REISSUES.

A.		
Air, Apparatus for carbureting	B. Sloper	4,476
Air-compressing apparatus	J. S. Patric	4,337
Alarm, burglar, Electro-magnetic	W. B. Guernsey	4,297
Alarm, Fire	J. O. Fowler, jr	4,554
Alcoholic liquors, Manufacture of, from the rhubarb plant.	J. H. Deacon	4,606
Alizarine, Manufacture of (Division A.)	C. Graebe and C. Liebermann	4,339
Animal-poke	H. F. Chapin	4,667
Anthracene, Preparing coloring-matter from	J. Brönner and H. Gutzkow	4,558
Artesian wells, Method of constructing	N. W. Green	4,373
Artificial asphalt rock, Manufacture of	A. B. Vandomark	4,501
Auger-bits, Machine for bending the lips of	J. Swan	4,517
Auger-bits, Machine for manufacturing	J. Swan	4,518
Augers, Machine for forming the lips of	J. Swan	4,560
Axle-box	D. Dalzel	4,594
Axle, Wagon	W. A. Lewis	4,564
B.		
Back-chain for cart-saddles	W. B. McClure	4,679
Bark-extracts, Apparatus for evaporating and concentrating.	T. W. Johnson, jr., and A. W. Goodell	4,531
Barrel	H. G. Porter	4,272
Barrel-filler, Automatic (Division A.)	S. C. Catlin	4,617
Barrel-filler, Automatic (Division B.)	S. C. Catlin	4,618
Barrels, Apparatus for pitching	L. Schulze	4,294
Base-burner (Division A.)	D. G. Littlefield	4,585
Bayonets, Manufacture of, and apparatus therefor	H. Waters	4,304
Bed bottom, Spring	H. E. Bissell	4,564
Bedstead and tester	F. Layanx	4,414
Bedstead-fastening	A. M. Rodefer	4,436
Beltings, vulcanized-rubber, Finishing	C. McBurney	4,668
Belts and pulleys, Compound to increase the friction between.	L. F. Robertson	4,239
Bessemer steel, Apparatus for the manufacture of	H. Chisholm	4,439
Binder, Tempering	G. W. Emerson	4,545
Binding invoice-books	J. L. Rile	4,577
Bit-brace (Division A.)	H. S. Bartholomew	4,510
Bit-brace (Division B.)	H. S. Bartholomew	4,519
Bit, Expansive	W. A. Clark	4,603
Boiler and washing-machine	D. H. and J. B. Savage	4,561
Boiler for ranges, stoves, &c	W. B. Scaife	4,467
Boiler, Kitchen	W. B. Scaife	4,283

Alphabetical list of reissues—Continued.

Invention or discovery.	Name of patentee.	No.
Boiler, Steam	P. Quinn	4,308
Boiler, steam, Sectional	W. H. Cornell	4,677
Boiler, Wash	C. N. Tyler	4,544
Bolt for safes	G. L. Damon	4,389
Bolt-heading machine	J. Minter	4,641
Bolts and rivets, Device for cutting	J. Johnson	4,299
Boot and shoe	C. S. Dunbrack	4,422
Boot and shoe heel trimming-machine	E. J. Beane	4,491
Boots and shoes, Insole for	M. A. Johnson	4,547
Bracelets, Manufacture of enameled	A. Codding	4,253
Braid, trimming, leather, &c., Imitation	H. Loewenberg	4,444
Brake, Car (Division A.)	W. H. Dunham and J. Widney	4,465
Bread, Device for baking	A. J. Quackenbush and G. Hawn	4,230
Breast-pump	M. Mattson	4,282
Bridge, Iron	D. H. Morrison	4,398
Bristles in brush-stocks, Method of holding	C. D. Rogers and M. P. Wilkins	4,450
Broiler (Division A.)	D. E. Roe	4,651
Broiler (Division B.)	D. E. Roe	4,652
Brush, Boiler-flue	R. King	4,442
Building for preserving fruit and other substances	B. M. Nyce	4,487
Buildings, Cooling and ventilating	T. Krausch	4,607
Bur for knitting-machines	M. Van Auken	4,555
Burner, Lamp	W. H. Gray	4,435
Burner, Lamp	H. W. Hayden	4,541
Button-hole	B. M. Smith	4,303
C.		
Cans, tin, Machine for making	E. W. Bliss	4,659
Can, Wood-incased	O. S. Camp	4,650
Capstan and windlass	D. N. B. Coffin, jr	4,453
Car, Cattle	J. W. Street	4,340
Carpenters' squares, Machine for figuring	N. Millington	4,302
Carpet-lining	J. F. Fales	4,296
Carriage, Children's	W. E. Crandall	4,293
Carriage top-prop block	S. L. Barnett and S. Beery	4,621
Car, Stock	L. Swearingen	4,336
Cartridge, Metallic	H. Berdan	4,491
Cart, Street-sprinkling	L. Rodenhausen	4,590
Case for ribbons, laces, &c	S. Whitaker	4,611
Caster, Revolving (Division A.)	C. H. Latham and J. S. Lugg	4,656
Caster, Revolving (Division B.)	C. H. Latham and J. S. Lugg	4,657
Catarrh, &c., Compound for treating by inhalation	D. Slade	4,445
Cattle-car, Railway	National Cattle-Car Company, Salem, Ohio.	4,368
Cement pipes, Machine for making	E. L. Baker, H. Knight, and E. Dayton	4,563
Chair, Folding	F. M. Holmes	4,280
Cheese-vat	B. H. and W. A. Stuart	4,416
Cigar-bunches, Apparatus for pressing, shaping, and drying.	A. Pearl	4,459
Clothes-frame (Division A)	J. E. Earle	4,503
Clothes-frame (Division B)	J. E. Earle	4,504
Clothes-washer	A. B. Mercier	4,227
Cloth, Process of obtaining bright colors upon, by printing.	A. Paraf	4,363
Cloth, Steaming and cooling	L. M. Heery	4,573
Clover-seed, Machine for thrashing, hulling, and cleaning.	M. R. Mansfield	4,566
Coffee, Process for treating (Division A)	J. Ashcroft	4,479
Coffee, Treating	J. Ashcroft	4,480
Compound, Detergent	W. Berry	4,370
Compound, Lubricating	H. Grogan	4,440
Cords, Machine for covering	J. Turner and I. E. Palmer	4,649
Corks, Machine for manufacturing	M. F. Crocker	4,654
Cooler, Milk	A. E. Baldwin	4,573
Corn, Machine for husking	L. A. Aspinwall	4,388
Corset	C. D. Rutherford	4,415
Corset, Self-supporting	C. A. Griswold	4,427
Cotton-gin	D. Pratt	4,664
Cotton, Machine for opening	W. C. Jillson and A. B. Palmer	4,312
Coupling, Car	W. B. Snedaker	4,330
Coupling, Hose	J. C. Cooke	4,344
Coupling, Hose	J. C. Cooke	4,605
Coupling, Shaft	S. C. Schofield	4,256
Coupling, Thill	D. A. Johnson	4,681
Cracklings, &c., for fertilisers, Machine for reducing	A. Smith	4,265
Crib for horses	H. Eddy	4,405
Crucible for melting steel and other metals	A. Pickering, C. R. Vickery, C. R. Atwood, and The Phœnix Manufacturing Company.	4,608
Cultivator	B. Tinkman	4,231
Cultivator	A. Adams	4,258
Cultivator	T. Bertrand and P. Samos	4,209

Alphabetical list of reissues—Continued.

Invention or discovery.	Name of patentee.	No.
Cultivator	T. M. Quisten	4,302
Cultivator	L. Packard	4,474
Cultivator	W. S. Weir	4,499
Cultivator	T. F. Bertrand and P. Sames	4,561
Cultivator	B. Tinkham	4,609
Cultivator	W. S. Weir, jr.	4,610
Cultivator	F. J. Underwood	4,665
Cultivator, Corn	A. Kinyon	4,435
Curtain or shade fixture	W. Campbell	4,234
Cut-off gearing, Variable	J. E. McKay	4,540
Cutting and sewing oval seams, Mechanism for	A. Judson	4,639
D.		
Dental plate, Atmospheric	N. T. Folsom	4,220
Diaper	J. C. Hempel	4,494
Disinfectant or carbolic-acid soap	C. J. Ames and C. A. Seely	4,330
Ditching and grading machine	W. J. Wanchope	4,676
Drawers	H. G. Fisk, T. R. Clark, and T. J. Flagg	4,435
Dredge-box	A. F. Tripp	4,615
Drill, Grain	L. Wight	4,499
Drill, Seed	F. H. Manny	4,307
Dyes or coloring-matters from anthracene...(Div. B)	C. Graebe and C. Liebermann	4,321
E.		
Electro-magnets, Construction of	H. M. Paine	4,237
Engine, Electro-magnetic	J. P. Tirrell	4,618
Engine, pumping, Steam	N. W. Wheeler	4,479
Engine, Steam	P. Estes	4,270
Engine, Steam	J. Houpt	4,374
Evaporating-pan for saccharine liquids	F. G. Butler	4,326
F.		
Fabric for head-covering	C. F. Bosworth	4,261
Fare-box for vehicles	J. B. Slawson	4,649
Fare box, Passenger	J. B. Slawson	4,240
Fastening for paint-cans, &c	J. K. Chase	4,695
Fatty substances, Process of extracting	C. F. Simonin and E. W. Coffin	4,509
Faucet	J. Powell	4,336
Feeding paper to printing-presses	R. M. Hoe	4,499
Felt hats, Machine for forming the brims of	W. A. Fenn	4,235
Fire-arm, Breech-loading	K. V. Barnekov	4,308
Fire-arm, Repeating	W. H. Morris and C. L. Brown	4,496
Fire-arm, Revolving	W. C. Dodge	4,493
Fire-place heater, Base-burning	D. Stuart and L. Bridge	4,367
Flour-packer	S. Taggart	4,696
Fluting and sad iron	M. H. Knapp	4,443
Fluting-machine	H. H. Cole	4,340
Fluting-machine	S. G. Cabell	4,653
Fruit-drier	J. P. Miller	4,495
Fruits, Treating, to dry, saccharify, and preserve them	C. Alden	4,287
Fruits, vegetables, and meat, Drying	F. H. Smith	4,469
Furnace for soldering	L. Cutting	4,585
Furnace for the manufacture of iron and steel	H. Ross and J. H. Clemens	4,609
Furnaces, hot-air, Mode of regulating the draught of	A. H. Morshon	4,644
G.		
Gas, illuminating, Manufacture of	F. King	4,457
Gaseliers and drop-lights, Apparatus for suspending	S. B. Vance	4,226
Gate-opening apparatus, Electro-magnetic	W. Robinson	4,374
Generator, Steam	A. L. Pennock	4,301
Generator, Steam	G. H. Babcock and S. Wilcox	4,518
Generator, Steam	R. K. Rogers and J. Black	4,535
German hand-cheese, Manufacture of	F. C. and T. F. Mende	4,363
Glass, Embellishment of	E. Ingraham	4,441
Glass for mirrors and reflectors, Silvering	W. A. Walker	4,477
Glass-molds, Machine for operating	W. C. King	4,571
Globe for gas-lights	T. Trudeau	4,633
Glove	R. D. Burr	4,278
Governor for steam-engines	J. Judson	4,655
Grain, Machine for decorticating	W. Ager	4,458
Grain, Process for decorticating	W. Ager	4,451
Grain-separator	S. Howes, A. and N. Babcock, and C. Ewell	4,546
Grate...(Division B)	D. G. Littlefield	4,58
Grate-bar	J. R. Smith	4,511
Gridiron, griddle, and frying-utensil, Combined	S. Lee	4,649
Grindstone-journal box	T. W. Brown	4,31

Alphabetical list of reissues—Continued.

Invention or discovery.	Name of patentee.	No.
Grist-mill and cotton-seed huller, Combined	J. W. Smith	4,446
Gun-barrels, Manufacture of	J. H. Burton	4,666
Gun-carriage...(Division A)	J. B. Eads	4,471
Gun-carriage...(Division B)	J. B. Eads	4,472
H.		
Hand-stamp	T. J. W. Robertson	4,675
Harness for horses	J. Rouse	4,325
Harness-ring	H. N. Eames	4,295

A.		
Abdominal supporter.....(Reissue 493)	J. M. Milligan	16, 602
Acid, Sulphuric.....(Reissues 502, 603)	A. Monnier	17, 970
Apples, Machine for paring	D. H. Whittemore	16, 666
Apples, Machine for paring and slicing	D. H. Whittemore	16, 417
Axes, Machine for making	C. F. Hutchins	16, 732
B.		
Bedstead-fastening	A. M. Rodefer	13, 693
Billiard-table cushions.....(Reissues 7,998, 2,510)	H. W. Collender	18, 805
Blind-fastening.....(Reissue 3,392)	H. Vansands	17, 943
Blind-slats, Machine for cutting tenons on	S. C. Ellis	16, 534
Bobbins for roving and slubbing	I. Hayden	17, 929
Bolts, Machine for threading.....(Reissue 656)	W. Sellers	18, 775
Books, Binding	A. H. Rowand	17, 899
Boxes, &c., Method of joining	J. Stimpson	16, 557
Boxes, Machine for cutting pasteboard for	F. N. Clarke	16, 719
Box, Passenger-fare.....(Reissues 550, 4,240)	J. B. Slawson	17, 899
Bridges, Iron truss-frame for	F. C. Lowthorp	17, 684
Bridge for piano-fortes, Metallic	G. H. Hulskamp	17, 838
C.		
Camera, Solar.....(Reissue 2,311)	D. A. Woodward	16, 700
Candle-snuffers	O. W. Stow and A. Barnes	18, 713
Carriage-prop.....(Reissue 1,331)	C. Thomas	18, 254
Centering-machine	E. F. Whiton	17, 814
Chain-machine.....(Reissue 928)	L. Toune	18, 490
Chair for invalids	J. G. Holmes	17, 567
Corn-husker	E. F. French	17, 909
Cotton-gin	D. Pratt	17, 906
Cotton, Long trunks for cleaning	I. Hayden	18, 742
Cotton-seed, Machines for hulling	W. R. Fee	17, 961
Cotton, wool, and other fibrous materials, Machine for clearing and separating.	I. Hayden	16, 833
Crib for horses.....(Reissue 1,300)	H. Eddy	16, 357
Cultivator	C. H. Sayre	18, 073
Cultivator-teeth	J. P. Cramer	16, 364
Cutting and bending sheet-metal, Machine for	E. Savage	16, 853
E.		
Eaves-troughs, Apparatus for suspending	J. A. Watrous	18, 113
Edge-planers for shoemakers.....(Reissue 4,454)	I. A. Dunham	18, 237
F.		
Fire-alarm telegraph for cities, Electro-magnetic	W. F. Channing and M. G. Farmer	17, 355
Fire-arm, Breech-loading. (Reissues 1,592, 3,798, 3,860)	W. C. Hicks	16, 797
Fire-arms, Accelerating	A. S. Lyman	16, 568

Alphabetical list of extensions—Continued.

Invention or discovery.	Name of patentee.	No.
Fly-frame of printing-presses, Mode of operating	R. M. Hoe	18, 640
Furnaces, Cupola and other ... (Reissues 1,403, 1,843)	P. W. Mackenzie	18, 651
G.		
Gaseous bodies, Machinery for compressing	W. A. Royce	17, 304
Gas-tubes, Extension	C. Monson	18, 154
Gauges, Steam-pressure	C. A. Eastman	17, 560
Generater, Gas	A. M. Giles	16, 830
Generators, Gas	J. Butler	18, 184
Generater, Steam	F. Latta	18, 460
Gore-cloth, Elastic (Reissue 492)	R. Winslow	17, 950
Grinding and polishing machine	D. Lovejoy and E. S. Butterfield	18, 509

Hand-stamp	T. J. Robertson	18, 249
Harrow (Reissue 45)	D. W. Sharos	16, 496
Harrow (Reissue 864)	S. S. Hogle	16, 866
Harvester	E. D. Buckman and S. A. Sisson	16, 957
Harvester (Reissues 548, 3,393)	C. Crook	17, 905
Harvester (Reissues 548, 3,394)	C. Crook	17, 905
Harvester	W. T. B. Read	17, 451
Harvester (Reissue 3,524.) (Division A)	J. P. Manny	17, 779
Harvester (Reissue 3,525.) (Division B)	J. P. Manny	17, 779
Harvester (Reissue 3,526.) (Division C)	J. P. Manny	17, 779
Harvester (Reissue 3,580.) (Division A)	J. P. Manny	17, 796
Harvester (Reissue 3,581.) (Division B)	J. P. Manny	17, 796
Harvester (Reissue 1,775)	H. Willard and R. Rose	18, 562
Harvester (Reissue 1,776)	H. Willard and R. Rose	18, 562
Harvester (Reissue 1,780)	H. Willard and R. Rose	18, 562
Harvester (Reissue 1,781)	H. Willard and R. Rose	18, 562
Harvesters, Raking-apparatus for	J. W. Budd	18, 009
Harvesting-machines	G. Esterly	16, 873
Hat-bodies, Forming	I. Gill	16, 426
Hay-presses, &c., Securing the doors of	C. Martratt	17, 196
Hinge	J. D. Browne	16, 678
Hook, Whiffletree	A. M. Cooley	17, 666
Horse-power	G. E. Burt	18, 238
Horse-rakes (Reissue 3,303)	J. J. Squire	16, 318
Horse-shoes, Machine for making (Reissue 1,998)	J. A. and I. T. Burden	17, 665
Hydrant	G. P. Perrine and J. E. Boyle	17, 638
I.		
Iron, Manufacture of	W. Kelly	17, 698
Iron spoons (Reissue 4,506)	G. I. Mix	18, 513
Ivory, Factitious	W. M. Welling	17, 940
K.		
Keeper for right and left hand door-locks	C. Adams	16, 676
L.		
Lathe for turning irregular forms, Automatic	W. D. Sloan	16, 938
Lathing and plastering, Mode of	J. G. Vaughan	16, 435
Lime and other fertilizers, Machine for spreading	P. Seymour	18, 774
Lock (Reissue 62)	L. F. Munger	17, 804
Locomotive furnaces	S. A. Bolster	18, 863
Loom	B. G. Dawley	16, 306
M.		
Mechanical movements for sewing and other machinery. (Reissue 4,563.)	J. Hanley	18, 845
Melodeon (Reissue 1,656)	S. A. Jewett	18, 290
Meter, Fluid	J. Cochrane	16, 945
Mill for cleaning castings	H. Remsen	17, 012
Mill, Sawing (Reissue 542)	W. M. Ferry	17, 899
Mowing-machine (Reissue 904)	G. C. Dolph	18, 141
Mowing-machine	J. P. Manny	18, 510
Mowing-machines (Reissues 831, 1,007)	E. Ball	18, 788
Mowing-machines (Reissues 831, 1,008)	E. Ball	18, 788
Mowing-machines (Reissues 831, 1,009)	E. Ball	18, 788
Mowing-machines (Reissues 832, 1,010)	E. Ball	18, 788
Mowing-machines (Reissues 832, 1,011)	E. Ball	18, 788
Mowing-machines (Reissues 832, 1,012)	E. Ball	18, 788
N.		
Nail-plate feeding-machine (Reissue 2,301)	J. C. Gould	17, 273

DISCLAIMERS.

Invention or discovery.	Name of patentee.	No.
Feeding lumber laterally in sawing-machines. Filed January 28, 1871. Second claim of specification disclaimed.	S. R. Smith	16, 454
Platform-scales. Filed January 10, 1871. Second and third claims of specification disclaimed.	F. M. Strong and T. Ross	14, 119
Solar camera. Filed February 23, 1871	D. A. Woodward. (*See* March 7)	16, 709
Wood, Machine for splitting. Filed April 14, 1871. Fourth claim disclaimed.	W. L. Williams. (*See* April 25)	17, 061
Harvester. Filed April 20, 1871. First claim of specification disclaimed.	C. Crook. (*See* May 2)	17, 305
Lantern. Filed April 29, 1871	W. Westlake, J. F. Dane, and J. P. Covert. (*See* May 16.)	40, 399
Roofing, &c., Composition for. Filed May 8, 1871	Plastic Slate Roofing Joint Stock Company, New York. (*See* May 16.)	46, 495
Sawing thin boards, &c., Machines for. Filed May 30, 1871.	J. Lagowitz, R. Peck, and G. J. Bogert. (*See* June 13.)	10, 965
Steam-pumping apparatus. Filed May 27, 1871	G. H. Corliss. (*See* June 13)	17, 423

LIST OF PATENTS

ISSUED FROM THE

UNITED STATES PATENT OFFICE

FOR THE

WEEK ENDING JANUARY 3, 1871,

AND EACH BEARING THAT DATE.

110,617.—FLIER FOR SPINNING-MACHINE.—Theodore T. Abbot and John A. V. Smith, Manchester, N. H., said Abbot assignor to said Smith.

Claim.—As an article of manufacture, the above-described flier, composed of the pieces A and A′, having angular sockets *g g*, tubular and bent arms C C, auxiliary piece E, and section B′, provided with openings D D, all constructed in the manner and for the purpose described.

110,618.—MOLE-TRAP.—John Adams, Greencastle, Ind.

Claim.—The trap described, consisting of its legs A A, plates a^1 a^2, plunger B, with cap *b* and disk *b′*, trigger *c*, and pieces *d d′*, when constructed and arranged as described.

110,619, antedated December 24, 1870.—STONE-DRAG.—Elijah C. Allen, Deerfield, Mass.

Claim.—1. A stone-drag, as constructed, with separate bottom and bow-planks *a b*, and a metallic connection, A, as described, arranged, and combined together, and with guard-ledges *h i i*, and a head piece, B, all substantially as specified.

2. The metallic connection A, as composed of the base, bent and slotted, as described, the support or guard-ribs, and the cross-rib, arranged and cast in one piece, as set forth.

110,620, antedated December 29, 1870.—SEEDING-MACHINE. — Asher S. Babbit, Keeseville, N. Y., assignor to Babbit, Hinckley, & Co., same place.

Claim.—1. The pivoted slides E E′, provided with bent arms e^1 e^2, when arranged above and below a hopper-bottom having orifices with inclined edges, and operated by means of pins, as described.

2. The lever G, in combination with the arms *h h′* and slide F, as and for the purpose described.

3. The arrangement of the frame A B, drag-bars C, with rollers *c*, hopper D, slides E E′, plate F, and lever G, when the parts are constructed as described, for the purpose set forth.

110,621.—FETTER OR CLOG FOR FOWLS.—Sanford J. Baker, Madison Centre, Me.

Claim.—An improved fetter or clog for fowls, formed of the bent and pointed wire A, pivoting-wire B, and recessed wooden jaws C, said parts being constructed and arranged substantially as herein shown and described, and for the purpose set forth.

110,622.—PUMP.—Joel R. Bassett, Cincinnati, Ohio.

Claim.—1. The combination, substantially as described, of the base A *a′*, duct B *b* C C′, with its opening D D′ F F′, and valves E G, pump-barrel H A, shell I, partitions L L′ M M′, ports N N′, vacuum-chamber O, suction-pipe R, discharge-chamber P, pipe *p*, piston Q *q*, plate S, opening T, valve U, air-vessel V *v′*, diaphragm W *w* Z, chest X, valve *x*, and retaining devices B′, for the purpose set forth.

2. In combination with the pump-barrel H, air-vessel V, and diaphragm W *w*, the sleeve *v* and the bushing Y, for the object stated.

110,623.—MACHINE FOR MARKING SQUARES.—Charles S. Bement, Southington, assignor to Hart Manufacturing Company, Kensington, Conn.

Claim.—The combination of the marking-roller D, shaft *d*, boxes *c c*, slides *g g*, leveler E, weighted or spring lever F, and the bed A′ or its equivalent, the whole constructed and operating together, substantially as described.

110,624.—CUTTER FOR NAIL-CUTTING MACHINES. — Elenzar Bless, Indianapolis, Ind.

Claim.—The anvil A and cutter B, formed and arranged substantially as and for the purpose set forth.

110,625.—SHOT-CASE AND DISTRIBUTER.—Sinclair Booton, Seguin, Texas.

Claim.—1. The vertically-adjustable perforated tube E arranged within the hollow center of a vessel, A, that is divided into several compartments, substantially as and for the purposes herein shown and described.

2. The cover D, arranged on the bowl A, and fitted around the vertically-adjustable post F and tube E in such manner that its opening is in line with the opening *e* in the tube E, substantially as herein shown and described.

110,626.—COMPOUND FOR CULINARY USE.—Henry W. Bradley Binghamton, N. Y.

Claim.—As a new and improved article of manufacture, a lard, vegetable butter, or shortening, which is composed of the ingredients, or their respective equivalents, in the proportions herein set forth.

110,627.—RENDERING AND TREATING OFFAL AND OTHER ANIMAL SUBSTANCES.—Duncan Bruce, Brooklyn, N. Y., assignor to Emma Bruce, same place.

Claim.—The smoke-generator, arranged between the heater and the boiler or reducing-vessel, and heated by hot air or superheated steam from the heater, substantially as herein described.

110,628.—PAINT-BRUSH.—William B. Burtnett, New York, N. Y.

Claim.—The circumjacent socket B L, and central plug C K, combined as described, with the handle and bristles of a paint-brush, for the purpose specified.

110,629, antedated December 30, 1870.—HOG-SNOUTER.—John C. Campbell and Warren S. Bruce, Good Hope, Ill.

Claim.—The rotating head G, when armed with the cutters 1 2 3 4, and held in a fixed position by spring E, as set forth.

110,630.—PILL-MACHINE.—Pierre Canhape, New York, N. Y.

Claim.—1. The combination of the comb-bar B, clamp E, and strippers H, substantially in the manner described, and for the purpose specified.

2. The combination of the molds A with the comb-bar B, substantially as and for the purpose specified.

110,631.—PAPER-CUTTING MACHINE.—John E. Coffin, Portland, Me., assignor to Frederick W. Bailey and James Noyes, same place.

Claim.—1. In the combination consisting of the crank *y*, the adjustable stud *z*, the sector *b'*, the gear *d'*, the ratchet *a*, the pawl *e''*, and the drum *x*, constructing the sector *b'* with the crank-slot *a'*, substantially as described.

2. The combination of the cam 5, the lever 6, and the truck 7, the piece 9, and the pawl *e''*, substantially as described.

3. The cam *w'*, the arm *v'*, and spring *y'*, the arm *w'*, toggle 1, and the arms 4 3, in combination with the truck *f'* on the shaft *l*, as described.

110,632.—BEDSTEAD-FASTENING.—Charles S. Comins, Lowell, Mass.

Claim.—1. The tapering plate A having lugs B, or other devices, for engaging in mortises, slots, rests, &c., concavity C, and ridges D, substantially as described.

2. The plate A, constructed as described, in combination with the side pieces E, slot G, orifice F, and plug I.

110,633.—FASTENING FOR EAVES-TROUGHS.—Leonard Cook, Shreveport, La.

Claim.—The band C, clasp A, and wire E, in combination with the spike B and trough D, all constructed and arranged as shown and described.

110,634.—SEEDING-MACHINE.—Jackson Corad, Corydon, Iowa.

Claim.—An inwardly-converging self-feeding hopper, F, and apertured box B, combined, as described, with a revolving vessel, E, having an inner conical seed-crowder, *c*, and radial tubular distributing-arms *d*, all arranged as described.

110,635.—FLOUR-BOLT.—Robert W. Cunningham, Chesterville, Ohio.

Claim.—The herein-described vibratory flour-bolt, constructed with tapering sides C, cloth partition H, whereby said bolt is divided into an upper and lower chamber, F G, space J when covered with bolting-cloth *b*, openings M and L, and cloth top B, all arranged in relation to each other for operating in the manner substantially as described, and for the purpose set forth.

110,636.—COTTON-PLANTER AND MANURE-DISTRIBUTER.—Nimrod Donaldson, Line Creek, S. C.

Claim.—The opener C, constructed substantially as described, in combination with the revolving barrel G, the guard H, and the delivery-wheel I and elastic coverer K.

110,637.—REVERSIBLE LATCH.—Heinrich Dotzenroth, Pittsburg, Pa.

Claim.—The sliding stop E, provided with the vertical flange *v* and front projection *r*, and arranged as shown, whereby the latch is prevented from sliding into the case to be disengaged fro the follower D *t*, for the purpose of reversal, locked in position, substantially as shown and d scribed.

110,638.—REFINING PETROLEUM.—Richar Eaton, Montreal, Canada.

Claim.—1. The art of removing earthy partic and other impurities from crude petroleum-oil the washing action of water, substantially in t manner and for the purpose described.

2. The entire apparatus in its novel arrange of purifying-vessel *a*, perforated conical chamb *b*, inlet water-pipes *c c²*, steam-pipe *c³*, outlet w ter-pipe *d*, out oil-pipe *e*, oil-tank *e²*, water-tanks and *g*, overflow water-pipe *i*, pumps *h'* and *j* supply pipe *k*, and tanks *k* or *l*, revolving brush gearing *n*, and perforated diaphragms *o*, all wor ing together, substantially in the manner and the purpose described.

110,639.—PROTECTING THE HEARTHS O FURNACES.—Henry William Ellicot Baltimore, Md.

Claim.—Encircling the hearth of furnaces wi water or air by means of pipes or otherwise, for t purposes and use expressed.

110,640.—LOOM.—Robert Elliott, Chest Pa.

Claim.—1. The loosely-pivoted frame C guide-rollers *c c c*, combined and connected wi the heddles, straps, and upper rollers, all substa tially as described.

2. The jack-bar, provided with the slot *c*, step pin *c³*, and link *d'*, substantially for the purpo specified.

110,641.—VENTILATOR.—William Enni Philadelphia, Pa.

Claim.—In combination with the shaft C end-induction tube D, the partition-wall E, loos within the said shaft C, for the purpose of carry the air downward upon the heating surfaces of heater or radiator B, and from thence into t room A, as herein shown and described.

110,642.—DOVETAILING-MACHINE.—Harr H. Evarts, Chicago, Ill.

Claim.—1. The lever slide I with its pivot gib-box *q'*, the arm O with its guide-bars *s' s''*, t spindle G with its pivoted guide-box H, combin with the carriage D and mandrel-frame C, for t purpose of governing the direction of the mov ments of said carriage D and mandrel-frame C substantially as shown and described.

2. The pivoted box H and adjusting nut *i*, whe combined with the spindle G, provided with pin *k* arranged as described, and operating in the man and for the purpose specified.

3. The combination, with the stop-arrangem H *i k* and spindle G, of the adjustable elbow K st stop L, arranged as described, and operating in t manner and for the purpose specified.

4. The combination, with the vertically-movin carriage D, of the rocking mandrel-frame C carry ing the tools *h' i'*, and made adjustable by means screws *m n*, in the manner and for the purpose sp cified.

5. The lever Q, double-acting pawl P, gauge-scr ment R, stop S, rubber spring *v'* and bearing P for insuring the connection of the gears and com pensating for wear, when combined with the gear 1 2 3 and rack N, for giving motion to and adjust ing the action of the table, substantially as de scribed.

6. The weighted shaft O, with detent *x*, combine with the gear 3 and the lever and pawl Q P, as described.

7. The angularly-adjustable gauge-block T an stop X, in combination with the table M, in the manner and for the purpose specified.

110,643.—ALARM FOR LOCOMOTIVE-ENGINES.—Reed A. Filkins, North Adams, Mass.

Claim.—The combination of the slide C with the lever B and bell-crank D, all arranged on a locomotive-engine, substantially as and for the purposes herein shown and described.

110,644.—COMBINED COTTON-SEED PLANTER AND GUANO-DISTRIBUTER.—Lafayette Gantt, Camilla, Ga.

Claim.—The combination of the dropper F G H and hopper J K L M with each other and with the frame-work A C D E, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

110,645.—GLASS TELEGRAPH-INSULATOR.—John Garity, East Birmingham, Pa.

Claim.—A solid glass telegraph-insulator, having a head, *b*, grooved, and of form suitable for use with either a wrench or spanner, and having also a threaded pin, *a*, the face of which tapers from the face of the head to or toward the point, substantially as and for the purposes set forth.

110,646.—GATE.—Robert Gidley, Lagrangeville, N. Y.

Claim.—1. In combination with the free end of a gate, a swinging-bar, E, pivoted to the post B, and grooved at its upper end to receive a locking-bar, substantially in the manner described.

2. The combination of the hinge-bars or rails F with post G, and lever or levers I, substantially as shown and described.

110,647.—HAND-HOLE CAP FOR STEAM-BOILERS.—William W. Graham, Boston, Mass., assignor to himself and James S. Parsons, Windham, Conn.

Claim.—The combination and arrangement of the perforated oblong or elliptical cover D, as described, with the oblong or elliptical cover B, and the shanks *f*, mortised and grooved as described, all adapting for use for the purpose and in the manner as explained.

110,648.—LAMP.—Franklin T. Grimes, Liberty, Mo.

Claim.—The arrangement of the air-supply tube and passage B relatively to the reservoir A and wick-chamber C or its tube D, whereby the incoming air is made first to descend through the body of oil in the reservoir, and afterward to ascend in the course or passage to the flame, substantially as specified.

110,649.—CLOTHES-PIN.—George Alfred Harris, Buchanan, Mich.

Claim.—The improved clothes-pin, consisting of the two parts A B, pivoted together by the ears C and pin D, and the spring E, the said parts A B having the grooved sides, all substantially as specified.

110,650, antedated December 23, 1870.—SAW-SET.—Henry A. Harris, Center, Texas.

Claim.—An improved saw-set, formed by the combination of the handle A, stationary jaw B having a scale of division-marks formed upon its face, fence C, adjustable jaw D, thumb-nut E, arm F, gauge G having a scale of division-marks formed upon it, and set-screw H, with each other, substantially as herein shown and described, and for the purposes set forth.

110,651, antedated December 30, 1870.—FOLDING LAMP-SHADES.—Henry M. Hartshorn, Malden, Mass.

Claim.—1. Connecting the supporters *c d* by means of the wire-rings *v*, or their equivalents, for the purposes specified.

2. The combination and arrangement of the rings *v* with the two classes of supporters *c d*, or their equivalents, arranged substantially as specified.

110,652.—COMPOSITION FOR PRESERVING WOOD.—William Hayman, Taunton, Mass., assignor to himself and William R. Black, same place.

Claim.—The said composition made of the ingredients and in the manner substantially as hereinbefore explained.

110,653.—RECLINING AND ROCKING-CHAIR.—Samuel Hayward, Boston, assignor to himself and Luther E. Kimball, Cambridgeport, Mass.

Claim.—1. A rocking or reclining-chair, constructed in such a manner that the back, front legs, and seat are rigidly connected together, when so arranged upon elastic back legs to pivot upon the bottom of the front legs, substantially as described.

2. The leg and arm D of a chair, made in one piece, when the arm is so formed as to serve as a spring, substantially as described.

3. The spring-tie E, in combination with the leg and arm C, constructed and operating substantially as described.

101,654.—BASE-BURNING FIRE-PLACE HEATER.—Elisha S. Heath, Baltimore, Md.

Claim.—The fire-place heater, constructed with the rear extension of the base A, and with the pipes C C E, arranged with relation to such base and the cylinders of the heater, substantially as herein described, for the purpose specified.

110,655, antedated December 24, 1870.—DROP-HAMMER LIFTER.—Francis M. Hodge, Shelburne Falls, Mass.

Claim.—1. The rotary engine herein described, and drum E, arranged on the same shaft, combined with the hammer-strap C, as and for the purpose described.

2. The combination of friction-roll *l*, drum B, pendent arm K, strap *i*, belt *e*, band *b*, (on flange *a*,) and lever *g*, all relatively arranged as and for the purpose described.

3. The disk M having tappets N N, and the sliding circular plate Q having stud R and lateral projection R' thereon, combined with the valve-rod S S T, all constructed and relatively arranged as and for the purpose specified.

110,656.—KNITTING-MACHINE.—William H. H. Hollen, Fostoria, Pa.

Claim.—The combination, with the cam-plate C, of the tumblers D D and notched springs E E, when constructed and arranged to operate upon the needles and cylinder, substantially as hereinbefore described, and for the purpose specified.

110,657.—CALIPER.—William P. Hopkins, Lawrence, Mass.

Claim.—The improved friction-nut, consisting of the disks *e f*, screw *g*, and the locking-pin *h*, all combined and arranged substantially as specified.

110,658, antedated December 20, 1870.—THRASHING-MACHINE.—Hiram E. Hurlburt, Hammondsport, N. Y.

Claim.—1. The thrashing-machine herein described, consisting of the frame A B, the shaft C, endless belt D, crank-wheels G and *g*, bar K, rollers *a* and *c*, pulley *d*, pitman *n*, lever *s*, and beaters V, constructed and arranged to operate substantially as set forth.

2. In combination with the above-described thrashing-machine, the ratchet-wheel H and pawl P, when arranged to operate as and for the purpose specified.

110,659.—DOUBLE-HINGE.—John S. Jennens, Bangor, Me.

Claim.—In combination with a double hinge, the plate F, substantially as and for the purposes described.

110,660, antedated December 31, 1870.—SUBSOIL-PLOW.—Marquis R. Jones, Walworth, Wis.

Claim.—1. A standard of a subsoil plow, with its rear edge serrated or notched, substantially as described, in combination with a brittle pin, I, and draft-rod F, when the whole are constructed and connected together, substantially as and for the purposes described.

2. Axle *j*, beam A′, caster-wheel K′, part *b*, and set-screws *k k*, when the whole are constructed and connected together, substantially as and for the purposes described.

110,661. — MILKING-STOOL. — Richard W. Jones and John B. Baker, Syracuse, N. Y.

Claim.—The seat B, loop C, and tightening device D, all constructed and arranged as herein specified.

110,662.—APPARATUS FOR THE MANUFACTURE OF BROMINE.—John J. Jühler, Natrona, Pa.

Claim.—Stills for the manufacture of bromine, made of wood, or with an interior lining of wood, substantially as hereinbefore described, and for the purpose set forth.

110,663.—RUT-LEVELER.—Calvin Marshall, North Easton, Mass.

Claim.—My improved rut-leveler, as described, consisting of the roller C, the frame A, the scrapers D D, the tongue B, and the lever E, all arranged and combined, as specified and represented, so as to operate or be capable of being actuated in the manner and by the means as hereinbefore set forth.

110,664.—HOT-AIR FURNACE.—Peter Martin, Cincinnati, Ohio.

Claim.—1. The combination, substantially as described, of the combustion-chamber A, ash-pit B, fire-chamber C, external side-pipes D, diaphragm E, interior and perforated tubes *J j*, channels K, flue L, and internal and imperforate plate N, for the object stated.

2. In combination with the tubes J or N, the corrugations *c* of the fire-chamber C, for the purpose herein set forth.

3. In combination with the parts A, B, C, D, E, K, L, and M, the opening *n* and damper O, for the object described.

110,665. — COMPOSITION FOR ROOFING.—Jerome B. Melvin, Lowell, Mass.

Claim.—The composition of the herein-described ingredients in about the proportions specified, for the purpose and in the manner substantially as set forth.

110,666, antedated December 22, 1870.—PURIFICATION OF CAST-IRON.—John W. Middleton, Philadelphia, Pa.

Claim.—1. The employment of hot air, superheated steam, or gas, directed and discharged in various places by numerous air-gun-like shots or shooting gushes, of short duration, or some five hundred to fifteen hundred of suddenly-cut-off jets, into the metal in the pool of iron and slag, or of a refining, boiling, or puddling-furnace, and thus making an atmospheric kneading-like process for working out impurities, as well as decarburetizing and otherwise purifying fluid-iron, substantially as and for the purpose described.

2. The combination, with a puddling, boiling, or refining-furnace, of a series of the sliding-windo plates H, of fire-brick, for the purpose of coverin suitable openings made through the walls of th furnace, when the said sliding plates are each pr vided with an eye-opening, covered or closed tight ly by thick glass or mica plates so that the sa glass or mica-covered opening can be brought int juxtaposition with the opening in the wall of th furnace, to afford a view of the interior, and of th pools and tuyeres, and of the metal operated upo in the furnace, and so that the said slides can b moved back again to protect the glass or mica from injury, without allowing any of the blast to b forced out between the said slide and the wall o the furnace, substantially as described and se forth.

3. The combination, with a refining, puddling, o boiling-furnace, of any form or description, of a se ries of pipes or tuyeres F F, projecting in down ward-sloping directions, through the top or side of the furnace or through both top and sides int the same, and communicating at their outer end with the blast-pipe, and any sudden cut-off device to produce sudden air-gun-like shots of blast, sub stantially as and for the purposes hereinbefore se forth.

110,667. — MOTIVE-POWER APPARATUS.—Cassius A. Mills, Bridgeport, Conn.

Claim.—The combination, with a wheel, A, of case, C, with chambers E, passages, gates, and chutes, said case being arranged for shifting th chambers relatively to the wheel, and provide with a locking device, all substantially as speci fied.

110,668.—HOT-WATER FEEDER FOR STEAM BOILERS.—John H. Mills, Boston, and John Howarth, Salem, Mass.

Claim.—1. The arrangement for heating the feed water, consisting of the exhaust-pipe D and cen cal plates E I, substantially as described.

2. The arrangement of the chambers F F′, heate A, and chest C, as specified.

110,669.—SEWING-MACHINE FOR WORKING BUTTON-HOLES.—Eugène Moreau, San Francisco, Cal., assignor to himself James W. Haggerty, and Samuel Hill.

Claim.—1. The cams P R, provided with notche and smooth edges, as described, located in differen planes, in combination with pins in corresponding planes, all for operating the cloth-holder, as de scribed.

2. The cams P R, in combination with the slid ing bar Q provided with its pin, lever O with pro jection N, spring M, and cloth-holding frame F t with its pin *s*, pin I, and spring *k*.

3. The pawl 2′ with its spring, in combination with the lever 2 and hanger 3, as described.

4. The pivoted box K with its spring, in combi nation with the plate A and pin L, as described.

110,670.—TUCKING DEVICE FOR SEWING-MACHINES.—Aaron Morehouse, Hartford, Conn.

Claim.—1. The presser-guide D, when attached to and used in connection with the main bar C having the guide-swell O thereon, and having the spring guide J attached thereto, substantially as herein described.

2. The same in connection with the adjustable gauge *b*, constructed and operating substantially as specified.

3. The combination of the main bar C, presser guide D, spring guide J, gauge *b*, and gauge *d*, all constructed and operating substantially as set forth.

4. The adjustable gauge *d* having the arms and A thereon, and formed so that the sewed tuck or plait may pass between and in contact with said arms, and be guided in its passage by the edge while the main body of cloth passes underneath both said arms and upon the cloth-plate of the ma chine, substantially as described.

3. Devices, substantially as described, and at tached wholly to the presser-foot or presser-bar, whereby the fold in the fabric is gauged or measured, folded, and sewed simultaneously, and the cloth-plate is left entirely free, substantially as set forth.

110,671.—SAW-TABLE.—Peter Neeb, Buffalo, N. Y., assignor, by mesne assignment, to Margaret Neeb.

Claim.—1. The arrangement of parts, table A, slides B B, frame I, spindles H H, and gearings F, the whole to operate as and for the purpose set forth.

2. In combination with slide B, gauge, fig. 5, for the purpose set forth.

110,672, antedated December 17, 1870.—FLOUR-SIFTER.—Lucy S. Nourse, Templeton, Mass.

Claim.—In the construction from woven wire A, with its band B and handle C, for the use, as described, as a new article of manufacture.

110,673. — WAGON-BRAKE.—Andrew Van Der Hyden Oliver, Bethlehem, N. Y.

Claim.—1. In a wagon-brake, the loop *a* and runner-strap *b*, combined with the backing-rod G, substantially as and for the purpose set forth.

2. The forked lever-rod H with its eye *x*, combined with the brake-lever D and backing-rod G, when all are constructed and operated as described.

3. The guard L, constructed substantially as and for the purpose set forth.

110,674. — BELT-SHIPPER.—John L. Otis, Leeds, Mass.

Claim.—1. In combination with the hanger, the frame or support, the shipper-bar, the toggle levers, and spring, substantially as and for the purpose described.

2. In combination, the support or frame, the shipper-bar, toggle-levers, and spring, the adjustable rods for bringing the handle within convenient position for the operator, substantially as described.

110,675. — PRINTING-TELEGRAPH.—George M. Phelps, Brooklyn, N. Y., assignor to the Western Union Telegraph Company, New York City.

Claim.—1. Two magnets operated alternately through two-line wires, in combination with the armatures, escapement, type-wheel, and printing mechanism, substantially as and for the purposes set forth.

2. A magnet constructed in two sections or coils, and charged by pulsations over one of two-line wires, and operating upon an armature to effect the printing, substantially as set forth.

3. The combination of the horseshoe-magnet, printing-lever actuated thereby, and the two electro-magnets and circuits for moving the said horseshoe-magnet, substantially as set forth.

4. The combination of electro-magnets having sectional coils, two-line wires, and mechanism for moving the type-wheel, with mechanism for giving an impression by an armature operated by said sectional-coil electro-magnets, substantially as specified.

5. Two electro-magnets operated through separate line-wires to set the type-wheel, in combination with an electro-magnet operated by the reversal of the electrical current to give the impression, substantially as specified.

6. An impression-lever, in which the pressure-pad gives the impression by the momentum and moves away from the type, in combination with a stop on the impression-lever and a stop on the type-wheel or shaft, substantially as specified.

7. The type-wheel, connected to the shaft by a spring and stop, substantially as and for the purposes set forth.

8. The finger-keys of the telegraphic transmitting instrument, arranged in two concentric arcs of circles, as and for the purposes specified.

9. Two rotating arms, forming stops, in combination with finger-keys, arranged in two arcs of circles, and with mechanism for giving electrical pulsations simultaneously with the revolving of the said arms, substantially as specified.

10. The circuit-closers operated alternately, substantially as specified, in combination with two-line wires and receiving mechanism, substantially as set forth.

11. The automatic detent, operated by friction, in combination with the current-changer or switches for changing the polarity of the current, substantially as specified.

12. The finger-key m^1, combined with the current-changing switches, substantially as and for the purposes specified.

13. The arrangement, substantially as specified, of the circuit-closing mechanism and connections, so that the ground-connection is automatically made with either polarity of the current by the movement of the lever *s*, substantially as set forth.

14. The lever *w*, in combination with the receiving and transmitting-connections, arranged substantially as specified, to adapt the device to forwarding or to receiving messages.

110,676. — SPARK-ARRESTER. — Charles L. Pierpont, Durand, Wis.

Claim.—The spark-arrester, formed by the combination of the flange B, spark-receiver C *c*′, pipe E, and double cone F, with each other and with the smoke-stack A, said parts being constructed and operating substantially as herein shown and described.

110,677. — LUBRICATOR. — William Pratt, Providence, R. I., and N. Bangs Williams, New York City, assignors to Abby A. Williams, Brooklyn, N. Y.

Claim.—1. Making the cover of the oil-cup the means of turning the regulating-screw, by means of the slotted screw-staff, the slotted link, and slotted cover, and at the same time securing the cover to the cup.

2. The regulating the flow of oil in an oil-cup by means of pressure upon a cylinder of cork, made with a central perforation, and slits tending into this from its outer periphery, all made and operating substantially as described, or their mechanical equivalents.

110,678.—CHURN.—James H. Reed, La Fayette, Ind.

Claim.—1. The combination of the sliding arms G and cords H with the rocking-chair and the churn-dasher, substantially as described, for the purpose specified.

2. The base or frame-work supporting the chair and churn, provided with the transverse bar J, adapted to enter notches formed in the rockers of the chair, substantially as described, for the purpose specified.

110,679.—CORN-PLANTER.—John Reichelderfer, Cridersville, Ohio, administrator of Philip Kuntz, deceased.

Claim.—1. The described arrangement of shiftable handles E, tongue *t*, and seed-distributing mechanism F G H J K L, in the described combination with the shiftable hoe P.

2. The spout V, pivoted at its upper end, so as to permit of its being vibrated by means of the trigger Y, through the medium of the rods Z Z′ Z″, arms 1 2 3, pawl 4, segment-ratchet 5, tongue 6, cord 7, and spring 8, with fixed lip X for closing the discharging end of said spout, the whole constructed and operating in manner as represented and described.

3. In the described combination with the shiftable handles E, the catch Q, spring R, and trigger mechanism S J U.

110,680.—Manufacture of Acid Phosphates for use in Baking-Powders, &c.—Nathaniel B. Rice, East Saginaw, Mich.

Claim.—1. The process herein described for producing acid phosphates, the same consisting in the treatment of phosphates by means of phosphoric acid, substantially as described.

2. The mode of preparing the super-phosphate of soda, potassa, ammonia, and magnesia, substantially as described.

110,681.—Steam-Engine. — Thomas Ross, Rutland, Vt.

Claim.—1. A cylinder for an engine or pump, having its working surfaces hardened by chilling, substantially as described.

2. In combination with an engine with chilled working surfaces, as described, a valve with its working face hardened by chilling, substantially as described.

110,682. — Cultivator. — Jacob Sattison, Ripley Township, Ohio.

Claim.—1. The adjustable slotted links or standards H, pivoted to the cross-beam G, in combination with the shares or wings E, substantially as described and for the purpose specified.

2. The adjustable slotted links H when pivoted to the vertically-adjustable cross-beam G, adjustable slotted links F when pivoted to the standard C, in combination with the shares E, in the manner as described and for the purpose specified.

3. The arrangement of the shares E, adjustable slotted links F, adjustable slotted links or standards H, cross-beam G, beam A, and share D, in the manner as described and for the purpose set forth.

110,683, antedated December 31, 1870.—Windmill.—Edvard Savoral, New York, N. Y.

Claim.—1. The connection of the vanes E E with each other and the upright rod *d*, by means of links or other flexible materials, substantially as and for the purposes herein described.

2. The swinging frame F, sails G G, and wind-trap H, substantially as and for the purpose herein set forth.

110,684.—Casting Bar-Solder.—Abraham Schoenberg, New York, N. Y.

Claim.—1. In combination with a hopper I, constructed substantially as described, the grooved and ribbed wheels J and L, and scraper 5, when the same shall be constructed and operate substantially and for the purpose set forth.

2. In combination with the finishing wheels P² and S, knife V, and scraper 8, the hopper I, grooved and ribbed wheels J and L, and scraper 5, when the same shall be constructed substantially as and for the purposes set forth.

110,685.—Dies for Forming Horse-Collar-Shells.—John W. Schwaner, Egg Harbor City, N. J.

Claim.—The improved dies A B, for forming the shells or foundation-plates of horse-collars, said dies being constructed substantially as herein shown and described.

110,686.—Shutter-Fastening.—Philip T. Share, Baltimore, Md.

Claim.—The latch B, pivoted in a recess beneath the sill, locking at one end into the hook D upon the shutter, and furnished at its other end with the pin H projecting into the sash, and covered by a recess in the bottom rail, as and for the purpose herein described.

110,687, antedated December 30, 1870.—Gate.—George A. Slater, Benton Harbor, Mich.

Claim.—The gate A, hung on the pinion B, supported by the post C on one or both sides, so as to be opened or closed by vibration in a vertical plane, substantially as described, for the purpose hereinbefore specified.

110,688.—Seed-Dropper. — Hiram Moore Smith, Richmond, Va.

Claim.—The herein-described construction and arrangement of the scraper barrel A D, spring E and scraper B, as specified, when used in combination with reciprocating slide or cylindrical seed-dropper.

110,689.—Pattern for Molding Stove-Lids.—Samuel Smith, Philadelphia, Pa., assignor to himself and Charles Nobl & Co., same place.

Claim.—The stopper B and indenting slide C constructed to operate, respectively, in combination with the open cavity *a'* and the communicating-hole 4 in the pattern-plate A, substantially as and for the purpose hereinbefore set forth and described.

110,690.—Lubricating Compound.—Jacob H. Smyser, Pittsburg, Pa.

Claim.—A lubricating compound, composed of vulcanized rubber, petroleum, tallow, oil, or other grease, mixed with pine or coal-tar, as and for the purposes herein described and represented.

110,691.—Clothes-Drier.—Henry M. Stevenson, South Peacham, Vt.

Claim.—The combination of the side panels A top panels D E, cross-bars and braces F and C', the several parts being jointed together and arranged substantially as specified.

110,692.—Reversible-Plows.—George W. Thompson, Ripley, Ohio.

Claim.—1. A double reversible mold-board, combined with a brace E, constructed and arranged as and for the purpose described.

2. The combination, with the mold-board and beam of a reversible plow, of the support D, bent at I toward the land-side and from the colter, to prevent clogging, as described.

110,693.—Extension Plow-Share.—George W. Thorp, Columbus, Kansas.

Claim.—The share E, fast to adjustable bars G G, combined with a slotted plate, B, rigidly attached to an immovable brace, C, for the purpose of allowing the said share to be extended in the manner described.

110,694.—Seed-Planter and Guano-Distributer.—Henry L. Tillery, Halifax, N. C.

Claim.—1. The grinding or pulverizing-wings *l* formed of corrugated metal, and attached to the drum *k*, and bent backward thereon, as shown and described.

2. The arrangement of triangular frame *b*, stock *a*, scrapers C, bars *r*, arm *t*, and handles *w w*, with the frame-work A, as and for the purpose specified.

3. The scrapers C, coverers *c*, bars *r s n*, and arms *t y*, arranged substantially as specified.

4. The box *e*, provided with a perforated bottom the drum *k*, slide *h*, drum *k*, and the funnel *f*, combined, substantially as specified.

110,695.—Printers' Furniture.—Richard B. Topham, Washington, D. C.

Claim.—The combination and arrangement of the side-stick A with the quoins B B, the quoins being furnished with a dovetailed tongue, *b b*, fitting loosely in the groove *a a a* in the side-stick, substantially as shown and described.

110,696. — Platform-Scale. — John H. Truex, Rochester, N. Y.

Claim. The arrangement of the two stirrups B

one inside of the other, the outer suspended on the inner, both being loosely attached to each other by the continuation of the loop C, which prevents their being detached by accident, with the levers A A resting upon their respective stirrups independently of any connection with the latter, whereby a free action of each set is obtained, and with a secure construction of mechanism, as herein shown and described.

110,697. — Folding-Bedstead. — Joshua Turner, Cambridgeport, Mass., assignor to Benjamin A. Pettingill and Isaac S. Pear, same place.

Claim.—In a folding-bedstead, composed of a frame, A, legs B, and braces C, the construction and application of the braces to the legs and frame in manner as described, whereby the former are rendered self-adjusting, while the legs are being either folded or unfolded, in manner as set forth.

110,698.—Wheelbarrow-Frame.—Beckwith W. Tuthill, Oregon City, Oregon.

Claim.—The wheelbarrow-frame, composed of the side pieces A, with the front arch *b*, all made of one continuous piece of tubing, as specified.

110,699.—Plaiting Device for Sewing-Machines.—William Walker, Brooklyn, N. Y., assignor to George H. Wooster, New York City.

Claim.—1. The plaiting-knife C and presser-foot I, in such combination with each other, and with the edge *v* of an opening in the bed-plate, as herein specified, that the said knife plaits over the said edge, and between it and the sole of the presser-foot, as herein described.

2. The combination of the two knives C C', the one of which is arranged to work above the material in connection with the bed-plate A, while the other is arranged to operate below the material in connection with the presser-foot of the machine, essentially as specified.

110,700.—Alarm-Attachment for Machines for Forming Hat-Bodies.—William C. Waring, Yonkers, N. Y.

Claim.—1. The combination, with the double or reverse conical former A, of the roller I, constructed to bear on the reverse cones of the former, and the bell or alarm-signal, operated by said roller, substantially as specified.

2. The combination of the bell G and hammer F with the sliding block or standard F, the adjusting-screw E, and the operating-roller I, essentially as and for the purpose herein set forth.

110,701.—Heel-Tap for Boots and Shoes.—Alexander Warner, Brooklyn, E. D., N. Y.

Claim.—The heel-tap, composed of the metal ring A, with equidistant internally-projecting bearings *e e* and pins *e e*, the leather disk B fitting within the said ring and recessed for the reception of the said bearings, and the central-attaching screw D, the whole constructed and arranged as herein shown and described.

110,702.—Drying Oil-Cloths and Similar Fabrics.—Oliver C. Washburn, Philadelphia, Pa., assignor to Thomas Potter, same place.

Claim.—1. The arrangement of heating-pipes and rollers, operating as shown and described.

2. The process of drying oil-cloth and similar fabrics by exposing them while in continual motion to artificial heat, substantially as described.

110,703.—Governor for Steam-Engines.—Charles Waters, Boston, Mass.

Claim.—1. A regulator or governor, substantially such as described, in which the weights or balls are supported independently of the pendulum-arms which operate the valve, when said balls are connected to said arms so as to control their position without loading the arms with the weight of the balls.

2. In combination with a regulator a valve arranged to be adjusted in the direction of its axis of rotation, when arranged also so that it may be adjusted angularly upon or with reference to such axis.

110,704.—Constructing Moldings of Paper. — William W. Webster, Chelsea, Mass.

Claim.—A paper cornice, made and applied in the manner and for the purpose described.

110,705, antedated December 17, 1870.—Saw.—Thomas Welham, Philadelphia, Pa.

Claim.—A hand-saw provided with a muzzle, as herein shown and described, the blade of the saw having teeth upon one side for cross-cutting, and upon the other for slitting, the whole being arranged as and for the purpose herein specified.

110,706. — Seed-Planter. — William F. West, Haverstraw, N. Y.

Claim.—The combination and arrangement of the revoving axle B, pins N, bar M, lever I, and valves H, with the trunks F, track-coverer V, hinged plow G, and cords R and T, all made and operating substantially as described, and for the purposes hereinbefore set forth.

110,707. — Bag-Filling and Weighing Machine. — Charles A. Whelan and Charles T. Wakeley, Madison, Wis.

Claim.—1. The pin K, provided with cross-pin *p* and slot *a*, in combination with block I on hopper H, when connected and arranged as shown, and for the purpose specified.

2. The combination of the hopper H, having block I and pin K, with the frame A, windlass D, and scales S, when all constructed, arranged, and operated as shown, for the purpose described.

110,708.—Sad-Iron Heater.—Lewis Wilkinson, New York, N. Y.

Claim.—As an article of manufacture the small, light, hollow smoothing-iron, constructed as shown and described, and adapted to be sustained, while being heated, by the bracket of an ordinary gas-burner, all substantially as herein set forth.

110,709. — Children's Hobby-Horse.—William L. Williams, New York, N. Y.

Claim.—The bolt *c*, passing through the neck of the hobby-horse and having locking-pins, in combination with the shield *e*, hinged at *d* to the stud or post, as and for the purposes set forth.

110,710. — Apparatus for Making Extracts for Tanning.—Riley P. Wilson, New York, N. Y.

Claim.—1. The combination of the leaching-vats, receivers, and evaporating-pan, with their connections, substantially as and for the purpose hereinbefore set forth.

2. A steam-tight evaporating-pan, with connecting tube or tubes to the leaching-vats, substantially as and for the purpose hereinbefore set forth.

3. The combination of the steam-chamber and evaporating pan with their connections, substantially as described.

4. Perforated tubes, connected with the false bottom of the leach, running up into the bark, so that the entire leach may be saturated by steam simultaneously.

110,711.—Cover and Table for Sewing-Machines.—Francis R. Wolfinger, Chicago, Ill.

Claim.—The leaf C, arranged to slide down

through a slot in the bed A and form a leaf of greater extension and smooth surface for supporting goods when being sewed, as set forth.

110,712.—Guiding-Wheel for Harvesters.—Walter A. Wood and William Anson Wood, Hoosick Falls, N. Y.

Claim.—The construction of the guiding-wheel and its supports as follows: The wheel F, yoke *f*, spindle E, with its shoulders 1 2 and lugs *d d*, plate D and its flange *b*, long-flanged hollow columns B, and beam A, all constructed and arranged to operate as and for the purpose described and represented.

110,713.—Harvester.—Walter A. Wood, William Anson Wood, and John M. Rosebrooks, Hoosick Falls, N. Y.

Claim.—1. In a clutch mechanism, the combination of the foot-lever and its pawl *c* with the clutch-head and its wedge-shaped planes *e*, for the purpose of moving said clutch-head from the gear that it engages with, substantially as described and represented.

2. In combination with the rake-pin or spindle K carried around by the endless chain or belt A, the roller M, plate N and its boss *k*, through which the spindle passes, for the purpose of allowing a free turning motion and preventing the straw from winding on said spindle and choking or clogging the rake, substantially as described.

3. A finger-bar, composed of a wooden back-piece, S, and an angle-iron front piece bolted thereto, for attaching the guards to, substantially as described.

4. In combination with the platform of a harvesting-machine and a rake traversing it by a chain or belt, as herein shown, the raised flanges *e* on the guards, for holding up the butts of the grain so that the rake may pass in under the straw and thus more certainly insure its complete removal, substantially as described.

110,714.—Harvester.—Walter A. Wood, William Anson Wood, and John M. Rosebrooks, Hoosick Falls, N. Y.

Claim.—The arrangement of the levers C' D', and 4, in relation to the roller shoe-piece *x*, for operating the cutter-bar, as described and represented.

110,715.—Harvester.—Walter A. Wood, W. Anson Wood, and John M. Rosebrooks, Hoosick Falls, N. Y.

Claim.—1. In combination with the roller-bar, for carrying and supporting the finger-bar and cutting apparatus, the coupling-bar S and the gag-bar T hinged thereto, and acting in connection therewith, substantially as described.

2. In combination with the cutting apparatus, the bent and slotted piece *e* for admitting of the removal and replacement of the cutters, for holding the pitman to the cutter-bar, and for catching and holding the cutters from dropping down when the finger-bar is raised and folded up, substantially as described.

110,716.—Harvester-Rake.—William Anson Wood, Hoosick Falls, N. Y.

Claim.—1. In combination with a harvesting-machine having a circular platform and a rake rod or stale operated underneath said platform, the locking device, consisting of the spring-bolt and recesses, substantially in the manner and for the purpose herein described and represented.

2. In combination with a rake for clearing the platform or grain-table of the cut grain thereon, a rake-tooth working outside of the outer fence of said platform, to sweep off and carry around any grain that may hang on said outer fence, substantially as described.

110,717.—Car-Wheel Mold.—William Ellison Worth, San Francisco, Cal.

Claim.—The improved rotary mold or flask for car-wheels, consisting of the upper and lower flasks N F, and rings M B, constructed and arranged substantially as specified.

110,718.—Harvester.—Charles M. Young, Meadville, Pa.

Claim.—1. The combination of the main frame carrying one portion of the gearing, the gear-frame carrying another portion of the gearing and vibrating on a pivot parallel with the tongue but eccentric to any gear-center, and the universal joint for driving the gearing, arranged in the plane of the joint and between the two frames, substantially as hereinbefore set forth.

2. The combination with the main frame carrying one portion of the gearing, the gear-frame carrying another portion of the gearing and vibrating on pivots parallel with the tongue, the universal joint in the shaft connecting the two sets of gearing, the shoe fixed to the vibrating frame, and the hinged finger-beam, as hereinbefore set forth.

3. The combination of the main frame carrying one portion of the gearing, the gear-frame vibrating eccentrically to any gear-center, the gearing, the joint connecting the gearing, the crank-shaft on the vibrating frame, the rocking cross-head, and the cutter-bar, as set forth.

4. The combination of the main frame carrying one portion of the gearing, the gear-frame vibrating on a pivot parallel with the tongue, the gearing, the fixed shoe, the hinged finger-beam, the cutter, the rocking cross-head, and the crank-shaft, substantially as hereinbefore set forth.

5. The combination of the fixed shoe, the crank-arm on the pivot of the hinged shoe, and the bail or guard-rod hinged to the fixed shoe and crank-arm, as set forth.

110,719.—Musical Notation for Accordeons.—Carl Friedrich Zimmermann, Philadelphia, Pa.

Claim.—1. The system of musical notation, consisting of the three-lined staff, fig. 1, and adaptable to either French or German accordeons, as shown and described.

2. In connection with the above staff, the measure divided by equal space-marks *x y*, fig. 2, between which the key-numbers are indicated, substantially as described.

110,720.—Seeding-Machine.—D. S. Alvord, Austinburg, and Charles D. Hollis, Ashtabula, Ohio.

Claim.—The arrangement of the seed-box A, wheel B, curved arm D, guide-wheel E, tube F, slide G, arm K, pin *c*, and spring A', as and for the purpose specified.

110,721.—Meat-Cutter.—Jeremiah S. Artley, Danville, Pa.

Claim.—The combination, with the base A, of the vertically-placed and centrally-hinged casing B C, with enlargements *d* and knives *b*, and the vertically-placed cylinder D and knives *c*, operated by means of the wheels E G, all as shown and described.

110,722, antedated December 29, 1870.—Iron Plow-Beam.—Albert Ball, Canton, Ohio.

Claim.—The metal plow-beam A B, constructed of such form that a transverse section of the same at any point shall be of a U-shape, and that the vertex of any such section shall be on the lower or anterior side of the beam and its open part on the upper or posterior side of the beam, the lower end of said beam having the faces C, D, and E, on which the mold-board, share, and land-side are placed, and upon which they are secured by bolts passing through the sides of the beam, substantially as is herein specified.

110,723.—Car-Replacer.—David H. Ball and John Brooks, Sinnamahoning, Pa.

Claim.—The within-described car-replacer, consisting of the inclined bed A having clasp E pivoted at one end, and provided with the pivoted rail C on its face, which extends over and beyond the clasp, all substantially as shown and described.

110,724.—Grain-Dumping Car.—Leonard Bammerlin, Massillon, Ohio.

Claim.—1. The tilting grain-trough D, provided with the supporting-arms P P, and pivoted on the side of the car-box A, substantially as and for the purpose specified.

2. The stop-lever K, provided with the pointed lugs R, in combination with the car-truck G and the ratchet-bar N, substantially as and for the purpose specified.

110,725, antedated December 30, 1870.—Rein-Holder.—William Barstow, San Francisco, Cal.

Claim.—1. A rein-holder, in which the reins are held or bound by one or more balls, C, or equivalent device, moving between two inclined surfaces or between one inclined and one plane surface, substantially as herein specified.

2. A rein-holder, constructed as herein described, with the two leaves *a b* and box *d*, with its inclined side *f*, in combination with the ball C, substantially as herein specified.

110,726.—Curtain-Brake.—Thomas S. Bayne and George H. Maurer, Washington, D. C.

Claim.—The grooved curtain-brake herein described, provided with a lever-arm, *a'*, hinged loosely to the frame to permit lateral movement, and a spring or band, C, adjusted on the said arm so as to regulate the pressure.

110,727.—Coating and Decorating Paper, Cloth, and other Materials.—Frederick Beck, New York, N. Y.

Claim.—1. The process herein described for coating and decorating paper, cloth, and other materials, by applying thereto powdered shellac or other suitable substance, then covering the same with scales of mica and subjecting the material so prepared to the action of heated dies, rolls, plates, or other surfaces, under pressure, substantially as set forth.

2. Paper, cloth, or other materials coated or decorated with mica-scales, substantially as described.

110,728.—Sash-Holder.—John H. Bloodgood, Bridgeport, Conn.

Claim.—A sash-holder, consisting of the plate F formed upon or made a part of the plate H, and combined with the cam C formed upon the central chambered portion D, the arm E, and spring within the chamber, the whole constructed and arranged to operate substantially in the manner set forth.

110,729.—Gas Apparatus.—Abraham L. Bogart, New York, N. Y.

Claim.—1. The retort G, constructed as described, and combined with the heating burner, substantially as and for the purpose specified.

2. The annular cup or alcohol reservoir L, combined with the retort G and with the heating burner, in the manner and for the purpose substantially as described.

3. The combined burner, retort, and alcohol reservoir, when constructed and arranged substantially as shown and for the purpose set forth.

4. The illuminating burner, composed of the perforated nipple O and the burner E, provided with the slot *r*, substantially as and for the purpose shown.

5. In combination with the gas-jet *s* and pipe or mixing-chamber F, the air-passages *f* and *f*, substantially as and for the purpose set forth.

110,730.—Shuttle for Sewing-Machines.—Frederick W. Boland, New York, N. Y.

Claim.—The flat-base shuttle herein described, having cylindrical bore *b* and exit opening *c* arranged at the front end, but a little to one side of the point, in the manner and for the purpose shown and described.

110,731.—Hot-Air Furnace.—Lansing Bonnell, Milwaukee, Wis.

Claim.—1. Draught-guides U U, in combination with air-tubes E, with flanges Y and flanges W W, bottom B, and ash-pit floor X, substantially as described.

2. Drums C and D, in combination with air-tubes E, with flanges Y, substantially as described.

3. Air-tubes E, with flanges Y, substantially as described.

4. Air-tubes E, with openings Z and Z', in combination with bottom B, top F, and ash-pit floor X, substantially as described.

5. A furnace, having tubes E, with openings between them at their tops and bottoms, so that the draught may pass out between them at their top and down their outsides, and in through between them at the bottom, and out again between guides U U, substantially as described.

110,732.—Cigar-Mold.—Nicholas H. Borgfeldt, New York, N. Y.

Claim.—A cigar-mold constructed of four pieces, viz., the base *a*, the side pieces *b b*, and the follower *c*, substantially in the manner herein shown and described.

110,733.—Fastener for Meeting-Rails of Sashes.—Eliue K. Breckenridge, West Meriden, Conn.

Claim.—The plate A of a sash-fastener, to which the lever B is pivoted, constructed with a recess, *a*, for the insertion of the spring upon the under side, to bear against the said lever, in the manner substantially as described.

110,734.—Manure-Fork.—Amos S. Brinser and Henry Bricker, Falmouth, Pa.

Claim.—The combination of the ferrules A and B, shanks *c c* and *m m*, and pin *c*, when constructed and arranged substantially as and for the purpose specified.

110,735.—Sewing-Machine.—William H. Baker, Johnstown, N. Y.

Claim.—1. The combination of the shuttle-covering plate with the guide-regulator and its spring, arranged and operating substantially as described.

2. The guide or regulator B, constructed as shown and described, and provided with the spring C, substantially as and for the purposes herein set forth.

3. The combination of the plate A, regulator B, with projection *b*, the stud or pin *d*, and spring C, all constructed and arranged to operate substantially as and for the purposes herein set forth.

110,736.—Combined Cultivator and Planter.—Peter Burress, Braidwood, Ill.

Claim.—1. The covered plow-shares P P, with their colters H attached to the adjustable frames F F, all arranged to operate in combination with the main frame, substantially as described.

2. The arrangement, with the main frame, of the swinging tongue E, lever A, and rod K, all constructed and operating as set forth.

3. The rotating shaft N, provided with the seed-tubes T and rods S, in combination with the seed-slide all arranged to operate substantially as described.

110,737.—Hemmer for Sewing-Machines. Cyrus Carleton, Brooklyn, N. Y., assignor to Wilcox & Gibbs Sewing-Machine Company, New York City.

Claim.—1. The broad, flat, hem-turning plate 2 2, folded and bent centrally to turn over the edge of the cloth, its outer edges only being in contact and inclined, as shown, to press on the cloth outside of the seam the whole length of the plate, in order to force the cloth inward, all constructed and operating substantially as described and specified.

2. The combination, with the folding and guiding-plates 2 2, of the diagonal guide-piece 4, arranged at the delivery point of the hemmer to automatically guide the turned edge of the cloth and present it properly to the sewing mechanism, and to force the excess of cloth sidewise from between the plates 2, substantially as described and specified.

3. The independent adjustable pressure device, consisting of the non-elastic bar 3, spring 7, and screw and nut 8 and 10, in combination with the folding-guide 2, constructed and operating substantially as described and specified.

110,738.—Preserving Wood.—Thomas W. Chandler, New York, N. Y., assignor to himself and Nicholas De Peyster, same place.

Claim.—Preserving green lumber or articles that are cut or manufactured therefrom by the process herein described, in connection with the ingredients named, substantially as set forth.

110,739.—Sewing-Machine for Working Button-Holes.—Sherman Cleminshaw, Troy, N. Y.

Claim.—1. In combination with the needle-bar and its shuttle and eye-pointed needle mechanism, substantially as described, for holding the shuttle and needle firmly while it passes through the goods, but leaves it free to move when above the goods, to allow the thread to pass around it, as herein set forth.

2. The shuttle O, constructed as described, and provided with bobbin *g*, spring *f*, holes *h i*, and needle *b*, all substantially as and for the purposes herein set forth.

3. The box N, constructed as described, and provided with bearings *a a*, spring *e*, and lever *d*, for securing the combined needle and shuttle, substantially as and for the purposes herein set forth.

4. In combination with the spring *e*, the roller *m*, made adjustable, and arranged to make the needle and shuttle rigid at proper times, substantially as and for the purposes herein set forth.

5. The twister W, provided with circumferential and vertical grooves, and the hook *t*, all substantially as and for the purposes herein set forth.

6. The combination of the twister W, bar X, auger Y, and pins *v v*, all constructed and arranged to operate substantially as and for the purposes herein set forth.

7. The adjustable carriers *x x*, constructed and arranged to operate, in combination with the twister W, substantially as and for the purposes herein set forth.

8. The arrangement of the presser-foot S with point *l*, bar T, spring *p*, and cam-lever U, all substantially as and for the purposes herein set forth.

9. In combination with the presser-foot S, the guide-wire *r*, bar *s*, and pivoted box V, all substantially as and for the purposes herein set forth.

110,740.—Binder for Sewing-Machines. Jacob L. Coles, Newark, N. J.

Claim.—1. The arrangement, with relation to the folding-guide J and block *a*, of adjustable hook *f* and gauge *g*, as and for the purpose described.

2. The combination, with the guide J, over which the binding is folded and which guides the hat-brim, of the guide K arranged within the same to receive and guide a strip of filling on the edge of the brim and within the binding, as described.

110,741.—Automatic Car-Coupling.—David Pitkin Cory, Cranford, N. J., assignor to himself and Josiah Crane, jr., same place.

Claim.—The construction and arrangement of the draw-bolt B, slotted lever C, pin *a*, spring *d*, eye-bolt D, side-guides H H, and springs *f f*, operating in connection with the draw-head A and link I, substantially as and for the purposes herein set forth.

110,742.—Harvester.—William Robert Cory, Springfield, Ill.

Claim.—1. In combination with the dropper F the means employed for tilting the same, consisting of the lever P and slide H, constructed and arranged substantially as and for the purpose shown.

2. In combination with the above, the sweep K and arm I for operating the same, substantially as specified.

3. In combination with the cut-off bar N, pivoted to or upon the shaft L, the arm I of the slide H and arm O, attached to said shaft L, substantially as and for the purpose described.

4. In combination with the slide H, dropper F sweep K, and cut-off N, the lever R provided with the slot *r*, the connection S, the rod T, and the foot-piece U, substantially as and for the purpose set forth.

110,743.—Boot-Jack.—John Crabtree, Cincinnati, Ohio.

Claim.—1. The sliding arm B, held in place by projection a^1 and wires *a* and a^2, when used as and for the purpose specified.

2. Providing a sliding arm of a boot-jack with a scale and figures for the purpose of setting said arm, as herein set forth.

3. The rubber plug *d'* and washer *d*, in combination with the sliding arm B of a boot-jack, when arranged in the foot D, to operate substantially as herein described and shown.

110,744.—Children's Carriage.—John C. Crandall, New York, N. Y.

Claim.—In a children's carriage, the arrangement of a single reach, which is rigidly connected at one end to the box of the carriage, while its other end connects with the front axle by means of a pivot and one or more springs, substantially in the manner and for the purpose herein shown and described.

110,745.—Children's Carriage.—William E. Crandall, New York, N. Y.

Claim.—1. The mode of securing the profile-frames A A, runners B B, seat C, toy-box D, traverse E, and foot-board F, to each other by means of screws, substantially as and for the purpose shown and described.

2. The handle H, in combination with profile-frames A A, seat C, runners B B, and axles G, substantially as set forth.

110,746.—Railway-Car Seat.—William Crandell, Westfield, N. Y.

Claim.—1. The combination of the pivoted arms *a a'* with the seat C and back D, in the manner and for the purpose specified.

2. The pivoted arms *a a'*, the swinging lever E, and the spring rods F F', arranged together and operating in connection with the changeable seat C, in the manner and for the purpose specified.

110,747.—Door for Ranges.—Royal E. Deane and Thomas Shedd, New York, N. Y.

Claim.—The combination, with a door, B or C, of a supporting-lever D or D^a, one end of which shall be held upon a rod or inserted beneath a loop secured upon the face of a range or stove, while its opposite end shall be inserted beneath a loop secured upon the door B or C, when the same shall be constructed and operated substantially as and for the purposes set forth.

110,748.—Machine for Bending Metal Stirrups.—John H. De Valin, Baltimore, Md.

Claim.—1. In combination with the block A, constructed as described, with flanges *a a'*, shoulders a^2, projection a^3, and recess a^4, the slotted gauge C, adjusted in the recess a^4 by means of the screws H, and the lip-bolt F, provided with lip f^1, wings f^2, and key f^3, all substantially as and for the purposes herein set forth.

2. The combination of the block A, bolts D E E', clamp B, gauge C, lip-bolt F, and with or without the thickness-pieces H K G, all constructed and arranged as described, to operate substantially as and for the purposes herein set forth.

110,749.—Washing-Machine.—Samuel De Vean, Syracuse, N. Y.

Claim.—1. The wheel C, operating substantially as described, when provided with double buckets D' D', substantially as and for the purposes set forth.

2. The combination, with the wheel, constructed substantially as described, with double buckets D' D', of a boiler, A, provided with a band, *g*, in which bearings *e* are formed for the pivot of the wheel, substantially as shown and set forth.

3. The spring-catch *f*, in combination with the wheel C *e* and hinges *e*, all constructed and arranged as shown and described.

4. The wheel C, having buckets D' D', as described, when provided with a door portion, *c*, which is hinged so as to open sidewise in line with the shortest diameter of the wheel, substantially as herein shown and set forth.

110,750.—Gate.—Albert Jason Dimick, Berlinville, Ohio.

Claim.—The combination of the sliding bearing I, guided between and upon the diagonally-arranged posts O O, the stationary bearing N affixed to said posts, and a pin M inserted in a hole in the rounded part L of the axis of the crane, when all said parts are constructed and arranged as herein set forth.

110,751.—Handle for Cross-cut Saw.—Thomas S. Disston, Philadelphia, Pa., assignor to himself and Henry Disston & Son, same place.

Claim.—The plate D, adapted to the handle and to the saw-blade, substantially as described, in combination with the set-screws *b b'* and grooved bar E.

110,752.—Quadrat.—William Donald, Erie, Pa.

Claim.—The improved quadrat, beveled substantially as shown, for the purpose set forth.

110,753.—Feed-water Pipe.—John Doyle, Baltimore, Md.

Claim.—1. A feed-water pipe within a steam-boiler, with graduated perforations to equalize the distribution of the feed-water in the boiler, substantially as and for the purpose described.

2. A puppet-valve or series of puppet-valves within a steam-boiler, or a pipe discharging water therein, substantially as and for the purpose hereinbefore described.

110,754.—Tug for Towing-Boats.—Walter Everson, New York, N. Y.

Claim.—A hull constructed of the body A and twin sub-hulls B B, formed by the vertical stanchions *d d*, said sub-hulls, together with the intermediate deck H H, forming a parallel water-way from stem to stern, substantially as and for the purposes set forth.

110,755.—Spike-Machine.—David Eynon, Richmond, Va.

Claim.—1. The revolving disk D, having a series of dies arranged as described, in combination with the header H, griper B, and nippers Q Q, operating substantially as described, and carrying the blanks and inserting the same in the dies.

2. The combination of the header H, arms J, and adjustable guides *q q*, substantially as described.

110,756.—Spike-Machine.—David Eynon, Richmond, Va., assignor to Tredegar Company, same place.

Claim.—The slide R, carrying nippers Q Q, and the slide T, having a limited sliding motion on the slide R and operating said nippers, in combination with a shaft K, its crank *i*, connecting-rod or rods *e*, and mechanism, substantially as described, for adjusting the length of said rod or rods.

110,757.—Fruit-Can.—Reuben G. Farnham, Elbridge, N. Y., assignor of one-half his right to Russell B. Wheeler, same place.

Claim.—A jar-fastening, consisting of the ball C provided with a slot or recess, *d*, within which is fastened the eccentric or cam-lever D, substantially as described for the purpose set forth.

110,758.—Plow.—Nelson Faught, Pittsborough, Ind.

Claim.—1. The mold-board A, when constructed as described, and provided with the flange *a* and curve A', combined, so as to turn the sod or turf from the time when it is raised by the point, as herein described and shown.

2. The bottom extension E of the shear-plate D, when formed in one piece with the point C, and arranged to operate as herein described and shown.

110,759.—Excavator.—David Gilmore and William W. Forrest, Peotone, Ill., assignors to George Laidlow, same place.

Claim.—1. The slotted standard *r*, swiveled braces *q*, sliding frame *m*, roller *n*, braces S S', lever *t*, disk *u*, for adjusting the plow 12 13 to a vertical position, as set forth.

2. The combination of the slotted standard *r*, braces *q q* S S', frame *m*, roller *n*, bar G, rollers F, lever *w*, and projecting frame-piece U'', for moving the plow 12 13 to and from the elevator, as set forth.

3. The combination of the truss-frame A B, slotted standards C D, removable connecting-rod I J K, with the elevator 6 6', as set forth.

4. The extension-elevator, consisting of the inner frame 6 6', extension-pieces *b* 9, rack and pinions *c a*, and rollers 16, arranged to be adjusted in the truss-frame A B C, as set forth.

110,760.—Precautionary Attachment for Bottles Containing Poison.—Joseph Harrison, Philadelphia, Pa.

Claim.—A band for poison-bottles, &c., consisting of an elastic ring with projecting spikes, as described.

110,761.—Device for Nicking Screw-Caps.—William Hillhouse and George W. Briggs, New Haven, Conn., assignors to "The Grilley Company," same place.

Claim.—1. The herein-described cutter *a*, for cutting nicks in capped screws, constructed with projections *i i*, combined with a handle or stock, A, as and for the purpose specified.

2. In combination with the cutter *a*, constructed as described, the guides *b b*, combined with a handle or stock, A, as and for the purpose described.

110,762.—Device for Cutting Soles for Boots and Shoes.—Archelaus M. Howe, Worcester, Mass.

Claim.—1. The combination, with the cutting-die, of a separate pressing-rim, with pressing-plate and uniting device, substantially as and for the purposes set forth.

2. The combination, with the cutting-die A, of the pressing-rim D, plate B, and dogs C, substantially as and for the purposes herein set forth.

3. The combination, with the pressing-rim D, plate B, and dogs C, of the slides F and springs J, substantially as and for the purposes set forth.

4. The combination, with the plate B and cutting-die A, of the discharging-plate K, screws or pins L, and springs M, substantially as and for the purposes herein set forth.

5. A device for cutting soles for boots and shoes, consisting of a cutting-die, A, pressing-rim D, pressing-plate B, holding-dogs C, dog-slides F, discharging-plate K, guide-screws or pins L, and springs J and M, said parts being constructed and combined as shown in the drawing and herein described.

110,763.—Broiler.—Michael T. Hynes, Boston, Mass.

Claim.—The apparatus A with its flues *c c*, opening *e* to admit a fry-pan or broiler, and with or without the openings *b b*, all constructed substantially as and for the purpose set forth.

110,764.—Hollow Brick.—George H. Johnson, New York, N. Y.

Claim.—The improved hollow brick or tile herein shown, composed of the equal rectangular sides *a a* and ends *b b*, when said parts are disposed, with relation to each other, in the manner and for the purpose herein set forth.

110,765.—Carpenters' Shooting-Board.—Joseph Jones, Newark, N. J.

Claim.—The bed-plate B and adjustable table A, in combination with the stop D, all the parts being constructed, arranged, and operating in the manner and for the purpose as shown and described.

110,766.—Carriage-Axle.—Henry Killam, New Haven, Conn.

Claim.—1. The carriage-axle A, constructed with the enlarged portion B and shoulder *a* within the hub, and provided with the groove *d*, and communication *b* with the said groove outside the hub, as and for the purpose described.

2. In combination with the axle A and its enlarged portion B within the hub, the packing-cap E attached to the inner end of the hub, in the manner and for the purpose set forth.

110,767.—Eyeleting-Machine.—Albert Komp, New York, N. Y.

Claim.—1. The combination of the stud *d* of lever J, and the elongated slot *e* of link *f*, whereby the hopper-frame Q is allowed to remain stationary while the pin G is engaging an eyelet, substantially as described.

2. The combination of the movable stop *g* with the link *f* and hopper-frame Q, whereby the stop, acting against the shoulder *h* of said link, arrests the descent of the supplier and the hopper-frame until the plunger D has ascended far enough to clear the end of the supplier, substantially as described.

110,768.—Metallic Heel.—Austin S. Mann, St. Louis, Mo.

Claim.—As a new article of manufacture, the metallic hollow heel A, when provided, at or near its upper face, with malleable pins B B, for securing the heel on the boot, and with like pins D' D' at the base, to retain the pad, substantially as described.

110,769.—Ironing-Table.—Daniel W. Marshall, Pawtucket, R. I.

Claim.—The improved laundry-table herein described, consisting essentially of the platform A and board B, connected by pivoted supports E C and D, substantially as shown and described.

110,770.—Fare-Recorder for Cars, &c.—George R. Metten, Cleveland, and Oscar S. Pease, Xenia, Ohio; said Metten assignor to said Pease.

Claim.—1. The cut-out and beveled projections *k k*, arranged, as described, upon the frame K, and used in combination with the beveled corners of the plate L, substantially as and for the purpose herein set forth.

2. The spring-hook *m*, arranged, as described, on the frame K, and used in combination with the ratchet-wheel *i* on the roller I, to change the inked ribbon *f*, substantially as herein set forth.

3. In combination with the above, the frame K with projections *k k*, hook *m*, and springs *p p*, the plate L with projection *n*, and the cover E with springs *y y*, all substantially as and for the purposes herein set forth.

110,771.—Horse Hay-Rake.—Charles Rollin Merriam, Middlebury, Vt., assignor to himself and W. H. Merriam, Stratford, N. H.

Claim.—1. The adjustable elevating-studs *m m* attached to the hinged frame H, in combination with supporting-bar I, substantially as and for the purpose set forth.

2. The combination of frame H, bar N, and adjustable stud *m'*, with adjustable studs *m m* and elevating-bar I, substantially as described.

3. The jointed arm G, provided with guides *d*, slot *b*, and spring *c*, as and for the purpose set forth.

4. The teeth *x x*, constructed as described, in combination with arm G, ferrule *y*, and the pin which connects the teeth, all arranged substantially as set forth.

110,772.—Corn-Husker.—Abel Merwin, St. Joseph, Mich.

Claim.—1. In combination with the cutter-blade C, the cutting and stripping-tool G, constructed and arranged to operate in the manner shown and for the purpose set forth.

2. The combination and arrangement of the cutter-bars B and F, cutter-blade C, cutting and stripping-tool G, lever E, lug A, springs H and I, rod J, and treadle L, substantially as and for the purpose described.

110,773.—Method of Forming Body-Loops for Carriages.—Robert R. Miller, Plantsville, Conn.

Claim.—The hereinbefore-described method of forming body-loops from a solid bar of iron without welding, substantially as specified.

110,774.—Compound for Destroying Worms in the Cotton-Plant.—Thomas W. Mitchell, Richmond, Texas, assignor to himself and Robert P. Briscoe, same place.

Claim.—The improved solution herein described, prepared in the manner and in substantially the proportions herein set forth, so as to be used as specified.

110,775.—Street-Sprinkler.—William C. Moores, Washington, D. C., assignor of two-thirds of his right to Gilbert Pullen, same place.

Claim.—1. A street-sprinkler, consisting of the tank or body A and a distributing-wheel or head, B, connected thereto, and arranged to be operated by the movement of the apparatus, substantially as described.

2. The disk *i*, provided with the radial blades *j*, constituting the head D, and the bevel-pinion *a* mounted on the tube *a*, in combination with the shaft *d* having the bevel-pinion *c* and pulley *f* arranged to be operated by the driving-wheel B, substantially as set forth.

3. In combination with the head or distributer D the shields G, constructed and arranged to operate substantially as herein described.

110,776.—Car-Coupling.—Joseph Mount, Monroe township, N. J.

Claim.—The spring E, provided with the lug K, fitting into a groove in the pointed pin, the spring being rigidly attached at one end and moved at the other by the arm D, which has projections *a a* (one or more) through the face of the draw-head, the whole being adapted to draw-heads of the ordinary construction, and operating as set forth.

110,777.—Machine for Cutting the Ends of Wooden Pencils.—Teile H. Müller, New York, N. Y., assignor to Joseph Reckendorfer, same place.

Claim.—1. The combination, with the pencil-feed block, of the reciprocating carriage moving parallel with the face of the feed-block, and the revolving cutter mounted on said carriage and set at an angle with the face of the feed-block, substantially in the manner and for the purposes shown and described.

2. The combination, with the pencil-feed block, the reciprocating carriage, the driving or eccentric shaft from which said carriage derives its movement, and the revolving cutter and cutter-shaft, of the pulleys on said eccentric and cutter-shaft, constructed of different sizes, so that the eccentric shaft may revolve at a different rate of speed from that of the cutter-shaft, as and for the purposes shown and described.

3. The herein-described combination, with the pencil-feed block, of the cutter-carriage and mechanism for imparting to the same a vibratory movement, arranged so that the position of the carriage with relation to the feed-block may be varied to compensate for the wear of the cutter, as set forth.

4. The adjustable pencil-feed block, constructed substantially as herein described; that is to say, having a trough for the body of the pencil, a tubular opening for the end of the pencil, and a steel line, as and for the purposes set forth.

5. The combination, with the reciprocating cutter-carriage and pencil-feed block, of the gauge attached to said carriage in front of the cutting-blade, and arranged with relation to the feed-block so as to determine the extent to which the end of the pencil shall project therefrom, substantially as herein shown and set forth.

6. The combination, with the circular revolving cutter and the reciprocating carriage, of an emery or grinding-wheel moving the said carriage, and mounted upon a horizontal shaft placed transversely to the cutter-shaft and adjustable longitudinally, substantially in the manner and for the purposes shown and described.

7. The combination, with the cutter-carriage and cutter, of the grinding-wheel, the adjustable lever or arm for supporting the same, as described, and the spring for upholding the said wheel with a yielding pressure against the cutter, as herein shown and set forth.

110,778.—Lightning-Rod.—David Munson, Indianapolis, Ind.

Claim.—1. A sheet-metal lightning-rod, when made hollow and without any solid supporting-rod or brackets on its inside, substantially as and for the purposes set forth.

2. The combination, with a hollow sheet-metal lightning-rod having no solid internal support, of the solid point and ground-connection F D, substantially as and for the purpose set forth.

3. A hollow sheet-metal lightning-rod, of either round or angular shape, formed with one or more lips C, substantially as and for the purpose described.

4. The connection of the several lengths of the hollow rod, as shown at E, substantially as and for the purpose described.

5. The connection of the portion D to the hollow rod by means of metal bands and slots, substantially as described.

110,779.—Casting Car-Wheels.—Chandler Needham, Worcester, Mass.

Claim.—The process or mode above described, for making a combined cast-steel and cast-iron car-wheel, whereby the molten cast-iron is introduced through a series of holes into the mold directly upon the inner unfluxed surface of the cast-steel tire, and a perfect union and weld of the metals are produced, as stated.

110,780.—Car-Starter.—William Harrison Newton, Newport, R. I.

Claim.—1. The combination, with the axle of a car or other wheeled vehicle, of an eccentric drum mounted loosely thereon, and a roller or equivalent device located within the drum, or between it and the axle, substantially as and for the purposes shown and described.

2. In combination with the eccentric drum and its roller, operating in connection with the car-axle, as set forth, the means, substantially as herein shown and described, for causing the drum to return to its normal position when the draft-chain is slackened.

3. The arrangement, herein shown and described, of the eccentric drum, the roller, and the axle, provided upon that part inclosed by the drum with a hub or pulley-like projection, for the purposes set forth.

4. The partition flange placed in the eccentric groove or recess within the drum and around the axle, as and for the purposes set forth.

110,781.—Heating-Stove and Drum.—William H. Nobles, St. Paul, Minn., assignor to himself and C. D. Williams, same place.

Claim.—1. The cut-off H, and its arrangement for convenient use, as herein described and set forth.

2. The drum G, provided with partition *b* and pipes E I, constructed and arranged substantially as and for the purposes set forth.

3. In combination with the above, the stove A, provided with partition *a*, air-chamber C, and pipes D E J, all constructed and arranged substantially as and for the purposes herein set forth.

110,782.—Hair-Puff or Roll.—Joseph D. Oppenheimer, Philadelphia, Pa.

Claim.—A hair-roll or puff, when the wool, after having been carded in laps by machinery or otherwise, is sewed on the wire B in the manner above set forth and described.

110,783.—Fastening for Braces, &c.—Edward Lawley Parker, Birmingham, England.

Claim.—The improvements hereinbefore described and illustrated in the accompanying drawing, in connecting together and disconnecting from one another the two parts of fastenings for braces, belts, and other articles; that is to say, the perforated plate *b c d* of the one part of the fastening, and the spring-arms and hooks *f f'* of the other part of the fastening, said parts being arranged for joint operation, substantially as described and illustrated.

110,784.—Milk-House.—Henry Peregoy, Mount Carmel, Md.

Claim.—The arrangement within a well-house of

the rectangular box B, provided with shelves and doors, as described, one end of said box having wire-cloth a, and inserted in the side of the well, while the other end has a chimney passing up through the top of the well-house, as herein set forth.

110,785.—STEP-LADDER.—William G. Philips, Newport, Del.

Claim.—The construction and arrangement of the ladder A B, support or prop D E, platform C, bars G G, arm b, pin a, and shaft c, all substantially as shown and described, and for the purposes set forth.

110,786. — CORN-PLANTER. — Fielding W. Poe, Jr., Vandalia, Ill.

Claim.—1. The arrangement of the elbow-levers e, standards c, chains h, seed-boxes d, connecting-rails d, and seed-tubes i, as and for the purpose specified.

2. The arrangement of the wheels b between and in line with the seed-tubes, as and for the purpose explained.

110,787.—WINDOW-SHADE.—Ansel W. Porter, Union City, Ind.

Claim.—1. A window-shade, composed of slats connected by straps or equivalents, when said straps are attached to the slats near the upper edge, and the lower edge of each slat overlaps the upper edge of the adjoining slat, substantially as herein set forth.

2. In combination with a window-shade composed of slats and straps, or equivalents, in the manner described, the box d e, constructed and arranged substantially as and for the purposes herein set forth.

3. The within-described "book-shade," constructed as described, so as to be lowered from the top, and raised from the bottom at will, substantially as set forth.

110,788.—CORN-PLANTER.—Jacob R. Randall, Camargo, Ill.

Claim.—1. The hinged frame C, adjustable gauge-wheels G G, cutters I I, with mold-boards b b, boxes D D, conductors J J, and slide d, all constructed and arranged to operate substantially as and for the purposes herein set forth.

2. In combination with subject-matter of foregoing clause, the main frame A, wide rollers B B, and movable seat M, said main frame having the frame L, with shovels K K, hinged at its front end, substantially as and for the purposes herein set forth.

110,789.—WRENCH.—John F. Robertson, Warwick, N. Y., assignor of two-thirds his right to James H. Holly and John G. Knapp, same place.

Claim.—1. The hinged or pivoted jaws A, provided upon their inner faces with the inclined planes a' and dovetailed grooves a'', in combination with the sliding block C provided with the dovetailed tongues c', substantially as and for the purpose specified.

2. In combination with the jaws A and sliding block C, constructed as described, the screw D and nut E, working within a suitable frame, substantially as shown, and for the purpose set forth.

110,790.—MACHINE FOR SEWING OR WORKING BUTTON-HOLES.—Charles E. Robinson, Boston, Mass.

Claim.—1. The combination, with an organized machine for making a button-hole stitch, of the following elements, viz., a means of holding the cloth or material while being operated on, and a means, as hereinbefore specified, of feeding the cloth or material along automatically, and with a variable speed, the said elements being constructed, arranged, and made to operate together, and with the stitch-forming mechanism, as and for the purpose set forth.

2. The combination of the automatic variable feed-motion or mechanism with the guiding mechanism, the whole being constructed, arranged, and made to operate together in manner for the purpose set forth.

3. The feed-clamp, constructed substantially as described, for holding the cloth or material to be operated on, in combination with the feeding and guiding mechanism, constructed, arranged, and operating in manner and for the purpose specified.

4. The mechanism, substantially as described, for imparting rotary or horizontal movements to the feed-clamp or cloth-carrier, the same consisting of the gear D, the pinion b, the impelling-pawl and ratchet, the lever G and its spring, the cam F, and means of imparting rotation to the latter.

5. The means or mechanism, as described, for regulating the movement or rotation of the pinion b, or the feed-clamp, in order to produce the lesser equable and uniform feed, the same consisting of the prismatic-shouldered block or stop s or its equivalent, arranged upon the lever E', in combination with the lever G, the whole being combined and arranged together in manner as set forth.

110,791. — FRAME FOR TRAVELING-BAGS, &c.—William Roemer, Newark, N. J.

Claim.—In combination with a hinged flange-frame, a hinged inlay lying parallel with and riveted or otherwise fastened to the side flange of the frame, substantially as and for the purpose herein specified.

110,792.—TARGET-GAME.—John C. Schooley, New York, N. Y.

Claim.—The new and improved toy herein shown and described, consisting of the target a, provided with a series of holes b b, suitably numbered, and the ball c, attached to the center of said target by the elastic cord d, all as specified.

110,793.—STEERING-APPARATUS.—John C. Schrader and Carl L. Mathiesen, New York, N. Y.

Claim.—The cap C, constructed substantially as set forth, and the tiller or cross-head E, in combination with the springs or elastic cushions F, which are arranged in the former to bear against the latter, substantially as and for the purpose set forth.

110,794.—STREET-PAVEMENT.—William L. Shaw, Portland, Me.

Claim.—A pavement, constructed with the blocks B B, the oblique-edged planks a a, and the laterally-channeled key-pieces c c, each constructed independently of the others, and all adapted to look together when in place, substantially as described.

110,795. — WARPING-MACHINE. — Thomas Singleton, Over Darwen, England.

Claim.—1. The two rollers F and G and the two arms N or P, and the journal R, in combination substantially as and for the purpose hereinbefore set forth.

2. The falling weights or staples E E E, in combination with the rollers F and G, to stop the machine, as hereinbefore described.

110,796. — HYDRAULIC ENGINE. — William Snyder, Bullskin township, Pa.

Claim.—The hydraulic engine, having cylinders A, fore-bay B, man-hole covered by plate G, shaft D with wheels E, step F, and sluice H, constructed as described, and adjusted for operation as specified.

110,797.—RAILWAY RAIL-CHAIR.—William H. Staats, Crescent, assignor of one-half his right to Rufus Lape and Charles A. McLeod, Troy, N. Y.

Claim.—The rails A A, resting upon the beveled

bed-plate C, said parts being inclosed by the clamps B B, and secured by bolts a d, in the manner shown, substantially as described, and for the purpose set forth.

110,798. — ENVELOPE.—Robert Sherwood Stubbs, Lisbon, N. H.

Claim.—The letter-sheet herein described, provided with the flap b, slits e s s, and ears c c', substantially as specified.

110,799.—MOWING-MACHINE.—Zuriel Swope, Lancaster, Pa.

Claim.—1. The cutter-bar J, provided with recesses in its upper surface, and a circular projection, m, in the center of each recess, substantially as and for the purposes herein set forth.

2. The combination of the knives K K with their shanks k k, the recessed cutter-bar J with projections m m, and the plate or band L with screws or bolts e e, all substantially as and for the purposes herein set forth.

3. The arrangement of the frame A, driving-wheel shaft b, driving-wheel C, ratchet-wheel d, spring c, cog-wheel E, pinion f, crank h', pitman G, and lever H, all as shown and described, in relation to the reciprocating cutter-bar, and for the purposes set forth.

110,800. — APPARATUS AND PROCESS OF CLEANING COTTON-WASTE, &c.—George W. Sylvester, Belleville, N. J.

Claim.—1. The apparatus herein described for washing and cleansing cotton and woolen waste, composed of a series of tanks or vessels, so as to alternately immerse and wring or squeeze the material, as set forth.

2. Apparatus for expelling the solvent, composed of a steam-tight jacket and perforated steam-pipes.

3. The process of cleaning waste by the application of hydrocarbons, such as herein described, applied substantially in the manner set forth.

4. The macerators herein described, arranged so as to purify the oil by filtration, in the manner described.

5. The method described for purifying oil from waste by macerating or filtering with bone-black or its equivalent, as set forth.

6. The apparatus described, for separating the heavy oils from the light solvents, consisting of the still T, digester Q, steam-coil U, its connecting-passages or pipes S and V, and condensing-chamber R, arranged and operating substantially as described.

7. The combination of the following separate parts, which constitute a complete method, viz., successive washing and squeezing or wringing, the separating of the impurities from the mixed oils by maceration and filtration, the separation of the heavy oils from the filtering medium by solvents, and the final separation of these from the heavy oils, all substantially as set forth.

110,801.—MEAT-CHOPPER AND VEGETABLE-SLICER.—James M. Taft, Arcadia, Wis.

Claim.—1. The frame A, constructed with arches a' a', and transverse bar V, mortised at v', when arranged as described, for the purpose of holding interchangeably the meat-chopper or grater, substantially as specified.

2. The jointed feeding-bar h, provided with hook i and operating in connection with the cam k, for turning the block K, substantially as herein set forth.

110,802. — CLOTHES-LINE HOLDER.—Ezra W. Talbott, Napoleon, Ohio, assignor to himself and James W. Miller, same place.

Claim.—The angle-levers D D, having a hook at the top and detachably-fulcrumed at E, combined, as described, with pin I and the uprights B B, having steps F F and perforated arms C C, for the purpose specified.

110,803. — RAILROAD-CAR VENTILATOR.—Clark P. Tillinghast, Providence, R. I.

Claim.—The improvement in car-ventilators or dust-guards, which consists in providing the leaves A and A' with the right-angled edges b b', hinged to the car substantially as described by means of which the current of air is directed past the joint with the window-jamb or side of the car, as and for the purposes specified.

110,804.—SODA-WATER FOUNTAIN.—Antony Tumler, New York, N. Y.

Claim.—The ice-chamber A, sirup-wells B, pipes F, sliding gate H, ways I I, and open-base C, combined, arranged, and operating substantially as and for the purposes described and set forth.

110,805.—SCHOOL-DESK AND CHAIR.—Alexander Sidney Vaughan, Elkton, Md.

Claim.—The frames B B', supporting the desk A and seat D, in combination with the back F secured to or forming part of said frames, as specified.

110,806.—APPARATUS AND PROCESS FOR DISTILLING OIL.—William G. Warden, Philadelphia, Pa.

Claim.—1. The process of distilling oils, &c., by subjecting the same to the action of heat in a vessel a portion of which extends below the fire, and in which a constant upward current from the said lower portion is maintained, as described.

2. An oil-still suspended or otherwise arranged within a furnace, so that a portion of the body of the still will project below the fire-chamber, forming a receptacle for retaining the heavier particles below the point where the heat is applied.

3. The combination of the subject-matter of the preceding claim and a feed-pipe, m, communicating with the still near the bottom of the same, as set forth.

4. The combination of the furnace A and its fire-places, the chamber D, and still B, supported on the roof of the furnace, and passing through the same into the said chamber D.

110,807.—COTTON-PLANTER. — Dwight F. Welsh, Nevada, Ohio.

Claim.—1. The seed-shaft E', when constructed with hook-shaped teeth e e, arranged thereon in triangular clusters, the brushes D' D', and the revolving whipper F' f, when constructed substantially in the manner herein shown and described.

2. The combination of the seed-shaft E e and the revolving whipper F f, substantially as set forth.

110,808. — RAILWAY-SWITCH. — William Wharton, jr., Philadelphia, Pa.

Claim.—The combination of the switch-rails, the double-cranked shaft F, and the sliding rail H, all arranged and operated substantially as described.

110,809. — BEE-HIVE. — John Wheeldon, Greensburg, Ind.

Claim.—1. The combination of the stationary rabbets D D, right and left swinging doors E E, wire-cloth or perforated tin a a a' a', glass c c, and panels b b and b' b', all substantially as shown and described, to form the inner hive.

2. In combination with the inner hive, composed of the various parts described, the outer hive, formed of the bottom board A, front and rear sides B B, and right and left swinging doors C C, constructed and arranged substantially as and for the purposes herein set forth.

3. The combination of the case J, nucleus-boxes K K, wire-cloth m, movable glass n, and frames L, all constructed and arranged as described, and attached to the door E of the inner hive, substantially as and for the purposes herein set forth.

110,810.—ATTACHMENT FOR SEWING-MACHINES.—William H. White, Baltimore, Md, assignor of one-half his right to I. Wellington Hoyer, same place.

Claim.—1. The combination of the adjustable hemmer-hooks C C with the double hemmer-guide A, for the purposes and in the manner substantially as specified.

2. The combination of the attachment F, constructed as described, with the double-scroll hemmer A, substantially as shown and described.

3. The combination of the device E, constructed as shown, with the double-scroll hemmer-guide A, substantially as specified.

4. The improved double-guide or hemmer A, having the points or check-guides *c c* at the larger end, and with its inner edges nearly or quite straight, and parallel to the back of the guide from thence to the smaller or U-shaped end, as shown and described, to operate as specified.

110,811.—CORN-PLANTER.—Joseph M. Whitmore and John N. Arvin, Valparaiso, Ind.

Claim.—1. A diagonally-slotted and reciprocating slide M, applied perpendicularly to the pin N of flap O, as and for the purpose described.

2. The combination of levers L L and bar J with sleeves G G, pinions H H, and rack-bars I I, when arranged and operated as described.

3. The combination of a rack-bar, I I, sleeve G, pinion H, and pin N, with dropper F and flap O, as and for the purpose described.

4. The runners P P, pivoted in front and resting directly beneath the axle, and the covering-rolls S S attached thereto, combined with mechanism U T V, extending in front of the driver's seat and within reach of his feet, as and for the purpose described.

110,812.—MACHINE FOR WRAPPING "KISSES," &c.—Charles C. Wilson, Baltimore, Md.

Claim.—1. The air-pump *w*, flexible tube *h*, movable pipes *e e*, and suckers *o o*, or their equivalents, for feeding paper by suction, as herein set forth

2. The lever I and cam 15, arranged as described, for operating the air-pump *w* and feeding mechanism *e e*, substantially as set forth.

3. In combination with the feeding mechanism *e e*, the springs 16 16, for the purposes set forth.

4. The arrangement of the wheel *k*, elastic feed-rollers *l l*, and scissors *o*, for feeding and cutting off the mottoes, substantially as herein set forth.

5. The front plungers *a* and *b b*, constructed and arranged to operate substantially as and for the purposes herein set forth.

6. The plunger *p*, constructed and arranged to operate substantially as and for the purposes herein set forth.

7. The carrier 10, constructed and arranged to operate substantially as and for the purposes herein set forth.

8. The triangular plungers *d d*, constructed and arranged to operate substantially as and for the purposes herein set forth.

9. The folders *f f*, constructed and arranged substantially as and for the purposes herein set forth.

10. The back center plunger *c*, arranged to operate substantially as and for the purposes herein set forth.

110,813.—CUT-OFF VALVE FOR STEAM-ENGINES.—George S. Young, Clearfield, Pa., assignor to himself and Ai. Fitch Boynton, same place.

Claim.—1. The construction of a steam-engine cylinder and its valve-chest, with their dividing line intersecting the side steam-passages, substantially as and for the purpose set forth.

2. The cut-off valves *n*, constructed and arranged substantially as described, whereby they can be opened and closed by the passage of the ejent and live steam respectively, without other agency, substantially as specified.

3. The arrangement of the cut-off valves in separate chamber or chambers from the slide-valve chest, and between it and the cylinder, substantially as shown and described.

4. The combination of the forked lever *k* and flexible bar *p* with the arms *m* on the axes of the cut-off valves *n*, to effect the retention and release of the latter, substantially as specified.

110,814.—MILL-SPINDLE STEP.—George S. Young, Clearfield, Pa., assignor to himself and Ai. Fitch Boynton, same place.

Claim.—The combination of the worm-wheel C carried by the cover D, with the step B and socket A, all constructed and arranged to operate substantially as shown and described.

REISSUES.

4,223.—CHILDREN'S CARRIAGE.—William E. Crandall, New York, N. Y.—Patent No. 100,121, dated February 22, 1870; reissue No. 3,972, dated May 17, 1870.

Claim.—1. A riding device, consisting of the profile-frames A A connected together by a seat so as to allow the feet of the rider to extend downwardly between the said frames, substantially as described.

2. Two profile-frames terminating in rockers below, and connected together by a seat and a foot-board.

3. The combination of a box, D, profile-frames A A, and a suitable seat, C, substantially as described.

4. The profile-frames A A, seat C, box D, bed B, rockers and wheels, combined and operating in relation to each other, substantially as described.

5. A hinged toy-box arranged between two profile-frames, substantially as described.

6. The wheels F, arranged upon the rockers in front and rear, in combination with the two profile-frames connected together by a seat, substantially as described.

7. The riding device produced substantially as described, that is to say, that it can be converted into a carriage or rocking-horse through the medium of rockers and wheels, the latter adapted to be raised or lowered, substantially as described.

4,224.—SECURING RAILWAY-RAIL JOINT.—Lyman Fay, Worcester, Mass., assignor to Joseph M. Rice, same place, and Daniel R. Pratt, New York.—Patent No. 35,597, dated June 17, 1862.

Claim.—1. The construction and arrangement of boxes or cups, recessed to admit of the reception of rubber or other elastic packing, in combination with fish-plates applied to railroad-rail joints, and the bolts passing through said boxes or cups, in the manner and for the purpose herein described.

2. The combination of the box or cup F, elastic packing H, follower G, with the fish-plates or splice-pieces A B, the bolts E, and rails C D, in the manner and for the purpose herein described.

3. The arrangement, substantially as herein described, to secure splice-pieces or fish-plates to the joints of railroad-rails, by means of boxes, cups, or plates, interposed strips of rubber or other elastic material, and follower and bolts, for the purposes set forth.

4,225. — Division A. — INSTRUMENT FOR DRAUGHTING GARMENTS.—Ursula Louise Leete, New Haven, Conn.—Patent No. 107,068, dated September 6, 1870.

Claim.—1. The instrument herein described for draughting the front of an upper garment, having its shoulder-rule C and dart-form L connected to the main rules by a slide and pivot, for the purposes set forth.

The instrument for draughting the back of an ... garment, having its rule E pivoted to the ... rule, as shown and described.

... — Division B. — INSTRUMENT FOR ...RAUGHTING GARMENTS.—Ursula Louise ...eete, New Haven, Conn.—Patent No. ...7,068, dated September 6, 1870.

...im.—1. The combination of the main-rule G, ...rule F, pivoted-rule H, and pivoted sliding ...le I J, substantially as shown and described.

...In combination with the above, the main-rule ...-rule M, supporting-rule E, shoulder-bar C, ...main-rule G, short bar Q, back-form R, and ...rule P, when all are combined to operate substantially as shown and described.

...— CLOTHES-WASHER. — Ariadna B. ...Mercier, Providence, R. I.—Patent No. ...,773, dated July 31, 1866.

...im.—An improved apparatus for washing ...es in an ordinary boiler, consisting of a perfo... false bottom, A, for the clothes to rest upon, ...water-space formed underneath the said false ..., and a plug B, or equivalent device for ...ing a hollow shaft through the mass of clothes ...ect with such water-space, and enable a jet ...er to rise from the effect of ebullition, and ...ad over the top of the clothes, substantially ...ein described.

...—PUNCH.—Isaac P. Richards, Whit...ville, Mass.—Patent No. 104,769, dated ...e 28, 1870.

...im.—1. The combination of the separable ...nch with a shoulder and shank, as described, ...the separable punch having a teat-shank sock... going entirely through it axially, as specified.

...The combination of the separable teat, having ...ulder and shank, as described, and the separable punch having the shoulder *c c*, and the teat-... passage going entirely through it, as set ... with the screw-coupling nut D, the shank A, ...screw B, all being as explained.

...—BLANK FOR, AND DIE FOR MAKING, ...OLD-BOARDS FOR PLOWS. — William ...old Watson, Tonica, Ill.—Patent No. ...,686, dated March 15, 1870.

...im.—1. The herein described die or former, in ...h to upset and thicken the edge or chin of a ...board blank, substantially as and for the purpose set forth.

...The blank *i*, when constructed substantially ...d for the purpose herein specified.

DESIGNS.

...—CARPET-PATTERN.—Robert R. Camp..., Lowell, Mass., assignor to Lowell ...nufacturing Company, same place.

...im.—The configuration of the design hereunto ...ed, when made by being inwrought into ...three-ply ingrain, or other carpeting, in the ... similar to the photographic print accompanying ...is specification.

...—CARPET-PATTERN.—Robert R. Camp..., Lowell, Mass., assignor to Lowell ...nufacturing Company, same place.

...im.—The configuration of the design hereunto ...ed, when made by being inwrought into two ...ply ingrain, or other carpeting, in the form ... to the photographic print accompanying ...pecification.

4,549.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply ingrain, or other carpeting, in the form similar to the photographic print accompanying this specification.

4,550.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply ingrain, or other carpeting, in the form similar to the photographic print accompanying this specification.

4,551. — HAIR-PIN.—William F. Fluhrer, New York, N. Y.

Claim.—The design for a hair-pin, as herein shown and described.

4,552.—TYPE.—Julius Herriet, New York, N. Y., assignor to David Wolfe Bruce, same place.

Claim.—The design or pattern for printing-types herein set forth and shown.

4,553.—TYPE.—Julius Herriet, New York, N. Y., assignor to David Wolfe Bruce, same place.

Claim.—The design or pattern for printing-types herein set forth and shown.

4,554.—EGG-STEAMER.—William Kirkham, Springfield, Mass.

Claim.—The design for an egg-steamer, as shown.

4,555.—SHAWL.—Charles H. Landenberger, Philadelphia, Pa.

Claim.—The design for a shawl, substantially as described and illustrated.

4,556.—RAILING FOR CEMETERY LOTS.—Albert Laurence Murphy, Philadelphia, Pa.

Claim.—The design for a cemetery railing, substantially as described, and illustrated in and by the accompanying drawings.

4,557.—LAND-MARK.—John H. Parrish, Greensborough, Ala.

Claim.—The design for a cast-iron land-mark or monument, substantially as shown and described.

4,558.—COLLAR-BOX COVER.—Pulaski B. Pickens, New York, N. Y.

Claim.—The design for a box-cover, as shown.

4,559.—TYPE.—Richard Smith, Philadelphia, Pa., assignor to MacKellar, Smiths & Jordan, same place.

Claim.—The design for printing-type, as shown.

4,560.—TYPE.—Richard Smith, Philadelphia, Pa., assignor to MacKellar, Smiths & Jordan, same place.

Claim.—The design for printing-type, as shown.

4,561.—TYPE.—Richard Smith, Philadelphia, Pa., assignor to MacKellar, Smiths & Jordan, same place.

Claim.—The design for printing-type, as shown.

4,562.—CHAIN-HOOK.—George D. Stevens, New York, N. Y.

Claim.—The design for a chain or snap-hook, as herein shown and described.

TRADE-MARKS.

122.—DURHAM TOBACCO.—W. T. Blackwell, Durham, N. C.

123.—AGRICULTURAL IMPLEMENT.—Hall & Speer, Pittsburg, Pa.

124.—HAY-ELEVATOR AND OTHER AGRICULTURAL IMPLEMENTS.—Aaron J. Nellis, Pittsburg, Pa.

125.—SEA-MOSS COUGH-CANDY, TROCHES, AND SIRUP.—William J. Rand, Jr., Brooklyn, N. Y.

126.—CIGAR.—Straiton, Schmitt & Storm, New York, N. Y.

127.—YEAST.—The National Yeast Company, Seneca Falls, N. Y.

ISSUE OF JANUARY 10.

PATENTS.

110,815.—GLASS LAMP.—John Adams, Birmingham, Pa.

Claim.—1. In the manufacture of glass lamps, the manner of attaching a metallic handle to the lamp-stem, between the bowl and foot, by interposing the eye of the handle between the foot and bowl cavity of the mold, so that, with the blowing of the bowl, the peg of the latter shall make a firm union with the glass of the foot through the eye of the handle, substantially as described.

2. As an improved article of manufacture, a glass lamp having a metallic handle, with a solid eye attached between the bowl and foot.

110,816, antedated December 30, 1870.—LAMP.—Albert Albertson, Jersey City, N. J.

Claim.—1. The combination of the tapering jacket A with openings *a*, hollow tapering wick-case B, and wall D, when such parts are constructed of heat-conducting metal, and so arranged as to form air-rarefying chambers, to conduct air to the interior and exterior of a hollow flame, as and for the purpose set forth.

2. In combination with the elements of first claim, the annular oil-reservoir C, with filling-tube I, as and for the purpose set forth.

3. Coating or covering the outside of lamps, operating with heat-conducting draught-flues or chambers, as described, with a non-conducting substance, for the purpose specified.

4. The deflector F″, and rod F′, in combination with the tapering jacket A and hollow tapering wick-holder B, as and for the purpose set forth.

5. The combination and arrangement of the jacket A, wick-case B, wall D, radial wings E, rod F′, deflector F″, constructed of heat-conducting metal, and annular oil-reservoir C, or equivalent, as and for the purpose specified.

110,817.—STOVE-PIPE SHELF.—Samuel J. Anderson, Cazenovia, N. Y.

Claim.—The combination of the pivoted shelf D with the shelf A, substantially as herein shown and described, and for the purpose set forth.

110,818.—LIFTING-JACK.—Orren A. Anthony, Mayfield, N. Y.

Claim.—The slotted post A having loose pawl E and top piece C thereon, and the pivoted pawl lever G H E, combined, as described, with the su attached notched bar I, as and for the purpose sp cified.

110,819.—CASE FOR REED ORGANS.—Charle Edwin Bacon, Buffalo, N. Y.

Claim.—In combination with the case of a ree organ, an extension of the top of the same, formin three sides of the square, two of said sides to th right and left of the manuals, forming receptacle for music books and sheet music, &c., while th third forms the back of the instrument, the whol construction being substantially as and for th purpose specified.

110,820.—BED, CUSHION, AND OTHER U HOLSTERING.—Horace H. Barnes, Hoo sick Falls, N. Y.

Claim.—A series of short tubes, C, and wi coils D, combined with a bed, A B, in the manne shown and described, and for the purpose spec fied.

110,821.—ADJUSTABLE DOOR-FASTENER.- Lucius Philetus Barnes, Fitchburg, Mas

Claim.—The combination and arrangement the bar A, the slider B, the clamp-screw C, the r D, and the screw E, the said rod D being pivot or hinged to the slider B and the screw E, all i ing substantially as and for the purpose and to o erate as set forth.

110,822.—MACHINE FOR DRILLING SHU TLES.—Charles E. Billings, Hartfor Conn.

Claim.—The arrangement, relative to one an ther, herein described, of the block B, support gear-wheels F and G, drill-spindle H, sliding sa M, and the main spindle E.

110,823. — ADJUSTABBE LOCK-COUPLI FOR VEHICLES. — George G. Burge Grafton, Ohio.

Claim.—In combination with the socket B, t hook D and retaining-block E, when constru ed and arranged to operate together in the ma ner and for the purpose substantially as shown a set forth.

110,824.—COMPOUND FOR STOVE-POLISH Robert E. Cherrington, South Bost Mass.

Claim. — The improved compound for sto blacking, consisting of glycerine and plumba mixed to form a suitable paste, for the purpose s cified.

110,825.—WASHING-MACHINE. — Sarah Clark, Richmond, Ind.

Claim.—1. In combination with the brush-bl F, the springs K K, arranged substantially as scribed, for the purpose set forth.

2. In combination with the brush-block, spring-clamp N to hold the article being washe the block, substantially as described.

3. The combination of the brush-block F, w board D, and rollers E E, arranged substantiall described.

110,826.—INSULATED BOLT FOR RAILWA RAILS.—John W. Cochran, New Yo N. Y.

Claim.—1. The combination, with the bolt C the insulating-sleeve S, made of soft and ela material, and applied to the shank of the b when said sleeve is made to extend the en length of the bolt, between its head and nu ends, substantially as and for the purpose sp fied.

2. The combination, with the insulating-sl S, on the bolt C, of the nut D, formed with not or indentations, *e*, in it, essentially as herein forth.

7.—MARINERS' SOUND-INDICATOR.—ce Cochrane, New York, N. Y.

m.—1. The combination of the stationary M with opening T, and rotary or vibratory L with opening O, substantially as and for the ses hereinbefore set forth.

The combination with the tube L with opening M with opening T, and wheel or lever and oke K, substantially as and for the purposes before set forth.

2.—RUBBER PAD FOR HORSE-SHOES. niel L. Corbin, Friendship, N. Y.

m.—An India-rubber pad or cushion adapted achment to the feet of horses by means of tal pin B or rubber projection C, let into a in the shoe, substantially as described, for pose specified.

9.—SELF-ACTING SEWER-BASIN TRAP. tthew K. Couzens, Yonkers, N. Y.

m.—1. The floating valve C, placed upon the B, which connects with the sewer-pipe, to e a secondary outlet for the same, substan- as herein shown and described.

The protective basket D, secured to the pipe protecting the valve C, as specified, and pro- with a guide-rod, *a*, and hood, *b*, for said as specified.

0.—SPRING-BOTTOM FOR WAGON-BO- m.—Ephraim D. Cramer, Hackettsn, N. J.

m.—The end-tapered wooden spring C, flexi- ps G G, and rollers F F, combined as de- , to form an elastic wagon-body bottom.

1.—WASHING-MACHINE.—Albert O. ne, Boston, Mass.

m.—A washing-machine, consisting of a ation of a common washing-tub, A, with a ttom, *g*, plunger *i* and *h*, and lever *d*, con- d and operated as and for the purposes and manner herein set forth.

2. — COTTON-SEED PLANTER AND NO-DISTRIBUTER. — William W. m, Montgomery, Ala.

m.—1. The two pyramidal seed-boxes D, hav- rforated plates E attached to their adjacent and being rigidly attached to the square axle B, said parts D E being constructed and g in connection with the axle B and wheels ntially as herein shown and described, the purpose set forth.

A furrow-opener standard F, supported loosely upon and between the bars *a′*, for the pur- allowing it to easily slip up and over a root obstacle in its path, as described.

3.—MANUFACTURE OF ARTICLES FROM ER-PULP. — Francis Curtis, Foxbo- h, Mass., assignor to David Scrym- r, same place.

m.—The herein-described manufacture of ar- l ornament.

4.—FEED-CUTTER.—William Dahlem, son, Ind.

m.—A feed-cutter consisting of the adjusta- ntermittent feeding device shown, the presser -bearing wheel B, and box A, all combined ged to operate together in the manner and for the purposes set forth.

5.—STEAM-ENGINE VAVE.—Charles ane, Springfield, Mass.

m.—The arrangement of the poppet-valves valve-piston A, and their operation in con- with it and with the ports *c* and *d*, substan- specified.

110,836.—CULTIVATOR.—William A. Dryden, Monmouth, Ill., assignor to himself and John M. Turnbull, same place.

Claim.—The cultivator-shovel A, when constructed substantially as described, with a diagonal twist or curve across its lower part, for the purpose of offering a counter-resistance to the side pressure of the ordinary twisted shovels, substantially as described and for the purpose specified.

110,837.—CORN-PLANTER.—Young I. Edwards, Trenton, Tenn.

Claim.—The pitman *k*, provided with the trunnions *n*, and combined with the recessed plate *m* and guard *l*, in the manner described, and for the purpose of affording protection and imparting steadiness of motion to the pitman.

110,838.—VENTILATOR. — William Ennis, New York, N. Y.

Claim.—The shield or jacket E over the hot-air furnace, when arranged relatively to the air-passage *h*, as and for the purposes set forth.

110,839.—DRIVE-SCREW.—David F. Fetter, New York, N. Y.

Claim.—A drive-screw having an angular thread of the character shown, and a conoidal point the base of which is of the same diameter as the lower end of the shank, with which it immediately connects.

110,840.—SHOE.—John W. Fisher, Albany, N. Y.

Claim.—A shoe made with the extended flaps B D, formed substantially in the manner shown, so that the shoe may be convertible at pleasure into a buttoned or laced gaiter or shoe.

110,841, antedated January 7, 1871.—BINDING ATTACHMENT FOR HARVESTERS.—Abraham Freed and Jonathan Snook, La Porte, Ind.

Claim.—A binding attachment for grain-reapers, when constructed in all its parts and arranged as set forth, as herein shown and described, having tables C C′, frame A, pins *b b′ b″ b‴*, rollers D D, connecting-rod F, and rods B B′ for supporting the awning.

110,842. — CONNECTING-ROD. —Wilkerson G. Freeman, Richmond, Va.

Claim. — The broad wedge D, arranged in a wedge-shaped space between one of the brasses and the wall of the notch in the connecting-rod, and provided with the adjusting-screw F and jamb-nut G, the said screw screwing through the cap, or the side of the rod opposite to the cap, all substantially as specified.

110,843.—MILL-BUSH.—Hamlin F. Frisbie, Danville, Ill.

Claim.—1. The combination, with a wedge, I, of recessed knob and washer L, a shouldered and studded bolt, and a clamping-nut, all constructed and applied as shown in fig. 1 of drawing.

2. The hollow bearing-pieces H C, combined with a case, B, hollow triangular pieces E G, and upper annular chamber M O, constructed and relatively arranged as shown and described.

110,844.—FIRE-SCREEN AND STAND.—Hugo O. Fritsch, New York, N. Y.

Claim.—The combined fire-screen and stand, having its parts arranged substantially as herein described.

110,845. — CLARIONET. — Anton Fritsche, New York, N. Y.

Claim.—1. The lever C, applied to a clarionet, in combination with the keys *a* and *b*, to facilitate

in the playing of the same, substantially as herein shown and described.

2. The ring *h*, provided with the ear *i*, and combined with the arbor *c* and lever *c*, to operate substantially as and for the purposes herein shown and described.

3. The ring *j*, provided with the arm *k* and combined with the arm *f* of the arbor *c*, with the lever C and key *b*, substantially as herein shown and described.

4. The arbor *c*, provided with the projecting arm *f*, shank *d*, and ear *g*, to be thereby combined and connected with the key *b* and lever C, substantially as herein shown and described.

5. The additional key *c*, arranged in connection with the ring *i*, for producing the full A or A-sharp, as specified.

6. The combination of the rings *l m* and tubes *r o* with the tube *w* and key *s*, all arranged to operate conjointly or separately, substantially as herein shown and described.

7. The additional G-sharp key D, actuated by the F-ring *z*, substantially as herein shown and described, for relieving the fourth finger, as specified.

8. The ring *z*, carrying the arm c^1, and combined with the lever f^1 and key D, to operate substantially as herein shown and described.

9. The combination of the ring *m* and its shank *n* with the key D, spring c^1, and lever f^1, for operating substantially as herein shown and described.

10. The rocking thumb-slide E, arranged on a clarionet, substantially as and for the purpose herein shown and described.

11. The sliding cam i^1, operated by the thumb-slide E, and connected with the lever f^1 and arm c^1 for locking the key D, as specified.

12. The key F, connected with the tube m^1 and combined with the rings p' and c', to be closed by either one of the same or by both, as specified.

13. The additional E-flat key I, connected with the arbor a^2, which is held down by the shanks r' and c' of the rings p' s', substantially as herein shown and described.

14. The arm d^3 on the rocking thumb-slide E, arranged as described, to hold the key I closed, as specified.

15. The keys F and I, combined with the rings p' and s', and with the appendages of the same to be operated thereby, substantially in the manner herein shown and described.

16. The lever f^2, fitted under the handle g' of the key H, and combined with the arbor a^2 of the key I, to close said key I, substantially as specified.

17. The lever f^3 and handle m^3, connected with the key L and lever f^3, to operate the said key, substantially as herein shown and described.

18. The jointed lever h^2, connected by the stop f^4 with the lever f^3, to play the keys J and L in conjunction, substantially as herein shown and described.

19. The keys I and L, brought in close proximity by means of the handles g' and m^3, with which they are combined, as set forth.

20. The combination of the levers n^2 and h^2 with the key L, lever f^3, and lever f^2, all operating substantially as herein shown and described.

110,846, antedated December 30, 1870.—LAMP-BURNER. — George P. Fuller, Humphrey, N. Y.

Claim.—The combination of the slide F with the safety-tube C, the slide being provided with holes *d* and the tube with perforations *a*, substantially in the manner and for the purpose set forth.

110,847, antedated December 29, 1870.—HIDE-WORKING MACHINE. — Marcus B. Gould, Buffalo, N. Y., assignor to himself and Winfield S. Shaw, same place.

Claim.—1. The arrangement of the cranks *f* with reference to each other, and with the pitmen *m* and table *d*, so that one-half of the series of working-tools operates on the hide at a time, as hereinbefore set forth.

2. The cross-beam *i* provided with guide-hangers *o o*, arranged and operating with the pitmen working-tool *w'* at the free ends thereof, substantially as hereinbefore set forth.

3. The spring pressure-arms and rollers combined and arranged with the adjustable beam *i*, pitmen *m*, and movable table *d*, as the purpose hereinbefore set forth.

4. The arrangement with the platform movable table *d* of the frame-carrier *h*, and and racks and pinions *u v*, constructed and ing as hereinbefore described.

5. The arrangement, with the cross-beam supporting-springs *t*, adjusting-lever *k*, as the purpose hereinbefore set forth.

110,848, antedated January 6, 1871.—HA FASTENING.—Hugh B. Grumling, Gr Pa.

Claim.—1. The arrangement, with respect hames C C and lever B, of the rigid loop A, t versely pivoted and embracing the front and faces of both hames, as and for the purpo scribed.

2. A trace-hook, D, having a slotted shank-p *d*, adjusted up and down by screw and nut, as for the purpose described.

110,849.—HAY-PRESS.—Finlay F. Ha ton, Green Bay, Wis.

Claim.—1. The arrangement of the swi crane N, provided with the pulley M, with rel to the case A, follower D, and cords F, as the purpose specified.

2. The combination, with the case, follower, the cords, of the grooved ribs E, substantial specified.

110,850.—STEAM-PUMP.—Thomas Harri ton, Pittsburg, Pa.

Claim.—The cocks *f*, branching pipes *e e*, ing in the common shell *d*, in connection cones *a b* and pipe *c*, all arranged substantial described.

110,851.—FIRE-ESCAPE.—Edward J. H son, Golconda, Ill.

Claim.—1. In combination with the lazy-to the described means for adjusting its inclinat consisting essentially of the rocking-post D, slotted slides F, rocker G, and the adjusting scr *s s'*, all arranged and operating substantial and for the purposes set forth.

2. The combination of chains or cords N wi "lazy-tongs" fire-escape ladder, substantially as for the purpose described.

110,852. — ARTIFICIAL STONE FOR PA MENTS, WALKS, FLOORS, &c.—Carle B. Hutchins, Ann Arbor, Mich.

Claim.—The compound produced by uniting ingredients as set forth in the foregoing specifi tion.

110,853. — SULKY-CULTIVATOR.—Hugh Jordan, Victoria, Texas.

Claim.—1. The frame-work of the cultiva consisting of the bent axle-tree B, bars C, cross-bar N, tongue E, and brace-rods F Q, parts being constructed and arranged substantia as herein shown and described, and for the purp set forth.

2. The plow-standards K, draft-bars O, p standards R, and draft-rods or chains U, constr ed and arranged in connection with the bars and axle-tree B, substantially as herein shown described, and for the purpose set forth.

3. The combination of the shaft or roller X, vers W, and connecting-rods V, with the p standards K R and bars C of the frame-work of cultivator, substantially as herein shown and scribed, and for the purpose set forth.

4. The combination of the levers Z and con ing-rods Y with the plow-standards K, and w the cross-bars A' attached to the braces F of frame-work of the cultivator, substantially as

wn and described, and for the purpose set

54.—BED-BOTTOM.—William B. Jud- Poughkeepsie, N. Y., assignor to J. Nelson, Jr., same place.

im.—The combination of the webbing stripe connections S, the latter looped around the -wire, and also riveted to the webbing C, ially in the manner and for the purpose ibed.

55.—NEEDLE-SETTER AND THREADER SEWING-MACHINES. — Jacob Karr, shington, D. C.

im.—1. The self-closing spring-pinchers here- ribed, having the fingers for opening them, e gage, and also having the arms of the pinch- ribed, the one with a slotted funnel and the with a retractile point directly opposite the the whole constituting a needle-setter and ibed.

The pinchers A and A', having their limbs, operating fingers, and the slotted-gauge pro- *b* formed out of a single piece of elastic metal, as described.

56.—DEVICE FOR SECURING THE TINES HAY-TEDDERS.—De Lancy Kennedy, w York, N. Y.

im.—The grooves *f* in the buttons or clamps in combination with the terminal portions e tines, substantially as specified.

57.—APPARATUS FOR GENERATING AND RNING VAPOR FROM HYDROCARBONS. hua Kidd, New York, N. Y.

im.—The combination of retort A, in which r is generated by admitting the oil into the under pressure, aparingly, with the air-in- jet *f*, fixed in a larger pipe, open to the at- re, together with bent tube E, adjustable G, and wire gauze S, or the equivalent of or all of said parts, when combined to an illuminating apparatus, as described.

58. — ROLLER-SKATE. — Matthew H. ball, San Francisco, Cal., assignor to self and James Garvey, same place.

im.—The boxes or bearings F, having the through their sides, with the springs or E, as and for the purpose described.

59, antedated January 6, 1871.— OFING-TILE PRESS. — John Koehler, ren, Ohio.

im.—1. The roller D, with the projections *a a* ds *b b*, and the ribs *c c*, substantially as and purpose as hereinbefore described.

The mold E, with the raised grooves *e e*, s *d*, pins *i i*, and slope G, substantially as the purpose as hereinbefore set forth.

The mold F, with its groove *d*, pins *i i*, and G, substantially as and for the purpose as inbefore set forth.

The combination of the frame A, sliding frame D, and molds E and F, all constructed, ar- d, and operated as shown and described, for purpose herein set forth.

60.—PLOWSHARE.—John Lane, Chica- Ill., assignor to Hapgood & Co., same place.

im.—A plowshare having a thick flange, *a*, a al, *b*, and a thin body, *c*, when made by first g a share-blank having a thick end from one n metal, and afterward welding thereto the *c*, substantially as and for the purpose set

61. — GRAVEL AND SAND-HEATER.— lip Le Goullon, Pittsburg, Pa.

im.—An improved gravel an sand-heater, formed by the combination of the outer double-walled case A, inclined ring-flanges D, and inner case C G, forming the ring-flue or chamber B, heating-chamber L, and fire-chamber H, and provided with the doors F and K, draught-opening I, and smoke-pipe or flue J, with each other, substantially as herein shown and described, and for the purpose set forth.

110,862. — STEAM-GENERATOR.— Mirabeau N. Lynn, New Albany, Ind.

Claim.—1. The combination of the tubes A and transverse tubes B and E, and the interior circulating-tubes L, arranged substantially as specified.

2. The combination with the above of the water-return tubes O, substantially as specified.

3. The connection of the tubes A and B or E by means of the tubular screw-threaded plugs C or F, plugged at the outer ends by the plugs C' G, and having the lateral orifices, substantially as specified.

110,863.—CARRIAGE-CURTAIN FASTENER.— William H. Morse, West Newbury, Mass.

Claim. — The above-described carriage-curtain fastener, composed of the stud *b* and hook *a*, combined and operating substantially in the manner and for the purpose hereinbefore set forth.

110,864. — HAND-STAMP.—Marcus P. Norton, Troy, N. Y., assignor to Helen M. Ingalls, same place.

Claim.—The arrangement and the combination of the cutters or knives *a f g h* with the type-wheels or revolving and circular changing dates *a b c d*, whereby and by the means of which the month and the day of the month and the year are given and formed upon the internal revenue stamp at the time the same is canceled by being cut or punctured by the said knives or cutters, in the manner and for the purposes substantially as herein described and set forth.

110,865. — TRACTION-ENGINE. — Treat T. Prosser, Chicago, Ill., assignor to himself, Henry Waller, and W. S. Waller, same place.

Claim.—1. The traction-wheel C, constructed substantially as shown, so that both the weight carried and the driving power shall be centrally supported and applied.

2. In combination with the traction-wheel C, the driving-pinion D, but only when arranged to drive the traction-wheel from a point opposite to that upon which it rests, substantially as set forth.

3. In combination with the traction-wheels C, the boiler B, the pinions D, and shaft D^1, when arranged to operate in relation to one another, substantially as set forth.

4. The frame G, in combination with the cylinders E E, when constructed and arranged in relation to the boiler B, substantially as described.

5. In combination, the cylinders E and frame G, when the latter is so constructed that a part, G^2, of the same shall constitute one of the heads of the cylinder, substantially as set forth.

6. The frame G, when cast in such form that the parts G^1 shall form ways, carrying the cross-head between their opposed faces.

7. The cross-head and ways, in combination, when constructed with a tongue and groove on one side only, substantially as and for the purpose set forth.

8. The frame G, when cast to form the plumber-block, ways, and cylinder-heads in one piece, substantially as set forth.

9. The combination of the main frame, the boiler B placed transversely across the frame, stand I, and carriers K, arranged substantially as set forth.

110,866. — APPARATUS FOR SUPPLYING NAPHTHA TO VAPOR-BURNING STREET-LAMPS.—Frances M. Randell, Greenburg, N. Y.

Claim.—The combination, with a street lamp-

post, of the naphtha-reservoir, pipe, and cocks, for the purpose of filling the reservoir with naphtha and supplying the latter to the burner under pressure, as described.

110,867.—PICTURE-NAIL.—Thomas C. Richards, New York, N. Y.

Claim.—The scalp B, held in place or in contact with the anvil or head *a'* of the nail A by means of the washer C, substantially as herein shown and described.

110,868.—LUBRICATOR.—Joseph Richter, Cincinnati, Ohio.

Claim.—In the described connection with the chamber C and the valve F, the valve E, when the same is constructed to open by gravity and close by the pressure of steam, as and for the purpose explained.

110,869, antedated December 31, 1870.—DENTAL LATHE.—Elias C. Rishel, White Haven, Pa.

Claim.—1. The mandrel A, provided with tapering and threaded journals and nuts, as described, in combination with the tapered bearing *b* and sleeve D, the latter arranged in a bearing support, having a notch, *d*, and set-screw E, as specified.

2. The combination, with the bearing-support and the mandrel, of the adjustable bush D and the set-screw E, substantially as specified.

110,870.— DRAWER FOR STORES.—Robert Jordan Roberts, New York, N. Y.

Claim.—The drawer having a transparent face, and provided with the sample-support *b*, substantially as and for the purposes herein shown and described.

110,871.—LATHE FOR TURNING WOOD.—Ira Rood, Elyria, Ohio.

Claim.—The construction and arrangement of mandrel L with its bearing-tool P, chuck K, and automatic adjustable slide-rest, as herein shown and described.

110,872.—MAN-HOLE PLATE FOR STEAM-BOILERS.—John D. Sansom, Peoria, Ill.

Claim.—The hinged man-hole plate A for steam-boilers, in combination with the crab D and bolt *f*, for securing it, substantially as and for the purpose set forth.

110,873. — APPARATUS FOR BOILING AND TREATING PAPER-STOCK. — George Sinclair, Leith, Scotland.

Claim —1. The perforated tube *d*, arranged centrally and longitudinally of the boiler A, and extending from top to bottom, as shown and described, and for the purpose specified.

2. The perforated plates b b^2 b^3, arranged as shown and described, with reference to the boiler A and furnace-chamber, as shown and described.

3. The arrangement of the vessel E and pipes E^1 and E^2 with reference to the boiler D and furnace-wall B, as shown and described, for the purpose specified.

110,874.—PISTON.—Andrew H. Smith, New York, N. Y.

Claim.—The combination of the rod D, flange or plate E, tubular rod or sleeve G, ring, plate, or flange H, and nut I, with each other, to adapt them to expand and contract the piston-packing, substantially as herein shown and described, and for the purposes set forth.

110,875. — CEREMONIAL BELL.—John W. Smith, Keokuk, Iowa.

Claim.—1. The ceremonial apparatus herein described, consisting of the case A, essentially as described, with one or more bells B arranged within it, and with one or more holes *a*, for the admission of a striking instrument, substantially as described.

2. The arrangement of the cushion *f* with bell B within a perforated ceremonial bell-case substantially in the manner described.

3. The elastic strip *e*, stretched across the opening *a*, directly over the bell, substantially as described.

4. The arrangement of the bell B and perforated sounding-board S within the ceremonial bell A, substantially in the manner and for the purpose described.

110,876.—HORSE HAY-RAKE. — Joshua Stoddard, Worcester, Mass.

Claim.—1. The connection of the clearer with the hinged seat-board, substantially as herein described, so that the vertical movements of the latter are imparted to the former.

2. A locking device, composed of the rigid arm *m*, jointed lever *k l*, with pin *p*, the pedal *o*, the arm *n*, and the main fulcrum-pin, in combination with the hinged seat-board, rake-head, crane, and main frame, all constructed and arranged to operate substantially as herein set forth.

3. In combination with the parts mentioned in the next preceding clause, the set-screw *r* and loosely-attached lever-handle *q*, arranged as herein specified, for facilitating the operation of the locking device.

4. The sockets for the rake-teeth and springs made with lugs *a*, *a'*, and *v*, and adapted to secure the springs and teeth thereto without bolts or rivets, as described, and attached to the rake-head, in the manner herein set forth.

110,877.—LIQUID-METER.—William G. [illegible]art, Chicopee, Mass.

Claim.—1. The sliding weight or piston N, the flexible attachment secured thereto, said piston being caused, by the pressure of water on it, alternately upon its sides, to move to and fro in the vessel upon the rod B, substantially as described.

2. As arranged in relation to the subject matter of the foregoing first clause, the flexible tube, one end of which is closed and secured around the rod B, and the other end closed and secured around the piece C, or to the end of the vessel at some point distant from the rod B, the same operating as a check to prevent the leakage of the water, substantially as described.

3. The sliding weight N and the rod B, having the protuberances or collars *b* and *b'''* thereon, in combination with automatically-operated valves and water-ways, as a means of changing the inclined position of the measuring vessel, substantially as described and set forth.

4. The weights G, in combination with the automatically-operated rod B, piston N, and its appendages, as a means of securing the measuring vessel in either inclined position until it has been filled with liquid, all substantially as described.

5. The two-way plug V attached to the measuring-vessel, the same being suspended between centers or points Y'', and operating and adjusted within the barrel or shell A, which is attached to said plug V independently of any vertical support, all serving to change the direction in the passage of the water at each vertical movement of the measuring vessel, substantially as set forth.

110,878.—METHOD OF COATING SAD-IR[illegible] &c.—William H. Towers, Boston, M[illegible]

Claim.—1. The improved process herein described for coating and polishing sad-irons and [illegible] ticles.

2. As a new article of manufacture, a sad-iron coated with zinc or other metal, substantially as described.

110,879. — THIMBLE.—Edward B. To[illegible] Newburyport, Mass.

Claim.—As a new article of manufacture, a thimble struck out of sheet metal, with a solid edge or rim, substantially as described, and for the purpose set forth.

[illegible].880. — CAR-COUPLING. — George H. Weeks, Allegan, Mich.

[illegible]laim.—1. The pivoted bars B having semi-conical notches formed in their adjacent edges, sliding [illegible]ving inclined slots formed in it, guide-pin D, [illegible] spring E, in combination with each other and [illegible] the bumper B, substantially as herein shown [illegible] described, and for the purpose set forth.

2. The combination of the lever G and connecting-[illegible]w chain H with the spring E, guide-pin D, [illegible]ted slide C, pivoted and notched bars B, and [illegible]per A, substantially as herein shown and described, and for the purpose set forth.

[illegible],881.—METALLIC CARTRIDGE. — Rollin White, Lowell, Mass.

[illegible]laim.—1. The cap-chamber *d*, with parallel vertical walls, *s*, extending all the way through the [illegible], substantially as set forth.

2. The cap A, having a concavity in its outer [illegible]ace, and provided with a fulminate receptacle, [illegible]nd anvil *b*, with or without the vent *i*, substantially as set forth.

3. The combination of the cap-chamber, as described, with a cap, A, substantially as described, and for the purposes set forth.

4. The combination of the cap A, constructed as described, and the plate or anvil *b*, substantially as [illegible]d for the purposes herein set forth.

5. The head or butt B, constructed as described, with a flange, *c*, and lip *y*, substantially as and for [illegible] purposes herein set forth.

6. The combination of the head B, metal tube C, [illegible]d paper tube *h*, all constructed and arranged [illegible]stantially as and for the purposes herein set [illegible]th.

7. The combination of the head B with its tubes [illegible]d *f*, and the tube or shell D, constructed as [illegible]cribed, and connected together by means of the [illegible]ate covering *m*, substantially as and for the [illegible]rposes herein set forth.

[illegible],882. — CURBING FOR EXCAVATIONS.—Henry Whitestone, Louisville, Ky.

[illegible]laim.—Spiral curbing, composed of sections C, [illegible] guide-drum A, and guide-strip B, made and employed substantially in the manner and for the purposes described.

[illegible],883.—FASTENING FOR THE TIPS OF BILLIARD-CUES.—Oliver C. Wilbur, Jr., Providence, R. I.

[illegible]laim.—The split socket A, in combination with [illegible]erew-tip, C, all as herein described, and for the purpose specified.

[illegible],884.—BOILER FOR HEATING.—John G. Wilson, New York, N. Y.

[illegible]laim.—1. A boiler composed of a plain elliptic [illegible]side shell and a corrugated inside shell, being [illegible]ted at their bottom edges, around the aperture [illegible] the fire-door, and around the smoke-pipe, substantially as described.

2. The manner of forming a bottom joint between the outer and inner shells of a cast-iron boiler, substantially as specified.

[illegible],885.—WASHING-MACHINE.—Ananias Z. [illegible]oung, Liberty, Miss.

[illegible]laim.—The dashers B and H, working frame E [illegible]d case A, all combined and operating substantially as specified.

[illegible],886.—SNOW-SHOVEL.—Albert Q. Adams, Wallingford, Vt.

[illegible]laim.—The snow-shovel herein described, having the curved wooden blade B, strengthened and [illegible]nforced by the metal strips *d d*, inserted lengthwise in the side edges thereof, and by the shoe *c*, substantially as specified.

[illegible],887.—CHARGER FOR SHOT-POUCHES.—Thomas W. Allen, Waterbury, Conn.

[illegible]laim.—In combination with the cylinder D and cut-off F, the charger I, with its inclined end provided with the notch *a* and shoulder *d*, as and for the purpose described.

110,888.—FENCE.—Collester M. Ballard and Myron Morehouse, Johnsonburg, N. Y.

Claim.—1. The combination of the stakes C with the hinged brace-bars B B and fence A, so arranged that the driving of said stakes will cause the bars B B to firmly clamp the fence-bars, as hereinbefore specified.

2. The combination with the fence A of the short braces B' B' and long braces B B, arranged in the manner and for the purpose hereinbefore specified.

110,889.—HOT-AIR FURNACE.—William D. Bartlett, Amesbury, Mass.

Claim.—1. The furnace as made, with a combustion-chamber located with respect to the fire-pot, as shown and described, when the combustion-chamber is unencumbered with tortuous or contracted passages between the fire-pot and the direct or indirect smoke outlet, and when it is traversed by air-flues which are surrounded by the heated and volatile products of combustion proceeding from the fuel, through the lower series of which flues passes cold air from a cold-air chamber on one side of the furnace, and thence back and forth, alternately, through each series of flues, to a hot-air chamber located over its top, the air being heated in its passage through the flues, the whole being arranged and combined substantially as described.

2. The plate *r* of the air-heating chamber, in which the air-discharge passages are made by and between perforations through the plate and pings which are located in such perforations.

110,890.—SPARK-ARRESTER.—Darwin Beach, Oshkosh, Wis.

Claim.—In combination with the smoke-stack A, deflector F, conical deflector B, spark-chamber C on top or set in the up-take A, return-flues D D, and wire or perforated cone B, substantially as shown and described.

110,891.—EMBOSSING HAT-LININGS.—Thomas W. Bracher, New York, N. Y.

Claim.—1. The hat-lining A, provided with a backing of paper, cloth, or woven material where the embossing is to be applied, with size interposed between said backing and lining, substantially as and for the purpose described.

2. The face of the hat-lining A, provided with metallic foil, as set forth, when the same is subjected to pressure between embossing-dies, as and for the purpose herein shown and described.

3. Embossed hat-linings, illuminated with two or more colors by placing leaves of different colors upon the lining where the different impressions of the designs are to be produced.

110,892. — ANIMAL-POWER APPARATUS. — Orville M. Brock, Monroeton, Pa., assignor to James H. Hawes and George Hawes, same place.

Claim.—1. The hollow shaft D d^1 d^1, flanged at both ends, in combination with the radial arms E, inclined braces F, rim G, and rim or wheel g', the said parts being constructed and operating in connection with the pulley or wheel H of the driving-shaft I substantially as herein shown and described, and for the purpose set forth.

2. The adjustable cross-armed spindle C c^1, and adjusting-arms B, in combination with the wheel D E F G, substantially as herein shown and described, and for the purpose set forth.

110,893.—HAY-TEDDER. — Alzirus Brown, Worcester Mass.

Claim.—The combination, with the axle A and clutch-gears C, of the horizontal sliding bars E E', links H H', hinged to the sides and back of the ends of said bars, hand-bar G, standard I, guides J, and spring K, said parts being arranged for joint operation as herein shown and set forth.

110,894.—Bee-Hive.—Gustavus Adolphus Brown and Francis Adams McCallen, Russellville, Ky.

Claim.—1. The hinged platform M and supports m m, when constructed so as to form an extension of the track L and support the drawn-out frames, substantially as described.

2. The moth-trap I having side entrances i i, the perforated or gauge-plate H, and bee-entrance J, arranged with relation to each other and the compartment G of the hive, as herein shown and described, for the purposes specified.

110,895.—Fluting-Machine.—Abner Burbank, Rochester, N. Y.

Claim.—The double corrugated rollers B B, journaled within a frame, D, combined and operating in connection with the reversible slab or bed A, fluted on both faces, substantially as described, for the purpose set forth.

110,896.—Grain-Drier. — Lewis S. Chichester, Brooklyn, N. Y.

Claim.—The arrangement of the hot-air flues at each side of the grain-bin, and with which the air-spaces beneath the tables e e open at both ends, in combination with the pipe i i, passing to the flue f, and provided with openings in their sides within the grain-bin, as and for the purposes set forth.

110,897.—Churn.—Jacob Clark, Brush Valley, Pa.

Claim.—1. The combination, with the oscillating churn-body mounted on the single frame C, of the guiding and holding slotted bar D' rising from the base-frame D and embracing the said frame C, as and for the purpose described.

2. The body A, frame C, and slotted bar D', in combination with the lever G and spring H, as and for the purpose described.

110,898.—Ventilator or Blower.—John F. Collins, New York, N. Y.

Claim.—1. The base-piece B, divided into compartments K, one for each arm, so that the current of one arm cannot counteract that of the others, substantially as set forth.

2. The combination of the hollow arms C C C C, the base-piece B, divided into compartments K, the hollow driving-shaft A, and the packing-joint H, combined, constructed, and operating together substantially as described, and for the purposes set forth.

110,899.—Fence.—Thomas C. Collins, Little Hockhocking, Ohio.

Claim.—The combination of the panels A B C, pieces D E, braces G G', and pins b b, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

110,900.—Parlor-Organ.—James Cordley, Adrian, Mich.

Claim.—1. In the described organ, the pumping-bellows A A', reed-bellows or regulators B, and pipe-bellows or regulators C, wind-stocks i d l, reed wind-chest H, and pipe wind-chest n, with valves i b o w, constructed and arranged as shown and set forth, for the purpose specified.

2. The combination, with the vertical pumping-bellows A A', of the pedals a a', connected cords e e', vertical pulleys c c', and horizontal pulley c'', for operating the said bellows without the aid of springs.

110,901.—Railway-Car Platform.—Rensselaer A. Cowell, Cleveland, Ohio.

Claim.—1. The combination and arrangement of the rails B B, blocks C C, belt e, and braces K K, and for the purpose described.

2. The combination and arrangement of the brace-rods h h, connecting-bar h', and upright supports j j, with the draw-head G, substantially as shown and for the purpose set forth.

110,902.—Churn.—John Cram, Chicago, Ill., assignor to himself and John Cram, same place.

Claim.—1. The inclined vanes or paddles D carried by standards E E', in combination with shaft C and square arms G G', the said arms G being arranged to present a double inclined surface, as described, substantially as specified shown.

2. The crank or lever H, having projections h, combination with the shaft C, constructed as specified and shown.

110,903.—Lathe-Chuck.—Austin F. Cushman, Hartford, Conn.

Claim.—1. The combined screw and bevel pinion, consisting of a rod having the pinion G formed thereon, and the screws H and H' secured upon the rod on opposite sides of the pinion, substantially as set forth.

2. The shell B, having a recess formed underneath the sliding jaws with semicircular bearings at each end, in combination with the combined screw and pinion having corresponding journals its ends, and the jaw A having a continuous screw thread cut in its under side, all arranged to operate as herein described.

3. In combination with the subject matter of the second claim, the plate B, screw-threaded on periphery, the annular rack D, and the clips F, described.

110,904.—Loom.—Hilas D. Davis, North Andover, Mass.

Claim.—1. The combination of the guide L with the cam-slide M or its equivalent, which will move the guide and lock the same, substantially as described.

2. In combination with the jack, the guide, the cam-slide, a pair of needles or pushers and double pattern-chain, substantially as described.

3. The eyeners and jacks, constructed and combined so that one of the eyeners will serve as guide for the lower ends of the jacks, substantially as described.

4. In combination with the jack, the two adjustable eye-pieces attached to the central part of the back, substantially as described.

5. The duplex differential pulleys and cords, in combination with the jack and leaf of heddles, substantially as described.

6. The duplex series of reversed wedges, with the parts subordinate thereto, for working the shuttle-boxes, substantially as described.

7. The combination, with said wedges, either singly or in pairs, of a jack or jacks, which are worked by a lifter or depresser under the control of a pattern-chain or its equivalent, substantially as described.

8. The combination of a series of wedges with a series of guided rollers or blocks interposed between said wedges, so as to transmit their united effect to the parts which move the shuttle-boxes, substantially as described.

9. The combination of the two series of wedges and guided rollers or blocks with the guided roller or block which moves the shuttle-boxes, and two fixed abutments, between which the system of wedges and rollers or blocks acts, substantially as described.

10. In combination with each jack which works the shuttle-boxes, a detent, which holds the jack at rest at its extremes of motion, substantially as described.

11. The combination and arrangement of the series of jacks that work the heddles and the series of jacks that work the shuttle-boxes, and the lifter and depresser, and pattern-chain, and the necessary mechanism that actuates them, all constructed substantially as described.

110,905.—Ventilator.—Edward Mortimer Deey, New York, N. Y.

Claim.—1. The steam-pipe T V W, and eccentric passing hot-air pipe G H I, when used in combination with the hot-air chamber E, steam-vessel P, reservoir or condenser L, substantially as and for the purposes described and set forth.

2. The pivoted plate P' P', &c., in combination with the hot-air chamber E, steam-pipe T V W, and passing hot-air pipe G H I, substantially as and for the purposes described and specified.

3. The coiled steam-pipe or bulb k' placed within the bell K of the hot-air pipe G H I, for the purposes substantially as set forth and described.

110,906. — Railroad-Car Ventilator.—Asher M. Dexter, Elmira, N. Y.

Claim.—A ventilating car-window, composed of sash A, wire-cloth screen D, or its equivalent, and pane of glass C, substantially as set forth.

110,907. — Apparatus for Dyeing Fabrics.—Thomas Messenger Drown, Philadelphia, Pa., assignor to W. A. Drown, same place.

Claim.—1. A reservoir, containing volatile impregnating material, closed to prevent the evaporation of the said material, but slit at two points to permit the passage through it of a strip of fabric to be impregnated, as set forth.

2. The combination of said reservoir and a tank, communicating with the reservoir, as described.

110,908.—Propeller.—Edgar Eltinge and John C. Brodhead, Kingston, N. Y.

Claim.—The combination of the paddles B, arranged in pairs, shafts C, crank-arms D, bars E, F, G, guide-support H, bar F, and eccentric I, with each other, and with the driving-shaft K and framework A of a vessel, substantially as herein shown and described, and for the purpose set forth.

110,909.—Bee-Hive.—Thomas S. Engleby, Cedar Falls, Iowa.

Claim.—1. The combination of the wire frames b and frames G G with the rectangle s, substantially as specified.

2. The combination of the base A with inclined ends B, movable main case C, movable top D, wire frames b b, rectangle s, and comb-cards G constructed and arranged substantially as and for the purpose herein set forth.

110,910. — Fence. — Admiral Faulkner, Mount Pleasant, Iowa.

Claim.—The stiles A A, posts B B, and rails C C, in combination with the stakes D D and rails E E, constructed and arranged substantially as shown and described.

110,911.—Shaft-Tug.—Kasson Frazer, Syracuse, N. Y.

Claim.—A shaft-tug composed of an inner ring with the metallic sections B and C each separately riveted to said ring A, in the manner herein described and shown.

110,912.—Rotary Engine.—Samuel Gibson, Lancaster, assignor to himself, Alexander L. Hayes, same place, and J. W. Wierman, York, Pa.

Claim.—1. The stationary wheel or casing A provided with a series of buckets, a a, extending around its entire inside circumference, in combination with the inner revolving wheel G provided with two buckets i i, all constructed and operating substantially as and for the purposes herein set forth.

2. The combination of the outer stationary wheel with buckets a a, steam-chest B, box D, journal d, disk c, arms A A, inner revolving wheel G, steam i, and outlet or exhaust-pipe H, all constructed and arranged to operate substantially as and for the purposes herein set forth.

110,913. — Shutter-Fastener.—Ebenezer A. Geories, Philadelphia, Pa.

Claim.—The self-closing latch D, having a rotary motion, and adapted to engage one end of a hinged bolt, substantially as and for the purpose described.

110,914.—Wrench.—John Goodin, Joliet, Ill.

Claim.—The pieces A and B, constructed as described, and used in combination with a right-and-left screw, C, as and for the purpose set forth.

110,915.—Air-Engine or Fan-Blower.—Gardner C. Hawkins, Boston, Mass.

Claim.—The interposition, between the arm or spoke of the wheel of an air-engine and the fan or blade carried thereby, of an elastic medium, for purposes stated.

110,916.—Coffee-Roaster.—Louis Houcke, Springfield, Ohio.

Claim.—1. The herein-described coffee-roaster, consisting of the vessel A, provided with the lids B, having the windows C and hooks c thereon, in combination with the crank and arms L, all constructed and arranged to operate substantially as described.

2. The scrapers or arms L, made flat on their under surface, and thicker at their outer ends, arranged for use, in connection with the vessel A, as herein described.

110,917.—Broom-Holder.—Zadok Howe, Lowell, Mich.

Claim.—A broom-holder, made of one piece of wire in the manner herein described, so as to form the loop or double portion a, tine b, with its crook d and straight tine b', the ends of said tines being bent outward, and the entire holder attached to the wall by means of the block f and screw e, substantially as herein set forth.

110,918.—Joint for Frames of Folding-Umbrellas.—Algernon S. Hubbell, Norwich, Conn.

Claim.—A joint for folding-umbrellas, consisting of a block, c, provided with ears f f to lock against the fork of the brace to which it is hinged, and attached to the outer portion of the stretcher, and hinged to its inner portion, the whole arranged as herein shown and described.

110,919.—Sad-Iron.—Hubert R. Ives, New Haven, Conn.

Claim.—The herein-described sad-iron, consisting of the base A, constructed with the flange a, combined with the sheet-metal portion C, united to the said ribs, in the manner described, to form a chamber for the reception of the non-conducting material, as set forth, and provided with a handle, E F, substantially as specified.

110,920. — Auger-Handle. — William A. Ives, New Haven, Conn.

Claim.—The arrangement of the follower C within the perforated cylinder A, formed to correspond to the said perforations, and operated by a set-screw, or equivalent device, to secure the auger in the said perforations, substantially as herein described.

110,921.—Hat.—Jeremiah Keith, Charlton, Mass.

Claim.—As new articles of manufacture, hats and similar articles formed of coiled braids or strips fastened together by wire-staples, substantially as shown and described.

110,922.—Street-Lamp.—John F. Kerns, Baltimore, Md.

Claim.—In combination with the lamp A, the detachable reflector B, constructed and arranged substantially as described and shown, for the purpose set forth.

110,923.—Lounge. — Oswald Kubitschky, Chicago, Ill.

Claim.—1. The supplemental head-rest G, pro-

vided with the hinged parallel bars H and leg I, all constructed and arranged as described, for the purpose specified.

2. The sliding supplemental head-rest G, in combination with the head-rest C, the frame A, and folding seat D, as herein described, for the purpose specified.

110,924.—PLOW.—John M. Leonard, Marshall, Mich.

Claim.—The combination with each other, and with a plow, of the jointer-share and mold-board A B, when employed either with or without the roller D, and constructed, arranged, and connected substantially as and for the purpose set forth.

110,925.—BILLIARD-TABLE.—William Lochhead, Brooklyn, N. Y.

Claim.—1. The interior cushions D D, when arranged in lines oblique to those of the side cushions C C, substantially as and for the purpose set forth.

2. In combination with the cushions D D, the sockets *e e*, as set forth.

110,926.—SLIDING STOP-VALVE.—Henry G. Ludlow, 2d, Troy, N. Y., assignor to Ludlow Valve Manufacturing Company, same place.

Claim.—1. A movable or adjustable incline or inclines, C, in combination with an adjustable or fixed valve-operating wedge or wedges, *e* E, essentially as described.

2. One or more gates D, in combination with an adjustable incline or inclines, *c*, and adjustable or fixed wedge or wedges E, essentially as described.

3. The wedge or wedges E, arranged between the gates, in conjunction with a movable incline or inclines, *c*, as described.

4. The combination, in a stop-valve, of the gates D D', wedges E E', incline or inclines *c*, stem C, and case or shell A B, the several parts being constructed, arranged, and operating as described.

110,927.—GRINDING-MILL.—Isaac Mayfield and William D. Mayfield, Mayfield, Ky.

Claim.—1. The decreasing bars S S S S, in combination with the casing H and adjustable knives *v*, attached to the hollow cylinder D, when constructed and arranged as and for the purpose specified.

2. The arrangement of the cams h upon the shaft D, the lever K, sleve P, and shoe O, in the manner and for the purpose set forth.

110,928.—REGULATING THE DISCHARGE OF WATER FROM PUMPS.—John Mayher, East Hampton, Mass.

Claim.—The combination of the pump A and supply and discharge-pipes *a' a* with the pipe or passage *b*, having the valve *b'*, as described.

110,929.—ROTARY BLOWER.—Henry C. McIlwain and Alonzo Brumfiel, Connersville, Ind.

Claim.—The adjustable rubber "rubs," in combination with fans B B, relatively so arranged that the fans will bridge from one rub to the other at or near the point of deviation from the line of the arc in the shell, as and for the purpose set forth.

110,930, antedated December 30, 1870.—VALVE FOR OIL-PUMPS.—Henry Millingar, Pittsburg, Pa.

Claim.—The gas-valve, consisting of the combination of the tubular piece *b*, the valve-disk *f*, and the shell A F, constructed and arranged substantially as described, for the purpose of giving a passage for the gas into the well-tubing at any point above the pump and below the seed-bag of oil-wells, in the manner hereinbefore set forth.

110,931.—CRADLE.—Albert H. Ordway, Haverhill, Mass.

Claim.—A cradle, supported by and rocking upon the springs, substantially as shown and described.

110,932.—NECK-YOKE OF HARNESS.—Al Parliman, Palmyra, N. Y.

Claim.—The body A, formed with a central pending bearing, *a*, strap-loops *b b*, and cross- *c c*, when used in connection with the tongs the hame-straps, and the neck-yoke, substant as described.

110,933.—STEAM VACUUM-PUMP.—Ja H. Pattee and Hugh J. Graham, M mouth, Ill.

Claim.—1. The combination of a steam vac pump with a water-wheel arranged to op substantially in the manner and for the pur set forth.

2. The combination and arrangement of pi with valves *s*, U, and P, constructed and oper substantially as and for the purpose specified.

3. The arrangement of the valve P, stem K I, and condense-pipe L, in the manner subs tially as described and for the purpose specifi

4. The cam F, lever G, pitman H, and two- cock U, when arranged to operate substantial described and for the purpose specified.

5. The combination of the condense-water v J, pipe O, pipe N, tank A, and pipe L, substan ly as described and for the purpose specified.

110,934.—SPRING FOR WAGONS AND C RIAGES.—Samuel J. Pearsall and Sila Briggs, Saratoga Springs, N. Y.

Claim.—1. The spring B C, in Figs. III and with the lower ends extending from the body ther than the upper ends, as described, in co tion with the spring connections under the bod ranged as and for the purpose set forth.

2. The arrangement of the spring connectio der the body, marked E in Figs. II, III, and with the reaches or frame-work, and the bo the vehicle, with the devices of the first clai set forth.

110,935.—VALVE-GEAR.—William R. Re Tremont, Pa., assignor to himself "The Iron Manufacturing and Coal C pany," same place.

Claim.—The rock-arm, having the points *d* shank *f*, working between the plates *a b* of valve-rod to vary the motion of the valve, sub tially as herein shown and described.

110,936.—PUMP.—Nathaniel P. Sheld San Francisco, assignor to himself Wm. H. Hall, of San José, Cal.

Claim.—1. The combination of the cylinde with the revolving frame A, substantially as for the purpose hereinbefore set forth.

2. The combination with the plunger H and plunger-wheel K, placed eccentrically to the volving cylinder A, substantially as and for the pose hereinbefore set forth.

3. The combination of the plunger-wheel K the frame A and gear L, intermediate gear L gear L^2, substantially as and for the purpo forth.

110,937.—BEE-HIVE.—Luther S. Sis West Edmeston, N. Y.

Claim.—The comb-frames G E, constructe herein described, that is, the top-bars G cut out to form a passage for the bees, and gro for the insertion of the comb-guide *a*, and the pieces E E notched at their lower ends to fit the screws *d d*, the said top bar of each fram ing further provided with a downward-projec vertical bar *b*, having at its lower end the p rated block H, and all the frames inclosed w the hive composed of the connected corner-pos A with glass sides, cleats C C and cover D, a herein set forth.

110,938.—UNIVERSAL COG-WHEEL COUPLING.—Egbert Smith, Adams County, Ill., assignor to himself and Martin Sherrick, same place.

Claim.—A universal cog-wheel coupling and joint, constructed and operated substantially as and for the purpose described.

110,939.—CURTAIN-FIXTURE.—William H. Tambling, Eleroy, Ill.

Claim.—The combination of the cornice B, placed on the face of the window-frame at or near its top, and provided with the eye-bolts *a a*, *d d*, and *d'*, with the curtain C, its cord *e*, bar *b*, roller D, and weighted tassel E, all as and for the purposes herein set forth.

110,940.—PIANO.—William F. Ulman, Boston, Mass.

Claim.—1. A sounding-board, supported with reference to the case or frame upon projections *h*, extending from the frame at intervals, substantially as shown and described.

2. In combination with a metal frame, strips of wood *n*, or analogous material, upon which the strings bear, (adjacent to the hitch-pins,) substantially as described.

3. In combination with the metal-string plate and the hitch-pins, the groove or grooves *m*, for receiving the strip or strips *n*, substantially as shown and described.

110,941.—BOOK-CASE FOR SCHOOLS, &c.—Peter T. Vannice, Kewanee, Ill.

Claim.—1. The shelves *b b*, divided into stalls or divisions by cords or tapes *d d*, all arranged to operate as set forth.

2. A book-case for schools, arranged with shelves *b b*, cords *d d*, drawers D D N N O, compartments C C', G M M', and drop-door E, receptacles J K L, as and for the purpose set forth.

110,942.—VESSEL FOR CARRYING LIQUID CARGOES.—William Gray Warden, Philadelphia, Pa.

Claim.—1. The within-described cellular structure, having its lower portion extending entirely across the hold of the vessel, and contracted above so as to leave cargo-spaces *y y*, substantially as described.

2. An overflow vessel or vessels, J, communicating through a system of pipes with the cells of the structure, and situated so as to retain the liquid which overflows from said cells, substantially as described.

3. An open space, *b*, formed through and by the cellular structure, for the reception of the mast, but of such diameter that the mast cannot bear against the sides of the same.

110,943.—CUT-OFF FOR STEAM-ENGINES.—William Watts and Frederick A. Phelps, Newark, N. J.

Claim.—1. The cams J', formed and operating as represented, in combination with cut-off valves G G^1 and their connections, so as to drop the valves without in any degree disturbing or tending to disturb the position of the governor, as herein set forth.

2. The broad lifters H^2, fixed on the lifting-rod H, and inclosed loosely between broad parallel surfaces, G^2, on the back of the slide-valves G G^1, so as to unite the lifting mechanism with the valves and provide ample bearing in all positions of the latter, substantially as and for the purposes herein specified.

3. The arrangement of the toes H^1 in relation to their respective cams J' J', whereby, in case the governor ceases operation, said toes drop entirely off said cam and remain unaffected thereby.

4. The construction and arrangement in relation to each of the said toes and cams, whereby the latter are enabled, when the governor resumes operation and impels the sleeve endwise, to be thrust successively under their respective toes, substantially as hereinbefore described.

5. The hand-shaft K and its cams or eccentrics K', with suitable means for turning it, when arranged as represented, relatively to the lifting-rods H, the cut off valves G G^1, and connections H^2 G^2, so as to allow the cut-off valves to be held temporarily or permanently at will, independently of the cams J' J' and their connections, as specified.

110,944.—MACHINE FOR BOARDING LEATHER.—Urban R. Williams and William P. Martin, Salem, Mass.

Claim.—1. A machine for boarding leather, in which the stock is subjected to a continuous operation between two surfaces which move in opposite directions, substantially as set forth.

2. The movable apron-frame with its driving-gear G, arranged as described, so that it may be vibrated or oscillated around the axis of shaft of the driving-pinion F, for the purpose set forth.

110,945.—PRESSER AND STITCH-DIVIDER FOR SEWING-MACHINES.—Alfred S. Woodward, New York, N. Y.

Claim.—The presser D, having the concave recess G in the heel, and the adjustable stitch-divider H I, secured thereto, substantially as and for the purposes described and specified.

110,946.—APPARATUS AND PROCESS FOR GENERATING AND BURNING VAPOR FUEL.—Alfred J. Works, New York, N. Y., and Henry A. Daniels, Washington, D. C., assignors to the United States Vapor-Fuel Company, New York City.

Claim.—1. A method of and apparatus for refining and reducing hydrocarbon and olefiant liquids by forcing into and minutely diffusing therein, fig. 1, a current of hot air, by the aid of pressure from a boiler or by means of an ordinary blower.

2. An apparatus for and method of producing gas or other products, in a generator, from the above-described liquids, by means of a current of hot air driven and minutely discharged into the body of such liquid through the direct application of steam-power, substantially as and for the purposes herein shown and described.

3. A generator, constructed and arranged so that its contents may be raised and maintained at a very high temperature by means of steam-heat, in combination with single or double grate-bars, for using solid fuel, or a self-feeding vapor-burner, substantially as and for the purposes herein set forth.

4. The generator, constructed with a fire-box, connected and fed by a pipe communicating with its vapor-chamber.

5. The generator, constructed with a fire-box and duplicate grate-bars, for the purposes above described.

6. A steam-pipe, connecting with the main feed-pipe, so as to blow steam through and clean out the burners, promote combustion, as well also as to instantly extinguish the fire, by throwing into the combustion-chamber a surplus of steam.

7. The arrangement of refractive or incombustible material at or near the point of combustion, so that either or all of the aforesaid elements of combustion shall pass through the said material, in the manner and for the purposes herein described.

8. The combination and arrangement of the burner and refractive material with a furnace or with a fire-box.

9. A gas or vapor-purifier, fig. 3, either with or without means of heating the same.

10. A gas or vapor-purifier, in combination with superheating, decomposing, and refractive materials, fig. 4, as and for the purposes above described.

110,947. — PAPER-POLISHING MACHINE.—Abram Wright and George F. Wright, Clinton, Mass., assignors to themselves and John H. McNabb, same place.

Claim.—1. Three or more independent pieces of flint, *v v v*, or other suitable substance, used conjointly on the same piece of paper 4, for the purpose hereinbefore set forth.

2. The flint *v*, the imbedding substance 3, and the socket *u*, when used substantially as and for the purpose hereinbefore set forth.

3. The spring *w*, when used substantially as and for the purpose hereinbefore set forth.

REISSUES.

4,230. — DEVICE FOR BAKING BREAD.—Abram I. Quackenbush and Guilford Hawn, Fort Plain, N. Y.—Patent No. 99,109, dated January 25, 1870.

Claim.—1. The combination of the clamp, or its equivalent, with a cup, B, and pan A, substantially as described.

2. The construction of the pan A with lips *a*, adapted to receive flanges *b* on cups B, substantially as described.

3. The combination of the clamp C, or its equivalent, with the cup B, or its equivalent, and pan A, substantially as and for the purposes described and set forth.

4,231.—CULTIVATOR.—Benjamin Tinkham, Cameron, assignor to Hapgood & Co., Chicago, Ill.—Patent No. 30,897, dated December 11, 1860.

Claim.—1. The beams E, hinged or pivoted to the axle by a joint, substantially such as described, whereby the beams, with their shovels, have a free vertical and lateral movement, and still be held in an upright position, as herein set forth.

2. The rearwardly-projecting bars D, or their equivalents, for supporting the hinged beams above the ground, substantially as described.

3. The combination of the axle B, rigid tongue C, braces or bars D, and the hinged beams E, all arranged to operate substantially as and for the purpose herein set forth.

DESIGNS.

4,563.—TYPE. — Andrew Gilbert, Boston, Mass.

Claim.—The design of the said type, as described and shown.

4,564.—COAL-HOD.—Christian Linder, Nauffen, Würtemberg.

Claim.—The said design for a coal-hod body, as represented and described.

4,565.—SOLDIER'S MONUMENT.—Lewis A. Tifft, Springfield, Mass.

Claim.—The design for a soldier's monument, as shown.

4,566.—COMBINED PENCIL AND RECEPTACLE.—Horace J. Wickham, Manchester, Conn., assignor to Joseph Reckendorfer, New York City.

Claim.—The design for a combined pencil and receptacle-head, as shown.

TRADE-MARKS.

128. — PAINT. — Averill Chemical Paint Company, New York, N. Y., and Cleveland, Ohio.

129. — LIQUID CHEMICAL PAINT.—Averill Chemical Paint Company, New York, N. Y., and Cleveland, Ohio.

130.—CHEMICAL PAINT.—Averill Chemical Paint Company, New York, N. Y., and Cleveland, Ohio.

131.—AGRICULTURAL FORK.—Batcheller Manufacturing Company, New York, N. Y.

132.—CARPET. — Lowell Manufacturing Company, Lowell, Mass.

133.—STEAM-ENGINE.—Joel Sharp, Salem, Ohio.

134.—FRINGES, RIBBONS, AND TRIMMINGS OF SILK.—Silbermann, Heinemann & Co., New York, N. Y.

ISSUE OF JANUARY 17.

PATENTS.

110,948, antedated December 31, 1870.—PADLOCK. — John H. Ames, Stamford, Conn.

Claim.—1. The spring-brace *d*, in combination with the tumbler and fence, constructed as described, and provided with projections *h y j*, for the purpose set forth.

2. A safety-padlock, consisting of the case A, circular, oscillating, and notched fence *b*, oscillating tumbler K, sliders *g g g g*, springs *e e e e*, and springs *d*, *k*, and *c*, hooked lever C, hasp B, in combination with the flat key D, bitted on its sides or end, constructed and arranged substantially in the manner and for the purposes herein set forth.

3. The combination of a circular, oscillating, and notched fence *b* and projection *y* with stop-spring *d*, flat key D, hooked lever C, and hasp B, substantially in the manner and for the purpose set forth.

110,949. — HARVESTER. — Thomas James Barnes, Corry, Pa.

Claim.—1. The laterally and vertically-pivoted cutter-bar lever E, combined as described, with two disks made fast to a loose sleeve upon the axle, and having intermediate cams J^1 J^2 and pieces J^3, for the purpose specified.

2. The subject-matter of first claim, combined as described, with cam L H and lever M, for the purpose specified.

110,950, antedated January 7, 1871.—RAILROAD-CAR VENTILATOR. — William C. Betts, Brooklyn, N. Y.

Claim.—1. The combination of a series of curved elastic plates B with the bottom plate A and top plate G, to form an adjustable ventilator, substantially as herein shown and described.

2. The pivoted perforated plates or valves F and stops f^1 f^2 in combination with the curved elastic plates B, substantially as herein shown and described, and for the purpose set forth.

3. The pivoted bars D, in combination with the free ends of the curved elastic plates B, substantially as herein shown and described, and for the purpose set forth.

4. The wire catch or connection-rod E, constructed substantially as herein shown and described, and for the purposes set forth.

5. An improved car-ventilator, formed by the combination of the base-plate A, top plate G, curved elastic plates B, pivoted perforated valve-plates F, stops f^1 f^2, adjusting-bars D, and catch or connecting-rod E, with each other, substantially as herein shown and described, and for the purpose set forth.

110,951.—BACK CENTER FOR MILLING-MACHINES.—Amos H. Brainard, Hyde Park, Mass.

Claim.—The combination of the bar *a*, nut and screw *g f*, slotted block *h*, frame *n i i*, and bolts *k l*, substantially as and for the purpose set forth.

110,952. — CLOTHES-DRIER. — Joseph L. Brigham, St. Paul, Minn.

Claim.—The described arrangement of frames A B C, cords H H, and hook I, substantially as and for the purpose set forth.

110,953.—DEVICE FOR DISCHARGING OIL FROM TANKS. — William J. Brundred, Oil City, Pa.

Claim.—The tubular castings B, K, and L, valve D, rod F, and collar N, constructed and arranged to operate substantially as and for the purposes herein shown and described.

110,954. — WOOD PAVEMENT. — William Bushnell, Elizabeth, N. J.

Claim.—A metallic dowel-pin for wooden pavements, made with pointed ends and a central shoulder, and applied to the blocks in the construction of pavement, as set forth.

110,955.—BELT-GRAKING.—James H. Butler, Hampden, Me.

Claim.—Conveying the power from a driving-drum to a pulley on an arbor, which may be at any incline, by means of a belt running over two loose pulleys arranged at an intermediate point and at such an incline as will correspond with the incline of the pulley on the arbor and driving-drum.

110,956. — FILE-CUTTING MACHINE.—Pehr Johan Carlsson, Andover, Mass.

Claim.—1. In combination with the sliding carriage A, the screw *l*, bevel-gears *p* and *r*, the latter bored out and screw-threaded so as to encompass and constitute the nut for the screw-shaft *l* and bearing *c* on the carriage *f*, as fully set forth.

2. The combination of the weight 28, forked rod 8, fulcrums 26 and 27, with the face-plate bar, for the purpose of holding the face-plate bar onto the file in a manner set forth.

3. The combination of the pointer 29, (attached to the screw *l*,) arm *w*, provided with an irregular groove, with carriage *f*, to which it is hinged, and the locking apparatus, consisting of the devices 42, 43, 44, and 45, substantially as and for the purpose set forth.

4. In combination with the frame *a*, hollow pillars *c*, and cross-bar *e*, the feeding mechanism, as made, with the shaft 3 worm 2, worm-wheel 1, shaft *s*, gears *t*, *u*, and *x*, and adjustable frame *y*.

5. The automatical chipper arrangement, consisting of the circular bar 46, index 36, and adjustable finger 35, in combination with the fork 29, frame 31, and friction-pulley 32, as fully set forth.

6. The projecting bracket 23, with its spring, attached to the face-plate bar, movable in the pertussed hammer, in a manner and for the purpose set forth.

110,957.—GATE-LATCH.—Calvin Cole, Dayton, Ohio, assignor to Moses Gilmor, same place.

Claim.—The catch C, serving also as a stop to the gate, the latch-bar D, provided with the triangular foot F and depending vertically from the gate, and the socket E, all constructed and operating as specified.

110,958.—PAPER BED-BOTTOM.—James B. Crane, Dalton, Mass.

Claim.—1. An improved bed-bottom, formed by passing paper in sheets or strips around a frame, A, when wet, and allowing it to shrink to its place as it dries, substantially as herein shown and described, and for the purpose set forth.

2. The application of paper to a foundation frame or bedstead, to form a bed-bottom, however said paper may be applied.

110,959.—PEN-CLEANER.—Samuel Darling, Providence, R. I.

Claim.—A pen-cleaner vessel, having a brush, D, set vertically within the vessel, and held to place between the top and bottom thereof by a spring, 3, and operating as described.

110,960, antedated January 14, 1871.—BIT-BRACE. — William Pendleton Dolan, Charlottesville, Va.

Claim.—1. The combination, with the crank of a brace, of the head A and arms B and C, constructed and operating as specified.

2. The combination, with the crank of a brace, of the jaws I K, sleeve H, shaft G, spindle *e*, ratchet-wheels E F, and pawls *f g*, in the manner and for the purpose described.

110,961.—CLAMP.—John J. Dominic, Gallupville, N. Y.

Claim.—The adjustable jaws B C, screw D, swivel E, and stock A' F, all combined as described, to form a tool for applying rubber to a thill-coupling for the prevention of rattling.

110,962. — STAMP-CANCELER. — Charles C. Egerton, Washington, D. C., assignor to Samuel E. Middleton and Daniel W. Middleton, Jr., same place.

Claim.—The combination of the plate A with its teeth *a a*, central opening *b*, and recesses *c c*, and the screw B with its spring wings *d d*, all substantially as and for the purposes herein set forth.

110,963.—ELECTRO-MAGNETIC WEIGHING-MACHINE.—Henry Fairbanks, St. Johnsbury, Vt.

Claim.—1. Combining, with a weighing-scale, electro-magnets, to control the motion of the sliding poise, substantially as described.

2. Using, as herein set forth, the motion of the beam or other moving part of the scale, to make electrical connection with one or two electro-magnets when the poise requires to be moved, and to break the same when, by such movement, the scale is balanced.

3. In an automatic weighing-machine, a double clutch, or its equivalent, controlled by armatures held within attracting distance of their magnets, as specified.

4. The movable piece c^2, and its holding spring or equivalent, carried upon the several register-wheels, in combination with the roller c^1, or its equivalent, whereby the piece c^2 is at one point in each revolution forced to engage with and move the higher wheel, as and for the purpose herein specified.

5. The mechanism n to n^{10}, for stopping the machinery when each load has been weighed.

6. The mechanism n^{11} to n^{13}, for withdrawing the stop when another load is to be weighed.

7. The within-described electro-magnetic weighing-machine, automatically determining the weights of varying loads by a poise moved by mechanism under electro-magnetic control, and indicating the same by figure-wheels, the whole being constructed and operating substantially as set forth.

110,964.—COMPRESSION-COCK FOR FLEXIBLE TUBES.—Henry Fairbanks, Boston, Mass.

Claim.—The compression-cock G, in combination with the flexible tube F, substantially as described, and for the purpose set forth.

110,965.—AUTOMATIC WEIGHING AND DISTRIBUTING-SCALES. — Henry Fairbanks, St. Johnsbury, Vt.

Claim.—1. The combination of two reversed

bent levers, c^2, c^3, and their connections, with a connecting-link and pendants c c^1, and with the scale-beam a and operating mechanism, for distributing or controlling the reception of material, as specified.

2. The combination of a weighing-scale with the shifting devices c^1, &c., to c^3, as set forth.

3. In combination with a distributing-scale, a device for automatically closing a valve or stop-cock, and thereby cutting off the supply stream when, in consequence of any derangement, the scale is overloaded, as herein described.

110,966.—Saw.—Walter Lafayette Gage, St. Louis, Mo.

Claim.—The tooth, having end lugs b, inclines b', and rectangular base C, in combination with a corresponding recessed saw plate A, substantially as and for the purpose set forth.

110,967, antedated January 7, 1871.—Portable Camp-Grate.—Lorenzo D. Gavitt, Los Angeles, Cal.

Claim.—The folding legs c and hook-brace b, and the mode of securing the movable bars, and their application to the use and purpose herein set forth.

110,968.—Churn.—Alden Gifford and Zenas A. Gifford, Somerset, N. Y.

Claim.—1. The combination, in a churn, of a double-armed socket-frame, E J K, dashers C C D, and handle or lever F, operating substantially as shown and described.

2. The dashers C C, provided with key-hole slots H H, and suspended from the pivot-bolts G G, in the manner shown and described.

110,969. — Harness-Saddle. — Algernon Gilliam, Pittsburg, Pa.

Claim.—1. The removable flanged backing or cantle for harness-saddles, constructed and arranged in the manner and for the purpose herein described.

2. The combination of the saddle-seat B with its lug A, formed upon the same, backing or cantle E, and screw C, in the manner and for the purpose herein described.

110,970.—Mechanism for Opening and Closing Telegraphic Station-Circuits.—Elisha Gray, Chicago, Ill.

Claim.—1. The springs L and L′, arranged to operate substantially as and for the purpose specified.

2. The combination of plates A and A′, ground-plate E, plates J and J′, springs L and L′, the several parts arranged to operate together substantially as and for the purpose set forth.

110,971. — Endless-Wire Rope-Way. — Andrew Smith Hallidie, San Francisco, Cal.

Claim.—1. The method herein described of attaching the suspension-rods to the rope by means of a hanger proceeding or projecting horizontally from the upper and outer quarter of the rope in a manner substantially as hereinbefore described, and for the purpose hereinbefore set forth.

2. The hanger E, substantially as and for the purposes set forth.

3. The hanger E, in combination with the rods J and frame T, having the joints L M N or their equivalents, substantially as described, and for the purposes set forth.

4. The dump-car S, constructed and operated substantially as described, in combination with the rods J and hanger E, substantially as and for the purposes set forth.

110,972. — Machine for Mixing and Bleaching Sugars.—Melancthon Hanford, Lexington, Mass.

Claim.—1. In a machine or apparatus so arranged as to constitute a whole, devices for mixing and for bleaching sugar, for purposes stated.

2. A machine for mixing sugar, consisting of a drum, and a series of rods or mixers disposed therein, and supported and operated as explained.

3. A machine for mixing and for bleaching sugar, consisting of a series of rods revolving within a drum, and air-inlet and escape-pipes combined with the latter, whereby air is, by the centrifugal force of the revolving rods, drawn into and discharged from the drum, as stated.

110,973.—Animal-Trap.—George L. Hart, New Britain, Conn.

Claim.—The combination of the block a, spring c, choker d, and bait-hook e, the whole constructed and arranged substantially as and for the purpose set forth.

110,974.—Wedge for Splitting Wood.—Albert Houser, Ellington, Conn.

Claim.—A wedge of solid metal up to the extent of its taper, and from thence wood, protected on its wearing sides with metal, substantially as and for the purposes herein described and set forth in the foregoing specification.

110,975.—Stair-Rod Fastening.—Robert Hutchison, Newark, N. J., assignor to William B. Gould, same place.

Claim.—1. A spring finger attached to the metallic stair-rod loop, and acting against the end of the rod to retain the same in place, but to yield when the rod is moved endwise and allow the rod to slip past the finger for its removal, substantially as set forth.

2. The spring e, attached at the back of the loop c, and made with an opening that allows the screw to pass freely, and with fingers that are bent up to take the end of the stair-rod, substantially as set forth.

3. The open loop b for a stair-rod, made with the projecting studs 3 and stop-pin h, substantially as and for the purposes set forth.

110,976, antedated January 7, 1871.—Pump.—Edward T. Jenkins, Brooklyn, N. Y.

Claim.—1. A pneumatic pump, applicable to the discharge of liquids from close vessels, having a chamber, which serves as the cylinder of the condensing pump while affording a passage to the discharge-pipe through which the liquids escape from the vessel, said parts being constructed and arranged as described and shown.

2. The combination, with the chamber A, of the valves B and E, connection C, lever D, and telescopic discharge-pipe H, when the same shall be constructed and operate substantially as and for the purpose set forth.

3. In combination with the second clause of claim, the valve J^2 and spindle K, substantially as and for the purposes set forth.

110,977.—Attaching Door-Knobs to their Spindles. — James N. Karr, Buffalo, N. Y.

Claim.—The sleeve G, when provided with a flange, g, and arranged so as to operate with the rosette F, shank E, and screw-hole m, substantially in the manner and and for the purposes hereinbefore set forth.

110,978.—Fountain Paint-Brush.—Daniel J. Kellogg, Toledo, Ohio.

Claim.—1. The combination of the handle A, screw-cap B, reservoir C, brush D, spring F, and cap G, with each other, whether the conductor E be used or not, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the lamp-wick E, or equivalent conductor, with the brush D, spring F, reservoir C, cap B, handle A, and cap G, substantially as herein shown and described, and for the purpose set forth.

…73, antedated January 5, 1871.—…ufacture of Eyelet-Blanks.—…illiam R. Landfear, Hartford, Conn.

…im.—1. The process, substantially as herein …ified, of making connected series in ribbons …let-blanks, that is to say, the order of and the …l successive operations on the ribbon or strip …t of the several sets of punches acting in …ction with corresponding sets of the several …s of dies or molds in the surface of the roll, …eries first operated with being on a portion of …t that is of greater diameter than the re…ing portion, in order that greater speed of …n rotation may be imparted to said series, to …ovate for the draw of the metal, substantial…specified.

…The combination of the latch E with the in…ittently-revolving mold-roll B, stripper g, and …ecating punches d, substantially as described.

…980.—Mode of Forming Balls of …ine and Cord.—Hamilton B. Law…n, Cropseyville, N. Y.

…im.—The herein-described mode of forming a …l of twine, wicking, cord, &c., having a spher…interior and an exterior shell of prolate layers, …isting an oblate spheroid, as shown and de…ed, and for the purpose set forth.

…981.—Machine for Molding Chair-…ottoms.—John Lemman, Cincinnati, …Ohio.

…im.—In combination with the reciprocating …orm F F, carrying a fixed pattern, H, and the …A to be cut, the swinging-yoke C a b, when …ranged to swivel upon a single spindle, B, and …ed across the reciprocating form and work, as …d for the purpose set forth.

…982.—Siding-Gauge.—William E. Low…n, Princeton, Iowa.

…im.—An improved siding-gauge, formed by …combination of the stock A, strap or handle, …d stop B b', adjustable-rest C, pointed screw F, …spring H, and spring I, with each other, said …rts being constructed and operating substantial…as herein shown and described, and for the pur…e set forth.

…983.—Machine for Manufacturing …Hinges.—William F. Lewis, Waterbury, …Conn., assignor to Benedict & Burnham …Manufacturing Company, same place.

…Claim.—The combination, with the base A, of …adjustable hopper, D, sliding plate G, sliding …e B, provided with a hammer, H, grooved …k C, and springs L and N, and arm K, when …same shall be constructed and operate substan…ly as and for the purposes set forth.

…984.—Burial-Case.—Ivory Lorde, Mo…ine, Ill.

…Claim.—The deck-top for burial-case, which is …osed by the combination of A, B, C, D, E, and …, in the manner above described.

…985.—Door-Check.—Horatio Nelson …Hicks Lugrin, Chelsea, Mass.

…Claim.—The door-fastener as composed of the …tated base-plate A and lever B, the spring C, …d the lever-catch D with or without the spring f, …anged and combined substantially in manner …d to operate as and for the purpose as hereinbe…re described.

…986.—Cutlery. — Myron W. Lyman, …Chicago, Ill.

…Claim. —In combination with a slotted handle, …e or more blades having a transverse groove, H, …spring I, plate G, and operating-screw F, sub…ntially as described, for the purpose specified.

110,987, antedated January 14, 1871.—Shoemakers' Tool.—Myron W. Lyman and Franklin C. Wyman, Chicago, Ill.

Claim.—The fore-part or edge-irons, when the adjustable and reversible cap is formed with a shank-iron, L, in addition to the guard G, and shoulder M, as herein shown and described.

110,988, antedated January 9, 1871.—Cotton-Scraper and Harrow.—John M. P. Lyon, Bellefonte, Ala.

Claim.—The scraper E, in combination with a cotton-harrow, constructed and operated as described, for the purpose hereinbefore specified.

110,989.—Earth-Closet.—Patrick Malone, New Orleans, La., assignor to himself and Charles C. Landry, same place.

Claim.—The combination of the curved strips D and the metallic gate I with the platform G, the links F, and cover E, when these parts are constructed, arranged, and operated substantially as described for the purpose set forth.

110,990, antedated January 8, 1871.—Producing Refined Cast-Iron, Steel, and Malleable Iron.—John W. Middleton, Philadelphia, Pa.

Claim.—1. An apparatus for opening and closing a series of tuyere-pipes connected with a puddling, boiling, or refinery furnace, when the said apparatus is constructed to operate substantially as and for the purpose hereinbefore set forth.

2. The employment of a floating metallic indicator, E, constructed substantially as and for the purpose hereinbefore set forth.

3. The employment of a disk of porous burnt brick-clay, secured on the bottom of a deep vessel containing melted iron, the said disk being saturated either with water, hydrocarbons, acid, or alkaline solutions, substantially as and for the purpose hereinbefore described and set forth.

4. The employment of a small torpedo, G, in the bottom of the insulated vessel containing melted iron or steel, in combination with the electric wires g' g'', and arranged to explode the said torpedo by an electric spark, substantially as and for the purpose specified.

110,991.—Lunch-Box.—David Miller, Allegheny City, Pa.

Claim.—The hereinbefore-described lunch-box, provided with hinged partitions k k, as and for the purpose set forth.

110,992. — Attaching Knobs to their Spindles.—Charles Morrill, New York, N. Y., assignor to George H. Bidwell, same place.

Claim.—1. The combination, with the spindle B, screw-heads E D, check-screw F, knobs C C′, and lock, of the sleeves G G′, constructed, arranged, and operating substantially as and for the purposes herein specified.

2. The spindle B, provided with a screw-thread, e, in combination with the screw-head E and check-screw F, substantially as and for the purposes herein specified.

110,993.—Hoisting Apparatus.—Charles R. Otis and Norton P. Otis, Yonkers, N. Y.

Claim.—The arrangement, essentially as described, of the hoisting-rope G, the safety-rope M, and the take-up rope N, the first connecting the platform, car, or cab with the hoisting-drum, the second connecting the safety-drum with the safety-stops, and the third connecting the safety-drum with the hoisting-drum, for operation in relation to each other as specified.

110,994. — MATERIAL CALLED "OLE-IERINE," FOR DYEING AND PRINTING.—Alfred Paraf, New York, N. Y., assignor to Edward Sabino Renwick, trustee, same place.

Claim.—The new article of manufacture denominated ole-ierine, and herein before described.

110,995.—PROCESS OF EXTRACTING THE COLORING-MATTER OF MADDER.—Alfred Paraf, New York, N. Y., assignor to Edward Sabino Renwick, trustee, same place.

Claim.—The improved process of extracting the coloring-matter of madder by means of a liquid hydrocarbon, substantially as before set forth.

110,996. — TREE-PROTECTOR. — Caroline Parks, Milan, Ohio.

Claim.—The herein-described tree-protector, having the base formed of some flexible material, and covered internally with the compound herein described, after having been placed around the tree in the manner substantially as set forth.

110,997.—APPARATUS FOR DISTILLING AND CONCENTRATING LIQUIDS.—C. Chauncy Parsons, New York, N. Y.

Claim.—1. The process, herein described, of concentrating liquids or separating liquids having different boiling-points, by passing the distilled vaper or the liquid to be concentrated, or both, through a column of porous material, such as porous stone, brick, or equivalent substance, substantially in the manner and for the purposes set forth.

2. In apparatus for distilling liquids or for separating liquids having different boiling-points, the employment of a column containing a porous material, substantially such as specified, through which the distilled vaper or the liquid to be concentrated is caused to pass.

3. The combination of the column, constructed as herein described, and the still, substantially as shown and set forth.

4. The column, constructed as described, in combination with the condensing-worm G, or other apparatus for condensing the vapor passing out from the column, substantially as set forth.

110,998.—APPARATUS FOR EXTRACTING ESSENTIAL OILS.—George Gilman Percival, Waterville, Me., assignor to Isabel B. Percival, same place.

Claim.—The combination of the heater D, or its equivalent, with a still for extracting essential oils from solids or liquids, substantially as and for the purpose hereinbefore described.

110,999. — OIL-PAINT FOR COATING OIL-CLOTH.—Thomas Potter, Philadelphia, Pa.

Claim.—The above-described composition of matter, made of the ingredients and in the manner specified.

111,000, antedated January 5, 1871.—MACHINE FOR MIXING CONCRETE, &c.—Silas Putnam and Thomas Burt, Rockville, Conn.

Claim.—1. The combination of the plows, knives, and scrapers *a b c*, operating inside the tub G by means of arms E, and shaft D protected by tube F, the discharge K, the gate L, and the lever and rod O, substantially as and for the purpose hereinbefore set forth.

2. The combination of the revolving table M, attached to and operated by the shaft C, and the scraper N, substantially as and for the purpose hereinbefore set forth.

3. The combination of the plows, knives, and scrapers *a b c*, the tub G, arms E, shaft D, tube F, discharge K, gate L, lever and rod O, operating in connection with the revolving table M, shaft C, and scraper N, by means of the gear-wheels H I, substantially as and for the purpose herein before set forth.

111,001, antedated January 7, 1871.—FILTER.—Louis Raecke, New York, N. Y.

Claim.—1. In a filter, a sieve constructed with flange, so placed on its surface as to leave a space between the said flange and the walls of the filtering-vessel.

2. Packing the space between the flange *b* and the walls of the cylinder so closely with the filtering material as to prevent the fluid from passing down the said walls and out the sieve in an impure state.

3. A filter, constructed and arranged as herein before described, viz., having two sieves, with filtering material of wool, cotton, felt, or other fibrous material between the same, and the lower sieve having on it a flange, *b*, all combined with the vessels *c* and *c*, all as and for the purposes described.

111,002.—LET-OFF MECHANISM FOR LOOMS.—Horatio A. Remington, Anthony, R. I.

Claim.—The combination of the stud-wheel *a*, the centrally-located pad *a* on the arm of the vibrator, operating inside the circle of teeth of the stud-wheel, all constructed and operating substantially as herein set forth, and for the purpose specified.

111,003.—BURGLAR-ALARM.—William Reynolds, Manchester, N. H.

Claim.—The combination of the supporting-post E, detachable rod F, and hammer-arm A, when said hammer-arm rests directly upon the rod F, all constructed and operated substantially as shown and described.

111,004.—MACHINE FOR BURRING WOOL, &c. — William Richardson, Oldham, Great Britain.

Claim.—1. The fine-comb cylinders A and A' with their respective sets of rollers and brushes *n o* and *l' n' o'*, rollers *w* and *w'*, and casing *p*, arranged substantially as herein shown and described.

2. The combination of the grid, the rising and falling and traversing spikes, with the comb-cylinder A' and the rollers *l' n'* and brush *o'*, substantially as specified.

111,005.—LOCK FOR DOORS, &c.—Benjamin F. Roberts, Lacona, Iowa.

Claim.—1. The pivoted bars or bolts A A, staples *a a' a'*, springs *a' a'*, vertically and laterally sliding connecting-rod B *b'*, staples *b b*, and pivoted transverse bar C, constructed and arranged to operate substantially as shown, and for the purpose specified.

2. In combination with the above-enumerated parts, the circular plate D and crank or key E, substantially as shown and described.

111,006. — JOINT FOR RAILWAY-RAILS.—William W. Robinson, Ripon, Wis.

Claim.—1. A rail-splice, consisting of the block C in the recesses of the rails, of fish-bars and bolts, when the bolts pass through enlarged openings at the ends of the block C, as set forth.

2. In combination with the recessed rails, the block C, grooved fish-plate D, and the bolts E, substantially as described, for the purpose specified.

111,007.—OPEN LINK FOR COUPLING DOUBLE AND WHIFFLETREES.—Newton C. Sample, Penningtonville, Pa.

Claim.—An open-link, A, with its extremities *a* turned out on both sides, in the manner shown and for the purpose specified.

111,008. — CASE FOR ODOMETERS.—Jacob D. Seipel and Cyrus B. Alsover, Easton, Pa.

Claim.—1. In an odometer, the shell, composed

parts C C', hinged and secured to each other and to the axle by the clamp-screw D, substantially as set forth.

2. The combination of the hinged lid E, stationary E', wrench D', nut D, and lock F, substantially as and for the purpose set forth.

111,009.—FRUIT-PICKER.—Walter L. Shaw, Erie, Pa.

Claim.—1. A fruit-picker, consisting of two parallel guiding-rods *a a*, slides *b b*, each carrying a bag, or basket, and connected together by cords which pass over pulleys *c*, arranged and operated substantially as described.

2. The slides *b*, each in combination with a cord *d'*, friction-roller *g*, and pole *a*, arranged substantially as set forth.

3. The devices of the first claim in combination with the clips *i*, substantially as described.

4. In combination with a basket or pouch-frame, the bag *d'*, a knife-edge arranged in a V in the frame, substantially as described.

111,010.—IRON VIADUCT.—C. Shaler Smith, Baltimore, Md., assignor to the Baltimore Bridge Company, same place.

Claim.—An all-iron trestle formed of fixed piers composed of any number of panels of trestle, as described, alternating with spans of truss, each having one or both ends loose, to permit of expansion and contraction, substantially as and for the purpose set forth.

111,011.—CLOTHES-DRIER.—Horace Swan, Woodstock, Vt.

Claim.—The combination of the two light adjustable frames, which are composed of side slats *a* and *c c*, and connecting-rods *i i i i'* and *j j j j'*, substantially as described, with each other and with the uprights *a a*, substantially as and for the purpose herein set forth.

111,012. — CUSTARD AND CAKE-BAKER.—Charles L. Sweatt and George A. Hunteen, Fishersville, N. H.

Claim.—As a new article of manufacture, a custard and cake-baker, consisting of the stand *a*, having the stem *b*, the annular rim *c*, provided with the rings *f* and the handle *g*, all arranged and operating in the manner set forth.

111,013.—MACHINE FOR MAKING SPIKES.—James H. Swett, Pittsburg, Pa.

Claim.—1. In combination with the pointing and heading-dies and nippers, the feeding-jaws U and mechanism to impart to said jaws the reciprocating and lateral movements described so as to feed and hold the spike-rod or blank, substantially as described.

2. The combination of the wedge-shaped and toothed pieces *k* and mechanism for reciprocating the same, with the feeding-jaws U and pointing-dies, substantially as described.

3. The combination of the nippers *n*, sectional slides *q q'*, adjustable slides *p*, and reciprocating connecting-rods *t*, substantially as described.

4. As an improvement on nippers for spike and nail-machines, the points or spurs *u u* on the faces of the jaws and in rear of the nipping-surfaces, as and for the purpose described.

111,014.—MACHINE FOR SLITTING, BEVELING, AND BENDING METAL-TUBE SKELPS. Stephen P. M. Tasker, Philadelphia, Pa.

Claim.—1. The combination of the milled-head cutters J J' J' with feed-rolls F F and lower guides D', arranged and operating substantially as and for the purpose above described.

2. The combination and arrangement of the milled-head cutters J J' J' with the feed-rolls F F, guides D', and bending-rolls K K', substantially in the manner and for the purpose set forth.

3. Jointly, the construction of the roll L' with the curve *f*, tongue *g*, and groove *h*, and the combination thereof with the roll L, as described.

4. Jointly, the construction of the roll L' with the curve *f*, tongue *g*, groove *h*, and flanges *e*, and the combination thereof with the roll L, as described.

5. The combination of the rolls L L' with the rolls K K' by means of a suitable gearing, as and for the purpose set forth.

6. The combination of the rolls O O' with the rolls L L', for finishing the bending operation, substantially in the manner described.

7. The combination and arrangement of the three pairs of rolls, K K', L L', and O O', for bending a flat skelp into the form represented in figs. 9, 10, and 11, as above set forth.

8. The combination of the guiding-mouth D and guides D D', the feed-rolls F F, and the milled-head cutters J J' J', with the three pairs of bending-rolls, substantially in the manner and for the purpose above described.

111,015.—MACHINE FOR SLITTING, BEVELING, AND BENDING METAL-TUBE SKELPS. Stephen P. M. Tasker, Philadelphia, Pa.

Claim.—1. The adjustable beveled cutters J J' J', in combination with the guide-plates D' D' and feed-rolls F F, or their equivalent, substantially as described.

2. The combination and arrangement of the feed-rolls F F, guides D' D', beveled cutters J J' J', and bending-rolls K K', for slitting, beveling, and bending the skelps at one operation, substantially as described.

111,016. — MACHINE FOR SLITTING AND BENDING METAL-TUBE SKELPS.—Stephen P. M. Tasker, Philadelphia, Pa.

Claim.—The combination of the series of pairs of cutting-disks with the combination of guides, feed-rolls, and skelp-bending rolls, substantially as described.

111,017.—MACHINE FOR BENDING METAL-TUBE SKELPS.—Stephen P. M. Tasker, Philadelphia, Pa.

Claim.—The construction of one or more of the bending-rolls with flanges *e*, and combining said roll or rolls with the other parts of the machine in such manner that said flanges shall overlap the contiguous rolls, substantially as represented, so as to guide the sheet of metal as it passes through the machine, as above set forth.

111,018.—FAUCET FOR BEER OR OTHER BARRELS.—Samuel Thompson, Schaghticoke, N. Y.

Claim.—The combination of the sleeve or clamp D with its screw *e*, the coupling C, and the faucet A, having its outlet *b* arranged in relation with its bore, substantially as specified.

111,019.—WATER-WHEEL.—Jacob W. Truax, Essex Junction, Vt.

Claim.—1. The relative construction and arrangement, with respect to each other, of the flanged stationary cylinder A B and the flanged cap H I, as shown and described.

2. The arrangement of orificed, chuted, flanged, and chambered cap H I J and annular gate K with respect to wheel D, as and for the purpose specified.

111,020.—WINDOW FOR STOVES.—Henry B. Van Benthuysen, Lock Haven, Pa.

Claim.—1. The conical points C C, attached to or forming part of a mica frame, for holding the mica in place, or their equivalent, substantially as set forth.

2. The air-space or chamber D, for the passage of air around the edge of the mica, substantially as described.

3. The deflection-plate E, attached to or cast solid with the casing or frame, substantially as and for the purpose described.

4. The perforations or air-passages F F, or equiv-

ments, and the same in combination with the air-chamber D, substantially as and for the purposes herein before described.

5. A mica frame, (door or window,) constructed substantially as shown in figs. 1 and 2, in combination with deflection-plate B^2, air-passages F F, and air-chamber D, as and for the purposes described.

6. A mica frame, (door or window,) constructed substantially as shown in figs. 3 and 4, in combination with deflection-plate B^2 and air-chamber D, as and for the purposes set forth.

111,021.—Wagon-Box and Wagon-Rack Lifter.—Izaak Van Kersen, Kalamazoo, Mich.

Claim.—The frame C C, provided with pulleys D D, clamps G G, and pawl F, in combination with windlass H, drops E E, and cross-beams F and J, all combined, arranged, and constructed as and for the purposes set forth.

111,022.—Shank-Piece for Boots and Shoes.—Jeremiah M. Watson, Sharon, Mass.

Claim.—The elastic wooden shank-piece, as composed of the centralizer and vamp-space filling-piece *b*, and the series of body-leaves *a*, all arranged as set forth, and fastened together at or near their rear ends, only as described.

111,023.—Cotton-Cropper.—Dwight F. Welsh, Nevada, Ohio.

Claim.—1. The shaft E, carrying the choppers or hoes H H, constructed in two parts, and connecting or hinging them, the said parts, together by means of a universal joint, arranged and operating substantially as and for the purpose described.

2. The vertical rod F, supplied with a loop at its lower extremity embracing the shaft E, and a spring, *f*, at its upper end, in combination with the projecting bar or support G fastened to beam D, all arranged and operating substantially as and for the purpose set forth.

3. The handles I I, secured in place on the shaft E by means of the metal plate i^1, clips or ferrules i^2 i^3, and shoulder and nut i^3, arranged to operate in the manner and for the purpose specified.

111,024.—Pruning-Hatchet.—Jerison White, Providence, Pa.

Claim.—The construction of a "pruning-hatchet," consisting of the concaved edges 2, 4, and 5, with the convex edge 3, and the shank and socket C, constructed as described.

111,025.—Rock-Drill.—George L. Williams, of Mine La Motte, Missouri, assignor to himself, Radcliffe B. Lockwood, and William A. Scott, same place.

Claim.—1. The shoulder B on the core-lifter A′, and the socket C secured to the core-lifter A′ by any number of pins *c*, in combination with the annular cutter A, substantially as set forth.

2. The socket C, having slots C^1 and C^2 to rotate in accordance with the movements of the drill, and, by means of pins c^1 c^2, operate a pawl, D, within the core A′, said parts, in conjunction with each other, forming a core-lifter that shall operate substantially as and for the purpose set forth.

111,026.—Rotary-Pump.—Irvin Williams, Baldwinsville, N. Y.

Claim.—1. The wheel A B, with inwardly-curved back plate and curved buckets *a*, and the casing C F, having division *c*, pipe *m*, the curved plate C′, with bearing *c′* and stuffing-box *r*, and the inner bearing P *p p*, and shaft *b*, all constructed, arranged, and operating substantially as herein described.

2. In connection with the pump G *g′* and check-valves A *i*, the tripping-lever *k*, arranged and operating with relation to the pump A C, substantially as specified.

3. The herein-described rotary-pump, composed of the wheel A B *a b*, casing C *c*, curved removable back plate C′ *c′*, the shaft D *d*, stuffing-box *r*, induction and eduction-pipes E F, air-pipe *m*, the valve-chamber H, bearing P *p*, the hand-pump G *g′ n*, tripping-lever *k*, and valves *h i*, all constructed, arranged, and operating substantially as herein described.

111,027.—Hot-Air Furnace.—Charles A[illegible]len, Hartford, Conn.

Claim.—The chamber *c*, arranged between the fire-pot *b* and the shell *a′*, in combination with the induction-tubes *d* and heating-tubes *d′*, and draught-passages *i*, each side of the feed-hopper, as shown and set forth.

111,028.—Reversible Knob-Latch.—William H. Andrews, New Haven, Conn., assignor to Burton Mallory, same place.

Claim.—In knob-latches, the case A and plate B, each provided with the flange *b* around the lower-opening and ribs E, combined with the lower D and bolt C, constructed as described, and arranged to operate substantially in the manner set forth.

111,029.—Shingle-Machine.—Holiday C[illegible] Babcock, Eureka, California.

Claim.—1. The riving machinery, consisting of the frame O, platform P, pins R, and guide-piece Q, in combination with the river M having spring-catches S, constructed and operating substantially as described, for the purpose set forth.

2. In combination with said riving machinery, constructed and arranged as described, the platform J, having the guide-bar T, spring S, and projections V, as described.

3. The shingle-machine, constructed specifically as described, with its frame, platform, knives, guides, and operating mechanism, when arranged as described, for the purpose set forth.

111,030.—Hydro-Atmospheric Elevator.—Cyrus W. Baldwin, Boston, Mass.

Claim.—1. The construction of the stand pipe of a well herein explained, the same consisting of two upright hollow cylinders of sheet metal, of different diameters, arranged one within the other, the space intervening between them being filled with a suitable cement or composition, whereby a tight joint and stiffness of structure are insured, substantially as set forth.

2. In combination with the poising-plunger of a bucket of the elevator, an air-pipe, or its equivalent, which opens and regulates communication between the interior of the well or cylinder in which such plunger plays, and the atmosphere above such plunger, for purposes stated.

3. The combination, with the carriage of an elevator, of a well or cylinder and a poising-plunger or bucket playing therein, and connected to the carriage, and operating in conjunction with two water-tanks, the arrangement of the carriage, cylinder, and plunger being as and for purposes stated.

4. In combination with the poising-plunger of a bucket, and the carriage of an elevator of the class upon which these improvements are based, a suitable brake or stopping mechanism for arresting motion of said carriage, for purposes set forth.

5. The combination, with the elevator-carriage of the shaft *z*, disks or drum *c*, pulleys d^1 d^2, cords b^1 b^2, or their equivalents, and the friction-bar and bent lever *d′*, the whole operating as shown and described.

6. In combination with the well D and plunger G, the pipe *g′*, or its equivalent, for preventing access of air to the lower end of the plunger except at such times and in such quantities as shall be admitted by the operator by means of the air-pipe or its equivalent.

111,031.—Fire-Bar.—William Batchelo[illegible] Winchester, England, assignor to Edwi[illegible] Russ and Thomas Shewell Morris, same place.

Claim.—1. The bearing-bars *b*, with notched u[illegible]

[illegible] edges, upon which the under side of the fire-[illegible] a rest, as and for the purpose set forth.

2. The elongated openings *c* and keys *d*, combined with the bars *a*, bearers *b*, and projections upon the said bars *a*, as and for the purposes set forth.

111,032.—Water or Steam-Valve.—Robert Berryman, Hartford, Conn., assignor to the Berryman Regulator and Alarm Company, same place.

Claim.—The hollow conical valve A, having ports B and B′, substantially as and for the purposes specified.

111,033.—Plow.—Hiram R. Bowen and Lorenzo D. Robnett, New Washington, Ind.

Claim.—The subsoil-plow herein described, composed of the beam, handles, and standard, as shown, and twisted, sharpened upright A, with flange A′, concave-convex shovel B, and sole or shoe C, all constructed and arranged, relatively to one another, as set forth.

111,034.—Cotton-Seed Huller.—Horace C. Bradford, Providence, R. I., assignor to himself, and H. N. Fenner, same place.

Claim.—The improved cotton-seed huller herein described, consisting of the corrugated cylinder C and the series of yielding beds D, each of which is mounted upon adjustable springs *a*, and provided with a concave and tangential face, forming, when arranged as shown, the alternate spaces *d*, the whole constructed and operating substantially as described.

111,035.—Feed-Cutter.—Joseph H. Bradley, Hillsborough, Ohio, assignor to himself and Charles S. Bell, same place.

Claim.—The lever *i*, provided at one end with the slot *m*, and connected at that end with the disk *l* which is furnished with a pin, *k*, that passes through the slot *m*, the lever *i* being connected at different points with the two bell-cranks *f r*, and combined thereby with the separate pawls *d e* and sockets *b c*, all these parts being arranged to operate substantially as described.

111,036.—Steam-Boiler.—Adolph Brase and Lemuel Salladay, Sciotoville, Ohio.

Claim.—1. In combination with a steam-boiler, the perforated tube B, scrapers J, chamber D, and pipe E, when the same are arranged to operate substantially as and for the purposes described.

2. In combination with a steam-boiler, a movable tube, having scrapers thereon, from which the feed-water is distributed, and from which the mud and sediment are blown off, substantially as described.

111,037.—Cultivator.—George Walter Brenson, Ottawa, Ill.

Claim.—1. The slide-bars H H, in combination with the boxes I I, the stems J J, the chains P P, and the plow-beams K K, substantially as and for the purpose described.

2. The sliding braces R R, in combination with the plow-handles L L and the plow-beams K K, substantially as described.

111,038.—Stamp-Canceler.—Franklin W. Brooks, New York, N. Y.

Claim.—A device for securing revenue or other stamps or seals, consisting of two plates, adapted to firmly hold a stamp between them, and to tear and deface it by a sliding movement of one plate over the other in any direction, the said plates being held together by spring-catches, which will be released by such sliding movement.

111,039.—Boots and Shoes.—Franklin J. Barcham, Racine, Wis.

Claim.—1. The method of constructing the lower portion of a boot or shoe in a single piece A, by slitting the rear end of the piece and lapping the flaps, substantially as herein shown and described.

2. The part A, when constructed substantially as shown and described.

3. The counter of a boot or shoe, when strengthened by the overlapping flaps, substantially as and for the purpose specified.

4. The method of arching a shoe or boot-sole, at D, by cutting the leather at the counter and drawing the flaps together, substantially as shown and described.

111,040.—Fluid-Meter.—Leopold F. Buschmann, New York, N. Y.

Claim.—The arrangement of a stationary disk, D, perforated with oblique contracted channels *a*, and fitting closely into the jacket C, over the bucket-wheel A, mounted on a vertical spindle, B, the extension of which carries a worm-screw to transmit the motion of the bucket-wheel A to the registering apparatus, all as herein shown and described.

111,041.—Hay-Tedder.—William H. Butterworth, Trenton, N. J.

Claim.—1. The connecting-rods *f*, having one end pivoted to the cranks *g* and the other end pivoted to the ring I, when arranged substantially as described, so that each rod will alternately come in rigid contact with said ring, or suitable projections on the same, while the reel is revolving, for the purpose of imparting a continuous rotary motion to said ring, substantially as set forth.

2. In combination with the above, the oscillating fork-rod M and its crank *g*, arranged and operating substantially as and for the purposes set forth.

3. The fork-holders N and their clamps O, provided with jaws *h h*, clamping-bolt *k*, and washer *l*, in combination with the coil-support *s*, all constructed and arranged substantially as and for the purposes herein set forth.

4. The combination, with the driving-wheel E, of the driving-gear F, having the arms *b b* provided with concentric slots, whereby the gear may be readily attached to wheels having spokes unequally placed, and allow the bolts to pass through the center of the spokes, substantially as described.

5. The combination, with the frame of the machine, of the axle-plates G G, constructed as described, and provided with cars *a a*, substantially as and for the purposes herein set forth.

6. The combination, with the frame of the machine and the shafts or thills P, of the curved metallic standards R, ribs *m*, and clips *n*, substantially as and for the purposes herein set forth.

7. The device for raising and lowering the tedder, consisting of the slotted and perforated casting *r* and the lever S, having its lower end pivoted to the cross-bar of the shafts, and provided with a stud or bolt, and the spring-catch *t*, all constructed and arranged to operate substantially as and for the purposes herein set forth.

111,042.—Thrashing-Machine.—Henry Russell Canine, Waveland, Ind.

Claim.—1. The vibrator I, constructed as described, composed of wooden frame 1, serrated longitudinal ribs 2, sheet-metal bottom 4, riddle 5, placed over the fan-shoe, and pivoted straw-rake 6, arranged and operated substantially as shown and described, for the purpose specified.

2. The fan-shoe *u*, as described, consisting of wooden sides 7, inclined sheet-metal bottom 8, transverse wooden suspension bar 9, and sheet-metal edge guards 10, and suspended and guided in its movements by straps *u′ u″*, all constructed and arranged for operation as described, for the purposes set forth.

3. The swinging double-discharge grain-chute *v*, reversible without being detached, and constructed and operated substantially as shown and described.

4. The combination, with the vibrator I and swinging fan-shoe *u*, of connecting-rods 20 20 and interposed vertical rock-shaft 21, as and for the purpose set forth.

5. In combination with the grain-chute *v*, rock-shaft 21, and rock-lever 23, the connecting-rods 22, when provided with adjusting perforations, as shown, by the use of one or other of which said grain-chute may be reversed, as set forth.

6. The combination, with the tailings delivering-chute *w'*, of the brackets 16 16, slide 17, guide 18, crank-shaft 24, and pitman 25, as and for the purpose stated.

7. The combination, in belt-tighteners *s s'*, for threshing-machines, of spring hand-levers 26, bearing-pulleys 27, and holding-racks 28, constructed and arranged as herein represented and described.

111,043.—Hay and Cotton-Press.—Nathan Chapman, Hopedale, Mass.

Claim.—1. In combination with the traversing block *d*, the radial links *c*, the links *e*, and pawl *f*, for turning the ratchet and sprocket-wheels, substantially as described.

2. I do not claim a lever with its fulcrum on the ratchet-wheel shaft; but I do claim the lever *b*, provided with holes, *r*, to graduate its power, and with its fulcrum in the stand U, in combination with the links *c*, block *d*, link *e*, and pawl *f*, substantially as described.

3. In combination with the follower J, the sprocket-wheel P, arranged in line with the slot I so as to draw the follower straight down the slot without canting it so as to bind against the sides of the slot.

4. In combination with the sprocket-wheel P and chain N, the arrangement of the rollers Q Q, for holding the chain up to the sprocket-wheel and compelling it to leave the wheel, substantially as described.

5. In combination with a follower, J, drawn down with single chains, working directly onto the sprocket-wheels, the rope, weight, and pulleys, to draw up the follower and chains, as described.

111,044.—Medical Compound Pill for Cure of Colds, &c.—William E. Chilson, Troy, Pa.

Claim.—The within-described medical compound for pills, composed of the ingredients named, substantially as and for the purposes specified.

111,045.—Preserving Wood.—Benjamin H. Detwiler and Samuel G. Van Gilder, Williamsport, Pa.

Claim.—The above-described process for preserving wood, consisting of the ejection of the sap by steam or otherwise, and the introduction of resin, pitch, asphalt or its equivalents, held in solution by the use of petroleum or any of its distillates, substantially as herein set forth.

111,046.—Hound, Sway-Bar, Tongue-Brace, and Cross-Bar of Vehicles.—Gerard Doan, Theodore Wallis, and George D. Moreland, Fleming, N. Y., assignors to Thomas M. Jones, Chicago, Ill.

Claim.—1. The hounds E E and sway-bar F, formed of a single piece of wood, bent only at the junction of said hounds with said sway-bar, in the manner described.

2. The single piece of wood G, bent as set forth, combined with tongue and hounds E E, to perform therefor the functions of both a cross-bar and pair of braces, as described.

111,047.—Grate-Bar.—Albert Fickett and Charles C. Benton, Rochester, N. Y.

Claim.—1. The grate-bar A, in combination with the sliding grate B, when the diagonal bars *a'* run in an opposite direction to the diagonal bars *b'*, substantially as described.

2. The curved sliding grate B, in combination with the grated plate *a*, having a convex upper surface, as and for the purposes set forth.

3. The dead space *c* at one or both ends of the grate-bar, in combination with the sliding grate B, for the purposes specified.

111,048.—Machine for Lining Straw Board, &c.—Benjamin F. Field, Beloit, Wis.

Claim.—1. In combination with the roller E, the clutch H, and adjusting-rod I, substantially as and for the purpose set forth.

2. The adjustable plugs *e* and nuts *f*, combined with the hollow roller E and the shaft F, as set forth.

3. The tension-roller L, provided with friction-brake-springs, in combination with the paper roller E, substantially as and for the purpose set forth.

4. The tension-roller L, mounted upon the reversing-arms N and the two paper-rollers E E, arranged in reference to said rollers as and for the purpose set forth.

5. The two paper-rollers E E, arranged as described upon the frame D, combined with the adjustable guide-roller *p*, as set forth.

6. In combination with the scraper S, the adjusting thumb-screws U, substantially as and for the purpose set forth.

7. The combination and arrangement of the revolving-mixer D' with the cooling and thinning chamber G' and the reservoir A, substantially as and for the purpose set forth and described.

111,049.—Shirt-Button or Stud.—Levi W. Fifield, Worcester, Mass., assignor to Thomas F. Arnold and Henry E. Webster, Providence, R. I.

Claim.—The elliptical spring *c*, each leaf of which being provided with an offset, *g*, and operating in conjunction with button A, knob B, and shank *d*, in the manner and for the purpose described.

111,050.—Seed-Drill and Cockle-Separator Combined.—John E. Fletcher, Rectortown, Va.

Claim.—1. The metal frames *n n*, constructed and arranged as shown and described, whereby they perform the double function of scraping the peripheries of the front rollers *i i*, and of retaining both sets of rollers in place on the shafts *d* and *g*, as specified.

2. The improved seed-drill and cockle-separator herein described, consisting of the seed-box H, the metal scraper-frame *n*, rollers *k l*, seed-discharge spout M, cockle-spout O, trough P, pinions *r* and *s*, gears B C, shifting-gear E, and lever *f*, all constructed and arranged as shown and described.

111,051.—Papering Pins.—George Fowler, Seymour, Conn.

Claim.—1. The arrangement of pins between two continuous strips, secured together in the interval between the pins by an adhesive material, in the manner described and shown.

2. The arrangement of a continuous line of pins secured together in the manner described within a case A, the said case provided with a means for rolling up the pins, and aperture for delivering the same, substantially as set forth.

111,052.—Lightning-Rod.—Joseph R. Fricke, Pittsburg, Pa.

Claim.—1. The combination, with a copper-wire cable lightning-rod, of a spirally-flanged core or stiffener, the whole arranged and constructed substantially as herein set forth.

2. The dovetail connection between the end of the spiral rod and the coupling-screw, when constructed as herein described and shown.

111,053.—Portable Chair.—George Gardner, Glen Gardner Station, Clarksville Post-office, N. J.

Claim.—The arrangement of the several fastenings and the button or bolt *f* on the bottom, substantially as herein described, whereby the several parts of the chair are locked together by the act of fastening the seat.

111,054.—Fire-Tongs.—Alfred M. George, Sand Fly, Texas.

Claim.—The arrangement of the tongs *a b* and slotted guide *c*, when constructed and operating as specified.

111,055.—Plow.—Elias Hayman, Columbus, Ga., assignor to Blount, Haiman & Brother.

Claim.—The arrangement of the plow-point E, mold-board D, land side F, slotted standard C, and screw-bolts c^3 c^4 c^5 c^6, as and for the purpose specified.

111,056.—Plow.—Thomas Harding, La Fayette, Ind.

Claim.—1. The axle B, constructed with the cast-iron end pieces *b b*, when said end pieces are provided with sockets *d d* and flanges *e e*, for the purposes described, and the wooden cross-bar, as set forth.

2. In a straddle-row cultivator, the draft-pole A and a double crank-axle B, when joined together substantially as described, so that said draft-pole and axle can be adjusted in height, for the purpose set forth.

3. The combination of the double crank-axle B, tongue A, jointed thereto by means of the strap D, and the braces E, for the purpose of adjustment, as set forth.

111,057.—Emery-Wheel.—Thomas Harding, La Fayette, Ind.

Claim.—1. A polishing-wheel constructed with a slightly flexible rim, connected to a rigid hub, by means of elastic supports made adjustable, so as to center or balance said rim, substantially as set forth.

2. The chambered wheel A, in combination with the plungers C, screw-bolts *c*, and elastic springs *i*, constructed substantially as described, to support the rim D, as set forth.

3. The rim D, constructed of successive layers of leather or other suitable material, glued, cemented, or otherwise fastened together, in combination with elastic supports C, resting upon a rigid wheel, as and for the purpose set forth.

111,058.—Construction of Barrels for Beer, &c.—Matthew Hawe, Albany, N. Y.

Claim.—1. In barrels and similar vessels for holding beer, ale, and other fermentations liquids, constructing the heads B arching or crowning inward by means of the bevel-pieces *a* and *b*, or *a*, *b*, and *c*, substantially as and for the purpose set forth.

2. Making the beveled line *a* of the upper edge of the head B in such a manner that the said beveled line *a* will bear against a portion of the bowel *b*, as also the cross V, substantially as and for the purpose set forth.

111,059.—Sewing-Machine.—Arthur Helwig, London, England, assignor to himself and Simon Collins, same place.

Claim.—The vibrating looper *b*, constructed and operated as described, in combination with a needle, *a*, having vertical and lateral motion, both the looper and needle operating together, substantially as and for the purpose herein set forth.

111,060.—Water-Meter.—Frederick G. Hesse, Oakland, Cal.

Claim.—1. The rotary flanged wheel W, chambered, provided with valves E and a conduit P, and arranged in a suitable casing, in combination with an endless belt, B, substantially as described.

2. The endless belt B, armed with stiffening-bars *c*, in combination with wheel W, substantially as described.

3. Stationary cam C, in combination with valves E, the intermediate connections, and the wheel W, substantially as described.

4. The annularly-grooved and flanged wheel W, constructed with valve-seats *b*, and adapted to operate, in conjunction with an endless belt, B, within a close case, substantially as described.

5. The apparatus having belt-pulley R and wheel W arranged within casing L, and adapted to operate with belt B, all substantially as described.

111,061.—Crushing and Hulling Attachment to Grinding-Mills.—George C. Hohenstein and Charles T. Glaeser, Cincinnati, Ohio.

Claim.—The described arrangement of the respectively smooth and corrugated rollers F and G, mounted in different planes, and of unequal diameter, flexible mouth-piece, N, and adjustable convex throat L, as and for the purpose set forth.

111,062.—Combined Seed-Drill, Manurer, and Potato-Digger.—Eugene C. Hopping and Eugene A. Ely, Madison, N. J.

Claim.—1. In combination with a potato-digger, the chain O, with the rotating wings P and wires N, arranged to operate substantially as and for the purposes herein shown and described.

2. The stationary racks R R, for rotating the wings of the endless chain, substantially as described.

111,063.—Beam or Girder for Fire-Proof Structures.—William Wesley Hughes, Philadelphia, Pa.

Claim.—As a new article of manufacture, a beam or girder, to the sides of which plaster of Paris or other non-conducting material is confined, as set forth.

111,064.—Apparatus for Separating Oil from Grain and other Materials.—Elias S. Hutchinson, Baltimore, Md.

Claim.—1. An apparatus for separating oil from vegetable and other matters, adapted to confine the material while the oil is removed, and afterward release and agitate it for drying, either wholly within the same chamber, or by discharging a portion into another chamber or chambers.

2. A vat for removing oil from vegetable and other matters, adapted to be turned or tipped on two axes, substantially as and for the purposes set forth.

111,065.—Feed-Cutter.—Christoph Kemper, Hermann, Mo.

Claim.—The arrangement of the fly-wheel D, its knife F, shaft E, feather-spring F', cam *e'*, slotted cam-lever G pivoted and connected to angle-lever K, lever H, guide H', set-screw *h'*, ratchet devices L I J M, pawls *i i'*, corrugated feed-roller C C', plate *a'*, sliding standard M, spring bar O, when all said parts are combined and constructed to operate substantially in the manner and for the purpose described.

111,066.—Mode of Making Bricks.—François Lambert, Los Angeles, Cal.

Claim.—1. The combination of the box E, perforated top G, follower H, and rods I I, for the purpose of forming a series of holes in bricks before they are burned.

2. As a new article of manufacture the within-described brick, for the purposes set forth.

111,067.—Combined Steamer and Condenser.—George W. Lane, Portland, Me., assignor to himself and John Alles, Boston, Mass.

Claim.—The combination of the walls *a*, cover *g*, steamer *f*, condenser *c*, tubes *h e i*, and rim *d*, to be used as herein set forth.

111,068.—Oiler.—Albert D. Laws, Bridgeport, Conn.

Claim.—The concavo-convex bottom for oilers,

formed from a disk of sheet-steel, and tempered to give and retain its elasticity, substantially in the manner set forth.

111,069. — GRAIN-BINDER. — Sylvanus D. Locke, Janesville, Wis.

Claim.—1. The twisting-pinions G H, operated independently, and arranged to clamp and hold the ends of the binding-wire between them during the process of twisting, substantially in the manner set forth.

2. In combination with the clamping and twisting-pinions G H, the racks Q R, arranged with alternating teeth, in the manner and for the purpose set forth.

3. The shield K, constructed as described, in combination with the twisting mechanism, to guide the binding-wire both to the front and rear teeth of the twisting mechanism, and to guard said twisting mechanism from entanglement with the grain, substantially as set forth.

4. The combination of the shield K and stationary jaw J of the wire-holder and cutter, arranged and operating as described.

5. The movable jaw I of the wire-holder and cutter, provided with a stud, *d*, combined with the cam U, located at the end of the guide-box M, as described.

6. In combination with the jaws I and J of the wire-holder and cutter, the pin P, substantially as and for the purpose set forth.

7. The combination of the cam W and spring L with the movable jaw I in the manner described, whereby the binding-wire will be griped, severed, and securely held, as set forth.

8. In combination with the head C and the twisting-mechanism, the latch-spring O, located and operating as described, to hold the binding-wire in engagement with the rear teeth of the twisting mechanism.

9. The arrangement of the guard-spring *g*, in connection with the stud *d*, for the purpose set forth.

10. The arrangement of the spring A in connection with the head C, shield K, and twisting mechanism, as set forth.

11. The guide-box M, when provided with the racks for operating the twisting mechanism, cams U W, for operating the cutting and griping-jaws, and the lug r, for a permanent attachment of the guide-roller N, as set forth.

111,070.—HUB FOR VEHICLES.—William I. Lyman, East Hampton, Mass.

Claim.—1. The combination of the spokes, metal casing, wooden hub, and melted sulphur, cement, or their equivalents, for the purpose of filling in around the spokes.

2. A metallic casing or shield for a hub, constructed substantially as described, and consisting of the parts A B, connected at the collars C C by the pieces *f f* extending toward the center of the hub, and leaving a space between their inner edges and the hub, and having the part B extended to form the band D.

111,071.—EMBROIDERY ATTACHMENT FOR SEWING-MACHINES.—William A. Mack, Norwalk, Ohio.

Claim.—The combination, with the support or body B, arranged for attachment to the sewing-machine, of the cam and ratchet-wheel W, lever *b*, and slotted arms A, constructed, arranged, and operated as described.

111,072.—LAMP.—Rufus S. Merrill, Boston, Mass., assignor to himself, William B. Merrill, and Joshua Merrill, same place.

Claim.—1. In an Argand lamp having the removable part of the burner provided with sleeves fitting over a burner-supporting tube, as described, the annular trough located upon the exterior of said burner-supporting tube at or just below the point to which the lower part of the exterior sleeve extends when the removable portion of the burner is placed on the tube, as herein shown and described.

2. The formation of the notched wick raising sleeve of the removable portion of an Argand burner, with inclined or beveled sides between the notches, substantially as and for the purpose shown and set forth.

111,073.—LAMP-CHIMNEY.—Rufus S. Merrill, Boston, Mass., assignor to himself, William B. Merrill, and Joshua Merrill, same place.

Claim.—A slip-chimney for Argand burners, made with a contracted neck, a cylindrical body above the neck, and a conical or tapering base or deflector below the contracted neck, as and for the purpose shown and set forth.

111,074.—LAMP-BURNER.—Rufus S. Merrill, Boston, Mass., assignor to himself, William B. Merrill, and Joshua Merrill, same place.

Claim.—1. The combination, with the inner and outer wick-tubes of an Argand burner and the ratchets or other wick-raising devices arranged upon the exterior of the said tubes, of a chamber or case inclosing the said ratchets or other wick-raising devices, and separating the exterior draught from the central draught, substantially as herein shown and described.

2. The inner and outer wick-tubes, united by means of a longitudinal fin or strip extending the whole or nearly the whole length of said tubes, as described, and combined with a tube or conduit for conveying the central draught to the inner tube, as shown and described.

3. The removable portion of the burner, provided with a base composed of a perforated plate, the outer portion of which is bent down at an angle with the remainder, so that the air forming the exterior draught must pass through two sets of perforations at an angle with one another before reaching the flame, substantially as shown and described.

111,075. — MANUFACTURE OF SAFETY-MATCHES.—L. Otto P. Meyer, Newtown, Conn.

Claim.—In the manufacture of the safety-match, gelatine prepared with diluted acetic acid or with diluted solution of carbonate or bicarbonate of soda, substantially as described, and for the purposes set forth.

111,076. — BRICK-PRESS. — James Allaire Millholland, Mount Savage, Md.

Claim.—1. The vibrating and sliding rods or levers P, operating as described, in combination with the cross-face J and operating mechanism, as and for the purpose set forth.

2. The yokes Q Q, at the inner ends of the said vibrating rods or levers, in combination with the double cams R R, for operating upon the yokes, substantially in the manner described.

111,077. — WATER-WHEEL. — Albert L. Moore and Norman S. Parker, El Dorado, Oregon.

Claim.—The buckets I, protruding forward to an angular point, and receding backwardly in a curve behind the axis of the wheel, combined as described, with chutes C arranged at a tangent to the circle whose radius extends from the axis to the farthest outward extremity of the buckets, as and for the purpose described.

111,078. — TILE-MACHINE.—Albert Moorhous, Indianapolis, Ind.

Claim.—The arrangement of the slotted screens H H and removable dies E E with the hinged shutters G G, which are locked by the T-bolts, as shown and described, for the purpose of allowing the gravel to be removed from the plunger-chamber B, as specified.

111,079.—HAT-MACHINE.—Charles M. Osgood, Amherst, Mass., assignor to L. M. Hills & Sons, New York City.

Claim.—The graduated table A, in combination with the socket C and plunger or die E, substantially as above described.

111,080.—WINDOW-FRAME.—Silas R. Owen, Skewartsville, Mo.

Claim.—1. The window-frame herein described, having the stationary stripe A A and K running the entire length of the window, bearing-stripe B shouldered at *d*, short stripe E E and L, and the removable strip *s*, when constructed in the manner and for the purposes specified.

2. In combination with the upper and lower sashes F and H, of different widths, a window-frame, having communicating grooves *t* and *f*, arranged substantially in the manner and for the purpose specified.

111,081.—MACHINE FOR THE MANUFACTURE OF PAPER CARPET-LINING.—Claudius A. Pease, Astoria, N. Y.

Claim.—1. The combination of the two sets of web-sheet-forming mechanism, A and B, and batting mechanism, with the presser-rolls H and endless-apron F, arranged together substantially as and for the purpose described.

2. The band *b* on the presser-roll H, substantially as and for the purpose specified.

3. The combination and arrangement of the endless aprons F F and M, so as to deliver to the pressing-rolls H H the sheets of newly-formed web of paper with a bat of fibrous or spongy materials between, as set forth.

111,082.—MACHINE FOR MAKING BOLTS AND NUTS. — George Richard Postlethwaite, Birmingham, Great Britain.

Claim.—1. The combination of a lower vertical die-holder or slide, made in two parts and hinged together, as and for the purpose described, a lever, as m^3, for elevating and supporting said die-holder, and an upper vertically-reciprocating die-holder or plunger *y*, as herein set forth.

2. The combination of the die-holder and lever, specified in the first claim, and the lever *s*.

3. The combination of the die-holder and lever, specified in the first claim, the lever *s*, and the setting-pin *t*.

4. The combination of the die-holder and lever, specified in the first claim, and the screw-stops and bar q^3.

5. The combination of the die-holder and lever, specified in the first claim, the plates b^2 and projections b^3 thereon.

6. The combination of the die-holders and lever, specified in first claim, the dies b b^2 b^1, lever 8, rod 11, and spring 12, as set forth.

7. The combination of the series of jointed levers, die-holders or slides, the series of levers *m* for elevating and supporting said slides or holders, the series of levers *s*, the series of upper reciprocating die or punch-holders or plungers, the series of dies a b c d, and the series of tools a^1 b^1 c^1 d^1, as set forth.

111,083.—TRACK-CLEARER FOR MOWING-MACHINES.—Benjamin F. Power, McConnellsville, Ohio, assignor to Hugh M. Cochran, and Joseph F. Sonnanstine.

Claim.—The laterally and vertically-oscillating head A, constructed as described, in combination with the spiral arms *a a* and swivel E, substantially as and for the purpose described.

111,084.—TABLE FOR DRILLING-MACHINES. Thomas Reaney, Chester, Pa.

Claim.—1. The table A, divided on the upper surface into two or more compartments, in each of which lie loosely one or more balls, as and for the purpose set forth.

2. In combination with the subject-matter of the foregoing claim, the annular channeled plate C, and the balls lying loosely therein, as set forth.

111,085.—REAMING AND COUNTERSINKING-TOOLS.—Thomas Reaney, Chester, Pa.

Claim.—The combination of the adjustable gauge B and its shoulder *i* with the rings or collars D and D', their set-screws, and the body of the tool.

111,086.—MATTING APPARATUS.—James H. Reilly, Brooklyn, N. Y., assignor to Henry G. Reed, Taunton, Mass.

Claim.—The combination of jointed needles with a chuck, drum, or its equivalent, in the manner and for the purpose specified.

111,087. — HOT-AIR ENGINE.—Alexander K. Rider, New York, N. Y., assignor to himself, Cornelius H. Delamater, and George H. Reynolds, same place.

Claim.—1. The aspirating engine, having two pistons E and M working in the same cylinder A, in combination with the internal or closed furnace C, and with passages for conducting the air from the cylinder to the furnace and again to the cylinder, as herein specified.

2. The connecting-rod G, constructed with an offset, carrying the attachment of the upper link H, substantially as described, and for the purpose specified.

3. The two offsets G^2 G^2, on opposite sides of the connecting-rod G, with or without the connecting-slot G^4, adapted to allow of reversing the engine.

4. The valve P and connected air-passages, constructed and arranged substantially as represented, so as to perform the double function of controlling the fire and of throttling the air-passages, as specified.

111,088.—AIR-ENGINE.—Alexander K. Rider, New York, N. Y., assignor to himself, Cornelius H. Delamater, and George H. Reynolds, same place.

Claim.—1. The connection H, extending upward or away from the cylinder, arranged as represented relatively to the operating parts *d d'*, and to the several connections of the working-piston E and shifter M, for the purposes set forth.

2. The cut-off valve W and seat X, protected from the action of the current of heated gas, and arranged and operating relatively to the furnace or correspondingly-heated portion of the engine, and to the cylinder B and pistons E and M, and their connections, as set forth.

3. The casting B' and casing T, constructed and arranged as represented, relatively to the furnace C, cylinder B, pistons E M, and their connections and passages, for the purposes herein set forth.

111,089, antedated January 7, 1871.—CIGAR-FILLING.—Socrates Scholfield, Providence, R. I.

Claim.—A cigar-filler or bunch, primarily arranged or held by suitable means in approximate cylindrical form, and of uniform size throughout, or nearly so, and tapered by removing a section of its interior fiber, in wedge or other suitable shape, producing an improved cigar, substantially as described.

111,090.—FENCE.—Wesley W. Sherman, St. Charles county, Mo.

Claim.—The arrangement, in a portable fence, of the posts *a*, *c*, and *d*, caps *b*, braces *e*, supports *f g h k*, and the longitudinal planks, constructed as herein described.

111,091. — COLLAPSING CORE-BARREL.—William Smith, Pittsburg, Pa.

Claim.—A core-barrel, one section of which is provided with three inclinations and moves in slides or grooves, and connected to the other sections of it by means of chains or their equivalent,

the whole being so constructed and arranged that, by drawing endwise the sections with three inclinations, it will collapse or diminish the diameter of the core-barrel, as herein described.

111,092.—MACHINE FOR SINKING SCREW-PILES.—William Sooy Smith and William Reuschel, Chicago, Ill.; said Reuschel assigns his right to said Smith.

Claim.—1. The combination, with the hub of the wheel or other turning device, of the friction-rollers K and a clamp G, when arranged for action on the shafts of screw-piles, substantially as specified.

2. The combination, with the clamp G, of the weighted cords M, substantially as specified.

111,093.—EDGING-MACHINE. — Edward H. Stearns, Erie, Pa.

Claim.—1. The combination of the saw-carrying sleeve *c*, provided with the described catches, operated by springs, and the arbor N', with its notches, substantially as and for the purpose described.

2. The rising and falling guides *l l*, which may be raised above the feed-rollers to guide the lumber, and lowered below and out of the way of the same as and when desired, constructed and operated substantially as and for the purpose described.

3. The windlasses w^2 w^2, the metal piece A^2 with the four bearings for the journals of the windlasses, the notched wheel B', the spring-crank b', the spring f^2, the arrangement of the pins *i i i i* upon the drums of the windlasses, in combination, when each is constructed and all are arranged substantially as and for the purpose described.

4. The single return-roller F, provided with spurs, and revolving in an opposite direction to that of the feed-rollers, with the said feed-rollers R R, and the saw-arbor N, and frame A, when all are constructed and arranged substantially in the manner described.

111,094. — EXTENSION-SCAFFOLD. — Asel Sweet, Westfield, Pa., assignor of one-half his right to George W. Chrisholm, same place.

Claim.—The apparatus herein described for sustaining and adjusting a builder's scaffold, when constructed with extension-bars A, B, and C, with their pulleys, bracket *k*, clamps *v v*, trip-rope H, windlass G, and lifting-rope D, all constructed, arranged, and operated as set forth.

111,095.—LUBRICATOR FOR AXLES.—Henry Thurlow, Skaneateles, N. Y.

Claim.—The box A, provided with a series of wires or wire springs C C, the ends of which protrude through the bottom of the box for the purpose of conveying heat from the car-axle to the grease in the box, melt said grease, and lubricate the axle, substantially as herein set forth.

111,096, antedated January 6, 1871.—RAIL-ROAD-SPIKE.—Henry Torstrick, New York, and Reinhold Boeklen, Brooklyn, N. Y.

Claim.—The head C of a spike, as shown, when its shank is provided with the inclined nose wider at its outer edge, as described, and for the purpose set forth.

111,097.—MANUFACTURE OF ORNAMENTAL BARS OR RODS OF METAL.—Stephen Tuddenham, Lower Marsh, Lambeth, England.

Claim.—1. As a new article of manufacture, ornamental bars or rods, such substantially as herein shown and described, made by twisting bars or rods, previously prepared as to their shape, in cross-section and to their surface, with special reference to the subsequent operation of twisting, and to the character or kind of ornamentation to result from such twisting, as herein set forth.

2. The method of attaching socket-pieces or bosses to the bars, whether said pieces be plain or ornamented, by fitting the same upon the bars before twisting them, and then securing said socket-pieces or bosses in their places by the operation of twisting said bars, as described.

3. The clamping device, substantially as described and illustrated in figs. 9 and 10, for holding the several bars of the group together and in their proper relative positions while subjected to the operation of twisting, as set forth.

111,098.—WAGON-JACK.—George H. Tule, Haddonfield, N. J., assignor to himself and Samuel Wood, same place.

Claim.—The wagon-jack composed of the post A, lever B, elbow-rod C, slide D, and guide *c*, all arranged and combined substantially as herein shown and described.

111,099.—AUGER.—Blase Walch, Frederick, Md.

Claim.—The adjustable cutter D, when constructed and applied to an auger, substantially as described.

111,100. — MANUFACTURE OF ARTIFICIAL LEATHER.—Frederick Walton, Staines, England.

Claim.—1. The manufacture of japanned and other artificial leather with oxidized oil or linoleum cement, as above described.

2. The manufacture of japanned and other artificial leather with a cement of kowrie or New Zealand gum, gum copal, dammar, or sandarac, combined with castor oil, as above described.

3. In the manufacture of japanned leather, a fleece of cotton or fiber to prevent irregularities of the base fabric from appearing on the japanned surface, as above described.

111,101.—PLANTER AND CULTIVATOR.—A. Quarles Withers, Holly Springs, Miss.

Claim.—1. The curved vibratory seed-plate E, constructed, arranged, and operating in the hopper D, substantially as and for the purposes herein specified.

2. The partitions *v v* dividing the hopper D into compartments, in combination with the vibratory plate E, for the purpose of distributing fertilizers simultaneously with planting-seeds, substantially as herein specified.

REISSUES.

4,232.—HORSE HAY-RAKE.—Newcomb M. Barnes, Tiffin, Ohio.—Patent No. 105,542, July 19, 1870.

Claim.—1. The handles F F when pivoted to the frame A B E, substantially as shown and described, and provided with springs I to operate upon the rake-head, as and for the purpose specified.

2. In combination with the above the stop-pins *d d*, substantially as shown and described, for the purpose specified.

3. The head D of a revolving rake, mounted on a frame composed of the draw-bars A A, upright posts B B, and shoes or runners E E, the several parts being constructed and arranged substantially as specified.

4,233.—TREADLE FOR SEWING-MACHINES.—John A. Bradshaw, William H. Brown, and Darius Whithed, Lowell, Mass.—Patent No. 92,786, dated July 20, 1869.

Claim.—1. The arrangement of the treadle *g'* and the rods *g* and *f'*, when attached to the segment-gear *f* and *e'*, respectively, the one in rear and the other in front of the fulcrum-shaft, substantially as specified.

2. The arrangement of the segment-gears *e'* and

[illegible] *b'*, pawls *f* and *f'*, substantially as [illegible] described and specified.

3. The caster-plates or rods *n* and *o*, with casters *p*, *q*, and *r*, when arranged in reference with each other, and operated substantially as herein described and specified.

4. The adjustable slides *o' o'* and *p p*, in combination with the caster-plates *n'* and *o*, for the purposes as specified.

4,234. — CURTAIN OR SHADE-FIXTURE.—William Campbell, New York, N. Y., assignor to Nathan Campbell.—Patent No. 44,602, dated October 11, 1864.

Claim.—1. The wedge E and pulley D, in combination with the spring roller A, all arranged substantially as and for the purpose herein set forth.

2. The wedge-bearing *i*, in combination with the pulley D and wedge E, substantially as set forth.

3. The yielding cushion *b*, in combination with a shade-roller, for the purposes set forth.

4,235.—MACHINE FOR FORMING THE BRIMS OF FELT-HATS.—William A. Fenn, Rochester, N. Y.—Patent No. 17,033, dated April 14, 1857.

Claim.—1. In combination with mechanism for stretching the brim radially, the conical rollers for feeding or rotating the hat-body.

2. In combination with feed-rollers having a continuous rotation, mechanism for arresting the moving brim, whereby the same is stretched circumferentially.

3. Rollers for feeding forward the hat-brim, an intermittent clamping mechanism for arresting the progress of the brim, and an intermittent radially-stretching mechanism, combined and coacting as described.

4. In combination with the feeding-rollers, the guide or plate N, operating in the manner and for the purpose specified.

5. The combination of the bar E, rod *n*, spring *o*, arm J, and serrated bed *m*, operating in the manner and for the purpose specified.

4,236.—APPARATUS FOR SUSPENDING GASOLIERS AND DROP-LIGHTS.—Samuel B. H. Vance, New York, N. Y., assignor to Mitchell, Vance & Co., same place.—Patent No. 70,635, dated November 5, 1867.

Claim.—1. The combination of a series of tubes and connecting-joints in an elongated and tortuous line, and crossing each other's paths as they do-send, and so connected as to form a continuous gas-passage, as also a frame capable of supporting a drop-light burner without the use of an additional frame, substantially as described.

2. In combination with two or more stationary burners, a drop-light, centrally arranged in relation thereto, when said drop-light is suspended to and sustained by a system of lazy-tongs, that not only furnish a continuous and tortuous gas-passage, but also forms within itself a frame of sufficient rigidity to sustain said drop-light, substantially as described.

3. In combination with the series of tubes and joints forming a gas-way capable of being elongated, substantially as described, and a drop-light suspended thereto and sustained wholly by said frame-work of tubes and joints, the guides and cross-head, substantially as and for the purpose described.

DESIGNS.

4,567.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,568.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,569.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,570.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,571.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,572.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,573.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,574.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,575.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,576.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,577.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,578.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,579.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,580.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,581.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,582.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,583.—DRESS-TRIMMING.—John Cash and Joseph Cash, Coventry, England.

Claim. — The design for dress-trimming, as shown.

4,584.—Dress-Trimming.—John Cash and Joseph Cash, Coventry, England.

Claim.—The design for dress-trimming, as shown.

4,585.—Pump.—Leonard Egleston, Seneca Falls, N. Y., assignor to Rumsey & Co., same place.

Claim.—The design for a force-pump, as shown and described.

4,586.—Show-Case.—José Ramon Gallegos, Havana, Cuba.

Claim.—1. The design for a cigar show-case, consisting of the stand B and body A, made in the form substantially as herein shown and described.

2. The design for a show-case, consisting of the stand B and body A, made in the form shown, and having a globe, C, and eagle D, either or both, upon its top, substantially as herein shown and described.

4,587.—Stem of a Tobacco-Pipe.—John Watts, Philadelphia, Pa., assignor to Harvey & Ford, same place.

Claim.—The design, consisting of the coiled stem *a*, with its pendent bulb *b*, substantially as described and shown in and by the accompanying drawing.

TRADE-MARKS.

135.—Cosmetics, Pomades, and Perfumeries. — Holbrook & Merrill, Boston, Mass.

136.—Worsted Goods.—Samuel McLean & Co., New York, N. Y.

137.—Gin.—I. D. Richards & Sons, Boston, Mass.

138.—Illuminating-Oil.—Jacob D. Spang, Dayton, Ohio.

139.—Kerosene and Spirits of Turpentine.—Francis Spies, New York, N. Y.

140.—Boots and Shoes.—Elmer Townsend, Boston, Mass.

141.—Akron Cement.—"The Union Akron Cement Company," Buffalo, N. Y.

142.—Whisky.—H. Webster & Co., San Francisco, Cal.

EXTENSIONS.

Thomas Nelson, of Troy, N. Y.—Letters Patent No. 16,248, dated December 16, 1856.

"Improvement in Machinery for Weaving Shade-Cord."

Claim.—1. The arrangement of the inclined planes C C, G G, around a circle, and divided from each other by the chasm or pathway Z, the same being intended as the course or track of the spool-cars.

2. The arrangement of the spool-cars, in combination with the eccentrics M and N, which operate the cars, in the rear of the inclined planes, by means of pins or equivalent apparatus passing from the cars through slots in the planes.

3. The arrangement of carriers or shuttles U U', attached to the eccentrics passing through the chasm Z, between the upper and lower planes, and traversing circularly, and delivering the woof or filling between the threads of the warp as they change their relative positions by the alternate elevations and depressions of the spool-cars.

Joseph H. Goodell, of Logansport, Ind.—Letters Patent No. 16,306, dated December 23, 1856.

"Improved Machine for Cutting Veneers from the Log."

Claim.—1. The combination and arrangement, as shown and described, of the reciprocating log-carrying slide B, unsupported by trunnions or axles for its curvilinear play, with the fixed guiding-stripe *c* and stationary knife D, when said guiding-stripe serve as the sole guide to give to the log-carrier, operated as specified, its curvilinear movement and simultaneous side-action, as and for the purposes set forth; and whereby a steadier and more reliable united double-bearing is given to the log in its two movements, the log may be secured with facility to the carrier, and the driving-power be communicated to the log in a more positive and direct manner for cutting with increased ease and precision thin veneers, as herein set forth.

2. Hinging the knife-holding frame G to the main knife-feeding slider-frame H, for the easy and double adjustability of the knife, as shown and described.

Samuel G. Lewis, of Philadelphia, Pa., executor of Lea Pusey, deceased.—Letters Patent No. 16,286, dated October 21, 1856.

"Arrangement of Railroad Platform-Scales."

Claim.—The arrangement of the platform of a railroad scale, either in the main or a subsidiary track of a railroad, substantially in the manner herein described and set forth, so that when the said platform is not in use for weighing as a railroad-scale the locomotive and train may pass directly over the same without bearing upon the said platform or scale, and also so that the cars may be passed on and off the said scale in the course of weighing without crossing the track, and therefore without using a "frog" or its substitute, as described, whereby all the advantages heretofore derived from a "siding," constructed for preserving the scale from the injurious effects of the locomotives and trains passing rapidly over it, are equally attained, and the room and expense required for the construction and use of the said siding entirely avoided.

John J. Squire, of De Soto, Mo.—Letters Patent No. 16,318, dated December 16, 1856; reissue No. 3,303, dated February 16, 1869.

"Improvement in Horse-Rakes."

Claim.—1. In combination with mechanism for raising the teeth operated by the draft of the team, means for throwing said mechanism into gear, placed under the control of the driver in his seat on the machine.

2. In a two-wheel rake, in which the teeth are raised for discharging the gathered hay by the draft of the team, mechanism, under the control of the driver in his seat on the machine, for causing the draft of the team to raise the teeth, in combination with means for automatically releasing the teeth after the hay has been discharged.

3. A feathered sliding clutch on the rake-head, in combination with a clutch-face or pins on the hub of the carrying or driving-wheel, for the purpose set forth.

4. The clutch D, and lever B for operating the same, in combination with an arm, F, on the rake-shaft, whereby the rake is lifted by the draft of the team and automatically released, substantially as specified.

Benjamin G. Dawley, of North Providence, R. I.—Letters Patent No. 16,306, dated December 23, 1856.

"Improvement in Looms."

Claim.—The use of an intermediate wheel D, or its equivalent, to balance and regulate the tension in the delivery of the warp from two or more yarn-beams combined together to form one web of wide cloth, substantially as above described.

Henry Eddy, of North Bridgewater, Mass. Letters Patent No. 16,357, dated January 6, 1857; reissue No. 1,300, dated April 6, 1862.

"Improvement in Cribs for Horses."

Claim.—1. The application and use of the inclined planes H H, with the vertical opening I between them, in combination with the sides of the crib E E, substantially as specified and for the purposes herein set forth.

2. The space *g h h*, partially inclosed by the inclined planes H H, with the opening I, substantially as specified.

3. The ventilator *e* in combination with the planes H H, substantially as described.

4. The cap K, when applied to the crib D, substantially as described and for the purpose herein set forth.

ISSUE OF JANUARY 24.

PATENTS.

111,102.—Charger for Shot-Pouches.—Thomas W. Allen, Waterbury, Conn.

Claim.—The bearing F, for the support of the lever B in a shot-charger, formed from sheet metal, and doubled to bring the two ears *a a* into line and form a space for the lever, substantially in the manner herein described

111,103. — Children's Carriage. — Rodney C. Britton, Springfield, Vt.

Claim.—The combination of the reach-arms G G, jointed to the body A, within fastenings, with the interposed spring or springs *e*, substantially as and for the purpose set forth.

111,104.—Baggage-Truck.—William Hammond Brown, Bangor, Me.

Claim.—1. The carriage and the lifting mechanism, substantially as described, arranged and combined in manner and for operation with a platform, as set forth.

2. The platform and its fare or hooks, arranged as explained, for use or in combination with the carriage and lifting mechanism, as specified.

111,105.—Automatic Lubricating-Cup.—James A. Bryan and William Stainfield, Kent, Ohio.

Claim.—The construction and arrangement, with relation to the cup A and cap B, of the valve C, cage or strainer D, stem E, check-nut F, and screw G, as and for the purpose set forth.

111,106.—Pruning-Shears.—John Calder Macedon, N. Y.

Claim.—The arrangement of the handles A B, the cutting-blades C D, spring-lever F, friction-wheel E, cam-wheel G, stop I, and hinge-joint H, when the parts are combined and operate as and for the purposes set forth.

111,107. — Bee-Hive. — Albert Claypool, Weston, Ohio.

Claim.—1. The combination of the casing A, the inclined slotted top C, the sloping honey-board E, the comb-frame G, and the racks I, all constructed and arranged substantially as described and shown, for the purposes set forth.

2. The feeding-box O, constructed in two sections, *e f*, having interposed between them layers of cloth, *h*, and divided into cells upon the upper side by transverse partitions, *g*, as and for the purpose set forth.

111,108.—Parlor-Bedstead.—Francis E. Coffin, Boston, Mass.

Claim.—The rest-blocks O upon the side rails K K of the parts G G, hinged together by the links M M, in combination with the case or cabinet A, having a top, D, and a flexibly-connected lid E, substantially as herein shown and specified.

111,109.—Sleigh-Brake.—Eustace J. Cooper, Mineral Point, Wis.

Claim.—The lever X with eccentric A, and the brake-block E, with cam D, shoulder K, and ratchets O I I, combined and operating substantially as set forth in the annexed specification.

111,110. — Steam-Lubricator. — Daniel Currie, Belleville, Ill.

Claim.—1. The combination of the cup A, piston C, hollow piston-rod B, and cup P, as and for the purpose shown and specified.

2. The combination of the cups A and P, piston C, hollow piston-rod B, and tubes G and *h*, as and for the purpose shown and specified.

111,111.—Type-Casting Machine.—William Wallace Dunn, San Francisco, Cal.

Claim.—1. The eccentrics *g'*, and rod *g*, arm 5, rock-shaft 4, adjustable arm 15, rod 14, cam-plate 13, rock-shaft 6, arms 7 and 8, set-screws 9, adjustable lever 10, and spring 12, combined and arranged substantially as described, and for the purpose set forth.

2. The cutter 18 in combination with the holder 64, pillar 65, and screw 66.

3. The punch 32 in combination with the arm 50 and set-screw 51, substantially as and for the purpose set forth.

4. The arrangement of the eccentric 69, rod 70, cam 71, pin 72, guide-frame 73, sliding-plate 74, and clamp 75, when employed in connection with the punch 32, as described.

5. The presser-foot 17, in combination with lever 55, having the adjusting-plate 57 and spring 56, as shown and described.

6. The combination of the frame 58, the cutter-bed plate 20, cutter 18, breaker 30, and cutter-plate or type-landing 16, with the foot 17 and type-slicer 19, when the parts are arranged as described for the purpose set forth.

111,112. — Governor for Electro-Motors.—Thomas A. Edison, Newark, N. J., assignor to himself, Elisha W. Andrews, George B. Field, and Marshall Lefferts, New York, N. Y.

Claim.—A yielding fly rotating against the atmospheric resistance, and so arranged as to break or close an electrical circuit, in combination with a revolving electro-magnetic motor, substantially as and for the purposes set forth.

111,113.—Machine for Cutting Paper Collars.—Alfred L. Elliot, Boston, assignor to himself and Edwin A. Eaton, Winchester, Mass.

Claim.—1. The combination of the press-block D, guides P P', wedges Q Q', and nuts R R', constructed in the manner and for the purpose as explained.

2. The arrangement of sliding and beveled dies, by which with two parts of successive dies I can cut different sizes of collars, substantially as described.

3. The combination of sliding dies, as described,

with dies for stitching or for button-holing collars, substantially as set forth.

111,114.—Flux for Welding Steel of High and Low Grades.—John Farrel, New York, N. Y.

Claim.—1. The within-described flux for welding high and low steel, substantially as described.

2. High and low steel welded together with the flux described, or the equivalent thereof, substantially as specified.

111,115, antedated January 13, 1871.—Truss.—Alexander Folleau, San Francisco, Cal.

Claim.—The combination with the pad D, of the auxiliary adjustable pad G, arranged beneath the surface of the same, substantially as described.

111,116.—Steam-Boiler Feeder.—Lucus Foote, North Fairfield, Ohio.

Claim.—The arms F G, as arranged to operate in relation to each other, and in combination with the shaft E and valves and shaft I and float, in the manner as and for the purpose set forth.

111,117, antedated January 7, 1871.—Burial-Case.—Patrick H. Griffin, Albany, N. Y.

Claim.—The thin metal struck-up case B B' adapted to contain a coffin, and to be secured as set forth.

111,118. — Thill-Coupling. — Collins W. Griffith, Cincinnati, Ohio, assignor to himself and Charles H. Mackintosh, Strathroy, Canada.

Claim.—The arrangement of the clip-sections A and A', the brackets b and b', the studs c and c', the staple B, and the key C, having a cord D, when the several parts are constructed substantially as described and shown, and as and for the purposes set forth.

111,119.—Back-Pad Press. — Edwin W. Harlow, Hastings, Mich.

Claim.—The construction and arrangement of the matrix and die-plates A B, links C, lever D, and spring-catch E, as and for the purpose set forth.

111,120.—Pump.—Patrick Harvey, Chicago, Ill.

Claim.—The cylinders A and F, provided with the annular chamber d, in combination with valve G, pipe H, and valve J, the whole arranged as described, whereby the suction-valve G may be secured below the check-valve J, substantially as and for the purpose specified.

111,121.—Evaporator.—Richard Hawley, Jr., Detroit, Mich.

Claim.—The arrangement, hereinbefore described, of the evaporating-pan A, walls B, generator C, flue D, bridge-wall E, smoke-guide F, and steam-pipes H, for the purposes set forth.

111,122.—Feed-Trough Guard.—Edwin Hovenden, Bushnell, Ill.

Claim.—1. The zigzag partitions B B, &c., or equivalent divisional pieces forming alternate feed-openings on either side of a feed-trough, as a hog or cattle guard, substantially as and for the purposes described.

2. The combination of the partitions B B, or equivalent arrangement of divisions, with the uprights b b b, &c., and the slop-boards C C, all substantially as described, and for the purposes set forth.

111,123.—Railway-Car Coupling.—Lewis Huddle and Jacob K. Huddle, Tiffin, Ohio.

Claim.—1. The combination of the rod e and springs S S with the draw-head halves A A, substantially in the manner described.

2. The combination of the toggle-lever c d draw-head halves A A, and U-spring S', the parts being so combined that the toggle-lever placed forward of the spring fulcrum of the draw-head, all as described.

3. The combination of the draw-head halves A, spring S', toggle-lever c d, springs S S, and rod e, substantially in the manner described.

111,124.—Gate.—Robert Henry Hudgin, Fairfield, Canada.

Claim.—1. The rock-shaft L, provided with joint d, in connection with the link and pin h and suspension-bars G, when constructed, arranged and operating substantially as and for the purpose set forth.

2. The latch E, secured to the gate by the rod or bars F, and operated by the connecting-rod I from the rock-shaft L, substantially as specified.

3. A gate, constructed and operating as herein described, wherein the same is suspended by suspension-bars G by the ratchet D, or its equivalent, and steadied by the pin b, said suspension-bars being pivoted to the top of the post J, substantially as and for the purposes herein set forth.

111,125. — Harrow and Cultivator.—James F. Jaquess, Commerce, Miss.

Claim.—The above-described "center-draft device" attached head for the harrow and cultivator," without any reference to the particular form or mode after which the body or parts of the implement may be constructed.

111,126.—Ash-Screen. — Edward C. Jenkins, Jr., Worcester, Mass.

Claim.—The herein-described screen, composed of the case A and the rotary sifter or screen c, the box being provided with the overhanging bearings e e, and the screen with the irregular undulating surface, and the door F, the whole operating in manner as before explained.

111,127. — Car-Spring. — James Leland, Springfield, Mass.

Claim.—A car-spring, constructed of the cylinders A B C D, &c., having the flanges b, and arranged in the manner and for the purpose shown and described.

111,128.—Method of Securing Joints of Frames, &c.—Charles F. Linscott, New York, N. Y., assignor to Edward S. Torrey and Joseph Torrey, same place.

Claim.—A key A, formed with the cylindrical sides a a' and web b, when used or employed for making or securing joints of frames, screens, &c., as herein before described and set forth.

111,129.—Sewing-Machine. — T. A. Macaulay, New York, N. Y.

Claim.—1. The shuttle E, having its lower edge and heel and toe cut away so that only its top wall and point will touch the race-face, substantially as described, and for the purpose set forth.

2. The shuttle E, constructed as described, when operating in connection with a needle and shuttle-carrier having a regular and reciprocating movement, as and for the purpose set forth.

111,130. — Gathering Attachment for Sewing-Machines.—William A. Mack, Norwalk, Ohio.

Claim.—1. The notched spring-fingers or nippers converging toward each other at the ends nearest the presser-foot, and shaped to positively retain and carry the material lying between them during their forward movement, and to their backward movement slip over the same, as described.

2. The adjustable plate-cam S, in combination with the nippers u, to measure the plait.

3. The plate-bar p, provided with the nippers u and with the opening r, as and for the purposes set forth.

4. The combination, with the presser and the plate-bar having the nippers u, of the spring o and thumb-screw b', as and for the purposes set forth.

111,131. — Sawing-Machine. — James D. Matthews, Niles, Mich.

Claim.—The combination of the saws S with the bed-springs K, the slide E, and the gearing F, B, G, H, and T, substantially as and for the purpose herein set forth.

111,132. — Grain-Drill.—Daniel E. McSherry, Dayton, Ohio.

Claim.—The receiver C, having a catch, D, and spring E, in relation to the shaft H and concave B, substantially as described.

111,133. — Compound for Preserving Drain-Tiles, Bricks, &c.—Edward Miller, Marquette, Mich., assignor to Charles H. Mackintosh, Strathroy, Canada.

Claim.—A preserving compound, when composed of the ingredients and in or about the proportions herein described.

111,134. — Meter.—Charles Moore, New York, N. Y., assignor to José F. De Navarro, same place.

Claim.—1. The combination, with the swinging or reciprocating piston of the meter, of a valve for controlling the movement of the piston, arranged so that, while said valve is lifted by the piston, it is free to drop and turn in part by its own weight and in part by the pressure of the incoming fluid, to effect its reversal at the close of the piston's stroke, substantially as specified.

2. The cylindrical valve F, constructed with open ends, and with alternately-disposed inlets f and outlets g, for operation, in relation to the ports d d' and inlet and outlet-passages or chambers of the meter, essentially as herein set forth.

3. The combination, with the valve F, constructed to operate substantially as described, of the vibrating hollow cam G, with its reversed inclines K K', set in motion by the piston, the cross-bar, or piece H, and the stops m m', substantially as specified.

4. The combination of the pinion A on the swinging piston-shaft, the toothed sector i, the hollow cam G, with its reversed inclines K K', the valve F, the cross-bar or piece H, and the stops m m', essentially as shown and described.

111,135. — Chair-Clamp for Railway-Rails. — William Morehouse, Buffalo, N. Y.

Claim.—1. The chair and clamp, consisting of a base, c^2, jaws C C, and bolts D or D', substantially as and for the purpose described.

2. The combination of the recessed fish-bars B b, chair and clamp C C c^2, and bolts D or D', substantially as described.

111,136.—Machine for Upsetting Iron.—Martin L. Munger and Corodon D. W. Gibson, Grand Blanc, Mich.

Claim. — 1. In iron-upsetting machines, the combination of the levers E and F, when connected and operating substantially as herein set forth.

2. The arrangement of the bed-plates B and C, cam D, levers E, F, and L, slides H, plates M, bolts a, rod b, plate d, bolts k, steel plates m N, and joints n, when combined and operating substantially as and for the purposes shown and described.

111,137.—Boot-Stretcher.—Isaac W. Myers, San Francisco, Cal.

Claim.—1. The skeleton foot-piece A, constructed as described, and the heel-piece B, disk D', worm e', and rack e, arranged and operating as and for the purpose set forth.

2. The boot-stretching last, composed of the skeleton A, the heel B, disk B', screw C, toe-piece D, wedge E, wings F, instep G, screw H, nut I, plate J, screw M, and bosses N, when the parts are severally constructed and arranged as described and shown, and as and for the purposes set forth.

111,138.—Hay-Rack.—Franz Louis Nagler, Irving township, Mich.

Claim.—The construction and arrangement of the bed-frame A, binding standards C D, sectional box-frames E E, and wings F, substantially as herein described, and for the purpose set forth.

111,139. — Corn-Sheller.—Franklin Nelson, Wyandotte, Mich., assignor to himself and Joseph Maseth, same place.

Claim.—The improved corn-sheller herein described and shown, consisting of the standard A, driving-wheel B, slotted yokes C, corrugated rollers D, sliding boxes E, elastic straps F, ring G, pinion H, shelling-teeth I, elastic ring K, cap L, rubber gasket N, ring O, and spout P, when said parts are constructed, combined, and arranged to operate substantially as described and shown, for the purposes set forth.

111,140. — Clamp for Carriage-Seats.—Henry J. Northrup, Lansingburg, N. Y.

Claim.—In combination with a movable carriage-seat, as described, the hinged pawl or hook F, spring H, and plates I and J, constructed and arranged to operate substantially as described.

111,141.—Machine for Pressing Fabrics.—George H. Nussey and William B. Leachman, Leeds, England.

Claim.—A pair of heated pressing-rollers, acting upon the cloth as received from a pair of detaining-rollers, combined with a pair of cool pressing-rollers to hold down the nap as the fabric cools, as set forth.

111,142, antedated December 29, 1870.—Obtaining Madder Extracts.—Alfred Paraf, New York, N. Y., assignor to Edward Sabino Renwick, trustee, same place.

Claim.—The process of manufacturing an aqueous solution of madder extract from the madder material by means of oil and soap solution without intermediate precipitation, substantially as before set forth.

111,143.—Water-Meter.—Webster Park, Norwich, Conn.

Claim.—1. The combination and arrangement of the self-closing gate F with the flexible cap B, for the purpose of giving a positive and reliable motion to the wheel of a water-meter, substantially as herein described.

2. The combination and arrangement of the wheels H M, yoke E, and gate F, for the purpose of varying the movement of the indicators according to the size of the opening, substantially as herein set forth.

3. The combination and arrangement of the self-closing gate F and cap B with the water-wheel G L, and with the wheels H M and yoke E, for the purpose of moving the indicators by both the velocity and the depth of the stream, and hence according to the quantity of water flowing through the meter, substantially as and for the purpose herein described.

111,144.—Anchor.—Gurney C. Pattison, Baltimore, Md.

Claim.—1. An extended shackle, G, provided with an inner cross-bar or stop, m, to arrest its movements, as herein described, and combined with the shank A of an anchor, fitted with a stock about midway its length, substantially in the manner and for the purpose herein set forth.

2. An auxiliary bolt, C, inserted through the end of the shank A of an anchor, outside of the pivot-bolt holding its fluke-arm B, and so combined with the latter as to afford support thereto when thrown out for engagement, all substantially as herein set forth.

111,145.—ANCHOR.—Gurney C. Pattison, Baltimore, Md.

Claim.—A stock, D', pivoted upon the shank A' of an anchor, about midway its length, substantially in the manner and for the purpose herein set forth.

111,146.—TUBE-EXTRACTOR.—Isaac S. Peters, Marshall, Mich.

Claim.—An implement for extracting tubes from wells, consisting of the dog D and bar A, when the dog is eccentrically pivoted and projects at both sides of the bar, being provided at each end with a spur which enters the metal, substantially as herein described.

111,147.—MACHINE FOR GRINDING HAND-SAWS. — Edwin S. Piper, Rochester, N. Y.

Claim.—1. The feed-rolls H H', one of which is arranged in a universal bearing so as to be self-adjusted to the other, and combined with the grinding apparatus, substantially as set forth.

2. In a grinding apparatus, the arrangement of the toggles *e* to adjust the bearings of the stones, in connection with the feeding device, substantially in the manner herein set forth.

111,148, antedated January 7, 1871.—COMPOSITION FOR COATING WOODEN STRUCTURES TO PROTECT THEM AGAINST FIRE. Anthony Pirz, Long Island City, N. Y., assignor to himself and Henry Torstrick.

Claim.—The compound herein described for protecting wooden structures against fire.

111,149.—TOY CARRIAGE.—Frederick W. Porter, Springfield, Vt.

Claim.—A toy carriage having the blocks A and B forming the two seats of the carriage, to which blocks are attached the frame *f g* and the axle *e* for the wheels, and which blocks also serve to strengthen the body, all constructed and arranged substantially as herein described and specified.

111,150.—HORSE HAY-RAKE.—Samuel Rockafellow, Moline, Ill.

Claim.—1. The handles H H, cleaner G *g g*, and links J J, when arranged to operate with the rake A D D, and thills B B, and cross-bar C, substantially as described, so that lifting the rake by the handles H H operates the cleaners G *g g*.

2. The draft-hooks L L, combined and arranged to operate with the cleaners G *g g*, thills B B, and rake A D D, substantially as described, and for the purpose specified.

111,151.—ASPHALTIC PAVEMENT.—Samuel R. Scharf, Baltimore, Md., assignor to himself and Hugh M. Funston, New York.

Claim.—1. The above-described pavement as a whole, the same having first a base of stones mixed with and laid in stiff bitumen, (obtained from long distillation of coal-tar,) and then well rolled; second, a layer of smaller stones coated with a mixture of bitumen and asphalt, also rolled; third, a layer of fine gravel or broken stones wet with said mixture, likewise rolled; and finally, covered with carbonate of lime or water cement, and finished by rolling, substantially as set forth.

2. The use of stiff bitumen, without coal-tar, in the base of an asphalt and stone pavement, substantially as described.

111,152.—COUPLING FOR SHAFTING.—Geo. A. Smith, Philadelphia, Pa., assignor to Cresson & Smith, same place.

Claim.—The combination of a clamp-coupling A constructed substantially as described, with the bolts *a* and *a'*, and the transverse grooves *c* and *c'* in the shafts B B'.

111,153. — SIZING-MACHINE. — Albert H. Sturgis, Lewiston, Me., assignor to himself and Joseph A. Pierce, same place.

Claim.—The combination of a revolving brush with a clearer or its equivalent, when the clearer is arranged in such relation to the brush that the latter will act upon the sheet of thread forward of the clearer at or near a point in line vertically below the center of the brush, as described.

111,154.—FURNACE FOR STEAM-BOILERS.—Morse K. Taylor, United States Army.

Claim.—1. The combination, with the boiler A of the water-grate E, the dumping-grate G, and the sifting-grate I, when the same are constructed and arranged substantially as described and shown, for the purposes set forth.

2. The dumping-grates G, in combination with the studs *a*, rock-shafts *b*, heads *f*, levers *d*, coupling-rods *g*, and latches *f*, all constructed and arranged substantially as described and shown, for the purposes set forth.

111,155.—MANURE-RAKE ATTACHMENT FOR PLOWS.—Marinus Van Duine and Jan De Jonge, Zeeland, Mich.

Claim.—The rake D, in combination with the wheels F and H, hangers I and C, and bearing E, and connected to the beam B of the plow A, all constructed substantially as described and shown, and arranged to operate as and for the purposes set forth.

111,156.—COFFER-DAM.—John E. Walsh, New York, N. Y.

Claim.—The combination of the loose piles D D, constructed to act as guides, with the boxes E E and shell or walls of the dam, essentially as described.

111,157.—COFFER-DAM.—John E. Walsh, New York, N. Y.

Claim.—1. The bent plates C, bolted at one end only to the inwardly-curved doors B, in the manner and for the purpose shown.

2. The angle-iron *d'* and packing *d''*, in combination with the inwardly-curved hinged doors B, having flexible bent plates C, interposed packing *d'''*, bolts *f*, and nuts *f'*, all constructed and arranged to operate in the manner described.

3. The coffer-dam herein described, composed of the outwardly-curved side walls A, strengthened by rods *e*, inwardly-curved hinged doors B, having the flexible bent metal plates C, packing *d''* and *d'''*, and angle-irons *d'*, all the parts constructed and arranged together in the manner and for the purpose shown.

111,158.—PLOW-COLTER.—Seth Way, La Porte, Ind.

Claim.—An elliptic spindle, constructed, combined, and arranged in all its parts as herein set forth, when attached to a colter for plows.

111,159. — STEAM-GENERATOR. — Samuel West, Elmwood, Ill., assignor to Elmwood Mining and Manufacturing Company, same place.

Claim.—1. A steam-generator, composed of sections A A A, when constructed substantially as described, with cross-pipes B B B and C C C, and arched top, and provided with steam-connections F and water-connections E E, and secured by bolts G G G, substantially in the manner and for the purpose specified.

The sections A A A, constructed as described, secured by the bolts G G G, when combined the plates I I, bonnets H H, grate *j*, door J, K, and supports L L, substantially as described and for the purpose specified.

111,160.—SERVING-REEL.—Joseph Henry Westcott, Medford, Mass.

Claim.—1. A serving-reel, composed of a frame one or more spools or spindles, with their regu s s s s, as herein shown and described.

2. In combination with a serving-reel, the hinges *q*, and *r*, locking apparatus *s s' t*, the guiding-*u*, and guides or their equivalents *v v v v*, for purpose as herein fully set forth and described.

111,161, antedated January 12, 1871.—MOP-HEAD.—Henry H. Wetmore, Barre, Vt.

Claim.—1. The arrangement of wires *g g* opposite openings in socket F, and annular groove on forward end of ferrule C, as and for the purposes specified.

2. A lower jaw, B, having flat shank E threaded the end, combined with a swiveled upper jaw, enable both to turn simultaneously and always preserve their relative positions.

111,162. — WINDOW-PROTECTOR.—William I. Winant, Rye, N. Y., assignor to himself, William Wilmot Kissam, and Emily Winant.

Claim. — The window-protector, made of sheet *e*, with side pieces *f f*, attached to the building at *i*, by hinges, as and for the purposes set forth.

111,163. — GRAIN-DRIER. — Levi Abbott, Lewiston, Me., and Joseph A. Sherburne, Boston, assignors to themselves and Enel W. Johnson, Boston, Mass.

Claim.—The within-described perforated tubes surrounded by the metal pipes or tubes C, provided with the perforations *d*, and allowing an air-chamber between the said tubes, when applied to a grain-elevator, substantially as and for the purposes set forth.

111,164.—SAW.—Emanuel Andrews, Williamsport, Pa.

Claim.—The cross-cut saw A provided with scoring-teeth B, clearing-teeth B', and recesses C, when the several parts are constructed and arranged as described and shown, and as and for the purposes set forth.

111,165, antedated January 14, 1871.—EARTH-SCRAPER.—Asher S. Babbit, Keeseville, N. Y., assignor to Babbit, Hinckley & Co., same place.

Claim.—1. The lever D, provided with the arm *d* in combination with the bearing-plate *d'* and holding-bar *c*⁴, as and for the purpose described.

2. The scraper described, consisting of the axle A, pole B, scraper C, with holding-bar *c*⁴, and lever D, with arm *d*, when constructed and arranged as described, for the purpose set forth.

111,166. — CONCRETE FOR PIPES, TUBES, BUILDINGS, &c. — Thomas J. Barron, Brooklyn, E. D., N. Y.

Claim.—1. The concrete herein described, constructed of the materials and by the process substantially as described.

2. The process herein described for constructing concrete.

111,167. — HOLLOW AUGER.—Aaron Bauman and Orin O. Witherell, Toledo, Ohio.

Claim.—1. The arrangement, upon a rotary stock A, of the front bits d^1 d^2, and rear bit d^3, as and for the purpose specified.

2. The arrangement, with respect to the tools, and near the internal surface of the revolving hollow shaft, of the separate and independent steam-pipe E, to discharge the chips in the manner described.

3. As an improvement in pipes for injecting steam into a hollow auger-shaft, the arrangement on the end thereof, and with respect to the tools, of the point *e'*, to stir up the chips and prevent them from clogging the auger.

111,168. — ATMOSPHERIC-PRESSURE ATTACHMENT FOR DENTAL-PLATES.—John B. Beers, San Francisco, Cal.

Claim.—1. In combination with the dental-plate A, provided with a recess, *b*, the disk *a*, or its equivalent, secured in said depression at or near its center, substantially as and for the purpose above described.

2. As a new article of manufacture, the disk *a*, prepared to be attached to dental-plates in the manner substantially described.

111,169. — LIQUID-COMPASS. — John Bliss and George H. Bliss, Brooklyn, N. Y.

Claim.—1. A compass-card of aluminum, with a frosted surface, and divisions painted upon that surface, substantially as set forth.

2. The float and compass-card, both constructed of aluminum, and combined together substantially as specified.

3. A liquid-compass, in which the liquid that floats the card is glycerine, or its mixtures, for the purposes specified.

4. A compass-card and float combined, with an inverted pivot, when the pivot projects below the upper portion of the float or floats, substantially as and for the purposes specified.

5. A compass in which the needle or parts within the bowl are protected by a coating that is not soluble in glycerine, when glycerine or its mixtures are employed as the liquid in said compass, as set forth.

111,170.—CAR-COUPLING.—Joseph Boothroyd, Michigan City, Ind

Claim.—1. The coupling-pin E, provided with an ear or lug, H, in combination with the chain I and tumbler B, provided with steps or notches, as and for the purposes set forth.

2. The tumbler B, provided at its bottom with a step or notch for holding down the lug and pin, substantially as shown and described.

111,171.—COAL-BOX.—Timothy L. Bosart, Jr., Indianapolis, Ind.

Claim.—A coal-box, having the reservoir A' and the lower chamber G separated by the adjustable inclined chute D, all constructed and arranged substantially as and for the purpose set forth.

111,172.—RAILWAY-CAR TRUCK.—Louis D. Boyce and George H. Jones, Rochester, N. Y.

Claim.—The combination, with the ordinary wheels of a car-truck, of the reverse cones C C, arranged in pairs on the intermediate elevated shaft D, their small ends adjoining, but separated from each other, to produce a surface of greater width or extent than that of the ordinary wheels, and having the bevels turning inward to produce a brake-action of the main wheels against the rails when off the track, as herein described.

111,173.—COLLAPSING CORES.—Anthony T. Brodie and Robert R. Smith, Pittsburg, Pa.

Claim.—A metallic core, consisting of the parts A B C D and shaft *g*, provided with springs *h*, said parts being held together by rings *k* and pins or screws *l*, the whole being so constructed as to yield, as and for the purpose herein described.

111,174.—GAS-GENERATOR.—John Butler, New York, N. Y.

Claim.—1. The combination of the retort G with

the retort H, located substantially as shown and described, and for the purposes set forth.

2. The furnace A, with walls constructed of non-heat-conducting materials, and provided with double doors D D', combined and arranged with the retort G suspended from the roof of said furnace, and the retort H above the said roof, as set forth.

3. The furnace, composed of two shells, the annular space C between the same being filled with non-conducting material, and provided with double doors D D', the latter to prevent cold air from entering the furnace and the former to retain the heat within the furnace, substantially as and for the purposes set forth.

4. The pipe L, incased in non-conducting material, to convey any of the volatile hydrocarbons to a gas-retort and prevent the vaporizing of such volatile hydrocarbons in their passage to the retort, and so constructed as to prevent any back pressure and to insure their entrance into the retort in a liquid form, substantially as shown and described.

111,175. — Apparatus for Carbureting Air.—Henry Albert Chapin, New York, N. Y.

Claim.—1. The arrangement, relatively with the tank A, of the chamber C, provided with a sealed lid or cover, as described, in combination with the valve by which the supply from the tank to the carbureting-chamber is regulated and made capable of operation from within the sealed upper chamber C, substantially as specified.

2. The arrangement, relatively with the sealed upper chamber, of the several pipes or connections by which the liquid is supplied to and drawn from the tank A and carbureting-chamber B, essentially as herein set forth.

3. The combination, with the gas-pipe *e* and air-escape tube *c*, of the connection *m*, substantially as and for the purpose herein described.

4. The combination and arrangement, with the carbureter and with an outer water-case or jacket E, of an air-circulating space or chamber F, provided with vents or ducts, substantially as and for the purpose or purposes specified.

111,176.—Scouring, Washing, and Wringing-Machine.—William H. Churchman, Indianapolis, Ind.

Claim.—1. The combined water elevator and projector N R S, operating within a hollow cylinder, H, substantially as described.

2. The combination of the perforated fountain-cylinder H and the wringer-basket G, as described, for the purposes set forth.

3. The described arrangement, one within the other, of the combined water-elevator and projector N R S, and the fountain-cylinder H, with its hollow shaft L, the whole constituting, in conjunction, the scouring and washing device of my machine.

4. The combination, substantially as set forth, of the centrally-disposed washing device H L N R S, with the centrifugal wringing-machine.

5. The described arrangement of the hollow shaft L, screw-threaded sleeve or nut-clutch Q P, and socket-pulley O, or devices substantially equivalent, for readily changing from a scouring, washing, and wringing device to a wringer, or the reverse, at the will of the operator.

111,177.—Die for Making Felly-Plates. Allison N. Clark, Plainville, Conn.

Claim.—For use jointly with a plain-faced drop or hammer, the die-block A, provided with the depression *a*, of the form and with the beveled or sloping margin herein described and shown.

111,178.—Hat.—James W. Corey, Newark, N. J.

Claim.—1. A felt or other soft or pliable hat, the brim of which is shaped, set, curled, or stiffened by means of a binding, the foundation of which is shellac or equivalent preparation stitched or cemented thereto.

2. As an article of manufacture, the within-scribed binding for flexible hats, consisting of fabric stiffened with shellac or equivalent mate-al, and covered with an independent or ornament fabric or finish, substantially as herein describe

111,179. — Fluid-Meter.—Robert Creu baur, Williamsburg, N. Y.

Claim.—1. The combination, with a valve, G, the crank-shaft P and the carrier N, substantial as and for the purpose hereinbefore set forth.

2. The combination of two or more reciprocati pistons with connecting-rods f^1 and a crank-sha or shafts P, with one or more rotating valves shaft-bearings S S^1, for the purpose named.

3. The ports f f^3 f^2 f^5 of the valve-casing F, combination with the ports *x y* of valve G, when t construction of the ports enables them to oper to proportion the quantity of fluid passing throu them to the requirements of the pistons, substa tially in the manner described.

4. The valve-casing ports f f^3 f^2 f^5 and valv ports *x* and *y*, either or all of them, with the closing edges in an oblique or curved direction, as to close upon each other as the blades of sors, substantially as and for the purpose herei before set forth.

5. The combination, with the main body, of c piston T and its neck *y*, of the guide-ring H wi the fluid passages *h' h'*, substantially as and for t purpose hereinbefore set forth.

6. The combination, with a cylinder, K, and piston T with guide-ring H, of the cylinder-nec K^2, substantially and for the purpose hereinbef set forth.

7. The combination of the valve G and the valv casing F, and their ports, with the passages f^1 fig. 3, and openings 3 3 and 4 4, fig. 2, leading rectly to the front of the pistons, and passages and f^7 leading to the rear thereof, for the purpo named.

8. The connecting-rod f^1, composed of the tw soft-metal eye-pieces 10 and 11, and the centr hard-metal piece 12, the said pieces being co structed so as to be connected together in th manner shown, and to be adjusted so as to shor or lengthen the rod, as set forth.

9. The longitudinal diaphragm g^7 g^7, arranged a valve, G, so as to run at an angle with the ax of the same in order to enlarge the two end open ings g^4 and g^4 of the valve, substantially as d cribed.

10. The combination of two cylinders K K pistons T T, connecting-rods f^1 f^1, and a crank shaft P, with a transverse rotary valve, G, and i corresponding ports and channels, substantially and for the purpose hereinbefore set forth.

11. The combination, with the shell of each the pistons T, of a fluid-displacing piece, s provided with a central eye through which t connecting-rod f^1 operates, substantially as and f the purpose hereinbefore set forth.

12. The combination, with the cylinders K K and channels f^6 f^7, of diffusing chambers f^{10} f^{10}, fo the purpose named.

111,180.—Variable Cut-off for Steam Engines.—William B. Cross, Sacramento, Cal.

Claim.—1. The lever for working the valve-ste combined as described, with the sliding block ha ing the inclined plane, as and for the purpose spe ified.

2. The combination, with the sliding block M, the rod O, lever P, adjustable rod or hook S, an arm R, all substantially as specified.

3. The combination, with the rock-shaft, tee and levers D, of the arm R, lever P, adjusting ro or hook S, rod O, slide M, and valve-stem C, all su stantially as specified.

111,181. — Spoke-Tenoning Machine.—Godfrey E. Culp and Matthew Flaig, Lockhaven, Pa.

Claim.—1. The spring-plate C, hanging holder clamp-frame A, feet *t*, and lever *t*, pivoted in a sui

standard, and provided with a pin working in slot *l* of the spring-plate, when all these parts constructed, arranged, and operating as described.

2. The guide-way A, provided with the transverse bars *b* and adjustable supports *a*, the side-beam also provided with transverse recesses *b* and adjustable side-clamps *d*, and the spring-plate hanging holder *c*, clamp frame A, and lever *t*, when all these parts are constructed to operate as described.

3. The adjustable brace *m* provided with sliding bars *n*, the recessed guide-way A provided with adjustable supports *a*, and the recessed side-bar B provided with the side-clamps *d*, when these parts are combined and arranged as described.

111,182.—Furnace for Burning Small Coal or Culm.—Alfred Dart, Carbondale, Pa.

Claim.—1. The combination, with the inclined plate C, of the cover D, having transverse depressions E E, substantially as and for the purpose specified.

2. The gate G, arranged with the grate C, as shown and described, for the purpose specified.

111,183.—Wine-Press.—George L. Davenport and Charles G. Case, Davenport, Iowa.

Claim.—1. In a wine-press, the thrashing mechanism, consisting of the cylinders B and C, and sieve D, armed with teeth, and constructed and arranged to operate substantially as herein described.

2. In a wine-press, the separating mechanism, consisting of the inclined sieve F, with its pitman and crank-shaft, when constructed and arranged to operate substantially as herein described.

3. In a wine-press, the combination of the rubber-covered rollers I I with the fluted distributing-roll J, when constructed and arranged to operate substantially as herein described, and for the purpose set forth.

4. In connection with the rollers I I and J, the endless apron M, and the brushes O, when said parts are arranged substantially as and for the purpose set forth.

111,184.—Removable Car-Seat Back.—Peter F. Duchemin, Somerville, Mass.

Claim.—1. A removable support, B, fitting in the corner of a car-seat, and supplied with a projecting rest, A, substantially as and for the purpose set forth.

2. The clasp C, herein shown and described, with or without its spring *f*, for the purpose set forth.

111,185.—Treating Fruit-Trees to Prevent the Ravages of Insects, &c.—Samuel J. Everett, Mahoney City, Cal.

Claim.—1. The above-described mode of treating fruit-trees, substantially as and for the purposes described.

2. The compounds No. 1 and No. 2, substantially as and for the purposes herein described.

111,186. — Tray-Holder. — Obed Fahnestock, Indianapolis, Ind.

Claim.—1. A tray-holder, consisting of a plate A, the holders B C, and the adjustable holders E E, all substantially as specified.

2. The combination, with the plate A and holders B C, of the tapes or straps H and points K, substantially as specified.

3. The combination, with the plate A and the holders B C, of the legs D, substantially as specified.

111,187.—Pipe-Coupling.—John B. Fink, Mechanicsville, Pa.

Claim.—A pipe-coupling or connection, combining in the construction the two curved portions A A, the cross-bars A^1 A^1, and the bolt A^2, the whole being constructed and arranged to operate substantially as and for the purpose set forth.

111,188. — Hoisting Apparatus.—Henry Flad and James B. Eads, St. Louis, Mo.

Claim.—1. The combination of the pulleys Q Q' and S S', receding and approaching by means substantially as shown, pulleys T U, and pulley-carriage M, enabling the vertical movement of the load by a single rope, irrespective of the position of the carriage upon its track L, substantially as described.

2. In combination with the pulleys Q Q' S S', operating substantially as described, the pulleys T U and the pulley-carriage M, the drum B, for causing the horizontal movement of the position of the carriage without interfering with the horizontal movement of the load.

111,189, antedated January 14, 1871.—Water-Closet.—Charles Frankish, Chicago, Ill.

Claim.—In combination with a water-closet or privy-seat, the sections H H, when the same are arranged to operate substantially as and for the purposes herein shown and described.

111,190.—Gate.—Willard Green Franklin, Shelbina, Mo.

Claim.—The combination of the rearwardly-extended rail b^1, weight C, pivot d', brace b^3, and pivot b^4, with the gate B and post D, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

111,191.—Steam-Boiler.—John L. Frisbie, Brooklyn, N. Y., assignor to Marshall T. Davidson, same place.

Claim.—1. The combination and arrangement of the water-leg D, the annular water-chamber F, the water-tubes G, the heating-chamber C, the smoke-tubes H, and the body B, substantially as specified.

2. The smoke-tubes H, secured as described to the crown-sheet of the boiler by means of flanges *e*, in combination with the glands *f* and sockets *g* on said sheet, and into which the glands are made to screw, essentially as shown and described.

111,192.—Steam-Radiator.—John L. Frisbie, Brooklyn, N. Y., assignor to Marshall T. Davidson, same place.

Claim.—The combination of the outer steam-pipes B B, of corrugated form, or made with hollow wings *c*, constituting interior ducts *d*, and serving to support the inner air-pipes C C, with the base A, all arranged for operation substantially as specified.

111,193. — Caster.—Francis A. Gardner, Danbury, Conn.

Claim.—1. The shell A, constructed with the flange *a*, in combination with a caster-plate, D, constructed with a face inclined at an angle of about forty-five degrees to the prime axis of the caster, and the spherical rollers C, to operate in the manner set forth.

2. The plate G, constructed with radial arms H oblique to the prime axis of the caster and about parallel with the inclined surface of the plate D, and combined with the shell A, plate D, and rollers C, for the purpose set forth.

111,194.—Pen-Holder.—Alfred M. George, Sand Fly, Texas.

Claim.—The clamp B, made independent of and placed upon the upper side of a pen-holder, one end being free and the other confined to the holder, when used in combination with the clamp C, as and for the purpose set forth.

111,195. — MEDICAL COMPOUND FOR THE CURE OF RHEUMATISM. — Rebecca Gilkinson, New York, N. Y.

Claim.—The above medical compound, substantially as described.

111,196, antedated January 14, 1871.—SPRING-CATCH FOR DOORS. — William Glue, Muskegon, Mich.

Claim.—The straight-pull spring-latch B, made in one piece, and the eccentric D, constructed as described, and arranged within the frame A so that the latch shall operate vertically with relation to the keeper C, as herein set forth and shown.

111,197. — MACHINE FOR SEWING BOOTS AND SHOES.—Charles Goodyear, Jr., New Rochelle, N. Y.

Claim.—1. In a sewing-machine, organized for sewing boots and shoes, the combination, with a stationary jaw and a movable jaw, for holding the sole or other material of variable thickness, of a mechanism constructed and operating substantially as herein shown and described, whereby the supply of thread to the needle is regulated by the relative distance of the two jaws from each other, and without reference to the stroke of the needle.

2. The means, substantially as described, for varying the ratio of the supply of thread, so that with a given thickness of stock the supply of thread may be varied without altering the degree of tension upon the bobbin.

3. The needle and awl-stocks, mounted upon one and the same axis or shaft, when said awl-stock and needle-stock are actuated by geared lever segments, substantially as herein set forth.

4. The mechanism, herein described, or its equivalent, for releasing or unlocking the sliding bar which supports the movable jaw when it is desired to move the jaw to insert or remove the work.

5. In combination with a needle having its barb on the side from which the shoe is moved by the feed mechanism of the device shown and described, or its equivalent, to prevent the dropping of loops or stitches, as set forth.

111,198. — COMPOUND FOR REMOVAL OF SCALE FROM STEAM-BOILERS.—William Thomas Grant, Neelyville, Ill.

Claim.—The within-described compound, consisting of ground shells, ground bone, and coal-tar, or any of its distillates, substantially for the purposes herein set forth.

111,199. — BASTER-GUIDE FOR SEWING-MACHINES.—Franklin T. Grimes, Liberty, Mo.

Claim.—1. The baster or basting-bar A, made up in sections jointed together, as described, and one or more of said sections made capable of sliding, subject to spring pressure or control in direction of the length of the bar, in combination with the teeth *g* at the extremities of the end sections, substantially as specified.

2. The combination of the teeth A on the face or faces of the sectionally-sliding and jointed basting-bar A, with the teeth *g* at extremities of the end sections, essentially as shown and described.

3. The combination of a ruler and measurer B with a basting-bar A, constructed in sections, for operation as herein described.

111,200.—CORN-DROPPER.—Jacob H. Gross, Niantic, Ill.

Claim.—The journal-boxes C C, vertical slotted bars E, and bolts F, combined, as described, with shaft B, for the purpose of adjusting the star-wheels at a greater or lesser height.

111,201.—GATE.—John K. Harris, Springfield, Ohio.

Claim.—The arrangement of levers M M′, chain or rope L, and vertical latch-lever J, the latter being connected to the described or any ordinary spring-latch, for the purpose of opening and closing the gate from opposite directions, substantially as herein described.

111,202. — HAND CORN-PLANTER.—James M. Harrison, Spartanburg, Ind.

Claim.—1. The combination of the levers A and D with the slide E, having the spring-plate *g* applied thereto, and the guard-plate *c*, all arranged to operate as described.

2. The dotainer plate, or lip *k*, arranged between the levers A and D, near their lower end, as described, for the retention of the charge of grain, as set forth.

111,203.—BEER-COOLER.—Carl W. Haug, New York, N. Y., assignor to himself and Henry Bunz, same place.

Claim.—A cooler for beer or other liquids, composed of two vessels, A B, the outer vessel A being composed of a cylinder, *a*, and polygon *b*, connected by a bottom, *c*, with ridges *d*, and the inner vessel being composed of a polygon, *e*, and cylinder *f*, connected by a bottom, *g*, in combination with an annular cap, *h*, and with a supply and discharge-pipe, substantially as herein shown and described.

111,204.—BEE-HIVE.—Henry L. Heckman, Brooklyn, Iowa.

Claim.—1. The combination, with the main body A, of the metallic box B, having movable bottom C, glass bottle D, and perforated slide E, provided with the metallic sheets *a a′* and funnel *d*, all constructed substantially as herein described and shown.

2. In a bee-hive, the moth-trap B D, when constructed substantially as specified.

111,205.—COCK.—William H. Hedges and Matthew E. Campfield, Newark, N. J.

Claim.—1. The packing-tubing surrounding the stem *d*, in combination with the spiral spring when said tubing and spring are arranged between the flange or seat *b* and collar *c*, and operated together in the manner and for the purpose set forth.

2. The stem *d*, provided with an opening or openings near its lower end, and constructed as described, in combination with the tubing and spring arranged as set forth.

111,206.—MACHINE FOR CUTTING AND DRESSING STONE.—Jacob Hedrick, William Tash, and Henry Kreidler, York, Pa.

Claim.—1. The combination of shaft c^9, arms c^{10} carrying sliding axles a^{11}, pulleys a^{12}, and springs a^{13}, in the manner and for the purpose herein described.

2. The driving and intermediate gear-wheels C, C^1, C^2, C^3, *e*, e^1, and e^2, in combination with the clutch-lever *e*, sliding clutches d^2 and d^3, feeding-screws E and E′, shaft D^1, gear-wheels *d*, d^1, d^2, and d^3, sliding rod *f*, with its adjustable gauge, stops f^1, sliding frame F, rod f^2, and springs f^3, constructed and arranged to operate substantially in the manner and for the purpose set forth.

3. The driving and intermediate gear-wheels C, C^1, C^2, C^3, *e* e^1, and e^2, above enumerated, shaft I, sliding and revolving wiper-wheel G having wipers *g*, in combination with the chisel or pick-shafts H having adjustable lifting-arms I, constructed and arranged to operate substantially in the manner shown.

4. The chisel or pick-shafts H, cylinder adjusting nuts *j*, adjustable stops J^2, and springs j^1, when constructed and arranged in the manner shown.

5. The hand-screw rod K, base-plate i^3, springs i^2, in combination with the adjustable lifter-arms I, and chisel or pick-shafts H, in the manner and for the purpose described.

6. The slotted guide-plate J′, in combination with the base-plate i^4 and lifter-arms I, when constructed and arranged to operate in the manner and for the purpose set forth.

7. The adjustable picks or chisels, secured to their shafts H by means of the dovetail rib *c* on the pick, and the dovetail slot *c′* in the shafts H, and held by the holding-screw *h*, in the manner shown.

8. The hand-wheel shafts M, pinions *m′*, rack-arms L, and guide-ways L′, in combination with the frame B, when the parts are constructed and arranged to operate in the manner and for the purpose substantially as described.

9. The reciprocating, sliding, and supporting-arms B^1, when constructed and arranged to operate in the manner described.

10. The temper-screw rod a^3, sliding beam a^4, and plate a^5, in combination with the sliding and supporting arms B^1, when constructed and arranged in the manner and for the purpose described.

11. The hand-screw rods B^2, in combination with the supporting arms B^1, arranged to operate in the manner described.

12. The stone-cutting and stone-dressing machine herein described, when the several parts are combined and arranged to operate in the manner and for the purpose substantially as shown.

111,207.—BOX-OPENER.—Thomas B. Henkle, Knightstown, Ind.

Claim.—The device for opening boxes and for similar purposes, herein set forth, composed of the hand-lever A A^1 A^2, fulcrum-bar B B′, and lifting-hook C C′, constructed and arranged relatively to one another, substantially as specified.

111,208. — VEGETABLE-CUTTER. — David Wallace Hersey, Pembroke, Me.

Claim.—1. The combination of the single band-wire D and the metallic rests *f f* with the boards *b* b fitted on their upper edges to receive the wire, and the straining devices *a c d*, substantially as set forth.

2. The arrangement of the bars E E with the frame A carrying the band-knife B and platen D, substantially in the manner as specified.

111,209.—FOLDING-CHAIR.—Francis March Holmes, Boston, Mass.

Claim.—1. In a folding-chair, having the two pairs of crossed levers and the two seat-supporting rungs, arranged substantially as described, the combination of the seat with the front rung by means of double-jointed or three-leaved hinges, as described.

2. In a folding-chair, made with two sets of crossed levers and two seat-supporting rungs, as described, and with the seat connected to the front rung by double-jointed hinges, as set forth, the seat, as provided with the back-stop and one or more rung-stops, arranged to operate with the chair-backs and the rear rung, substantially in manner as set forth.

3. A folding-chair as having a rigid seat or seat-frame hinged to a rung, as explained, two sets of crossed levers and a back, combined to fold as described, and the pivots of the levers so arranged with respect to the feet thereof that the chair, when folded, and resting with all its feet on a floor or horizontal plane, shall be capable of "standing alone," or maintaining itself in an erect or standing position, all substantially as described.

111,210.—BRICK-MACHINE.—Erwin C. Hubbard, Green Bay, Wis.

Claim.—1. The mold-wheel M, plungers D and *g*, and the fork V, constructed, arranged, and operating in combination substantially as and for the purposes herein shown and described.

2. The lever T and the mold-wheel, when combined and operating substantially as set forth.

111,211.—RAILWAY-CAR WHEEL. — Lewis B. Hunt, New York, N. Y.

Claim.—1. The cushion of what I term "vulcanized" wood, interposed between the rim or tire and the hub of a car-wheel, and forming the sole connection between them, substantially in the manner herein shown and described.

2. Car-wheels made in whole or in part of vulcanized wood.

111,212.—OPERATING CUTTER FOR STEAM-PLOWS.—Oliver Hyde, Oakland, Cal.

Claim.—1. In combination with the blocks E, the metal shoes L, provided with the projecting knife-edged keel *m*, substantially as and for the purpose described.

2. The colter-runner A,′ hinged to the shaft A and cutter-shaft J, as and for the purpose set forth.

111,213.—ELASTIC TIRE FOR TRACTION-ENGINES.—Oliver Hyde, Oakland, Cal.

Claim.—1. The cylindrical or polygonal elastic blocks C, either solid or provided with a central hole, when used in the manner and for the purpose specified.

2. The wedge-blocks D, provided with the side-plates *f* and the slotted links *l*, in combination with the cylindrical or equivalent-shaped elastic blocks C, and vertical metallic rims B, substantially as and for the purpose above described.

111,214. — MANUFACTURE OF LEATHER.—Samuel B. Jenks and Frederick A. Holcomb, Grand Rapids, Mich.

Claim.—The combination of a chemical with a mechanical action upon skins for the purpose of producing leather, substantially in the manner above set forth.

6935

111,215.—COMBINED FEED-WATER HEATER AND CIRCULATOR.—Edward L. Jones, Memphis, Tenn.

Claim.—The arrangement of the drum *a*, vertical pipes *b*, straight pipe *c*, cross-tubes *d*, cocks *h*, *i*, and *k*, and serpentine pipes *f*, with the boiler and furnace, as specified.

111,216.—DIE FOR ORNAMENTING SHEET METAL.—Charles Kaufmann, Oconomowoc, Wis.

Claim.—1. The herein-described die for forming ornaments on sheets of metal, consisting of the parts A^1 and A^2, substantially as set forth.

2. In combination with the parts A^1 and A^2, the guides B B, substantially as specified.

111,217. — POTATO-PLANTER. — Hiram J. Kent, Palmyra, N. Y.

Claim. 1. The combination of the centering-springs *p*, knife *q*, plunger F, and mechanism for imparting motion to the latter, all constructed, arranged, and operating substantially as herein described.

2. The hopper D, mounted on a tilting frame, and provided with the inclined bottom *f g f g*, the hinged trough E operated from the plunger, and the vertical stationary plates *h j*, all constructed, arranged, and operating substantially as and for the purposes described.

3. In potato-planters, the valve *t*, pivoted lever *u*, and spring *u′*, applied to the delivery-tube G, when operated automatically from the crank-shaft I, and having a regular intermittent motion, all constructed, arranged, and operating substantially as herein described.

111,218.—DEVICE FOR BENDING WOOD.—Edward Lacey, Chicago, Ill.

Claim.—1. In combination with a bending-strap, the curved links B, formed with arcs at right angles to each other, substantially as described for the purpose specified.

2. In combination with the bending-strap herein described, the adjustable clamping-handles, consisting of the metallic loop E, the adjusting screws, and the operating handles, for the purpose specified.

3. In combination with the bending-strap herein described, the links C and metal plates J, substantially as described, for the purpose specified.

111,219.—PUMP.—George H. Laub, West Lebanon, Ind.

Claim.—The combination of the barrel A, bars G, wood pipes C D, top B, band I, lugs E K, and keys, all substantially as specified.

111,220.—TOOL FOR CUTTING OFF PIPES IN OIL-WELLS.—James H. Luther, Petroleum Centre, Pa.

Claim.—1. The cutter-cylinder A, provided with the adjustable pin *h*, slots *a*, cutters *b*, pressers *c*, and beveled guide or end, constructed and operating in the manner and for the purposes set forth.

2. The mandrel D E, having its lower extremity terminating in an inverted frustum of a cone, or wedge-shaped, and provided with a stop-ring and pins, and the upper extremity of its top section threaded, and bottom provided with "jar"-pin, the two coupled by the slotted coupling F, all constructed and operating substantially in the manner and for the purposes set forth.

3. In combination with the cylinder proper and top section having the cross-T and levers, the collar H I, constructed and operating substantially in the manner and for the purposes hereinbefore set forth.

4. The cutters *b*, and pressers *c*, provided with lips *d* to retain them in place, and having their backs beveled, in combination with the tapered mandrel E, as and for the purposes set forth.

111,221.—TOOL FOR CUTTING OFF AUGER-STEMS IN OIL-WELLS.—James H. Luther, Petroleum Centre, Pa.

Claim.—The cutter-cylinder or tube A, provided with the internally-arranged cutters and pressers C C′ and retaining-nut B, in combination with the rings D E F and collar C, all constructed and operating substantially in the manner and for the purposes set forth.

111,222.—EMBALMING.—Benjamin F. Lyford, San Francisco, Cal.

Claim.—1. The solution for embalming, composed of the ingredients herein described.

2. The process of compounding said solution, as set forth.

3. The process of embalming, as herein specified.

111,223.—GRATE-BAR.—Joseph T. Marshall, Wilmington, Del.

Claim.—1. A series of revolving grate-bars, with any number of concave sides, constructed for the purposes herein shown and set forth.

2. The combination of the frame A with the pentagonal or many-sided concave bars B, geared by wheels C and ends D, all constructed and arranged substantially as herein shown, and for the purposes set forth.

111,224.—CAR-COUPLING.—John Mayben, Milroy, Pa.

Claim.—The coupling-block B, eccentrically arranged so as to change the height of the coupling, substantially as described,

111,225.—STOVE-PIPE SHELF.—James McCallum, Rochester, N. Y., assignor of one-third of his right to Harvey E. Gillam, same place.

Claim.—1. The construction of the parts A B, which attach separately to the pipe in the manner shown, for the purpose specified.

2. In combination with the separate parts A B, which constitute the shelf and cover, the overlapping straps *a a*, the marginal rod *d*, the stay-rods *f f*, and the narrow flange *g*, the whole arranged as described, and operating in the manner and for the purpose specified.

111,226, antedated January 18, 1871.—GANG-PLOW.—John R. McConnell, Marengo, Iowa.

Claim.—The arrangement in a gang-plow, and with respect to a wheel, I, and shaft H, of the wheel L and the shaft J, adjustable in the apertures of standards h^1 K, as shown and described, and for the purpose specified.

111,227.—PUMP.—John H. McGowan, Cincinnati, Ohio.

Claim.—In combination with a pump, the supplemental valve E and suction air-vessel H, arranged and operating substantially as set forth.

111,228.—COMBINED GANG-PLOW AND CULTIVATOR.—James A. Medaris, Sullivan, Ind.

Claim.—1. The arrangement of the axle A with cranks *a a*, wheels B B′, frame C, and frame platform G, all substantially as shown and described.

2. The arrangement of the frame G, side bloc I I, cultivator-plows J and J′, plows K, and sub soilers L, all as shown and described.

3. The arrangement, with the frame or platfor G, of the hinged cultivator-plows J J′, rod h, foo lever *f*, rods *i i*, false doubletree N, doubletree and singletrees P P, substantially as shown and described.

111,229.—BRACE FOR CARRIAGE AND OTHER SPRINGS.—Lumon C. Miller, Humphrey, N. Y.

Claim.—The combination and arrangement of the adjustable piece B, constructed substantially as described, with the piece A, whereby the brace is adapted to various distances between the carriage-box and spring bar, as herein set forth.

111,230.—FOLDING DESK.—John Milwain, Nashville, Tenn.

Claim.—The table or leaf B, provided with the strip A, and attached to the bracket K, having pivots working in the vertically-elongated slots in the frame, substantially as and for the purpose specified.

111,231.—PORTABLE ESCRITOIR.—Walter G. Mitchell, Holliston, Mass.

Claim.—An improved portable escritoir, A B C D E, said parts A B C D E being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

111,232.—BUGGY-SEAT.—Edward T. Mitchoff and Jesse W. Dann, Columbus, Ohio.

Claim.—1. The wooden rim *a*, attached to the metal back B, substantially as and for the purpose described.

2. The combination of the curved wooden bracing-handles *c c*, rim *a*, metal back B, and seat-bottom A, substantially as and for the purpose described.

111,233.—FLUID-METER.—Charles Moore, New York, N. Y., assignor to William Tobin, same place.

Claim.—1. The combination, with a direct course or passage for the liquid through the meter, and with a passage or chamber from which the meter draws its supply, of a free or independent differential pressure-valve operating to control both passages, essentially as herein set forth.

2. The construction and arrangement, between the main inlet and main outlet, of the differential pressure or proportioning-valve F, with a hollow body having one or more inlets *d*, and one or more outlets *e*, in combination with one or more fixed passages *b*, *c*, and *f*, and with a fluid-chamber or case, from which the motor draws its supply, and which is in communication, through the meter, with the main outlet, substantially as specified.

3. The combination, with the differential pressure or proportioning-valve F, of the adjustable gate H to or over the opening *f*, by which the motor

or its case G is supplied with fluid through the valve, essentially as described.

4. The construction and arrangement, under exposure to the fluid in the outer case G and in the exhaust-chamber O, of the valve or valves L L, having piston-heads *i i*, with the openings *k k* and *n n*, the chambers M M or N N and O, and cylinder-ports *u u*, substantially as specified.

111,234.—LIQUID-METER.—Charles Moore, New York, N. Y., assignor to William Tobin, same place.

Claim.—1. The combination, with the cylinder A of the meter, having inlet and outlet passages arranged to receive the liquid below and to discharge it above, with the free or independent piston D, provided with a valve, E, opening downward for operation, substantially as described.

2. The combination of the weighted lever F with the piston D, and the valve E closed at or toward the termination of the down-stroke of the piston, as described, and opened by the weight or weighted lever F toward the termination of its up-stroke, essentially as specified.

3. The arrangement of the safety opening or openings *k* in the cylinder A, in combination with the valvular piston D, substantially as specified.

111,235.—MEASURING ATTACHMENT FOR PACKAGED FABRICS.—Edward Morgan, Washington, D. C., assignor of two-thirds of his right to J. F. McKee, Fort Smith, Arkansas, and Charles Fair, Philadelphia, Pa.

Claim.—In combination with a rolled or folded fabric, a measuring-strip, substantially as described.

111,236.—BODY-LINING FOR LADIES' DRESSES.—Schamu Moschcowitz, New York, N. Y.

Claim.—As a new article of manufacture, a dress-lining having the body-pattern stamped or marked upon it, as herein described, for the purpose specified.

111,237.—LAMP.—Rufus Nutting, Randolph, Vt.

Claim.—The construction of lamp-collars of a single piece of metal as an article of manufacture, when adapted to glass, composition, or metallic lamps, of whatever size, style, or construction, having a downward extension, forming a metallic wick-tube, open only at the top and bottom, and having a lateral hole near the top, substantially as and for the purposes set forth.

111,238.—GATE.—Patrick O'Neill, Murfreesborough, Tenn.

Claim.—1. The combination, with the gate A, of the roller D, hinged plates F G, and operating-chain I, substantially as specified.

2. The pivoted lever L, operated in either direction by cords P P, for operating the gate, through the medium of the branch chains M and N, connected with the chain I, as shown and described.

111,239.—BARK-MILL.—Gilbert E. Palen and Florello P. Avery, Tunkhannock, Pa.

Claim.—1. The hopper A, the flanged extension-plates B *b*, and flanged, grooved, stationary grinder *b c*, combined as described, with a cup, D *d*, rotary grinder G, and shaft F, for the purpose specified.

2. The hopper A, diametrically larger in the middle than at each end, and having the ribs *o* formed, combined as described, with a bark-breaker, oblique, and rotating horn I, for the purpose specified.

111,240.—SPADE.—Harrison Parkman, Philadelphia, Pa.

Claim.—As a new article of manufacture, a spade having an angular point or cutting-edge narrowed gradually from its lower to its upper corners, concave or curved in cross-section, and straight longitudinally on its rear side, substantially as shown and described.

111,241.—STOP-VALVE.—John Paterson, Troy, N. Y.

Claim.—1. The combination, with the gates C C, having sockets P P and pins S S, of the nut *m* having arms or trunnions O O, slots R R, and grooves Q Q, for locking the gates, substantially as hereinbefore set forth.

2. The combination and arrangement of the gates C C, having ribs T T, with the valve-case having corresponding ribs U U, substantially as and for the purpose hereinbefore set forth.

3. The adjustable fulcrum-stop *k*, operated by the cam or circular incline surface L and hand-lever *l*, substantially as and for the purpose hereinbefore set forth.

111,242.—STOP-VALVE.—John Paterson, Troy, N. Y.

Claim.—The combination of the gates C G, screw-faces F F, center-pin E, ribs T T, stop H, and incline K, arms P P, and stem N, constructed substantially as and for the purpose hereinbefore set forth.

111,243.—DRAWER-PULL.—Charles H. Pierpont, West Meriden, Conn., assignor to himself and P. J. Clark, same place.

Claim.—The handle A, of a drawer-pull, jointed to the drawer or a shank projecting therefrom so as to swing downward when let go from the hand, provided with a spring or cushion, C, substantially as specified.

111,244.—PLOW.—Joseph Pinkham, New Market, N. H.

Claim.—1. The frame A′, with adjusting-screws *a″ a″ a″ a″*, combined with the beam A, pivoted at *a*, substantially as and for the purpose described.

2. The colter B, with its projecting lip b^4 inserted into the slot or mortise in the point of the share, and the yoke *b″* fastened to the standard of the plow either by the bolt *b* or the bolts and bar b^3, substantially as and for the purpose described.

111,245.—BOOT-CRIMPER.—William Polsgrove, St. Thomas, Pa.

Claim.—1. The grooved crimping-board D, provided with the sliding stirrup K, spring L, and clamp M, all substantially as and for the purposes herein set forth.

2. The within-described boot-crimper, consisting of the frame A B C, crimping-board D, with stirrup K, spring L, and clamp M, the cross-head G, with crimper E E′, levers H H, and bars I I, all constructed and arranged substantially as and for the purposes herein set forth.

111,246.—CONNECTOR FOR TELEGRAPH-WIRES.—George Bartlett Prescott, New York, N. Y.

Claim.—An insulated telegraph-connector, made substantially as herein shown and described.

111,247, antedated January 14, 1871.—PLOW.—Jackson P. Pritchard, Conn Valley, Cal.

Claim.—In combination with the plows D and D′, connected and arranged as above claimed, the holding device, consisting of the spring J and cross-piece *e*, operated by the lever K, substantially as specified.

111,248.—MACHINE FOR CUTTING SCREW-THREADS ON BOLTS.—Salmon W. Putnam, Jr., Fitchburg, Mass.

Claim.—1. Jointly, the ring *f*, constructed as de-

scribed, with the double-acting cam-grooves in its end or front face, and the spiral or inclined grooves on its periphery, terminating toward the front end in the short straight grooves, and the combination of the said ring with the hollow arbor *h*, the cylindrical piece *i*, provided on its inner surface with rolls or pins, and the lever *k*, all as shown and described.

2. The cap *n*, made to hold the dies in the grooves, and constructed with covered openings to be used in conjunction with the openings *m*, substantially as described.

3. The combination, with a hollow die-carrying arbor, of the disk *p*, located within the arbor, and connected with an indicator, and so arranged that the amount of its movement, caused by passage of a bolt through the dies, may be indicated to the operator, substantially as and for the purpose set forth.

111,249. — STAIR-ROD FASTENING. — Emil Rath, New York, N. Y., assignor to Moritz Krickl, same place.

Claim.—The button F, pivoted to the standard D, in combination with the stair-rod C, formed with the slot G, arranged and operating substantially as herein shown and described.

111,250. — CULTIVATOR. — William Benjamin Read, Gallatin, Tenn.

Claim.—A cultivator, consisting of the reversible frame A, constructed as described, having the pivoted standards *g* and adjustable braces *i* and the adjustable handles B connected thereto, all as herein described.

111,251.—MACHINERY FOR TRANSMITTING AND DISTRIBUTING MOTIVE POWER.—James Richmond, Lockport, N. Y.

Claim.—1. The combination, with the main driving pulley A′, of the prime mover A, and series of driving-pulleys C C^1 and C^2 C^3, and transmitting-wire-rope belts G G′, of the branch-distributing pulleys D D, guide-pulleys H H, and branch belts I I, substantially as and for the purpose hereinbefore specified.

2. The combination, with the branch pulleys D D, of the guide-pulleys H H, made adjustable about the axis of the pulleys D D, substantially as and for the purpose hereinbefore specified.

3. The combination of the adjustable forked guide-wheel brackets L with the circular frame M, as and for the purpose hereinbefore specified.

111,252.—HAY-LOADER.—John P. Rideout, Bowdoinham, Me.

Claim.—The combination of the roller *d*, the pulley *b*, the lines H I, and the elevator *a*, with the hay-cart, for the purposes and in the manner described.

111,253.—SETTING STONES, &c.—William Riker, Newark, N. J.

Claim.—The setting for stones, consisting of the perforated plate A and of the headed pins C C, which are riveted to the plate subsequent to the finishing of the same, substantially as herein shown and described.

111,254.—CARD FOR MARINERS' LIQUID-COMPASSES.—Edward S. Ritchie, Brookline, Mass.

Claim.—1. A mariner's compass-card, as composed of a sheet of paper, cloth, or other proper material, protected by albumen or other coagulative substitute alone, coagulated, as described.

2. A mariner's liquid compass-card, as composed of two or more strata cemented together by albumen or other like coagulative substance, coagulated, as set forth.

3. A mariner's liquid compass-card, as composed of strata covered or saturated with albumen or other like coagulative substance, coagulated, and cemented together with albumen, coagulated, as described, whether the outer covering of the card be of albumen or other coagulative material alone or of such mixture with one or more pigments.

111,255, antedated January 18, 1871.—CATTLE-STANCHION. — Joshua A. Roeback, Hermon, N. Y.

Claim.—The arrangement of the standards A A, bars B B, movable stanchions C C, guides D D, horizontal bar E, with pins *a a*, and latches G G, all substantially as shown and described.

111,256.—CULTIVATOR.—H. Murtin Rose, Clinton, Ill.

Claim.—1. The combination of the seat and its adjustable arms C′ with the bifurcated end of the tongue C, substantially as described, for the purpose specified.

2. The combination of the slotted block D′ with the driver's seat B′ and the seat-arms C′, for the purpose specified.

3. The plows and beams of a wheel-cultivator suspended beneath the axle from the upright frame E, mounted thereon by means of the bent adjustable bars H and adjustable frame I, substantially as herein shown and described.

4. In combination with the adjustable pendent bars H and plow-beams, the adjustable frames I, slotted bar J, and adjustable loops K, substantially as described, for the purpose specified.

5. In combination with the adjustable frames I and slotted bar J, the wedges *r*, substantially as described, for the purpose specified.

6. The beveled recessed blocks X and eye-bolts V, constructed as described, and applied to the beams and standards in the manner herein set forth and shown, for the purpose specified.

7. The foot-horns I′, constructed as described and adapted for adjustment upon the plow-beams in the manner set forth, for the purpose specified.

8. The jointed adjustable levers K′, constructed as described, and provided with the friction-rollers *m′*, in combination with the guide-frames I and plow-beams, substantially as and for the purpose specified.

9. The plow-beams, when connected at their forward ends to the draft-pole by means of the pivoted plates *q* and pivoted block O, substantially as described, for the purpose specified.

111,257, antedated January 14, 1871.—BELT-TIGHTENER.—George W. Runk, Franklin, La.

Claim.—1. The projecting ears *a b*, the first serrated and the second having catch *c* to work therewith, combined with a swinging eccentric shaft B, as and for the purpose described.

2. The arrangement of links C, cross-heads D, and lever E, between the two belt-clamps, as and for the purpose described.

3. The combination, with the two supporting-plates A, having projections *g* on their ends, of the two apertured adjustable plates, F F, as and for the purpose described.

111,258.—MOWING-MACHINE.—George T. Savary, deceased, Newburyport, Mass., N. Jennie Savary, administratrix, assignor to John N. Pike, same place.

Claim. — The combination of the driving-wheel, the oscillating shaft, the jointed connecting-rod, vibrating lever and pitman, all these parts being constructed, arranged, and operating as described.

111,259.—LATH-MACHINE.—Charles Schleicher, Louisville, Ky.

Claim.—1. The upper feed-roll U and its shaft V, arranged with the adjustable springs X Y in the manner described and shown, for the purpose specified.

2. The gang of disks S on the shaft R, in combination with the adjustable gauge T and gang of saws C, all as herein set forth.

3. The arrangement of the slotted bed P hinged at one end to the frame A, the screw Z, gang of saws C, gang of disks S, gauge T, fixed and yield-

feed-rolls U and U′, and the adjustable springs Y, all constructed and operating substantially as herein shown and described.

111,260.—ICE-PICK AND HOOK.—Eide H. Schmults and Jacob Baker, New York, N. Y.

Claim.—A combined ice-pick, breaker, and lifting or opening implement, consisting of the main bar A, hook *a*, flattened end *d*, enlargement *c*, and spear *b*, as described and shown.

111,261.—RAILWAY-SWITCH AND SIGNAL APPARATUS.—Adolph Schnabel and Theodore Henning, Bruchsal, Grand Duchy of Baden.

Claim.—1. The locking-slides *j*, in combination with the valve-rods of the central apparatus, substantially as described, to prevent the switches of interfering trains from being set simultaneously.

2. The locking-slide L and plunger I, in combination with the switch-rail and with the plunger H, by which the switch-rail is adjusted, substantially as set forth.

3. The combination of the switch-moving plunger H with the signal-moving plunger D^2, substantially as set forth.

4. The combination of the plungers H and D^2 with the loaded plunger F^1 and with the controlling plunger *d*, substantially as described.

111,262.—LIQUID-METER.—Henry C. Sergeant, Newark, N. J., assignor to José F. De Navarro, New York City.

Claim.—1. In a meter in which the pistons of the measuring-cylinders or chambers also act as valves for each other, the arrangement and support, within and through the opening or passage which establishes communication between the cylinders, of the bearing-box for the crank-shaft, by which the pistons, through their respective pitmen, are connected to work in unison, substantially as specified.

2. The combination and arrangement of the openings *g g′*, in the outsides of the cylinders, relatively to the bearing-box G of the crank-shaft F, whereby said box, shaft, and cranks may be inserted through the side or sides of the meter, and provision is made for establishing connection of the pitmen by which the pistons are linked to the cranks, essentially as herein set forth.

111,263.—BURIAL-CASE.—Frank B. Shearer, Columbus, Ohio.

Claim.—A coffin, constructed as set forth, when the rubber coat C contains upon one of the surfaces of contact between the body and cover a strip, *b′*, of soft rubber, forming a constituent part of the hard-rubber coat, substantially as specified.

111,264. — APPARATUS AND PROCESS FOR CANNING AND PRESERVING MEATS, FRUITS, VEGETABLES, &c.—Nicholas H. Shipley, Baltimore, Md.

Claim.—1. The flask F′, constructed and described and shown, and for the purpose specified.

2. The stopples *f f′*, when constructed with notches or holes and adapted to be employed in connection with the flasks, substantially as described and for the purposes set forth.

3. The combination of box B, receiver A, and plate B′, provided with tapering apertures to receive the necks of the flasks, substantially as described.

4. The vertically-moving platform D, arranged in the box, in combination with the box B, plate B′, and receiver A, substantially as described.

5. The vertically-movable platform G, arranged in the receiver, in combination with the box B and plate B′, substantially as described and for the purpose set forth.

6. The combination of box B, car C, platform D, guide D′, and screw-rod or equivalent, d, as and for the purposes set forth.

7. The combination of receiver A, fig. 3, with the rods A′ *e*, and a device at the bottom of the latter for the purpose of grasping the cork or stopple, substantially as described.

8. The process herein described of exhausting atmospheric air from vessels to which heat is applied, and then condensing the contents of the vessels by applying cold through the medium of water in a stream or spray, as described.

111,265.—ROCK-DRILL.—Henry Shoemaker and John Shoemaker, Putneyville, Pa.

Claim.—The combination of the tube A, sleeves B and C, grooves *a a*, slots *a′ a′*, and keys K K, substantially as and for the purposes specified.

111,266.—GATE.—Lyman W. Sibley, Ames, Iowa.

Claim.—1. The combination, with the gate, of the oblique plate L, the swinging rollers Q Q′, levers R S, and the spring *d*, the said swinging rollers and the levers being arranged on an inclined pivot, all substantially as specified.

2. The combination, with the levers R S, of the cords, levers V V′, and the guide-rollers W Y, all substantially as specified.

3. The combination, with the oblique plate L and the rollers Q Q′, of the hanging block *e*, all substantially as specified.

111,267.—PLASTER FOR WALLS. — Benjamin R. Smith and John Campbell Harris, Philadelphia, Pa.

Claim.—The compound plaster, produced of the materials and in the manner substantially as herein set forth.

111,268. — LIQUID-METER. — William E. Snediker, New York, N. Y., assignor to José F. De Navarro, same place.

Claim.—1. The combination, with the water-case or dome A, of the cylinders B B′, the reciprocating tube or outer piston D, the free or independent interior piston E, the valve F, and the several ports or passages under control of said valve and outer piston or tube, substantially as specified, and whereby the interior piston, which throws the valve to reverse the action of the outer piston, is, in its turn, reversed by the action of the outer piston or tube, as herein set forth.

2. The arrangement of the ports *h h′* in the reciprocating outer piston or tube D, relatively to the fixed ports *i i′*, *j j′*, and *f f′*, whereby the inner piston E is caused first to move alone, subsequently by its action on the valve F, to continue its motion in common with the outer piston, and then to be reversed while the outer piston completes its stroke, substantially as shown and described.

3. The combination of the sliding-stops or bumpers G G′ with the interior free piston E, exterior piston D, and cylinders B B′, substantially as described.

111,269.—STEEL GLASS-CUTTER AND KNIFE. Thelesphore Spénard, Conticooke, Canada.

Claim.—A pocket or other cutting-knife, constructed with a revolving glass-cutter, substantially as described.

111,270.—BOLSTER AND PILLOW.—Timothy S. Sperry, Chicago, Ill.

Claim.—1. In a pillow or other similar article, the combination of the outer shell or web A with the inner supporting coil or coils D and the padded case, essentially as described.

2. The inner and an outer spring or springs, A D, constructed and connected to each other so as to constitute longitudinal counter-braces to each other, essentially as described.

3. The inner and outer spring-coil or coils, provided with horizontal stays, and connected at the junction of the several parts by loop-locks or other means, as described.

4. An oval, or nearly so, spiral shell or web, in

combination with a padded case or covering, as described.

3. The combination of the inner spring-coil or coils D, the outer spring-shell or web A, the horizontal stay-springs C, and the padded covering, the whole constructed and arranged as described.

111,271.—Burial-Casket Handle.—Clark Strong, Winsted, Conn.

Claim.—1. The plate A B, having the vertical slot D and transverse trunnion-slot *a* formed therein, in combination with the lever C and trunnions *d*, substantially as and for the purpose set forth.

2. The plate, having beveled jaws *f f* formed therein, combined with the lever C, to stop and hold this lever when raised, and to prevent its front from being marred against the plate, substantially as described.

111,272.—Harvester.—Henry Stuckey, Bucyrus, Ohio, assignor to A. C. Shock, same place.

Claim.—The hinged shoe G, constructed with cars G′ G′, for the purpose of changing from a front to a rear cutter, in combination with the shifting hinged bar D′, substantially as set forth.

111,273.—Bee-Hive.—David H. Swartz, Lancaster, Ohio.

Claim.—1. The passages D, open at their front ends, and having side-perforated chambers d^1 at their rear ends applied to the bottom A and on each side of the passage C, of a bee-hive, for the purpose of attracting the moths and promoting their destruction.

2. The tube E at the bottom, the tube N at the top, and the cap L between them, all combined as described, to afford a free circulation of air through the hive.

111,274.—Lamp-Burner.—Alvin Taplin, Forestville, assignor to the Bristol Brass and Clock Company, Bristol, Conn.

Claim.—1. The deflector, composed of two plates, the upper one, D, of which forms its body and the cone, while the under and elastic plate, D′, of larger diameter, is slitted to form wings *b* at its periphery, with the rear portions of the slits under cover of the upper plate, substantially as specified.

2. The slotted and elastic deflector-plate D′, constructed with clips or slotted projections *f f*, arranged to fit opposite edges of the wick-tube, essentially as and for the purpose or purposes herein set forth.

111,275.—Shuttle for Sewing-Machine.—Eben C. Thaxter, Providence, R. I.

Claim.—The combination, with the shuttle A, of the slide *a* and the slotted spring C, having a hole at one end through which the thread passes, and riveted at the other end to the side of the shuttle, the whole constructed and arranged in the manner substantially as described, for the purposes specified.

111,276.—Sewing-Machine Motor.—William C. Thornton and James D. Cooley, Hillsville, Va.

Claim.—1. The arrangement of the pin *b* and springs *d* and *l* in respect of a sewing-machine motor, as specified.

2. The arrangement of the pin *m* and brace *r* with respect to a wheel and axle, as described.

111,277.—Millstone-Driver.—John J. Tomlinson, Bozeman City, Montana Territory.

Claim.—1. In combination with the running stone of a grinding-mill, a driver composed of the parts E and F, connected together and with the runner, substantially as shown and described, and for the purposes set forth.

2. Making provision for lateral play in a mill-driver, substantially as and for the purposes shown in fig. 2, as herein described.

3. The arms G G of the driver F, provided with friction-rollers H H, and fitted loosely in recesses in the runner, as shown and described, to provide for lateral play, as set forth.

4. The inner driver E, outer driver F G, provided with rollers H, and the links I I, arranged with reference to the spindle and runner, as shown and described.

111,278.—Loom.—Hamilton E. Towle, Newark, N. J.

Claim.—1. The lifting hooks hinged together, operating in pairs, and connected with the harness-frames, in combination with two reciprocating lifters, whereby particular heddles may be kept elevated by the alternate action of said lifters.

2. The harness-frames, the hinged lifting hooks, and the pair of pattern-rollers and reciprocating lifters, all arranged as described, and the pattern-rollers operating independently each of the other.

3. The harness-frames, the hinged lifting hooks, the pair of pattern-rollers, and vibrating beam, with pawl-arms and the reciprocating lifters, all constructed and operating together substantially as described.

111,279.—Rein-Supporter.—Ross Townsend, Liberty township, Ohio.

Claim.—The rein-supporter, herein described, consisting of a curved branching spring or flexible rod, B *b* b^1, constructed with looped or hooked ends b^2, when said rod is attached by the clamp D E, constructed as represented, so that the rod B *b* b^1 may be adjusted or removed at will, in the manner specified.

111,280, antedated January 7, 1871.—Ice-Machine.—David K. Tuttle and Orazio Lugo, Baltimore, Md.

Claim.—1. The process herein described of producing ice by the expansion of cooled compressed air in direct contact with the water to be frozen.

2. The process described for cooling the air while under compression, the same consisting in surrounding the vessels or pipes containing the condensed air with a non-congealing liquid, which is cooled by the returning air from the ice-generator alone, or with the aid of a portion of the air previously cooled, as described.

3. The combination of the vessels B and B′, the first cooled by the circulation of water, and the other by the cold non-congealing liquid, as described.

4. The combination of the vessels B B′ and C, as described.

5. The combination of the vessels C and C′ with their connections, so as to alternate, as described.

111,281.—Salt-Cellar.—John T. Walker, Brooklyn, N. Y.

Claim.—The salt-cellar provided with the clamping-spring, as specified.

111,282.—Millstone Balance.—John Walsh, Galena, Ill.

Claim.—A balance-frame for millstones, formed in two parts, B C, and provided with retaining hooks *d* clamped together on and combined with the band, as and for the purpose described.

111,283.—Bee-Hive.—William Wambach, Indianapolis, Ind.

Claim.—The arrangement, with reference to one another, of the case or box A, interior box D, with air-passages between the two, comb-frames E F, and moth-drawer C, substantially as set forth.

111,284.—Nutmeg-Grater.—Dewitt C. Warner, Chicago, Ill.

Claim.—1. The two-pronged pivoted spring D C, arranged to hold a nutmeg when being ground, [illegible] to turn back to allow a nutmeg to be placed in [illegible] to be ground, in combination with the hopper F, rotary grinding-plate H, lid E, and apartment N, as set forth.

2. The combination of the apartments N M, grinding-plate H, hopper F, spring D C, cover B, door W, and door J, as and for the purpose set forth.

111,285.—Elevator.—John Jacob Weber, St. Clair, Pa.

Claim.—In the elevator, the semicircular case A, with the cam C let into the side of the elevator B, the plank D extending up and down the shaft, the spring G, combined and as herein set forth.

111,286.—Lubricator for Railway-Car Axles.—Isaac P. Wendell, Philadelphia, Pa., assignor of one-half his right to Stephen P. M. Tasker, same place.

Claim.—The curved plate A, having a longitudinal slot, *a*, and clips *d d* and *d′ d′*, in combination with the spring C and felt or webbing B, all arranged and operating substantially in the manner and for the purpose set forth.

111,287.—Lubricator for Railway-Car Axle-Boxes.—Isaac P. Wendell, Philadelphia, Pa., assignor of one-half his right to Stephen P. M. Tasker, same place.

Claim.—1. The clips *d* on the lower side of the plate A, for forming a connection with the spring C, and confining the extreme ends of the parts B′ of the felt, substantially as above set forth.

2. The opening *f*, between the parts B′ B′ of the felt, as and for the purpose set forth.

111,288.—Gas-Generating and Blast-Heating Apparatus for Metallurgic and other Purposes.—James D. Whelpley and Jacob J. Storer, Boston, Mass.

Claim.—1. The improved gas-generator and blast-heating apparatus combined, substantially as and for the purposes described.

2. The improved gas-generator and blast-heating apparatus, substantially as described, combined with the use and application of pulverized fuel, substantially as described.

3. The utilization or conversion into use of the hot gases and products of combustion from an oven used for heating a blast of air, in combination with the heated blast, substantially as and for the purposes described.

111,289.—Bee-Hive.—Asbury Wilkinson, Greensburg, assignor to himself and William T. Gibson, Indianapolis, Ind.

Claim.—1. The arrangement of the notched bars and frames D in connection with the side B, substantially as shown and described.

2. The frame D, having one side made wider than the rest, so that, when a series of them is suitably arranged in a hive, their wide sides shall form the body of the hive on that side, substantially as described.

3. The detachable comb-frames L, constructed to rest in and be held in position by the frames D, substantially as described.

4. The combination of the hinged catches F with the hinged sides C, the latter having the springs H applied, substantially as set forth.

5. The top J, provided with the stripes *g*, arranged to press against the sides of the hive, and to yield, to compensate for expansion and contraction, substantially as described.

111,290.—Flour-Bolting Reel.—Allison L. Williams, Orth, Ind.

Claim.—1. The combination of the shaft A, disks B, ribs C, heads D, rods *a*, and wire *b*, constructed and arranged as described, to form a mill-bolt reel, substantially as herein set forth.

2. In combination with a mill-bolt reel, constructed as herein described, the perforated cylinder E and tube G, as and for the purposes herein set forth.

111,291.—Roach and Bug-Trap.—Thomas Williams, Tompkinsville, N. Y.

Claim.—The annular trough *e* filled with liquid attached to the lower end of the funnel A, combined, as described, with the vessel in which the latter is placed, for the purpose of preventing the bugs from crawling around into the funnel.

111,292.—Apparatus for Making Ice and Cooling.—Franz Windhausen, Brunswick, Germany, assignor to Louis Schneider, C. T. Buddecke, and John A. Blaffer, of New Orleans, Louisiana.

Claim.—1. The combination of the compound pump B C, valves M N O P, injector R, tank A, water apparatus S, and suitable operative mechanism, substantially as shown and described.

2. The cylinder B and piston G, in combination with the plunger R and induction water-chamber or pipe R^1, as and for the purposes specified.

3. The tank A, inner perforated cylinder S, and the funnels S^2 and S^2, the parts being arranged with relation to each other, and operating substantially as shown and described.

4. The arrangement of the air-pumps B and C in a vertical line, and connected by the operative mechanism, driven by a single crank on a central shaft, substantially as and for the purpose described.

5. The freezing apparatus, fig. 6, consisting of the tank *a* mounted upon trunnions, in combination with the inner tank *c* and cover *d*.

6. The combination of the outer and inner tanks *a* and *c*, the same being provided essentially with a gradual feeding-apparatus for the introduction of liquid to be frozen, a cold-air inlet-pipe and corresponding discharge-pipe, with the vertical sliding box-shaped cover *d*, for the purpose of securing a flow of cold air in a current adjacent to and on a plane with the surface of the liquid to be frozen, substantially as shown and described.

7. In combination, the main tank *a*, inner tank *c*, cover *d*, and freezing vessels *f*, arranged substantially as shown and described.

111,293.—Ice-Machine.—Franz Windhausen, Brunswick, Germany, assignor to Louis Schneider, C. T. Buddecke, and John A. Blaffer, New Orleans, La.

Claim.—1. The eduction-ports M, located in the walls of the cylinder, between the ends, and so arranged with relation to the induction-valves that air introduced into the cylinder at either end will be discharged, after having been compressed, cooled, and expanded, through said openings, as described.

2. In combination with the cylinder A and piston C, the pistons K and K′, with their chambers and connecting-passages, the whole being so arranged that, by the raising and lowering of the pistons, the interior spaces on both sides of the piston C will be increased or lessened, as described.

3. The combination of the main piston C and auxiliary pistons D and D′, arranged within the cylinder, substantially as and for the purposes herein described.

4. In combination with the cylinder of an ice-machine provided with an intermittent water-injecting apparatus, the reservoirs F and float-valves G, the latter being so arranged that their natural buoyancy will open the valves, and the pressure within the cylinder will close them, substantially as described.

5. In combination with the cylinder of an ice-machine, the compression, cooling, expansion, and ejecting apparatus, so arranged that the several processes will be effected within the same cylinder at each and every complete stroke of the piston, substantially as described.

111,294, antedated January 21, 1871.—Car-Starter.—Finley J. Wright and Livingston W. Wandell, New York, N. Y.

Claim.—1. The combination of the coupling-rod T, starter-plate J, and catch R, with the sliding spring-latch I and i^2, for the purposes and operating substantially as hereinbefore described.

2. The combination of the spring-latch I and i^2 with the wedge-shaped cam P, for the purposes and operations substantially as hereinbefore set forth.

3. The combination of the starter-plate J and spring-latch I and i^2 with the pawl F and ratchet-wheel E, for the purposes and operations substantially as hereinbefore set forth.

111,295.—Paint for Ships' Bottoms.—Isaac J. Wyman, New York, N. Y.

Claim.—A paint, having as one of its ingredients metallic copper, as herein substantially described, and for the purposes herein set forth.

REISSUES.

4,237.—Construction of Electro-Magnets.—Henry M. Paine, Newark, N. J., assignor, by mesne assignments, to the Paine Electro-Magnetic Engine Company.—Patent No. 103,231, dated May 17, 1870.

Claim.—The interposition of a metallic medium between the layers of the coils of an electro-magnet, or the application of a metallic medium as a clothing or covering to the wire of an electro-magnet, as and for the purpose herein specified.

4,238. — Railway Car-Truck.—William Pettit, Philadelphia, Pa. — Patent No. 38,980, dated June 23, 1863.

Claim. — Arranging the center-pin which connects a railway car or locomotive-engine and tender to the truck, and around which center-pin the truck turns, in a position to the rear of the center of the truck and between the two axles of the same, in the manner and for the purposes herein set forth.

4,239.—Compound to Increase the Friction between Belts and Pulleys.—Louis F. Robertson, New York, N. Y.—Patent No. 104,356, dated June 14, 1870.

Claim.—A compound intended to increase the adhesion of belts to pulleys, and made of the ingredients herein specified, and mixed together, substantially in the manner and about in the proportion set forth.

4,240. — Passenger-Fare Box.—John B. Slawson, New York, N. Y.—Patent No. 17,899, dated July 28, 1857; reissue No. 550, dated May 4, 1858.

Claim.—1. A fare-box, composed of two compartments so combined that the fare, on being deposited through an opening in one of them by the passenger, without the intervention of the driver or conductor, shall be temporarily arrested therein for examination and inspection by the driver or conductor, through an opening therein covered by a transparent medium, and then, when approved of, transferred directly to the second or general receiving-compartment, which, as well as the first, is made inaccessible, except by violence, to the driver or other unauthorized person, for the purpose set forth.

2. A fare-box having two compartments, into one of which the fare is first deposited and temporarily arrested previously to its being deposited in the other, when the former is provided with openings covered or protected by transparent mediums or devices so arranged that the passengers can see through one and the driver or conductor through the other, in the manner substantially as and for the purposes set forth.

4,241.—Railroad-Car Seat and Couch.—Theodore T. Woodruff, Philadelphia, Pa. Patent No. 16,159, dated December 2, 1856; reissue No. 1,439, dated March 17, 1863; extended seven years.

Claim.—1. In the ordinary long passenger railway-car, the combination of a series of seats arranged in pairs transversely on each side of the central passage-way, with diaphragms or partitions between each pair of transverse seats, at such distance apart as to permit of berths between these diaphragms or partitions.

2. The arrangement of the back frame of said transverse seats so that the frame which supports the back cushion by day may form also the partition between the lower couches by night.

3. The combination of the set of transverse seats, the supporting back frames, and the removable back cushions, by which the proper length can be given to the couch at night, and the proper support for the passenger's back by day.

4. The employment of removable cushions, which rest against the transverse back frames by day to form part of a sleeping-berth at night.

5. The combination of a pair of transverse seats and partitions on each side of the pair, and the movable seat-cushions and intermediate supports between the seats, so that the opposite day seat-cushions on each pair may be brought together and occupy the intermediate space or footway between the seats as part of a couch.

6. The combination of the pairs of transverse seats with partitions on each side of each pair, so arranged as to form a double berth below, with the additional upper movable berths between the partitions so arranged as to convert the night-car into a complete day-car, furnishing an equal number with sleeping and sitting accommodations.

7. Forming an elevated couch above the couch formed by the backs of seats, by a series of hinged frames, substantially as described.

DESIGNS.

4,588.—Heating-Stove.—Nicholas Brayer, Rochester, N. Y., assignor to "Equitable Co-operative Foundry Company," same place.

Claim.—The design for a stove, substantially as herein set forth.

4,589.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,590.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,591.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,592.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,593.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,594.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,595.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,596.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,597.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,598.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,599.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,600.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,601.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,602.—Box for Tops of Bureaus.—Daniel A. Hall and David Garrison, Philadelphia, Pa., assignors to Swan & Clark, same place.

Claim.—1. The shape or form of the box, as represented.

2. The ornamentation on the box, as described and shown.

4,603.—Box for the Tops of Bureaus.—Daniel A. Hall and David Garrison, Philadelphia, Pa., assignors to Swan & Clark, same place.

Claim.—1. The form or shape of the box and lid, as herein described and represented.

2. The ornamentation of the box, as herein described and represented.

4,604.—Sewing-Machine Stand.—Henry Loth, Philadelphia, Pa.

Claim.—The design for a sewing-machine stand, substantially as described, and as represented in and by the accompanying drawing.

4,605.—Frame of School-Desks.—Albert E. Roberts, Des Moines, Iowa.

Claim.—The skeleton end frame of a school-desk, composed of three pieces, formed, combined, and operated as illustrated in and by the accompanying drawing and specification.

4,606.—Box for the Tops of Bureaus.—Baxter C. Swan, Philadelphia, Pa.

Claim.—1. The design for a box for the tops of bureaus, as shown and described.

2. The design for the molding of the edge of the box, as shown and described.

4,607.—Box for the Tops of Bureaus.—Baxter C. Swan, Philadelphia, Pa.

Claim.—1. The design for a box for the tops of bureaus, as shown and described.

2. The design for the molding of the edge of the box, as shown and described.

4,608.—Box for the Tops of Bureaus.—Baxter C. Swan, Philadelphia, Pa.

Claim.—The design for a box for the tops of bureaus, as shown and described.

4,609.—Box for the Tops of Bureaus.—Baxter C. Swan, Philadelphia, Pa.

Claim.—The design for a box for the tops of bureaus, as shown and described.

4,610.—Bed-Quilt.—Francis C. Van Horn, Camden, N. J.

Claim.—The design for a bed-quilt, shown in the accompanying drawing, consisting of the combination of central squares of uniform size and of alternately-different colors, with rectangular border-checks of different widths.

4,611.—Cooking-Stove.—Nicholas S. Vedder and Francis Ritchie, Troy, assignors to Russell Wheeler, Utica, N. Y.

Claim.—1. The compound ornament cast on and forming part of any stove, substantially as herein shown and described.

2. The combination of the compound ornament and the ornamental border-moldings of bead and rope-work arranged together and cast upon any stove, substantially as shown and described.

3. The combination of the compound ornament and the bead-molding for border, arranged together and cast upon any stove, substantially as shown and described.

4. The combination of the compound ornament and the twisted cord-molding for border, arranged together and cast upon any stove, substantially as herein shown and described.

4,612.—Fence-Cap.—George W. Young, St. Louis, Mo.

Claim.—The design for a fence cap, substantially as above set forth.

TRADE-MARKS.

143.—Averill Chemical Paint.—Averill Chemical Paint Company, New York, N. Y.

144. — Corn-Planter. — James Selby & Co., Peoria, Ill.

145.—Lubricating-Oil.—Warfield & Co., Rochester, N. Y.

ISSUE OF JANUARY 31.

PATENTS.

111,296. — Adjustable Reamer.—Edwin H. Adgate, Mittineague, Mass.

Claim.—The combination of the cutters D D cone S, screw-caps P P, and body of the reamer B, having the neck T for the reception of the screw-end E of the cone, the parts being constructed, and arranged substantially as shown and described.

111,297, antedated January 21, 1871.—Fastening for Door-knob Roses.—James M. Adolphus, Philadelphia, Pa.

Claim.—The shank A, having a groove, a, in combination with the spring or latch F, substantially as shown and described.

111,298. — STEAM-GENERATOR. — Christopher Ahrens and Frank Kamman, Cincinnati, Ohio.

Claim.—1. In combination with the circular water-jacket A B, the arrangement of the circulating coil of pipes into separately-detachable and separately-operating sections by means of fittings a and G, each section having vertical rows of continuous pipes H H′ I I′ K K′ K″ L L′ L″, varying in number of rows to conform to the circle, as described, and for the purpose specified.

2. In combination with the water and steam-jacket A B, extending up to a point above the discharge ends of the coil, the gauge-cocks P, located and operating in the described relation to the discharge apertures of the pipes J J′ M M′.

111,299.—MACHINE FOR WELDING TUBES.—William C. Allison, Philadelphia, Pa., assignor to W. C. Allison & Sons, same place.

Claim.—1. The sliding block *d* arranged on the rod D of a tube-rolling mill, at the rear of the head of the rod, as set forth.

2. The trough E, having a flaring end, adjoining the rolls, and carrying rollers G, as specified.

111,300. — WELL-AUGER.—Elijah Altman, Hamilton, Mo.

Claim.—An improved well-auger, formed by the combination of the point A, shaft B, tube C, flanges D, disk E, connecting-rods G, disk F, provided with hooks H, or equivalent, and disk I provided with keepers J, with each other, substantially as herein shown and described, and for the purpose set forth.

111,301. — FODDER-STAND.—John Antram and Elwood B. Mullin, Franklin, Ohio.

Claim.—The bench A, provided with legs B C D and folding arms E F, arranged to operate in combination substantially as herein specified, and for the purpose described.

111,302.—MILK-CAN.—Thomas M. Bell, New York, N. Y.

Claim.—The hoop or band B, rabbeted around the outer side of its upper edge to receive the turned-down edge of the bottom A and the lower edge of the body C, in combination with the said bottom A and body C, substantially as herein shown and described, and for the purpose set forth, whether the hoop D be used or not.

111,303.—PNEUMATIC SPRING.—John Bevan, Port Richmond, and Benjamin W. Hitchcock, West Flushing, N. Y.

Claim.—The combination of the outer flexible case A with the interior contractile or collapsible device B and inflexible air-cylinder or chamber C, for operation with or through an interior fluid or mixture, substantially as specified.

111,304. — PRINTING-PRESS GUIDE.—Alexander L. Bevans, Flushing, N. Y.

Claim.—The improved card-guiding and holding attachment for printing-presses, consisting of the guide-bars C, the vibrating-bars K, the sliding stops H, and the hooks D, all combined and arranged together and for application to a printing-press, substantially as specified.

111,305.—MANUFACTURE OF COPPERAS.—R. De Witt Birch, Philadelphia, Pa.

Claim.—1. The manufacture of copperas from waste liquor by the process described.

2. The process of neutralizing the free acid in a separate vessel from that in which the liquid is boiled to the required density.

3. The process of neutralizing, boiling, and settling the liquid in separate vessels, as described.

4. The above-described method of preventing the escape of copperas-vapor into the atmosphere.

5. The application of vapor from the heated liquid to heat the drying-blast, as described.

6. The combination of the chamber C and condenser D with the pipe G and blowing-machine.

7. The frames or slats h h, arranged in the crystallizing vessel, and operating as described.

8. The crystallizing-sticks, made in the shape and for the purpose described.

111,306.—APPARATUS FOR OPENING THE EYES OF PICKS.—Robert Blake, Scranton, Pa.

Claim.—1. The die and punch, respectively, of the form and of the dimensions relative to one another and to the blank to be operated on, herein described and shown.

2. The method of adjusting the blank in the die to be operated on by the punch, that is to say, its arms lying in and supported laterally by the walls of the notches, but free from contact with the bottoms thereof, and the eye in contact with the die at two points only, (the rounded shoulders at its two extremities,) in virtue of which the tapered punch will, in its descent, open out the eye transversely and give to it the proper form, and at the same time impart to the arms a downward curvature, all as set forth.

111,307.—METALLIC ROOFING.—George W. Bliss, Springfield, Mass.

Claim.—An improved covering for roofs, consisting of metallic plates A, having the edges turned at *c*, and either with or without the corrugations *e*, or patterns stamped therein, substantially as herein described and set forth.

111,308.—HORSE HAY-RAKE.—Olpha Bouney, Jr., San Francisco, Cal.

Claim.—1. The driver's seat *g*, provided with irons *m*, in combination with the hand-lever *k*, arranged to operate in connection with the bars and teeth of the rake, as described.

2. The combination of the spring *r*, tooth *d*, with bar *c* and connecting-shank, as set forth.

111,309.—HAT-SUPPORTER AND VENTILATOR COMBINED. — John A. Borthwick, Philadelphia, Pa., assignor to himself and George W. Hess, same place.

Claim.—A hat-supporting and ventilating device, consisting of a slotted tube arranged to be attached to the top of a hat, and containing a weighted slide, B, and pivoted supporting-arms C, the whole being arranged and operating substantially as herein described.

111,310. — BEE-HIVE.—Arthur Bradshaw, Rantoul, Ill.

Claim.—The arrangement of the slatted honey-boxes in one end of the hive, and resting endwise on the bottom thereof, with relation to the comb-frames, movable partition, and entrance, all as herein set forth, for the purposes specified.

111,311. — HEAD-STOCK FOR MILLING-MACHINES.—Amos H. Brainard, Hyde Park, Mass.

Claim.—1. The location of the pivot-pins *c c′* for supporting the block *d* in the center of the standards *a a′*, as and for the purpose described.

2. The combination of the conical spindle *g*, the worm-wheel *i*, index-plate *h*, with the worm *l*, adjustable index-arm *p*, and point *r*, substantially as described.

111,312.—WHEEL FOR VEHICLES.—Alexander D. Brown, Sr., Columbus, Ga.

Claim.—1. The angular projections *b′ b′* on the inner ends of the two parts of hub B, when constructed in the manner and for the purpose described.

2. The radial arms C, in combination with the two parts of the hub B, and axle A, having the screw-nuts *a*, when the parts are constructed in the manner and for the purpose described.

1. The divided hub B, having annular projection I and radial projections *b′ b′* in combination with the radial arms or spokes C, when constructed to operate in the manner shown.

4. The wheel herein described, as a new article of manufacture.

111,313. — WASHING-MACHINE. — Edmund P. Brown, Thomasville, Ga.

Claim.—1. The combination of the case A, two sets of rollers, B and F, and the working-bar I, the said rollers being arranged in frames as described, and the lower set having the cross-bars D between them, all substantially as specified.

2. The combination with the above of the springs *h*, substantially as specified.

111,314.—HAY-TEDDER.—Ezekiel W. Bullard, Barre, Mass.

Claim.—1. The combination, with the ends J′ of the main axle, of the supporting-arms H H, substantially as and for the purposes set forth.

2. The combination, with the slide-bars L L′, of the link M and shipper-lever K, substantially as and for the purposes set forth.

111,315. — CRACKER-MACHINE. — William Cairns, Jersey City, N. J.

Claim.—1. The combination, in a cracker-machine, of the independent cutters G and stamps M, for successive operation on the web of dough, substantially as specified.

2. The combination, with the intermittently-rotating feed-rollers C C′ and intermittently-traveling apron E, of the independently-operating cutters G and stamps M, essentially as herein set forth.

3. The combination of the pivoted block H, which carries the cutters, the slides I, and guides J, by which said block is directed in its up-and-down movement, and the slotted guide K, with its rod L, for effecting the swing of the cutters, essentially as shown and described.

4. The stamps M, having a swinging action, as described, in combination with the independent cutters G, arranged to have a swinging action in near or to one side of the stamps, substantially as specified.

5. The combination of the stripping-roller P and the scrap-delivery guide or roller Q, with the endless traveling aprons E and S, essentially as and for the purpose herein set forth.

6. The scrap-pan R, in combination with the stripping-roller P and the guide or roller Q, substantially as specified.

7. The scrap-pan R, arranged to swing or tilt as described, in combination with the roller or guide Q and the stripping-roller P, essentially as specified.

111,316.—PUMP.—Herman Camp, Rousville, Pa.

Claim.—The combination of a hollow elongated valve-piston, F, and stuffing-box C with a pump-barrel, A, and tubing of an oil-well, substantially as hereinbefore set forth.

111,317. — CULINARY VESSEL. — John H. Chappel, New York, N. Y., assignor to himself and Robert Seaman, same place.

Claim.—The bowl A, having a hoop, B, and shoulder *a*, constructed as stated, independent hoop C, and hooks *b b*, when the same are so combined and arranged as to secure either of the series of bottoms substantially as described, as and for the purpose specified.

111,318. — COMPOUND FOR ENAMELING BRICKS. — Decius W. Clark, Chicago, Ill.

Claim.—The enameling-compounds, substantially as described, and for the purposes set forth.

111,319.—CORN-POPPER.—William F. Collier, Worcester, Mass.

Claim.—1. The peculiarly-constructed screw-shank attachment C D E G, substantially as shown and described.

2. The combination of the screw-shank attachment with the popper-box or wires I and J, substantially as and for the purposes set forth.

111,320. — HORSE HAY-RAKE.—Isaac N. Condra, Genoa, Iowa.

Claim.—The handle D, secured to the rake-head A by strap *d*, provided with the notched plate H, and spring I, in combination with the tongues E and adjacent rake-teeth C′, all combined and arranged to operate substantially as described.

111,321.—BATH AND WASH-STAND.—Royal Cooper, Georgetown, D. C.

Claim.—1. The combination of the standard A with the hooks *g g* and *h*, the ring *e*, the click *d*, and the pulley *e* and the cord *f*, with the wash-stand, substantially as and for the purposes hereinbefore set forth.

2. A combined wash and bath-stand, all the parts of which are constructed and combined together for use, substantially as and for the purposes hereinbefore set forth.

111,322.—GATE.—Hosea Ballou Crandall, Brocton, N. Y.

Claim.—The arrangement, with the folding gate C and slotted platform B, of the elongated flange D and stop *g*, when constructed and operating as herein shown and described.

111,323.—GRAIN, COFFEE, AND RICE-CLEANER.—Andrew Crawford, Wilkesbarre, Pa., and Iram D. Crawford, Bloomington, Ill.

Claim.—1. The rotary wire-studded cylinder *a′*, in combination with the hollow perforated cylinder 2 furnished with the compound brush of bristles and stiff wires, substantially as described.

2. The combination and arrangement of the hopper H, vertical cylinder 1 with its rotary and fixed brushes *a* and *c*, inclined perforated cylinder 2 with its brushes *a′ b′*, inclined perforated cylinder 3 with its brushes *a″ b″*, connecting funnels G G, shaking-screen 4, sand-screen 8, and fan 5, substantially as and for the purpose specified.

111,324. — HARNESS-OPERATING MECHANISM FOR LOOMS. — George Crompton, Worcester, Mass.

Claim.—1. A pair of jacks, a leaf of heddles, a flexible connection, and an elevator, depresser, and evener, substantially as described, and so combined that the jacks of each pair are connected with the harness frames without the intervention of levers, and are forced to move simultaneously in opposite directions, as specified.

2. In combination with the above, the tightening device acting on the flexible connection, substantially as described.

3. The pair of jacks, constructed as described, arranged horizontally at the upper part of the loom and both of them above a pattern mechanism, and connected, substantially as set forth, with a leaf of heddles.

4. A pair of jacks moving simultaneously in opposite directions, and an elevator and depresser, and a pattern mechanism, one of the shoulders of one of said jacks being pivoted and constructed and combined, substantially in the manner described, so as to avoid breaking in case of accidental erroneous movement of the pattern mechanism.

5. Two horizontal notched jacks, attached, as described, to one leaf of heddles, in combination with a blade arranged between the jacks and acting as an elevator and depresser, all substantially as described.

111,325. — CARPET. — George Crompton, Worcester, Mass.

Claim.—1. As an article of manufacture, a carpet made up of two parti-colored warps, a linen

warp, a stuffing-warp, and weft-threads, when the same is so composed, substantially as specified, that the fabric has a pile either cut or uncut, or partially cut and partially uncut, upon both faces.

2. As an article of manufacture, a carpet presenting a pile either cut or uncut, or partially cut and partially uncut, upon both sides thereof, when the same is composed, substantially as specified, of two parti-colored warps, a linen warp, a stuffing-warp, and weft-threads, some of which latter are shot between sheds formed of the stuffing-warp, substantially as described.

111,326.—PLATFORM HORSE-POWER.—Frank J. Culver, Hartford, Vt.

Claim.—A horse-power, improved by having a platform made as aforesaid, and mounted on rolls, constructed as hereinbefore described.

111,327.—SCREW-DRIVER.—Moses W. Dillingham, Amsterdam, N. Y.

Claim.—The combined tape-measure and screw-driver, constructed substantially as shown and described.

111,328.—SCROLL-SAW.—William H. Dobson, Rochester, N. Y., assignor to Henry Lompert, same place.

Claim.—1. The elastic straining-spring A, provided with a rubber guard-cushion, *h*, for the purposes set forth.

2. The stretching and twisting device *b a*, constructed and operating substantially as set forth.

111,329.—COMPOUND LIQUID FOR USE IN VAPOR-ENGINES. — Joel A. H. Ellis, Springfield, Vt.

Claim.—The compound liquid herein specified for the generator of a vapor-engine.

111,330.—STUFFING-BOX FOR ENGINES.—Joel A. H. Ellis, Springfield, Vt.

Claim.—The gland of a stuffing-box for the rods of a vapor-engine, provided with a vapor-chamber, *g*, and a tube for conveying away the escape-vapors, as specified.

111,331.—VAPOR-GENERATOR FOR VAPOR-ENGINES.—John A. H. Ellis, Springfield, Vt.

Claim.—The vaporizing-vessel A, containing a fluid that vaporizes at a low temperature, and heated by the joint action of the escaping products of combustion from a steam-boiler furnace, and the exhaust steam from an engine passing through separate tubes or flues, substantially as specified.

111,332.—FLY-CATCHER.—Harriet A. Farnam, South Bend, Ind.

Claim.—The combination of the bait-cup F with the cylindrical cones B and C, substantially as described.

111,333, antedated January 29, 1871.—MACHINE FOR SPLITTING WOOD.—Frank Ficht, Dyckesville, Wis.

Claim.—1. The combination of the swiveled screw E, sliding head-block D *d'*, cutter N, and center-pin or point O, with the ways or bars C, standards B, and base-frame A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the rest P, connecting-rod Q, and bent lever R, with the base-frame A, standards B, slides or bars C, sliding cutter-head D *d'*, cutter N, and center point O, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the arm S and adjustable stops T with the sliding cutter-head D *d'* and with the lever M, substantially as herein shown and described, and for the purpose set forth.

111,334.—STEM-WINDING WATCH.—Walter H. Fitz Gerald, Carlstadt, N. J., assignor to Spadone & Fitzgerald, New York City.

Claim.—The combination and arrangement of the lever *f* and push-pin *h* with sleeve *d*, or its equivalent, so as to operate the clutch-lever *i* by means of the bow-ring, substantially as described.

111,335.—PAPER FILE.—John G. Floyd, Jr., New York, N. Y.

Claim.—The perforated leather-straps D, cords or tapes E, metallic piercers F, keepers G, and laying cleats H, or equivalent fastenings, in combination with the plates or leaves A B and flexible back C, substantially as herein shown and described and for the purpose set forth.

111,336.—DAMPER.—James M. Frear, Pittstown, Pa.

Claim.—1. The plate F, by means of which the damper may be adjusted, substantially as described, for the purposes set forth.

2. In a stove or range, the combination of the damper C and adjusting plate F, substantially as and for the purposes described.

111,337.—CARPET-STRETCHER.—Charles F. Gale, Aurelius, N. Y.

Claim.—A carpet-stretcher composed of the jointed sections B *b* C *c*, capable of a double adjustment, the adjustable connecting-pin D, and teeth when the latter, fitted in heads A A, are applied to both ends of the stretcher, and adapted to be operated by depressing the central joint at the point of connection between the parts B *b* C *c*, and locked in position, substantially as herein shown and described.

111,338.—ROAD-SCRAPER.—George B. Gallinghouse, North Madison, Ind.

Claim.—1. The device, consisting of the push-wheel C, horizontal wheel *e*, axle *a*, and bolt *b*, or its equivalent, arranged to operate substantially in the manner shown, and for the purposes set forth.

2. In a road-scraper, the incline-board D, when constructed and attached as shown, and arranged to operate substantially in the manner and for the purposes set forth.

3. A road-scraper, so constructed that the scraper-board B may be reversible and the push-wheel C and the incline-board D interchangeable, and the whole machine be thus made to operate either right or left-handed, when the said parts are constructed and arranged to operate in the manner shown, and for the purpose set forth.

111,339. — SASH-HOLDER. — Philetus W. Gates, Chicago, Ill., assignor to himself and D. R. Fraser, same place.

Claim.—The sash holding-device C, formed with a handle, *b*, and two or more chambers, *g g*, and furnished with two or more rollers, *c c*, in combination with the inclined recess *a a'*, which is of greater length than the device C, all in the manner described.

111,340.—RAILWAY-CAR TRUCK. — Charles Graham, Kingston, Pa.

Claim.—1. The connection of the springs on opposite sides of the truck by means of the bolster or car-body support carried by said springs, in combination with levers or mechanism arranged to transfer the load from one end of the bolster to the other for the purpose of equalizing the pressure on said springs, substantially as specified.

2. The combination, with the bolster D, of the springs F F', the bolts E E', the springs C C', and the levers G G', geared for operation together, essentially as shown and described.

111,341.—VALVE FOR STEAM-PUMPS.—Joseph F. Hamilton, Alliance, Ohio.

Claim.—The valve-chest A, provided with two steam-supply ports, and two or more exhaust-openings, arranged opposite each other, in combination with the piston-rod *a*, provided with two piston-heads arranged at unequal distances apart, substantially as herein described and set forth.

111,342.—DOOR-HANGER AND RAIL.—Thomas Foster Hamilton, Geneseo, Ill.

Claim.—The double open rail A, in combination with the tongued pulley E, substantially as and for the purpose specified.

111,343.—LOOM.—Emory B. Hastings, Palmer, Mass., assignor to himself, Edwin A. Sawyer, Daniel L. Thompson, and Charles A. Perley.

Claim.—1. The combination of the guide, having a spring for producing pressure upon the weft to hold it therein, and the shears for cutting off the weft while it is held by the nippers, when all are constructed and arranged substantially as described.

2. The combination and arrangement of the nipper, the shears, and the guide, when the shears are operated by the mechanism shown, or its equivalent, so that the shears will cut off the proper length of weft before it is entirely drawn in by the nipper, substantially as described.

3. The combination and arrangement of the bed-blade of the shears with the block I, by which the blade is moved out of the way of the nipper when it seizes the weft, and returns to co-operate with the movable blade at the proper time, substantially as described.

4. The combination of the lever U and stops W W' with the nipper, when all are constructed and arranged substantially as described.

5. The combination of the nipper and its adjuncts with the crank for operating the same, which works independently of that which operates the comb through the intervention of the intermediate devices or their equivalent, substantially as described.

6. The comb for beating up the weft, having both the reciprocating and rocking motions, constructed and operating substantially as described.

7. The combination of two leaves of heddles having racks upon each end of them, as described, and an intermediate pinion that engages with both of them, substantially as described.

8. The combination of the nipper and double harness-cams, and accessory mechanism for operating the heddles or harness, so that the motion of the heddles or harness will be arrested when the warps are closed upon the weft, and then continued, to open the next shed, substantially as described.

111,344, antedated January 28, 1871.—HARVESTER-RAKE.—George W. Hines, Brookfield, Wis.

Claim.—1. The combination of the adjustable bands B and C with stops E and *e*, irons *a b*, and plate F, arranged substantially as described.

2. Rake F, provided with nut G, teeth H, springs I, and rollers L, operating substantially as described.

3. The combination of the guide R, stop T, lever V, lever Y, cord X, and lever Z, operating substantially as described.

4. Dropper O, arranged to operate in combination with rake F and guide R, substantially as described.

111,345.—REGISTERING TICKET-PUNCH.—Austin D. Hoffman, Chicago, Ill., assignor to James H. Small, Buffalo, N. Y.

Claim.—1. An arm or lever, arranged so as to obstruct the mouth of a punch, and at the same time connect, either directly or by means of an intermediate mechanism, with the opposite jaw, so as to keep it from closing except when the said arm or lever, by being displaced from the mouth by the insertion of a ticket, disengages the stop, substantially as and for the purpose hereinbefore set forth.

2. The combination and arrangement, with the jaws A B and mouth *a*, of a ticket-punch, of the spring lever-stop M, and pin or shoulder *n*, substantially as and for the purpose hereinbefore set forth.

111,346. — COTTON-CHOPPER.—Joseph R. Hood, Weedowee, Ala.

Claim.—The shaft *f*, driven by the center traction-wheel *e*, arranged with the hoe *h* suspended by wire *j* to the frame *k*, whereby the hoe may be adjusted by the driver by inclining the handles, substantially as and for the purpose set forth.

111,347.—GRAIN-SEPARATOR FOR THRASHING-MACHINES.—James W. Huntoon, St. Louis, Mo.

Claim.—The combination and arrangement of fork G, shoe A, toothed bars E E, shafts D D, arms *b b*, couplings *d d*, rods *f a*, and crank-shaft C, as and for the purpose set forth.

111,348. — ELECTRO-MOTOR FOR CARS.—Solomon Jones, New Orleans, La.

Claim.—1. The combination of the pivoted bar or lever F, the electro-magnets B B' and C C', so arranged and connected by diagonal wires *b e* that the necessary power to impart the oscillating motion to the lever shall at the same instant be communicated to its opposite sides and at its extreme ends, and lever G and the mechanism by which power is communicated from its center, substantially as described, as and for the purpose specified.

2. The levers F and H H, with armatures attached, and electro-magnets B B', C C', D D', and E E', when the same are united by the diagonal connecting-wires *b e d e*, and the whole is so combined and arranged as to operate substantially as described and for the purpose specified.

3. The sliding current-breaker bars K K, each having keys *k k*, and the connecting-points K' K', when the same are so arranged in relation to the levers that the non-conductors *f' f'* and *h' h'* shall automatically complete and interrupt the currents with different sets of electro-magnets, substantially as described, as and for the purpose specified.

111,349.—PUMP.—Truman O. Jones, Galesburg, Ill.

Claim.—The arrangement of flanged cylinder B, stock A, and cylinder D, with screw-rods E and plates L, constructed as described, and operated substantially as and for the purpose specified.

111,350.—CORN-SHELLING AND CLEANING MACHINE. — Louis Kamp, Vanderburg county, Ind.

Claim.—1. The combination, in a machine for shelling corn, of the hinged cover C, adjusted by weights in the manner shown, with the cob-discharge opening O of the concave B, as and for the purpose described.

2. The improved corn-shelling and cleaning machine herein described, consisting of the cylinder A, provided with shelling-teeth, as shown, concave B, cob-discharge opening O, cover C, provided with weight I, endless belts D H F, riddles E and S, screen L, and pan P, all combined and arranged to operate substantially as described and set forth.

111,351.—BUNG-EXTRACTOR.—Josiah Kirby, Cincinnati, Ohio.

Claim.—The instrument herein described for extracting bungs, consisting of the stem C F and gravitating-dog E, connected, constructed, and operating substantially in the manner and for the purpose specified.

111,352.—BUNG. — Josiah Kirby, Cincinnati, Ohio.

Claim.—A wooden bung, constructed with a central detachable wooden plug, for the purposes specified, when the grain of the plug runs horizontally with the grain of the bung.

111,353. — CAR-STARTER. — George Byron Kirkham, New York, N. Y.

Claim.—1. The rails D D and posts E E, as represented, and for the purpose set forth.

2. The truck F, with its wheels *c c c c*, in combination with the nippers G G, wedge *g*, screw *h*, bars *l l*, pivots *f f*, and lips *i f'*, as represented, and for the purpose set forth.

3. The wheels J J, in combination with the posts I I', levers *m* and *o*, and slide *n*, as represented, and for the purpose set forth.

4. The wheel U, in combination with the wheel S, lever T, and rod T', as represented, and for the purpose set forth.

5. The combination of the wheels V X, pawl *s*, bar *t*, and springs *u u*, as represented, and for the purpose set forth.

111,354. — PUMP. — Thomas J. Lapsley, Nashville, Tenn.

Claim.—1. The combination of the plunger B with its air-chamber L and holes U, the sleeve C with its discharge-holes T, the piston flanges R R with the packing J J, the valve-chamber D with its discharge-holes E, the valve H, and pin G, by which it is held in place, substantially as and for the purpose hereinbefore set forth.

2. The combination of the lower valve-chamber F with its discharge-holes *y*, the valve H', the seat V, and receiving-pipe K, the chamber A with its discharge-pipes N N, and stand O, the lever P, and link Q, which connects it with the plunger, substantially as and for the purpose hereinbefore set forth.

111,355. — CARPET-CLEANER. — Hermann Henry Lindhorst, St. Louis, Mo.

Claim.—The shafts G G', secured by staples *g* to the transverse beams G², in combination with the beaters F F', beater-sticks *f*, tappet-heads *f'*, and cam-shaft H, when arranged to operate substantially as and for the purpose described.

111,356.—HOISTING APPARATUS.—Andrew B. Lipsey, New York, N. Y.

Claim.—1. The chain-pulleys A B, constructed with internal differential gears *c d*, a common axis, in combination with the pinion F, rotating around the eccentric hub E fast on the axis of said pulleys, the said pinion F meshing with the gears *c d* in their rotation around their axes, all arranged substantially as herein shown and described.

2. The arrangement of the gears *c d*, pinion F, eccentric E, and spindle C, with relation to the chain-pulleys A B, substantially as and for the purpose specified.

3. The pin or spindle C, having each of the parts *e*, *g*, *h*, and *f* of smaller size than the part preceding, in the order named, substantially as described, for the purpose hereinbefore specified.

111,357.—FERTILIZING COMPOUND.—Joseph M. Lowenstein, New Orleans, La.

Claim.—A fertilizing-compound, prepared in the manner described, from night-soil, sulphuric acid, bones or bone-dust, and unslaked lime.

111,358.—DISINFECTING AND VENTILATING BURIAL VAULT.—Benjamin F. Lyford, San Francisco, Cal.

Claim.—The process herein described of ventilating and disinfecting charnel vaults.

111,359. — SEWING-MACHINE.—William A. Mack, Norwalk, Ohio.

Claim.—1. The combination of the double-armed device *a a'* with the double-shouldered rod *p r* and the feed-bar *t b*.

2. The shuttle-lever *s l* and pushing-lever or rod *p r*, arranged and operating as described.

3. The combination of the pendent-rod *c r* and the walking-beam lever *f l*, for the purpose of operating the feed-bar *t b*.

4. The combination of the adjusting-thumb-screw *t s*, pendent-lever *c r*, and walking-beam lever *f l*, for the purpose of controlling the length of the step or stitch.

5. The combination of the walking-beam lever *f l* and double-armed feeding and retreating device *a a'*, for the purpose of giving motion to the feed-bar *t b*.

6. The shuttle-lever *s l* and pushing-rod *p r*, combined, and operated by the pendent-lever *p l*, as described.

7. The arm *d*, constructed as shown, and its spring *s p*, operated by a pin on the needle-bar, in the manner and for the purpose described.

8. The shuttle, provided with the removable head *h* and hooked spring *l p*, all constructed as described.

111,360.—LAMP. — Charles D. Macqueen, Philadelphia, Pa.

Claim.—1. In combination with the annular lamp L, the socket D, sliding-rod R, vertical tube T, set-screw S, and base-piece B, all arranged together substantially as and for the purpose described.

2. The socket D, constructed with the circular boss *b*, by means of which the socket is secured to the tube or gas-fixture and the lamp is supported above the bottom of the socket, leaving a space into which oil-dripping may accumulate, all as shown and described.

111,361.—HOISTING-FORK. — Elias Magruder, Cap Au Gris, Mo.

Claim.—The combination of the jointed brace *r* with the fork *r a* and the jointed fork *s i b*, said forks being hinged together at *g*, and the several parts being constructed and arranged to operate substantially as and for the purpose set forth.

111,362. — SPRING BED-BOTTOM. — Erwin Williams Maxson, Scranton, Pa.

Claim.—The arrangement of the rod *a*, wire *d*, band *c*, lip *g*, flange *g'*, and slat *f*, as specified.

111,363.—COVER FOR BINS.—Alonzo S. Maxwell, Dixon, Ill.

Claim.—The combination, with the case and cover B, provided with arms E and braces G, made in one piece, of the casings H I K and packing-strips L, all as shown and described.

111,364.—BEDSTEAD AND SPRING BED-BOTTOM.—William McArthur, Philadelphia, Pa.

Claim.—1. The springs *b*, connected at their upper ends to the ends of the slats, and at their opposite ends at the lower ends of the springs B, substantially as described.

2. The combination of the lower slats or supports F, upper slats C, intermediate coiled springs B, and pins *a'*, when the latter extend through both slats and through the springs, and can be detached by drawing them through the upper slats, as set forth.

3. The folding head-board M, hung to the end rail of the frame, and constructed and arranged to be operated substantially in the manner described.

111,365.—COMBINED ROCKING SOFA AND BEDSTEAD.—William McArthur, Philadelphia, Pa.

Claim.—1. The combination, with the said rocking sofa, of a hinged frame or frames, arranged to be folded beneath the seat, or to be drawn out and unfolded so as to form, with the sofa, a cradle or crib, all substantially as specified.

2. The combination of the subject-matter of the preceding claim, a hinged back, C, and rockers D, as specified.

3. The combination, with the arms B and the hinged arms B', of folding legs *f* and bolts *k*, as described.

111,366. — SULKY-PLOW.—Edward Meloy and Abram R. Stanley, Shullsburg, Wis.

Claim.—In combination with the plow-beam, the sulky-frame, and the king-bolt G, the levers J K, chain and pulley *j i*, and rod *k*, arranged to lift the front and rear ends of the plow-beam, substantially as described for the purpose specified.

111,367, antedated January 23, 1871.—THRASHING-MACHINE.—Joseph H. Miller, Arcadia, N. C.

Claim.—1. The cylinder rake H, in combination with the shaker X, provided with the toothed perforated transverse sections U, beaters C, and under side, constructed and arranged substantially in the manner and for the purpose specified.

2. The shaker X, provided with the toothed perforated sections U, beaters C, and under side, constructed and arranged substantially as shown and set forth.

3. The beater C, provided with the solid flange, constructed and arranged as shown.

4. The combination of the beaters C, arranged and operated as shown and described, with the perforated plates U, provided with the teeth *x'*, substantially as and for the uses and purposes set forth.

5. The arrangement of the smooth feed-roller R, toothed-cylinder rake H, shaker X, provided with the beaters C, the slatted sieve S, and fan-blower I, constructed and operated in the manner and for the uses and purposes substantially as herein shown and described.

111,368.—LAMP-CHIMNEY AND DISH-WASHER.—Charles S. Moore and Silas A. Moore, Worcester, Mass.; Silas A. Moore assigns his right to Harland Boyd, same place.

Claim.—The clamping arrangement for holding the swab, by the combination of two disks, A and A', the tube B, rod C, and spring D, substantially as and for the purposes herein specified.

111,369.—CULINARY VESSEL.—Francis Moradi, Malden, Mass.

Claim.—The above-described cooking-utensil or apparatus, the same consisting of the case A, provided with a perforated bottom, D, a cover, B, a series of horizontal ribs, G, or horizontal and vertical ribs G H, and a spiller or vessel, I, the whole being constructed, combined, and arranged together in manner and so as to operate as set forth.

111,370.—MANUFACTURE OF SUPERPHOSPHATE OF LIME.—Campbell Morfit, Sudbrook Park, England.

Claim.—Hydrochloric acid, sulphuric acid, sulphate of ammonia or crude ammoniacal liquor, and sulphate or carbonate of potassa, in the treatment of bones, bone-ash, bone-black, phosphorite, apatite, coeperite, or "Navassa guano," "Sombrero guano," South Carolina phosphate, coprolites, and the natural phosphates of lime generally, for the economical production of bi-phosphate of lime in a concentrated form, either with or without the association of ammonia or potassa salts, after the manner and by the means as herein substantially set forth and described.

111,371. — FOLDING SEITEE. — Henry T. Morse, Athol, Mass., assignor to L. Morse & Son, same place.

Claim.—1. The combination and arrangement of the cylindrical stretchers B and C, the straps F F, and the seat A, constructed as described, whether said stretchers form a part of the leg-frame or a part of the back.

2. The concave grooves *a* and *b*, in combination with the stretchers B and C, substantially as described.

3. The combination and arrangement of the seat A, the cylindrical stretchers B and C, with the legs D and E secured therein, the straps F F, the hinged back H, the jointed braces I I, and the stay-rods G, all constructed substantially as herein described.

111,372. — SEEDER AND CULTIVATOR.—James T. Mott, Postville, Iowa.

Claim.—1. The axle, constructed as described, and provided with the strips *b b*, for the purpose set forth.

2. The arrangement of the standards B B with parts *e e f f*, lever *h*, rods *l l*, bent at *n n*, and bar *m* of the cultivator, all operating as set forth.

111,373. — VALVE. — George Murray, Jr., Cambridgeport, Mass., assignor to himself, George Murray, Sr., and Henry E. Snow, same place.

Claim.—1. The lozenge-shaped sliding valve G, in combination with the sheet-copper guides C, both constructed substantially as described and shown, for the purpose set forth.

2. The combination of the spindle E, provided with right-and-left-hand screws, screws, the cap D provided with right-hand female-screw, and the valve G, provided with left-hand female-screw, all constructed, arranged, and operated substantially as described and shown, for the purposes set forth.

3. The combination of the case A, the valve-seats B, the valve G, the guides C, the cap D, the spindle E, the stuffing-box F, and the hand-wheel H, all constructed, arranged, and operated substantially as described and shown, for the purposes set forth.

111,374. — WASHING-MACHINE. — Andrew Jackson Nave, Columbus, Texas.

Claim.— The double cone-shaped wheel or cage E, constructed substantially as herein shown and described, in combination with the journals D, gear-wheels F G, crank H, box A, and cover B, as and for the purpose set forth.

111,375. — FANNING-MILL.—Harrison Ogborn, Richmond, Ind., assignor to Samuel T. Baker, Osceola, Iowa.

Claim.—1. The rock-shaft *w*, suspension-straps M, pivot-plates N O, adjustable rock-arm K, and rod I, in combination with shoe B, when said parts are constructed and arranged for operation substantially as described.

2. The adjustable knocker *t*, rod *n*, pin *o*, and blocks *h h'*, in combination with screens *c¹* and *d¹*, in shoe B, as and for the purpose described.

3. The shoe P, when supported at its forward end on pins *b¹*, and at its rear end by suspension-strap *e*, in combination with bell-crank *x*, and rods Y and *z*, as and for the purpose described and set forth.

4. In combination with the shoes D and P and their respective series of screens, the troughs T and V, when provided with the openings W and U, arranged as shown and for the purpose described.

5. The combined fanning-mill and grain-separator described, consisting of the several parts and mechanism hereinbefore specified, constructed, combined, and arranged to operate substantially in the manner and for the purpose described and set forth.

111,376.—PRESERVING-COMPOUND FOR THE HANDS, &c.—John W. Osborne, Brooklyn, N. Y.

Claim.—The improved composition herein described, produced by combining with paraffine any oil or softening agent, as described.

111,377. — SHOT-CARTRIDGE.—Seth White Paine, Williamsport, Pa.

Claim.—1. A shot-cartridge having its sides com-

posed of a number of plane faces, substantially as and for the purpose specified.

2. The binders c', constructed of suitable adhesive material, and applied to each layer of shot in the manner and for the purpose substantially as shown and described.

3. The hereinbefore-described shot-cartridge, consisting of the base A, the staves B, and the shot C, when the parts are constructed and arranged substantially as and for the purpose set forth.

4. A shot-cartridge having its shell divided longitudinally into a series of staves, B, which are hinged at their rear ends to or upon the base A, substantially as and for the purpose shown and described.

111,378.—Loom-Picker.—Jerome M. Parker, Leicester, Mass.

Claim.—The picker, constructed as described, that is, with but one bend or loop in the main piece, and with the end which strikes the shuttle enlarged by the addition of a filling piece on each side, strapped as set forth, and the parts united substantially as described.

111,379.—Shingle-Machine.—Willis Porter, Orono, Me.

Claim.—1. The combination of arm J, strap k, gib i, key j, feed-racks e e', geared wheels f f', guide v, springs r r', shafts F F' G, geared wheel I, and sliding boxes t t'', all operating to produce the movement of the carriage regularly up and down by the face of the saw, as set forth.

2. The shingle-flipper U, consisting of the rod and prongs p p' and arm or lever w, acting in connection with the long hoop T to tip shingles away from the saw.

111,380.—Invalid Bedstead.—William O. Reid, Vienna, N. C.

Claim.—1. The shaft H, when mounted in the side-rails of the bedstead, and provided with the arm a, and combined with the section E F of the bed-bottom, so as to subserve not only its original purpose of a pivot, but also to take the place of all other apparatus for elevating the section F, as described.

2. The combination of the hinged stopper B' with the bar a, latch b, spring c, and cord d, when all these parts are constructed and arranged as set forth.

3. The combination of the hinged stopper B' with the swinging arm I and teeth m, as specified.

111,381.—Water-Wheel.—Jacob B. Reyman, Springfield, Mo., assignor of one-half his right to Donald W. Campbell, same place.

Claim.—A hub or center for a turbine water-wheel, formed by the union of the parts n and m, bound in the manner substantially as described.

111,382. — Balance Slide-Valve for Steam-Engines.—George W. Richardson, Troy, N. Y.

Claim.—1. The packing P P P P, constructed in separate parts, so that those portions which wear alike shall be in sections by themselves, working independently of each other, and in their travel never crossing each other's lines of motion or their lines of separation, substantially as and for the purpose hereinbefore set forth.

2. The manner of breaking the joints of the packing by abutting the ends of the side-packing against the sides of the end-packing, or otherwise abutting the different sections against each other, substantially as and for the purpose hereinbefore set forth.

111,383. — Mica-Frame for Stoves.—George G. Richmond, Peekskill, N. Y.

Claim.—1. An improved mica frame for stoves, heaters, &c., in which the inner frame C is detachably secured to the recessed outer frame B by means of lugs c' formed upon its upper and lower ends, to enter recesses in the upper and lower ends of the recessed outer frame B, substantially as herein shown and described, and for the purpose set forth.

2. The inwardly-projecting lower end b^1 of the frame B, notched to receive the edges of the body A of the stove, to connect and hinge the mica-frame B C to the said body of the stove, substantially as herein shown and described, and for the purpose set forth.

111,384.—Portable Shelf and Support.—Parley D. Root, Weston, N. Y.

Claim.—A shelf-supporter formed of the parts A B, constructed and applied substantially as shown and described.

111,385. — Postage-Stamp Holder.—Julius Ropes, Ishpenning, Mich.

Claim.—The combination of the pivoted slots B, pressure-rollers C, feed-rollers D, cam-rollers E, receiving-rollers F, and springs H with each other, and with the case or box A, substantially as herein shown and described, and for the purpose set forth.

111,386. — Hand-Stamp. — Gottlieb Rost, Union Hill, N. J., assignor to himself, William Austin, Jr., and John Jungermann, New York City.

Claim.—The stamps A B, shaft C, projections N, hooked pawl O, grooved bar K, pistons D, tubes E, springs H, and stock F R G, all constructed, arranged, and operating substantially as specified.

111,387. — Water-Grate.—Joseph Ryan, St. Louis, Mo.

Claim.—1. The grate-bars A, formed in duplicate sections A^1 and A^2, having return-bend a, when arranged in combination with the cold-water sectional-pipe b^1 and steam-sectional pipe b^2 of the partitioned pipe B, and steam-pipes H and I, substantially as set forth.

2. The grates A, partitioned pipe B, tubes c, valves c^1, ash-pit pipe C, joint-pipe C', in combination with the feed-pipe D and circulating-pipe E, substantially as set forth.

3. The circulator E, spring-bend E, balance check-valve G, and feed-pipe D, when arranged within or without the fire-bed, in combination with the pipes C C', partitioned pipe B, and grate-bars A, substantially as and for the purpose set forth.

4. The grates J, acting as a bridge-wall, partitioned pipe j, bend or steam-pipe K, in combination with the circulating or feed-pipe K', balance check-valve k, and mud-drum F', substantially as set forth.

111,388, antedated January 21, 1871.—Roll for Hair-Dressing. — Elias Schnautz, New York, N. Y.

Claim.—As a new article of manufacture, a roll for the purposes specified, made substantially in the manner herein set forth.

111,389.—Base-Burning Stove.—John Q. C. Searle, New Albany, Kansas.

Claim.—1. In a magazine-stove, a water-chamber, D, in combination with a magazine having a contracted mouth, as and for the purpose described.

2. The funnels a a, arranged on the top of the stove, in combination with the chamber D, as set forth.

3. The tube b, communicating with the chamber D and with a flue or drum, as specified.

111,390.—Heater for Paper-Ruling Machines.—Louis Siebert and John Wilson Lilley, Columbus, Ohio, assignors to John R. Hool & Son, New York City.

Claim.—The heater, composed of the frame B, cover A, perforated slide D, and small slides [illegible] arranged to operate substantially as herein [illegible] and described.

[illegible],391, antedated January 14, 1871.—Cultivator-Plow.—Joseph Singer, Mendota, Ill.

Claim.—The arrangement of the arrow-shaped [illegible] G, knife E, and hinged mold-boards A and [illegible] connected adjustably by the perforated arms a [illegible] with the brace e and vertical standard, and all [illegible] arranged as shown and described.

[illegible],392.—Registering Ticket-Punch.—James H. Small, Buffalo, N. Y.

Claim.—1. The slotted connection d^1 of the punch-[illegible] C to the handle B, as and for the purpose [illegible] before set forth.

2. The combination of the trip-pawl f with the [illegible]-wheel pawl i, register-wheels H H', and [illegible] B, substantially as and for the purpose here-[illegible] before set forth.

3. The arrangement of the bell L and its striking [illegible]anism, and the register-wheels H H', and [illegible]ssistant parts, side by side and within the in-[illegible]-case D, located between the handles A B, [illegible]ntially as and for the purpose hereinbefore [illegible] forth.

4. The arrangement in a ticket-punch of the par-[illegible]-plate d^2 in the case D, in combination with [illegible] or covers f f', substantially as and for the [illegible]se hereinbefore specified.

5. The combination in a ticket-punch of the bell [illegible] with the lid f of the case D, substantially as and [illegible] the purpose hereinbefore set forth.

[illegible],393. — Burial-Casket. — Edward T. [illegible]mith and Joseph S. Winston, New York, [illegible] Y., assignors to themselves and C. H. [illegible]oyer, same place.

Claim.—The burial-casket end herein described, [illegible]g buried, glued, veneered, and compressed in-[illegible]flared and elliptically-curved form, substan-[illegible]y as herein described.

[illegible],394.—Electro-Magnetic Indicator.—Wesley D. Smith, Washington, D. C.

Claim.—1. An electrical indicator, composed of [illegible] following elements in combination: A dial [illegible]ed with signs or signals, two or more hands [illegible]ed independently over the same and mounted [illegible] shafts which are concentric to each other, [illegible] mechanism for rotating each hand, consisting [illegible]ratchet wheel upon its respective shafts, pal-[illegible] and a vibrating lever, actuated directly by an [illegible]o-magnet, the whole operating substantially [illegible]scribed.

2. In combination with the elements of the fore-[illegible]g claim, two or more revolving surfaces with [illegible]s, words, figures, or other characters arrang-[illegible]rom, and rotated directly by electro-magnet-[illegible] substantially as described.

[illegible],395.—Composition for Floors, Pave-[illegible]nts, &c.—Antonio Solari, Louisville, [illegible]y., assignor of one-half his right to [illegible]nacio Maguet, same place.

Claim.—The composition-floor or pavement de-[illegible]ed in the above specification, consisting of the [illegible]ents in the proportions and for the purpose [illegible]rth.

[illegible],396.—Bench-Vise for Wood-work.—[illegible]dwin Sprague, Allegheny, assignor to [illegible]mself and John R. Blakeslee, Birming-[illegible]m, Pa.

Claim.—The clamping-jaw B, provided with a [illegible] box, C, attachment-plate D, and combined [illegible] the clamping-jaw A and screw e, substantial-[illegible] herein described.

[illegible],397.—Bark-Mill.—Frederick Stamm, [illegible] Lampeter, Pa.

Claim.—1. The conical runner K, provided with [illegible] triangular teeth M, and graduated tapering grinding-teeth N, all constructed and arranged as shown and described, for the purpose set forth.

2. The shell A, provided with the tangential graduated teeth S, radial tapering teeth R, and arms I, provided with teeth J, all constructed and arranged as shown, for the purposes described.

3. The combination and arrangement of the shell A and runner K, constructed as described, with the breaker T, provided with shear-teeth t, and the cross-bars H, all constructed substantially as shown and described, for the purposes herein set forth.

4. The cross-bars H, with their ends G and lug V, and adjusting screws E and X, for adjusting the runner K vertically and laterally, as herein described.

5. The construction of the breaker T, attached to the shaft L, as herein described, and for the purpose set forth.

111,398.—Boat-Detaching Apparatus.—George Stancliff, New York, N. Y.

Claim. — The tackle-block, provided with the pivoted hook D, lever E, and cam F, all arranged to operate substantially as herein shown and described.

111,399.—Holder for Plates while being Warmed.—William T. Stoutenborough, Brooklyn, N. Y.

Claim.—The plate-holder, formed of the metallic ends a a, wire divisions b b, legs c, and connecting-bars d e f, as and for the purposes specified.

111,400. — Lamp-Burner. — Freeman Augustus Taber, New Bedford, assignor to Thomas S. Williams, Newton, and Philip S. Page, Malden, Mass.

Claim.—1. The improved duplex deflector, made as described; that is, with its inner cone having its base arranged above that of the outer cone, and connected to it, and otherwise arranged with respect to it, as set forth.

2. The burner, made of the instrumentalities as described, arranged as set forth; that is, of the wick-carrier with its two wick-holders and central draught-passage, and one or more inducts, the wick-elevator box, the wick-elevators connected by gears arranged outside of the said box, the duplex air-deflector, or two cones, and the foraminous supporter, all constructed and disposed relatively to each other substantially as hereinbefore described, and as represented.

111,401. — Lubricator. — John Tenwick, Grantham, assignor to Robert Charles Ransome, Ipswich, England.

Claim.—1. The combination of the crank-plate, constructed with a lubricating-cavity, and the hollow crank-pin, so arranged that the lubricating material may pass from said cavity to the journal of the crank-pin, substantially as before set forth.

2. The combination of the said crank-plate, the hollow crank-pin, and the crank-shaft, so that both the crank-pin journal and the journal of the crank-shaft may be lubricated by lubricating material supplied from the crank-plate, substantially as before set forth.

111,402.—Bed-Bottom.—Edwin C. Thompson, New York, assignor to himself and Charles L. O'Brien, Ithaca, N. Y.

Claim—1. The intersecting slats a b, crossing each other at an inclination, and kept in position by the cross-slats h, so as to form spring-sections for a bed-bottom or other article, substantially as set forth.

2. In combination with the foregoing parts, the separate frame of slats l, as and for the purposes set forth.

111,403.—Cleaning and Polishing Coffee.—William Thompson, New York, N. Y., and Samuel Thompson, Baltimore, Md.

Claim.—1. The process of cleaning and polishing

coffee by subjecting it to the action of soap-stone, or the substances herein described as appropriate substitutes therefor, in a revolving cylinder, constructed substantially as herein described.

2. The process of cleaning and polishing coffee by subjecting it to the action of water in combination with soap-stone, or the substances herein described as appropriate substitutes therefor, in a revolving cylinder, constructed substantially as herein described.

111,404, antedated January 21, 1871.—DIGGING-MACHINE.—Isaac P. Tice, New York, N. Y.

Claim.—1. The combination of the crank *g* with the arm I and helve A, shaft D, and shaft O, substantially as and for the purpose set forth.

2. The arrangement of the axle C, frame B B B, constructed as described, with the lever F, with friction-roller, substantially as described, and for the purpose set forth.

111,405. — CURTAIN-FIXTURE. — Richard Vose, New York, N. Y.

Claim.—The combination of the spring plate *e f* with the supporting-bracket *c*, the grooved roller-head *b*, and the tassel-weighted cord-loop *d*, substantially as and for the purpose herein set forth.

111,406.—COMBINED COFFEE-MILL AND APPLE-PARER.—Dewitt C. Warner, Chicago, Ill.

Claim.—The combination and arrangement, in the combined coffee-mill and apple-parer herein described and shown, of the plates G H, and the shafts Q and R, constructed substantially as and for the purpose set forth.

111,407.—PRINTING-PRESS.—Richard C. Warwick, New York, N. Y.

Claim.—The secondary or type-bed *l* and stops or rules *m*, in combination with the main reciprocating bed *g* of the cylinder or segmental two-feeder printing-press, substantially as and for the purposes set forth.

111,408.—TELEGRAPHIC PROTECTION FOR SAFES, VAULTS, AND BUILDINGS.—William B. Watkins, Jersey City, N. J.

Claim.—1. A shield or lining for vaults, safes, doors, or other parts of building, consisting of a series of strips or springs, through which the electric circuit of a line provided with battery power is completed, combined with mechanism for sounding an alarm when any strip or spring of the series is pressed apart or separated from another strip or spring.

2. A burglar-detective and police-alarm system, consisting of a main telegraph-line or lines, provided with suitable battery power, embracing police-stations, and having alarm-bells in the circuit, combined or connected with mechanism embraced within a closed circuit in banks or other buildings, which mechanism, when set in motion by the operations of burglars upon the protected parts of such banks or other buildings, will open and close the main line, so as to sound the number of the street and the number of the building, or the latter only, or any desired signal, at the police-stations.

3. The combination and arrangement of the switches *d*, *h*, *k*, and *s* with the local line for the purpose described.

4. The combination of a local and police-alarm mechanism, arranged as and for the purpose described.

5. The combination of the following elements, viz: first, a main line constructed to enter banks or other buildings; second, a local line within such buildings, embracing within its circuit a series of springs or strips arranged as and for the purpose described; third, mechanism combined with said local line for opening and closing the main line, so as to sound the number of the street and that of the building, or the latter only, when the strips or springs are separated from each other, as described.

111,409. — BURGLAR-ALARM AND POLICE-TELEGRAPH.—William B. Watkins, Jersey City, N. J.

Claim.—1. The improved automatic burglar and police-alarm, consisting of the combination of the following elements, viz: first, a street-telegraph line, constructed and arranged to enter one or more buildings; second, a local circuit placed in a building; third, devices arranged in the doors or windows of said building, so as to open or close said local circuit by the opening of said doors or windows; and, fourth, suitable mechanism brought into action by the opening and closing of the local circuit, and thereon automatically opening and closing the street circuit, so as to indicate or sound the number of a street and house, or the latter only, as described.

2. The arrangement of the spring *c f d* and fixed arm *h*, as described, so as to open and close an electric circuit.

3. An indicator, constructed with switch-keys and K, as described, in combination with a local circuit, E, for the purposes described.

4. The combination of the day-switch G with local line E and its opening mechanism B, for the purpose described.

5. The combination of a local line, E, and the device *d h* by which its circuit is opened and closed, an indicator, the day-switch, G, the operating mechanism B, and the police-line A, the whole constructed and operating as described.

111,410.—FIRE-ALARM TELEGRAPH.—William B. Watkins, Jersey City, N. J.

Claim.—1. The combination of any fire-alarm circuit or main telegraph line, A^1, with the alarm-operating mechanism in the boxes, substantially as described, and a secondary operating or building line, Z, also connecting with the mechanism and with break circuits in different buildings which have local circuits and heat-detecters arranged therein for operating said break-circuits, substantially as described, the whole arranged to be brought into operation so as to sound a different alarm from different causes through the main line under the different conditions, essentially as described.

2. The combination of the sliding or operating rod f^1 with the switch K, catch-spring g^1, stop e^1, switch M, buttons r^1 and o^1, all arranged and connected with the different lines and with the operating mechanism, as described, for the purpose of releasing the train by turning the switch K by means of an operator, as described, and by the means diverting the circuit of the main line through a break-circuit, D, and its connections, so as to sound a different peculiar signal through the main line, as described, which will indicate that fire has broken out in a building not connected with the fire-detecting lines.

3. The combination of the arm C and spring for releasing the switch K, so as to allow the spring k'' and o^1 to force back the switches K and M to their original position after they have been turned by an operator, so as to automatically close both lines after an alarm has been sounded, as described.

4. A self-acting indicator, consisting of the combination of a magnet, H, vibrating armature and lever *u*, adjustable spring *x*, stop-screw frame *v*, arm d^2, plate-card or indicator o^2, opening or glass f^2, arranged and operating essentially as described.

5. The combination of a telegraph-key, I, ring spring-arm g^2, the anvil f^1, spring K^1, with a vibrating armature, *t*, and a magnet, H, for the purpose described.

6. The combination of the following elements, viz: a fire-alarm circuit or other main line, A^1, embracing a hinged key, a^4, a secondary or operating line or circuit, V, with its battery W, magnet and armature and lever z^3, and embracing a break-circuit, y^3, a local fire-alarm circuit, U, or a series of local fire-alarm circuits combined with heat detectors, all operated as described, so that upon the commencement of a fire in a building the local circuit therein will be closed, a break-circuit p^3, will be operated so that a signal or a series of signals, which will locate the fire, will be sounded by means of the fire itself, through the main line, without the liability of deranging the main line by the breaking or derangement of any of the connecting lines.

7. The combination with a train of wheels of one or more revolving switches B, having alternate conducting and non-conducting sections thereon, springs 1 2, 3 4, and 5 6, which connect with the revolving switch and also with the main line A^1 and fire-alarm line Z, and with the break-circuit D, key I and magnet H, by means of the branch-wires and other connections described for the purpose of diverting the current of the main line alternately through the key I and plate D, or through either line, when operated as described.

8. The combination and arrangement of the switch M, buttons r^1 and *o*, with the branch-wires leading therefrom, and the catch C^2 for holding the switch M in the desired position for bringing into the circuit of the main line the coils of the magnet q^1, by means of the branches leading to and from the same, for the purpose of operating the armature r^4 in telegraphing and testing for breaks, as described.

9. The combination of the switch k^2, button m^2, switch l^2, button n^2, and branches connecting the same with the screw-posts l^4 m^4 and coils of the magnet q^4, for cutting out all other branches and connections of the main line with the mechanism, and for the purpose of detecting faults or breaks in the line when they occur in the mechanism, as described.

10. The combination of the switch r^2, buttons l^3 n^3, and ground-wire x^3, with the main line A^1, for grounding the line on either side, as described.

11. The combination of the switch s^2, button r^3, switch b^3, and button c^3, for closing both lines A^1 and Z, and for cutting out all connections of the same with the operating mechanism, so that the mechanism may be removed when desired, as described.

12. The combination of the spring-switch t^4, button o^4, branches 43 44, coils of the magnet H, and branch 54, for cutting out from the line Z the branches leading through the mechanism and for telegraphing when desired, as described.

13. The arrangement of words or characters upon the knob or handle f^3 in such manner as to indicate the condition of a train or mechanism in the boxes, as described, that is to say, whether the train is wound or unwound.

14. The combination of a telegraph line, A^1, and switches h^6 and f^6 with the battery R and the battery S'', for the purpose of renewing or repairing either battery when desired, as described.

15. The combination of the switches h^6, button l^6, battery S'', switch j^6, button k^6, and ground-wire x^6, and the switch f^6, battery R, switch p^3, button n^3, and ground-wire y^3, for dividing the line A^1 into two circuits when the ground-wires are put on in the boxes or buildings, as described.

16. The combination of two main lines A^1 and B^1, the line A^1 closed and the line B^1 open, or *vice versa*, and each having its own independent battery, both lines arranged substantially as described, so as to connect with the same operating mechanism and alarm instruments in the different boxes and buildings, and in such a manner that when a break occurs in the closed line A^1, for instance, the circuit may be instantly restored through all the instruments in the buildings and boxes by turning the switch s^2 of the open line B^1, upon the button r^3, at the battery office C^1, as described.

17. The combination and arrangement of the switches and buttons of the lines A^1 and B^1 upon the switch-board, shown in fig. 17, and the branch connecting therewith, for the purpose of testing for breaks in either line, or for switching out either line or both, when desired, essentially as described.

18. The devices herein described for automatically closing one line by the breaking of another, and consisting of a train of wheels, traveling-nut H^3, screw G^3, switch s^6, magnet C^3, and vibrating armature D^3, as described.

111,411.—FIRE-ALARM TELEGRAPH.—William B. Watkins, Jersey City, N. J.

Claim.—1. The method of operating the lever B or other device, for setting in motion the mechanism of a municipal fire-alarm box, A, by the interposition of mechanism depending for its action upon the fire, as described.

2. The method of bringing the lever B or other device of a municipal fire-alarm box, A, in a position to work the mechanism of said alarm-box by means of a cord, C, or other device, connected to an arm or wheel, b', which operates, when the gearing-train is released, so as to bring the lever B in the desired position, as described.

3. In combination with a mechanism for bringing the lever B or other device of a municipal fire-alarm box in a position to work said alarm-box, an arm or wheel, *n*, fixed to and turning with the main shaft *a*, and operated by a spring, F, or weight on said shaft, in connection with stops *r* and *s*, so as to automatically trip and release the mechanism and set the lever free to work the alarm-box, as herein described.

4. In a mechanism for operating the lever B, or its equivalent, of a municipal fire-alarm box, the method of arresting the movement of said lever in giving the alarm by means of a stop, t', or its equivalent, and thus maintain the mechanism in position to again operate said lever, as described.

5. In a mechanism for operating the lever B, or its equivalent, of a municipal fire-alarm box automatically by the fire, the arm *p* of the ratchet-pawl *m*, arranged and operating in connection with a stop, *b*, to limit the winding up of the main spring F in setting the mechanism, as described.

6. The combination of the arm *n*, or its equivalent, fixed to and carried by the shaft *a* and pawl *m*, which it carries, with the ratchet-wheels l' and k', for pulling up the cord C for automatically operating the lever B, as described.

7. The ratchet-wheels l' and k', pawl *l*, and arm *u*, made to move loosely on their shaft *a*, to allow the cord C to unwind during the descent of the operating lever B, as described.

8. The combination of a magnet, G, armature H, spring *i*, and locking-arm *g*, when operated by the fire itself, for the purpose of arresting and releasing suitable gearing-train and mechanism operated thereby, so as to operate the municipal fire-alarm boxes automatically, as described.

9. In combination with mechanism for operating the municipal fire-alarm boxes, as described, by means of the fire itself, an alarm-bell, J, or signal apparatus, for the purpose of indicating at the boxes the number of the street and building, or the latter only, from whence the alarm comes.

10. In combination with a mechanism for operating the municipal fire-alarm boxes, as described, by means of the fire itself, suitable devices operated by said mechanism for printing or recording the number of the street and the number of the building, or the latter only, simultaneously with the sounding of the alarm.

11. In combination with a printing device, N, operated by the movements of the armature H, the feeding-rolls *v* and *w*, operated by the motion of the main shaft *a*, so as to produce the proper feed of the paper, as described, when the said shaft *a* is set in motion by the action of the fire, as described.

12. The feeding-roll *w*, of the printing mechanism, arranged upon its shaft *a*, so that it will be carried forward with the forward motion of the shaft to feed the paper by means of ratchet w^2 and pawl w^3, and prevented from turning with said shaft *a* in winding up the spring, as described.

13. In combination with a printing device, N, for recording the number of the street and the number of the building, or the latter only, the break-circuit M, having metallic intervals, and its breaks of unequal length, arranged so as to operate said printing device and feed the paper so as to produce

impressions at intervals which will indicate the signal or numbers sounded.

14. A repeater or relay, or their equivalents, for sounding or indicating the numbers of streets and building, or the latter only, or any given signal through an independent telegraph line, when such repeater or relay is actuated automatically, as described.

15. In combination with a mechanism set in motion by the fire itself to operate the municipal fire-alarm boxes, the spring V, arranged so as to maintain a constant connection with the standard R, for the purpose of repeating, through the municipal lines, by means of the metallic arm W and standard T, the alarm caused by the fire and sounded and recorded at the box, by the mechanism herein described.

16. The switch-key S, for the purpose of connecting the municipal line with the mechanism described, so that the electric circuit of said line will remain closed when the switch is closed, and by opening the said switch allow the alarm to be repeated through the said municipal line by the movements of the armature in operating the arm W, as described.

17. The spring-switch S, located and arranged in connection with the mechanism described, for the purpose of being used as a key for telegraphing through the municipal line, as described.

18. The double spring switch X X', arranged so as to be connected and disconnected with either of the metallic buttons x^2 x^3, for the purpose of cutting off the electric circuit from the magnet G, and restoring it when desired, in either case keeping the electric circuit closed, and in either position, to be used, when desired, as a key for telegraphing.

19. A train of wheels, operated by a spring, F, or a weight, and the pulling-up and tripping mechanism connected therewith and operated thereby, as described, for setting in motion a second force, as described.

20. The combination of a heat-detecter, or local fire-alarm, Z, local circuit Z^2, the break-circuit M, street-line K' K', and alarm apparatus y y, with the municipal line and its boxes, the whole operating as herein described.

111,412.—Fire-Alarm Telegraph.—William B. Watkins, Jersey City, N. J.

Claim.—1. A street-telegraph line or lines, A, constructed so as to enter one or more buildings and be operated automatically, through suitable mechanism, by the agency of the fire itself, to produce an alarm simultaneously at different points within the circuit of said street-line, as described.

2. A street-telegraph line or lines, A, constructed so as to enter one or more buildings and be operated automatically, by the agency of the fire, in such manner as to indicate, by an alarm, the street and number of the building, or the latter only, in which the fire originates, simultaneously at different points within the circuit of said street-line or lines, as described.

3. In combination with a street-telegraph line, A, constructed and arranged to enter one or more buildings, a heat-detecter or local fire-alarm for closing a local circuit, and suitable mechanism operated automatically thereby, for opening and closing the circuit of said street-line, for the purpose herein described.

4. The combination of a revolving spring-arm, e, and stationary break-plate D, for opening and closing the electric circuit.

5. In a mechanism for opening and closing the electric circuit of a street-telegraph line operated automatically by a heat-detecter or local fire-alarm, a revolving spring-arm, e, in combination with a stationary break-plate, D, by which said circuit is opened and closed, constructed, arranged, and operated as herein described.

6. In a mechanism for automatically opening and closing the electric circuit of a street-line, the break-circuit D thereof, constructed with non-conductors or breaks arranged in two groups, the divisions in one group separated by long intervals, and the divisions in the other by short intervals, and each group separated by a long space, so as to indicate and communicate the street and the number of the building therein at or to as many points within the circuit as may be desired.

7. In connection with a break-circuit having non-conductors or breaks, and metallic intervals for indicating numbers, the method of indicating or sounding the cipher of any number by the use of two or more short breaks and intervals to produce short quick signals.

8. The manner of producing a succession of interruptions of an electric circuit by means of mechanism so constructed as to produce a rotary motion on the automatic closing of an electric circuit by a heat-detecter or local fire-alarm.

9. In combination with mechanism set in motion by the action of heat upon a local fire-alarm, as described, a secondary line P^2, in which the circuit is broken and closed by a revolving break-wheel, so as to indicate or sound the number of the street and the number of the building, or the latter only within said line, without sounding the said alarm within the primary line A, as herein described.

10. In a mechanism for automatically opening and closing the electric circuit of a street-telegraph line, A, by means of the fire itself, the combination therewith of a fixed break-circuit, D, and revolving break-circuit wheel, P, or two of either for the purpose of indicating and communicating the street and the number of the building thereon one or both, to any desired point or points within the street-line A, and at the same time, through an independent line, P^2, as described.

11. In a mechanism for automatically opening and closing one or more street-lines, the combination of the continuously-vibrating armature Q c lever R with its pawl S and hook or catch T, one or both, armature Z, the ratchet-wheel U, and the gearing V and W, with a fixed or revolving break-circuit, D P, or both, the several parts being constructed, arranged, and operated substantially in the manner and for the purpose as herein described.

12. The combination, with a heat-detecter, g g, its local line N O and battery M, with an automatic electro-magnetic motor for working one or more break-circuits and the line A by the action of the fire itself, as described.

111,413.—Fire-Alarm Telegraph.—William B. Watkins, Jersey City, N. J.

Claim.—1. The combination of a device operating to automatically close an electric circuit on an increase of temperature, with the circuit C F E, electro-magnet E, armature L, lever J, tripping detent M, fly Q, or its equivalent train of wheels, levers h and g, and alarm-bell j, operating as and for the purpose described.

2. The combination and arrangement of the magnet E, the armature L and its lever J, detent M, and spiral spring N, with the train of wheels, the break-circuit U, and a device operating to automatically close an electric circuit on an increase of temperature, for the purpose described.

3. The combination of the switch-key l l' with the mechanism herein described, for the purpose of cutting out the break circuit U and telegraphing, as described.

4. The combination with a device operating to close an electric circuit on an increase of temperature, and its local line F, C, and H, battery B, the magnet E, lever J, armature L, spring N, detent M, and the train of wheels and break-circuit U with the line W, and its battery Y, connecting with the buildings and alarm mechanism, as described.

111,414.—Stave-Sawing Machine.—Charles Thompson Watson, Deerfield, Mich.

Claim.—1. The combination and arrangement of the grooved and perforated saw S, adjustable fixed guides H H' M M', adjustable driving-wheel D, tongued rollers I' K', and loose pulley J, substantially in the manner specified.

2. The groove g in the interior surface of the

bow-saw, in combination with one or more rollers I K', having tongues to run in said groove in the manner and for the purpose stated.

111,415.—Machine for Disintegrating Wood.—Charles Wolff, Sr., and Charles Wolff, Jr., Cincinnati, Ohio.

Claim.—1. The feed-stop device, consisting of the elbow f^1, projections 1 and 2 on rod f^2, in combination with shifter J and clamp K, all arranged to operate as herein described and shown.

2. The combination of the shaft F, carrying pulleys f' f'' f^3, shaft G, with pulleys g g', screws H H', wheels A h' engaging with the worm on shaft G, elbow f^1, projections 1 and 2 on rod f^2, shifter J, and clamp K, all arranged to operate as herein described and shown.

111,416.—Corn and Phosphate-Drill.—John W. Wood, New Leeds Corner, and Gabriel Moore, Fair View School House, Md.

Claim.—1. The construction of the hoppers S with triplicate compartments o o' o', for distributing the seed and phosphate at one operation, in combination with the slides T, constructed, arranged, and operating substantially in the manner and for the purpose above described.

2. The combination and arrangement of the double mold-boards J J with the plows G by means of the straps or rods K, yokes L, and pivots c, substantially as and for the purpose set forth.

3. In combination with the mold-boards J the lever Q, ratchet R, double-jointed levers O O, socket f, and stem b' of the yoke E, the several parts being constructed and arranged for joint action, substantially in the manner and for the purpose specified.

4. The combination and arrangement of the slide X and pawl z with the cam-ring U and indicator W, substantially as and for the purpose set forth.

5. The combination and arrangement of the levers Z with the rods t of the slides T by means of the slots 1 2, substantially in the manner described, and for the purpose specified.

111,417.—Box-operating Mechanism for Looms. — Horace Wyman, Worcester, Mass.

Claim.—1. The pinion-and-spur or stud-wheel, the star-wheel and all the gearing therefrom, which operate the cranks through the government of the pattern-chain and its connections, when all are constructed and combined with the connectors and compound-levers to actuate the shuttle-boxes, as described.

2. The combination of the disks p and q, the bell-crank levers k and k^1, and springs k^2 j^3, as and for the purpose described.

111,418.—Tube-Holder.—Thomas Arnold, Petroleum Centre, Pa.

Claim.—The springs A, in combination with the rings A', for holding the tube B in position, and allowed to move vertically upon the same, substantially as shown and described.

111,419.—Car-Coupling.—David H. Ball, Sinnamahoning, Pa.

Claim.—In combination with a draw-bar, A, the plates or bars B, jaws C C, rods a a, arms b b, spring f, and shaft E, constructed and used as and for the purpose set forth.

111,420. — Envelope-Machine. — James Ball, New York, N. Y.

Claim.—1. The plain guides a, supporting the gudgeons of the roll of paper, and allowing said roll to adjust itself laterally in accordance with the guides c of the feed-cylinder, substantially as described.

2. The wheel d, with plain segment f, segmental step g, and wheel e, and the elliptic wheels h i, combined and operating together in relation to the feed-cylinder substantially as and for the purpose described.

3. The knife H, in combination with the rod l, disks n, loose pinion h, sleeve t, teeth r s, groove u, pin v, and cam-groove x, substantially as and for the purpose set forth.

4. The pin z, projecting from the swinging lever, and the notched disk y, operating together, in combination with the stop mechanism of the knife, substantially as and for the purpose described.

5. The platform I, having its edges bearing on the inner portions of the threads of the endless-geared screws K, so that an empty platform may be substituted for a loaded platform.

6. The combination of beaters a' b' and gauges c' d' with the platform I, as set forth.

111,421. — Grain-Drill. — Turner Barns and Hugh S. Jamison, Greensburg, Ind.

Claim.—The combination of the cut-offs S and T with the hopper R, whereby one, two, or three drills may be sown at a time, as desired, as and for the purposes set forth.

111,422.—Pipe-Wrench.—Oramel Graves Barrett, Boston Highlands, Mass.

Claim.—The combination of the latch-spring C, having a series of holes, f, in it, as described, with the double-jawed head B and the lever A, made, arranged, pivoted together, and provided with the holes b b b c c c of adjustment, all substantially as described.

111,423. — Paper-cutting Machine.—George Bates, Philadelphia, Pa.

Claim.—The combination of the cutting and scoring-disks and a graduated bar, G, so suspended that it can be brought opposite either of the scorers or cutters, as set forth.

111,424.—Harvester.—Lindley M. Batty, Canton, Ohio.

Claim. — 1. The within-described harvester-frame, the same consisting of the frame-plate A, having the standard G cast at the end and the two-part gear-cavity H I cast at the side and near the center thereof, and with all the shaft-bearings 1 1, 2 2, 3 3, cast thereon, and of the covers D and E, the side J of the cavity H I being either cast with said cavity or consisting of the sheet-metal plate J, and the several parts being arranged and combined substantially as and for the purpose specified.

2. The hub-box 15, having the ratchet-notches 20 20 formed on its inner face in such a manner as to leave the portions 21 21 of said face to bear on the face of the pawl-wheel 16, so as to form an additional journal-bearing for the driving-wheel, the several parts being constructed and arranged as is herein specified.

3. The combination and arrangement of the main frame G A I, coupling-frame L M, and heel-shoe Z, said coupling-frame having at each of its lower corners a hinge-joint with the ends of the heel-shoe, and having its upper corners united to the main frame by a rolling hinge-joint and a sliding pivot-joint, said last-mentioned joints being between the planes of the driving-wheels, and the several parts being arranged substantially as and for the purpose specified.

4. The within-described coupling-frame L N M, consisting of the coupling-bar L, cross-bar N, and brace-bar M, and with or without the eye k, the same being formed from a single bar of metal by bending it into the required form, and the several parts being arranged substantially as is herein specified.

5. The heel-shoe Z, consisting of a plate of sheet metal, having its end turned up to form one side of the sockets for the hinge-arms on the coupling-frame, and having combined with it suitable castings to form the other sides of said sockets, substantially as is herein specified.

6. The combination of the pinion 33, provided with the grooved clutch 34, forked lever 44, lever 37, rod 39, and treadle-lever 43, with arm 45, the

several parts being arranged substantially as and for the purpose specified.

7. The coiled-wire handle 7, formed on the upper end of the pawl wire 8, and encompassing the lifting-lever d, substantially as and for the purpose specified.

8. The crank-screw r, having the threaded portion thereof made in a tapering form, when used in combination with the swinging hinge-arm T on the coupling-frame, substantially as and for the purpose specified.

111,425. — WOOD PAVEMENT. — Henry M. Beidler, Philadelphia, Pa.

Claim. — 1. The boards or blocks B B, provided with notches *b b* and the strips C C, arranged as described, in connection with the blocks A A, substantially as and for the purposes herein set forth.

2. A wooden pavement, made in sections, composed of a series of blocks, A, notched boards B, and strips C, the blocks A being arranged slightly apart, and connected together by the pins *a*, and to the earth by the pins D, all substantially as and for the purposes set forth.

111,426, antedated January 21, 1871.—STALL FOR HORSES.—Samuel S. Bent, Port Chester, N. Y.

Claim.—1. The frame d, for receiving the ends or edges of the planking of the stall, and also the pivots or axes on which the manger or trough swings, the parts being constructed substantially as and for the purposes set forth.

2. The metal manger, with the frame and shoulder 6, to receive the wooden back, substantially as set forth.

111,427.—COOKING-STOVE.—Samuel Blue, Danville, Pa.

Claim.—The independent flue B, communicating with the draught-oven of a three-flue cooking-stove through an opening, c, in the lateral wall of the oven over the oven-door, substantially as specified.

111,428.—COMBINED GANG AND SUBSOIL-PLOW.—Joel L. Bond, St. Louis, Mo.

Claim.—1. The arrangement of the bent bar G, clamps *b b* and *d*, adjustable bar H, and plow D, constructed as described, and used in combination with a single plow to form a gang-plow or a subsoil-plow, as herein set forth.

2. The combination of the beam A with its plow D, the bent bar G, subsoil-plow D', frame I, wheel J, and grain-drill attachment K, all constructed and connected together as described, so that the subsoil will be turned over and cover the seed by the plow D', while the plow D at the same time makes a new furrow, substantially as herein set forth.

111,429.—MODE OF FORMING THE AIR-CHAMBER IN DENTAL-PLATES. — Mary Ann Boughton, Norwalk, Conn.

Claim.—The mode, substantially as herein described, of forming the air-chamber in plates for artificial teeth, that is to say, by placing the adhesive block *c* upon the roof of the mouth, and then taking the impression of the latter.

111,430.—CUP FOR KEROSENE-LAMPS.—Nathaniel L. Bradley, Meriden, Conn., assignor to Bradley & Hubbard, same place.

Claim.—In the manufacture of cups for kerosene-lamps the arrangement of the socket B upon the bottom of the cup, so as to form a bearing entirely below the bottom of the cup, substantially in the manner and for the purpose set forth.

111,431.—GRAIN-THRASHER AND CLEANER. William H. Butterworth and John Butterworth, Jr., Trenton, N. J.; said John Butterworth, Jr., assignor to said William H. Butterworth.

Claim.—1. In combination with the shaker of a thrashing-machine, the rake-heads E, when constructed as described, and for the purposes set forth.

2. In combination with fan-shaft x, shaker D and shoe G, the eccentrics *d*, jointed rods *f*, and springs *e*, arranged as described, and for the purposes set forth.

3. In combination with the stationary tail-board K, the movable tail-board J, slotted irons *h*, bolts *k*, and thumb-nuts *m*, all constructed and arranged substantially as and for the purposes herein set forth.

4. In combination with the tail-boards K and J, the shields L, arranged as described, and for the purposes set forth.

111,432. — CULTIVATOR.—Jarvis Case, La Fayette, Ind.

Claim.—1. A cultivator having the axle A attached rigidly to the tongue, and provided with the arms A' having wheels attached, in combination with the beams hinged to the body A of the axle, and extending backward far enough to cause the line of draft extending from their hinged point to the shovels to fall in rear of the longitudinal plane of the arms A', substantially as and for the purpose set forth.

2. The loops E, hinged or clasped to the axle A, in combination with the beams having the laterally-projecting arm at its front end, whereby the beams can be attached rigidly or loosely to the loops and still be at liberty to move vertically, substantially as described.

111,433. — HOT-AIR DISTRIBUTING-PIPE.—Horace C. Crehore, Boston, Mass., assignor to himself and Samuel T. Cushing, same place.

Claim.—1. The subdivided pipe a, constructed with partitions arranged to equalize the distribution of heated air into vertical series of apartments, substantially as shown and described.

2. In combination with each or either main valve, an auxiliary valve, which is opened by the closing of the main valve, and *vice versa*, and which when open diverts the hot air into another conductor or flat, substantially as described.

111,434.—BEE-HIVE.—Samuel Cuplin, Iowa Falls, Iowa.

Claim.—1. One or more double partitions, formed of slats, in the frames of a surplus honey-box, substantially as and for the purposes herein set forth.

2. The perforated feeder I, provided with a perforated flange *h*, and used for ventilating purposes, substantially as herein set forth.

3. The arrangement of the shutter J with wire-cloth *e*, sliding-door *d*, door K, and button B, all substantially as shown and described.

111,435. — INKSTAND. — Samuel Darling, Providence, R. I.

Claim.—1. An inkstand having an elevated dipping-cup within the reservoir, and an ink-receiving cavity in the upper part, constructed and operating substantially as described.

2. An inkstand having a hollow, elastic stopper, substantially as and for the purpose set forth.

111,436.—BRANDING-STAMP.—Armistead M. Darrell, Washington, D. C., assignor to himself, Solon C. Kemon, and Lysander Hill, same place.

Claim.—1. A hand-stamp, containing a reservoir, B, wick *b*, and die-plate A, constructed and arranged substantially as described.

2. In a stamp, the combination of the movable metallic strip E with the die-plate A, the former passing across the face of the latter, countersunk in a groove provided for the purpose, substantially as described.

111,437.—POTATO-DIGGER.—James Davis, Saratoga, N. Y.

Claim.—1. The pickers I I, constructed as described, and operated by means of the crank-shafts G H, pinions *f g*, cog-wheels J L, shaft K, and axle B, substantially as set forth.

2. The combination, in a potato-digger, of the axle B, wheel C, with recessed hub, cap D, ratchet-wheel *c*, and spring-pawl *b*, all substantially as and for the purposes herein set forth.

3. The arrangement, in a potato-digger, of the journal-boxes E E and *e e*, and straps *d d* and *m m*, for supporting and adjusting the crank-shafts G H with the pickers I I, substantially as herein set forth.

4. The arrangement of the plow or blade M, slotted bars N N, with beams P P, guides O O, cross-bar R, lever S, and rods *k k*, all substantially as and for the purposes herein set forth.

5. The arrangement, with frame A of the potato-digger, of the bar V, tongue W, bar X, shaft Y, projection *p*, and lever Z, all substantially as and for the purposes herein set forth.

6. The combination of the pivoted arms A' A', slotted bars B' B', roller C', and scrapers D' D', all substantially as and for the purposes herein set forth.

111,438.—COMBINED PNEUMATIC AND RUBBER SPRING.— Patrick S. Devlan, Jersey City, N. J., assignor to himself, Isaac P. Wendell, and Stephen P. M. Tasker, Philadelphia, Pa.

Claim.—1. The gum cylinder or cylinders B, having one or more recesses in their outer periphery, to contain air to react against the outward pressure of the air in the interior of the cylinders, in combination with one or more pistons, C, and the case A, substantially in the manner and for the purpose hereinbefore described.

2. The construction of the gum cylinder B with spiral ribs around its periphery, forming both a horizontal and vertical stiffening of the cylinder, and suitable guides for the same in its reciprocating movements, as above set forth.

3. The combination of the plate D and tube d, and the combination thereof with the case A and cylinder B, as and for the purpose set forth.

111,439. — SEAL FOR DIP-PIPES IN GAS-WORKS. — Grafton Douty, Columbus, Ohio.

Claim.—1. A chamber, F, for a movable dip pipe, E G, interposed between the hydraulic main B and retort, and communicating therewith through the dip-pipe, to seal and unseal the main, as described.

2. The supporting and sealing-seat H H' of the movable dip-pipe E G, as described.

3. The arrangement of the weighted lever L, connecting-rod N, and movable dip-pipe E G, for the purpose of raising and locking the dip-pipe, when unsealed, and forcing it down upon its seat when sealed, as described.

4. In combination with a hydraulic seal and gas-retort, the movable dip-pipe E G, the inclosing-chamber F, the communicating-bridge D, and the rising-and-depressing lever L, constructed, arranged, and operating as described.

111,440. — SEAL FOR DIP-PIPES IN GAS-WORKS. — Grafton Douty, Columbus, Ohio.

Claim.—1. In hydraulic seals for gas-works, a movable dip-pipe, D, having a liquid-seal for both its upper and lower ends, as described.

2. A movable dip-pipe, D, for sealing and unsealing the hydraulic main A of gas-works, having a perpetual liquid seal at its upper end.

3. A liquid seal for the upper end of a movable dip-pipe, supplied with such sealing-element by the escaping tar from the retort, as described.

4. The inverted cup J of a movable dip-pipe D, in combination with the sealing-chamber I and the hydraulic main, with which said chamber communicates, as described.

5. The combination of the upper liquid-seal and hydraulic main with a movable dip-pipe or pipes and a gas-retort, as described.

111,441.—LUBRICATING-COMPOUND.—Elisha Dyer, Jr., Providence, R. I.

Claim.—The lubricating-compound herein described, composed of animal fat, grease, or tallow, palm-oil, and paraffine, in the proportions and prepared substantially as set forth.

111,442.—TUBE-CUTTER.—Daniel E. Eaton, Boston, assignor to himself and James S. Hanscom, Cambridge, Mass.

Claim.—1. The rod a, with its inclines *f*, the cutter-stocks jointed to the nut or collar *m*, and the feed-screw *e*, combined and operating substantially as shown and described.

2. In combination with the cutters arranged to operate as described, the ring *r* and gauge-pins *t*, substantially as shown and described.

111,443.—COMPOUND FOR DRESSING AND COLORING THE HAIR.—John N. Fallis, Newport, Ky., assignor to himself and Charles Thacker, Sr., same place.

Claim.—The preparation for dressing and coloring the hair, compounded of the ingredients specified, in about the proportions stated.

111,444.—TREATING COTTON-SEED OIL TO RENDER IT DRYING.—Rasselas Farley, Cincinnati, Ohio.

Claim.—The process for converting crude cotton-seed oil into a drying oil, substantially as herein explained.

111,445.—HARROW.—August Friedemann, Waverly, Iowa.

Claim.—1. The levers K and L, when pivoted to or upon the harrow, substantially as and for the purpose shown.

2. The sections A and B, composed of the alternately long and short bars C, containing the teeth O, and connected together by means of the cross-bars D, all arranged substantially as and for the purpose specified.

111,446. — TEMPERING STEEL.—George B. Garman, Washington township, Ind.

Claim.—The method and mode of tempering steel by cleansing the fire, as above described, and the application to the steel of the said chloride of sodium in the manner hereinbefore mentioned, and the use of the said solution of chemicals in the proportions and in the manner above set forth and described, or in the use of a solution of said chemicals in substantially the same proportions.

111,447.—SEWING-MACHINE.—Thomas Garrick, Providence, R. I.

Claim.—1. The serpentine grid or rack G, substantially as described, in combination with the take-up spring 7, as its equivalent, for the purpose of producing the requisite tension and to take up the slackness of the needle-thread, as described.

2. The tilting cloth-plate M, substantially as described, in combination with a tilting presser, D, as described, for holding the fabric to be sewed obliquely to the needle, substantially as specified.

3. The combination, with a divided loop-catcher, when arranged to operate through the button-hole, substantially as herein described, of the combined gauge and spreader X, for the twofold purpose herein set forth.

4. The combination of a rotary shuttle of the material described with the magnet and shield of brass, or its equivalent, interposed between it and said shuttle, substantially as and for the purposes set forth.

5. The magnet, in combination with the tension-roller, arranged and operating substantially as and for the purpose specified.

6. The combination and arrangement of the fixed and movable casters N N^2 with the treadle or its equivalent, substantially as and for the purpose specified.

7. The shuttle-bobbin, having a groove in its flange, and combined with a spring-finger bearing in said groove, as herein described.

8. The tilting and holding-cam or button *j* or its equivalent, in combination with the cloth-plate, as described, for the purpose specified.

9. The spool-holder B^1 and the bobbin-winder, constructed substantially as described, for the purpose specified.

111,448. — BOOT-AND SHOE SOLE.—Benjamin D. Godfrey, Milford, assignor to William Claflin, trustee of the American Wire-Quilted Sole Association, Boston, Mass.

Claim.—A sole or tap-sole, made of several layers of thin leather, united by short sections of fine wire driven closely together, substantially as shown and described.

111,449.—MANUFACTURE OF RUBBER ROLLS. John Greacen, Jr., and Edward L. Perry, New York, N. Y., assignor to Combination-Rubber Company, same place.

Claim.—An elastic roll, made by first winding cord B directly upon the shaft, then wrapping the same with a filling fabric composed of rubber *a* and cords *b*, and covering the whole with a surfacing of rubber, D, the several parts being formed into a compact mass by vulcanization, substantially as herein described, for the purposes specified.

111,450. — CARTRIDGE-BELT.—William B. Hayden, Columbus, Ohio.

Claim.—The revolving cartridge belt B, arranged on the supporting belt A, substantially as and for the purposes herein shown and described.

111,451.—BEE-HIVE.—John H. Hendrick, Clinton, Ill.

Claim.—The bee-hive herein described, consisting of the main body A, with drop-door A^1, comb-frames C, board D, surplus-honey boxes E, and feed-box F F', all the parts being constructed and arranged substantially as set forth.

111,452.—FEEDING MECHANISM FOR SEWING-MACHINES.—Walter B. Higgins, San Francisco, Cal.

Claim.—The feeding mechanism described, consisting specifically of the cam-wheel *b*, constructed as described, with its cam-shaft *a*, lever *z*, with its arms, having the adjusting screw *d* and spring *e*, and slotted bar X, with teeth W, when combined and arranged as described.

111,453. — UMBRELLA.—Mason Hirsh and Leopold Hirsh, Philadelphia, Pa.

Claim.—1. As a new manufacture, an umbrella, the handle and tip of which are connected to the stem so as to be detachable from the same, as set forth.

2. The combination, with the recessed stick A, detachable handle and tip, and slides *g g'*, of spiral springs *f* connecting the tip and handle to the slide, as specified.

111,454.—MANUFACTURE OF SOAP.—James Hoagland and Isaac C. McDonald, Columbus, Ohio.

Claim. — The within-described compound for soap, composed substantially of the ingredients herein set forth

111,455. — FOLDING-CHAIR. — Francis M. Holmes, Boston, Mass.

Claim.—1. The seat, as connected to its back-supporting rung F by double-jointed hinges G, and provided with one or more stops, H, to sustain it against the front rung E, such seat being to fold over the front rung and down in advance of it, as set forth.

2. In the folding-chair, the combination of the band I with the seat and its supporting-rungs E and one or more stops H, and with the three-leaved hinges G fixed to the seat, and the back rung F, all being substantially as described.

111,456.—FASTENING FOR EPAULETTES.—William Julius Horstmann, Philadelphia, Pa.

Claim.—The combination, with an epaulette, of a hinged tongue, *b*, having a recess, *c*, at its outer end, and a spring, B, having a projection or catch *f*, substantially as described.

111,457.—MACHINE FOR CUTTING STAVES.—Amyntas J. Howell and James Murphy, Spruce Hill, Pa.

Claim.—1. The crozing and chamfering-knives G, constructed as represented and described, for the purpose specified.

2. The arrangement, in the surface of the cylinder B, of the hinged or pivoted gauges H, for determining the thickness of the staves, substantially as shown and set forth.

111,458. — GATHERING ATTACHMENT FOR SEWING-MACHINES. — Allen Johnston and William T. Johnston, Ottumwa, Iowa.

Claim.—1. The reciprocating spring C, having its outer end slotted and turned upward, in combination with the stationary spring I, placed above the former spring and having its outer end slotted and turned downward, substantially as and for the purposes herein set forth.

2. The sliding plate B and its adjusting-lever G, when combined and arranged with the slotted piece *e* and lever D, substantially as and for the purposes herein set forth.

3. The combination of the bed-plate A, sliding plate B, with spring C, levers D and G, arm H, and spring I, all constructed and arranged as described, to operate substantially as and for the purposes herein set forth.

111,459.—COATING AND DECORATING WALLS, CEILINGS, &c. — Charles T. Kemmer, Cleveland, Ohio.

Claim.—1. The herein-described process of preparing oily coatings for walls, ceilings, &c., substantially as set forth.

2. The process of treating or preparing sheeting or other textile fabric for the purpose of forming painted or printed sheets of paint with plain or ornamented surfaces, and which may be transferred to walls, ceilings, &c., substantially as herein set forth.

3. The combination of the sheeting, prepared, as described, with size and the oily coating, with a plain or ornamented surface, substantially as set forth.

4. The composition, as described, of making a water-proof flat painted surface.

5. The oily water-proof sheets or coatings, either plain or ornamented, prepared in the manner substantially as set forth, and for the purpose described.

6. The fibers of cotton, wool, wood, or their equivalents, in combination with pigments, for the purpose of giving body and strength to the described coating, substantially as set forth.

7. Sheets of paint, composed of the within-stated ingredients, ready for applying to walls or other surfaces, substantially as described.

111,460. — CANT-HOOK.— Amos Kennard, Clearfield, Pa.

Claim.—1. In a cant-hook, the combination with the ferrule B, the point C, provided with the shoulder *z*, and the screw-shank *k*, substantially as specified.

2. In a cant-hook, the ferrule B, provided with the stops *h* and *d*, in combination with the key *f* and the hook D, substantially as specified.

111,461.—LETTER-BOX.—Cyrus Levis, Philadelphia, Pa.

Claim.—A letter-box, consisting of a plate, B, hinged to the outside of a door or door-frame, and controlled by a hinged link, *h*, and arm, *i*, adapted to an opening and plate, *j*, of the said door or frame, all substantially as described.

111,462.—PROPULSION OF CANAL-BOATS.—Thomas Main, Greenpoint, N. Y.

Claim.—The screw-propeller A, when placed in the cavity in the bow of the boat and within the body of the hull thereof, in combination with a channel inclining downward to the bottom of the boat, substantially as described.

111,463. — Box. — Henry Manneck, New York, N. Y.

Claim.—A sectional folding box, composed of the bottom and sides *a b b* made in one piece, and the ends B B, separately made, with angular portions *c* at the sides and bottom, the parts A B B being secured together at the corners by metallic clamps C and corner pieces D, all constructed and arranged substantially as and for the purposes herein described.

111,464. — MANUFACTURE OF BROOMS.— Ezra P. Marble, Sutton Centre, Mass.

Claim.—In the manufacture of brooms and brushes, the utilization of the cortical envelope of the broom-corn stalk, substantially as specified.

111,465.—CARPET-LINING.—John C. Mayall, Boston, Mass.

Claim.—As a new article of manufacture, the carpet-lining A, consisting of the continuous bat C and single sheet of paper B, folded over and enveloping said bat, and with its edges *c* overlapping each other and secured, as and for the purpose herein described.

111,466.—BEE-HIVE.—John Armstrong McAnulty, Gilpin, Pa.

Claim.—1. The hive herein described, having the side boxes D D and the horizontally-sliding glass plates F F, when constructed and operating substantially as shown and described.

2. The pendent comb-cards E E, having their upper bars dovetailed to slide in corresponding dovetail grooves in the top of the hive.

3. In combination with the upper ventilating passage C and the ventilators *b b* in the lower chamber G, the air-passage *z*, guarded by the notched strip *s* and the diagonal piece of wire-cloth *x*, substantially as specified.

111,467.—FRUIT-DRIER.—John V. R. Miller, Richmond, Ind.

Claim.—1. The pan B, for generating steam and heating air, constructed with a partition, *a*, and perforations *c*, in combination with a fruit-drier, A, operating substantially as herein described.

2. The combination of the fruit-drier A, having a perforated bottom, *m n*, pan B, and furnace A', arranged relatively to one another, substantially as set forth.

111,468.—SLIDING-DOOR.—John More, New York, N. Y.

Claim.—1. The adjustable double series of sheaves M N, carried on the doors and adapted to work, as represented, on the single way E, when the lower series of sheaves, N, is adjustable or movable up and down to fit tightly to the way, substantially as herein specified.

2. The elastic stops G^1 G^2, or either of them, arranged as specified, so as to arrest the motion of the door gently, as set forth.

3. The adjusting-screws g^1 g^2, in combination with the step-plates R, struts G^1 G^2, and way or rail E, which supports the sliding doors, as specified

4. The bar or way E, made in two pieces halved together when connected to the central bolt C, and adapted to be adjusted up and down at each end, so as to carry the sheaves which support the double door, and to allow the sheaves and the bar E itself to be easily introduced and removed, in the manner and for the purposes herein set forth.

111,469. — COMBINED BAND-CUTTER AND FEEDER FOR THRASHING-MACHINES.— Samuel S. Myers and James McCauley, McAllisterville, Pa.

Claim.—1. A combined conveyer and band-cutter, consisting of sectional chutes, one or all of which shall be provided with carrier-belts C, and having the revolving knives F arranged therein, substantially as described.

2. In a band-cutter, the detachable and reversible knives F, having sickle-teeth formed on their edges, substantially as described.

3. The nut *a* provided with grooves, in combination with the knives having their ends bent to fit therein, and the nut C arranged upon the shaft G, substantially as described.

4. In a band-cutter the slotted legs I, in combination with the hinged section A for adjusting the latter, as described.

5. The combination of the carrier-belts *c*, cleats *e*, pins *n*, and revolving knives F, when said parts are relatively arranged as shown, and for the purpose described and set forth.

111,470.—MACHINE FOR MOLDING KNOBS.— Charles H. Palmer, Brooklyn, E. D., N. Y.

Claim.—1. The vertically-divided and laterally-movable mold-sections *a a*, having applied to them the neck-forming portions *s s*, in combination with a pressing-plunger, C, substantially as described.

2. The elevating device *e*, in combination with the laterally-movable sections *a a*, constructed as described, and the pressing-plunger C, substantially as described.

3. The bracing-strap *e*, and the locking devices *t t'*, in combination with the laterally-sliding mold-sections *a a* and the accessories, substantially as described.

4. The treadle G, held up by a spring, S, and connected by levers and rods to the laterally-movable mold-sections *a a*, in combination with the forked rod *n*, pin *p*, and elevating-rod e^1, said parts being so constructed that the mold-sections *a a* will be separated before the rod e^1, with its knob *d*, begins to rise.

111,471. — VAPOR-BURNER. — Robert W. Park, Philadelphia, Pa.

Claim.—1. The wings or plates J J, heated by independent jets of ignited gas from the apertures *s*, in combination with oil or vapor-passages situated below the said wings, all substantially as described.

2. The passages *h*, h^1, and h^2, formed in the body of the burner, in respect to the wings J J, and communicating with the branch B and mixing-chamber *z*, through channels *t* and *t'*, all substantially as specified.

3. The said passages *h*, h^1, and h^2, when formed between tubes H and A', substantially in the manner described.

4. The tube or sleeve H, formed in one piece with the wings J, and arranged to be fitted over and secured to the body of the burner, as specified.

111,472. — BORING AND MORTISING MACHINE.—Jacob Peters, Lebanon, Pa., assignor to Simon J. Stine, same place.

Claim.—The combination of the lever D, collar E, shaft F, and link C, when all these parts are constructed and operate as described.

111,473.—TRACE-CARRIER.—Robert Porter, Ottumwa, Iowa.

Claim.—The ring A, provided with the radial arms B, from the center-plate of which is a hinged or stationary post, G, provided with the cross-bar H, all constructed as and for the purposes set forth.

111,474.—Machine for Drilling and Tapping Water and Gas-Mains.—James Riley and Patrick Riley, New York, N. Y.

Claim.—1. In combination with the water and gas-tight cylinder or chest, herein described, a rotating or sliding cover, carrying a drill-shaft and shaft to insert the service-cock, substantially as described.

2. In combination with the subject-matter of the preceding claim, the drill-shaft E and screw-sleeve D, constructed and arranged to operate substantially as described.

111,475.—Fluting-Tongs.—Jacob C. Robie, Binghamton, N. Y.

Claim.—The handles or stops A A, to prevent the inward deflection of the shanks B and C between the semicircular spring D, and their connection with the prongs H H and *a a a*, substantially as hereinbefore described, for the purpose set forth.

111,476. — Apparatus for Preserving Milk.—Even Rönning, Broadhead, Wis.

Claim.—The water-tight receptacle A, having faucet E, perforated cover A′, and raised open platform C, in combination with the cans B B, provided with wire gauze D, all arranged as described, for the purpose of preserving milk, as specified.

111,477. — Street-Sweeping Machine.—Edward A. G. Roulstone, Boston, Mass.

Claim.—The ring P, operated by the sliding bar A, in combination with the arms M N, pivoted to the revolving plate X, substantially as and for the purpose described.

111,478.—Method of Flanging Boiler-Heads.—William B. Scaife, Pittsburg, Pa.

Claim.—The method hereinbefore described of turning the edges of a disk of metal to a position at right angle to the plane of the disk, for boiler-heads and analogous articles.

111,479. — Journal-Box.—John Schieder, New York, N. Y.

Claim.—1. A journal-box, containing two shells, provided with bearing-surfaces made of alternate layers of India-rubber cloth and sheet metal, (sheet-copper being used by preference,) said shells being adjusted by means of set-screws so that the bearing-surfaces can be brought in the required position, as herein shown and described.

2. The supporting-latches at the heads of the journal-box, provided with removable shells, substantially as set forth.

3. The swivel-arm, secured to a hanger by screws with right-and-left-hand threads, substantially as herein shown and described.

111,480.—Concrete Block for Paving.—John J. Schillinger, New York, N. Y.

Claim.—A compound for pavement-blocks, made of cement and broken stones mixed together and formed into blocks of suitable form, leaving the broken stones exposed on the upper surfaces of the blocks, substantially in the manner herein described.

111,481. — Lamp. — Hermann Alexander Schottky, Stapleton, and Theodore Simendinger, New York, N. Y.

Claim.—1. The cap H, fitting in the top of the cylinder B, in combination with the cone F and with tube E, substantially as described.

2. The internal cone F and air-pipes *c*, in combination with the cylinder B and oil-reservoir A, substantially as set forth.

3. The spring-valve *f*, secured to the wick-tube and fitting in a seat in the bottom end of the wick-jacket, substantially as described.

111,482.—Harvester.—Jacobs W. Schuckers, Philadelphia, Pa., assignor to Isaac A. Sheppard, same place.

Claim.—The combination of the internally-geared spur-wheel J, revolving with the main axle, the pinion *j*, mounted on the frame, the pinion *k* on the collar k^1, the internally-geared spur-wheel, revolving loosely on the main axle in a direction opposite to that of its fellow *j*, the pinion k^2 on the frame, the pinion *l* on the sliding sleeve, the clutch, the bevel-wheel loose on the main axle, and the crank-shaft, all these parts being constructed and operating as described.

111,483.—Harvester-Reel and Rake.—William H. Seymour, Brockport, N. Y.

Claim.—1. The reel, constructed substantially as described, that is to say, with its beaters supported at their outer ends, and left open or disconnected from the shaft at their inner ends, to permit the passage of the rake through the path of the beaters.

2. The combination with the reel, constructed substantially as described, of a vibrating or sweep-rake adapted to pass through the path of the reel-beaters and between said beaters and the reel-shaft, substantially as set forth.

3. The rake, operating relatively to the reel, as described, in combination with mechanism operated from the reel-shaft for driving said rake and timing its movements to those of the reel.

111,484.—Wringing-Machine.—Albert H. Spencer, Providence, R. I.

Claim.—1. The independent axes C D, serving as fulcrums for the levers E F and as braces for the whole machine.

2. The pressure-levers E F, hinged on the axes of the intermediate gears, and forming yielding bearings for the rollers K L.

3. A pair of wringing-rollers, provided with end gears and mounted in yielding bearings, in combination with and operated by a driving and an intermediate gear, respectively mounted upon fixed bearings, the several gears being so arranged that their relative working positions will remain the same whether the rolls be in close contact or widely separated, substantially as described.

4. The clamp O, formed of a piece of elastic sheet metal bent curved and attached to the screw N, as described.

5. The uprights A B, pivots C D, and levers E F, in combination with the gear-wheels G H I J, pressure-rollers K L, and spring M.

111,485.— Base-Burning-Stove.—Stephen Spoor, Phelps, N. Y.

Claim.—1. The separate, inclosed recesses G G H, situated around the magazine A of a base-burning heating-stove, in combination with a plate, E, situated beneath said recesses and over the combustion-chamber B, and provided with cooking-holes *a a*, substantially as and for the purpose herein specified.

2. The radial partition-plates *b b*, separating the recesses or ovens G G H, and the inclosing covers or doors *c c*, in combination with the said cooking recesses or ovens, substantially as and for the purpose herein set forth

3. The arrangement and combination of the valve-apertures *l m m*, leading directly to the flues *f g g*, and the annular diving space *n*, pipe or flue *o*, and valve-aperture *p*, leading indirectly to the said flues, in combination with a regulating damper, *q*, substantially as and for the purpose herein specified.

4. The perforated plate I and valve K, arranged between the recesses G G and flue-space A, substantially as and for the purpose herein set forth.

111,486.—Manufacture of Illuminating-Gas.—Ira N. Stanley, Brooklyn, N. Y.

Claim.—1. The process of presenting coal-gas to the hydrogen-producing material in the hydrogen-chamber A, so that the coal-gas shall be in contact with the hydrogen at the moment of its evolution at a high temperature, and shall thereby combine more perfectly therewith, and also preserve the walls of the hydrogen-chamber A, as specified.

2. The process of conducting coal-gas through the entire length of the hydrogen-retort, as and for the purposes specified.

3. The chambers A B and connections N, for the above process, when made in two separate retorts, united and cemented together, as specified.

111,487.—Umbrella.—Nicholas Starr, Homer, N. Y.

Claim.—The described joint, formed of a single piece of metal bent at *a* a^1 a^2 a^3, to form the closed socket *a* for the lower half of the rib, and open socket *a′* for the upper half of the rib, the rib and brace-rods being held by the rivets *b b′*, as described.

111,488.—Electro-Magnetic Sewing-Machine. — George Stevens and Joshua Hendy, San Francisco, Cal.

Claim.—1. Constructing the machine so that the needle-bar shall be operated directly from the electro-magnets, either with or without the intervention of levers, so that the oscillation of the armatures between two or more electro-magnets shall cause a similar movement of the needle.

2. In an electro-magnetic sewing-machine, the cups *o p r* and switch *s*, connected with the battery so as to vary the power, substantially as herein specified.

111,489.—Guard-Chain for Bracelets.—George D. Stevens, New York, N. Y.

Claim.—1. A middle stop *s* on the guard-chain of a bracelet, substantially as herein shown and described.

2. A sliding-guard, in combination with a bracelet, as described.

111,490.—Churn.—William W. Stilwell, Oxford, Wis.

Claim.—1. The fan-shaped dashers P P, arranged spirally on a dasher-shaft, beveled downward on one side and hollowed out on their under sides, with orifices *i i* through the top, all substantially as and for the purposes herein set forth.

2. The arrangement of the shaft N, swivel *h*, and slotted key *c*, substantially as shown and described.

3. The combination of the tub A, partition B, water-reservoir C, funnel D, faucet K, fan-shaped dashers P P, and the mechanism herein described for operating said dashers, when all the parts are constructed and arranged substantially in the manner and for the purposes herein set forth.

111,491. — Carriage-Body. — Chauncey Thomas, Boston, Mass.

Claim.—1. A carriage-body formed of one sheet of metal, and in which the sides are bent into shape without cutting the metal, substantially as described.

2. A carriage-body having its sides corrugated into form, substantially as shown and described.

3. In a carriage-body with corrugated sides, the depressions at the top of the sides to receive the cap-piece.

111,492. — Vehicle. — Chauncey Thomas, Boston, Mass.

Claim.—1. The whiffletree, arranged at the rear of the front axle-tree.

2. The arrangement of the whiffletree upon a pivot, substantially in line with the axis of the draw-bolt.

3. The combination, with the whiffletree, of the curved steadying and presser-spring *k*, substantially as and for the purpose specified.

4. The relative arrangement of the front supporting-irons *a a*, cross-bar *b*, transverse front elliptic spring *c*, and upward-bent front axle *h*, substantially as shown and described.

5. The bent irons *a a*, secured to the cross-bar, and terminating with a step, *l*, and having an intermediate step, *m*, the steps being arranged substantially as shown and described.

111,493. — Stove-Grate. — William S. Thomas, Kendallville, Ind.

Claim.—1. As a new article of manufacture, the grate for wood-stoves herein described, composed of the frame B, having supporting-feet, and the grate A, which is hinged to the former at *a a*, near one side, and constructed with slots a^1 a^1, to permit of the attachment of extension sections, substantially as set forth.

2. The combination of the frame B, grate A, constructed with slots a^1 a^1 and hinged to the former at *a a*, and extension sections C, provided with downwardly-projecting bent bars C′, for attachment to the main grate to form an extension-grate for wood-stoves, substantially as set forth.

111,494.—Chair. — Cyrus Tucker, Terre Haute, Ind.

Claim.—1. The yielding back D of a chair, pivoted to the seat thereof, and having springs connecting the two parts above named, so arranged that the back will automatically pass forward of a vertical line, and thus accommodate itself to the position of the occupant, substantially as set forth.

2. The within-described chair, consisting of an automatically-adjustable or yielding back, in combination with the vertically-adjustable seat, substantially as and for the purpose set forth.

3. The combination and arrangement of the back D, seat C, sockets C′ C′, and springs E E, substantially as and for the purpose set forth.

111,495.—Truss.—Cornelius C. E. Van Alstine, New Haven, Conn.

Claim.—The combination of a chambered pad, F, with a bearing, *b*, upon which rests the helical spring, provided with the seat *c*, the movable plate H, fixed plate L, and the double convex plate or head I between the said two plates, the said head I provided with a stud or screw, E, for attachment to the arm of a truss, substantially in the manner herein set forth.

111,496.—Machine for Preparing Wood-Pulp. — Michael Waissnix and Alois Waissnix, Reichenau, and Carl A. Specker, Vienna, Austria.

Claim.—The drying apparatus for wood-pulp, consisting of an endless apron, a suction mechanism, and one or more roller-presses, all constructed and operating substantially in the manner set forth.

111,497.—Fly-Exterminator.—Amasa K. Walker, Hampden, Me.

Claim.—The net *a*, in combination with the cup *c* and receptacle *en*, as specified.

111,498.—Mode of Laying Pipes across Rivers.—John Frothingham Ward, Jersey City, N. J.

Claim.—1. The within-described mode of laying light cast-iron pipes, having ball-and-socket or other flexible joints, across rivers, creeks, &c.; that is to say, by connecting together length after length on a barge or other floating object, lowering the lengths therefrom, permitting one length to come in contact with the socket of the adjoining length, and causing the barge to recede as the lengths are added, all as set forth.

2. A barge or barges or other floating structure, provided with a cradle, and otherwise constructed, for laying pipes, substantially as described.

111,499.—Door-Lock.—John Welsh, Canton, Ohio.

Claim.—The spindle J, provided with one or two

knobs, D E, in combination with the door or drawer-lock A B C, said spindle having the key-hole *e* formed through the center thereof, and the outer half of the knob or knobs being arranged to turn on the half connected with the spindle, substantially as and for the purpose specified.

111,500. — REPEATING FIRE-ARM.—Luke Wheelock, New Haven, Conn., assigno to the Winchester Repeating-Arms Company, same place.

Claim.—1. The combination of the breech-pin E and lever G, constructed with the shouldered portion G', the arm or arms A, and connecting-rods *t*, for the operation of the breech-pin, substantially as set forth.

2. In combination with the breech-pin E, constructed with the shoulder *e*, the lever G, provided with the cam H^1 and the lock-bolt H, operating to secure the breech-pin, substantially in the manner set forth.

3. In combination with the cylinder I, arranged upon or so as to form the bearing of the lever G, the slide *r* arranged upon the said lever G, and the arm or arms A provided with the bar A', a locking device substantially such as described, and arranged to operate during the passage of the said bar A' over the said slide *r*.

4. In combination with the cylinder I, arranged upon or so as to form the bearing of the lever G, the slide *s* arranged upon the said lever G, and the arm or arms A provided with the bar A', the lever L, and carrier-block D, arranged to operate the said lever L during the passage of the said bar A' over the said slide *s*, substantially as set forth.

111,501.—BOLT-REEL.—Benjamin Clayton White, Des Moines, Iowa.

Claim.—1. The combination of the bolting-cloth, the single ribs B, and the double rib B^1 B^2, when said parts are constructed and arranged together in the manner herein shown and described.

2. The improved arrangement of the metallic bands A A, the ribs B B and B^1 B^2, the bolting-cloth, and the friction-rollers *b b*, when all these parts are constructed as shown and described, for the purpose set forth.

111,502.—HARNESS SADDLE-TREE.—Philip H. Wiedersum, New York, N. Y.

Claim.—1. The cantle-plate B, provided with the square box *k*, as and for the purpose set forth.

2. In combination with the cantle-plate B, provided with the square box *k*, the rib *r*, as and for the purposes set forth.

111,503.—MECHANICAL MOVEMENT.—Jacob Woolf, Burr Oak, Mich.

Claim.—1. The bearing R S *a'* in combination with the levers I, wheel E, cranks G, and eccentric annular weight H, one or more, adapted to operate as described.

2. The stationary crank-shaft C, bent, as shown at *c*, in combination with the standards A A', levers I, cranks G, wheel E, and weight H, as described.

111,504.—MANUFACTURE OF STEEL, STEELY IRON, AND HOMOGENEOUS OR CRYSTALLINE IRON.—James D. Whelpley and Jacob J. Storer, Boston, Mass.

Claim.—1. The improved process herein described for converting wrought-iron into steel, steely iron, and homogeneous and crystalline metal, consisting in subjecting wrought-iron, on the hearth of a reverberatory furnace, to a flame of high temperature and reducing or carbonizing character, so as to fuse the same, substantially as described.

2. The method described for reducing or fusing bar or wrought-iron by charging it on a hearth of a reverberatory furnace, and subjecting it to a flame produced by bringing together a combined jet of hot air, and hot gas, and pulverized fuel, in the manner and for the purposes substantially as described.

3. The combination, with a hearth of a reverberatory furnace, of jets or openings so arranged as to project into the furnace, and over or upon the charge therein, a combined current of hot air and hot carbonaceous gas, with or without pulverized fuel.

4. The apparatus and combinations, substantially as described, for obtaining the results herein specified.

REISSUES.

4,242. — REFRIGERATOR. — Joseph Hyde Fisher, Chicago, Ill.—Patent No. 49,09[illegible], dated August 1, 1865.

Claim.—1. The warm-air flue or passage F leading from the top of the preserving-chamber C in the upper part of the ice-chamber B, in combination with the separate cold-air flue or passage *c* leading from the ice-chamber to a point in the preserving-chamber a little below the exit-level of the flue F, whereby a space is left for the warm air above the influence of the entering cold air, for the purposes hereinbefore described.

2. The construction of cooling and drying apparatus for preserving meat, vegetables, &c., whereby the cooler air after passing over or through the ice in the upper ice-chamber shall enter the lower or preserving-chamber above the level at which the meat, &c., are to be placed, and a little below the opening for the ascent of the warmer air, and by a separate passage or passages from the warmer air, for the purposes hereinbefore described.

4,243. — RUBBER ROLL FOR CLOTHES-WRINGERS.—James B. Forsyth, Boston, Mass.—Patent No. 59,798, dated November 20, 1866.

Claim.—As a new article of manufacture, a rubber roller, whose interior is composed of vulcanized rubber mixed with fibers, when the fibers are arranged substantially as above described.

4,244.—MANUFACTURE OF INDIA-RUBBER ROLLERS.—James B. Forsyth, Boston, Mass.—Patent No. 59,580, dated November 13, 1866; reissue No. 2,589, dated May 7, 1867.

Claim.—1. As a new article of manufacture, a rubber roller, constructed substantially as described, whose interior portion consists of rubber made semi-elastic by either or both the methods above described.

2. The process above described of making rollers, consisting in forming the roller of two rubber compounds, such as are above described, one for the interior portion and the other for the exterior portion of the roller, and curing or vulcanizing them at a heat suitable for vulcanizing soft rubber, all as and for the purpose specified.

4,245.—THRASHING-MACHINE.—Hugh Hanna, Pittsburg, Pa.—Patent No. 84,546, dated December 1, 1868.

Claim.—1. In a machine for thrashing grain, a reversible beater-reel, constructed substantially as described, provided with removable beater blades whose forward or working faces are arranged at an acute angle relative to a line radiating from the axis of said reel, as and for the purpose specified and set forth.

2. In combination with a thrashing-reel, constructed, arranged, and operating as above described and claimed, a concave, in one or more sections, and susceptible of being adjusted with relation to said reel, as and for the purpose hereinbefore described.

4,246. — REGISTERING TICKET-PUNCH.—Austin D. Hoffman, Chicago, Ill., assignor, by mesne assignments, to James H. Small, Buffalo, N. Y.—Patent No. 100,036, dated February 22, 1870.

Claim.—1. The combination, with a ticket-punch, [illegible] a bell, connected with the moving parts of the [illegible] so as to be rung each time the latter is operated, substantially as and for the purpose hereinbefore set forth.

2. The arrangement, in a ticket-punch, of the jaw A, bell F, bell-hammer *e*, bell-crank *f*, push-rod H, and jaw B, so as to operate as hereinbefore shown and described.

3. The combination and arrangement, with the handles A B of a ticket-punch, of the spring-pawl I, ratchet-wheel M, and a registering device, as hereinbefore set forth.

4. The combination, in a ticket-punch, of the box K for the cuttings, with a registering device, which shall indicate the number of times the jaws are actuated, substantially as hereinbefore set forth.

5. The combination, in a ticket-punch, of a bell, a registering device, and a box to receive the cuttings, arranged so as to operate as hereinbefore set forth.

4,247.—Division A.—CENTRIFUGAL SUGAR-DRAINING MACHINE.—Hugh W. Lafferty and Robert Lafferty, Gloucester City, N. J.—Patent No. 88,185, dated March 23, 1869.

Claim.—1. The annular oil-cup D, when so combined with the spindle A as to support and inclose the bearings thereof, substantially as set forth.

2. An enlarged waste-oil cup T, having a contracted rim or neck, and combined with the spindle or shaft of a centrifugal machine, substantially as herein set forth.

3. India-rubber or other elastic packing interposed between the supports of a centrifugal machine and the beams or base to which it is attached or from which it is supported, substantially as herein set forth.

4. The combination of a cone friction-pulley, M I, with the driving-spindle A of a suspended centrifugal machine, substantially as and for the purpose herein set forth.

5. The within-described combination and arrangement of the friction-pulley M N of the spindle A, the driving-pulley S, and connecting-band O, for the purpose herein specified.

4,248.—Division B.—CENTRIFUGAL SUGAR-DRAINING MACHINE.—Hugh W. Lafferty and Robert Lafferty, Gloucester City, N. J.—Patent No. 88,185, dated March 23, 1869.

Claim.—A corrugated or grooved metallic plate, arranged and combined substantially as herein described, with suitable top and bottom plates to inclose and to form the sides of the draining-basket of a centrifugal machine, as and for the purpose herein set forth.

4,249. — SHAWL. — Martin Landenberger, Philadelphia, Pa. — Design No. 4,233, dated July 19, 1870.

Claim.—1. The within design for shawls, substantially as herein set forth.

2. The checkered, the spotted, and the plain stripes of a shawl, combined substantially as set forth.

3. The spotted or speckled, zigzag, and checkered stripe in combination with the plain stripe, as herein set forth.

4,250. — SLIDING STOP-VALVE.—Henry G. Ludlow, 2d, Troy, N. Y., assignor to Ludlow Valve-Manufacturing Company, same place.—Patent No. 33,309, dated September 17, 1861.

Claim.—1. In a sliding stop-valve, the gate B, made separate from the wedge or wedges C *d*, as described.

2. In a sliding stop-valve, the wedge or wedges C *d*, made separate from the gate B and stem D, as described.

3. The combination of the gate B, stem D, and wedge or wedges C *d* in three or more separate parts, whether the stem be connected directly with the gate or wedge.

4. The gate and wedge, connected or united to each other so as to allow the wedge to play loosely upon the back of the gate and have a movement independent of the gate, essentially as described.

5. The bearing *n* between the gate and wedge, for the purpose of allowing the wedge to rock or accommodate itself to the gate and inclined surface or surfaces, as described.

6. In a sliding stop-valve, the combination of the gate B, the wedge or wedges C *d*, the incline or inclines *c*, the bearing surface *n*, the recess *h*, projection *k*, and the inlet- and outlet-openings *a* and *e* of the valve-case, constructed and operating essentially as described.

4,251. — HARVESTER.—Henry Waterman, Williamsburg, N. Y.—Patent No. 13,512, dated August 28, 1855; extended seven years.

Claim.—1. The combination of the two sets of knives described, with the cutter-bar having a curvilinear motion, as set forth.

2. The shifting-cradles, substantially as described, mounted on the frame or platform of a reaping-machine, and placed across it so as to be parallel, or nearly so, with the cutter-bar, and so arranged, as described, that when one of them is liberated to discharge a gavel of grain another shall take its place to catch the grain that is next to be cut, as set forth.

3. The flexible deflector, constructed and operating as set forth.

DESIGNS.

4,613. — DESSERT-SET. — Charles Casper, Meriden Conn., assignor to the Meriden Silver-Plate Company, same place.

Claim.—The design for a dessert-set, as herein described and shown.

4,614. — DESSERT-SET. — Charles Casper, Meriden, Conn., assignor to the Meriden Silver-Plate Company, same place.

Claim.—The design for a dessert-set, as herein described and shown.

4,615. — PLOW-CLEVIS. — John M. Cook, Marion, Ind.

Claim.—The design for a plow-clevis, herein described.

4,616.—SEWING-MACHINE SAMPLE-TRUNK.—Frederick S. Fahnestock, Chicago, Ill.

Claim.—The design for a sewing-machine sample-trunk, as herein shown and described.

4,617.—CORSET.—David H. Fanning, Worcester, Mass.

Claim.—The design for corsets, substantially as shown and described.

4,618.—CASTER-BOTTLE.—Joshua B. Graves, New York, N. Y.

Claim.—The design for a caster-bottle, as shown.

4,619.—BOTTLE-STAND.—Cyrus H. Latham and George D. Dudley, Lowell, Mass., assignors to Woods, Sherwood & Latham, same place.

Claim.—The design for a bottle-stand, substantially as shown in the accompanying photographic drawing.

4,620.—SODA-FOUNTAIN.—George F. Menchham, Newton, assignor to James W. Tufts, Medford, Mass.

Claim.—The design for the casing of a soda-water apparatus, herein shown and described.

4,621.—SUSPENDER-LINK.—Edwin Oldfield, Norwich, Conn.

Claim.—The design for a suspender-link, above described.

4,622.—THREAD AND NEEDLE-CASE.—Theodore R. Timby, Saratoga, N. Y.

Claim.—The design for a thread and needle-case, as herein represented and described.

TRADE-MARKS.

146.—MOLASSES-GATE.—George S. Lincoln & Co., Hartford, Conn.

147.—MEN'S CLOTHING.—Edward T. Steel & Co., Philadelphia, Pa.

EXTENSIONS.

JAMES P. CRAMER, of Schuylerville, N. Y.—Letters Patent No. 16,364, dated January 6, 1857.

"Improvement in Cultivator-Teeth."

Claim.—My improved cultivator-tooth, composed of a properly-shaped sheet-metal blade and shank, with an iron head cast upon the shank and embracing its outer and inner surfaces in such a manner that the said blade, shank, and head of the tooth will form but a single piece, substantially as herein set forth.

IRA GILL, of Walpole, Mass.—Letters Patent No. 16,426, dated January 13, 1857.

"Improvement in Machines for Forming Hat-Bodies."

Claim.—The forming of a hat-body within an inclosed chamber, in which a vortex is produced by means substantially such as described, said chamber diminishing in area from its open to its closed end to regulate the draught through it, and to avoid counter currents, eddies, or dead space, as set forth.

Also, in combination with the cone, on which the hat-body is formed, a register or draught-regulator within it, so as to regulate the quantity of fur or other material that is to be gathered upon its upper and lower portions, as set forth.

JOHN G. VAUGHAN, of Middleborough, Mass.—Letters Patent No. 16,425, dated January 13, 1857.

"Improved Mode of Lathing and Plastering."

Claim.—Plastering ceilings or other surfaces on lathing formed and secured so as to leave interstices between them, with parallel sides oblique to the surface of the plastering when put on, substantially as and for the purpose specified.

ISSUE OF FEBRUARY 7.

PATENTS.

111,505.—COFFEE-POT.—Niven Agnew, Delaware, Canada.

Claim.—In combination with a coffee-pot or vessel for making coffee, the percolating-cups B and C, condenser E, and tube F, arranged and operating substantially as and for the purposes herein shown and described.

111,506.—ADJUSTABLE SHUTTLE-BINDER.—Nicholas J. Allen and James C. Moody, Brunswick, Me.

Claim.—The combination, with the binder *b*, of the bolt *c*, socket *d*, eccentric piece *e*, and flange A all arranged and operating as described.

111,507.—SPARK-ARRESTER.—Thomas A Andrews, Jr., Philadelphia, Pa.

Claim.—The combination of the casting *f*, th series of dish-shaped or flanged plates *c*, *d*, and and the open cover *m*, and removable top *g*, in th manner and for the purpose substantially as s forth.

111,508.—FENCE.—Hugh M. Barber, Frank lin Station, Ohio.

Claim.—An improved fence, formed by the com bination of the metallic posts A B *b'* C, construct ed as described, boards D, and keys E, with eac other, substantially as herein shown and describe and for the purpose set forth.

111,509.—FAUCET.—Thomas W. Bartholo mew, New York, N. Y.

Claim.—As an article of manufacture, the con ical, truncated rubber bush or thimble A, mad of gradually-increased thickness from the smalle to its larger end, whereby it is adapted to be ap plied to a faucet, substantially as specified.

111,510.—CORN-PLANTER.—Leander Beck er, Jackson Township, Pa.

Claim.—1. The lever F, connecting-rod E, s shaped bar or lever *e*, journal-box d^2, pinion an axle *d*, and pinion d^1, all combined, constructed and operating as and for the purpose set forth.

2. In combination with the above, the bifurca ed connecting-bar D and agitator-bars C C, arrang ed to operate substantially as and for the purpos described.

3. The lever F, in combination with the pivote transverse bar G, perforated connecting-bars I and standards K K, with teeth i^1 and corn-drill i^2 constructed and operating substantially as and fo the purpose set forth.

4. The combination of the pivoted blocks or bar H H, staples H' H', and springs *h h* with the per forated connecting-bars I I of the cultivator-stand and drag-bars K K, substantially as and for th purpose described.

111,511.—APPARATUS FOR OILING FELLIES SPOKES, &c.—Priscus E. Bomby, Espy Pa.

Claim.—The trough, constructed with the up right iron post slotted for the adjusting of th wheel, for oiling fellies, spokes, and hubs, as spec fied.

111,512.—LAMP FOR COAL-OIL STOVES.—John Bowles, Augusta, Ga., assignor t himself and Samuel Bard, same place.

Claim.—1. Arched recesses formed as herein de scribed upon the outer side of the water-pan H and terminating in extended tubes projecting up wardly from the arches on the upper side thereo for the purpose of covering and embracing th wick-tubes of the lamp and the toothed wheels an rods operating its wicks, and to permit the water pan to rest immediately upon the lamp, the wheel being arranged and combined substantially a herein set forth.

2. The combination of jackets K K of absorben material with the outer surface of the arches an tubes projecting from the bottom of the water-pan to cover the same, substantially in the manner an for the purpose herein set forth.

3. One or more vertical transverse partition plates, *c*, secured in the wick-tubes of a lamp fo coal-oil stoves parallel to the ends of said tubes so as to divide the wide wicks usually employe therein into two or more sections, substantially in the manner and for the purpose herein set forth.

4. A spring or pawl, F, so combined with the wick-tube of an oil-lamp as to engage the teeth o the ratchet-wheel operating the wick therein when the wick is not interposed between them all substantially as and for the purpose herein se forth.

1. The combination of a cam, *g*, with the spring F, engaging the ratchet-wheel of the wick-tube, of a lamp, and with an operating-rod, G, all substantially as and for the purpose herein set forth.

111,513.—OSCILLATING BALANCE STEAM-VALVE.—John C. Bromley, Rock Island, Ill.

Claim.—The arrangement and application of the bracket Q, set-screw M, stuffing-box H, and adjustable nut N, attached to the balance plate G, as and for the purpose set forth.

111,514.—PAPER-COLLAR BOX.—Lee Churchill, Troy, N. Y.

Claim.—As a new article of manufacture, a paper-box, cut or stamped in one piece from a sheet of card-board or paper, and shaped and folded, substantially in the manner, by the means, and for the purposes herein described and specified.

111,515.—HINGE FOR GATES.—Charles B. Clark, Buffalo, N. Y.

Claim.—The coupling-bolt E of a gate-hinge, having the portion which passes through one of the knuckles reduced in diameter the length of the knuckle, so as to form a shoulder, *e'*, arranged and operating with the knuckles of said hinge, to prevent the uncoupling thereof, as hereinbefore set forth.

111,516.—BROILER.—Levi H. Colborne and David H. Lowe, New York, N. Y.

Claim.—1. The part A, made with a groove or channel, a^1, and provided with a handle, a^3, lip or spout, a^2, and lug a^4, substantially as herein described, to adapt it to serve as a stand and gravy receptacle for the broiler, as set forth.

2. The pivot D, in combination with the hinged parts B C, to adapt them for attachment to a stand, A, as and for the purpose set forth.

3. An improved broiler, formed by the combination of the parts A B C, said parts being constructed and operating substantially as herein shown and described, and for the purposes set forth.

111,517.—COOKING-STOVE.—John B. Crowley and Addis E. Chamberlain, Cincinnati, Ohio, assignors to Chamberlain & Co., same place.

Claim.—1. The flues E E' and F, arranged substantially as described, whereby the inflowing air is heated on its passage to the fire-chamber, as set forth.

2. The extension-pan or plate C, having its front flange L resting on the vertical plates of the stove-body, substantially as described.

3. The extension-pan or plate C, having its side flanges N projecting laterally beyond the vertical sides of the stove, substantially as and for the purpose set forth.

111,518.—SELF-CLOSING COCK.—William Dalziel, New York, N. Y.

Claim.—1. The cock, provided with a piston and valve, which are operated by a small portion of the liquid passing through the cock for automatically closing the same, as set forth.

2. The pipe A, divided by a partition, *b*, into two channels, *f* and *g*, connected by an aperture, *e*, which can be closed by a valve, substantially as herein shown and described.

3. The pipe *c*, leading from the main pipe A to the cylinder C, for conducting water to the piston which closes the valve, as set forth.

4. The cock B, constructed with two sets of openings, one for discharging water from the pipe A, and one for emptying the cylinder C, substantially as herein shown and described.

111,519.—CLOTHES-DRIER.—Alfred Day, Skowhegan, assignor of one-half his right to Francis Lyford, Augusta, Me.

Claim.—1. The T-shaped slide, in combination with the collar *g* and grooved standard A *a*, when constructed, arranged, and operated substantially as and for the purpose set forth.

2. The combination of the slide *i*, collar *g*, grooved standard A *a*, the cap *b*, folding and revolving arms *c*, braces *h*, lines *f*, the cord *k*, and pulley *l*, all constructed, arranged, and operating substantially as herein described.

111,520.—ASPHALT CEMENT FOR PAVEMENTS, DRAIN-PIPES, &c.—Edward J. De Smedt, New York, N. Y.

Claim.—The combination of hydrated lime, roasted brick-clay or pulverized soft brick, with heavy petroleum or the residue of the same, and Grahamite or Ritchie mineral, with natural asphalt and sand, gravel, or an equivalent substance, all treated in the manner substantially as and for the purposes set forth.

111,521, antedated January 28, 1871.—MAIL-BAG FASTENING.—D. Franklin Dodge, Lowville, N. Y.

Claim.—The combination of a jointed frame, B, hasp E, jointed lever F, bolt G, staple *h*, and catch *i*, constructed and arranged substantially as above described.

111,522.—CARRIAGE-CURTAIN KNOB.—William B. Douglass, Newark, N. J., assignor to Frederick Baumgartner, Brooklyn, N. Y.

Claim.—The new article of manufacture of a carriage-curtain knob, consisting of an elongated head, a neck, which joins said head at a point nearer to one end than the other, and a shank, substantially as and for the purposes herein specified.

111,523.—MACHINE FOR WARPING YARN.—George Draper, Hopedale, Mass.

Claim.—1. In combination with a warper, a mechanism substantially as described, or its equivalent, for running the warp-cylinder at a fixed uniform rate of speed, such as will enable the slack of the yarns to be taken up and the spools started before putting into operation the mechanism for running such spools at their normal or much faster speed, all being essentially as hereinbefore explained.

2. In combination with the fast-and-loose pulleys F G of a warper, and their train of gears C D for operating the main cylinder-shaft B, the auxiliary train of gears *a b e f* to operate with such main train, and to be operated by the loose pulley, by means and in manner substantially as described.

3. In combination with the fast-and-loose pulleys F G, and the main and auxiliary trains of gears C D *a b e f*, their belt-shifters H *h*, and the shouldered holder *k*, the spring *n*, and the stud *o*, applied to the main and auxiliary belt-shippers, such stud and spring being to operate as and for the purpose as explained.

111,524.—SASH-HOLDER.—Henry W. Drott, Cumberland, Md.

Claim.—The cross-headed bar D, rubber E, springs B, and cam-lever F, constructed, combined, and operating as herein set forth.

111,525.—FUNNEL.—Lester P. Edwards, Hamlinton, Pa.

Claim.—A funnel for filling fruit-cans in the process of canning fruit, which screws on the top of the can, and is provided with holes for the escape of the air, substantially as shown and described.

111,526.—WATER-HEATER FOR STEAM-BOILERS.—David C. G. Field, Lowell, Mass.

Claim.—1. The position of the heater in and over the boiler-flue, in order that the advantage of the use of the exhaust-steam may be combined with the use of the heat which has passed the boiler and

would go to the chimney if not thus utilized, as described.

2. The combination and arrangement of the heater B with the boiler A, (said heater being placed over and within the flue G,) and the pipes connected therewith, substantially as described, and for the purpose specified.

111,527.—STEAM-GENERATOR. — Loyal C. Field, Galesburg, Ill.

Claim.—1. The conical-shaped elevation E on the grate d, when arranged to operate with said grate and rings, A, substantially as described and for the purpose specified.

2. The arrangement of base D, rings A A′, and partial ring A″, constructed as described, with flanges B, and united by bolts K, dome C, and casing G, all as and for the purpose substantially as set forth.

111,528, antedated January 25, 1871.—BEDSTEAD-FASTENING. — Sebastian Goetz, Reed's Mills, Ohio.

Claim.—1. The box or frame A, provided with the curved or concave sides a a and end b, holes c c, and inclined projections d d d, when constructed as described and for the purpose specified.

2. The semicircular ring B, provided with the pins f, as and for the purpose herein described.

3. The combination of the box or frame A with the semicircular ring B, when both are constructed as herein described, for the purpose specified.

111,529.—INVERTIBLE TROUGH. — Francis J. Goldsmith, Concord, assignor of one-half his right to Peter F. Young, Painesville, Ohio.

Claim.—The invertible trough, A, said trough having the flattened journals C C on each end, substantially as and for the purpose hereinbefore set forth.

111,530.—FEED-GRINDER. — Myron Gore, Ottawa, Ill.

Claim.—1. The running ring D, cut alike on both sides, with ribs g h on a smooth surface, and the grooves i i, substantially as and for the purposes herein set forth.

2. The stationary ring H, (or H′,) cut, as described, with circular grooves e e and curved ribs f f, and used in combination with a running ring, substantially as and for the purposes set forth.

3. The head C, secured on the shaft B, and provided with arms a a, in combination with the grinding-ring D, substantially as set forth.

4. The movable arbor E, with head G and ring H, in combination with the movable hopper I and ring H′, all constructed and arranged, as specified, to be operated by means of the lever K and arms J J′, or other suitable means, substantially as and for the purposes herein set forth.

111,531.—LAMP.—Franklin T. Grimes, Liberty, Mo.

Claim.—1. The combination and arrangement relatively to each other of the main reservoir A, the secondary reservoir or wick-chamber B in the base of the lamp, the tubular connection or connections b, and the air-tube or passage E, substantially as specified.

2. The combination of an automatic valve or valves, d d′, with the tube or tubes b, the reservoir A, and the wick-chamber B, for operation essentially as and for the purpose or purposes herein set forth.

3. The application of an automatic valve f f to the reservoir of a lamp, so constructed that air is admitted to the reservoir A when the lamp is in use, and the orifice closed when it is inverted, substantially as specified.

4. The arrangement of the safety water-chamber F relatively to the air-tube or passage E and oil-reservoir A, essentially as shown and described.

111,532.—MACHINE FOR BORING POSTS.—Jesse R. Group, Idaville, Pa.

Claim.—In a boring-machine, the combination of the lever R, operating the auger-stock P, the friction-bar R¹, operating in its return motion as a friction brake against the pulley N³, substantially as and for the purpose described.

111,533. — LEATHER-PUNCHING AND CUTTING-MACHINE.—Emery E. Hardy and Napoleon Dubrul, Joliet, Ill.

Claim.—1. The combination of the feed-rollers D′ and E′, operating at intervals, with the reciprocating-shaft or arm G and hollow punch l, substantially as specified.

2. The combination of the adjustable bed plate n with the adjustable stripping-plate I and reciprocating-punches l, substantially as described.

3. The bed-plate n supported by the screws u or their equivalents, capable of being adjusted independently of each other, to adapt the bed-plate to the varying lengths of the different punches, substantially as described.

4. The combination of the intermittingly-moving feed-rollers D′ and E′, with the reciprocating hollow punch l, stripping-plate I, and bed-plate n, substantially as described.

5. The combination of the grooved rollers D and E with the knives m, secured in the frame K, one of said rollers being mounted in the yielding frame H, to allow it to adapt itself to the different thicknesses of leather and bear with uniform pressure thereon, substantially as set forth.

6. The arrangement of the punching devices and the slitting devices, with their operating mechanism, upon the same frame, in such relation to each other that both operations of punching and slitting may be performed simultaneously, substantially as set forth.

111,534.—CARTRIDGE-SHELL EJECTOR FOR REVOLVING FIRE-ARMS. — Gilbert H. Harrington, Worcester, Mass.

Claim.—The ejector E, having a swinging and sliding movement around a forward extension of the center-pin P, substantially as and for the purpose herein described.

111,535. — WATER-PROOF PIANO-COVER.—Henry F. Herkner, New York, and Jared W. Post, Brooklyn, N. Y.

Claim. — A new article of manufacture, a seamless water-proof piano-cover, produced in the manner and by the means substantially as set forth.

111,536.—HYDRAULIC APPARATUS.—George H. Herring, Durand, Ill.

Claim.—1. A pump, the piston of which is operated in its down-stroke by the weight of water in a tank connected or supported on the piston-rod, said tank being provided with a valve so arranged as to be opened by coming in contact with a projection, c, to cause said tank to discharge its contents into a well or reservoir, in combination with a counter-balance, by which said piston is raised when the contents of the tank are discharged.

2. Combination and arrangement of the tank B, provided with a valve, b, [illegible]mp G, and its piston F, cord or chain C, [illegible]D, counter-balance E, and flume-gate d, [illegible]tion as herein described.

111,537.—ÆOLIAN CHIMING-BELL.—Heinrich Herrmann, New York, N. Y.

Claim.—1. In æolian chiming-bells, the clapper E, formed of a quill, provided with a light knob, c, as described.

2. The combination, with a glass chiming-bell, of the light-knobbed quill clapper, as and for the purpose described.

3. The light-knobbed quill clapper of a chiming-bell, combined with a feather at the end thereof, as and for the purpose described.

111,538, antedated January 30, 1871.—DOUBLE-ACTING ROTARY ENGINE.—James P. Herron, Atlanta, Ga.

Claim.—1. The wheel C, having inlet-channels g to receive steam through the hollow shaft D, and exhaust-channels h to discharge steam near its center, in combination with a wheel, B, provided with piston-headed grooves for the purpose of causing one wheel to turn by impact and the other by reaction, substantially as set forth.

2. The wheels B and C, both provided with piston-headed grooves operating in combination, substantially as described, for the purpose of allowing steam or air to assist in turning both wheels by expansion, as set forth.

3. The construction and arrangement of the packing-block F, operating substantially as described and shown.

111,539, antedated February 1, 1871.—APPARATUS FOR TRANSMITTING POWER AND CHANGING THE SPEED.—Spencer Hiatt, Clayton, Ind.

Claim.—1. The bevel-wheels F, G, and H, arm I, and shaft C, cone-pulleys D and D′, pulleys E and E′, and belts K and L, arranged and operated substantially as and for the purpose hereinbefore set forth.

2. The lever Q, rock-shaft M, cam O, brake N, and catch-bar R, arranged and operated as and for the purpose hereinbefore set forth.

111,540.—SCAFFOLD.—Samuel Hollabaugh and Thomas W. Letts, Mount Union, Pa.

Claim.—The improved scaffold herein described, composed of the rock-posts A B C, adjustable legs or arms P P, double platform D K, ladder Q, and pinions N N, all constructed and arranged in the manner shown and described.

111,541, antedated January 26, 1871.—SHOE FOR THRASHERS. — Dennis W. Hollihan, San Francisco, Cal.

Claim.—1. The side plate or rim v′, provided with the slotted lug-plates T′, as and for the purpose described.

2. The arrangement of parts hereinafter named, to wit, the frame A, the distributer B, the screens C P Q, and conveyers T U V, when constructed as described, for the purpose set forth.

111,542.—AUTOMATIC STEAM WATER-ELEVATOR. — Charles Houghton, Roxbury, Boston, Mass.

Claim.—1. In combination with the pump-cylinder A, the water supply-pipe I, the steam-pipe F, and a steam-generator, so located as to be subjected to the action of the fire in a cooking or heating apparatus, and of sufficient capacity to contain at all times a quantity of water large enough to make steam for more than one full discharge of the pump-cylinder, when arranged so that the supply of water in the generator will be replenished intermittently, in the manner and by the means described, for the purpose set forth.

2. The poppet-valves E′ and J, located and arranged as described, in the condense-pipe E and in the water supply-pipe I, as and for the purpose specified.

3. In connection with an automatic steam-pump worked by steam generated in a cooking or heating apparatus, and a tank in which water is heated by circulation established by heat from such apparatus, the employment of a three-way cock, arranged and located as described, for the purpose specified.

4. In connection with the cylinder A of an automatic steam-pump, the perforated or wire-cloth inlet-pipe in the cylinder, substantially as described, for the purpose specified.

5. The combination with an automatic steam-pump, as described, the arrangement of the hot-water boiler G, as shown and described, as a source of supply of water for the steam-generator, as set forth.

111,543.—WHEEL AND AXLE FOR RAILWAY-CARS.—Wescom Hudgin, Athens, Ga.

Claim. — The sleeve C, having right-and-left screw-threads formed upon its ends to screw into the inner ends of the hubs of the wheels A, in combination with the wheels A and axle B, substantially as herein shown and described, and for the purpose set forth.

111,544.—CLOVER-HARVESTER.—John W. Hull and Albert G. Stiffler, Alquina, Ind.

Claim.—The bar K, spring I, and guide-blocks K′, combined, as described, with crotched bar F, to sustain the elevation of the rake and cutter until they have been lifted over the clover-heads.

111,545. — FLOUR-SIFTER.—Curtis Huntley, Lowell, Mass.

Claim.—The combination of one or more obliquely-arranged oval plates E with a tube or quill, H, and a crank-shaft, all operating in connection with a curved screen arranged within a flour or meal-scoop, as described.

111,546.—STEERING APPARATUS.—Edward Augustus Inglefield, 10 Groves End Road, St. John's Wood, England.

Claim.—1. The cylinder q^1 q^2, containing a piston, which is connected with the tiller-lever, a capstan, a gun-turret or gun-carriage, to operate the same, by pressure applied to the ends of said piston, as specified.

2. The cylinder a, provided with jacket f^1 f^2, valves h^1 h^2, and piston b, to operate substantially as herein shown and described.

3. The cylinder n, connected with the pipes l, m, o^1, and o^2, and with the steering-wheel, substantially as herein shown and described.

4. The barrel i, applied to the cylinder n, and combined with the hollow plunger v, substantially as herein shown and described.

111,547. — MODE OF FASTENING HUB-BANDS, &c.—James Ives, Mount Carmel, Conn.

Claims.—1. The mode of securing hub-bands and other metal articles by means of blank countersinking, as described, so that the remaining thin portion of metal, when punched through, will form holding-burrs, substantially as and for the purpose described.

2. The mode of fastening in place the hub-band or other metal article by means of a nail and burr combined, the burr being formed from the remaining thin portion of metal, substantially as and for the purpose set forth.

111,548.—BATTER-POT.—Edwin A. Jeffery, New York, N. Y.

Claim.—1. The combination, with a batter-pot, of an auxiliary chamber C to contain the precise quantity of batter for each cake, when provided with the means of opening and closing communication between the two, substantially as set forth.

2. The spring-lever F and valves D and E, in combination with a spout or chamber, C, and pot A, substantially as and for the purposes set forth.

111,549.—MANUFACTURE OF RUBBER FLOOR-CLOTHS, &c.—Henry W. Joslin, Jersey City, N. J.

Claim.—1. An inlaid rubber cloth, substantially as specified.

2. The process, substantially as herein described, of making rubber cloth, having a variegated surface, by imbedding, through pressure, into a rubber-cloth base, while raw, a pattern or patterns of different-colored rubber, and afterward vulcanizing the whole.

111,550. — COUPLING FOR SHAFTS FOR MILLS.—William Kean, Chicago, Ill.

Claim.—The combination of the clutch E and screw *a* with the sleeve D, key C, and shafts A B, all arranged substantially as herein shown and described.

111,551.—PREPARATION OF PLATINUM FOR FILLING TEETH.—Edward G. Kearsing and Leonzo Kearsing, Spring Valley, N. Y.

Claim.—Platina covered with gold, for dentists' use, in filling teeth, substantially as described.

111,552.—BOILER-TUBE PLUG.—Thomas La Blanc, Philadelphia, Pa.

Claim.—1. The bisected plug C, composed of wedge-shaped parts *a b*, constructed substantially as described, and temporarily held together by pins *d* and *d'*, the piece *a* being provided with the rods D E, substantially in the manner and for the purpose set forth.

2. The combination of the adjustable arm G with the rod H, substantially as and for the purpose specified.

3. The hollow plug J, when constructed, arranged, and operating with the tube A, substantially in the manner and for the purpose set forth.

111,553. — CARPENTERS' WORK-BENCH.—Robert C. Love, Augusta, Me.

Claim.—1. The combination of the slide A, slotted bench and escutcheons, the screws *d d*, washers *f*, nuts *e*, and the means herein described for preventing the slide from falling too suddenly, all constructed, arranged, and operating substantially as set forth.

2. In combination with the vertical adjustable slide A, the horizontally-adjustable and swinging button *h*, secured by a screw and nut so as to be retained in position when adjusted, all constructed, arranged, and operating substantially as herein described.

111,554. — SPRING-BED.—Nicholas Mason, Lincoln, Mass.

Claim.—The springs H, with their plates D G and pins E, applied to the side pieces A and rails C which support the slats, when constructed to operate substantially as and for the purpose described.

111,555.—CHURN.—James McBride, Ithaca, N. Y.

Claim.—1. The arrangement of the weighted lever G, the long rod H, short rod J, staff-support L, and two-parted clasp M, acting together on the dasher K, substantially as described.

2. The arrangement of the hand-lever A, rod C, crank D, fly-wheel E, shaft F, weighted lever and crank G, rods H and I, and supports L and M, acting together and constituting my machine, substantially as described.

111,556. — THILL-COUPLING.—William B. Meloney, Smyrna, Del.

Claim.—The pivoted button D, when provided with the projection or stop *d'*, and arranged to secure the detachable bolt C *c'* in place, in connection with the thill-iron B and jaws A of the clip, as shown and described.

111,557.—HARVESTER.—James Moran, Auburn, N. Y., and Casper D. Wallace, Corry, Pa., assignors to themselves and Hiram K. Needham, St. Louis, Mo.

Claim.—1. The described combination of the hand-lever *n*, rock-shaft *l*, segments *m* and *r*, link *t*, connecting-links *p p'*, shaft *e*, rocking-block *f*, and fixed pin and roller *i k*, arranged to effect the several movements hereinbefore described by the manipulation of the single lever *n*, substantially as set forth.

2. The combination, with the tongue of a harvesting-machine, of the lever *n*, notched segment *r*, pawl *s*, link *t*, and fixed pin *u* upon the body of the machine, for the purpose of rendering the body and frame fixed or movable with relation to the tongue, substantially as set forth.

3. The pin *i* and roller *k* affixed to the frame, in combination with the hinged cutter-bar and rocking-block *f*, substantially as and for the purpose set forth.

111,558. — TONGUE FOR CHILDREN'S CARRIAGES.—Edmund A. Morse, Rutland, Vt.

Claim.—The movable thills *a a*, arranged in connection with a child's carriage, as and for the purpose set forth.

111,559. — MAT.—Peter W. Neefus, New York, N. Y.

Claim.—The elastic strips D, combined with the bars C of plate B, substantially as shown and described.

111,560. — FLOOR-CLAMP.—David Nevin, Georgetown, Colorado Territory.

Claim.—The flooring-clamp, consisting of the plate A, lugs *a b*, screw *c*, lever B, and jaw C, all applied to operate substantially as herein shown and described.

111,561. — INVALID-BEDSTEAD. — John H. Oerter, New York, N. Y.

Claim.—The hinged and jointed frame K H M, in combination with the frame G and their operating-cords and pulleys, all constructed and arranged substantially as shown and described.

111,562.—CHURN.—William Parks, Meadville, Pa.

Claim.—1. The churn-dasher herein described, consisting of the vertical bars 1 2 3 4 5, the horizontally-placed perforated wings K K, notched as at 6 7 8 9 10 11, the rounded portion S, and strainer U, all constructed as specified.

2. The above-described dasher, in combination with an oscillating churn-barrel A, substantially as set forth.

111,563.—CLOTHES-DRIER.—Asahel H. Patch, Hamilton, Mass.

Claim.—The improved hanger for clothes hereinbefore described, composed of the metallic frames A B and rods or bars connecting the same, substantially as specified.

111,564.—RATCHET-COUPLING FOR BARGES, &c. — William W. Patterson and Edmond Bishop, Pittsburg, Pa.

Claim.—The shaft A, wheel B, and lever C, provided with pawl D, combined with rods *e* and *f*, arranged and operating, with relation to each other, as and for the purpose herein described.

111,565.—ARTIFICIAL FUEL.—Benjamin F. Penny, Rochester, N. Y., assignor to Thaddeus B. Curtis, New York City.

Claim.—The mode herein specified of mixing and burning anthracite and bituminous coal-dust, as specified.

111,566. — FOUNTAIN BLACKING-BRUSH.—Albert D. Pentz, New York, N. Y.

Claim.—1. A polishing-brush, A, and supply-brush B L, combined with chambers C N arranged between them, as and for the purpose described.

2. The elastic ring O and valve U with the plate R and flexible disk S, whereby the liquid can be discharged from the fountain C by means of pressure, substantially as shown and described, and for the purposes set forth.

3. The ring H, band M, and catch P, combined, as described, with the brush B and box C, to connect them, and to form an auxiliary and intermediate chamber, N, for the purpose specified.

4. The valve-screw T, disk S, plate R, and elastic ring O, combined, as described, with the apertured box C G, and brush B L, for the purpose of graduating the flow of blacking, as set forth.

111,567. — LATCH-LOCK.—Nicholas Petré, New York, N. Y.

Claim.—In combination with the bolt C and tripping-lever E, the hinged piece or limb D and its slot *f* and pin *i*, and the spring G, moving on the incline *e*, for the double purpose of allowing the bolt to be thrown and held out of and to be returned into action with the arms F, the parts being arranged to operate substantially as described.

111,568.—WINE-SIRUP AND BEVERAGE.—Alvin Davis Puffer, Boston, Mass.

Claim.—1. Concentrated wine or beer-sirups, made as herein described, or in any way substantially the same, when used for the purposes set forth.

2. Wine or beer beverages, made by mixing soda-water with the above-described sirups.

111,569.—KILN FOR DRYING MALT.—John A. Remer, New York, N. Y., assignor to himself and Henry Assenheimer, same place.

Claim.—1. A revolving and perforated annular drier, substantially as specified.

2. The combination of inner and outer buckets *c* and *d* with a revolving and perforated annular drier, essentially as described.

3. The combination, with the gates or valves, arranged around the outer periphery of the revolving drier and with the buckets which said valves control, of mechanism for automatically opening and closing, when required, the valves as they pass under the hopper that supplies the drier, substantially as specified.

4. The combination and arrangement of the shifting device or toe *q* and mechanism for controlling the same with the revolving drier B and its valves and buckets, essentially as and for the purpose herein set forth.

111,570. — PORTABLE SWING.—Daniel M. Reynolds, Chicago, Ill.

Claim.—The combination of seat S, button *s'*, cleat *s*, and pendent rods *d d*, having a shoulder for the support of the seat when employed in a swing, substantially as described.

111,571, antedated January 23, 1871.—POTATO-DIGGER. — Richard B. Robbins, Adrian, Mich.

Claim.—1. The vibrating screen B, constructed with the lateral outlet H, in combination with the guard-fingers or fenders 9 10 11, arranged and operating as described, as and for the purpose set forth.

2. The combination with the screen B, suspended by links *s s*^{1} *s*^{2} *s*^{3}, as described, of the rigid arms or cleats *m m* and central tappet-wheel *o t*, as and for the purpose shown.

3. The fender or guard-fingers 9 10 11, attached alternately to the share and vibrating screen, as shown and described, for the purpose shown.

4. The combination and arrangement of the double beam D D' D'', constructed as shown and described, and colters *h h*, substantially as set forth.

111,572.—MACHINE FOR THREADING SCREWS.—Daniel M. Robertson, East Boston, and Jason A. Bidwell, Boston, Mass.

Claim.—The threading tool-holder I', in combination with the rock-shaft I, spring T, cam Z, and arms Y Y, arranged substantially as described.

111,573.—FERRULE.—William Henry Rodden, Toronto, Canada.

Claim.—A wrought capped ferrule B, with or without the straps E, in combination with the metallic pad D, when said ferrule is made solid in one piece, substantially as herein shown and described, and for the purposes set forth.

111,574. — THILL-COUPLING. — Lewis S. Rowe, Derby Line, Vt., assignor to himself and U. T. Sheafe.

Claim.—An improved thill-coupling, formed by the combination of the guard F *f'*, countersunk-headed bolt D, ears *a'*, rubber tube E, thill-iron C, yoke B, and clip A, with each other, substantially as herein shown and described, and for the purpose set forth.

111,575. — RIVETING-MACHINE.—William Sellers, Philadelphia, Pa.

Claim.—1. In a steam riveting-machine, the continuous closed guide, attached to and opening into the cylinder, and extending from the cylinder to the post A, and covered in by a flat plate, H, substantially as and for the purposes described.

2. The combination of the cylinder, the continuous closed guide connected therewith, the semi-cylindrical or rectangular piston-rod, and the supporting-post, substantially as described.

3. The ducts in the piston and guide, operating as described, for the purposes set forth.

4. The construction and relative arrangement of the post A, supporting the punch, the guide, the cylinder, and the piston, and the post B, holding the die, as described.

111,576.—FEATHER-RENOVATOR. — James T. Sheldon, Chicopee, Mass.

Claim.—1. In combination with the cylinders B and C and head L, the valve H, arranged and constructed in the manner and for the purpose shown and described.

2. In combination with the steam and drying-cylinders, the tubes S, constructed of rubber, and stiffened by coil-springs, in the manner and for the purpose shown.

111,577.—PORTABLE BOOK-HOLDER.—Calvin W. Sherwood, Chicago, Ill.

Claim.—The rotating handle C, standards B, and pawl *b*, in combination with the bars A A' and cord *c*, substantially as specified.

111,578.—PORTABLE FENCE.—Hector Sinclair, New York, N. Y.

Claim.—1. The locking wedge-shaped cleats and socket strips *d* and *e* or *d'* and *e'* on the uprights of the panels and posts, essentially as shown and described.

2. The combination of the rails *b b*, pivoted at their ends to the uprights *a a'* of either panel, with the locking wedge-shaped cleats and socket-strips *d* and *e e*, arranged on the outsides of said uprights, substantially as specified.

111,579.—PAPER FOR USE IN THE BOTTOMS OF BIRD-CAGES.—Jasper H. Singer, New York, N. Y.

Claim.—The paper for bird-cages, herein described, the sand or gravel being attached by a farinaceous paste, substantially as hereinbefore set forth.

111,580.—BOILER-FURNACE. — Le Grand Skinner, Chittenango, N. Y.

Claim.—The horizontal flue-boiler A, sheet-iron casing and furnace G, with non-conducting lining of fire-brick H, grate D, and sliding bridge-wall E *e*, all constructed and arranged as and for the purpose specified.

111,581. — PRINTING-PRESS. — Earle H. Smith, Bergen, N. J.

Claim.—The combination with the impression mechanism, consisting of the bed and tympan, and toggle-joint, worked from the treadle K, with the inking apparatus described, or the equivalent

thereof, when operated by the same treadle, substantially as specified, the whole constituting a direct-acting self-inking treadle printing-press.

111,582.—PULLEY.—Scott A. Smith, Philadelphia, Pa., assignor to Cresson & Smith, same place.

Claim.—In a pulley cast in one piece and afterward separated, the surfaces E E, substantially as and for the purpose described.

111,583.—TANNING. — William C. Stone, Derby Line, Vt., assignor to himself and William S. Foster.

Claim.—The improved tanning process, both as applied to the tanning of skins with the hair, fur, or wool on or removed, substantially as herein specified.

111,584. — BRAKE FOR RAILWAY-CARS.—Charles W. Tierney, Altoona, Pa.

Claim.—The lever G, connected with the jointed or flexible connection between the buffer and friction-shaft E of a car-truck, so that it will serve to control the effect of the buffer upon the said shaft, and of the latter upon the brakes, as specified.

111,585.—WASH-BOARD. — Westly Todd, Allegheny, Pa.

Claim.—A new article of manufacture, viz., a wash-board provided with the projections B and C, and with grooves arranged in the manner and for the purpose hereinbefore described.

111,586.—PRISON-LOCK.—Henry R. Towne, Stamford, Conn.

Claim.—1. The coupling G, securely attached to the inner end of lock R, when constructed with projecting ears p p, arranged to engage with suitable lugs K K, when the lock stands in either the locked or unlocked position.

2. The eccentric E, provided with bearings b b containing slots L L, in combination with the shaft F containing pins c c, the cross-head D, bolt B, and pin M, all constructed, arranged, and operating substantially as and for the purpose described.

3. The combination of the bolt B, cross-head D, shaft F, cam E, coupling G, and lock R, all constructed and arranged to operate substantially as herein described.

111,587.—PERMUTATION-LOCK.—Henry R. Towne, Stamford, Conn.

Claim.—The case A, containing apertures b b in its opposite sides, in combination with an oscillating bolt or bar B, arranged so as to close said apertures simultaneously.

111,588.—FLUTING-MACHINE. — Theodore M. Tucker, Newark, N. J.

Claim.—The rack s and pinion y, the projections v and u, spiral springs s and t, the movable frame B and its roller D, constructed, combined, and arranged as and for the purpose shown and described.

111,589.—STOVE-DRUM.—Willard Twitchell, Syracuse, N. Y.

Claim.—An indirect conduit or chamber, e, filled with iron turnings or other suitable loose material, in connection with the direct draught B' B, dampers h i, and stove A, all constructed and operating substantially as and for the purpose specified.

111,590, antedated January 26, 1871.—LUBRICATOR FOR LOOSE PULLEYS.—Stephen Ustick, Philadelphia, Pa.

Claim.—1. The chamber or chambers B on the periphery of the shaft A, formed by means of the permanent tube C and the shaft A, which forms a bearing for the eye of the loose pulley, and is constructed substantially in the manner and for the purpose above set forth.

2. The chamber or chambers B, formed by the periphery of the shaft A, and the interior periphery of the tube C, whose outer periphery forms the bearing for the eye of the loose pulley, the said tube being closed at its ends, where it is made fast to the shaft A, and having an opening for filling the chamber with oil, and egress-openings to the eye of the pulley, substantially as described.

111,591, antedated February 4, 1871.—RAILWAY-CAR BRAKE.—John E. Weaver, Lancaster, Pa.

Claim.—The arrangement and combination of the plates B, D, and E, hinged to each other, (with or without the additional hinged plate C and rubber K,) together with their sustaining springs G and F, when applied and operated substantially in the manner and for the purpose specified.

111,592. — CANDY-CUTTING MACHINE.—Christopher Wentz, Albert Green, and Orlando P. Connor, Trenton, N. J.

Claim.—1. The combination of the main wheel A, attached to shaft B and crank C, the connecting-rods D D D, forming a downward drawing motion to the knife E, substantially as herein described, for the purpose set forth.

2. The cam F, affixed to shaft B, lever a, rod b, and small lever c, operating in connection with the springs d d', as herein set forth, for the purpose specified.

3. The main cog-wheel G, rotated by the lever b and cog-wheels H, I, and K, connected with the toothed rollers, as herein shown and represented.

4. The adjustable roller K, operated by the small screws e e, as herein shown and represented.

111,593. — APPARATUS FOR DELIVERING GRAIN, ORES, &c., INTO GRINDING-MILLS.—James Davenport Whelpley and Jacob Jones Storer, Boston, Mass.

Claim.—1. The feed-screw with varying pitch, in combination with device for giving it a longitudinal adjustment, as set forth.

2. The combination of the screw X, of varying pitch, with the plates P, guides T, and spring S, all constructed and arranged as and for the purpose shown and described.

111,594.—FEED-CUTTER.—John R. Whittemore, Chicopee Falls, Mass.

Claim.—The arrangement of the iron side frames or journals E E, cast in one piece, and having journals for the rollers A B and shaft carrying the cutting-knives, and slots D D for the reception of the end of the bed-plate C, with screw-holes for the adjusting screws a a and b b that regulate the same, substantially as shown and described.

111,595.—LOOM-PICKING MOTION.—Henry A. Whitten and Elijah D. Gove, Holyoke, Mass.

Claim.—The rocker, in combination with the bed and device for adjusting the same, the parts of which are constructed and arranged substantially in the manner and for the purpose shown and described.

111,596, antedated January 23, 1871.—DROP-TUBE STEAM-GENERATOR.—S. Lloyd Wiegand, Philadelphia, Pa.

Claim.—A screw-cap for boiler drop-tubes, of uniform or nearly uniform thickness of metal, with internal projections adapted to sustain an inner tube or guide to promote circulation of water, and corresponding external depressions adapted to receive the claws of a wrench.

111,597, antedated January 25, 1871.—VELOCIPEDE.—William L. Williams, New York, N. Y.

Claim.—1. The wheel g, gearing to the wheel p upon the axle e, in combination with the levers m and r, and ratchets or clamps connected with the swinging hobby-horse, the parts being arranged and acting substantially as set forth.

2. The coupling-pinion t and gear-wheel u, in combination with the wheels p and q and connections to the swinging-horse f, the parts being arranged and acting substantially as and for the purpose specified.

3. The steering mechanism, made with cords or rods that pass above but contiguous to the axis of motion of the horse, and connect at one end to the cross-head of the steering-wheel and at the other end with the bridle or rein, as set forth.

111,598.—STEAM-HEATER.—Joseph L. Winslow, Portland, Me.

Claim.—1. A radiator, composed of two or more pipes joined at either end of said pipes, of one continuous piece of metal.

2. The annular steam-spaces f, as formed by the internal surface of the outer pipe, in connection with the outer surface of the internal pipe.

3. The method of securing the internal pipe by a single bolt, said pipe being enlarged at one end and diminished at its opposite end, at an angle to the sides other than a right angle.

111,599.—VESSEL FOR HOLDING OIL.—Arthur T. Woodward, New York, N. Y.

Claim.—The combination, with a metallic vessel, of a wooden or equivalent oil or fluid-holding vessel, arranged therein substantially as and for the purposes set forth and described.

111,600.—HYDRAULIC TURNPIPE.—Samuel Adams, Michigan Bluff, Cal.

Claim.—1. The combination of the bent pipes A and C, connected by a loose joint with the flexible pipe E and nozzle F, when arranged to operate substantially as described.

2. In combination with a bent revolving pipe, C, the standard G, screw f, and projection e, substantially as and for the purpose specified.

111,601.—WATER-WHEEL.—John P. Allen, Springfield, Ohio.

Claim.—1. In combination with a water-wheel receiving the water on the under side, the inclined guides B, when arranged between two conical rings C and D, substantially as and for the purpose described.

2. In combination with the conical guide-rings C and D, the wheel E, made with two rows of buckets connected together, the inner row being made of vertical plates to receive the water, and the outer row inclined to discharge it, with the top plate concave near its outer edge, substantially as and for the purpose set forth.

3. In combination with a water-wheel having two rows of buckets, as described, the ring F, when connected to a conical ring, D, by bars g placed immediately against the discharge of the wheel, substantially as shown and described.

111,602.—COATING BRICK, WOOD, AND OTHER SURFACES ON WALLS, &c.—Edward E. Alvord, Salt River, Mich.

Claim.—The method herein described, for the coating of brick, wood, or other surfaces with cement or plaster prepared and made by the process and substantially in the proportions herein specified.

111,603.—DRIVING-POWER FOR LOCOMOTIVES.—William D. Arnett, Denver, Colorado Territory.

Claim.—The relative arrangement of the wrist-pins i i j j j' j' and cranks h h, in combination with the connecting-rods, the spur-wheels D D', and steam-cylinders B B', substantially as described, and for the purposes set forth.

111,604. — SAND-SIFTER.—William Bailey, Friendship, N. Y.

Claim.—1. In a sand-sifter having a suitable supporting-frame and a revolving wire-screen rotated by a crank, C, the described construction of the front end of the screen, consisting essentially of the ring or hollow journal E, made large enough to admit the blade of a common spade, and having its mouth entirely unobstructed, so that the sand can be shoveled directly into it without the aid of a feed-spout or conductor, substantially as described, for the purpose specified.

2. The combined sand-auger and conveyer, M E, constructed as described, and adapted to be operated either with or without the revolving screen, as herein set forth.

3. The combination of the open-mouthed revolving screen with the auger and conveyer M E, substantially as described, and for the purposes set forth.

111,605.—SCOOP AND SIFTER.—Joseph Baker, Trenton, Canada.

Claim.—1. The scoop A, provided with a detachable sifter, B, whereby sifters of different degrees of fineness may be used in connection with the scoop at will, substantially as described.

2. In combination with the combined scoop and sifter, the agitator K, having the spiral spring F applied to the thumb-piece or stem, substantially as set forth.

111,606. — FEATHER RENOVATOR.—James A. Bell, Tyrone, Pa., assignor to himself and Henry Z. Stetler, same place.

Claim.—The case A, mounted on the hollow journals so as to be revolved, and provided with the large steam-pipe F, having the extension H, also provided with the small pipe I, having the induction-cock L, exhaust M, plug O, perforations P, and the radiating tubes N, the said case and the pipe F being provided with escape-cocks, and all combined and arranged substantially as specified.

111,607.—FRUIT-JAR.—Melville R. Bissell, Kalamazoo, Mich., assignor to Salmon B. Rowley, Philadelphia, Pa.

Claim.—A glass jar, terminating at the top in a partly-blown and partly-ground bearing for a gum ring, as set forth.

111,608.—FLOWER-STAND.—Elijah D. Castelow, Meriden, Conn.

Claim.—The rotary plant-stand, as herein described, composed of a series of graduated shelves, all arranged to transmit their weight to the lower shelf, which revolves or rotates upon a track-support, the whole held together by means of a central bolt-rod, in the manner and for the purpose substantially as herein specified.

111,609.—ALCOHOL-STILL.—George Clarkson, Elgin, Ill., assignor to himself, Samuel D. Wilder, and Albert Sherwin, same place.

Claim.—1. The still herein described, having compartments B and C, constructed and arranged substantially as specified.

2. In combination with a double-chambered still, the pipes e, h, and f, valve K, and regulating-faucet D, substantially as specified.

3. The coiled pipe a, induction-pipe b, and eduction-pipe c, in combination with the double-chambered still, substantially as specified.

4. In combination with a double-chambered still constructed for continuous distillation, the glass gauges F and F', constructed and arranged substantially as described.

111,610. — STAIRWAY.—Charles Saunders Close, Philadelphia, Pa.

Claim.—1. The combination, with the opening of a spiral staircase, of a series of plates, arranged to open and close with a fan-like action, substantially as set forth.

2. The said plates C, C', C², &c., when provided at their opposite edges with rollers or wheels, f

and f, arranged substantially in the manner described.

2. The cylinder or casing A, arranged above a spiral or other stairway, as specified, and having internal flanges and grooves, and being otherwise arranged for the reception and retention of the plates C, C^1, &c., substantially as herein set forth.

4. The section of railing H', when attached to the upper plate C^4, so as to serve as a medium for operating the plates.

111,611.—Manufacture of Straw-Board for the Construction of Buildings.—Judd M. Cobb, Beloit, Wis.

Claim.—1. The prepared plastering-board as a new article of manufacture, substantially as herein described.

2. The process, substantially as herein described, for producing the plastering-board.

3. The siding for buildings, constructed and prepared in the manner substantially as herein described.

111,612.—Apparatus for Cleaning Sulphurets and other Ores.—Charles C. Coleman, San Francisco, Cal.

Claim.—1. A machine, having the cone or cylinder C, with the interior constructed as shown, and operating to separate gold and sulphurets, substantially as herein described.

2. The perforated-jet-tube E, or an equivalent device, for washing the sulphurets and retaining them always at the bottom of the cone, substantially as and for the purpose described.

111,613.—Boot-Jack.—Ezra Coleman, San Francisco, Cal.

Claim.—In combination with the ordinary boot-jack, composed of the forked board A and block B, the hinged strip D, with its adjustable toe-support or strap E, substantially as and for the purpose herein described.

111,614.—Apparatus for Feeding Pulverized Fuel to Furnaces.—Thomas Russell Crampton, Westminster, London, Great Britain.

Claim.—1. The series of conducting-tubes arranged on the same horizontal level, and grouped substantially as set forth.

2. In combination with the above, combining, as an additional element, a solid floor, without fire-bars, on which the streams from the tubes may impinge or not, as desired.

3. In combination with the subject matter of the first clause as above, combining, as an additional element, a sloping bridge-wall, as hereinbefore described, with a view, by the impingement thereon of the carbonized air from the tubes, to promote the greater homogeneity of the combination of the fuel and air entering the combustion-chamber from the tube aforesaid, as they impinge upon it and are deflected upward into the chamber beyond.

4. The combination of the stirrers Q in the reservoir O, the opening d, the box P, and the rollers L and M for delivering a sheet of pulverized fuel in equal quantities into the trough, whose bottom is the open mouths of the receiving-tubes G, arranged as above described.

5. The combination, as additional elements to the last clause of claim, of the air-nozzles from the air-chamber S, the receiving-tubes, and the conducting-tubes, the center line of the nozzles being below the center line of the conducting-tubes, as described.

6. The division of a given quantity of pulverized fuel into equal parts by passing it between adjustable rollers into a trough whose bottom is the open rectangular mouths of the tubes requiring to be equally supplied with fuel, in the manner herein described.

7. The arrangement of the rollers L and M relatively to the discharge-opening d in the hopper, so as to form a limited supply-chamber between them, as hereinbefore described.

8. The arrangement of the receiving-tubes side by side, when the sheet of pulverized fuel falls into them, thereby diminishing the length of the rollers, and in that manner avoiding too great an attenuation of the sheet of fuel passing through them.

111,615.—Apparatus for Distributing and Feeding Powdered Fuel to Furnaces.—Thomas Russell Crampton, Westminster, London, Great Britain.

Claim.—1. In an apparatus for feeding powdered fuel to furnaces, the combination of the feeding-rollers E and F with the trough B, screw-conveyer D, and the intermediate limited supply-chamber d, arranged and operating so that the latter will be kept constantly filled with fuel irrespective of the direction in which the fuel is moving in the trough, as described.

2. The combination of the hoppers A and A' with the trough B, screw-conveyer D, and elevating-buckets H and H^1, constructed, arranged, and operating so that while one hopper is supplying the fuel to the feeding apparatus for one or more furnaces the other will collect the fuel not taken from the conveyer by said feeders, and *vice versa*, as described.

3. The pressure of a series of furnaces, regulated and controlled automatically, to the same or different uniform degrees for each furnace from one and the same supply of air, as described.

4. In combination with an apparatus for feeding several furnaces from one supply with powdered fuel and air, and a fan or blower, a regulator interposed between the furnace or furnaces and the blower, as described.

5. The apparatus for feeding, regulating, dividing, conducting, and discharging powdered fuel into furnaces, the combination of the supply-hoppers A A', the conveyer D, the feeding-rollers E F, the receiving and conducting-pipes H^3 and S, with the branch-pipes L, air-regulators, air-main, and blower, substantially as described.

111,616.—Furnace for Burning Pulverized Fuel.—Thomas Russell Crampton, Westminster, London, Great Britain.

Claim.—1. The fuel-charged air, for the combustion, injected into the furnace at the rear end thereof, and near the neck, in the opposite direction from that in which the products of combustion escape, as described.

2. The fuel-charged air, for the combustion, injected into the furnace at or near the top thereof so as to be caused to pass toward the front end of the chamber, turn down and return between the incoming streams and the metal under treatment, as described.

3. The furnace, constructed and adapted to receive the fuel-charged air at its rear end, and in which the work is done in one and the same chamber within which the combustion takes place, as described.

4. The arrangement of an incoming and returning current of air and fuel within the combustion-chamber, so that the former is heated by the latter, as shown.

111,617.—Suspender.—John W. Dayton, Waterbury, Conn.

Claim.—The two parts A B of a pair of suspenders, doubled and overlapping, each part passing over an independent bar, d f, of a looping device, C, substantially as set forth.

111,618.—Hand-Vise.—James W. Devlin, Yonkers, N. Y.

Claim.—An improved hand-vise, consisting of the hollow handle A, cone B, hollow screw C, cross-head D, lever-jaws E, and springs F, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

111,619.—Saw.—Henry Disston and Thomas Oates Hill, Philadelphia, Pa., assignors to Henry Disston & Son, same place.

Claim.—A hand-saw, having the cutting edge of the blade rounded at or near its outer end, as specified.

111,620.—Device for Enlarging Wells.—Thomas Donnelly, Pittsburg, Pa.

Claim.—The combination of the stock a, sockets b, cutting-bars c, springs d, jar-stem e, and knob h, as and for the purpose described.

111,621.—Valve and Cock.—Isidore Dreyfus, New York, N. Y.

Claim.—1. A valve or cock provided with a series of ports or valve-openings, in combination with a single valve and valve-stem having a movement toward and away from said ports, and mounted or supported in a ball-and-socket or equivalent bearing, as described, in such manner that the stem may be directed to or brought in line with any one of the ports which the valve is required to close, substantially as and for the purpose set forth.

2. The central bulb or chamber, divided into three channels or compartments, communicating with one another through ports formed in a diaphragm separating them from the valve-chamber, in combination with an oscillating valve operating substantially as shown and set forth.

3. The combination of the screw-threaded valve-stem, its rotary or movable bearing mounted in the case or shell of the valve or cock, as described, and the stuffing-box formed upon said bearing, for making a steam-tight joint between it and the stem, as shown and set forth.

4. The combination, with the valve-openings or ports, of the oscillating valve, its movable bearing, and the socket which contains said bearing, the said socket being provided with a slot or slots for the passage of the valve-stem formed in the plane which passes through said ports, substantially as and for the purposes set forth.

111,622.—Heating-Stove.—Samuel H. Emery, Jr., and Chauncey H. Castle, Quincy, Ill.

Claim.—The arrangement, with the cylinder A and oven B, of the flue C, passages D E, and the pipe-collar F, all substantially as specified.

111,623.—Sifter and Strainer.—Lyman Fay, Fall River, Mass.

Claim.—The combination and arrangement of the spring e with the cross-bar E and shaft D, with its arms G G, the receptacle A, and hooks a a, operating substantially in the manner and for the purpose set forth.

111,624.—Water-Meter.—Thomas B. Fogarty, Brooklyn, N. Y.

Claim.—1. The hollow piston, with open center and adjustable nuts B b, to act on the lever H^1, as and for the purposes described.

2. The snap-lever K, spring or springs N, and lever H^1 H^2, operated by the moving piece or piston B, which receives the pressure of (and by its motion measures) the water, substantially as herein set forth.

3. The cylinder A, hollow piston B, chambers C C', valve E, and ports F F^1 F^2, in combination with each other and with the lever K, bracket A', springs F, and lever H^1 H^2, and arranged to operate as and for the purposes described.

111,625.—Boot and Shoe Fastening.—Franklin D. Ford, New Bedford, Mass.

Claim.—1. The mode of lacing a shoe by means of the laces B B, rooved in alternate holes, substantially as herein shown and described.

2. The fastening E, for securing rings to the shoe, constructed and operating substantially as described.

111,626.—Gate-Latch.—William Fosket, Meriden, Conn., assignor to Charles Parker, same place.

Claim.—In a latch in which the lever B is arranged to operate the bolt as described, the latch-bolt constructed as a concave end, and hung to the said lever in the manner described, to allow of a rocking motion of the latch as it passes onto the keeper.

111,627.—Walking-Cultivator.—Andrew Friberg, Moline, Ill.

Claim.—1. The coupling F, composed of the pieces a and b, having the circumferential grooves c with lateral space s, connecting said grooves, to enable the coupling to be adjusted laterally and held in position, as described.

2. The adjustable shoes H, in combination with a shank or beam so curved that the shovel may be adjusted thereon at different inclinations without varying the height of its lower point, substantially as described.

111,628.—Safety Device for Hatchways.—Alexander Fries, Cincinnati, Ohio.

Claim.—1. The provision of one or more nets to be suspended within hatchways, substantially as and for the purpose stated.

2. The application, to the hatchways of a hoisting apparatus, of two series of nets, L, of which the upper ones are suspended from some point or points above the platform and the lower ones from the platform itself, substantially as set forth.

111,629.—Brick-Machine.—Benjamin M. Gard, Urbana, Ohio, and Emery R. Gard, Chicago, assignors to United States Brick-Machine Company, Chicago, Ill.

Claim.—1. The combination of the frame A, composed of the uprights a a, and connecting braces b b with the tub-bottom B, having lateral flanches c c, in the manner and for the purpose herein specified.

2. The combination of the tub-bottom B and its lateral flanches c c with the attached half-tub f, and its braced shaft-bearing h, substantially in the manner and for the purpose herein set forth.

3. The combination and arrangement of the diagonal or oblique brick-molds Q Q, the traverse belt P, and carrier-belt O, for automatically removing the bricks from the mold-wheels, substantially as herein specified.

111,630.—Water-Wheel.—James Gardner, South Lee, Mass.

Claim.—1. The gates D D for a water-wheel, made of curved outer parts and of the shorter inwardly-projecting oblique guides f, substantially as and for the purpose herein shown and described.

2. The combination of the adjusting-ring E with the gates D D and ledges l l, to constitute a sand-channel, substantially as herein shown and described.

111,631.—Clod-Fender.—Robert T. Gillespie, Millport, Ohio.

Claim.—1. The shield H, constructed as described, and provided with an adjustable sliding auxiliary shield I, substantially as and for the purposes herein set forth.

2. In combination with a plow, the slotted L-shaped bars D D, hinged bars E E, with their braces G G, and the fender H I, all constructed and arranged substantially as and for the purposes herein set forth.

111,632.—Planing-Machine.—James Goodrich and Henry J. Colburn, Fitchburg, Mass.

Claim.—1. The combination of the legs H H^1 H^2, &c., having inclines n n' and o o', with the guide-rail K, having inclines k k^1 k^2 k^3, as described, and for the purpose set forth.

2. The combination of the adjustable frame C^1 with the cutter-head D and presser-bar D^1, as herein described, and for the purpose set forth.

3. The combination of the lever B^2 with the arc B^3, adjustable weights C^4 C^4, and pressure-feet C^3, substantially as described, and for the purpose set forth.

4. The combination of the springs E^4 E^4 with the yokes E^2 E^2, the frames E^2 E^2 E^1 E^1, and the rollers E E, as herein described, and for the purpose set forth.

111,633.—HARVESTER.—William F. Goodwin, Metuchen, N. J.

Claim.—1. The double zigzag wheel G, in combination with the reciprocating zigzag disk, substantially as and for the purpose described.

2. The combination of the reciprocating zigzag wheel or disk H, sleeve A, and lever I, operating substantially as described.

3. The vibrating cutter-frame, consisting of frame-bar D, and sleeves C C^1, connected together as described, in combination with the pivoted drag or brace-bar E, arranged and operating as described.

4. The buffer-box J and slide *f*, constructed as described, in combination with the frame-bar D and vibrating lever I, as described.

111,634.—HORSE-POWER.—William F. Goodwin, Metuchen, N. J.

Claim.—1. In a horse-power, the adjustable pivotal bearing e^1, in combination with the screw-shaft F and master or worm-wheel H, substantially as set forth.

2. In combination with line-shaft F, the pivotal bearing e^1 and the removable bearing E^1, constructed as shown, for supporting said shaft in chamber E, as described.

3. In a horse-power, a screw-shaft having a thread the working face of which has a bevel equal to the pitch of the screw, in combination with a master or worm-wheel the teeth of which have their working faces beveled to correspond with the bevel on the thread of the screw, substantially as set forth.

4. In combination with the worm-wheel H and screw-shaft F, the inclosing shell or casing A A' B, provided with the sleeve B' for supporting the upper end of the worm-wheel shaft, and with the chamber E supporting shaft F, substantially as described.

111,635.—HAIR-PIN.—Charles M. Gormly, Pittsburg, Pa.

Claim.—The four-pronged hair-pin, constructed, as described, of two pins arranged transversely to each other, fastened permanently together at their looped end, and bent near the middle of their length, for the purposes set forth.

111,636.—IRON ABUTMENT FOR BRIDGES.—Jacob S. Goshorn, Fort Wayne, Ind.

Claim.—In an iron abutment for bridges, the tubular longitudinally-grooved columns B B, cut away at *m m* to allow the insertion of plates E E, in the manner and for the purpose described.

111,637.—DEVICE FOR SECURING CORKS IN BOTTLES.—Samuel L. Gouverneur, Fredrick City, Md.

Claim.—The device for securing corks in bottles, consisting of the cap-plate A, links *b*, combined with the triangular or polygon base B C D, having an adjustable locking-leg, as shown, and for the purpose substantially as described.

111,638.—APPARATUS FOR THE MANUFACTURE OF CONFECTIONERY.—William F. Goward, Boston, Mass.

Claim.—1. In combination with the plate *d* and its pins *e e*, or the mechanical equivalents of such parts, one or more flat plates or fingers so disposed with respect to the pins as to be readily inserted between them and below the confection adhering to them, for purposes hereinbefore set forth.

2. In combination, one or more fingers, arranged as described, and the turn-buttons or cams *f f*, or their equivalents, in manner and operating as explained.

3. In combination, the board or plate *d* with its pins *e e*, &c., the fingers *e e*, &c., properly mounted, and the buttons *f f* or their equivalents, for purposes hereinbefore stated.

111,639. — SECTIONAL STEAM-BOILER.—James S. Griffith and Charles E. Emery, New York, N. Y.

Claim.—1. An improved tube-head for sectional boilers, provided with an enlarged top, serving as a steam-drum and chamber for the separation of the steam and water, substantially as and for the purpose specified.

2. The return-tubes A', in each section, arranged, as shown and described, in relation to a partition, F, and the front and rear tube-heads, substantially as and for the purposes specified.

3. In combination with a steam-drum, the deflecting partition *f* and dam E, arranged substantially as and for the purposes specified.

4. A boiler tube-head, combined and connected with a tube by a stuffing-box joint, said tube-head being provided with an opening opposite the tube, through which the joint may be packed and the tube cleaned or removed, substantially as shown and described.

5. The combination of a bonnet, *p*, and gland *m*, with a bolt, *o*, substantially in the manner and for the purposes specified.

6. A boiler-tube, with nuts *r* or pins *v* secured to the ends thereof, combined with stuffing-boxes and glands, substantially in the manner and for the purposes specified.

111,640.—WINE AND CIDER-PRESS.—Thomas W. Grinter, Russellville, Ky., assignor to James L. Haven, Cincinnati, Ohio.

Claim.—The combination, in a wine and cider press, of the springs L with screw H and screw-plate I, substantially as shown, for the purpose set forth.

111,641.—BRIDGE FOR SUPPORTING SHAFT-DRILLING MACHINES.—Joseph P. Griscom, Port Carbon, and John Fritz, Mahanoy Plane, Pa.

Claim.—The combination of the track or frame A, extension pieces B B, and screws C C, all constructed as shown and described, and arranged so that there will be two extension pieces, B, each with their screw C at each end of the track, as herein set forth.

111,642.—EXPLOSIVE COMPOUND.—Joseph Hafenegger, San Francisco, Cal.

Claim.—The admixture with, or addition to, explosive compounds of a mineral oxide and oily, fatty, or resinous substances, substantially as and for the purpose above described.

111,643.—CAM FOR QUARTZ-MILLS.—Oliver P. Hart, Logtown, Cal.

Claim.—The improved cam herein shown, consisting of the sections A B, respectively provided with key-ways *e e*, in combination with the dovetailed gibs *f g* and keys *i i*, all constructed and arranged substantially as and for the purpose set forth.

111,644. — STEAM ROAD-WAGON.—Charles W. Hermance, Schuylersville, N. Y.

Claim.—1. The horizontal frame F, or its equivalent, attached at one end to the rear axle at one end, and resting upon springs at the other, thereby suspending the boiler, engine, and machinery, and permitting of all necessary vertical motion of the same, between the axle and parts which they support, substantially as and for the purposes herein set forth.

2. The springs *a a*, or their equivalents, attached to or supporting the rear of the horizontal frame which suspends the boiler and machinery, for the purposes set forth.

3. As applied to wagons propelled by steam, the double train of gears, or their equivalents, in combination with the fly-wheel and piston, substantially as herein set forth.

4. In combination with the double train of gears, the lever M, rod *m*, and movable clutch *k*, attached to the axle for the purpose of changing the speed, the circles *n*, wheels N O, pinion *p*, and crank-shaft P, all substantially as and for the purposes set forth.

5. The horizontal frame E and springs *a a*, or any other device that shall operate as their equivalents, by suspending the boiler, engine, or machinery, and allow of vertical motion to the same, between the axle and parts which they support, without ungearing itself or changing the distance between the axle and cylinders, as herein set forth.

111,645.—PUMP.—Oliver Higgins, Napoleon, Ohio.

Claim.—The combination with the cylinder A, slotted vertically at *s s*, the automatic cut-off G, provided with the guard-plates *d d* and the guide-screws *e e*, and the double-headed piston-rod D, substantially as specified.

111,646.—SPRING BED-BOTTOM.—Egbert B. Hill, Grand Rapids, Mich.

Claim.—The forked metallic spring brace B B, in combination with the upper frame F F and parts C C, or their equivalent, when constructed and arranged substantially as and for the purposes herein set forth.

111,647.—TAP-WRENCH.—George W. Huntoon and Edwin Simonds, Lowell, Mass.

Claim.—1. The plates A, constructed and arranged to retain the jaws E in place, and to resist the thrust of the thumb-nuts B, as set forth.

2. The adjustable overlapping jaws E E, constructed and arranged substantially in the manner and for the purpose set forth.

111,648.—AUGER.—William A. Ives, New Haven, Conn.

Claim.—A double-twist auger, when provided with curved edge, sloping floor-lips *b b*, and side lips or cutters *a a*, in the manner shown and described.

111,649. — BIT-BRACE.—William A. Ives, New Haven, Conn.

Claim.—The combination of the jaws C and D, the bearing *a* within the socket A, spring *d*, and sleeve B, to close the jaws, the whole constructed and arranged to operate substantially in the manner and for the purpose set forth.

111,650.—FEED-WATER APPARATUS.—James Kindel, Wilmington, Ohio.

Claim.—The described arrangement of the steam-return pump B and chamber G with their pipes F and H, live-steam-pipe I, and water-supply-pipe J, for the purpose set forth.

111,651, antedated February 3, 1871.—PLOW.—Sampson B. King, Starkville, Ga.

Claim.—The arrangement of the notched beam A, bail G, hooked and swiveled bar E, and stirrup D, all constructed to operate as specified.

111,652, antedated January 28, 1871.—ICE-CRUSHER.—Oliver B. Kinsey, Newark, N. J.

Claim.—The case A, oscillating vibratory plate B, and the adjustable plates D and E, constructed and arranged substantially as specified and shown.

111,653. — PORTABLE STALL. — Daniel P. Leach and William F. Leach, Franklin, Ind.

Claim.—The combination and arrangement of the posts A A, planks B B, clamps *a a*, treadle C, lever D, with weight E, door G, drop H, and feed-trough I, all substantially as and for the purposes herein set forth.

111,654.—DYEING AND PRINTING TEXTILE FABRICS.—John Lightfoot, Lowerhouse, near Burnley, England.

Claim.—1. The mode or method of producing a black dye or color for fabrics or yarns, substantially as hereinbefore described.

2. The treatment of the substances hereinbefore described, whereby I obtain commercial cream of tartar fit for the market.

111,655. — MEDICAL COMPOUND. — Henry Lister, Houston, Texas.

Claim.—The above-described medical compound, substantially as and for the purposes set forth.

111,656.—POTATO-DIGGER.—George C. Love, English Centre, Pa.

Claim.—1. The combination of the grooved axle A, wheel B B, circle C, roller D, bar *a*, and fork E G, constructed and operated substantially as shown and described.

2. In combination with the grooved axle A, wheels B B, circle C, fork E G, and roller *d*, the bail H, provided with the catches *e e*, operating in the cog-wheels *b b*, all substantially as set forth.

111,657. — COOKING-STOVE. — Peter Low, Cleveland, Ohio.

Claim.—1. The reservoir B, constructed with three recesses or chambers *a a a*, and used substantially as and for the purpose set forth.

2. In combination with said reservoir, a cooking-stove, the rear plate of which shall be provided with spaces to correspond with chambers *a a a*, and in connection therewith form flues, substantially as and for the purpose described.

111,658.—APPARATUS FOR EXTRACTING OIL FROM BONE-DUST.—William W. Lucas, Cleveland, Ohio.

Claim.—The box C, constructed substantially as described, and resting on a cross-bar, D, and the pan G, steam-pipes E, and the box A, when the same are constructed, combined, arranged, and operating substantially as shown, and for the purpose set forth.

111,659, antedated January 28, 1871.—FAUCET.—John R. Mackay, Meriden, Conn.

Claim.—As a new article of manufacture, the faucet described, provided with the horizontal rod or shaft D, valve E, acted upon by the spring *c* by means of the lever F, and connecting-rod G, and cock C, when combined and arranged as described, for the purpose set forth.

111,660.—SCAFFOLD.—Nicholas Martz, Lykens, Pa.

Claim.—1. The combination of the hinged sections A with the vertical ladder-supports B, the working platform C, and the diagonal braces I, constructed, arranged, and admitting of the adjustment herein shown and described.

2. The vertical supporting-ladder section B, sustained by one of its rounds *b* in a grooved seat, *a*, clamped vertically and laterally by wedges E and F, and endwise by buckled straps G, to the hinged sections A, as herein shown and described.

111,661.—MANUFACTURE OF PAPER, CORDAGE, TWINE, &c.—James H. McConnell, Springfield, Ill.

Claim.—The application of the fiber of the plant

Abutilon avicennæ to the manufacture of cordage, twine, paper, and textile fabrics, as herein set forth.

111,662.—Truss-Bridge.—John A. McKay, Auburn, Ind.

Claim.—The caps M M, when constructed and applied substantially as and for the purposes set forth.

111,663. — Type-Holder. — William McNaughton, Chicago, Ill., assignor of one-half his right to John H. Trumbull, same place.

Claim.—The plate A, when provided with the flanges *a a* and spring *b*, substantially as and for the purpose specified.

111,664.—Vent-Plug.—Charles H. Miller and William Ascough, Buffalo, N. Y.

Claim.—1. The screw-spindle B, the valve C, and the elastic cord D connecting the same, in combination with the plug A, said parts being constructed, arranged, and operating substantially as herein described.

2. In combination with the above, the spiral spring E, for the purpose and substantially as herein set forth.

111,665. — Wagon. — Alexander Moffitt, Washington, D. C.

Claim.—1. The combination of a pole or shaft attachment with a brake, when so arranged that the brake will be applied only by the raising of the pole or shafts, substantially as herein set forth.

2. The pole I, passing through a mortise in the whiffletree-bar J, or a loop attached to said bar, and attached to the hook *b*, substantially as and for the purposes herein set forth.

3. In combination with the pole I and whiffletree-bar J, the adjustable stop *e*, substantially as and for the purposes herein set forth.

4. The combination of the pole I, whiffletree-bar J, stop *e*, and supports or foot-stalls K K, constructed and arranged substantially as and for the purposes herein set forth.

5. The brake-bar stay H, passing through the head-block E, and provided with a hook, *b*, on its front end for attaching the pole, substantially as and for the purposes herein set forth.

6. In combination with the brake-bar stay H, a latch for locking the same, so that the brakes will not operate, substantially as set forth.

111,666.—Vapor-Burner.—Thomas Moore, Bloomington, and James O'Donald, Clinton, Ill.

Claim.—1. The flame-regulator, consisting of the sleeve E, wings E′, and non-conducting button H, as and for the purpose set forth.

2. In combination with the above, the burner D and wick-tube C C¹, as shown and described.

111,667.—Dental-Engine.—James B. Morrison, St. Louis, Mo.

Claim.—1. A tool-head, as a W″, having universal rotary and flexible motion at the extremity of one or more pivoted, pulley-carrying, and extensible arms, substantially as described.

2. In combination with a swiveled shaft, a spring applied substantially as shown, namely, maintaining the proper extension or elongation of the said shaft, and permitting one end of it to be turned on its axis.

3. The oscillating shaft I I′, turning on a center in line with the axis of the pulley C, and connected to the stand by a helical or other spring, K, substantially as and for the purpose described.

4. The treadle F, hinged to the frame G, the said frame being pivoted to the stand, substantially as and for the purpose described.

5. The construction of the burr-tool in two separate parts, consisting, respectively, of the perforated removable head and spindle or shank, substantially as and for the purposes set forth.

111,668. — Die for Forging, Trimming, and Shaping Spring-Clips for Carriages.—Francis B. Morse, Plantsville, Conn., assignor to H. D. Smith & Co., same place.

Claim.—The series of dies, constructed substantially as described, for forging, trimming, and shaping spring-clips for carriages.

111,669. — Feeding Quicksilver to Stamps and Amalgamators. — George C. Munson, Empire City, Colorado Territory.

Claim.—1. The adjustable plugs *b*, operated by means of a set-screw, and constructed and arranged in connection with the shaft C and cup or reservoir A, to cut off and deliver to the stamp-mill or amalgamator any desired quantity of quicksilver, substantially as herein shown and described.

2. In combination with the plugs *b* and shaft C, the scale or indicator *f*, substantially as described, and for the purposes set forth.

111,670.—Meat-Cutter.—Hugh B. Murphy, Allegheny City, Pa.

Claim.—The combination and arrangement of the revolving cutter-block B with ratchet-teeth *c*, pawl or lever *f*, crank A, shaft *i* provided with lifters *k*, levers *l* provided with cutters J and adjustable weights *n*, and the gum spring R, the whole being constructed, arranged, and operating substantially as herein described, and for the purpose set forth.

111,671.—Animal-Hoisting Apparatus.—Jason Newton, Marengo Township, Mich.

Claim. — The higher and lower gallows frames A and B, (detachable or not,) in combination with a winch and its appurtenances, and with pulleys P P¹ P², and gambrel-hooks H, all constructed, arranged, and operated substantially as and for the purpose set forth.

111,672.—Clock-Pendulum Rod.—Russell W. Norton, New Haven, Conn.

Claim.—The pendulum-rod, constructed with an indentation near the upper end of the flattened portion, substantially in the manner and for the purpose set forth.

111,673.—Animal-Trap.—James C. Parrish, Petersburg, Va.

Claim.—The cylinder *b*, having the projection *a*, the opening *f*, and orifice *l*, in combination with the spring *e*, the spring false bottom *g*, provided with the pin *h*, the box *i*, provided with the recesses *q u*, and the hinged cover *t*, perforated at *p* and provided with the wire *o*, all arranged and operating as described.

111,674.—Feeding Device for Carding and other Preparing Machines.—Edwin Pettitt, Manchester, England.

Claim.—In combination with the toothed cylinder A, the close concentric case B, provided with a vertical extension for supplying the fibrous material to the roller under a constant and equable pressure maintained by a weight, substantially as set forth.

111,675. — Combined Grain-Drill and Corn-Cultivator.—David B. Platt, Jeffersonville, Ind.

Claim.—1. The sliding plates J, provided with the saddles *e*, and adjusted by means *f*, substantially as and for the purposes herein set forth.

2. The wheels H H, provided with cup-shaped recesses, and operating in combination with the saddles *e e* on the adjustable sliding plates J J, substantially as and for the purposes herein set forth.

3. The agitator I, constructed as shown and described, and operating in combination with the

wheels H H, substantially as and for the purposes herein set forth.

4. The combination of the shoe K, plate *h*, beam L, wooden pin *i*, and guide-plate *j*, all constructed and arranged substantially as and for the purposes herein set forth.

5. The combination of the shoe K, plow M, bail *k*, and spring *l*, constructed and arranged substantially as and for the purposes herein set forth.

6. The arrangement of the bent rod *p*, lever *r*, spring *s*, and clutch *d*, substantially as shown and described, and for the purposes herein set forth.

111,676.—Gate.—John Pool, Elizabeth City, N. C.

Claim.—1. The oscillating lever F, carrying the latch J, in combination with the rocking-beam E, applied and operating together, substantially as and for the purpose described.

2. The band L, formed with notches *e e*, in combination with the latch J, jointed to the lever F, and operating in connection with the beam E, to which the gate is hinged, substantially as and for the purpose described.

3. The projecting rods O, in combination with the bolt N of the gate, substantially as and for the purpose described.

4. The wheel-trips W, platform G, levers V, latches P, and hand-lever T, arranged and operating with the gate E, substantially as and for the purpose described.

111,677.—Governor for Steam-Engines.—George F. Pottle, Boston, assignor to himself and Reuben K. Huntoon, Wakefield, Mass.

Claim.—The combination of the fan-disk A′ A A with the buttress-fan disk D B B, when constructed and arranged substantially as described.

111,678.—Shuttle for Sewing-Machines.—George M. Pratt, Middletown, Conn.

Claim.—The combination, with the shuttle, of the pivoted bobbin-holder B C D, the tension device, consisting of two disks or surfaces F E, the spring H, and adjusting nut I, all constructed and arranged to operate substantially as herein described.

111,679.—Cast-Iron Barrel.—Abel Putnam, Jr., Saratoga Springs, N. Y.

Claim.—As a new article of manufacture, a cast-iron barrel, combined with a porcelain lining, as specified.

111,680.—Water-Cooler.—Abel Putnam, Jr., Saratoga Springs, N. Y.

Claim.—The arrangement of the concentric jars *a b*, so connected that there is no communication between the two, the inner jar being open at the top and the outer jar being furnished with an orifice, *h*, at its lower end, all as specified.

111,681, antedated February 4, 1871.—Propelling Apparatus for Boats.—Joseph Repetti, Philadelphia, Pa.

Claim.—1. The combination of the helical springs *i i′* with the shaft *a*, wheels *c c′*, wheels *d*, and propeller-shaft *m*, and propeller *z*, substantially as and for the purpose set forth.

2. The combination of the levers *h h′* with the helical springs *i i′*, shaft *a*, wheels *c c′*, wheel *d*, propeller-shaft *m*, and propeller *z*, substantially as and for the purpose specified.

3. The arrangement of the propeller-shaft *m*, inclosed tube *n*, propeller *z*, and wheel *d*, substantially as and for the purpose set forth.

4. The combination of the lever *e*, eye *f*, sleeve *g*, and pin *k*, substantially as and for the purpose set forth.

5. The combination of the levers *r r′*, cords *t t′*, cord *u*, pulley *v*, pins *p p′*, and levers *h h′*, substantially as and for the purpose specified.

6. The arrangement of the bench *w*, guards *x x*, benches *q q′*, levers *h h′*, and *r r′*, substantially as and for the purpose specified.

111,682.—Medicated Plaster.—Albert D. Richards, Somerville, Mass., assignor to Tufts, Grosvenor & Co.

Claim.—A medicated plaster, made and coated with a compound formed of the ingredients set forth, and prepared substantially as herein described.

111,683.—Pen-Holder.—Henry Roth, Virginia City, Nevada.

Claim.—In a reversible pen-holder or stock A, having a slot, *b*, the combination and arrangement of the pivoted plate *c*, clasp *d*, and movable ferrule E, substantially as and for the purpose described.

111,684.—Box for Packing and Transporting Sheet-Metal Cans.—Charles E. Russ, Boston, Mass.

Claim.—The method of packing metallic vessels constructed with a projection or chine about their ends, by means of a box having the inner surface of its top and bottom provided with corresponding grooves to receive the projection or chine, for the purpose of firmly holding the vessel in the manner herein shown and described.

111,685.—Fertilizer-Distributer.—Christopher Salvo, Columbus, Ga., assignor to himself, Joseph C. Brewer, and Robert W. Milford, same place.

Claim.—The hopper A A′, constructed as stated, valve B, spring C, and knives D D, when the same are combined and arranged to operate substantially as described, as and for the purpose specified.

111,686.—Machine for Degerminating Malt.—Charles Sauter, New York, N. Y., assignor to himself and G. Schütz, Jersey City, N. J.

Claim.—1. The cylinders B B′ B″, arranged one above another and rotated in opposite directions, as set forth, for the purpose of breaking the germs off the grain, substantially as specified.

2. The separating-cylinder E, divided by partitions *a*, which are perforated and connected with slanting discharge plates *c*, substantially as herein shown and described, to operate as set forth.

111,687.—Corn-Planter.—Levi Scofield, Watertown, Wis.

Claim. — 1. In a seed-planter, an independent reel-marker adapted for operation at the will of the operator, except while the markers are in contact with the ground for the purpose of marking off the spaces between the hills or rows, and at the same time to throw the seeding mechanism into gear, substantially as described.

2. In a seed-planter, the reel-markers H and jointed shaft F, so arranged that the markers shall pass under the wheels M, or their equivalents, for the purpose of leaving a mark across the track of the wheels, substantially as described, for the purpose specified.

3. In a seed-planter, the reel-shaft, provided with wheels and supports at its outer ends for the purpose of supporting said ends and forming a track for the markers to cross, substantially as described, for the purpose specified.

4. In a seed-planter, the rotating reel-shaft, provided with a universal joint for the purpose of allowing the outer ends of the shaft to rise and fall while in operation, so that the markers H upon the ends of the shaft shall conform to the inequalities of the ground, substantially as described, for the purpose specified.

5. In a seed-planter, the jointed rotating reel-shaft, provided with the markers H and a pivoted box or bearing, *e*, at or near its center, substantially as described, for the purpose specified.

6. The arrangement of the vibrating-lever Q, rod

R, and clutch-lever, in relation to the shaft F and its attachments, whereby the seed-dropping mechanism is automatically operated, substantially as described.

7. The gears *a b*, shaft E, clutch-box N N, provided with a zigzag cam, *f*, and the lever O for communicating an intermittent reciprocating motion to the seed-bar T, substantially as and for the purpose specified.

8. The arrangement of the seed-boxes E, the plates V, the seed-plates Y, and the seed-bar J, having pins *h*, constructed as described and shown, and operated as and for the purpose set forth.

9. The arrangement of the cut-off *j*, the strike *l*, and the plates Y and W, when constructed as described and shown, for the purpose specified.

111,688.—ELECTROTYPE-DIE OR MOLD FOR MOLDING PLASTIC MATERIALS.—David Scrymgeour, Foxborough, Mass.

Claim.—The mode herein described of producing a matrix or mold, and also a support or backing for the same.

111,689.—ROCK-DRILL.—Jacob Shelley, Mahanoy township, Pa.

Claim.—The combination of the sleeve D and hollow spindle with the adjoining sections of a drill-rod.

111,690.—SHIRT.—Solomon Sibley, Boston, Mass.

Claim.—A shirt, with its bosom and front constructed in the manner shown and described.

111,691.—HOT-BLAST STOVE FOR HEATING AIR, STEAM, &c.—Charles William Siemens and Edward Alfred Cowper, Westminster, and Charles Cochrane, Ellowes Upper Gornal, England; said Siemens and Cochrane assign their right to said Cowper.

Claim.—1. Constructing the filling-in of regenerative hot-blast stoves of a large number of separate vertical or nearly vertical passages of sufficient size to allow of a brush or blast of air or steam being passed through them for the removal of deposit therefrom, while, at the same time, the passage so formed with extended surfaces effectually absorb and give out the heat from and to the gases and air passing through them, substantially as hereinbefore set forth.

2. Constructing the filling-in of regenerative hot-blast stoves of separate, vertical, or nearly vertical, passages, so formed with projections, contractions, roughnesses, or equivalent contrivances, that while the currents of air or gas in passing through the passages are effectually disturbed and brought into contact with extended heated or heat-absorbing surfaces, yet these passages readily allow of a brush or other cleaning instrument, or a blast of steam or air, being passed through them for removing the deposit, substantially as hereinbefore set forth.

3. Constructing such aforesaid separate vertical passages in the manner and of the various forms hereinbefore described, with reference to the accompanying drawing, or in any manner substantially the same, for the purpose of effectually absorbing and giving out the heat from and to the currents of gas and air, and yet allowing of the passage of a brush or blast of steam or air through them for the removal of the deposit.

4. Constructing the filling-in of superposed layers of bars or slabs, so arranged as to leave vertical spaces passing right through all the layers, through which brushes or blasts of air or steam may be readily passed, substantially as described, with reference to figs. 9 and 10 of the drawing.

5. The employment of blasts or jets of air or steam, or both, for the removal of the deposit in the passages of regenerative hot-blast stoves, substantially as set forth.

6. The various before-described arrangements of blast-pipes for the introduction of jets of air or steam, for clearing out the deposit from regenerative hot-blast stoves.

111,692, antedated February 4, 1871.—RAILROAD TICKET.—Joseph T. Smith, Louisville, Ky.

Claim.—Partial tickets or checks for passengers or baggage, rendered adhesive or otherwise attachable, as and for the purposes specified.

111,693.—SPRING-BOLT.—William E. Sparks, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—In spring-bolts or latches, the bolt D, constructed with inwardly-inclined sides, and the case with a corresponding opening to form a bearing for the bolt, to support it in drawing or when drawn into the case, substantially in the manner and for the purpose set forth.

111,694, antedated February 4, 1871.—DEVICE FOR REEFING AND FURLING SAILS.—William Spear, Cape Elizabeth, Me.

Claim.—1. The sail-holders E E, constructed as described, and used either in combination with the usual hoops around the mast or fastened in a channel cut into or formed upon the surface of the mast, substantially as and for the purposes herein set forth.

2. The springs *p p*, arranged as described, with the collar *p'*, for the purposes herein set forth.

111,695.—CAR-COUPLING.—Laroy S. Starrett, Athol, Mass.

Claim.—1. The combination of the link, constructed with fluted or serrated ends, with the fluted or serrated tongue or projection *f* upon rod *e*, for the purpose of giving lateral movement as well as elevation to the link, substantially as shown and described.

2. The spring *g*, in combination with the rod *e*, its fluted or serrated tongue or projection *f*, and the serrated or fluted link, substantially as described.

111,696.—BEE-HIVE.—Monroe J. Stearns, Galesville, Wis.

Claim.—1. The arrangement of the bottom A, legs B B, drawer C, damper D, screens *a a*, cleats *b b*, slide *c*, and entrances *d d*, all substantially as shown and described, and for the purposes set forth.

2. The box E, constructed as described, with slats *f f* and *h h*, guides *g g*, bar *k*, and openings *n n*, all substantially as and for the purposes herein set forth.

3. In combination with a hive formed of the two boxes E E, constructed as described, the false bottoms G G and cut-offs I I, substantially as and for the purposes herein set forth.

4. The combination of the bottom A with drawer C and damper D, the boxes E E, false bottoms G G, honey-boxes H H, cut-offs I I, and outer case J, with its guards K K, all constructed and arranged substantially as and for the purposes herein set forth.

111,697.—FOUNTAIN.—Joseph Storer, Hammersmith, England.

Claim.—A self-acting fountain of the character herein described, with the cisterns or reservoirs capable of being turned on an axis of motion, and provided with suitable tubes, and within the axis with valves or passages, so that by simply reversing the position of the cisterns or reservoirs *a a'* the action of the fountain may be continued, substantially as herein shown and described.

111,698.—COOKING-STOVE.—David Stuart, Philadelphia, Pa.

Claim.—A cooking-stove, having the front end of the oven and the front end of the lower flue depressed, as set forth.

111,699.—COMBINED REMOVABLE COCK AND FIXED SOCKET.—Cornelious Sullivan, Boston, Mass.

Claim.—The combination of the permanent thimble A, the removable tube C^1 C^1, and the spring-valve D, with the extension K of the cock H, substantially as described, and for the purpose set forth.

111,700.—SAND OR EMERY-PAPER.—George Carpenter Taft, Worcester, Mass., assignor to himself and Augustus Ball Davis, Philadelphia, Pa.

Claim.—A new article of manufacture and commerce, consisting of sand or emery-paper, or emery-cloth, rendered adhesive at the back, as set forth.

111,701.—FILTER FOR CISTERNS.—Robert W. Thompson, Mansfield, Ohio.

Claim.—1. A cistern-filter, consisting of the vessel A, provided with the necks or tubes *a*, or equivalent means for attaching it to the water-conductor, and having the detachable sponge applied thereto, substantially as described.

2. The sponge-holder B, constructed as described, and arranged within the vessel A, as set forth.

3. The detachable conical screen D, in combination with the vessel A and sponge-filter, arranged to operate as herein described.

111,702, antedated February 1, 1871.—PAPER-CUTTING MACHINE.—William H. Topham, New York, N. Y.

Claim.—1. The combination of the rotary cutter with the sliding frame *p* and vertically-sliding shaft *w* which carries the chuck and former or pattern, as herein set forth.

2. The combination of the sliding frame *p* with the clutch *s*, the gear-wheel *r*, and flange *n*, as herein set forth.

111,703.—HUB FOR WHEELS.—James L. Van Wert, Tolland, Mass.

Claim.—1. The ring C, provided with strips *a a*, in combination with the nut F and wedge E, operating substantially in the manner and for the purpose set forth.

2. In combination with the first clause of claim, the two parts H K, recesses *b b*, &c., box B, and nut G, the parts all being constructed substantially as shown and described.

111,704.—MILLSTONE BAIL AND DRIVER.—Albert G. Waldo, Milwaukee, Wis.

Claim.—1. The millstone bail C and driver B, in combination with the adjustable rubber springs I, when constructed and arranged substantially as herein described, for the purpose of interposing the rubber springs to the right or left between the bail and its driver, as set forth.

2. In combination with a driver, B, provided with lugs E, a bail, C, having interior lugs F, with rubber springs H attached thereto, when constructed and arranged to operate substantially as herein described, and for the purpose set forth.

111,705.—FURNACE FOR BURNING PULVERIZED FUEL UNDER STEAM-BOILERS, EVAPORATORS, &c.—James D. Whelpley and Jacob J. Storer, Boston, Mass.

Claim.—1. The arched combustion-chamber, in combination with grate-bars, and separate blast to the combustion-chamber and under the grate-bars, substantially as and for the purposes described.

2. The arrangement of a series of arches or deflectors under a boiler or evaporator so as to break up and deflect the current of flame and gas, substantially as described.

3. The combination of the arches B B B and C and the concave hearth, as shown and described.

4. The arrangement of the ash or cinder receptacle with the combustion-flues, as described.

5. The combination of the solidly-arched combustion-chamber with the reverberating flues and the supporting and deflecting arches, substantially as described.

6. The device, shown in fig. 3, for supporting the boiler over the concave flue, for collecting the cinders, as described.

111,706, antedated January 28, 1871.—HAY AND COTTON-PRESS.—Jacob Lewis White, Hernando, Miss.

Claim.—1. The combination of the press-box A, sliding frame *k*, inclosing the press-box and sliding up and down outside the same, follower *h*, connecting-rods *i*, and toggles *a o r*, in the manner and for the purpose specified.

2. The combination of the bifurcated lever *r* with the lower double lever *a a*, provided with the cross-block *n* and tongue *o*, as and for the purpose set forth.

111,707.—ELECTRO-MAGNETIC ALARM-BELL.—Charles Williams, Jr., Somerville, and Jerome Redding, Charlestown, Mass.

Claim.—1. An electro-magnetic striking apparatus, provided with a revolving hammer driven by a weight or other motor, and an electro-magnet which controls the action of the pins, studs, stops, detents, or their equivalents, substantially as herein described.

2. In combination with the revolving hammer and electro-magnet, the pin A, which prevents the revolution of the hammer while the magnet remains charged and the circuit closed, substantially as herein described.

111,708.—WHEEL FOR WHEELBARROWS.—George Withington, Iona City, Cal.

Claim.—The screws *e* on the ends of the spokes B, provided with adjusting-nuts C, to true the tire of the wheel both centrally and laterally, substantially as described.

111,709.—MACHINE FOR CUTTING CORN-STALKS.—John Wood, Pella, Iowa.

Claim.—The improved stalk-cutter, consisting of the frame A *d h*, provided with the central box *a* to receive the shoes or drags *i*, and with hooks *l* for attaching the shoes beneath the cutting-cylinder, and the separate or independent cylinders or wheels *c*, which are provided with knives *e* secured to arms *f*, and arranged to rotate at the sides of the frame with a space between them, all as shown and described, and for the purpose set forth.

111,710, antedated January 28, 1871.—HARNESS-SNAP.—Alonzo B. Woodard, Alfred Centre, N. Y., and William Bruen, Newark, N. J.; said Bruen assigns his right to said Woodard.

Claim.—The recessed tongue A, cast with loop *d* and bearing *e*, and the part C, with hooks *h i*, for the purposes set forth, when said tongue and part C are fitted together, as shown, and held in contact by the inclosed spring B, all substantially as herein described, and forming an improved harness-snap.

111,711.—MEDICATED SMOKING-TOBACCO.—Wesley A. Wright, Lynchburg, Va.

Claim.—1. The process of treating medicated smoking-tobacco, substantially as and for the purpose herein set forth.

2. As a new article of manufacture, medicated smoking-tobacco, when treated substantially as and for the purpose herein set forth.

111,712.—TREATING SMOKING-TOBACCO.—Wesley A. Wright, Lynchburg, Va.

Claim.—1. The above-described process of treating smoking-tobacco, substantially as and for the purpose set forth.

2. As a new article of manufacture, smoking to-

bacco, when treated substantially as above described.

111,713.—DEVICE FOR SAVING GOLD AMALGAM AND QUICKSILVER.—Oliver H. Young and Daniel J. Vaughn, Wisconsin Hill, Cal.

Claim.—1. The plates D, provided with diamond-shaped pockets or reservoirs *a*, substantially as and for the purpose described.

2. The D-shaped pockets or reservoirs *a*, when constructed as above described, for the purpose above set forth.

REISSUES.

4,252.—CULTIVATOR. — Augustus Adams, Sandwich, Ill., assignee of William A. Dryden and Cyrus E. Dryden.—Patent No. 67,173, dated July 30, 1867.

Claim.—1. The frame of a wheeled cultivator, adjustable longitudinally upon its axle or other support, for the purpose specified.

2. In a wheeled cultivator, a driver-seat adapted to be thrown into position to form a riding cultivator, and to be turned up or moved out of the way of the driver when walking, for the purpose specified.

3. The adjustable seat-bar J, in combination with the pivoted side bars I, for the purpose specified.

4. The driver's seat of a cultivator, adapted for vertical adjustment, with relation to the frame, by the means substantially as described, for the purpose specified.

5. The combination of the cultivator-frame with the bifurcated tongue or extended braces, for the purpose specified.

4,253. — MANUFACTURE OF ENAMELED BRACELETS.—Abiel Codding, Jr., North Attleborough, Mass.—Patent No. 91,604, dated June 22, 1869.

Claim.—The improvement in the construction of bracelets, which resides in uniting the outer plate *d* and inner band or plate *a* by means of flanges *c c*, substantially as described.

4,254.—COOKING-STOVE.—Charles P. Geisenhainer, Pittsburg, Pa., assignor to Esek Bussey and Charles A. McLeod, Troy, N. Y.—Patent No. 32,764, dated July 9, 1861.

Claim.—1. The arrangement in cooking-stoves of an air-flue opening under the hearth, for introducing air in the rear of the fire-basket, in such relation to the flue, for the exit of the smoke and products of combustion, as is hereinbefore described; that is to say, placing the horizontal smoke-flue in the front part of the stove, and immediately under the air-flue, for the purpose of increasing the heat of the air as it enters the stove through the flue under the hearth, by extracting the waste heat from the smoke and products of combustion before they escape from the stove.

2. Constructing the door to the fire-chamber of cooking-stoves with a flange projecting from its lower edge, so situate in relation to the hinge as that, when the door is closed, a space shall be left between the projecting flange and the grate-bars, to catch and return to the fire any smoke or gas that would otherwise escape into the room, substantially as hereinbefore described.

3. A cooking-stove, with hot-water reservoir or boiler attached, and so constructed that the front plate of the reservoir is formed by or is identical with the outer wall or casing of the vertical flue or flues in the rear of the oven, so that there is but a single plate between the water in the reservoir, and the products of combustion in the said flue or flues.

4,255.—VENTILATOR. — Melville E. Mead, Darien Depot, Conn.—Patent No. 90,180, dated May 18, 1869.

Claim.—The automatic ventilator, consisting of the two oppositely-arranged series of pivoted slats, connected by one or more rods or bars, whereby they are adapted to operate substantially in the manner herein set forth, for the purpose specified.

4,256.—SHAFT-COUPLING.—Silas C. Schofield, Chicago, Ill.—Patent No. 63,182, dated March 26, 1867.

Claim.—1. Providing the coupling-forks or heads B with gudgeons or their equivalents D, substantially as and for the purposes specified.

2. Constructing the ring A with two chambers, *a*, provided with lateral openings *b*, substantially in the manner and for the purposes set forth and shown.

3. The combination of the forks or heads B, provided with the gudgeons D, or their equivalents, with the chambered ring A, arranged and operating substantially as specified and for the purpose described.

4. In its application to a coupling for tumbling-shafts, the chambered ring, when made independent of the shaft-heads and constructed to inclose the same for the purpose of safety, substantially in the manner shown and described.

4,257.—OVERSHOE.—Henry G. Tyer, Andover, Mass.—Patent No. 68,398, dated September 3, 1867; reissue No. 2,820, dated December 24, 1867.

Claim.—The improved water-proof boot or shoe hereinbefore described, made of vulcanized rubber and elastic and inelastic cloth, when constructed with an elastic part or parts of vulcanized-rubber compound, covered and lined with elastic or extensible fabric, substantially as hereinbefore described.

DESIGNS.

4,623.—HEATER FOR MILK, &c.—George Sumner Albee, Hopkinton, Mass.

Claim.—The design for a heater, as herein shown.

4,624.—CARPET-PATTERN.—John H. Bromley, Philadelphia, Pa., assignor to John Bromley & Sons, same place.

Claim.—The design for a carpet, as shown.

4,625.—LIQUOR-HOLDER.—James A. Dunworth and Frank Dunworth, New York, assignors to "Vidvard & Sheehan," Utica, N. Y.

Claim.—The design for holding liquor, as shown.

4,626.—TYPE.—Heinrich Flinsch, Frankfort, Prussia.

Claim.—The design of the type, as described and shown in the "Characters" of the accompanying printed sheets.

4,627.—TYPE. — Andrew Gilbert, Boston, Mass.

Claim.—The design of the said type, as described and shown.

4,628.—SHOW-CASE.—Winfield S. Grove, Philadelphia, Pa.

Claim.—The design for a show-case, substantially as described and as represented in and by the accompanying drawing.

4,629.—SHOW-CARD.—Charles S. Hall, Rochester, N. Y.

Claim.—The design for an advertising-card, substantially as set forth.

4,630.—MATCH-SAFE. — Albert D. Judd, New Haven, Conn.

Claim.—The design for match-safe, as herein described and shown.

4,631.—DOVETAIL. — J. Dwight Kellogg, Jr., Northampton, Mass.

Claim.—The design for dovetailing wood, as here shown.

4,632.—CARPET-PATTERN.—Hugh S. Kerr, Philadelphia, Pa., assignor to Israel Foster, same place.

Claim.—1. The design for the ornamental figures A, as described and shown;

2. The design for the ornamental medallions B, as illustrated;

3. The design for the foliated space, bounded by the said figures and medallions; and

4. The design for the entire pattern, including figures A, medallion B, and said foliated space.

4,633.—CARPET-PATTERN.—Hugh S. Kerr, Philadelphia, Pa., assignor to Israel Foster, same place.

Claim.—1. The design for the ornamental stripes *a*, arranged as shown and described.

2. The design for the tablets B, bounded by the stripes *a*.

3. The design for the tablet C, as illustrated and described.

4. The design for the tablet D, as shown and described.

5. The design for the whole pattern, substantially as described and represented in and by the accompanying drawing.

4,634.—CHAIR.—Anton Kimbel, New York, N. Y.

Claim.—The design for a chair, as described and shown.

4,635.—CHAIR.—Anton Kimbel, New York, N. Y.

Claim.—The design for a chair, as described and shown.

4,636.—CARPET-PATTERN. — Christian J. Koch, Philadelphia, Pa., assignor to John Bromley & Sons, same place.

Claim.—The design for a carpet, as shown.

4,637.—SIEVE.—Robert J. Mann, Dallas City, Ill.

Claim.—The design for a metallic-band sieve, as shown and described.

4,638.—DRAWER-PULL.—Julius E. Merriman, West Meriden, Conn., assignor to Foster, Merriam & Co., same place.

Claim.—The design for drawer-pull, herein described, consisting of the peculiar-shaped connection between the head and socket, as shown in the accompanying drawing.

4,639.—OIL-CLOTH PATTERN.—James Patterson, Elizabeth, N. J., assignor to Thomas Potter, Son & Co.

Claim.—The design for an oil-cloth, as shown.

4,640.—MOLD FOR LAGER-BEER GLASSES.—John P. Pears, Pittsburg, Pa.

Claim.—In the glass mold cavity *a*, the groove *b* and convexes *c c'*, substantially as described and shown.

4,641.—MOLD FOR LAGER-BEER GLASSES.—John P. Pears, Pittsburg, Pa.

Claim.—In the glass-mold cavity *a*, the beads *b* and convexes *c*, substantially as described and shown.

4,642.—LEAD-PENCIL.—Joseph Reckendorfer and Teile H. Müller, New York, N. Y., assignors to Joseph Reckendorfer.

Claim.—The design for lead-pencils, as herein shown and described.

4,643.—BRACELET.—Theron I. Smith, North Attleborough, Mass.

Claim.—The design for a bracelet herein described and shown in the drawings.

4,644.—BRACELET.—Theron I. Smith, North Attleborough, Mass.

Claim.—The design for a bracelet, herein described and shown in the drawing.

4,645.—STOVE-PLATE.—Nicholas S. Vedder and Francis Ritchie, Troy, N. Y., assignors to Hicks & Wolfe, same place.

Claim.—1. The design for the open-work urn A, as shown.

2. The design and ornamentation of the top plate B, as shown herein.

3. The design for the cylinder-plate C, as shown by photograph.

4. The form and ornamentation of the cornice D and plate E, as herein shown and described.

5. The design for the door or window F, as shown.

6. The form and design of the curved plate G and cornice I, as described and shown by accompanying photograph.

7. The design for circular plate H, substantially as represented.

8. The design of the door J and base-plate K, as herein shown.

9. The form and design of the hearth-plate L, as shown.

10. The design and ornamentation of the leg M, as shown by accompanying drawings.

TRADE-MARKS.

148.—COMPOSITION-OIL.—Butler & Haynes, Bangor, Me.

149.—SHOES, BROGANS, AND BOOTS.—Edward Francis Jones, Farmington, N. H.

150.—SUGAR, SIRUP, AND MOLASSES.—William Moller & Sons, New York, N. Y.

151.—MACHINERY OIL.—Charles L. Morehouse, Cleveland, Ohio.

152.—ILLUMINATING-OIL.—Charles L. Morehouse, Cleveland, Ohio.

153.—LUBRICATING-OIL.—Charles L. Morehouse, Cleveland, Ohio.

154.—FACTORY OIL.—Charles L. Morehouse Cleveland, Ohio.

EXTENSIONS.

D. H. WHITTEMORE, of Worcester, Mass.—Letters Patent No. 16,417, dated January 13, 1857.

"Improvement in Machines for Paring and Slicing Apples."

Claim.—1. So arranging the slicing-knife that it shall cut the apple into a continuous spiral slice, as set forth.

2. So combining the parer and slicer with each that the operation of the two shall be simultaneous, as set forth.

THADDEUS FAIRBANKS, of St. Johnsbury, Vt. Letters Patent No. 16,381, dated January 13, 1857; reissue No. 445, dated March 31, 1857.

"Improvement in Platform Scales."

Claim.—1. My improved arrangement and combi-

nation of four bearing multiplying levers C C C C, a multiplying lever K and a lever, F, made as described, so as to act at the same time as an equalizing and a multiplying lever, the whole being applied to a steelyard weighing lever, by means substantially as set forth.

2. Arranging the suspension-bridge so that its arched standards shall extend upward by the sides of the platform, and between it and the sides of the pit, in manner as stated, in combination with arranging the transverse levers C C, and their bearings below the platform, the same affording the necessary room for the vertical play of the longitudinal levers, while it secures an advantage as regards the depth of the pit, as stated.

("An act for the relief of Francis M. Strong and Thomas Ross.")

FRANCIS M. STRONG and THOMAS ROSS, of Vergennes, Vt. — Letters Patent No. 14,119, dated January 15, 1856.

"Improvement in Platform Scales."

Claim.—1. The use of corresponding concavities and balls, in combination with the proximate faces of the intermediate bearing pieces h and the shoe g, substantially as described and for the purposes specified.

2. The adjustable bearings i, in combination with the pivots e, substantially as described, and for the purpose specified.

3. The combination of the projections on the bearings i with the the notches in the pivots e, constructed as described for the purposes specified.

ALBERT F. JOHNSON, Parkville, N. Y.—Letters Patent No. 16,387, dated January 13, 1857.

"Improvement in Sewing Machines."

Claim.—Combining the hook, when furnished with a lever or arm, as described, with the eccentric-headed screw q and the adjustable projection or screw r, for the double purpose of taking, first, the loop properly from the needle, and, secondly, for actuating the hook at the proper time for the needle to take the loop from the hook.

ISSUE OF FEBRUARY 14.

PATENTS.

111,714.—SEAT FOR VEHICLES.—Daniel R. Allen, Cumberland, Me.

Claim.—1. The connections or supports D when used to uphold the seat E by such means as to permit of its oscillating motion and still keep the said seat horisontal or nearly so, as herein described.

2. The seat E, when suspended by connections D arranged underneath said seat, and with or without the springs or bars B C, as herein set forth.

3. The springs F, when applied, as herein set forth, either to the top or bottom of the supports D.

111,715. — COMPASS-JOINT.—Theodore Alteneder, Philadelphia, Pa.

Claim.—The halves a and b of a compass-joint, provided with recess c and washer d, and the combination and arrangement thereof, substantially as and for the purpose shown and described.

111,716.—LEATHER TO RESEMBLE CLOTH.—Moritz Altmann, Baltimore, Md.

Claim.—1. The process substantially herein described of producing a new kind of leather with a surface similar to cloth.

2. As a new article of manufacture, the leather herein described, with a cloth surface, for the purpose set forth.

111,717. — RECEPTACLE FOR STATIONERY ARTICLES, &c.—William F. Baade, Buffalo, N. Y.

Claim.—The arrangement of the case A^1, flexible slate and cover M^1, with the box or case B, provided with the legs or supports L^1, all constructed and arranged substantially as and for the purposes herein set forth.

111,718.—VENTILATOR.—George R. Barker, Philadelphia, Pa.

Claim.—In combination with the same chimney-shaft or main flue A, a warmed flue, having its mouth e' at or near the floor, for drawing off the vitiated air, a hot-air supplying flue, having its discharge-openings e'' above the mouth e' of the said vitiated air-flue, and the partition e', the said parts being arranged to operate together, substantially as and for the purpose hereinbefore set forth and described.

111,719.—LEATHER-PUNCHING AND FEEDING MACHINE.—William Barry, Carthage, N. Y.

Claim. — The intermittently-rotating rolls A B, allowing the edge of the leather to be sewed to project beyond one end thereof, combined with an awl, N, arranged to move across said end and perforate said edge at intervals, all in the manner described.

111,720, antedated February 2, 1871.—WATER CUT-OFF.—Rufus M. Bixby, Iowa City, Iowa.

Claim.—In connection with the pipes A B C, arranged as shown, the oblong vessel D divided into two compartments, one above each exit-pipe, in combination with the deflecting vessel F pivoted at p and provided with the opening m, and floor n or o, all said parts being constructed as and for the purposes set forth.

111,721. — STEAM-RADIATOR.—George W. Blake, New York, N. Y.

Claim.—A steam-radiator, constructed substantially as described, of steam-chambers A A, division-plates B, arranged to form return-passages therein, inlets and outlets e f, and zigzag projections C C on the outsides of the chambers, and made to break joints as regards contiguous chambers, the whole being arranged for circulation of the steam and air, as specified.

111,722.—REFRIGERATING OYSTER-CAN.—Alfred Booth, Chicago, Ill.

Claim.—1. The combination, in a sheet-metal refrigerating-can for oysters in bulk, of the flanged ends a a and the wooden covers or guards D, or their equivalents, substantially as described.

2. The combination of the case or covering E with the can, substantially as and for the purpose described.

111,723. — CURTAIN-FIXTURE.—Charles M. Brown and Cecil L. Gates, Hartford, Conn.

Claim.—The combination of the roller a, brackets a b, constructed as described, rim-flanges f h, gears g g', cord and tassel h m, substantially as and for the purpose set forth.

111,724.—COMPOSITION FOR PAVEMENTS.—Closson P. Burgess and James R. Stevenson, Rochester, N. Y.

Claim.—The composition for pavements, consisting of the ingredients in the proportions specified, classified, prepared, and used in the manner and for the purposes described.

111,725.—STUMP-EXTRACTOR.—Elisha W. Cady, Tomah, Wis.

Claim.—The grappling-hooks C C, in combination with the pulley E, and the shaft d, and the ratchet-wheel and lever f, and the hook A, the parts being connected with chains, substantially as above set forth, for the uses and purposes above specified.

111,726.—SEED-SOWER.—George A. Carman, Deer Park, N. Y.

Claim.—The metal plate a, hopper B, wheel C, with its openings d d and set-screws, arranged and operating in connection with the pipe E, formed with the semi-cylindrical portion F, which surrounds the periphery of the wheel C in one piece, as and for the purpose set forth.

111,727, antedated February 2, 1871.—DRAIN-TILE.—Aaron W. Conley, Economy, Ind.

Claim.—The tubes A and B, provided respectively with grooves a and b, in combination with the arch C, substantially as and for the purpose set forth.

111,728.—SASH-BALANCE.—James M. Connel, Newark, Ohio.

Claim.—The combination, with the sashes B C, of cords H, pulleys E F G, and pins or hooks J and I, arranged as herein described, for the purpose of operating either or both the sashes, as desired, or locking the same, substantially as explained.

111,729. — STATIONARY BELL-HOLDER.—Sylvester Croll, Philadelphia, Pa., assignor to Samuel J. Philips, same place.

Claim.—The bell A and socketed frame B, constructed substantially as described, to form a bell-mounting for harness, as set forth.

111,730.—APPARATUS FOR LEACHING BARK, &c.—Hilen C. Crowell, Morgan, Ohio.

Claim.—The steam-pipe D, laterally-perforated base-tube E, tube F having the revolving top J, and the false slotted bottom B, all constructed and arranged as shown and described, for the purpose specified.

111,731. — ORNAMENTING MIRRORS.—William M. Davis, Mount Sinai, assignor to himself and S. S. Norton, Brooklyn, N. Y.

Claim.—The method herein described of ornamenting and figuring looking-glasses, that is to say, removing portions of the silvering by a revolving scraper guided by templates or patterns, substantially as and for the purposes herein set forth.

111,732, antedated February 4, 1871.—NIGHT-LATCH.—Charles C. Dickerman, Boston, Mass.

Claim.—1. The combination of the bolt C, sliding plate D, bearing E, and guide-pin d, when constructed to operate substantially as and for the purpose set forth.

2. The combination of the bolt C, sliding-plate D, bearing E, guide-pin d, and spiral spring g when constructed to operate substantially as and for the purpose described.

3. In a latch or lock, the combination of the shell A, face-plate B, bolt C, sliding-plate D, guide-pin e, springs G and g, tumbler or lever O, with notches o and o', trunnion J, key-hole W, and key S, as and for the purpose described.

111,733. — WEIGHING-SCALES. — Franklin Fairbanks and Harvlin Paddock, St. Johnsbury, Vt.

Claim.—1. The adjustable leverage of the force F on the segment E, or its equivalent, in combination with a weighing-scale, as and for the purposes specified.

2. The within-described friction-pawls W^2, wheel W^3, and hollow cylinder X^2, or its equivalent, in combination with a weighing-scale and with registering mechanism, as specified.

111,734.—TREATING BLOOD FOR THE MANUFACTURE OF FERTILIZERS. — Levi S. Fales, New York, N. Y., assignor to the American Fertilizing Company, same place.

Claim.—The process of treating blood with soda or potash, lime, acids, heat, and agitation, substantially as and for the purpose herein specified.

111,735.—HAY-LOADER.—John E. Fell and John H. Mattocks, Maquoketa, Iowa.

Claim.—The curved bar Z, arm W, lever W', and rod X, combined and relatively arranged as and for the purpose described.

111,736. — DRILL-REST FOR TURNING-LATHES. — Henry H. Folsom, Lowell, Mass., assignor to Charles A. Chase, same place.

Claim.—The combination of a drill-holder, A, containing two or more holes, with the drill-rest B, substantially as described.

111,737.—PURIFIER, CONDENSER, &c., FOR GAS WORKS.—Andrew Fulton, Albany, N. Y.

Claim.—1. In the construction of covers for gas-purifying boxes, center-seals, condensers, and the like, sheet-lead rims, as described, for the purpose set forth.

2. In the construction of the above-mentioned articles, rubber, as described, for the purpose set forth.

3. The combination of lead and rubber in the construction of covers of purifying-boxes, center-seals, condensers, and the like, used in the manufacture of gas, substantially as and for the purpose set forth.

111,738.—PRUNING-SHEARS.—Erasmus D. Gaines and John A. Mechillen, Chicago, Ill.

Claim.—The pruning-shears, consisting of the curved blade A and handle B, the curved blade C formed upon the pivoted plate D, the pivoted handle F, angular lever H, and pivoted connecting-rods G I, all constructed, arranged, and operating substantially as herein shown and described.

111,739, antedated February 2, 1871.—COTTON-PRESS.—John B. Gridley, Louisville, Ky., assignor of one-third his right to Robert Patterson and Chauncy Rice.

Claim.—1. The chain b, when held by the side of and beneath the clutch-wheel d by means of the spoon h and lever k, substantially in the manner and for the purpose specified.

2. The finger l, in combination with the grooved clutch-wheel d, substantially as and for the purpose described.

3. The follower-bar s, guides o rigidly attached to the press at their lower ends and loose at their upper ends, and convex rubbers r, all arranged as explained.

4. The arrangement of the windlass s, cords t, sheaves u u, and follower-bar s, substantially as specified, and to the end that the follower may be drawn over the press-box by a continuation of the same motion that elevated it.

111,740.—INTERFERING-PAD FOR HORSES.—William H. Hall, Boston, assignor to himself and Joseph W. Haskins, Charlestown, Mass.

Claim. — The within-described interfering-pad, consisting of an elastic tube or cushion, A, secured in place by a wire, b, which passes through it longitudinally and extends around the inner edge

of the shoe and upon the outside of the heel, where it is fastened, substantially as set forth.

111,741.—Artificial Leg.—James Edward Hanger, Staunton, Va.

Claim.—1. The pivot C, in rear of the center rubber cushion D, pad E, and leg B, combined as described, with thigh A having solid knee protruding within the leg-piece, all for the purpose of forming an improved knee-joint.

2. The curved wooden piece G applied to an artificial leg, in combination with the spring on back part of the leg, the lifting spring, the deflecting-bar, and the mechanism of the foot, as specified.

3. The combination, with the foot, the leg, thigh, and the bent wood-piece G, of the spring K, cord L, and deflecting-bar M, substantially as specified.

111,742.—Air-Pump.—Charles B. Hardick, Brooklyn, N. Y.

Claim.—1. The valve box-lid or cover D, formed with the valve-seats *d d* in it, and with a suitably-arranged passage, A, through it, in combination with a series of valves *f f*, carried by said lid or cover, and for operation in relation to the seats *d d* substantially as specified.

2. The combination, with a valve box-lid or cover, D, its valve-seats *d d*, and valves *f f*, of a general valve-guiding and spring-holding bar E, secured to said lid or cover, so as to be readily detachable for separate removal of the valves or inspection and repair of them and their seats after the same have been collectively detached from the cylinder of the pump, essentially as described.

111,743.—Extracting Turpentine from Trees.—Benjamin I. Hazard, Georgetown, S. C.

Claim.—The method of collecting turpentine by means of V-shaped grooves, *a*, cut in the side of a tree, and channels, *b*, cut in the grooves, as and for the purpose specified.

111,744.—Bark-Mill.—John Helenbrook, Olean, N. Y.

Claim.—In the bark-mill herein described, the arrangement of the sweep K, with one of its arms elevated and provided with projections *k k* and prongs *c c c*, in combination with the frame-bars B B provided with prongs *b b*, when all the parts are constructed and arranged as shown and described, for the purposes set forth.

111,745.—Animal-Trap.—Asahel A. Hotchkiss, Sharon, Conn.

Claim.—The trap, constructed substantially as described, with its base B and upright A hinged to fold, as and for the purpose herein set forth.

111,746.—Adjustable Bevel.—Leonard D. Howard, St. Johnsbury, Vt.

Claim.—1. The inclined flanges *t* of the section *a'*, in combination with the inclined screw-head *d* of the section *a*, as described.

2. The section *a*, provided with the dovetail block *g* and screw *f*, in combination with the section *a'*, provided with a groove at its butt corresponding to the dovetail block, and with the lug *h*, as set forth.

111,747.—Clothes-Drier.—Leonard D. Howard, St. Johnsbury, Vt.

Claim.—The arrangement of the rod *a*, rings *e* fitting one within the other, socket *d*, arms *s*, and hooks *t*, all constructed and operating as specified.

111,748.—Pump.—John Humphrey, Keene, N. H., assignor to James Wilson, Bridgeport, Conn.

Claim.—In a brake mechanism for operating the piston-stem or discharge-pipe of a pump, the combination of a collar, F, provided with the hook or loop *f*, with the pin or bar *e* connected to the horizontal arm A of the operating-lever A B, substantially as and for the purposes herein specified.

111,749.—Lithographic Press.—Thomas Hunter, Philadelphia, Pa.

Claim.—The reciprocating damping-fountain D, operating as described.

111,750.—Washing-Machine.—William G. Jones, Marshall, Texas.

Claim.—1. The roller-apron F *f*, in combination with the cylinder D, substantially as herein shown and described, and for the purpose set forth.

2. The single rollers G, in combination with the cylinder D and apron F, substantially as herein shown and described, and for the purpose set forth.

3. The arms H, interior rods I, and exterior rods J, in combination with the cylinder D, substantially as herein shown and described, and for the purpose set forth.

111,751, antedated January 30, 1871.—Rubber Roller for Paper-Machines. Richard A. Kelty, Lambertville, N. J.

Claim.—The roller, herein described, consisting of the transversely-corrugated or roughened metallic core A, the rubber cylinder B, and the ribbed lining or continuous cord-coil *c*, substantially as specified.

111,752.—Sewing-Machine.—Eben A. Kimball, Abington, Mass.

Claim.—1. The thread-guide *c'*, constructed and operated substantially in the manner and for the purpose described.

2. The slotted cast-off *h*, adjustable on its bar M by means of the screw *i*, as and for the purpose set forth.

3. The within-described mechanism or its equivalent, for regulating the stroke of the needle in such manner as to insure the cast-off being always carried up into contact with the material without regard to the length of the loop, as set forth.

4. The spring N, provided with one or more friction-rolls, *q*, in combination with the cast-off bar M, operating substantially in the manner and for the purpose described.

5. The adjustable throat-plate O, constructed and applied to its supports, substantially as set forth.

111,753.—Base-Burning Fire-Place Heater.—Philip Klotz, Baltimore, Md., assignor to Bentley C. Bibb, same place.

Claim.—1. In connection with a base-burning magazine G G', the sides and top of which are air-tight when the feed-door is closed, an air-register, *v*, arranged to open directly into the magazine above the coal contained therein, substantially as and for the purposes specified.

2. The combination of the air-register *v* with the door *a* having the flange *a'*, the magazine G G', and the space around the upper end of the extension G', substantially as described, and for the purposes set forth.

111,754.—Combination-Tool.—Josiah B. Lamkin, Champaign, Ill.

Claim.—An implement constructed as herein shown and described.

111,755.—Wagon-Hound Coupling-Box and Plate.—William J. Lewis, Pittsburg, Pa.

Claim.—A coupling-box and plate, made from rolled-plate or sheet-iron having sides *a'* and ears *a''*, substantially as described.

111,756.—Rubber-Block Holder for Wagon-Brakes.—William J. Lewis, Pittsburg, Pa.

Claim.—A rubber-block holder for wagon-brakes, made of rolled plate-iron, having sides *a'* and flange *c*, substantially as described.

111,757.—Post-Hole Digger.—Aaron E. Lindsley, Paw Paw, Mich.

Claim.—The post-hole digger, herein described, consisting of a handle, A, cutting-tube B, and conical compressor C, vertically adjustable, by means of a rod, *b*, passing through guides, for the purpose of condensing and retaining the earth or sand within the tube B, substantially as specified.

111,758.—Butter-Tub, &c.—William Marsh, Waterford, Penn.

Claim.—The combination of the hook *c*, tub B, and cover A, constructed as shown and described.

111,759.—Bakers' Oven.—Alexander Martin, Allegheny, Pa.

Claim.—The arrangement of the fire-chambers *b*, grates *m*, openings 3, heat-chambers *c c*, K, and F, spaces 2, openings *n n'* in walls A' and oven-bottoms O *m'*, combined with the dampers and flue or chimney R, constructed, arranged, and operating with relation to each other, substantially as herein described, and for the purpose set forth.

111,760.—Millstone-Feeder and Grain-Scourer.—Pleasant H. Massey, South Bend, Ind.

Claim.—1. The corrugated cylinder A, when made of glass, in combination with the scourers B and shaft E, substantially as and for the purpose set forth.

2. The combination of the scourers B, shaft E, washers *a*, and nut *b*, substantially as specified.

3. The segmental scourers B, constructed and arranged upon the shaft E, substantially as and for the purpose set forth.

111,761.—Steam Land-Carriage.—Jerome B. McKinley, Spencer county, Ky.

Claim.—1. The sliding steam-cylinders A A, and stands B B in which they work; also the connections C C between the lower end of the cylinders and journal-boxes, in combination with the cross-heads D D, the eccentrics K, cranks E, gum springs F, wheel G, and platform L; also the pipes I, I, and M, the boiler N, and chimney O; also the force-pump Y with its pipe Z Z, the shaft U, and eccentrics T, by which the pump is operated, when arranged, constructed, and operated substantially as and for the purpose hereinbefore set forth.

2. The combination of the steering-post with its cranks B', and links A' A' which connect it with the platform L, when arranged, constructed, and operated substantially as and for the purpose hereinbefore set forth.

3. The combination of the wheel S, the gum spring X, the brakes R, with their foot-lever Q, and body V, with its seat and water-box W, when arranged, constructed, and operated substantially as and for the purpose hereinbefore set forth.

111,762.—Combined Key-Ring and Door-Fastener.—Bryant H. Melendy, Manchester, N. H.

Claim.—1. The hook D, held in place by a spring-arm, and having shoulders d^2 on the inner part thereof, combined as described, with the pieces A, having recesses and shoulders d^3 thereon, for the purpose specified.

2. The compensator G, constructed with a hole in its rear end and with lips or flanges g^1 g^2 upon its ends, in combination with hook D, pieces A, spring E, and spring-arm F, substantially as herein shown and described, and for the purposes set forth.

111,763, antedated February 13, 1871.—Pump-Valve.—Charles L. Merrill, Watertown, N. Y.

Claim.—A valve provided with downwardly-projecting curved arms arranged around its outer surface, leaving a water-way or passage between their rear ends and the valve-stem, substantially as set forth and described.

111,764.—Plow-Beam.—Samuel Holden Miller, Hamilton, Ill.

Claim.—1. The combination and arrangement of plow-beams B and C, the parts D and E, F and G, all constructed and operating as set forth.

2. The combination and arrangement of the front end of beam C, draft-roll I, bolt K, and double-tree L, all constructed and operating as set forth.

111,765.—Machine for Making Candy.—Thomas Mills and George M. Mills, Philadelphia, Pa. [illegible] land, O.

Claim.—1. The combination, with the rolls A A' and frame D, of the swing-frame E and adjusting-screw G, substantially as and for the purpose hereinbefore set forth.

2. In combination with the rolls A A' and side guides *c c*, the basis of frame D and pockets K K, when relatively arranged, as and for the purpose set forth.

111,766.—Riddle and Thrashing-Machine.—Daniel Murphy, Dubuque, Iowa, assignor to himself and Timothy C. Murphy, same place.

Claim.—1. The combination of the rods G L, shoe B, crank J, and lever E, when said parts are arranged for operation in the manner and for the purpose shown and described.

2. The laterally-sliding fingers *e e*, jointed rod C C', shaft D, lever E, rods G L, crank J, and riddle-shoe B, all constructed and arranged for operation substantially as described.

6935

111,767.—Car-Coupling.—James W. Musser and Ralph Carkhuff, Lewisburg, Pa.

Claim.—1. The longitudinally-movable and vertically-arranged supporting-bar C and segment-lever D, in combination with the supporting-bars C' and inclined slots *a*, substantially as described.

2. The laterally-yielding jaws *i* and their yielding surfaces *h* or *h'*, in combination with the longitudinally-movable coupling-pin support C, notched, substantially as described.

3. The coupling-pin D of the H-form, in combination with the guides *g g* or coupling-box herein described.

111,768.—Step and Tram-Box for Mill-Spindles.—William Giles Morment, Dyersburg, Tenn.

Claim.—The bridge-tree A, tight box B, and inwardly-concave sections E, combined as described, with screws F and jam-nuts G, to admit of both tramming and adjusting the spindle itself, as described.

111,769.—Hand-Washing Rubber.—Elwood R. Norny, McDonough, Del.

Claim.—The combination of one or more rollers with a water-trough or scoop, the journals of the roller or rollers turning in the ends of the scoop, as and for the purpose set forth and shown.

111,770.—Blind-Slat Regulator.—John T. O'Donoghue and Alexander Leavitt, New York, N. Y.

Claim.—The side-recessed stile B, combined with a slat, C, and spring-held toothed wheel D, both pivoted in the center of said recess, as and for the purpose specified.

111,771.—Animal-Trap.—Ebenezer Oliver, New York, N. Y.

Claim.—1. The door C of a rectangular wire-trap A, arranged to swing inward, and provided with a spring, D, spring catch E, and stops F, substantially as herein shown and described and for the purpose set forth.

2. The setting and tripping devices, consisting of the pivoted lever G and pivoted bait-hook H *h'*, in combination with the body or box A and spring door C D, substantially as herein shown and described, and for the purposes set forth.

3. As an improvement in the double doors of

animal-traps, the connected doors I J hung from the same pivoting points, as and for the purpose specified.

111,772.—ROLLED-BAR FOR NUT-BLANKS.—Henry W. Oliver, Jr., Pittsburg, Pa.

Claim.—The rolled nut-blank bar, made substantially as described, as a new article of manufacture.

111,773.—STAMP-CANCELER.—Amos D. Owen, Thorntown, Ind.

Claim.—1. The dies B J, secured at opposite ends of the curved arm A, the latter being pivoted at a by means of the radial arms C C, when constructed, arranged, and operating substantially as and for the purposes set forth.

2. The shield H, in combination with the tube F and the die B, when all are constructed and arranged substantially as described and shown, for the purposes set forth.

111,774.—CORN-PLANTER.—John Morse Parsons, Charles City, Iowa.

Claim.—1. The combination of the arms C, axle-tree B, gudgeons D, thimbles or sleeves F, and wheels A with each other, for the purpose of supporting and operating the planting device, substantially as herein shown and described.

2. The seed-drums E, seed-droppers Q, weights R, short tubes S, and strikers T, in combination with each other and with the arms C and conductor-spouts U, for the purpose of receiving the seed and transmitting it to the said conductor-spouts in quantities to form the hills, substantially as herein shown and described.

3. The conductor-spouts U u^1 u^2, constructed substantially as herein shown and described, in combination with the seed-distributer E Q R S T, as set forth.

4. The dischargers J, clappers or plates K, spring L, plungers M, sliding rods N, sliding weights O, in combination with each other and with the conductor-spouts U, stamps I, arms C, and gudgeons D, substantially as herein shown and described, for the purpose of receiving the seed from the conductor-spouts U and introducing it into the ground, as set forth.

5. The combination of the arm H and curved stop and guide P with the thimbles or sleeves F and sliding weights O, for the purpose of holding the said weights, and dropping them at the proper time, substantially as herein shown and described, and for the purpose set forth.

6. The combination of the smoothers B' C' D' E' with the frame-work and operating parts of the planter, substantially as herein shown and described, and for the purpose set forth.

7. The spacing device, consisting of the gear-wheel I', gear-wheel J, tilting-shaft K, rock-bar L', arms N', springs O', inclined projection P', quadrant Q', spring S', lever V', connecting-rods W', slides X', rollers Y', and catches Z', in combination with each other and with the wheels A, arms C, and operating parts of the planter, substantially as herein shown and described, and for the purpose set forth.

8. The combination of the incline T' and wire ring U' with the quadrant Q' and tilting-shaft K' of the spacing device, substantially as herein shown and described, and for the purpose set forth.

111,775.—SUPPORTING-CORES.—Enos B. Phillips, Cambridge, Mass.

Claim.—Flat-headed chaplets inserted in patterns previous to molding, for the purpose described and herein set forth.

111,776.—ADJUSTABLE ATTACHMENT OF CAMS FOR FLIERS OF PRINTING-PRESSES.—Charles Potter, Jr., Plainfield, N. J.

Claim.—The within-described improvement in the fly mechanism in printing-presses, consisting of the terminal piece A' and the locking means a, arranged to serve relatively to the shaft A, the axially-adjusting means C, and fly-cam B, substantially as and for the purposes herein set forth.

111,777.—CLOTHES AND HAT-HOOK.—Reuben W. Randall, Biddeford, Me.

Claim.—The combination and arrangement of the hooks a and b, pivot f, spring clamp e, and spring c, as herein described, and for the purposes set forth.

111,778.—COFFEE-MILL.—François Raymond, Woodhaven, N. Y., assignor to the Lalance and Grosjean Manufacturing Company, of New York City.

Claim.—The ring A having the notched studs P, and the stationary grinder having the inclined flanges I, combined with the box top and each other, all substantially as specified.

111,779.—MACHINE FOR CLEANING AND SCOURING WHEAT.—Ephraim Russell, Minneapolis, Min.

Claim.—The series of spiders A A, having teeth a a a arranged alternately upon shaft E, in combination with the perforated metallic case C, constructed and arranged to operate in the manner shown.

111,780.—GATE.—Cyrus W. Saladee, St. Catharines, Canada.

Claim.—1. The adjustable brace-block g, constructed and operating in the manner and for the purposes set forth.

2. The combination of the posts p and b, the hook r, and studs d d', constructed as described, and operating as and for the purposes set forth.

111,781.—CULTIVATOR.—Marshall Sattley, Taylorville, Ill.

Claim.—The axles B B, each extending out about one-third the distance between the hubs of the wheels, combined as described, with a right-angled bar, C C, and obtuse-angled bar, D D, the former fastened to said axles at the outer part and the latter at the inner part, near the hub, all as and for the purpose set forth.

111,782.—SEWING-MACHINE SEAT.—Sarah A. Sexton, New York, N. Y.

Claim.—The hinged seat C, screw D, pedestal E, bar F, collared rod J L, and tube G, combined with a sewing-machine, as and for the purpose described.

111,783.—WEAVING TUBULAR FABRICS.—Guilford Smith, South Windham, Conn.

Claim.—The extending twines or cords a a, applied and controlled substantially as herein described, and passing through the tubular fabric in the weaving operation without being incorporated therein.

111,784.—APPARATUS FOR INJECTING PRESERVATIVE LIQUIDS INTO WOOD.—William H. Smyth, Steubenville, Ohio.

Claim.—The combination of a liquid-holder and air or gas-condensing chamber, an air-pump, and an attaching-cup, adapted for attachment to a tank or the end of a piece of timber, for charging the timber by the action of compressed air or gas on the said liquid, substantially as specified.

111,785.—BEDSTEAD.—George Snowden, Hudson, N. J.

Claim.—The side-rails A having the headed pins a b thereon, the end-pieces B having the slots c d therein, and the end-threaded rods E, all combined and described, for the purpose specified.

111,786.—PRAIRIE-PLOW JOINTER.—Andrew J. Spicer, Galesburg, Mich.

Claim.—The semicircular colter for cutting loose a ribband of turf from the landside of the furrow, being turned in the manner and for the purpose set forth and described.

111,787.—EXCAVATOR.—Thomas Symonds, Portland, Me., assignor to John B. Curtis, same place.

Claim.—The combination of the buckets F F, of the arms A A and B B, applied as described, the handle Q, the shaft H, and the ropes, arranged as set forth.

111,788.—MACHINE FOR CUTTING CHEESE, BUTTER, &c.—James H. Thomas, Lynn, Mass., assignor of one-half his right to Benjamin F. Larrabee, same place.

Claim.—The arrangement of the knife-bar e and knife f, the spring f and its supporting-bracket c, and the treadle k, in combination with the table A, as and for the purposes herein shown and set forth.

111,789.—REMOVING SLAG FROM FURNACES.—John Thomas, Hokendauqua, Pa.

Claim.—The improved mode of removing slag or liquid cinder by discharging it while in a liquid state into a strong current of running water, whereby it is disintegrated and flows away with the water, all substantially as specified.

111,790, antedated February 11, 1871.—COMBINED FENDER AND GAUGE-WHEEL.—Alexander B. Thornton, New Berlin, Ill.

Claim.—The arrangement, with reference to the beams A and plows C, of the fenders H, slotted standards J, and adjustable brace-bars K, all constructed as and for the purpose specified.

111,791.—APPARATUS FOR THE TREATMENT OF ALCOHOLIC AND OTHER SPIRITS.—Reuben D. Turner, New York, N. Y.

Claim.—1. The combination of the air-blast, vents, or nozzles e, the burners h, the ozone-tubes f, exposed to the cooling action of water on their exterior, with the tank A and its rose or sprinkler D, and distributing plates or devices for spreading or dividing the liquid in its descent within the tank under exposure to the ozone or ozonized air, substantially as specified.

2. The combination, with the elements recited in the preceding claim, of the suction-fan or device L, essentially as specified.

3. In combination with the ozone-distributing devices or tubes f, the tank A, provided with a charred lining or interior surface b, substantially as described.

111,792.—METHOD OF ATTACHING HANDLES TO SAWS.—Samuel W. Valentine, Bristol, Conn., assignor to Porter Saw Company, same place.

Claim.—The combination of the saw-plate D, flanges B B, T-bolt C provided with the pins b b, as described, and the nut c, the whole combined and operating together substantially as and for the purpose described.

111,793.—DOUBLE-SHOVEL PLOW.—Robert Paten Van Horne, Gratiot, Ohio.

Claim.—In combination with the main beam A, branch beam B, plows H H, hook D, handles I I, adjustable braces L L, stretchers K N, and clamping bolts E F, arranged relatively one to the other, the removable plow-beam P provided with the shovel O, constructed as described, for the purpose specified.

111,794, antedated February 1, 1871.—SMUT AND WHEAT-SEPARATING MACHINE.—William H. Wash, Howardsville, Va.

Claim.—1. The arrangement of the main shafts B B, in combination with the counter-shaft J and their respective pulleys and bands, for operation substantially as set forth.

2. The arrangement of the blast and exhaust-fans Q and Q' and their respective air-passages with relation to the beater P and separator X, in such manner that the blast from the fan Q is taken up and discharged by that Q', as shown and described.

3. The arrangement of the weighted valve l at the grain-exit of the cylinder N, to prevent the escape of grain except under a pressure of air sufficient to open said valve, as specified.

4. The combination of the convex or curved chute k beneath the hopper, whereby the grain from the tubes f is delivered to the air-blast in a thin broad sheet, as described.

111,795.—ASH-SIFTER.—William Weaver, Greenwich, N. Y.

Claim.—An improved sifter, consisting of the box A, hopper B provided with a door or cover, C, sieve D, long handle F, bars or ways E, ash-chamber G, chute or cinder chamber H, sliding door or gate I, and door J, said parts being constructed and arranged substantially as herein shown and described, and for the purpose set forth.

111,796.—MACHINE FOR BUNDLING WOOD.—William L. Williams, New York, N. Y.

Claim.—The treadle k and roller l, acting against the cam surface 2 of the lever g, in combination with the band m and supports c, the parts being constructed and arranged substantially as and for the purposes set forth.

111,797.—PAPER-TRIMMING MACHINE.—William P. Yeoman, Waukegan, Ill.

Claim.—The feed-table H, combined with the spring guide N' N, which serves the purpose of holding the different lengths of paper rolls and of guiding the paper to the knives, as described.

111,798.—CHEWING-GUM.—Thomas Adams, Hudson City, N. J., assignor to John D. Adams, same place.

Claim.—The chewing-gum prepared from the material and in the manner specified, as a new article of manufacture.

111,799.—SULKY ATTACHMENT FOR BREAKING-PLOWS.—Asa H. Allison, Charlottesville, Ind.

Claim.—The beam J, in combination with the rear lifting device F, d, h, and f, clevis I, rack H, clamp b, and lever D, as and for the purpose set forth.

111,800, antedated February 3, 1871.—TOBACCO-PRESS.—Herman H. Alms, Kansas City, Mo.

Claim.—1. The cam e, constructed as described, with belt and weight e, in combination with and operated by the treadle k, substantially as and for the purposes set forth.

2. The arrangement of the treadle k, lever m, and spring n, in combination with and operating the two cams e and h, substantially as described, and for the purposes set forth.

3. The arrangement of the cam h and pulleys i i, i'', in combination with the weight g and treadle k, substantially as described.

4. The movable rammer b and head s, in combination with the jointed rod d and cam e, constructed as described, and for the purposes set forth.

5. The combination of check-lever and spring o with the cam h, pulleys i i i'', weight g, and pin on the rammer-head, arranged substantially as described, and for the purpose set forth.

6. The automatic sliding funnel-bracket, operated by means of the cam h and weight g, substantially as shown and described.

111,801.—TYING BROOMS AND BRUSHES.—James H. Anderson, Terre Haute, Ind., assignor to Thomas Marston, Jr., Walter L. Peck, and Clarence I. Peck, Chicago, Ill.

Claim.—1. The improvement in tying brooms, brushes, or whisks, herein described, with two or more wire or metallic braces with projections, secured down, by pressure or percussion, to such an angle to the plane of the broom-handle as to thoroughly fasten the cross-wires binding the corn or other material to the handle.

2. The arranging the said wire or metallic braces with projections, so secured down, by pressure or percussion, as described, upon the corn or other material on the handle, in a winding or cork-screw form, substantially as set forth.

111,802.—PAPER-BAG MACHINE.—Charles F. Annan, Boston, assignor to himself and Herbert S. Merrill, Cambridge, Mass.

Claim.—1. A grooved shaft, L, provided with sliding collars *b c*, substantially as and for the purpose set forth.

2. The leading roll M, suspended in arms *e*, pivoted to the frame-work, and made adjustable, by screws or otherwise, for the purpose set forth.

3. The paste-box N, supported in arms 21, adjustable by the screws 26, in combination with the arms *e*, adjustable by the screws 19, as and for the purpose described.

4. A knife-bar, *s*, provided with a bent projection, 48, and screw 49, for regulating the inclination of the knife V with respect to a brake-roller and former, substantially as described.

5. A brake, *u*, provided with a revolving roller, 53, operating substantially in the manner and for the purpose set forth.

6. A slotted plate, 67, in combination with a slotted stud, 60, to allow of the employment of different-sized gear, as described.

7. A dovetailed piece, *d*, provided with openings 15 16, in combination with a sliding collar *b* and grooved shaft L, for the purpose set forth.

111,803.—PAPER-BAG MACHINE.—Charles F. Annan, Boston, assignor to himself and Herbert S. Merrill, Cambridge, Mass.

Claim.—The adjustable arm B, with its split socket C, in combination with the former A, provided with a projection, *a*, as and for the purpose described.

111,804.—DEVICE FOR LABELING CIGARS.—Reuben H. Andrews, Washington, D. C.

Claim.—The combination of threads with cigars, substantially as described, and for the purposes herein set forth.

111,805.—PRINTING-PRESS.—Amos H. Bangle, Brooklyn, Cal.

Claim.—1. The slotted cam-arms S, transverse rod *t*, and adjustable pressure-rollers *s*, when employed as and for the purpose specified.

2. The fountain *y*, hung upon journals at each end, and tilted into contact with the distributing-rollers by the sliding frame L, substantially as and for the purpose described.

3. A printing-press, combining the features herein specified, that is, having the sliding form-bed B, hinged platen P, and sliding frame L operated by the cam-cylinder C in the manner described, and having a tilting fountain, *y*, the whole constructed and arranged to operate in the manner and for the purpose specified.

111,806.—CONCRETE FOR PIPES, BRICKS, &c.—Thomas J. Barton, Brooklyn, E. D., N. Y.

Claim.—1. The coating herein described for concretes, substantially as specified.

2. The coating herein described for concretes, substantially as and for the purpose specified.

3. The concrete herein described, composed of soluble silicates, coke-dust, sand, and ashes, compounded in the manner and proportions substantially as specified.

111,807.—BED-BOTTOM.—Van Boll, Seville, Ohio.

Claim.—The combination of the splint bottom D and adjustable frame A, provided with the keys E and dowels constructed and arranged in relation to each other substantially as and for the purpose set forth.

111,808.—CORN-PLANTER.—Cyrus F. Bilhimer, Irwin's Station, Pa.

Claim.—1. The hollow axle S, with wheel J secured thereto, in combination with the spindles *a a* and set-screws *b b*, constructed and arranged to operate substantially as and for the purpose specified.

2. The rocking cross-bar L, with foot-rest lever K and pivoted lever M, so as to enable the operator to work the dropping mechanism either by hand, foot, or automatically, substantially as herein set forth.

3. The combination of the rocking-bar L, pivoted or hinged lever M, pins *d d*, and wheel T, substantially as and for the purposes herein set forth, arranged and connected as described, for operating the dropping mechanism.

4. The corn-boxes G, droppers H, and slide-valves I, constructed and arranged to operate substantially as and for the purposes herein set forth.

5. The arrangement of the corn-boxes G with their droppers H, the plows X, and the curved shovels B, substantially as shown and described, and for the purposes herein set forth.

111,809.—SPRING-SUPPORTER FOR CARRIAGES.—Daniel H. Brown, Utica, Mo.

Claim.—In combination with the elliptical spring A the slotted tubes G H I, connected to the curved plates K K′, coil-springs B C, rings D E, and pins *a c b*, all constructed and arranged to operate substantially as set forth.

111,810.—MILLSTONE-PICK.—Henry J. Brunner, Nazareth, Pa.

Claim.—1. The notched gibs *d d*, blanks or cheek-plates *f f*, and one or more blades C D E G, in combination with the wedge-shank or head A, substantially as and for the purpose herein specified.

2. The combination of the taper shank of shaft A, slotted blades C D E G, notched gibs *d d*, either with or without the cheek-plates *f f*, and the key *g*, or its equivalent, constructed and arranged substantially as and for the purpose herein set forth.

111,811.—COOKING-STOVE.—Eseck Bussey, Troy, N. Y.

Claim.—The jacket B, constructed as described, and inclosing, in whole or in part, a sheet-metal reservoir placed in the rear of a cooking-stove, said jacket B fitting closely around said reservoir and combined therewith, substantially in the manner and for the purposes herein described and set forth.

111,812.—COOKING-STOVE.—Eseck Bussey, Troy, N. Y.

Claim.—1. Attaching or securing the reservoir B to the rear of a cooking-stove by means of one or more lugs or projections, *a a*, fitting into corresponding notches or recesses, *c c*, cast in the back part of the top plate A of the stove, substantially as herein described and specified.

2. The raised auxiliary top plate D, in combination with the reservoir B and principal top plate of the stove, A, when combined with damper E, in the manner and for the purposes hereinbefore described.

3. The damper E, located above the rear center vertical flue of the stove, and below the plane of the raised extended top D, whereby the necessity of a damper in the stove-pipe is obviated, as herein fully described and set forth.

111,813.—LAMP-BRACKET FOR SEWING-MACHINES.—Henry Campbell, San Francisco, Cal.

Claim.—As a new article of manufacture, the lamp-bracket for sewing-machines, consisting of the socket B, standard C, brace E, swivel-arm D, plate F, with catches *g h*, and the spring catch *k*, all as described.

111,814.—BREECH-LOADING FIRE-ARM.—Martin J. Chamberlain, Springfield, Mass.

Claim.—1. The retractor I, moving upon the pivot *i′* and having the projection *k* thereon, and operated by means of the curved part *f* of the breech-block, all constructed substantially as described.

2. The projection H′ upon the trigger, operating within the recess *h′* and upon the bearing *b′*, substantially as herein described.

3. The vertical projection *a′* upon the trigger, in combination with the elongated part *a* of the hammer, all constructed and operating substantially as described.

4. The safety-button *m*, secured to the hammer upon the pivot *g*, in combination with the breech-block F and lock-frame A, constructed and operating substantially as set forth.

111,815.—APPARATUS FOR THE MANUFACTURE OF BESSEMER STEEL.—Henry Chisholm, Cleveland, Ohio.

Claim.—The combination of the body A and section D, (containing the tuyeres, air-chambers, &c.,) constructed and arranged in relation to each other substantially as and for the purpose specified.

111,816.—LET-OFF MECHANISM FOR LOOMS.—John Clegg, Warwick, R. I.

Claim.—1. The warp-lever B, slotted actuating-rod C, spring *h*, adjustable collar *i*, escapement-wheel D, escapement-lever F, with fingers *o p* and arm *q*, beam-gear A, and suitable intermediate gearing, all constructed, arranged, and operating substantially as described.

2. The collar *i*, provided with a set-screw and suitable locking device, in combination with the automatic spring let-off motion, substantially as and for the purposes specified.

111,817.—MACHINE FOR THE MANUFACTURE OF MOLDINGS.—Joseph C. Cooke and Henry A. Whiteley, Preston, Conn.

Claim.—In a molding-machine, the arrangement of a rotary polisher beyond the cutting-tool of the same, substantially as and for the purpose set forth.

111,818.—ROTARY STEAM-ENGINE.—Philipp Cramer, Providence, R. I.

Claim.—1. The main steam-chamber E, in connection with two or more auxiliary steam-chambers F, mounted upon the pipe-shaft B, provided with suitable eduction-valves, operated by the direct pressure of steam, and arranged to deliver two or more columns or jets of steam into an interior or exterior space at right angles to the line of the axis of the engine, substantially as described.

2. In combination with a rotary steam-engine having a main and two or more auxiliary steam-chambers, and valves operated by the direct pressure of steam, the sliding rod O, stop-blocks *m* and *n*, sliding block G, and cam-pulley Q with sleeve *k*, the whole being arranged to control the action of the valves, substantially as shown and described.

111,819.—FEED-CUTTER.—John Criley, Shiloh Hill, and Whitney Gilbreath, Rockwood, Ill.

Claim.—1. The knife-plate or board N, having curved slots *n n′*, and carried on two pins or anti-friction-rollers O O′, substantially as and for the purpose described.

2. The combination and arrangement of the rocking draw-knife M N *n n′* and fixed knife L, substantially as described.

3. The combination and arrangement of the treadle V, pitman U R, cranks *s s′*, shaft S, balance-wheel T, knives M, and slotted plate or board N *n n′*, and L, as described.

111,820.—APPARATUS FOR SMOOTHING AND PRESSING PAPER DURING THE MANUFACTURE.—Daniel Crosby, Hampden, Me.

Claim.—The method of smoothing and compressing paper while in a moist state, by passing it between one or more pairs of press-rolls, the upper ones of which are smooth and the lower ones jacketed with any suitable material, as described.

111,821.—DENTIFRICE.—Oliver Danforth, Bibb county, Ga.

Claim.—A dentifrice or tooth-wash, composed of the ingredients in or about the proportions above specified.

111,822.—HUB AND AXLE.—Carlos R. Donner, Sonora, Cal.

Claim.—The box B, with its interior constructed as described, and having the supplemental steel boxes *a a*, in combination with the oil-cups C and D, the holding-nut F, with its projecting hub or shoulder *b*, and the cap H, with its lugs *c c*, all constructed and arranged substantially as and for the purpose set forth.

111,823.—SHELL-FUSE.—Ellis Drake, Stoughton, assignor to himself and John S. Smith, Leicester, Mass.

Claim.—1. The combination and arrangement of parts, as herein shown and described, whereby a time-regulator, a time, a percussion, and a concussion-fuse are contained in the same fuse-case, substantially as described.

2. A plunger, C, arranged loosely upon a square or angular shank, B, formed with a fuse-case, in combination with a fulminate upon the shoulder of said fuse-case, as and for the purpose set forth.

3. The grooves *c c*, formed upon the inner wall of the front end of a fuse-case, substantially as and for the purpose set forth.

4. The plunger D, formed or provided with legs *b*, in combination with the groove or grooves upon the inner wall of the front end of a fuse-case, when said plunger is connected with the cap, substantially as described.

5. The case A, formed with the slot *a*, shank B, and grooves *c*, in combination with the plungers C and D, and cap F, substantially as described.

111,824.—RAILWAY ALARM.—George Draper, Hopedale, Mass.

Claim.—My special railway-alarm apparatus, as composed of the lever B, its retractive spring *e*, the connecting-rod I, the rocker-arm D, the pawl *g*, the ratchet *f*, the grooved wheel *e*, the endless wire-rope E, the escapement-wheel A, the hammer G, its spring *m*, and the belt H, all arranged substantially in manner and to operate as described.

111,825.—GAS-BURNER.—Antoine Ernest Dupas, New Orleans, La.

Claim.—1. The combination of the duplicate concentric rings of jets A B, with gas-chambers C D, when the latter are connected with a bifurcated section of pipe E, and respectively supplied with gas through passages G G′ and H′ H″, in the manner herein described, for the purpose set forth.

2. The combination of the regulating-key I with the inner ring of jets B, when said key is employed in connection with a passage, H, which above the key is divided into branch passages H′ H″, as described, for the purpose set forth.

111,826. — Corn-Planter. — Arthur Edwards, Cuba, Miss.

Claim.—The combination of the oscillating post I, arms H H, levers G G, arms *e e*, and the arms *f f*, all constructed and operating substantially as set forth.

111,827.—Magazine for Breech-loading Fire-Arms. — William H. Elliot, New York, N. Y.

Claim.—1. The arrangement of the radial arms or partitions of the cartridge-space, as herein shown, whereby the cartridges are held in rows and circles, substantially as specified.

2. The combination of spring A with the hub *c* and radial arms *c'*, substantially as and for the purpose set forth.

3. The stop *k* with its spring *l*, in combination with curve *v*, when operating together substantially as and for the purpose specified.

4. The combination of the radial arms *c'''* with the partition *g*, substantially as and for the purpose specified.

5. The stationary ratchet *d*, in combination with spring A, hub *c*, and radial arms *c'''*, substantially as shown.

6. In combination with a magazine constructed substantially as herein shown, the slide or fastening *m* and loop *m'*, whereby the magazine may be attached to the arm or carried upon the belt as a cartridge-box, as specified.

7. The curve backward in the outer ends of the radial partitions, as and for the purpose specified.

8. The form of the end of the radial partition, viz., longer at one corner than the other, substantially as and for the purpose specified.

9. The arrangement of the radial partition of the cartridge-space, whereby a certain geometrical arrangement of the cartridges is effected, substantially as specified.

111,828. — Spool-Silk Case.—Samuel Elmer, Ashtabula, Ohio.

Claim.—The spool-case, consisting of the standard A, grooved case C of a greater diameter than the standard, and having ledge J at its lower end, glass plates F, which inclose the case C and hold the spools in place, and through which all the spools can be seen, when constructed and arranged in the manner and for the purpose described.

111,829.—Gauge for Saw-Filer.—James E. Emerson, Trenton, N. J.

Claim.—The bent-metal spring-gauge plate C, in combination with the file, straight or bent, or other equivalent device, when constructed, applied, and used in the manner and for the purpose shown and described.

111,830, antedated February 4, 1871.—Traveling-Trunk. — Harry Hubbard Evarts, Chicago, Ill.

Claim.—1. The bottom D, resting on the flange *d*, and formed with pieces E united thereto, and rising from the interior of the trunk, substantially as and for the purpose described.

2. The end pieces E, united to bottom D, and rising internally from said bottom, against the sides of the trunk, to the top of the lid A', substantially as and for the purpose described.

3. The flanges C, projecting inwardly beyond the side pieces B, for strengthening the trunk and supporting its bottom, substantially as and for the purpose described.

111,831.—Fence.—Oaker F. A. Faulkner, Mount Pleasant, Iowa.

Claim.—The herein-described trestle-fence, composed of panels, the horizontal bars A of which are supported at one end upon trestle-legs *c* a permanently secured thereto, and at the other end upon the adjacent panel and diagonal stakes *b b*, and riders C, whereby the panels are braced and locked together, substantially as set forth.

111,832, antedated February 10, 1871.—Bedstead and Bed-Bottom.—Frederick G. Ford, Baltimore, Md.

Claim.—1. The separate or independent [illegible] trass-holder E F *h*, in combination with the bedstead, said holder being supported on springs substantially as and for the purpose set forth.

2. In combination with the above, the slats stiffened with braces *a*, and faced on their ends with sheet metal, substantially as and for the purpose specified.

111,833.—Tackle for Hoisting Sails.—George A. Ford, Oswego, N. Y.

Claim.—1. The combination of the runner D, the blocks D', E E, G G, and H H, and the halliards F, all constructed, arranged, and operated as described and shown, for the purposes set forth.

2. The combination and arrangement of the devices employed for raising fore-and-aft sails, consisting of the runners D and K, the blocks D', E, G G, H H, I, M M, and N N, and the halliards F F and L L, all constructed and operated substantially as described and shown, for the purposes set forth.

111,834. — Mortising-Machine. — Joseph W. Fowle, Boston, Mass.

Claim.—1. In a mortising-machine, in which a boring-tool is used to remove the bulk of the material to be cut away, the combination of the slotted chisels with their driving mechanism, as herein shown and described.

2. The combination of the chisel-guiding and depth-gauging piece *r* with the combined boring tool and chisels, substantially as and for the purpose set forth.

111,835.—Griddle.—Titus D. Gail, Waukegan, Ill.

Claim.—The handles B, or their equivalents, in combination with the griddle A, the whole constructed substantially as and for the purpose described.

111,836. — Fire-Extinguisher. — Joseph Gardner, Bedford, Ind.

Claim.—The combined arrangement of the alkali-chamber A, acid-chamber B, mixing-chamber C, equalising-pipe U, branches V W, discharge-pipe S, and cocks N, O, T, X, and Y, as and for the purposes stated.

111,837. — Machine for Nailing Shoe-Soles with Wire.—Louis Goddu, Boston, Mass., assignor to Elmer Townsend, same place.

Claim.—1. The combination of the movable work-supporter M and its elastic lifter O with a nailing-machine, as composed of the guide-nose, the nail-driver and its operative mechanism, the mechanism for feeding the wire, that for receiving it and transferring the nail portion of it to the guide-nose passage, and, finally, mechanism for severing a nail from the wire, all being substantially as hereinbefore described.

2. The combination of the binding mechanism or toggle R, its spring S, and arm T, with a nailing-machine, substantially as described, such binding mechanism being for the purpose as mentioned.

3. The arrangement and combination of the catch-slide *u'* and the arm P (provided with springs) and constructed substantially as described) with the lever E and its supporting frame.

4. The combination of the operative lever E, as described, with the frame A, the nose B, and the nail-driver *o*, the transferrer F, and the feed-wheel I, all arranged, constructed, and provided with mechanism for operating them, in manner and through the action of such lever, substantially as hereinbefore explained.

[illegible]—Water-Meter.—Robert C. Gray and William B. Brittingham, La Fayette, Ind.

[illegible].—1. The recessed valves E E^2 and E^1 E^3, in reference to the ports *e* g^2 and *e'* and g^3, in respective seats, and channels *c* and c^1 in the case, substantially as set forth.

2. In combination with the foregoing elements, ports *f* and f^1 in the seats, and channels c^2 and c^3 in the sheet, substantially as set forth.

3. The hollow valves E and E^1, rigidly connected by the hollow stem E^2, and provided with apertures F^1 and E^3, respectively, with reference to the ports and ports D *f* and D' *f'* and exhaust openings A^1 *g*, substantially as set forth.

[illegible]. — Chimney-Top. — Richard W. Griffith, Georgetown, D. C.

[illegible].—The separate chimney-top A and case B, having the air-passages *h*, the case having an opening, A, and projection *d* all around, arranged and operating substantially as and for the purpose set forth.

[illegible].—Cotton-Press.—Robert J. Harrison, Raleigh, N. C.

[illegible].—1. The combination of the upright revolving lever G, the adjustable locking-plate M, the angular bolt Y, with the end D of the press, the notched and slotted platen-arm E, all operating substantially as described, for the purpose specified.

2. The lever G, constructed with the rounded metal face H, bar I, and strap J, arranged in bearings as described, for the purpose specified.

3. The arrangement of the lever G and horizontal platen-arm E with relation to each other and the press, whereby both are adapted to be operated by the same windlass, as herein shown and described.

4. The doors of the press, composed of the stripes and parallel bars O, in combination with the fixed metal loops P, removable metal loops Q, studs R, and wedges S, when arranged as herein described, for the purpose specified.

111,841.—Animal-Trap.—Sanford H. Hart and Hubert C. Hart, Unionville, Conn.

Claim.—1. The trigger *s*, pin *t*, and platform E, combined and arranged to operate as and for the purpose set forth.

2. The jaws *a a'*, spring B, platform E, trigger *s*, and pin *t*, all arranged to operate as shown.

111,842. — Earth-Closet. — Duncan C. Hartman, Baltimore, Md.

Claim.—The water-tight cylinder A, constructed as described, having the rocker M on the bottom, and the cover C, as set forth.

111,843.—Clothes-line Fastener.—Henry J. Hendey, Wolcottville, Conn.

Claim.—The clothes-line fastener herein described, having corrugated cam C, corrugated backplate A, spring B, and pins *b' b'*, substantially as and for the purposes specified.

111,844.—Hand-Stamp.—Horace Holt and William W. Secombe, New York, N. Y., assignors to "Secomb Manufacturing Company," same place.

Claim.—1. The intermediate disk, locked and actuated by a device connected to or carried by the stem or spindle by which said disk is operated.

2. The combination of the locking and unlocking devices *s m* of the intermediate disk or type-wheel with a stem or spindle, F, having an axial and reciprocating motion, and with the stamp-head, as herein described and set forth.

3. The segmental slot or slots *c* in the socket or guide C of a hand-stamp, in combination with the pin *a*, for limiting the turning or swiveling movement of the stamp-head, as described.

4. The depressions *d* at the ends of the slot or slots *c*, to form seats for the pin to hold it and the stamp-head in either of the extreme positions in which the latter may be adjusted, as described.

5. The combination of the segmental slot or slots *c*, pin *a*, spring E, tubular shank D, and socket or guide C, constructed and operating substantially as described.

111,845. — Spike-Extractor.—William S. Hough, Johnstown, Pa.

Claim.—The combination of stand A, curved lever *b*, and vertical bar *c*, provided with orifice and catch E, all constructed as and for the purpose set forth.

111,846. — Pen-Holder. — Isaac Jacobs, New York, N. Y.

Claim.—1. A metallic pen-holder, composed of two concentric tubes, one being of zinc, the other of copper or other metal or alloy which will form a voltaic couple with zinc, the outer tube being perforated to permit, when the pen-holder is griped for writing, the fingers and thumb, or one or more of them, to come in contact with the two metals of which the compound pen-holder is composed, substantially as and for the purposes shown and described.

2. The combination of the herein-described pen-holder and the pen, substantially in the manner specified, so that the pen shall be in contact with but one of the metals of which the holder is composed, substantially as and for the purposes set forth.

111,847.—Sash-Cord Fastener.—William N. Jackson, Muncie, Ind.

Claim.—The cord-fastener, slotted and concaved as shown, when combined as described with an inclined circular opening in the sash, all as and for the purpose set forth.

111,848.— Thrashing-Machine.—William N. Jackson, Muncie, assignor to himself and Benjamin F. Jackson, Anderson, Ind.

Claim.—1. The concave C, constructed with a central groove, c^2, and a set of parallel diagonal grooves, c^3, and ribs c^4 on each side of the central groove, such sets converging toward the discharging side of the concave, substantially as set forth.

2. In combination with the thrashing-cylinder of a thrashing-machine, a concave having a reciprocating motion parallel to the axis of the cylinder, substantially as set forth.

3. The combination of the vibrating concave C, constructed as described, and the cylinder B, having alternate annular grooves *b* and elevations b^1, and longitudinal serrations b^2, substantially as set forth.

4. The combination of the feed-rollers E and E^1 and thrashing-cylinder B, when severally constructed, with the alternate annular grooves *b* and *e* and elevations b^1 and e^1, and longitudinal serrations b^2 and e^2, as shown and described.

111,849. — Machine for Lining Pasteboards.—Gustav L. Jaeger, New York, N. Y.

Claim. — 1. The pasteboard-cylinder, provided with gripers *c c'*, in combination with the pasting-roller F and with the paper-cylinder G, all constructed and operating substantially in the manner herein shown and described.

2. The spiral cylinder-brush P, in combination with the paper-cylinder G and the pasteboard-cylinder E, substantially in the manner set forth.

3. The combination of the yielding-table O with the fly P, the paper-cylinder G, and the pasteboard-cylinder E, substantially as described.

111,850. — Stove-Oven Grate.—W. G. James, Richland Centre, Wis.

Claim.—As a new article of manufacture, the

within-described oven-plate, made of a single piece of solid sheet metal, with its ends and sides a a turned down, and with openings e at each corner to allow the heat to pass upward, all as shown and described.

111,851.—TREATING BONES, HORNS, HOOFS, &c., FOR MANUFACTURE OF FERTILIZERS. — William Burr Johns, Philadelphia, Pa.

Claim.—The process of desiccating and rendering friable bones, horns, hoofs, and other animal matter, by subjecting these substances, or any of them, to the action, at the commencement of the operation, of steam in contact therewith, and afterward to the action of heat evolved from steam not in contact with the substances, in one entire and continuous operation, completed in one vessel or apparatus.

111,852. — ATTACHMENT TO PLOWS FOR SUBSOILING.—Rose Johnson, Lawrence, Kansas.

Claim.—The combination of the shank A, made in two pieces hinged together, and provided with the plate C, secured by the bolts a a, all substantially as set forth.

111,853.—GRAIN-DRILL.—Benjamin Kuhns, Dayton, Ohio.

Claim.—The combination of the beam B, links a, and shifting drag-bars A, substantially as set forth.

111,854.—PLOW.—John Lane, Chicago, Ill., assignor to Hapgood & Co., same place.

Claim.—The plow-block K, V-shaped in cross-section, and formed, as described, to have affixed thereto the land-side, share, mold-board, and standard.

111,855.—MACHINE FOR BENDING WOOD.—Obadiah Marland, Boston, Mass.

Claim.—1. The combination of bars a, by means of half pivots and links, substantially as described.

2. The combination, with bars a, of two sets of pivots and links, one on which the bars turn, and the other for reinforcing the former.

3. The combination, with the bars a, of spanner-bars d or pieces f, substantially as and for the purpose specified.

4. The spanner-bars d, with notched and beveled edges, and with their backs curved at the edges, substantially as shown in fig. 6.

5. The combination, with a chain made up of bars a connected at their ends, of clamp-bearing pieces f, by means of trunnions, arranged substantially as and for the purpose set forth.

111,856. — METALLIC-CARTRIDGE.—Edwin Martin, Springfield, Mass., assignor to himself, Samuel W. Porter, and James F. Cranston, same place.

Claim.—1. A metallic cartridge-shell having the fold c made therein, making the shell of three distinct thicknesses at the juncture of the head with the cylindrical part, all constructed substantially as and for the purposes herein described.

2. An annular fillet or corrugation upon the interior of the head of the shell, in combination with the fold c, all constructed substantially in the manner and for the purposes specified.

111,857.—COMBINED CULTIVATOR AND HARROW.—John Maxton, Seybrook, Ill.

Claim. — The arrangement of the harrow-sections A A with teeth b b and shovels h h, connected together by the rod C and hinges B B, the front hinges having notches i i, to which the chains d d and cramer D are secured, and provided with the hinged handles E E, all as shown and described.

111,858.—BOOK-SUPPORT.—John McCa land, Alexander McCausland, and W liam J. A. McCausland, Providen R. I.

Claim.—1. The book-rack F, cover-fingers h and spring fingers i i', the latter operated by t thumb-piece s, all constructed and operating as scribed.

2. The hollow screw-clamp, elbowed stand book-holder, and table I, the latter being mou upon the standard and capable of a rotary and v tical adjustment thereon, as and for the purpo specified.

3. In combination with an adjustable book-h er, the newspaper or manuscript-clamps H H', and for the purposes specified.

111,859.—TURNING-LATHE.—Frederick Miles, Philadelphia, Pa., assignor to Fe ris & Miles, same place.

Claim.—The combination of cone-shaft H, gu wheel I, series of gear-wheels q on screw-shaft with the adjustable segmental arm J, carrying t intermediate gear K, clamp N, bolt M, nut-hou P, and graduated stud O, substantially as and the purpose described.

111,860.—WASH-BOILER.—Stephen S. Mile Delta, N. Y.

Claim.—The false-bottom plate D, constructed one or more angular partition-plates J, arranged open and close along their edges a, substantiall as described, for the purpose specified.

111,861.—COFFEE-POT.—Watson J. Mille Middletown, Conn., assignor to Simon & Miller, same place.

Claim.—1. In combination with the pot A, t closed removable cylinder G arranged within th pot to form a space around and beneath the cyli der, substantially as set forth.

2. In combination with the pot A, the removabl cylinder C arranged within the pot as describe and provided with the valve d, as and for the pur pose described.

111,862.—CONSTRUCTION OF CAR-AXLES AN SHAFTS. — James Montgomery, Croto Landing, N. Y.

Claim.—1. A hollow axle or shaft, having inter nal longitudinal wings or ribs and external wing or ribs, either curved or straight, substantially a and for the purpose set forth.

2. As an improvement in the method of makin journals, by attaching to the shaft a steel thimbl the thimble tapering, as described.

111,863.—MANUFACTURE OF SHOE-SHANKS Stephen Moore, Sudbury, Mass., assignor to himself and Homer Rogers, same place.

Claim.—1. In a machine for making shoe-shanks the combination, with a shank-molding mechanism, of an intermittently-moving feed-apron and a cutting or severing mechanism, arranged to operate substantially as described.

2. In combination with the cutting or severing mechanism, the lifter a^2, for supporting the blank substantially as described.

3. The combination, with a rotating-mold cylinder, of the inclined table A^2, for directing the blank to the open mold, substantially as described.

4. In combination with the inclined table A^2, the finger a^6, for transferring the blank from the table to the mold, substantially as described.

5. In a machine for molding shoe-shanks, an intermittently-rotating mold-cylinder and a drop-hammer, arranged to operate together, substantially as described.

6. The die or mold, made with the blunt edge f and the guards g g, substantially as shown and described.

The combination of a mechanism for feeding strip to the cutting or severing mechanism, anism for cutting the strip into blanks, and anism for molding the blanks into shanks, ntially as described.

In a machine for molding shoe-shanks, a die- der, having a series of peripheral dies adapt- for molding the shanks, each fastened in the e of the cylinder, substantially as described.

In combination with a machine for molding shanks, the mechanism for varying the feed the blank-forming material, substantially as de- ed.

In combination with the dies, substantially as described, a drop-hammer, provided with a shaping, substantially as described.

111,864. — PORTABLE LAUNDRY. — Jacob Morrison, Indianapolis, Ind., assignor to Matilda D. Morrison, same place.

Claim.—1. A portable laundry, the side plates or walls of which are constructed with grooves or channels, and which are so arranged with reference to the other plates or sheets of the device as to hold said sheets in position by a series of rods or bars, substantially in the manner set forth, for the purpose of enabling the parts to be separated and folded, as herein described.

2. The combination and arrangement of the drying-chamber, the steam-eduction pipe C, and the pipes B and B' B', substantially as and for the purposes set forth.

3. The combination and arrangement of the horizontal flues A' and B substantially as and for the purposes set forth.

4. The combination of the flues A', B, and D, and the sad-iron heating-chamber, substantially as and for the purpose set forth.

5. In a drying apparatus constructed substantially as described, the combination of the valve or damper in the mouth of the pipe C, and the pipes or flues B B' B', substantially as and for the purposes specified.

6. The arrangement of the slides which admit the air to the drying-chamber in regulated quantities, such slides being in the side walls of the chamber, as shown.

111,865. — MECHANISM FOR OPERATING PUNCHING AND EYELETING-MACHINES.—Charles H. Morse, Boston, assignor to himself and William A. Brown, Lynn, Mass.

Claim.—1. The levers F G H, in combination with cams B^1 B^2 B^3 and arms Q Q^1 Q^2, having arms R Z and catches S Z', substantially as described.

2. The levers e and treadles b, or their equivalent treadle, c, and rod d, in combination with arms Q Q^1 Q^2, substantially as described.

3. The combination of the adjustable plates P, treadles b c, and levers F G H, by which the throw of levers F G H is adjusted, substantially as described.

4. The arrangement of levers F G H, arm R Z, and rods or arms Q Q^1 Q^2, so that, by the throw of levers F G H, the same look with catches S upon arms R Z, substantially as described.

111,866.—WHIFFLETREE-PLATE.—Francis B. Morse, Plantsville, Conn., assignor to H. D. Smith & Co., same place.

Claim.—As an article of manufacture, a whiffletree-plate formed from two parts, c and d, each part being substantially like the other, and combined in the manner described.

111,867.—ATTACHMENT FOR SEWING-MACHINES.—Schamu Morits Moschoowitz, New York, N. Y.

Claim.—The combined hemmer and braider, constructed and operating as herein described, all parts of which are in one, and move with the presser-foot, under the operation of the feed-surface, substantially as described.

111,868.—BARREL.—Henry G. Porter, Grand Rapids, Mich.

Claim.—1. A sectional barrel, having the middle section or hoop rabbeted to form shoulders for the end sections to rest upon, and fastened together by means of metallic stripe running lengthwise of the barrel over the end sections and under the middle section, substantially as herein set forth.

2. A sectional barrel, A B, having its end rabbeted to form a shoulder for the head D to rest upon, and said head confined by means of a metal band, d, with or without the wooden band b, substantially as and for the purposes herein set forth.

111,869. — ELEVATOR AND CONVEYER. — Thomas J. Powell, Naples, N. Y.

Claim.—1. The combination and arrangement of the elbow H with the hook-lever E and pawl G, as herein described, whereby both are locked or released by one action of the elbow.

2. The arrangement of the double shoulders e d of the elbow and the pins or stops f g of the lever and pawl, operating conjointly, in the manner and for the purpose specified.

3. The arrangement of the hook-head p, the incline s, and the wedge-head v of the lever and pawl, operating in connection with the eye or catch K, in the manner and for the purpose specified.

111,870.—COOKING-RANGE.—John A. Price, Scranton, Pa.

Claim.—1. The combination of the flues r with the chamber h, located beneath the flues in the base of the range, for the purpose of forming a soot-receptacle, as set forth.

2. The combination of the flues r, chamber h, and damper s, for the purpose of regulating the temperature of the oven, as explained.

3. The arrangement of the ash-chamber e, heating-closet f, and soot-receptacle h, within the base a, as specified.

111,871. — COMBINED AGRICULTURAL IMPLEMENT.—Charles R. Rand, Dubuque, Iowa.

Claim.—The combined implement, consisting of the frame D, mounted on wheels centrally and made adjustable on its axle, said frame being provided with the brackets E, stirrups f' and g', and bars i and m, for attaching and operating its various attachments, substantially as described.

111,872.—STOCK-CAR.—Amos Rank, Salem, Ohio.

Claim.—1. The combination, with a stock-car, of adjustable and flexible or elastic partitions, constructed substantially as hereinbefore set forth, to prevent injury to the stock from the jerking of the cars.

2. In combination with a cattle-car, the rolling slatted partition, shown in fig. 5, constructed to operate as set forth.

3. In combination with a cattle-car, the flexible canvas partition, shown in fig. 6, constructed to operate as set forth.

111,873. — RAILWAY STOCK-CAR. — Amos Rank, Henry King, and Joel Sharp, Salem, Ohio.

Claim.—1. The combination of the reservoir, arranged beneath the floor of the car, with the watering-troughs arranged above the reservoir, substantially as hereinbefore set forth.

2. In combination with a stock-car, a water-reservoir and watering-trough, arranged in relation to one another as aforesaid, and an atmospheric pump for supplying water to the troughs in regulated quantities while an excess of pressure is maintained on the surface of water in the reservoir.

111,874. — CHIMNEY FOR LIME-KILNS.—William Rennyson, Norristown, Pa.

Claim.—The combination of the funnel-shaped

base A, tube B, and cap or damper C, with its operating mechanism, all constructed, arranged, and operating substantially as shown and described, and for the purpose set forth.

111,875.—Device for Obstructing Ants. Emery Rooks, Trenton, Tenn.

Claim.—The combination of the rod A, cylinders D D', flange E, and with or without the feet B and flange C, all constructed and arranged substantially as and for the purposes herein set forth.

111,876.—Horse and Cattle Powder.—Abraham Rudisill and Manrow Sell, Sell Station, Pa.

Claim.—A horse and cattle powder composed of Glauber salts, resin, sulphur, fenugreek, ashes, soot, antimony, and saltpeter, substantially as herein set forth.

111,877. — Fire-Extinguisher. — Enno Sander, St. Louis, Mo.

Claim.—In connection with the acid-chamber D and tank A of a carbonic-acid gas-generating apparatus the downwardly-opening valve H, crossheads I L, side rods J J', and operating-screw M, connected and operating substantially in the manner and for the purpose set forth.

111,878. — Bedstead-Fastening. — John Schepler, Lambertville, N. J., assignor to himself and Schickle, Harrison & Co., same place.

Claim.—The plates B B, secured at their lower ends to the bed-posts, and their upper portion inclining outward therefrom, in combination with inclined receptacles in the side pieces, so arranged that pressure or weight upon the bed will securely wedge the ends of the side pieces against the posts, substantially in the manner set forth.

111,879.—Concrete Pavement.—John J. Schillinger, New York, N. Y.

Claim.—A pavement composed of a concrete sub-bed laid in sections separated from each other by strips of paper or other suitable material interposed between them, and of pavement-blocks formed of cement, with pieces of broken stones imbedded in their surfaces and united to the sub-bed by means of cement, substantially in the manner shown and described.

111,880. — Spur-Attachment to Overshoes.—Henry Schwandt, New Orleans, La.

Claim.—The hollow removable spur-shank described, having spring *y* and thumb-screw *z*, in combination with the catch *d*, when constructed and arranged substantially as and for the purpose specified.

111,881.—Lubricator.—Nicholas Seibert San Francisco, Cal.

Claim.—1. The arrangement of the cock M, passages S S', and tubes O and P, with the oil-reservoir F and gauge J R, as herein shown and described, for the purpose specified.

2. The improved lubricator, consisting of the parts herein described, constructed and arranged substantially as specified.

111,882.—Japanning Eyelets, Buttons, &c. — Stephen N. Smith, Providence, R. I.

Claim.—1. The herein-described process of coating or japanning eyelets, buttons, and similar articles, that is to say, by sprinkling the liquid upon a mass of the articles while the latter are kept in motion, tumbling or rolling over or against each other, substantially as set forth.

2. The inclined rotating cylinder A, arranged to operate substantially as and for the purpose set forth.

111,883. — Corn-Dropping Attachment for Hoes.—Edmund L. Staples, Chillicothe, Ohio.

Claim.—As an improvement on the patent of Cotton and Staples, No. 68,907, the holes K in the seed-pocket H, and the projection *j* on the spring J, as and for the purpose set forth.

111,884. — Locomotive-Boiler Furnace. Andrew Jackson Stevens, San Francisco, Cal.

Claim.—1. The flues A A', with dampers C C, in combination with the deflecting-plates B B, and for the purposes set forth.

2. In combination with the foregoing, the steam-jet pipe D, as and for the purposes set forth.

111,885.—Apparatus for Ascertaining the Proof-Spirits in Fermented Mash.—Giuseppe Tagliabue, New York, N. Y.

Claim.—1. The areometer, constructed and graduated substantially as herein described, so as to indicate directly the percentage of proof-spirits to be expected from a grain-mash or other saccharine solution without the necessity of complex calculation or the use of a table.

2. The funnel A, constructed with a valve to be closed by hand in substantially the manner described.

3. The combination of the plug or valve B and packing C with the funnel A, substantially as set forth.

111,886.—Paper-File.—Jesse F. Tapley, Springfield, Mass.

Claim.—As a new article of manufacture, an improved bill and letter-file, consisting of the rigid or stiff portions A C and the flexible sides B, the same being used in combination with an elastic band, all constructed and arranged substantially as herein described.

111,887. — Cooking-Stove. — Nicholas S. Vedder, Troy, N. Y.

Claim.—1. The arrangement of the reservoir C at the rear of a cook-stove in such a manner as to form a chamber, E, through which the products of combustion must pass, whether a direct or an indirect draught is used, substantially as and for the purpose set forth.

2. The chamber E, formed by the back plate of the stove and the front of the reservoir C, and divided into side-down and center-up flue by means of plate *f*, substantially as and for the purpose described.

3. The openings *e*, in the top plate of the stove over the side flues and covers *d*, in combination with the openings *f* in the top plate G, substantially as and for the purpose set forth.

111,888, antedated February 3, 1871.—Clothes-Drier. — James K. Wagner, Potsdam, N. Y.

Claim.—The arrangement of the rack A B, cord C, with ring *a* secured by the bolt or pin *d*, and provided with the hook *b* at its end, all as shown and described.

111,889, antedated February 4, 1871.—Pincers for Shoe-Makers.—Michael Walpole, Milford, Mass.

Claim.—1. The slotted handle C, provided with ratchet-teeth *a a* on each side of the slot, substantially as and for the purposes herein set forth.

2. The fulcrum E, provided with toothed projections *b*, tenon *c*, head *d*, and spring *f*, all constructed and arranged to operate substantially as and for the purposes herein set forth.

3. The combination of the jaws A B, handles C D, teeth *a a*, fulcrum E, projection *b*, tenon *c*, head *d*, and spring *f*, all constructed and arranged as described, to operate substantially as and for the purpose herein set forth.

111,890.—Joiners' Plane.—George Allen Warren, North Bridgewater, Mass.

Claim.—1. The lateral adjuster, as described, as composed of the disk *b*, the journel *c*, the socketed shank *d*, with its clamp-screw and head, as set forth.

2. The arrangement of the said lateral adjuster, as described, with the bed of the stock and with slot *e* of the plane-iron, all being substantially as and to operate as explained.

111,891.—Tip for Wooden Shovels.—William P. Wentworth, Seneca Falls, N. Y.

Claim.—1. The combination of the grooves *a* and the ears *c*, substantially as described and shown.

2. The combination of the grooves *a* and the rings *b*, substantially as described and shown.

111,892.—Gauge for the Construction of Seat-Cushions.—John H. Williams, Pleasant Hill, Ohio.

Claim.—1. The combination of the grooved bar A with the sliding bars B B, slides E E, pivoted arms D D, spreading-arms C C, adjustable beveling-guides F F, and soft-metal corners J J, when constructed substantially as and for the purpose specified.

2. In combination with the elements of the above claim, the adjustable arm I, substantially as specified.

111,893. — Vapor-Burner. — Joseph S. Wood, Philadelphia, Pa.

Claim.—1. The tube *a*, constructed with a notched aperture, *a'*, at its upper end, in combination with the horizontally-adjustable tube C, carrying a ring-burner, G, on the arms of its upper end, substantially in the manner and for the purpose described.

2. The chamber *s*, in combination with the tube C, perforated arm *g*, burner G, and lamp-tube *a*, in the manner and for the purpose described.

111,894.—Planing-Machine.—Solomon A. Woods, Boston, Mass.

Claim.—1. In combination with the bed *a*, a removable bed, arranged to operate in conjunction with a cutter-head and feed-rollers, substantially as described.

2. In combination with a planing-machine, the described apparatus for oiling, arranged and operating as set forth.

3. The combination, with the nuts *p* and the screws working therewith, of the check-nuts *q* and clamping-collars *r*, arranged and operating substantially as set forth.

4. The combination, with the cutter-head frame, having its uniting bar located as described, of the bearing-bar *s*, as specified.

111,895, antedated February 2, 1871.—Scroll-Sawing Machine.—Samuel Manker Young, Jacksonville, Ill.

Claim.—1. The slide H, constructed as described, and provided with clamp *b*, thumb-screw *d*, and spring *e*, substantially as and for the purposes herein set forth.

2. The head J, secured at any height desired by thumb-screw *f*, and its inclination adjusted by tapper-screw *g*, substantially as and for the purposes herein set forth.

3. In combination with the head J, constructed and adjusted as described, the eccentric roller or cog *i*, constructed and operating substantially as and for the purposes herein set forth.

4. In combination with the saw I, and its upper bearing, formed on the slide H, the bar N, spring-hook *k*, and set-screw *m*, constructed and arranged to operate substantially as and for the purposes herein set forth.

REISSUES.

4,258.—Machine for Scraping Leather. James T. Barnstead, Peabody, assignor, by mesne assignments, to George L. Newcomb, Salem, and James Perkins, Peabody, Mass.—Patent No. 101,081, dated March 22, 1870.

Claim.—1. A machine for removing grease from leather, having the jointed vibrating arm F, carrying a scraper, I, arranged to reciprocate over a curved bed-plate, B, which is provided with adjusting screws and springs, substantially in the manner as set forth and shown.

2. In a machine for scraping grease from leather, the combination of the knife I and brush H, in the manner and for the purpose substantially as set forth.

3. The brush K, for the purpose of cleaning the knife, arranged and operated in the manner described and shown.

4,259. — Perforated Sheet-Rubber.—John Haskins, Boston, Mass.—Patent No. 67,298, dated July 30, 1867; reissue No. 3,100, dated August 25, 1868.

Claim.—The article of perforated rubber-sheets as a new article of manufacture, the same being used as and for the purpose set forth and described.

4,260.—Burning-Kiln.—Balthasar Kreischer, New York, N. Y.—Patent No. 81,793, dated September 1, 1868.

Claim.—1. The arrangement of flues F F, controlled by dampers *m*, substantially as herein described, for carrying off the vapor and the products of combustion, and openings *e f*, controlled by dampers *g* and *j*, and flues *d*, communicating with an adjoining kiln-chamber or intermediate flue D, as required.

2. The flues F F, in combination with flues or passages E in the hollow doorways C, substantially as described.

3. The double arch G in the kiln-chambers, in combination with openings or tubes H, and with a chamber or passages, *p*, connecting with the grate or fire-place, as herein set forth.

4. The outside flues *d d*, connecting with the kiln-chambers through base-openings *e e*, provided with dampers *g* and *j*, and serving to carry the heat from one kiln-chamber to either of the succeeding chambers or to the smoke-stack, substantially as described.

5. The bottom flue D, provided with branches running to or from the kiln-chambers, in combination with the outside flues *d d*, when constructed and arranged substantially as described.

4,261.—Folding-Lounge.—James W. McDonough, Chicago, Ill. — Patent No. 60,400, dated December 11, 1866.

Claim.—1. The rails *a a* of the frames A A' of a folding-lounge, constructed substantially as and for the purpose described.

2. The frames A A' of a folding-lounge, provided with the rails *a a*, in combination with the head H H', substantially as described.

4,262.—Machine for Figuring Carpenters' Squares. — Norman Millington, Shaftsbury, Vt., assignor, by mesne assignments, to The Eagle Square Company.—Patent No. 10,136, dated October 18, 1853; extended seven years.

Claim.—1. The fastening-pins or their equivalents for limiting the movement of the dies and re-

taining them in the chase, in combination with a series of separate dies and chase in their proper positions to stamp the several numbers on a square, so that they can all be moved together to change from one square to another, and that each die may be struck and be made to operate separately, as set forth.

2. A series of chases hinged to a common support, and containing each a series of separate dies, which may be successively brought into position for use, substantially as and for the purposes herein specified.

3. The combination of the revolving chase-wheel W with the lateral-moving anvil A, by which the relative position of the square to be stamped and the required chase is so regulated that the line of the square to receive the impression is brought under the chase containing the desired figures, substantially as herein set forth.

4,263.—MACHINE FOR CUTTING STONE.—George Morgan, Brooklyn, N. Y.—Patent No. 22,569, dated January 11, 1859.

Claim.—1. The arrangement, in the tool-stock of a stone-cutting machine, of a series of cutters fastened together, and having their edges graduated one above the other, so that the combined series will present an inclined serrated cutting edge, substantially as and for the purpose herein specified.

2. In combination with a series of cutters fastened together and having their edges graduated one above another, as described, a movable table to hold the stone to be cut and present it to the cutters, substantially as herein set forth.

4,264.—MACHINE FOR CHANNELING STONE.—Thomas Ross and Rockwood Barrett, Rutland county, Vt., assignees, by mesne assignments, of Andrews T. Merriman and Thomas Ross.—Patent No. 59,856, dated November 20, 1866.

Claim.—1. In a stone-channeling machine, adapted to move automatically over the face of the rock operated upon so as to feed the cutting device up to the work, the combination of the following instrumentalities, all mounted on a movable truck-frame, viz: A gang of reciprocating cutters, all fastened together; a steam-generator, cylinder, and piston to operate said cutters; an automatic adjustable valve-gear, so constructed and operating that the steam-valve is changed and the motion of the cutters thereby reversed by the concussion of the cutters with the rock; and an automatic feeding mechanism to feed the machine up to the work as the latter progresses, all constructed and combined to operate substantially as herein set forth.

2. In combination with the instrumentalities described in the foregoing claim in a stone-channeling machine, as therein set forth, the cutter-frame with the steam-cylinder rigidly attached thereto, and so hinged to the truck frame that the cutter-frame may be inclined to either side, or retained in a vertical position to cut a channel diagonal to the horizon or vertical, substantially as described.

4,265.—MACHINE FOR REDUCING CRACKLINGS, &c., FOR FERTILIZERS.—Armor Smith, Cincinnati, Ohio.—Patent No. 71,545, dated November 26, 1867.

Claim.—1. The combination of the box or trough-frame B and cord E and pulleys G G', irrespective of the particular cutting apparatus used, substantially as herein described, and for the purposes herein mentioned.

2. The combination of the wheel A with cutters C, box or trough-frame B, with cord E and pulleys G G', substantially as herein described, and for the purposes herein set forth.

DESIGNS.

4,646.—INFANTS' SHOE.—Willard M. Carpenter, Rowley, Mass.

Claim.—The design for an infant's shoe, substantially as shown and described.

4,647.—STOCKING FABRIC.—Thomas Dolan, Philadelphia, Pa.

Claim.—The design for a stocking fabric, substantially as described and illustrated in and by the accompanying drawing.

4,648.—STOCKING FABRIC.—Thomas Dolan, Philadelphia, Pa.

Claim.—The design for a stocking fabric, substantially as described and as illustrated in and by the accompanying drawing.

4,649.—CALENDAR CLOCK-DIAL.—Daniel J. Gale, Sheboygan Falls, Wis., assignor of one-half his right to Aaron Huyck, same place.

Claim.—The hereinbefore-described design for an astronomical calendar clock-dial, substantially as and for the purpose set forth.

4,650.—FLOWER-STAND.—Hiland H. Kendrick, Fulton, N. Y.

Claim.—The standard A and flower-pot or plant-supporting arms B B, extending outward radially from the standard, together constituting a design for a flower-stand, as represented and described.

4,651.—CARPET-PATTERN.—Hugh S. Kerr, Philadelphia, Pa., assignor to Israel Foster, same place.

Claim.—1. The design for the ornamented square *b*, as illustrated.

2. The design for the ornaments *d* between the stripes *a*.

3. The design for the central ornament *e* within the square tablet formed by the crossing stripes *a*.

4. The design for the ornamental square tablets F and G, bounded by the said stripes *a*.

5. The design for the entire pattern, including the stripes *a*, border *b*, ornaments *d* and *e*, and tablets F and G.

4,652.—CARPET-PATTERN.—Hugh S. Kerr, Philadelphia, Pa., assignor to Israel Foster, same place.

Claim.—1. The design for the figures A, as shown and described.

2. The design for the foliated ornamentation B, as described and represented.

3. The design for the whole pattern, including the figures A, foliated ornamentation B, and spots C.

4,653.—ENGINE-GOVERNOR CASE.—John Augustus Lynch, Boston, Mass.

Claim.—The design, substantially as described, for the case of an engine-governor.

4,654.—FLOOR-CLOTH PATTERN.—Charles T. Meyer, Newark, N. J., assignor to Edward C. Sampson, New York City.

Claim.—The design or pattern for floor oil-cloths, carpets, or other fabrics, shown and described.

4,655.—FLOOR OIL-CLOTH PATTERN.—Charles T. Meyer, Newark, N. J., assignor to Edward C. Sampson, New York City.

Claim.—The design or pattern for floor oil-cloths, carpets, or other fabrics, shown and described.

4,656.—FLOOR OIL-CLOTH PATTERN.—Charles T. Meyer, Newark, N. J., assignor to Edward C. Sampson, New York City.

Claim.—The design or pattern for floor oil-cloths, carpets, or other fabrics, shown and described.

4,657.—FLOOR OIL-CLOTH PATTERN.—Charles T. Meyer, Newark, N. J., assignor to Edward C. Sampson, New York City.

Claim.—The design or pattern for floor oil-cloths, carpets, or other fabrics, shown and described.

4,658.—FLOOR OIL-CLOTH PATTERN.—Charles T. Meyer, Newark, N. J., assignor to Edward C. Sampson, New York City.

Claim.—The design or pattern for floor oil-cloths, carpets, or other fabrics, shown and described.

4,659.—FLOOR OIL-CLOTH PATTERN.—Charles T. Meyer, Newark, N. J., assignor to Edward C. Sampson, New York City.

Claim.—The design or pattern for floor oil cloths, carpets, or other fabrics, shown and described.

4,660.—FLOOR OIL-CLOTH PATTERN.—Charles T. Meyer, Newark, N. J., assignor to Edward C. Sampson, New York City.

Claim.—The design or pattern for floor oil-cloths, carpets, or other fabrics, shown and described.

4,661.—FLOOR OIL-CLOTH PATTERN.—Charles T. Meyer, Newark, N. J., assignor to Edward C. Sampson, New York City.

Claim.—The design or pattern for floor oil-cloths, carpets, or other fabrics, shown and described.

4,662.—FRINGE.—Henry Asbury Truitt, Philadelphia, Pa., assignor to Thomas Dolan, same place.

Claim.—The design for a knitted fringe or braid, substantially as described and illustrated in and by the accompanying drawings.

4,663.—TASSELED FRINGE.—Henry Asbury Truitt, Philadelphia, Pa., assignor to Thomas Dolan, same place.

Claim.—The design for a tasseled fringe or border, substantially as described and illustrated in and by the accompanying drawings.

TRADE-MARKS.

155.—PLOW AND OTHER AGRICULTURAL IMPLEMENTS.—John C. Bidwell, Pittsburg, Pa.

156.—SMOKING-TOBACCO.—John W. Carroll, Lynchburg, Va.

157.—SMOKING-TOBACCO.—John W. Carroll, Lynchburg, Va.

158.—SMOKING-TOBACCO.—John W. Carroll, Lynchburg, Va.

159.—GINGER-ALE AND WINTER BEVERAGE.—Anderson Carson and William Lemon, Hartford, Conn.

160.—COMPOSITION COATING.—David B. Crockett, New Haven, Conn.

161.—STOVE.—Ignatius Droege & Co., Covington, Ky.

162.—PREPARATION FOR THE HAIR.—Charles E. Georger, New York, N. Y.

163.—LACE GOODS.—Abraham G. Jennings, New York, N. Y.

164.—ILLUMINATING OILS OR BURNING-FLUIDS.—William E. Jervey, New Orleans, La.

165.—MEDFORD RUM.—Daniel Lawrence & Sons, Boston, Mass.

166.—MEDICAL COMPOUND.—Pemberton, Taylor & Co., Atlanta, Ga.

167.—MEDICINAL PREPARATION.—Walter S. Wells and John J. Stell, New York, N. Y.

168.—MEDICINAL PREPARATION.—Walter S. Wells and John J. Stell, New York, N. Y.

EXTENSIONS.

SAMUEL R. SMITH, of Cincinnati, Ohio—Letters Patent No. 16,454, dated January 20, 1857.

"Improved Method of Feeding Lumber laterally in Sawing-Machines."

Claim.—1. The combination of mechanism by which the lateral adjustment of the log is effected, as described, such consisting of the spring *g*, the stationary-bearing roller *m*, or its equivalent, the lever *l*, the toggles *h i*, the slide-bar *f*, the catch mechanism T, the pinion *t*, and the rack or racks applied to the carriage V, substantially as described, the whole being arranged and operating together, essentially as specified.

2. Making the carriage or head-block V movable independently of the ways or frame on which it is supported, and combining with said carriage and its movable rack a lever and pawl or an equivalent device, whereby said carriage may be moved toward the saw by the hand of an attendant applied to the said lever.

DANIEL W. SHARES, of Hamden, Conn.—Letters Patent No. 16,498, dated January 27, 1857; reissue No. 45, dated March 12, 1861.

"Improvement in Harrows."

Claim.—1. A series of colter-teeth, H, formed substantially as specified, and arranged diagonally to the line of motion so as to form a harrow that loosens, mollifies, and harrows the soil, as described.

2. The tooth G, at the front end of the center-bar, formed with two divergent wings, in combination with a series of harrow-teeth, H, on the diagonals bars B B', as set forth.

PETER COOK, of Tonawanda, N. Y.—Letters Patent No. 16,529, dated February 3, 1857.

"Improved Machine for Cutting Veneers."

Claim.—The swinging box or head formed of the plates *i i*, said box or head working over concave beds B B and cutters C C, when the above parts are arranged substantially as shown, to allow the bolt F to feed itself to the cutters by its own gravity.

DISCLAIMERS.

SAMUEL R. SMITH, of Cincinnati, Ohio.—Letters Patent No. 16,454, dated January 20, 1857.—Filed January 28, 1871.

"Improved Method of Feeding Lumber laterally in Sawing-Machines."

Second claim of specification disclaimed.

FRANCIS M. STRONG and THOMAS ROSS, of Vergennes Vt.—Letters Patent No. 14,119, dated January 15, 1856.—Filed January 10, 1871.

"Improvement in Platform-Scales."

Second and Third claims of specification disclaimed.

ISSUE OF FEBRUARY 21.

PATENTS.

111,896.—MACHINE FOR CUTTING AND MITERING PRINTERS' RULES.—Frank H. Aiken, Franklin, N. H.

Claim.—1. The tool-holder S, sliding on rod T, the cutter R, and set-screws V, combined with the bed A and adjustable holder N, substantially as specified.

2. A printer's rule-cutting and mitering apparatus, consisting of the cutters D C, the gauge therefor, the adjustable holder, and reciprocating tool and tool-holder, all arranged on one bed or platform, substantially in the manner specified.

111,897, antedated February 4, 1871.—GOVERNOR-VALVE CONNECTION.—John F. Allen, Harlem, N. Y.

Claim.—The combination, with a valve and stem, A B, of the pulleys C B, weighted rope D, slotted spring-rod I K, and crank H, as and for the purpose specified.

111,898.—FISH-HOOK.—Levi Arnold, Belchertown, Mass.

Claim.—The metallic block or piece A B, provided with perforations to receive the line, and with a sliding ring for securing it, substantially as shown and described.

111,899.—MACHINE FOR CUTTING SCREWS.—James S. Atkinson, Ormsby borough, Pa.

Claim.—1. The abutment *d* with its inclined lateral faces *s*, a groove *s'* at the base of each incline, and a shoulder or stop, *s*, at the opposite end of each incline, and the combination of such abutment with the rod *m* and wedge-shaped catches *o*, reciprocating knocker *k*, and collars *l l'*, substantially as and for the purposes set forth.

2. The subject-matter of the foregoing claim, in combination with a toggle, *g*, leading to each of the die-holders of a screw-cutting machine, substantially as described.

3. The combination of the abutment *d*, constructed substantially as described, catches *o*, knocker *k*, operated by any suitable means, and rod *m* having stops *l l'*, in connection with any suitable mechanism for opening the dies.

4. The arrangement of drip-pan *t* with perforated bottom, inclined table *v*, and receptacle or vat *w*, for receiving and drawing off the oil, substantially as described.

111,900.—MACHINE FOR CUTTING LEATHER.—Horace Z. Baker, Pawtucket, R. I.

Claim.—1. The combination of the longitudinally-sliding rolls *k k'*, the former provided with the circular knife *n* and tongue *l*, the latter with grooves *o m*, into which the knife and tongue work, all as and for the purpose specified.

2. The combination of the rolls *k k'*, knife *n*, and groove *o*, with the adjusting-screw *s'* and frame 1 2 3, as and for the purpose specified.

111,901.—CURRIER'S TOOL.—James T. Barnstead, Peabody, Mass.

Claim.—1. The improved currier's tool, made substantially as described.

2. A currier's tool, having that part of the stock against which the knife bears made thicker than the opposite side, in the manner shown and set forth.

3. The improved method of attaching and holding the handles of a currier's tool, as described and shown.

111,902.—TAP FOR OIL-CANS.—Jabez A. Bostwick, New York, N. Y.

Claim.—In combination with each other and with a can or other vessel to contain liquids, the within-described hollow valve and discharge-tube G, and the seat C B for said valve, perforated and secured to the vessel, all substantially as and for the purpose herein set forth.

111,903.—SPRING CARRIAGE-CUSHION.—Thomas S. Burnett, Syracuse, N. Y.

Claim.—The cushion B and frame C D, the said frame having a stationary bearing at its front edge, on the face piece E, and its rear edge being supported by the spring *c c* in such manner as to have vertical movement, substantially as and for the purpose specified.

111,904.—WOOD PAVEMENT.—William Bushnell, Elizabeth, N. J.

Claim.—1. The herein-described mode of cutting two-shouldered paving blocks from a single block, as shown and set forth.

2. The dowel, made and applied to the blocks of the pavement, as set forth.

111,905.—WIRE-STRETCHER.—Albert Byington, Rochelle, Ill.

Claim.—The frame A, provided with the groove *a* and clutch C, in combination with the spindle D and clutch C, substantially as described.

111,906.—WASHING-MACHINE.—William H. Carman and Richard P. McCollum, Philadelphia, Pa.

Claim.—1. The corrugated oscillating or turning tub, with the projections F upon the outside, substantially and for the purpose as hereinbefore set forth.

2. The combination of the corrugated oscillating or turning tub with the loose weighted roller or rollers, working inside, and the lugs or projections F, secured to the tub, substantially and for the purpose hereinbefore described and set forth.

111,907.—CHURN.—Franklin B. Chapman, Salisbury, Mo.

Claim.—The combination, in a revolving churn, of the stationary dasher-wings J J, and the disk L, and revolving dashers N N, arranged and operating substantially as described.

111,908.—VALVE FOR WATER-ENGINES.—Abraham Coates, Watertown, and George W. Lascell, Syracuse, N. Y.

Claim.—The arrangement of the disk *a* having the transverse opening *e* that forms the induction-port, the disk *a'* having the transverse orifice *f*, the flat plate *c*, and the concavo-convex plate *f*, as described.

111,909.—WASHING-MACHINE.—John Court, Memphis, Tenn.

Claim.—The combination of the box, the swinging slatted frame oscillating on a pivot in the box, and the vibrating rubbing-teeth pivoted each side of the swinging frame, these parts being constructed to operate in combination, as set forth.

111,910.—TREATING BLOOD FOR THE MANUFACTURE OF FERTILIZERS AND AMMONIACAL SALTS.—John J. Craven, Jersey City, N. J.

Claim.—1. The process of treating blood by the use of salt-cake or its equivalent, as described.

2. The process, herein described, for obtaining ammoniacal salts from blood by treating it with salt-cake or other equivalent acid salt, substantially as described.

111,911.—PLOW.—Francis Cremer, Elmwood, Ill.

Claim.—1. The combination of the suspended adjustable beams G G, cross-bar H, swiveled vertical screw I, upright plate C *e d*, and guides *e f*, with the axle B of a wheel-plow, to admit of a vertical adjustment of the shovels F, as described.

2. The up-and-down adjustable cross-bar H, supporting the vertical plow-beams, substantially as and for the purpose herein shown and described.

3. The combination, with a wheel-plow, of the chain L and pulleys *l l l*, arranged and described, to equalize the draft.

111,912.—MANDREL FOR GAUGING AND CUTTING SOLDER-WIRE.—Lewis Cutting, San Francisco, Cal., assignor to himself and Francis Cutting.

Claim.—The cylinder A, with recess F and slot E, when operated as described, for the purpose set forth.

111,913.—VEGETABLE-CRUSHER.—Reuben Daniels, Woodstock, Vt.

Claim.—The grinding rolls A B, mounted and operated as set forth, combined with the scroll-hopper B' and oscillating feeder-block D, provided with the hooked plate I, as and for the purpose specified.

111,914.—BASE-BURNING STOVE.—Edward Mortimer Deey, New York, N. Y.

Claim.—1. The hot-air chamber H, provided with its boiler E, radiators I I, steam-pipe coil N, cold-air passage G, and register R, substantially as and for the purposes set forth.

2. The reservoir K, provided with water-supply pipe L, steam-pipe N, and steam-exhaust pipe O, for the purposes substantially as described.

3. The boiler F, provided with water-supply pipe L, having an air-cock, M, steam-pipe, N, and drain-cock, *f*, in combination with the hot-air chamber H and reservoir K, substantially as and for the purposes specified.

4. The coal-magazine E, in combination with the grate B C, hot-air chamber H, and reservoir K, substantially as and for the purpose described.

111,915.—FASTENING END-BOARDS IN WAGONS.—George W. Diller, Odell, Ill., assignor to himself and George B. Woodbury, same place.

Claim.—In combination with the end board of a wagon-box, the hinged cleat I, staple or eye K, and hook L, arranged to operate substantially as and for the purposes herein shown and described.

111,916.—CONDENSER AND FEED-WATER HEATER FOR STEAM-ENGINES.—Joseph Dilworth and John Cobourg Hodgins, Toronto, Canada.

Claim.—1. The perforated plate *h* in the chamber *f*, above the upper ends of the vertical tubes *b* of the feed-water heating apparatus, for the purposes set forth.

2. The blow-cocks or valves applied to and combined with the chamber *f* and perforated plate *h*, for the purposes set forth.

111,917, antedated February 11, 1871.—FANNING-MACHINE.—Edward P. Doremus, Washington, La.

Claim.—The combination of the wheel A and pins *a a* with the levers F F, rods *f f*, beam *e*, and fan D, all arranged to operate as set forth.

111,918.—LUBRICATOR FOR WHEELS, PULLEYS, AND JOURNALS.—Edwin Donden, Lykens, Pa., assignor to himself and Charles Broome, same place.

Claim.—An improved oiler for the journals of loose pulleys and other wheels, formed by the combination of the hinged lid or cover C, eccentric or cam D, and spring E, with each other and with the hole or cavity B leading in through the hub of the said pulley or wheel, substantially as herein shown and described, and for the purpose set forth.

111,919.—REFLECTOR.—Francis P. Doyle, New York, N. Y., assignor to himself and John Cooke, same place.

Claim.—The follower D, with lip E, screws F, and nuts G, when used in combination with the back B C and glass A of a gas-light reflector, substantially as and for the purposes described and set forth.

111,920.—CRUET-STAND.—Josiah W. Ells, Pittsburg, Pa.

Claim.—As a new and improved article of manufacture, a complete cruet-stand made of a single piece of glass; that is to say, the plate C, with bottomless receptacles E for the cruets, surrounding-flange B, central support S, and handle K, of one piece of glass, by pressing it to such shape while in a molten or plastic condition in a mold, substantially as shown and described.

111,921.—MACHINE FOR FORMING ARTIFICIAL STONE.—Josiah S. Elliott, Boston, Mass., assignor to the Union Stone Company, same place.

Claim.—1. The machine, herein shown and described, for manufacturing artificial stone, consisting of the ram B, mold C, feeder B', core *n*, and off-bearing table *h*, constructed, combined, and operating as set forth.

2. The combination, in an artificial-stone machine, of the ram B, oscillating feeder B', and movable mold C, with their connections, when constructed, arranged, and operating substantially as and for the purpose herein described.

3. The combination, herein shown, of the ram B, oscillating feeder B', movable mold C, and off-bearing table *h*, with their connecting and operating mechanism, as herein set forth.

4. The combination and arrangement of the mold C, shaft *d*, cams X and W, and their connections, as shown and described.

5. The arrangement of cams W and X, shaft *d*, and core *n*, with their connections, as herein shown and described.

6. The combination of the ram B and feeder B' with their operating mechanism, when constructed and operated in the manner set forth.

7. The combination of the lever *s* and the pivots *u* and *t* with the table *h* and the scraper *v*, as and for the purposes described.

111,922.—MACHINE FOR MOLDING TUYERES.—Samuel English, Troy, N. Y., assignor to himself and James Ostrander, same place.

Claim.—1. The combination, with the tapering mold B, of two or more pointed parallel core-rods A, the removable head F G at the large end of the mold, the removable piston or follower D, fig. 2, perforated to receive and support the slender core-rods, and fitted to slide within the small end portion of the mold, and the screw E for moving the piston or follower in the mold, substantially as described.

2. The combination of the horizontally-operating pointed core-rods A and pressing-screw E with the mold B, furnished with the removable head F G and follower D, and mounted on horizontal trunnions *b b*, and provided with the movable stops J J, or their equivalent, substantially as described.

3. The arrangement of the vertically-movable counter-weighted platform V, in combination with the mold B, mounted on horizontal pivots *b b*, and furnished with stops J J', removable head F G, piston or follower D, and the horizontally-operating pointed core-rods A, and screw E, or its equivalent, substantially as described.

111,923.—PRESS FOR HAY, COTTON, &c.—Christopher D. Findlay and David D. Craig, Macon, Ga.

Claim.—1. The screw A, in combination with

the perforated nut F, fluted tube D, and the balls G, substantially as specified.

2. The combination of the screw A, perforated nut F, tube D, flanges I K, and balls L, substantially as specified.

3. The combination of the tube D, rods M, and bed N of the frame, all substantially as specified.

4. The combination of the screw A, nut F, tube D, balls G L, rods M, bed N, follower B, and the case, all substantially as specified.

111,924.—HORSE-HOLDER ATTACHMENT TO CARRIAGES.—George W. Goodwyn, Petersburg, Va.

Claim.—The lever b c d, pivoted to the side of the carriage, and engaging with the toothed ring a on the hub of the wheel, as shown and described.

111,925. — CULTIVATOR-PLOW. — William Gowen, Bartlett, Tenn.

Claim. — The plow F, having the snake-head point, narrow neck, and long the mold-board, gradually widening upward from said neck, as shown and described.

111,926. — EARTH-CLOSET.—Edmund Griffith, Wilmington, Del.

Claim.—1. The cover C, the eye a, the slide H, and rod e, in combination with the shoe G, and rod e having a loop formed on its upper end, when all are combined and arranged in the manner described.

2. The vacuum-board L, when arranged to operate substantially as shown.

3. The board L, hopper B, slide H, rods e e, eye a, lid C, and shoe G, when all are combined as specified.

111,927.—MILLING-TOOL.—Lovi Griswold, Branford, Conn.

Claim.—The cutter a, arranged longitudinally in the spindle A, constructed with the shank B, collars D E, the said cutter threaded and combined with the sleeve C, around the said spindle, between the said two collars, for the adjustment of the cutter, substantially as described.

111,928. — CARRIAGE.—Chauncey Holmes Guard, Toronto, Canada.

Claim.—The springs C C applied edgewise to the body D at front and rear, as described, for the purpose of producing an end-pressure support.

111,929. — FIRE-PLACE.—Joseph Hackett, Louisville, Ky.

Claim.—The tile A, combining the following features of construction: first, thick on top, whereon is received the largest portion of heated gases, to prevent cracking; second, circularly curved on its outer face, to cover the throat of the flue; and third, orally recessed on its inner face, to retard the gases, complete the combustion, and evolve a maximum of heat before it reaches the flue, all for the purpose of forming an improved fire-back for stoves.

111,930.—MAKING CIDER.—George B. Hamlin, Willimantic, Conn.

Claim.—Preparing the apples, for the expression of the juice, in a cut condition, substantially as herein set forth.

111,931.—PATTERN FOR CASTING GROOVED ROLLERS.—John Herald, Unadilla, N. Y.

Claim.—The pattern-plate A, provided with the rim a, which will provide in the mold a depression for receiving the annular plate C, as set forth.

111,932.—COW-MILKER.—Elisha A. Hewitt, Groton, Conn.

Claim.—1. The arrangement of the teat-pieces having the stationary stop-collar and bulge with the series of flexible tubes and main conduit, as and for the purposes set forth.

2. In combination with the stationary stop and bulge, the adjustable or variable tubes to enter the teat of the cow more or less, as described.

111,933.—SELF-ADJUSTING CAR-TRUCK.—Edward Hipkins, Burford township, Canada.

Claim.—The combination of the frame H, longitudinal pieces G, hangers K, clutch-pulleys I, and circular pieces C, substantially as and for the purpose set forth.

111,934. — CAR-TRUCK.—Edward Hipkins, Burford township, Canada.

Claim.—1. The combination of the lever O and rotating tables C and D, connected together by rods Q, and working on the center pins I, substantially as set forth.

2. The rotating tables C and D, with receptacles H, in combination with the axles E, formed with collars to enter said receptacles, as and for the purpose described.

111,935.—HAT-SIZING MACHINE.—James H. Hopkins, Newark, N. J., assignor to himself and William Carrollton, same place.

Claim.—1. The combination of the boards P, levers R, sliding rods S, and levers T with each other and with the water-tank A, hinged covers B, and semi-cylindrical rubber D, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the rubber or equivalent springs H, sliding bearings F, and set-screws I with the shaft E, rubber D, and concaved perforated hinged covers B, substantially as herein shown and described, and for the purpose set forth.

111,936.—FLY-TRAP.—Peter D. Horton and Ezra T. Bryan, Marengo township, Mich.

Claim.—1. The net-work bag A, provided with distending strips $e\ e\ e'\ e'$ and props $p\ p$, when the entire device is adapted to be removed from the door, window, or other opening, as herein described, whereby a stationary frame is dispensed with.

2. In combination with the bag A, made, provided, and applied as described in the preceding clause, the converging wings or partitions c c, having an opening, i, between them, at the center, to form a trap, substantially as set forth.

111,937. — STEAM-ENGINE. — John Houpt, Springtown, Pa.

Claim.—The combination of a plurality of low-pressure engines with a primary high-pressure steam-cylinder, A, receiving its steam from any suitable steam-generator, and having a steam-dividing self-clearing jet-condenser, D, and a superheater, G, communicating between it and the several low-pressure engines, and operating together, substantially as and for the purpose hereinbefore set forth and described.

111,938. — ROOFING-TILE.—Charles Howard, Warren, Ohio.

Claim.—The tile A, provided with the cross-bars D, grooves D', sunken portions E E, and ribs F F F, in combination with the tile B, provided with the cross-bars D, grooves D', and longitudinal grooves C, and tongues C', when said parts are constructed and arranged with relation to each other, as and for the purpose as herein set forth.

111,939.—SNOW-SHOVEL TIP.—Eber Hubbard, Seneca Falls, N. Y.

Claim.—A malleable-iron snow-shovel tip, made with flanges or arms furnished with points or spurs designed to be driven into the wooden shovel, for the purpose of holding the tip to the shovel in such a manner as to obviate the necessity of using nails, screws, bolts, or rivets for that purpose, substantially in the manner and for the purposes set forth and described.

111,940.—EXCAVATING-MACHINE.—Joseph M. Hughes and Andrew J. Mapes, Independence, Mo.

Claim.—1. The hinged frame A, (of curved bars,) the bounds B, balancing-frame D, and overbalancing-bar G, combined with a rotary spading device K L, as and for the purpose described.

2. The subject-matter of first claim, combined with a foot-stand, I, arranged with respect to the driver's seat, as and for the purpose described.

3. In an excavating-machine, the arrangement of the spades L in a plane parallel to the axis of their rotating-shaft, to strike the earth downward at an acute angle, and pitch the earth upwardly at a corresponding angle into the receptacle.

111,941. — MACHINE FOR STRAIGHTENING BOLTS.—Charles E. Hunter, Hinsdale, N. H.

Claim.—1. The combination, with the block or "sow" A, having the grooves B and C, of the shank-holding plate F, bars E I, and their clamping-bolts, all substantially as specified.

2. The combination, with the above, of the adjusting-key H, substantially as specified.

111,942. — LIFTING-JACK. — Benjamin F. Johnson, Glasgow, Mo.

Claim.—The stand A B, lifting-block C, lever D, guide-rod G, and holding-pawl, all combined and arranged substantially as specified.

111,943. — LOCK-STOP COCK. — J. Evans Jones, Tidioute, Pa.

Claim.—In combination with a stop-cock, the bridle D, cap G, bolts E and F, the nuts I and J, rod K, and lock M, arranged substantially as and for the purposes herein shown and described.

111,944.—DRAFT-DEVICE FOR THREE HORSES.—Owen W. Jones, Columbus, Wis.

Claim.—The three-horse draft attachment to wagons, substantially as shown and described.

111,945. — COMPOUND FOR PLATING AND POLISHING.—Michael J. A. Keane, New York, N. Y.

Claim.—Pure silver, chloride of gold, cyanide of potassium, and prepared chalk, combined in the proportions and applied as and for the purpose specified.

111,946. — SASH-HOLDER. — William Haskell King, Newark, N. J., and Jared Rowland, Williamsburg, N. Y., assignors to William Haskell King.

Claim.—Curved inclined planes, in combination with the springs J J, shafts H H, and sleeves I I, constructed and operated in the manner and for the purpose shown.

111,947.—SECURING STEEL OR IRON PINS IN WOOD. — Richard Kitson, Lowell, Mass.

Claim.—The method, substantially as described, of fastening steel or iron bolts or pins in wood by means of an adhesive and corroding agent applied as specified, and by driving or forcing the bolt or pin into the wood, as set forth.

111,948. — PASSENGER - REGISTER FOR CARS.—John Kurz, Philadelphia, Pa.

Claim.—1. The arrangement of the levers D, D^1, and D^2, brackets C, C^1, C^2, C^3, C^4, and C^5, and spring E, in combination with the hollow sill A and deflecting plate B, substantially in the manner and for the purpose specified.

2. In combination with the above, the rod F, lever D^2, pawl-and-ratchet-wheel G, shafts H, H^1, and H^2, with their gearing and dials M, M^1, and M^2, all arranged and operating in the manner and for the purpose set forth.

111,949.—HORSE-POWER.—Daniel L. Lamon, Boston, Ga.

Claim.—The combination and arrangement of the bed-wheels C and J, wheels I and M, pinion-wheels H H, L, and P, and shaft E, substantially as and for the purposes herein shown and described.

111,950.—REFRIGERATOR.—John H. Lester, Niantic, Conn.

Claim.—1. The air-space d, outside of the main filling material D, and within the exterior wall A of a refrigerator, with means E for ventilating or for closing the ventilation of such space, as herein set forth.

2. The hair-felt refrigerator herein described, having coarse hair felted and used in a dry state between rigid walls or casings, with provision for ventilating the outer surface of the felt and keeping dry the entire non-conducting material, substantially as and for the purposes herein set forth.

111,951.—BASE-BURNING STOVE.—Dennis G. Littlefield, Albany, N. Y.

Claim. — The combination with direct-draught stoves, the employment of an inverted siphon, the short arm of which communicates with the combustion-chamber, and the long arm with the smoke-pipe, for conveying a portion of the products of combustion to the base, substantially as set forth.

111,952.—METHOD OF ATTACHING HANDLES TO SCRAPERS.—Edward C. Locke, Providence, R. I.

Claim.—The combination of a perforated scraper-plate, A, a pair of arms, C C, securely fastened to the same, the arms moving in different directions on a hinge, D, which is attached to each of said arms C C, a hinge, D, passing through the head of a tongue, E, the tongue E with perforations to correspond with those of the scraper-plate A, and used in conjunction with them, and a thumb-screw, J, or its equivalent, substantially as described, and for the purposes set forth.

111,953.—SAW-TOOTH SWAGE.—John Lough, Buckingham, Canada.

Claim.—1. The combination of the griping and lifting devices $n\ n^1\ o\ n^2\ n^3\ g^2$, with the holding devices m, as described.

2. The combination of the griping and lifting devices with a holding device and die, and anvil, as described.

3. The combination of an irregularly-formed wedge and rock-shaft with devices for griping, holding, and lifting the rod, as described.

111,954.—BEAM-COMPASS.—Josiah Lyman, Lenox, Mass.

Claim.—The manner of attaching a permanently-pivoted adjustable pen or point-holder, P h, to the end of beam-dividers, as shown and described.

111,955, antedated February 17, 1871.—BATHING-BRUSH. — Joseph Marshall, Brooklyn, N. Y.

Claim.—A bathing-brush having a back and bristles combined with a bristle-plate having the groove a filled with water-proof composition, the sponge-holder B detachably fastened by the screw b, and the sponge E clamped in a groove of the holder D by a wire, c, all relatively arranged and put together to form an improved article of manufacture.

111,956.—MILLSTONE.—John W. Masury, Brooklyn, N. Y.

Claim.—The millstones, herein described, consisting of the metallic plates A A, having beveled recesses on their outer edge, and provided with the stone slabs c c, with or without the furrows a

b b, when these parts are constructed and arranged as shown, for the purpose specified.

111,957.—LEATHER-PUNCHING MACHINE.—John Matheis, Ottawa, Ill.

Claim.—A punching-bar, composed of the vertical bar A, the cross-head B, the blocks E E with notches G G G, the screws F F, and the needles or awls C C, in connection with a machine for punching leather straps for fly-nets, substantially as and for the purpose described.

111,958.—WASHING-MACHINE.—Erwin W. Maxson, Scranton, Pa.

Claim.—1. The hanger *k*, when connected with its supporting standards by bars e^1 e^2, all constructed, arranged, and operating as specified and shown.

2. The arrangement of the hangers *k*, bars e^1 e^2, adjustable rails *m*, standards *l*, sliding frame A B, and roller *f*, all constructed and operating as specified and shown.

111,959.—BURGLAR-ALARM.—John McDowell, Washington, Pa.

Claim.—The combination of devices for weighing, for throwing liquid, and for telegraphing, when all are operated through the medium of the same yielding section of the floor, substantially as herein described.

111,960.—LAMP-BURNER.—William C. McGill, Cincinnati, Ohio.

Claim.—1. The combination of the sliding wick-tube A and spiral spring C, as herein set forth.

2. The valve-plate D, sliding wick-tube A, in combination with guide *a*, body B, and openings *b* and *c*, when arranged in the manner and for the purpose herein shown and described.

3. The wick-tube A, valve D, and spring C, arranged and operating substantially in the manner and for the purpose set forth.

4. The combination and arrangement of the sliding wick-tube A, valve D, spring C, guide *a*, and body B, when constructed substantially in the manner herein shown, and for the purpose specified.

111,961.—PUMP.—Charles L. Merrill, Watertown, N. Y.

Claim.—1. The combination of the pump-stock A with the flanged cap C and air-vessel B, when so arranged that the downward pressure of the air-vessel will cause the cap to grasp the periphery of the stock so as to prevent it from splitting, substantially as shown and described.

2. The foot-valve *e*, with hooks *g g'*, plate *i*, and bolt *f*, in combination with the head E, having the raised narrow face, constructed and arranged substantially as shown and described.

3. The combination and arrangement of the pump-chamber D, foot-valve *e*, plunger F, piston G, and valve *i* with the stock A, cap C, and air-vessel B, when all are constructed and operated as shown, for the purpose set forth.

111,962.—INDIA-RUBBER SHOE.—Christopher Meyer, New York, N. Y., and John Evans, New Brunswick, N. J.

Claim.—One or more transverse ribs, in rubber shoes or sandals, formed by thickening the substance itself in the lines or directions thereof while in the sheets, by means of rolling-dies, as and for the purpose described.

111,963.—COOKING-STOVE ATTACHMENT.—Nathan S. Minnis, Oil City, Pa.

Claim.—In combination with a warming-closet to a cooking-stove, the grate A, ash-pan B, grid-iron C, movable baker D, draught E and F, constructed as and for the purpose set forth.

111,964.—ANTI-RATTLING WASHER.—Benjamin Morton, Fertility, Pa.

Claim.—The combined washer A *a*, when made and applied to the spindles of vehicles, in the manner and for the purpose specified.

111,965. — PLOW. — James Oliver, South Bend, Ind.

Claim.—1. A colter and plow-point formed of one piece, when said colter has the same curve given it (or nearly so) that the mold-board of the plow has, to which it is to be attached, substantially as shown and described.

2. In combination with the standard *e*, when curved as described, the curved, grooved, and slotted brace *e* and beam *d*, when all the parts are arranged as and for the purpose specified.

111,966, antedated February 11, 1871.—DEVICE FOR GRINDING THE FLAT FACES OF VALVE-SEATS.—Samuel J. Peet and Daniel Sawyer, Boston, Mass., assignors to Samuel J. Peet.

Claim.—The pair of disks or plates A A, provided with cutting-surfaces, as described, in combination with the rod B, provided with the conical wedge *d* and the screw *c*, arranged and operating together substantially as and for the purpose set forth.

111,967.—CURTAIN-FIXTURE.—Phineas W. Phillips, Salem, Mass., assignor to James F. Almy, same place.

Claim.—A shade-roller, in which the following elements are combined, viz: A flanged metal cap, a hollow slotted roll, and metal step, made and used substantially as described, the whole operating together in the manner and for the purpose set forth.

111,968. — FELTED FABRIC.—James Ezra Pollard, Franklin City, Mass.

Claim.—As a new article of manufacture, the fabric, as hereinbefore explained, composed of feathers and wool, or equivalent felting material, arranged and felted, or felted and fulled, as described.

111,969.—MINIATURE WAR GAME.—Casimiro Portillo, New York, N. Y.

Claim.—The above-described construction and arrangement of parts, constituting a new game for players, substantially as specified and set forth.

111,970.—LARD AND BUTTER BOX.—William Pratt, New York, N. Y.

Claim.—A double-walled box or passage made of paste or straw-board, rendered impermeable to air, moisture, or oleaginous substances, by any of the well-known varnishes or cements, and this whether the spaces between the walls are filled with non-conducting substances or not.

111,971. — FIRE-PLACE GRATE.—William Pulsfort, Louisville, Ky.

Claim.—The bar E with its hooks F, in combination with the grate A, the jambs C, and back D, substantially as and for the purpose hereinbefore set forth.

111,972.—CAR-COUPLING.—Samuel H. Reed and George A. Reed, Fredericktown, Ohio.

Claim.—The combination of the jaw B and pin C with the link D *d* d^1 d^2, whereby said jaw and pin will be made to register with the openings *d* d^1, respectively, thus forming a double safety lock, substantially as shown and described, and for the purpose specified.

111,973.—MACHINE FOR BRONZING.—Israel L. G. Rice, Cambridge, Mass.

Claim.—1. The table or block A, constructed with the leaf *a*, chamber or receptable *b a''*, chambers for the reception of the rollers B B and cleaning-brushes C C, aperture or spout for feeding the bronze to the bronzing-rollers, and receptacle for the brush E, substantially as and for the purpose set forth.

2. The velvet or other suitably-covered bronzing-rollers B B, in combination with the receptacle or reservoir N, with its spout and reciprocating brush E, for equalizing the distribution of the bronze upon said rollers B B, all constructed and arranged substantially as set forth.

3. The casing or block A, constructed as described, in combination with the brush E, receptacle N, rollers B and D, revolving brushes C C, shafts G and I, pulleys K^1 K^2 K^3 K^4 K^5 and J^1 J^2 J^3 J^4 J^5, belts L, and connecting-rod F, all constructed and arranged substantially as and for the purpose set forth.

111,974.—SPRING BED-BOTTOM, SEAT, &c.—Charles Rich, Poughkeepsie, N. Y.

Claim.—The combination of spiral springs A B C D with tubes, clasps, or hooks *a b d*, with lining or packing E inside the tubes, clasps, or hooks, all susceptible of being rolled or folded up, as described.

111,975. — PLOW. — Alexander Rickard, Schoharie, N. Y.

Claim.—The flanged rotary perforated cap G, combined with a hollow beam D and draft-rod E, as set forth.

111,976.—PRIVY.—Frank Riedel, San Francisco, Cal.

Claim.—A suspended seat and seat-frame, *a b*, for privies, moving on the vertical rods *c'*, and having the cords *e*, pulleys *f f*, and weight *d*, substantially as described.

111,977.—IMPLEMENT FOR SLITTING AND LOOPING RAGS FOR CARPETS.—Daniel A. Russell, Windham, Ohio.

Claim.—The pivoted knife A, provided with an aperture, *b*, for uniting carpet-rags, as set forth.

111,978.—SHIRT.—Adolphe Salmon, New York, N. Y., assignor to Cahn & Salmon, same place.

Claim.—A shirt provided with two openings, one upon each shoulder, extending through the collar-band in such manner that the shirt may be passed over the head of the wearer, and that the size of the collar-band may be changed without disturbing the relative position of the collar-buttons upon the back and front of the neck, substantially as described.

111,979, antedated February 6, 1871.—CORN-PLANTER.—Joseph Schott, Peoria, Ill.

Claim.—1. The adjustable colter G, in combination with the bent plates H, when constructed and arranged substantially as and for the purpose herein specified.

2. The sliding block N, sliding plate *v*, and block and brush, fig. 7, combined with the lever K, cam C, and springs L and R, when constructed and arranged to operate substantially as and for the purpose specified.

111,980.—REVOLVING SHOW-CASE.—William J. Scott, Albany, N. Y.

Claim.—1. A revolving show-case, consisting of a series of flat cases projecting radially from a center, as herein described, and for the purpose set forth.

2. The combination of the heads C C, front panels D D, and covers E E, when arranged to revolve around or with a central shaft, J, substantially as and for the purpose herein specified.

111,981. — HOSE-RING. — George Sewell, Brooklyn, N. Y.

Claim.—The closed screw-ring A, in combination with the open screw-ring B, arranged so as to attach hose to couplings, substantially as described.

111,982.—STEAM-ENGINE.—Joel Sharp and Joseph W. Thompson, Salem, Ohio.

Claim.—1. The cylinder B, steam-chest C, slides M, bed-plate D, pillow-block K', lugs *k b*, as arranged and cast in one piece, and the pump E, in combination with the boiler, substantially as and for the purpose set forth.

2. The arrangement of the driving-shaft transversely across the top of the boiler, in pillow-blocks K K', and at right angles to the line of the engine, arranged in relation to the smoke-chamber G, substantially as and for the purpose set forth.

3. The base A', with the circular basin B, as arranged, in combination with the boiler A, for the purposes and in the manner substantially as set forth.

4. The arrangement of the arm H with the piece I, having a slot at right angles to said arm, in combination with the crank-pin *a*, wrist and link J, operating conjointly, as and for the purpose substantially set forth.

111,983. — PUMP.—George F. Shaw and Henry F. Shaw, West Roxbury, Mass.

Claim.—The combination, in a pump, of the tube A, provided with the valve *d*, and a retractor, constructed, arranged, and operated substantially as described and shown.

111,984.—NON-CONDUCTING MATERIAL FOR COVERING STEAM-BOILERS, &c.—Benjamin F. Smith, New Orleans, La., assignor of one-half his right to G. L. Laughland, same place.

Claim.—1. The hulls of cotton or rice-seed, either separately or combined, as a basis for a non-conducting covering for boilers, pipes, and other purposes.

2. The hulls of cotton or rice-seed, either separately or combined, treated in the manner above described, for the purpose specified.

111,985.—RAILWAY-CAR COUPLING.—Marcus B. Smith, Mattoon, Ill.

Claim.—The combination of the lever B B, secured in position by plates *c c*, in combination with the levers *t t*, *i*, and D, and notch *e*, when combined in the manner substantially as described, in combination with the bumper P, draw-bar U U, and spring *s*, to receive the shock of concussion from the link *r*, when operated in the manner and for the purposes as herein set forth and described.

111,986. — HEEL OF BOOTS AND SHOES.—Homer S. Smythe, Darlington, Wis.

Claim.—The permanent leather piece A, threaded and socketed metallic plate B C D, detachable rubber piece E, metal block F, and threaded bolt I, all combined, constructed, and relatively arranged as and for the purpose described.

111,987.—HARVESTER.—George H. Spaulding, Rockford, Ill.

Claim.—1. The pivoted compressing-fingers, constructed substantially as described, and arranged to be operated by the knee of the binder.

2. The cylinder D, with the teeth *a a* arranged spirally thereon, in combination with an endless revolving apron, all operating substantially as set forth.

3. The bows D D, in combination with revolving apron B and cylinder H, all constructed and arranged to operate as described.

111,988. — CONSTRUCTION OF CYLINDER FOR CARDING AND OTHER MACHINES.—Joseph M. Stone, North Andover, Mass.

Claim.—As a new manufacture, the cylinder herein described, consisting of a thin cylindrical

shell, having thick heads integral with the shell, and the exterior shafts fitted and driven into the said heads.

111,989, antedated February 20, 1871.—CRADLE FOR CHILDREN.—William J. Stowell, Baltimore, Md.

Claim.—1. The cradle or crib A, arranged and guided within a portable frame, and to swing only endwise upon suspenders or rods *a*, which are made with or without the springs *b*, and are attached to the posts of the portable frame and cradle or crib, substantially in the manner described.

2. The horizontally-vibrating treadle or lever D, made with or without the rod *d'*, in combination with the cord *b'* and endwise-swinging cradle A, substantially in the manner described.

111,990.—COMBINED AUGER AND REAMER.—Owen W. Townsend, Fond du Lac, Wis., assignor to himself and George O. Trowbridge, same place.

Claim.—The auger A, provided with the cutting-bit *a*, having its exterior diameter coincident with the inner edges of the knives *c'* of the reamer C, and in combination therewith, substantially as and for the purpose specified.

111,991.—SPINNING-WHEEL.—Franz Voegtli, Montgomery City, Mo.

Claim.—1. The treadle C, combined with the wire D, hinged to the frame A, and provided with bent supports *c*, substantially as and for the purposes set forth.

2. The slide M, its spring *m'* and pin *m*, combined with the rods *n n*, the bar O, the shaft L, having the screw-groove *l*, and the flier H, substantially as set forth.

111,992, antedated February 11, 1871.—SEEDER.—Tennis Vreeland, Oneida, Ill.

Claim.—The distributer J, when provided with radial flanges *j j j j* and side flanges *j' j' j' j'*, constructed, as shown, so as to form discharge-spouts at the corners, substantially as described, and for the purpose set forth.

111,993.—BALING-PRESS.—Edwin R. Wallace, Jonesville, S. C.

Claim.—The baling-box D, straps *b*, and plates *c* and *d*, open at both ends, and revolving in frames A B C D, combined, as described, with two followers, rotating on a right and a left screw, for the purpose specified.

111,994.—BREECH-LOADING FIRE-ARMS.—William G. Ward, Edgewater, N. Y.

Claim.—1. A groove on the front end of the hammer, constructed to engage with the upper end of the trigger-bolt, substantially as shown and described.

2. The combination of a groove on the front end of the hammer, and a notch in or hook on the rear upper end of the trigger-bolt, substantially as and for the purpose specified.

3. A cam on the front end of the hammer, to press down the trigger-bolt and diminish the travel of the trigger, when constructed substantially as shown and described.

4. The stop B^4, in combination with the trigger, for limiting the movement of the trigger-bolt, substantially as shown and described.

5. The combination of the tongue and groove for preventing displacement of the parts, substantially as shown and described.

6. In combination with a breech-loading fire-arm provided with lugs s^5, the magazine Z, provided with the pivots z^5, as and for the purpose specified.

111,996.—SASH-HOLDER.—William M. Warren, Watertown, Conn.

Claim.—The herein-described sash-lock, consisting of the lever C, one arm of which is formed into a projecting nose, *c*, the other arm *c* extending to a cam, D, which said cam is provided with a spindle, F, for operating the same, and the lever provided with a spring, *f*, to throw the nose of the lever outward from the case, the whole being constructed and arranged in the manner herein described.

111,996.—PRESSED NUT-BLANK.—Frank Washbourne, Brooklyn, N. Y., assignor to Steele & Johnson Button Company, Waterbury, Conn.

Claim.—As a new article of manufacture, the pressed nut-blank herein described, concaved upon one or both faces, substantially as and for the purposes set forth.

111,997.—PISTON-PACKING.—George Wells, Providence, R. I.

Claim.—The segments B B B, the V-shaped pieces A A A, when placed between the upper and lower piston-plate, and operated by a spring coiled about the post of the lower plate, all arranged and combined as described, and for the purposes set forth.

111,998.—HOOP-SKIRT.—James O. West, New York, N. Y.

Claim.—The hoops *a*, braces *f*, and the back-straps *e*, fastening in front, combined as described, with the side-suspending hip-straps *b b* of a hoop-skirt, for the purpose specified.

111,999.—WASHING-MACHINE.—Lawrence White, Orford, Iowa.

Claim.—An improved washing-machine, formed by the combination of the pivoted rack C, spring or springs D, pivoted beater E F, jointed lever G, connecting-rod H, and pivoted lever I, with each other and with the box A, substantially as herein shown and described, and for the purpose set forth.

112,000.—FAUCET.—William Crosby Wise and John Ashman, Chelsea, Mass.

Claim.—1. The arrangement and combination of the elastic ball B, cup G, collar F, rod D, bar or grating H, and shell A, substantially as and for the purposes shown and described.

2. In combination with an elastic ball-valve, the self-adjusting cup G on the end of a valve-rod, substantially as described, and for the purposes set forth.

112,001, antedated February 6, 1871.—CONDENSING DOUBLE-END LOCOMOTIVE-ENGINE.—Joseph P. Woodbury, West Roxbury, Mass.

Claim.—1. The crescent-shaped hot-water tank, in combination with the pipes O O' and condenser T, arranged substantially as and for the purpose set forth.

2. The combination of the throttle-valves S S, the rods R R'', and tube R, substantially as described, and for the purpose set forth.

3. The combination of the reverse-links L'' M with the actuating device H H^1 H^2 H^3 H^4, L L', G'' G' G, F E'', substantially as described.

4. The segment-gear P^{iv}, in combination with the throttle-valve stem S and the ratchet P^{iv}, substantially as described, and for the purpose set forth.

5. The telescopic rod H, in combination with the beveled gears G G' and rocker-shaft F', substantially as described, and for the purpose set forth.

112,002, antedated February 18, 1871.—SLIDE-VALVE.—John C. Woodhead, Pittsburg, Pa.

Claim.—The central casing E, with diaphragm F, when employed in connection with two valves, as described, for the purpose set forth.

112,003.—REFINING IRON, REDUCING ORES, &c.—John F. Allen, Tremont, N. Y.

Claim.—Passing molten metal, in the form of a shower or spray, through pulverized alkaline earths or oxides of iron, either with or without the admixture of pulverized carbon, such as charcoal or anthracite coal, substantially as herein shown and described, and for the purpose set forth.

112,004.—TOWEL-HOLDER.—Henry Alsop, Elkhart City, Ill.

Claim.—The hereinbefore-described towel-holder, consisting of the frame A, provided with the eye B and pivoted bearing C, in combination with the roller D, substantially as and for the purpose specified.

112,005.—PAPER-BAG MACHINE.—Peter Edward Armstrong, Philadelphia, Pa.

Claim.—1. The combination of the reciprocating knife H and the rotating arm *h*, operating as set forth.

2. A reciprocating or vibrating blade, *p*, in combination with the plate *a*, by which paste is transferred from a reservoir to the said blade, substantially in the manner described.

3. The combination of the grooved rollers *h h*, wheels *j j*, and plate F.

112,006.—CORN-PLANTER.—James M. Aitchison, Omar, N. Y.

Claim.—1. The disk F, hinged projection F^2, and spring *f'*, in combination with the pivoted bar E^2, rod and spring *e'*, and the pivoted comb-like device *e*, substantially as and for the purpose set forth.

2. The arrangement of the rollers B B and B^2 F, pulley B^1, handle B^2, belt C, pulley D, vertically-movable trough D^1, belt or chain *f*, pulley F^1, cam F, pivoted bar E^2, spring and cord *e'*, agitator bar *a*, and trough E, all arranged and operating substantially as and for the purpose set forth.

112,007.—BUCK-SAW FRAME.—John Gulick Baker, Philadelphia, Pa., assignor to Henry Disston & Son, same place.

Claim.—The recessed metal socket *i*, in combination with the strips *h h'* and diagonal G, as set forth.

112,008.—HAND-CAR.—William T. Beckman, Petersburg, Ill.

Claim.—1. The bolster F, provided with the shaft G and rack H, in combination with the sector H^1, shaft B, and lever C, substantially as and for the purpose specified.

2. The levers D and D^2, in combination with bolster F, rack H, sector H^1, shaft B and lever C, substantially as and for the purpose described.

112,009.—WINDOW-WASHER.—Charles Edward Bell, Greenfield, Ohio.

Claim.—1. The window-washer herein described, having the perforated reservoir D provided with the regulating slide F, the inclined plane G, and the clamps B H and B' C, substantially as specified.

2. In a window-washer, the perforated reservoir D with air-tight regulating slide F, and the inclined plane G, substantially as specified.

112,010.—PORTABLE WATER-CLOSET.—Petter Bergqvist, Austin, Minn.

Claim.—The combination and arrangement of the frames or boxes A A'', lined cover C, receivers G and E, the latter provided with a lid consisting of the two parts E' and E''', tube F, and air-pipe D, substantially as and for the purpose set forth.

112,011.—SEAL-LOCK.—Wilson Bohannan, Brooklyn, N. Y.

Claim.—The pivoted seal-holder I, carrying an arm, M, which is held by the shackle C in manner substantially as described.

112,012.—MACHINE FOR CLEANING GARDEN-WALKS.—Peter Boice, Chatham village, N. Y.

Claim.—The knife *f*, of the character specified, connected to the frame *a* and supported by the swinging axle *b* and wheels *c*, and adjustable in the depth of cut by the yoke *k* and wheels *m*, as and for the purposes set forth.

112,013.—DETACHABLE MAGAZINE FOR COOKING-STOVES AND RANGES.—Lewis Bridge, Philadelphia, Pa., assignor to David Stuart and Richard Peterson, same place.

Claim.—The magazine, composed of the sheet-iron body, the cast-iron ring E, arranged for the reception of the cover F, and the cast-iron ring *d* for fitting a boiler-hole of the stove, all substantially as and for the purpose described.

112,014.—MOP-HOLDER.—John Brizee, Alvarado, Cal.

Claim.—The mop-holder, consisting of the side wires *b b*, parallel locking-wires *d d*, and sliding wire *f*, substantially as and for the purpose above described.

112,015.—VALVE-GEAR FOR DIRECT-ACTING ENGINES.—Adam S. Cameron, New York, N. Y.

Claim.—1. The arrangement of a rod, F, secured in one of the pistons of a direct-acting engine, and extending alongside the other cylinder, said rod serving to actuate the steam-valve of the auxiliary or main cylinder, substantially in the manner herein shown and described.

2. The steam-chambers O, receiving steam from behind the throttle, and valves *i*, provided with tappets *k* extending into the cylinder A, for the purpose of cushioning or arresting the steam-piston, substantially in the manner herein set forth.

112,016.—SEWING-MACHINE FEEDING MECHANISM.—Mary P. Carpenter, San Francisco, Cal.

Claim.—1. A feed-motion for sewing-machines, consisting of two feed-rollers arranged opposite each other on opposite sides of the cloth, and each operated independently of the other by means substantially as herein described.

2. The combination, for supporting and operating the feed-roller which is arranged above the material, of the socket K, fitted to the presser-arm, the spindle *e*, passing through said socket, the bevel-gears *c d*, on the said roller and spindle, the ratchet-wheel *f*, on the said spindle, and the pawl *l*, carried by a pawl-box or carrier working upon said spindle, operated by some vibrating portion of the machine, all constructed substantially as herein described.

3. The combination, for supporting and operating the feed-roller which is arranged below the material, of the shaft H, the ratchet-wheel *j*, on said shaft, the pawl *p*, carried by a pawl-box or carrier oscillating around said shaft, and the rod *q'*, attached to the said pawl-box or carrier and connected with an arm of the needle rock-shaft, all substantially as herein described.

4. The combination, with the arms P or P', attached to the rock-shaft C, of the adjustable sliding connections *r* or *r'* of the rods N or *q'*, and their respective connections with the feed-rollers G or G', substantially as and for the purpose set forth.

112,017, antedated February 18, 1871.—SIGNAL-BOX FOR FIRE-ALARM TELEGRAPHS.—Stephen Chester, New York, N. Y.

Claim.—1. The combination of a swinging-bar or

lever with sliding bar and lever, for winding in such manner that the lines described by the independent movement of hanging-bar D with sliding bar C, and by the winding-lever A, shall intersect each other at the point from which both start, but shall separate and depart from each other from thence, while the swinging of the movable bar D is capable of being deflected from that position by the resistance of the bar A when the point of the former is caused to impinge upon the latter.

2. The attachment of a movable bar or swinging-lever to the actuator of fire-alarm boxes, for the purpose of causing the said actuator to engage with the winding apparatus of said machinery substantially for the purpose and in the manner described.

3. The arrangement of the movable lever in such a manner that it will be governed in its motions by gravity, as and for the purpose as set forth.

4. The combination of a spring or springs with the movable lever, as and for the purpose as set forth.

5. The combination of the spring H with the movable bar D, substantially for the purpose and in the manner described.

112,018. — PUMP. — Nathan T. Coffin, Knightstown, Ind.

Claim.—The sheet-metal lining B, secured in the interior of the wooden stock A by turning or flanging the ends of the tube, forming the lining into grooves cut in the stock, substantially as set forth.

112,019.—BINDER FOR SEWING-MACHINES. Jacob L. Coles, Newark N. J.

Claim.—1. The auxiliary U-shaped folding-guide B, provided with edge-gauges *h* and *i*, in combination with the main U-shaped folding-guide A, over which the braid is folded, as and for the purposes specified.

2. In combination with the auxiliary and main folding-guides A B, the spring-presser C, as and for the purposes specified.

112,020.–LUBRICATOR FOR STEAM-ENGINES. Henry C. De Land, Syracuse, N. Y.

Claim.—1. The method of automatically lubricating the machinery of a steam-engine by means of an oil-cup, B, having within it a stationary slotted or perforated tube, F, with a capped sliding tube, E, thereon, and provided with the head A and cock D, constructed and arranged to operate substantially as described.

2. The capped loosely-sliding tube E, in combination with the slotted or perforated tube F, when constructed and arranged to be operated substantially as and for the purpose set forth.

112,021.—IMPLEMENT FOR DRIVING SPOKES INTO HUBS OR WHEELS.—Wesley Edwards, Indianapolis, assignor to himself, John Holloway, Crawfordsville, and John F. Snider, Indianapolis, Ind.

Claim.—The combination of the adjustable screw-bolts E F and P F and adjustable spring G, all arranged to operate substantially as set forth.

112,022.—FRUIT-DRIER.—Benjamin F. Ella, Dayton, Ohio.

Claim.—1. A fruit-case, *h i*, combined with tubes *k*, in the manner and for the purpose specified.

2. The combination of the shaft *d*, radial arms *e*, and fruit-cases *h i*, in the manner and for the object specified.

112,023. — MOSQUITO-NET.—Jacob Joseph Alexander Ergenzinger, Atlanta, Ga.

Claim.—The frame or canopy A for a mosquito-net, constructed in the manner herein shown and described.

112,024.—PATTERN FOR APPLYING MEASUREMENTS AND LAYING OUT GARMENTS. Sarah C. Ewing, Indianapolis, Ind.

Claim.—The patterns A, B, C, D, and E, shaped and graduated as set forth, and for the purpose described.

112,025. — FLOATING WATER-ELEVATING WHEEL.—Charles Friedrich Fisher, New Orleans, La., assignor to himself, Lewis Moses, Bernard Moses, Gustave Moses and William Bogel, same place.

Claim.—1. The combination and arrangement of the spur wheel H, wheel D, and block-pulley C operated by the chain E working upon spur wheel D.

2. The relative arrangement of the buckets upon the links of the chain, so that they are raised by the junction of the planes of both pulleys at their point of attachment to said chain, and consequently in turning over the upper pulley C project beyond its periphery.

3. The well in boat A, with guard M, in combination with the apparatus, substantially as described.

4. The combination of hexagonal wheel or pulley I, at the bottom of frame B, with square pulley C at the top, carrying the chain with its attached buckets, substantially as described.

112,026. — APPARATUS FOR CARBURETING AND GENERATING GAS. — Fisher Ames Fisher, Westfield township, N. J.

Claim.—1. The construction and arrangement of the induction-siphon, and distributing-pipe *B'*, substantially as set forth.

2. In combination with distributing apparatus as covered by claim 1, the wicking distributed between the wire nettings W W W W, substantially as set forth.

112,027, antedated February 21, 1871.—KNITTING-MACHINE.—G. W. Folts, Boston, Mass., and James L. Branson, Chicago, Ill.

Claim.—The combination of the cylinders A B, bed-plate H, grooves F S, and stop device I *h*, all constructed and operating substantially as and for the purpose set forth.

112,028.—WATER-WHEEL.—Charles James Fox, Charlotte, N. C.

Claim.—1. The reversible case or frame in which the water-wheel is placed, so adapted that the shaft of the wheel can be changed from a vertical to a horizontal position by the means substantially as described.

2. The water-wheel N, consisting of a cylinder having the buckets formed in its side and partly inclosed, so that the water will be received, retained, and discharged on the outside, at the furthest point from the center, substantially as shown.

3. The combination of the float-valve D, levers C and G, and connecting-bars *a c*, when so arranged as to open and permit the closing of the gate, substantially as specified.

4. In combination with the float-valve and its levers, the screen P, case M, rod L, and wheel N, when all are arranged as described.

112,029.—LUBRICATOR.—Stephen F. Gates, Cambridge, assignor to the Lowell Oil-Cup Company, Lowell, Mass.

Claim.—1. The combination of the glass globe *c* and the stand *m*, both constructed as shown and described, the latter with a concave recess and a screw-furnished tubular recess below it, and the former with a rounded lower end conforming to the shape of the recess first named, when the globe and the stand are connected by a collared and screw-furnished bushing, in the manner and for the purpose set forth.

2. The combination, substantially as described, of the bolt *b*, having a conical head, *f*, the conical follower *d*, the compressible packing *e*, and screw-cap *c*, each constructed, as shown and described.

all operating in the manner and for the purpose specified.

112,030.—HAY-TEDDER.—Luke Hale, Hollis, N. H.

Claim. 1. The shaft *d*, with fingers *i i*, spring and cogged segment *s*, in combination with the wheel D, having alternate arcs of unequal cogs *a* all constructed and arranged to operate substantially as and for the purposes herein set forth.

2. The arms *r r*, with fingers *i' i'*, bar *p*, rod *n*, crank-wheel *m*, and pinion *k*, in combination with the cog-wheel D, all constructed and arranged to operate substantially as herein set forth.

3. The bar *t*, with teeth or fingers *i' i'*, crank-wheels *m m'*, shaft *h*, and pinion *k*, in combination with the cog-wheel D, all constructed and arranged to operate substantially as and for the purposes herein set forth.

112,031.—LOUNGE AND BED.—John C. Hall, Cincinnati, Ohio, assignor to himself and Allen C. Richards, same place.

Claim.—1. A convertible lounge and bed, consisting of the devices A, B, and G, of which the device G is hinged to A and is erect or nearly so when the article is used as a lounge, and is capable of being turned down to a horizontal or nearly horizontal position when employed as a bed, substantially as described.

2. A convertible lounge and bed, consisting of the frame A, legs B *b*, and hinged bed-frame G, which latter is capable of being maintained in its turned-down position by the sliding arms C C' of the lounge, substantially as herein explained.

3. The combination of the frame A, legs B *b*, sliding arms C C', boards D D, bars F F', links *f f'*, and hinged bed-frame G, for the purpose described.

112,032. — OIL-CLOTH PRINTING MACHINERY.—William Hudson Halsey, Philadelphia, Pa.

Claim.—1. The block J of an oil-cloth-printing machine, when secured to a traversing bar or frame, H, by elastic or spring connections, arranged substantially in the manner described, so as to maintain the block in a horizontal position and prevent it from swaying.

2. The bar H, attached to the printing-block as described, and arranged to be adjusted vertically in the traverting frame G.

3. The combination of the lever K and rod L with the bar H and printing-block J, the whole being arranged and operating substantially as described, for the purpose specified.

112,033.—HOLDER FOR NEEDLES IN SEWING-MACHINES.—Henry J. Hancock, New York, N. Y.

Claim.—The needle-guard G, constructed essentially as described, in combination with the needle-bar F, the pin or projection *f*, and the set-screw *g*, arranged to look with the needle-bar, as described.

112,034.—ROAD-BED.—Napoleon B. Heafer, Bloomington, Ill.

Claim.—The pulverized matter herein described, when prepared in the manner and of the materials specified, and used to form a road-bed.

112,035. — FAUCET.—William H. Hedges, Newark, N. J.

Claim.—1. The loose conically-pointed handle or lever F, under control of a stop, *m*, arranged to serve as a fulcrum, in combination with the tapering recess *e* in the valve or its stem, or plate E covering the outer end of the latter, and a spring operating to close the valve, substantially as specified.

2. The combination of the locking surface or ridge *a* with the tapering recess *e* and cone F of the lever or independent handle, arranged to act on the valve under the combined action of a stop or fulcrum and spring controlling the valve, essentially as herein set forth.

3. The flexible cup-packing D over the outer end of the valve-stem, in combination with the annular recess *f*, at the base of the chamber, in which said packing is arranged, substantially as specified.

112,036.—TRIP-HAMMER.–Benjamin Hershey, Erie, Pa.

Claim.—The combination of the torsional spring L, S-shaped cam H, and drop-hammer D C, when the same are arranged and operate substantially as described.

112,037.—SPRING FOR VEHICLES.—Benjamin Hershey and Richard Dudley, Erie, Pa.

Claim.—1. The horizontal rod D, when the same is secured in a transversely-sliding friction-plate in such manner as to allow of the necessary revolution of the rod to form a torsion spring, substantially as described, and for the purpose specified.

2. The rods D D, having lateral arms D' D', friction-plates *f f*, and standards C C, when the same are so combined and arranged as to operate substantially as described.

112,038.—SCHOOL-DESK AND SEAT.–Charles J. Higgins, Indianapolis, Ind.

Claim.—1. The desk, constructed with the legs crossing each other and supported by the casting G, as shown, in combination with the hinged seat F, lid C, and end pieces D, all arranged and operating substantially as and for the purpose set forth.

2. The casting G, formed and applied to the intersection of the legs A A', substantially as and for the purpose set forth.

3. The seat-hinge, consisting of the socket H, bearings *i i*, and pin J covered with rubber, all as described and specified.

112,039. — PLOW-COLTER. — Ephraim C. Hodge, Oneonta, N. Y.

Claim.—The colter D *d*, in combination with yoke B, stops E E, slide-rods C C, and beam A, whereby the colter may be used on either side of the beam and adjusted at the will of the operator, as and for the purpose set forth.

112,040.—FOLDING-CHAIR.—Francis March Holmes, Boston, Mass.

Claim.—The back rung F, pivoted to the longer levers B B', as described, and connected to the seat by means of the "two-leaved hinges" or arms G G, extended from the said rung and pivoted or hinged to the seat, all substantially as specified.

112,041.—FOLDING-CHAIR.—Francis March Holmes, Boston, Mass.

Claim.—The rungs E F, as arranged with their axes at unequal distances from that of the pivotal bar *a*, and the seat, as provided with the elevating cam I, or its equivalent, and hinged or connected with the back rung F, as explained, and such rung pivoted to the levers B B', all being substantially as hereinbefore described and as represented.

112,042.—WINDOW-SASH LOCK.—Bennet Hotchkiss, New Haven Conn.

Claim.—The within-described construction of the slotted plate *a c*, adapted to fit in the window-frame, as shown, with a recess underneath for the head of the bolt to be adjusted backward and forward therein, in combination with the bolt *b g* and threaded knob *h*, as and for the purposes herein set forth.

112,043.—HYDROSTATIC SCALE.—Orvis D. Hudson, Waupun, Wis.

Claim.—In a hydrostatic scale, constructed as described, the vertical ribs *c* on the outer side of

the inner vessel D, for the purpose of keeping the latter in a vertical position and equidistant on all sides from the vessel, substantially as and for the purpose set forth.

112,044.—BASE-BURNING STOVE.—George G. Hunt, Chicago, Ill.

Claim.—1. The movable gas-ring or rings or diaphragm G G², when made in the manner and used for the purposes hereinbefore set forth and described.

2. Making the coal-reservoir of a base-burning stove detached and movable from the main body of the stove, for the purposes hereinbefore specified.

3. The perforated plates *e e*, or their equivalents, in combination with the cover *m* and reservoir R, when used for the purposes hereinbefore specified.

112,045.—MANUFACTURE OF PAPER AND LEATHER-BOARD.—Carleton B. Hutchins, Ann Arbor, Mich.

Claim.—1. Hair in the manufacturing of leather-board and paper, substantially as herein described.

2. The combination of hair and potato pomace in the manufacture of paper and leather-board, substantially as set forth.

112,046.—MANUFACTURE OF FLOUR.—Elias S. Hutchinson, Baltimore, Md.

Claim.—As an improvement in the manufacture of flour from wheat or any grain, removing the oil from the meal by a chemical agent after grinding and prior to bolting, substantially as explained.

112,047.—VALVE.—John Johnson, Brooklyn, N. Y.

Claim.—In a globe-valve, the combination of a conical, double-seated, flexible valve and a conical recessed seat, their arrangement with reference to each other being such that, when the valve is pressed into its seat, its diameter may be enlarged so as to insure its fitting against the conical walls of such seat, substantially as and for the purpose set forth.

112,048.—HALTER-BUCKLE AND RING.—Llewellyn E. Jones and Theodore M. Barber, Syracuse, N. Y.

Claim.—A halter put together by buckles, made in clusters and applied as shown, so that the parts can be taken up or lengthened out or readily detached at any time with very little if any stitching or riveting, substantially as specified.

112,049.—STEAM-GENERATOR.—James L. Judge, Milwaukee, Wis.

Claim.—1. Hollow grates F, connected to the front bottom cylinder D and the back top cylinder D, and connected to fire-box A by pipes H and I, and with the boiler B by pipes O, forming a circulation of water from the bottom of the fire-box A with the boiler B, all in combination substantially as described.

2. Side cylinders D, both top and bottom, connected with tubes E and G, and the side cylinders connected with the fire-box by pipes H and I, to form a circulation of the water, substantially as described.

3. The basket, composed of cylinders D, tubes E, grates F, tubes G, with connecting-pipes H and I, air-tubes K and M, and connecting-pipes O, in connection with fire-box A and boiler B, all in combination, substantially as described.

112,050.—TUCK-MARKER FOR SEWING-MACHINES.—James Franklin Kellogg, North Bridgewater, Mass.

Claim.—The combination of a pressure-clamp, A, with the adjustable gauge G and arm F of a tuck-marker, substantially as described, for the purposes specified.

112,051.—LATHE.—James Kievlan, Chicago, Ill., assignor to himself and William Wisdom, same place.

Claim.—1. In combination with the head and tail-spindles, the former of which revolve on their own axes, and also around a common axis, as described, cutters arranged to turn off the stick while revolving around the same common axis.

2. The cutters Z, suspended on rods W, between the spiders, and constructed with tail-pieces and springs *s*, in combination with the cam which brings the cutters into action, substantially in the manner set forth.

3. In combination with the cutters and cam last aforesaid, the pinions 5, shafts 4, revolving with the spiders, and fixed spur-wheel 6, substantially as set forth.

4. In combination with the lathe-head Q Q' and shaft F, independently revolving, the adjustable friction-wheels N, communicating motion to the lathe-heads, substantially in the manner set forth.

5. In combination with the tail-spindles and cam V, the stirrups X, arranged to operate the spindles substantially in the manner set forth.

6. In combination with the tail-spindles, the spring-latches Y, and cam V for detaching said latches from the spider-rim, substantially in the manner set forth.

112,052.—DUMPING-CAR.—Sidney D. King, Middletown, N. Y.

Claim.—1. The inclined planes C C, in combination with the platform D, rollers *a a*, and box G, arranged as described, so that the box will move forward and dump itself, substantially as set forth.

2. The arrangement, with the platform D, of the spring-hook *b* and lever *f*, operating with the projection *d* on the turn-table, as and for the purpose herein set forth.

3. In combination with the platform D, the latch *g*, spring-bar *h*, bar *k*, and stop *s*, arranged as described, and for the purposes set forth.

4. The combination of the turn-table B, inclined planes C C, platform D, and box G, all constructed and arranged to operate substantially as and for the purposes herein set forth.

112,053.—FOLDING-BEDSTEAD.—Kasimir Kronkel, New York, N. Y.

Claim.—The sliding sleeves *d* and toes *e*, in combination with the pivoted side rails and the head and foot-pieces, as herein shown and described, for the purpose specified.

112,054.—CASTING SOLDER-WIRE.—Edward M. Lang, Portland, Me.

Claim.—1. The improved method of manufacturing solder-wire, viz., by the combination of the furnace F, crucible G, nozzle and valve H and N, and the wheel C having a flat and smooth surface in rotation, substantially as herein described.

2. The winding or coiling machinery, consisting of the shaft J, the truck K, and the tub M, or equivalent, operating in conjunction with the casting apparatus, as herein described.

112,055.—DUMB-WAITER.—Tolbert Lanston, Washington, D. C.

Claim.—The dumb-waiter herein-described, having cylinder D, piston-rod E, provided with guiding-lugs *c c*, pipes F and G, cocks *f* and *g*, together with the operating-rod H, actuating both cocks by simultaneously opening one and closing the other, substantially as specified.

112,056.—BOOT.—Jacob S. Lewis, Baltimore, Md.

Claim.—The within-described boot, having an unlined leg, cut three-quarters high, slotted at its top, as described, provided with the strap and buckle, all constructed substantially as and for the purpose set forth.

112,057.—MODE OF LASTING SHOES.—William H. Lovejoy, Lowell, assignor to himself and Christopher Robinson, Lynn, Mass.

Claim.—The improved mode of connecting the upper to the insole, viz., by the two ranges of sew[s], one of which is carried through the other and the upper, and the other through the insole alone, as set forth.

112,058.—ENGINE-GOVERNOR.—John D. Lynde, Philadelphia, Pa.

Claim.—1. The combination of the weights A and [B] curved arms B and their connections, springs C [and] valve-stem D, valve M, with its surrounding [chambers] and its disk *g*, substantially as and [whereby] to perform the functions herein set forth.

2. The construction of the valve M, with its [parts] *a b c d* and disks E *f g*, substantially as set [forth] and for the purpose made known.

3. The supplemental disk *g* and its combination [with] the valve M, substantially as and for the purpose herein set forth.

4. The combination of the valve M with the case [and] the annular steam passages *i i* and passage *h*, [substantially] as set forth.

5. The combination and arrangement of the pulley [F] and brake L, substantially as described.

6. The arrangement of the springs C *c*, weights [A] B, arms B, collar F, head G, standard P, handle [I], pulley N, brake L, valve-stem D, valve M and [its] immediate surrounding devices, all substantially as herein set forth, and whereby to more evenly [regulate] steam-engines.

112,059.—QUARTZ-MILL.—David D. Mallory, Mystic Bridge, Conn.

Claim.—The combination, with the double cylinder A A' and grinding-wheels B *a*, of the hopper [I] and its forked center feed-pipes *b b'*, and the exhaust-pipe H, provided with the regulating-valve I, when constructed and arranged to operate substantially as specified.

112,060.—AIR-PUMP.—Robert Mudge Marchant, London, England.

Claim.—1. The combination of a series of two or more water and storage-chambers, A B, the pump-barrel C, the plunger D with its rod D', and the connecting-pipe or passage E between each consecutive pair of chambers, substantially as and for the purpose or purposes herein set forth.

2. The arrangement of the water and storage-chambers A B, the inlet and outlet-valve *a b*, the connecting-pipe or passage E, the pump-barrel C, and the plunger D with its rod D', essentially as described.

112,061.—HARNESS-SADDLE TREE.—John H. Martin, Columbus, Ohio.

Claim.—1. The terrets or rein-loops *a a* and yoke A, formed of one piece of metal, substantially as described.

2. The pad-plate B, formed with a perforated chamber, *c*, and with partitions which form recesses within said chamber, all in the manner and for the purpose described.

3. The slotted plate *b*, recessed at *o o* to receive a T-shaped head, *b*, in combination with a spring, *s*, inclosed in a cup, C, substantially as described.

112,062.—CARPENTER'S PLANE.—William Miller, Boston, Mass., assignor to himself and C. E. Woodman, same place.

Claim.—1. The combination of plane A, yoke C, and rollers I, substantially as described.

2. The combination of plane A, yoke C, rollers I, and single or bifurcated finger H, substantially as described.

3. The combination of plane A, yoke C, rollers I, finger H, and staff or handle J, substantially as described.

112,063.—AUGER-BIT.—John C. Mills, Rochester, N. Y., assignor to himself and Richard Leake, same place.

Claim.—The combination of the slotted shaft A with its screw or auger *a*, the slotted plates or cutters B B with their cutters *d d* and *e e*, the screw [C] and the bolt *f*, all constructed and arranged as described, and for the purposes set forth.

112,064.—FENCE.—John Morton, Thornville Mills, Mich.

Claim.—The combination of the outside planks or boards C C, formed with overlapping ends and notched at *b b*, the keys *k*, the posts A A, with their rails B B, the pickets D D, arranged between said rails and planks, and secured thereto, together with the foot-braces E E, all constructed and arranged, and united or secured, substantially as shown and described.

112,065.—TOBACCO, HAY, AND COTTON-PRESS.—Lewis H. Moss, Browningsville, Ky.

Claim.—The double-acting dogs *n n'*, in combination with the levers G G, wheels E E, shafts *e' e'*, gear-wheels *e e*, and platen-stem D, when constructed and arranged to operate substantially as and for the purposes set forth.

112,066.—ROTARY STEAM-ENGINE.—Joseph C. Mossholder, Lebanon, Oregon.

Claim.—A rotary engine, having a cylinder, *a*, with segments *b b*, heads A A', valves C C, levers *y y'*, with coupling-arm *z*, rotary piston-carrying wheel B, with springs *s s*, pistons G G, piston-rods *r r*, rollers *v v*, and cam *p*, ports *m n m' n'*, exhaust-ports H H, and shaft D, all constructed and arranged as set forth.

112,067.—CURTAIN.—Robert Nenninger and Friedrich Brüuer, Newark, N. J.

Claim.—The combination of a curtain, made of a textile fabric, coated with a compound of linseed oil and a suitable pigment, with a cornice provided with corner blocks *a*, and with parting stripe *b* interposed between the folds of the curtain, substantially in the manner herein shown and described.

112,068.—MANUFACTURE OF SILICON STEEL.—Charles M. Nes, York, Pa.

Claim.—The improved steel or steel-like metal herein described and denominated silicon steel, in which the ratio of silicon to carbon is not less than one to two.

112,069.—APPARATUS FOR STEAMING OIL-WELLS.—William Nevins, Titusville, Pa.

Claim.—The sectional steam-pipe herein described, provided with a valve, D, at its lower end, and arranged to be rotated and elevated by means of a tubular screw, B, at its upper end, when constructed and operated in the manner and for the purposes specified.

112,070.—BOTTLE-CORK.—William Harrison Newton, Newport, R. I., assignor to himself and Samuel W. Francis, same place.

Claim.—As a new article of manufacture, a cork or stopper for bottles and like articles, interlaced or sewn with wire or cord in such manner that one portion of the cork cannot be drawn from the bottle without the other, substantially as herein shown and described.

112,071.—CLOD-CRUSHER.—Joseph B. Okey, Indianapolis, Ind., assignor to himself and Ferdinand A. Lehr, same place.

Claim.—In a clod-crushing machine, the stationary teeth or cutters C C, their lower surfaces being so formed as to present an acute angle with reference to their sides, in combination with the teeth of a revolving cylinder, the latter being so constructed as to nearly fill the space between the stationary ones, and thus, in conjunction therewith, form cutting-edges or devices, substantially as and for the purpose set forth.

112,072.—CLOTHES-DRIER.—Enos L. Parker, Painesville, Ohio.

Claim.—The combination of the C-shaped hinge

a, webbing hinges b, and posts A A, substantially as and for the purpose as hereinbefore described.

112,073.—HARNESS-PAD.—Martin W. Pond, Elyria, Ohio.

Claim.—The plates F F and pads B C, in combination with the flexible back-band A, constructed and arranged to operate in the manner described.

112,074. — CLOTHES-WRINGING HOOK.—James H. Pratt, Lynn, Mass., assignor to himself and Benjamin F. Larrabee, same place.

Claim.—The hook A, provided with projections B, set-screw D, and shield F, substantially as and for the purpose set forth.

112,075. — PASTEBOARD-BOX. — William Pratt, New York, N. Y.

Claim.—1. A box the body of which is made of straw or pasteboard, having straight grooves rolled or compressed therein at the lines where the board is bent to form the angles, and without cutting away any of the material or scoring for that purpose, and also having its lapping edges for the seam rabbeted by pressure or rolling, and without cutting or scarfing the material for such purpose.

2. A top or bottom for a box made of straw or pasteboard, by drawing the blank through and compressing it in dies, so as to leave the edges turned up at right angles to the blank, and without scoring or partial cutting to effect this, and without corner cutting at the angles of the same.

3. A paste or straw board-box, with the sides formed by compressing grooves into the angles of the same, and rabbeting by compression the margin of the stock for the joint or seam, and wherein the tops and bottoms are turned up by compression and fastened by a broad surface to the sides, and where the top is so formed that it may be sealed by means of a disk cemented into a rabbeted mouth pressed into the same, and having no projection above the surface of the box when sealed up.

112,076.—DOOR-LOCK.—Johnson M. Quinby, Westbrook, and A. S. Dyer, Cape Elizabeth, Me.

Claim.—The slide A, working in the shank b, and capable of being pushed into the slot c in the escutcheon, as herein described, and for the purposes set forth.

112,077.—MODE OF MANUFACTURING GOLD, SILVER, OR PLATED-WARE.—Henry G. Reed, Taunton, Mass., assignor to Reed & Barton, same place.

Claim.—The process of ornamenting gold, silver, or plated-ware, substantially as herein described.

112,078. — SIFTING-SHOVEL. — Thomas F. Rooney, Chicago, Ill.

Claim.—A shovel, composed of a piece of sheet metal, having its body formed of a series of parallel bars, made by punching slits between them and bending them transversely, substantially as described.

112,079, antedated February 20, 1871.—COMBINED GANG-PLOW AND CULTIVATOR.—Orestes Sampson, Petersburg, Ill.

Claim.—The combination of the main frame B, mounted on wheels a, and provided with the seat C, with the auxiliary frame D having the adjustable tongue G attached, and adapted to carry either plows or cultivators, whereby the implement is fitted to be used either as a gang-plow or a cultivator, as set forth.

112,080.—GRINDING-MILL.—George Selsor, Philadelphia, Pa.

Claim.—1. The combination, in a grinding-mill, of a bar having two inclined grinding-surfaces one coarser than the other, and a shell with two inclined grinding-surfaces, the whole being arranged substantially as described, so that the material operated on, after being broken by passing over one surface of the bar, shall be further reduced in contact with the other grinding-surface as set forth.

2. The combination of the shell A, having two inclined grinding-surfaces and arranged horizontally, and a vertical spindle, E, adjusted by a screw, D, or its equivalent, and carrying a double inclined horizontal bar, B, as set forth.

112,081.—HOT-AIR FURNACE.—Samuel H. Sexton, Baltimore, Md.

Claim.—1. The reversible damper-pipe S arranged in connection with the elbow-pipe R and radiating flues I I′, in the manner shown and described, to admit of changing the damper from side to side to suit the construction of the chimney and the location of the discharge-flue W.

2. The combination of the pipes I I′, the pipe R with its elbow, the pipe S, the damper s, and discharge-pipe or chimney.

3. The arrangement of the magazine D and damper P with the fire-chamber, the upper chamber I, columns M, and plates O, all constructed substantially as and for the purpose described.

112,082.—FRUIT-CAN.—Joseph S. Shaneman and Joseph S. Hoon, Beaver Falls, Pa.

Claim.—The plunger C, provided with packing a and air-tube b, and used in a fruit-can substantially as and for the purposes herein set forth.

112,083.—KITCHEN-TABLE. — John Shaw, Whitby, Canada.

Claim.—The combination of the kneading-trough A, bake-board B, movable top C, held to the table-board B by three cleats, D D D, or hinges G, the cupboard E, and the spice-drawer F, substantially as described.

112,084.—MANUFACTURE OF METAL TUBES AND COLUMNS. — Frederick H. Smith, Baltimore, Md.

Claim.—The manufacture of metallic columns and tubes, substantially in the manner herein shown and described.

112,085.—SPRING BED-BOTTOM.—Howard Smith, Groveton, N. H., and James Potter, Portland, Me.

Claim.—A spring bed-bottom, as herein described, that is, combining the two parts I I b, the two cross-bars put together without bolts, and the coiled springs attached to the slats by means of the looped and slitted leather pieces f fastened to the slat, as herein set forth.

112,086.—DEVICE FOR SEPARATING EYELETS.—Stephen N. Smith and Solomon W. Young, Providence, R. I., assignors to Union Eyelet Company, same place.

Claim.—A sieve, the apertures of which correspond in size or shape with the form or outline of a single eyelet, whereby the eyelets are caused to pass singly through said apertures when agitated, substantially as described.

112,087.—GRAIN-CLEANING MACHINE.—Jay Sternberg, Webster City, Iowa.

Claim.—1. The combination of the drums C, having buckets a, as described, the boxes H K, and cut-offs e, substantially as specified.

2. In combination with the drums C and operating-belt, as described, the shaft n, cam r, and arm s, constructed and arranged to operate substantially as and for the purpose specified.

112,088. — PRODUCING GAS FROM SOLID CARBONS.—Levi Stevens, Washington, D. C.

Claim.—The process herein described of volatilizing solid carbon, and uniting or combining it with superheated steam for heating purposes.

112,089.—ATTACHMENT FOR RANGES AND STOVES. — David Stuart, Philadelphia, Pa., assignor to Stuart, Peterson & Co., same place.

Claim.—The combination, substantially as described, of the bottom or hearth-plate of a range or stove, and a platform so arranged that it may be brought to a position either beneath or projecting beyond the said plate.

112,090.—CHEESE-VAT.—Ezra H. Stuart and Walter A. Stuart, Cedarville, N. Y.

Claim.—1. The movable perforated steam-pipes C C, arranged one on each side in the air-tight space of the double vat A B, substantially for the purposes herein set forth.

2. The case B, provided with faucet a at each end, a faucet, b, at the bottom, in combination with the milk-vat, A, perforated pipes C C, with their screw plugs d d, cross-pipe D, connecting-pipe E, and levers G G, all constructed and arranged substantially as and for the purposes herein set forth.

112,091.—LIQUID METER.—William G. Stuart, Chicopee, Mass.

Claim.—1. The metal plate a, arranged in combination with the sliding weights N N and cup-leather d′ d′, substantially as and for the purpose set forth.

2. The combination and arrangement of the rod B, sliding weights N N, and flexible tubing C with the parts it envelops, substantially as described.

3. The flexible tubing c c, sliding weights N N, pipe C C, and cup-leathers d′ d′, all combined and arranged substantially as shown and for the purpose described.

4. The vessel V, suspended between two centers or points g′′, operating and adjustable within barrel A, all arranged to perform the function herein set forth.

112,092, antedated February 16, 1871.—MEAT-TENDERER.—Levi B. Tarbox, Collierville, N. Y.

Claim.—The combination of the bottom A, standards B B, top C, handle D, pin a, rubber blocks c c, projections i i, and screw-pins d d, all constructed and arranged substantially as and for the purposes herein set forth.

112,093.—GRAIN-DRILL.—John H. Thomas and Phineas P. Mast, Springfield, Ohio.

Claim.—1. The pivoted plate or lever n, having the pinion P mounted thereon, and arranged to gear into the driving-wheel I, in combination with the arm L, provided with the lug r or its equivalent, arranged to operate substantially as described, for automatically disconnecting the grass-seed distributer by the rising of the hoes, as set forth.

2. A grain-drill, provided with a grass-seed sower, having its agitator connected with the operating mechanism, substantially as described, whereby the agitator is thrown out of gear by the elevating of the hoes, as set forth.

3. The plates A, provided with the projections e, or their equivalents, in combination with the sliding bar B and the supporting rods d, all arranged to operate substantially as set forth.

4. In combination with the lever C, the rock-shaft f and toggle-joints a b, for simultaneously operating both ends of the sliding bar B and the drag-bar thereto attached, substantially as set forth.

112,094.—HANDLE FOR CROSS-CUT SAW.—Edward W. Tilton, Oshkosh, Wis.

Claim.—The device herein described, consisting of the spring-clasp E and screw-rod R, operating in combination with the socket C and saw-blade A, substantially as and for the purposes specified.

112,095.—COTTON-PRESS.—Gabriel Utley, Chapel Hill, N. C.

Claim.—1. The swords C C, provided with teeth b b bent downward, and each with one tooth b′, above the other teeth, bent upward, substantially as shown and described, and for the purposes set forth.

2. The construction and arrangement of the box A, bar B, swords C C, levers D D, springs f f, cord n, follower E, pawls h h, ratchets k k, windlass G, and cords i i, all substantially as and for the purposes herein set forth.

112,096. — WHIFFLETREE-HOOK. — Amos Verbeck, Sterling, Ill.

Claim.—The combinaton of the screw-bolt B with head D and pendulum A, constructed and arranged as described, so that when said head and pendulum point in opposite directions their outer ends shall be about equal distance from a line drawn longitudinally through the center of the bolt, substantially as herein set forth.

112,097.—PROPORTIONAL SCALES FOR THE CONSTRUCTION OF TOOTHED GEAR.—John Walker, Philadelphia, Pa.

Claim.—The scale, consisting of the divisions A, B, C, and D, their letters and numerals, and lines a a′, &c., b, c c′, &c., d, and e, the whole being constructed and arranged as set forth.

112,098. — WHIFFLETREE. — Joseph Ward, Honeoye Falls, N. Y.

Claim.—The curved plate B, secured to and used in combination with bars A A, as and for the purpose set forth.

112,099. — WHEEL FOR VEHICLES.—James Weathers, Greensburg, Ind.

Claim.—The combination of the tire D, provided with a continuous groove on its inner side, with the set-screw b passing through the fellies C and securing the tire, all as shown and described.

112,100.—WATER-WHEEL. — William N. Whipple, Niles, N. Y.

Claim.—1. In a water-wheel, the plate C′, when formed with the recesses c c and the projections C, substantially as and for the purpose specified.

2. The arrangement of the plates c′ c″, in connection with the plates c c′, the bolts b b, and the top and bottom plates C C′, the whole being constructed substantially as and for the purposes set forth.

112,101.—WRENCH.—Rollin White, Lowell, Mass.

Claim.—1. The chuck B, constructed, as described, of a central plate a, cut out and provided with the screw-rods b b, and side-plates c c, all substantially as and for the purposes herein set forth.

2. The combination of the handle A and adjustable or movable chuck B, constructed and arranged substantially as and for the purposes herein set forth.

112,102.—DUST-PAN.—Henry Whittemore, Orangetown, N. Y.

Claim.—The improved dust-pan, consisting of the bottom A, sides B, socket c, long handle D, and removable pin e, constructed as described, for the purpose specified.

112,103.—DRIVING MECHANISM FOR ROVING, SLUBBING, AND OTHER MACHINES.—Alfred Wilcock, Richard Robinson, and Frederick Wilcock, Rochdale, Great Britain.

Claim.—The combination, with the pair of cones

e e and their driving-strap *d*, of an auxiliary strap, to assist the stopping and starting of the bobbins, whether the said strap be applied on a separate pair of auxiliary pulleys or on the ends of the cones themselves.

REISSUES.

4,266.—PAPER-FOLDING MACHINE.—Cyrus Chambers, Jr., Philadelphia, Pa.—Patent No. 15,842, dated October 7, 1856; reissue No. 4,079, dated July 26, 1870.

Claim.—1. The register-pins I I', located between the first pair of folding-rollers and in the line of the first fold in such position as to present the paper to be acted upon by the first-folding device.

2. The register-pins I I', adjusted and retained in adjustment by means of slides *c c'* and screws *s s'*, bar K, block M, and screws 1 and 2, substantially as set forth.

3. The combination of the register-pins I I', bars Q Q', and stops S, and carrying-tapes T T, or their equivalents, for correctly presenting and retaining the paper in position to receive the second and succeeding folds, substantially as described.

4. The combination of bars Q Q' and stop-bar S, for guiding and retaining the paper in position for receiving the various folds.

5. The folding-blades E, F, G, and H, receiving a motion equal to or greater than the surface motion of their respective folding-rollers, by the shape of the cams 6, 8, and 10, actuating said blades, substantially as shown and described.

6. The mechanism described, or its equivalent, for arresting at will the moving part of the folding device, the same consisting of the treadle 21, shaft 20, and levers 19 and 18.

7. The confining-bars Q Q' in a paper-folding machine, substantially as and for the purpose set forth.

4,267.—PIPE AND FIXTURE FOR WELLS.—John H. Duck and Elias K. Whitcomb, Elgin; said Whitcomb assigns his interest to James T. Whipple, Chicago, Ill.—Patent No. 58,721, dated October 9, 1866.

Claim.—1. In driven wells, a screen, when suspended within the main tube and detached from the point, the filtering surface projecting below the main tube into the water-course, substantially as described, and for the purpose specified.

2. The detachable point H, constructed as described, with its shank adapted to be inserted into the collar of the pipe L while being driven, substantially as and for the purpose specified.

3. The main tube L and the removable suspended screen S, detached from the point H, adapted for connection with a pump, for the purpose specified.

4,268.—SEAT FOR SCHOOL-DESKS.—George W. Hildreth, Lockport, N. Y.—Patent No. 55,293, dated June 5, 1866.

Claim.—1. The pivot and corresponding socket, in combination with the seat-arm and standard, when so constructed that without the aid of the bolt and nut the seat will be properly supported, and will be capable of turning up and down, substantially as described.

2. The bolt *f* and nut *g*, in combination with the seat-arm *a*, the support *e*, pivot *c*, and the socket, substantially as described, and for the purposes specified.

3. The trunnion and socket, when made tapering, and combined with the seat-arm, support, and bolt and nut, substantially as described, and for the purposes set forth.

4. The spring I and stops *d d*, for the purposes herein specified and shown.

4,269.—Division A.—HOISTING APPARATUS. Otis Brothers & Company, Yonkers, N. Y., assignees of E. G. Otis, deceased.—Patent No. 124, dated January 15, 1861.

Claim.—1. The pawls *f f*, and the teeth of the racks C C, constructed of hook form, essentially as shown and described, for the purpose set forth.

2. The arrangement of the ropes T, U, and V, combined and operating substantially as and for the purpose set forth.

3. The arrangement of the slide or belt-shipper S, in connection with the shoe or brake Z and rope T, substantially as shown, to admit of the simultaneous application of the brake and the shifting of the belts O P on the idle-pulleys J K, as set forth.

4,270.—Division B.—HOISTING APPARATUS. Otis Brothers & Company, Yonkers, N. Y., assignees of E. G. Otis, deceased.—Patent No. 124, dated January 15, 1861.

Claim.—The counterpoise, combined with the platform or cab of the hoisting apparatus through the intervention of the hoisting-drum, substantially as herein set forth.

4,271.—Division C.—HOISTING APPARATUS. Otis Brothers & Company, Yonkers, N. Y., assignees of E. G. Otis, deceased.—Patent No. 124, dated January 15, 1861.

Claim.—The counterpoise, combined with the safety-stop mechanism of the platform or cab through the intervention of the hoisting-drum, substantially as and for the purpose herein set forth.

4,272.—BARREL.—Henry G. Porter, Grand Rapids, Mich.—Patent No. 102,432, dated April 26, 1870.

Claim.—1. A barrel, constructed of three cylinders A B B, the middle cylinder A overlapping the others, and constructed in one or more sections, substantially as shown and described.

2. In combination with a barrel having a series of horizontal sections, A or B, beveling the inner edges of the top section and the circumference of the top C, so, when placed together, they form an even surface on top, as shown and described.

3. In combination with the top C and horizontal sections A or B, the elongated brace *b*, which extends on the exterior of the sections, and is bent over on the cover and under on the bottom, all as set forth.

4. In combination with the top section B and cover C, or bottom section and bottom proper, the metallic brace *c*, passing from the inner part of the section, between it and the cover, or bottom, and over and upon the cover, or bottom, as set forth.

5. The ribs D, when arranged in a barrel, constructed of three or more horizontal sections, to extend either the full length of the barrel or only between the upper and lower sections of the same, substantially as and for the purpose described.

4,273.—HOISTING-MACHINE.—Henry J. Reedy, Cincinnati, Ohio.—Patent No. 78,829, dated June 9, 1868.

Claim.—1. In combination with the platform of a hoisting-machine and a cord or cords for elevating or depressing the same, two sheaves attached to and operated by the same horizontal shaft, for the purposes specified herein.

2. The combination, substantially as described, with a hoisting-platform, of the suspending-rope E, weights H H', rollers *d*, sheaves F F', and shaft G, or their mechanical equivalents, by which the platform is both balanced and enabled to be elevated and depressed in the manner explained.

3. The arrangement, substantially as described, of the shaft P, ratchet-wheel R, rubber S, lever T, and pawl U V, or their mechanical equivalents, for the purpose set forth.

4,274.—ELECTRO-MAGNETIC GATE-OPENING APPARATUS.—William Robinson, Brooklyn, N. Y.—Patent No. 105,494, dated July 19, 1870; antedated July 8, 1870.

Claim.—1. The arrangement of the lever I, for operation by the wheels of a passing vehicle or train, and relatively to the circuit-closer of an electro-magnet apparatus, that the wheels depressing said lever will actuate the circuit-closer for operating a gate or signal, substantially as shown and described.

2. The combination of the lever or levers e with the gate or signal B and circuit-closer of a battery, arranged so as to operate the gate or signal by the action of the passing vehicle, substantially as specified.

3. The circuit-closer to the battery, so constructed that when the circuit is closed by the action of a moving vehicle or train, it will temporarily remain closed for a specified length of time, or until the vehicle or train has passed a certain distance beyond the point at which it closed the circuit, essentially as specified.

4. The combination of a bell or alarm with a circuit-closer, constructed or arranged for prolonged action, and under control of a moving vehicle or train, substantially as herein described.

5. The combination, with a circuit-closer arranged for operation by the vehicle while in motion, of clock-work for prolonging the action to said circuit-closer, and operating to keep the armature of the magnets in prolonged hold on or control of the gate or signal, substantially as specified.

6. The circuit-closer or its stand or frame, or a portion thereof, hung or arranged so as to be shifted out of working position by a vehicle or train passing in the one direction, and afterward returning to its normal position for control of the circuit-closer by a vehicle or train passing in the opposite direction, essentially as herein set forth.

4,275.—BED-LOUNGE.—James Seymour, administrator, William H. Coolidge, and Charles Stimson, Leavenworth, Kansas, assignees of William H. Colley, deceased. Patent No. 103,301, dated May 24, 1870.

Claim.—The frame A, having bottom, back, and inclined head-rest, all as described, combined with the hinged seat and swinging head-rest, constructed and relatively arranged therewith to form an improved compound lounge and bed, as shown and described.

4,276.—SAW-FRAME.—The Bissell & Moore Manufacturing Company, New York, N. Y., assignee of Daniel Moore and Edwin Moore.—Patent No. 94,500, dated September 7, 1869.

Claim.—A saw-frame made with end pieces *a b*, a tightener, *d*, and compound thrust-braces, substantially as set forth, introduced between the end pieces so that the ends of the said braces nearest the saw shall be spread apart by the act of drawing the other ends of such braces nearer together, substantially as described.

DESIGNS.

4,664.—POCKET-BOOK TIP.—James C. Arms, Northampton, Mass.

Claim.—The design for a metallic tip for pocket-book straps, herein shown and described.

4,665.—HAND-STAMP FRAME.—Jermain P. Barnes, Rochester, N. Y.

Claim.—The design for a hand-stamp frame, as herein set forth and shown.

4,666.—RAILROAD-STATION INDICATOR.—Francis F. Bibber, South Boston, Mass.

Claim.—The design for a railroad-station indicator, as shown.

4,667.—SPOON.—Elise De Busson, Yonkers, N. Y.

Claim.—The handle and bowl of an ordinary spoon placed in the relation to one another shown in the drawing, and above described, to form a new design for a spoon.

4,668.—CLOTHES-LINE REEL-IRON.—Daniel Densmore, Red Wing, Minn.

Claim.—The design for clothes-line reel-irons, as shown.

4,669.—STUCCO CENTER-PIECE.—James John, Chicago, Ill.

Claim.—The design for a stucco center-piece, as shown.

4,670.—SHAWL.—Martin Landenberger, Philadelphia, Pa.

Claim.—The design for a one-faced striped shawl, as herein described.

4,671.—CARPET-PATTERN.—Charles S. Lilley, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply ingrain, or other carpeting, in the form similar to the photographic print accompanying this specification.

4,672.—CARPET-PATTERN.—Charles S. Lilley, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply ingrain, or other carpeting, in the form similar to the photographic print accompanying this specification.

4,673.—TYPE.—Andrew Little, New York, N. Y.

Claim.—The design for printing-type, as shown.

4,674.—OIL-CLOTH PATTERN.—James Paterson, Elizabeth, assignor to Richard H. Reeve and Benjamin C. Reeve, Camden, N. J.

Claim.—The design for an oil-cloth pattern substantially as described, and as illustrated in and by the accompanying drawing.

4,675.—PARK-SEAT.—Edward O. Schwagerl, St. Louis, Mo., assignor to himself and Shickle, Harrison & Co., same place.

Claim.—The design for a park-bench or seat, substantially as above set forth.

TRADE-MARKS.

169.—FERTILIZER.—George Bourne, Baltimore, Md.

170.—HATS, CAPS, AND STRAW-GOODS.—Dunlap & Co., New York, N. Y.

171.—COTTON-BALE BANDS AND TIES.—James Jennings McComb, Liverpool, England.

172.—CORDS, FRINGES, RIBBONS, &c.—Silbermann, Heinemann & Co., New York, N. Y.

173.—PAINT.—J. Lee Smith & Co., New York, N. Y.

174.—MEDICINE.—George H. York & Co., Cambridge, Mass.

EXTENSIONS.

AZEL S. LYMAN, of New York, N. Y.—Letters Patent No. 16,568, dated February 3, 1857.

"Improvement in Accelerating Fire-Arms."

Claim.—The employment of the accelerators or additional charge-chambers, in the manner and for the purpose substantially as described.

Also, covering the muzzle and exhausting the air through an appropriate aperture, whereby the atmospheric resistance is removed from the front of the projectile while passing along the bore, as set forth.

JAMES STIMPSON, of Baldwinsville, Mass.—Letters Patent No. 16,557, dated February 3, 1857.

"Improved Method of Joining Boxes, &c."

Claim.—The joining of boxes, drawers, furniture, &c., by means of round tenons and mortises, and a half-lap or secret joint, as herein set forth and explained.

JULIA M. MILLIGAN, of New Albany, Ind. Letters Patent No. 16,602, dated February 10, 1857; reissue No. 493, dated September 15, 1857.

"Improved Abdominal Supporter."

Claim.—The bandage *a*, substantially as described, provided with a series of cords, *g*, and laces *h*, or their equivalents, applied and operated substantially in the manner and for the purposes set forth.

SETH C. ELLIS, of Jersey City, N. J.—Letters Patent No. 16,534, dated February 3, 1857.

"Improved Machine for Cutting Tenons on Blind-Slats."

Claim.—The arrangement of the rotating disks H H with their slots *a a* disposed in reference to and in combination with the same, for the purpose of regulating the revolution of the slat so as to direct the saws in cutting perfectly cylindrical axes or tenons to it, substantially as set forth in the within specification.

Also, the feeding apparatus, to wit: the sliding box N, disks M, with the wheels L and R lying within the jaws J J, and the lever P, with the eccentric on W acting together and in combination with the disks H H and saws, substantially as set forth in the within specification.

ISSUE OF FEBRUARY 28.

PATENTS.

112,104, antedated February 11, 1871.—TOY PROPELLER.—Arthur M. Allen, New York, N. Y.

Claim.—A toy propeller, consisting of the wheel B, provided with a loaded rim, as described, journaled between reaches, and operated with a string, side wheels E E, front wheel A, with a reach carrying an image, the whole constructed, arranged, and operated as set forth.

112,105. — SAD AND CRIMPING-IRON.—Charles Anderson, Montana, Iowa.

Claim.—1. The notched projections a' a^2, the slotted projections C' d^1, and the lock-lever or button E, said parts being constructed and operating in connection with each other and with the parts A B C, substantially as herein shown and described, and for the purpose set forth.

2. An improved combined crimping and sad-iron, formed by the combination of the three parts A C D, handle F, and heater B with each other, substantially as herein shown and described, and for the purpose set forth.

112,106. — PYROMETER.—William Henry Bailey, Albion Works, Salford, Great Britain.

Claim.—1. The combination of the tube containing the porcelain sections F, and the case containing the registering mechanism, when the said case is adjustable on the tube, as and for the purpose described.

2. Using short lengths of porcelain, earthenware, or other suitable material, in the construction of pyrometers, which are not liable to break in pieces when subjected to a high temperature, or broken in carriage.

112,107.—WASHING-MACHINE.—William C. Bain and John J. Kendall, Troy's Store, N. C.

Claim.—The tub A, bottom D, dasher E G G, slats I, levers L, crank device J N O, and handles K, all constructed, arranged, and combined in a washing-machine, as described.

112,108.—WRENCH.—Elias Beach, Titusville, Pa.

Claim.—In a pivoted cogged lever-wrench, the arrangement and combination of the fixed abutment H, screw-stem F, traveling locking-nut G, rack D, and the fixed and movable jaws C and A, operating substantially as described.

112,109.—WRENCH.—Elias Beach, Titusville, Pa.

Claim.—1. The combination of the movable jaw D with the guides C of the fixed jaw A, and the adjusting devices H and I, as described.

2. The combination of a movable cogged jaw D, made adjustable, as described, with the cogged lever-handle E, holding-roller G, and stock B C, of the fixed jaw A, as described.

3. The fixed jaw A, having a stock, B C, arranged to form guides C to the movable jaw D, supports for the adjusting-screws H I, and for the actuating-lever E, as described.

112,110. — WASHING-MACHINE.—Theophilus Beebe, Northport, N. Y.

Claim.—1. The combination, with the fixed rubber, of the swinging board D, suspended on the shaft E, supported in bearings F, said bearings being arranged between the springs G H in the slotted posts, and having the blocks L and temper-screws M combined with them, all substantially as specified.

2. The cup pieces N of the brake O, confined in the slots in the hangers by the tensions of the rod Q, substantially as specified.

112,111. — APPARATUS FOR CARBURETING AIR.—Alexander Dalrymple Bell, San Francisco, Cal.

Claim.—1. In an apparatus for the manufacture of pneumatic-gas, the combination of two carbureters or two sets of carbureters acting alternately, in a manner substantially as described, and for the purpose of preventing excessive refrigeration, substantially as described.

2. In an apparatus for the manufacture of pneumatic-gas, the combination of the air-pumps B and B', arranged to operate in a manner substantially as described, and for the purposes set forth.

3. The combination, in one machine, of two complete sets of apparatus for generating pneumatic-gas in a manner substantially as hereinbefore described, and for the purposes hereinbefore set forth.

112,112.—CHEESE-TURNING APPARATUS.—John Q. Black, Richland Centre, Wis.

Claim.—1. The turn-table D, carrying the radial shafts E E and cheese-blocks F, said shafts being simultaneously rotated by means of the toothed wheel C and pinions *d*, in the manner described, so as to effect the turning of the cheese, substantially as specified.

2. The cheese-blocks F F, provided with the fingers *e e* and *f f* at opposite ends, for holding and reversing the cheese and transferring it from one to another, as specified.

3. The jointed lever G, combined with the turn-table D, gear-wheel C, and shaft A, to operate substantially as herein shown and described.

4. The locking-pin *i*, arranged in combination with the disks C D and shaft A, substantially as and for the purpose herein shown and described.

112,113.—STRAW-CUTTER.—Bengt C. Blomsten, Waupaca, Wis.

Claim.—The combination of the treadle G, connecting-rod O, lever P with its connections, lever R, and adjustable crank-arm *m*, as described.

112,114.—SAWING-MACHINE.—N. H. Bolton, Omro, Wis.

Claim.—The carriage C, adjustable rest E E' spring-retracted discharger H, inclined guide I, and saw-gauge O, all combined as described, and operated in connection with the saw, for the purpose specified.

112,115. — DRILL.—Theodore V. Boyden, Bridgeport, Conn.

Claim.—1. One or more grooves or channels, *a*, formed in or along the outer edge or periphery of a drill, substantially as and for the purpose set forth.

2. In combination with one or more grooves *a*, a reservoir or recess for receiving and feeding the oil to the grooves in a drill, substantially as herein described.

112,116.—ODOMETER.—David L. Branning, Tampa, Florida.

Claim.—1. The combination, with the reducing train or the axle of the final wheel thereof of an odometer, of the adjustable arms E, substantially as specified.

2. The combination, with the reducing train or the axle of the final wheel thereof, and the bell-hammer, of the adjustable arm E, substantially as specified.

3. The combination, with the adjustable arm E, of the adjustable pointers L, substantially as specified.

112,117.—FEED-CUTTER.—Henry A. Buck, Fredonia, N. Y.

Claim.—1. The combination of the reciprocating connecting-rod, slotted as described, at the ends next the feed-wheels, the vibrating arms oscillating on the axes of the feed-wheels, the pins on the arms working in the slots in the connecting-rod, the pawls mounted on the vibrating arms, the ratchets on the feed-wheel shafts, and the feed-wheels, all these parts being constructed to operate in combination substantially as hereinbefore set forth, so as to enable the feed-wheels to work at varying distances apart.

2. The combination of the driving-shaft, the rotating cutter, the stationary knife, the vibrating lifting-plate, and the cam and pitman which vibrate said plate, all these parts being constructed to operate in combination substantially as hereinbefore set forth.

112,118. — GRAIN-DRIER.—John Buckingham, Wethersfield, Conn.

Claim.—1. The perforated bottom B and perforated gate C, the steam-heated coil D D, and connecting tubes E, and the horizontal ventilators F, all combined as described, with the bin, for the purpose specified.

2. The horizontal ventilators F and flue G, combined as described, with the bin A, for the purpose specified.

112,119. — SELF-CENTERING CHUCK FOR LATHES.—George O. Buckley, New Bedford, Mass.

Claim.—The jaw-carrier or center-block B, the rotary sleeve or collar D, the wedges C, and the jaws A, constructed, arranged, and combined as described and represented, the whole constituting a self-centering lathe-chuck.

112,120.—APPARATUS FOR HEATING LIQUIDS. David H. Burrell, Little Falls, N. Y.

Claim.—1. The cylindrical coil of pipe filled with water, laid horizontally, or nearly so, as a fire-box, the lower part of the coils constituting the grate over the ash-pit.

2. The combination of the several coils with a horizontal pipe running the entire height, for the escape of air and steam from the top of each coil.

3. The combination of the several coils by a pipe at the bottom, to let out the water and sediment.

112,121.—PROJECTILE FOR ORDNANCE.—John G. Butler, United States Army.

Claim.—1. The combination of the metallic disk B with the wedges C C' C'', &c., and the movable studs D D' D'', &c., substantially as and for the purpose hereinbefore set forth.

2. The safety-pins or keys E E' E''', &c., or ring F, substantially as and for the purpose hereinbefore set forth.

3. The roughened or serrated surface *g h* of the stud-sockets, in combination therewith, substantially as and for the purpose hereinbefore set forth.

112,122. — HOT-AIR FURNACE.—Benjamin F. Campbell, Boston, Mass.

Claim.—A casing, exterior to both the fuel and ash-pit openings of a furnace, provided with a channel or flue and damper, substantially as described.

112,123.—DOOR-KEY.—Charles C. Carpenter, Huntsville, Ala.

Claim.—The combination of pivot C, pean B, spring D, bolt E, countersink F, pin G, slot H, rivets I I, bold J, and socket K, substantially as and for the purpose hereinbefore set forth.

112,124.—GUN-SIGHT.—Frederic A. Churchill, Pittsfield, Mass.

Claim.—1. The bead or front sight A, composed of the tube and two or more convergent pins, substantially as herein shown and described.

2. The perforated sight C, made vertically adjustable by the cam E, as shown and described.

112,125.—SHUTTLE FOR SEWING-MACHINES. Theodore Colston, Hartford, Conn., assignor to himself and Charles E. Billings, same place.

Claim.—1. The spring of rubber or other elastic material, inserted from the outside of the shuttle through a hole at right angles to the axis of the bobbin, for the purpose of pressing the sliding socket *c* against the end of the bobbin-spindle, substantially as described.

2. The herein-described arrangement of the devices *c* and *d* within the shuttle, whereby they can be placed in position from the outside through an aperture which does not require to be closed up to prevent the spring from escaping.

112,126. — LAP-BOARD.—Daniel P. Cook, Hartford, Conn.

Claim.—1. The combination of the sections *a b c*, hinged together as described, with the grooved rails *d* and *e*, the whole constructed, arranged, and operated substantially as and for the purposes set forth.

2. The combination of the parts specified in the immediately preceding clause with the detachable legs *h i n*, hinged, as described, to their respective base pieces, and provided with stop-pawls, as described, the whole constructed, arranged, and operated substantially as and for the purposes set forth.

112,127. — MAGAZINE FIRE-ARM.—Joshua Davis, Limestoneville, Pa.

Claim.—1. The curved tube *i*, follower *m*, friction-pulleys *o* and *p*, chain or string *n*, hollow pulley *q* and its inclosed spring, in combination with the hooked lever *r*, and lever *h*, with its curved

arm a^1, in the manner and for the purposes substantially as set forth.

2. The combination of the hooked slide a^1, cog-wheel b', and cogged segment c', with the hammer e and spring h, for drawing out the empty cartridge-cases, substantially as set forth.

112,128.—WATER-WHEEL CURB.—Walter S. Davis, Warner, N. H.

Claim.—1. The circle of cams B, quartered alternately into recesses and projections, two of each on the upper and lower sides of the circle, so that when made to revolve it will open one or more gates alternately, substantially as set forth.

2. The circles having the cams B, quartered into recesses and projections, as described, in combination with the levers D and gates a, when arranged to operate substantially as specified.

112,129.—PRESERVING FISH BY FREEZING. Samuel H. Davis and David W. Davis, Detroit, Mich.

Claim.—Thin water-proof sacks, or their equivalents, for containing fresh fish and animal matter, and subjected to the process of freezing, substantially as herein described.

112,130. — MEADOW-CULTIVATOR.—Frank Philip Devenport, Carthage, Ill., assignor to himself, Johon W. Cherry, and Thomas Logan.

Claim.—The combination of the bars E E E, cutting-fins F F F with the shear C, and the land-side bar D, beam and handles of the cultivator, operating substantially as set forth.

112,131.—CORN-HUSKING BENCH.—Joel E. Draper, Northville, assignor to himself and Robert Dunlap, 1st, South Lyons, Mich.

Claim.—The combination of the section A B C, the section D E F, and the braces I, the several parts being constructed, arranged, connected, and operated substantially as described and shown, for the purposes set forth.

112,132.—COOKING-STOVE.—Lemuel Dunham, Lincoln Centre, Me.

Claim.—1. The pipe-connection E, chamber B and flue C, combined as described, with, and arranged above, the adjustably-grated Franklin stove A, for the purpose specified.

2. The end-grooved plate K, movable on the horizontal bottom of flue C, to adjust the back wall J and hold it by friction in any position, as described.

112,133.—PORTABLE FEED-RACK.—Edwin Farquhar, Aukenytown, Ohio.

Claim.—1. The pivoted racks J, provided with horizontal troughs, K, when constructed severally as described and shown, and arranged to operate as and for the purposes set forth.

2. The arrangement of the platforms G, troughs I, racks J, and bars K, with the roof, constructed as described, and frame and runners or sills, B, when combined together, substantially in the manner and for the purposes described.

112,134. — ATTACHING KNOBS TO THEIR SPINDLES.—William A. Fenn, Rochester, N. Y.

Claim.—1. The spring-sleeve E, provided with one or more lugs, f, in combination with the square spindle, having screw-threads b upon its corners, and the knob-shank C, having interior screw-threads b', and one or more recesses g, for the purpose specified.

2. The rose G, having the flange p, in combination with the spring-sleeve E, spindle D, and knob-shanks C, for the purpose specified.

112,135.—TRACTION-ENGINE.—George W. Fitts, Oberlin, Ohio.

Claim.—1. The arrangement, in a steam-vehicle, of the vertical boiler A, axles O, driving-wheels B, large pinions D, shafts and cranks C G, small pinions K, pitmen R, cylinders F, water-tank E, and steering apparatus H I J V, as herein described and set forth.

2. The combination of hollow axles O with the boiler of steam-vehicles, for the purpose of conveying water to the boiler and for keeping said axles cool, substantially as set forth and described.

112,136.—PRESERVING BLOCKS OF WOOD.—Edgar M. Fowler, New York, N. Y.

Claim.—1. The process herein described for impregnating blocks of wood, the same consisting of devices for holding the blocks in position so as to receive the injected liquid at the end or through the blocks by means of hydraulic pressure, as described, and for the purposes set forth.

2. The tanks, gaskets, pipes, and in combination with the binding-levers for holding the blocks in position, as described.

112,137. — LIGHTNING-ROD. — Joseph R. Fricke, Pittsburg, Pa.

Claim.—As an improved article of manufacture, a copper-cable lightning-rod or conductor, when constructed as herein described and shown.

112,138. — REVOLVING-BATTERY GUN. — Richard Jordan Gatling, Indianapolis, Ind.

Claim.—1. The cocking-plate or cam N, arranged laterally adjustable in the breech-case of the gun, substantially as and for the purpose set forth.

2. The arbor l', eccentric j', and slide i, in combination with the laterally-adjustable cocking-plate N, all arranged as set forth.

3. The cocking-plate N, arranged longitudinally adjustable to permit the regulation of the firing-spring v, as set forth.

4. The perforated cascabel-plate D, in combination with the perforated diaphragm-plate b, relatively constructed and arranged, as and for the purpose set forth.

5. The plug P, in combination with the perforated cascabel-plate D and perforated diaphragm-plate b, all relatively constructed and arranged as and for the purpose hereinbefore specified.

6. The worm-gear or its equivalent, of less diameter than the circle described by the locks, in combination with the perforations in the diaphragm and cascabel-plate, to permit the removal of the locks, in the manner and for the purpose described.

7. The plug P, having the lug and ring with lip projection, the latter having an inner transverse groove in which the rear lugs of the locks work when the gun is revolved, the said plug not being designed to receive any part of the force of the charge, but used with its appendages for the purpose of preventing the locks from working forward or backward at the time they are passing the slot in the rear cam and the perforation in the diaphragm during the revolution of the gear, all as described.

8. The cylindrically-formed locks H, working in uniform-sized perforations, made longitudinally and entirely through a revolving lock-cylinder, in contradistinction to locks and perforations reduced in diameter at their front parts, as shown and described in my patent dated August 9, 1865.

9. The lever F, acted upon by the spring w to hold the bottom t' closed, and allow it to be automatically opened when its lower part comes in contact with the hopper, in combination with the feed-box T, for the use and purpose specified.

10. The nut I, arranged on the shaft A, to hold the carrier-block F and cylinder G in place, and to act as guide for the locks, substantially as specified.

112,139.—BEE-HIVE.—Joseph H. Gisler, St. Louis, Mo.

Claim.—A bee-hive, consisting of the housing A A', sashes D D', hinged to a frame, E, door B, cupboard F, side openings f, honey-chambers F', metallic moth-trap C, ventilating-tubes I, trough H, partition-plates h h', all constructed, arranged, and combined to operate substantially as and for the purpose described.

112,140. — BALING SHORT-CUT HAY OR STRAW. — William Hadwin, Rochester, N. Y., assignor to himself and Isaac S. Wilson.

Claim.—In bales for short-cut hay or straw, the continuous wood covering on two opposite sides of the bale, composed of the series of wide and narrow slats B' and D', placed with their edges in contact and held in position by the cords C, as herein shown and described, for the purposes specified.

112,141.—GRAIN-SEPARATOR AND FANNING-MILL.—Samuel S. Hammond and John S. Paden, North East, Pa.

Claim.—1. The combination of the shaker E with the shoe D, blocks o p, and spring q, all arranged as described, for the purpose of imparting a double motion to the shoe, substantially as herein shown and described.

2. The general combination of the shoes C D, springs f q, blocks o p, and shaker C with each other, to operate substantially as herein shown and described.

112,142.—EXTRACTOR FOR OIL-WELLS.—Hart Harris, Tidioute, Pa.

Claim.—1. The wicker-heads or jaws H H and reins k k, in combination with ring G, spring K, and chain D, constructed, connected, and arranged to operate within an interiorly-cylindrical socket, substantially as and for the purpose herein set forth.

2. In combination with the inclosed wicker-heads H H and their reins k k, the inclosing-socket A, having longitudinal slots f f cut therein to permit an outward play of the heads, substantially as and for the purpose herein set forth.

3. In combination with the subject-matter of the last claim, the outer ring or band L encircling the socket, to prevent too great a movement of the heads and reins, substantially as herein set forth.

112,143.—SCREW-DRIVER.—Henry L. Hildreth, Lockport, N. Y.

Claim.—1. The cylindrical pawl-case C, reversible pawl D, spring E, and annular ratchet G, constructed, arranged, and operating substantially as described, for the purpose specified.

2. The combination and arrangement of the foregoing parts with the screw-driver F, tubular socket B, and handle A, in the manner and for the purpose set forth.

112,144.—PROJECTILE FOR ORDNANCE.—B. B. Hotchkiss, New York, N. Y.

Claim.—The means herein described for expanding packing to a definitely-fixed limit by pieces which are and remain firmly connected at one end to the main body, the same consisting of the buttons extending inward at or near the rear ends, and sliding forward on the periphery in grooves which are not only inclined or wedge-like, but have square shoulders at their forward ends, as specified.

112,145.—BELT-GEARING.—George C. Howard, Philadelphia, Pa.

Claim.—The improvements in belt-gearing described in the foregoing specification, and illustrated in the drawing accompanying the same and forming a part thereof, consisting substantially of the combination of the driving-pulley C, belt K, tightening-pulley Z, pulley D, and levers J, as and for the purposes set forth.

112,146.—LAWN-MOWER.—Amer Ingrham, Philadelphia, Pa., assignor to William L. Boyer & Brother, same place.

Claim.—In a hand lawn-mower, the planetary-gear C C c' c'' c''', the rotary cutter D, and the intervening gear-wheels E E', the said parts being constructed and arranged to operate together substantially as and for the purposes hereinbefore set forth and described.

112,147.—HARVESTER.—Isaac A. Johnson, Rockford, Ill., assignor to himself and Frederick H. Manny, same place.

Claim.—1. The combination of the driving-wheels, the gear-frame, the main frame pivoted thereto, and the bifurcated tongue hinged to the rocking-frame outside the driving-wheels, as set forth.

2. The tubular interlocking boxes g, constructed as described, and forming the trunnions on which the two frames vibrate.

112,148.—SHIP'S WINDLASS.—Christopher Contsworth Jordeson, Montreal, Canada.

Claim.—The combination of the capstan b, constructed as described, with the shaft c, having the screw d, when operating as described, for the purpose set forth.

112,149.—HARROW AND FIELD-ROLLER.—Abraham S. Keagy, Harristown, Ill.

Claim.—1. The revolving harrow herein described, consisting of the sectional revolving harrows G G, arranged to move abreast of each other, but each having an independent upward or downward motion, as specified.

2. The revolving harrow herein-described, having sectional harrows G G turning upon independent axles k k, screwed into the independent frames H H, connected to the horizontal rod E by the arms I I, and provided with the trough or seat D, substantially as and for the purpose hereinbefore set forth.

3. The combination of the teeth i i, frame C, and harrows G G, substantially as described.

4. The combination of the rod M, frames C and L, and rollers O O, substantially as described.

112,150.—ANIMAL-POKE. — Lewis Kelley, Saranac, Mich., assignor to himself and Joel Andrews, same place.

Claim.—The arrangement of the rock-shaft C, bell-crank E, spring F, needles G, and lever D, with the yoke A, when the several parts are constructed and operated substantially as described and shown, for the purposes set forth.

112,151. — STEAM AND WATER-ENGINE.—Henry James King and Daniel Charles Mulock, Middletown, N. Y.

Claim.—1. The cross-head F, grooved on the upper and convex on the lower edge, combined with guides G G', convex on the upper and grooved on the lower edge, as described, for the purpose of enabling both edges to be oiled.

2. The concavo-convex sides i i and concavo-convex core h, combined with intermediate springs j j, arranged as described, to form a double-acting valve.

112,152. — STUBBLE ATTACHMENT FOR PLOWS.—Jesse Kinney, London, assignor to himself and Cyrus Kinney, Ingersoll, Canada.

Claim.—The device C, when constructed, attached, and operating substantially as and for the purpose herein set forth.

112,153.—SEPARATING METAL FROM ORES. Solomon W. Kirk, Philadelphia, Pa.

Claim.—The ingredients above specified, mixed in an increased or diminished proportion to suit the different characters of the ores to be operated upon, when placed in an air-tight crucible or retort, and acting upon the ore with the chloride of carbon in its nascent state, as and for the purpose herein set forth.

112,154.—COMPOSITION FOR POLISHING.—Carl J. H. F. Kleemann, New York, N. Y., assignor of one-half his right to Arnold C. Franck, same place.

Claim.—1. The combination of Armenian bole, oxalic acid, and water, as a polish for metals and metallic substances.

2. The manufactured article, as set forth in my specification.

112,155.—Machine for Patching, Punching, and Embossing Button-Holes of Paper-Collars.—Charles Lang, Jersey City, N. J., assignor of one-half his right to Henry G. Clagstone, New York city.

Claim.—1. The method of cutting out and applying the strengthening patches to paper collars and cuffs, and cutting or punching therein the button-holes, substantially as herein specified, that is to say, by first cutting out the patch, then pasting it upon the collar, and then cutting or punching the button-hole in both patch and collar, the entire operation being effected by one forward travel of the punches, and by a practically simultaneous operation.

2. The combination of the punch and die D and H with the punch and die E and G, and mechanism for operating the same in rapid succession, for cutting out the patch and pasting it upon the collar, and cutting the button-hole in both patch and collar, substantially as herein specified.

3. In a machine for cutting the button-holes in and applying the patches to paper collars, the combination, with the punches D and E, of the cams I J, mounted on the shaft C, and arranged and operating substantially as and for the purposes herein specified.

4. The combination, in a machine, for the purposes herein specified, of the following members, to wit: the patch-cutting and pasting-punches D D D and dies H H H, the button-hole cutting-punches E E E and dies G G G, the gum-dampening or applying mechanism *n m t*, the cloth-feeding devices K *q q*, and a collar-carrier, B *r*, all arranged and operating substantially in the manner and for the purposes herein specified.

112,156. — Sawing-Machine.—George W. Lombard, Westminster, Mass.

Claim.—1. The saw-supports H, grooved at I, and provided with lining I', as described, and for the purpose specified.

2. The grooved and groove-lined driving-wheel A, formed in two parts, and adjustably attached together, as and for the purpose described.

112,157.—Pump.—David Loomis, Joy Winters, and Albert Stark, Clyde, Ohio.

Claim.—The piston-cylinder A, with flanched branches *b b* formed on it, in combination with the flanched cylinder D, with valves connected to it, substantially in the manner shown and described.

112,158. — Spring Bed-Bottom.—Joseph E. Lord, Quincy, Ill.

Claim.—The arrangement of the longitudinal slats A and the transverse slats B, supported at their ends by and secured to the exterior surface of the frames C and passing alternately over and under each other—this arrangement in combination with the arrangement of the springs D, secured at each extremity by passing it through an aperture in and clamping it to the under side of alternate longitudinal and transverse slats, substantially as shown and described.

112,159.—Governor for Steam-Engines. John Augustus Lynch, Boston, Mass.

Claim.—1. The combination of the helical cam-lifter E with the propeller A and its case D, all being to operate substantially in manner as described.

2. The propeller-case neck I, made as an oil-reservoir to open into the body of the case D, and arranged with the driving-gear F, the valve-wire *e*, and the valve-case K, substantially in manner as described.

3. The combination of the spring *m*, provided with means for varying its tension, as described, with the valve M, the propeller A, its case D, and the helical cam-lifter E, all being arranged and combined substantially in manner and so as to operate as described.

112,160. — Urn for Stoves.—Orville F. Mack, Charlestown, Mass.

Claim.—The pivoted urn D, in combination with hinged cover E and standards C, substantially as described.

112,161. — Corn and Cotton-Scraper, &c.—Cyrus Marsh, 2d, Natchez, Miss.

Claim.—A corn-scraper, consisting of a beam, A, wheels H G, adjustable arms C C', scrapers E E' and M, the latter set in motion by the wheel H, through the pinion K, and wheel L, and all constructed and arranged as and for the purpose shown and specified.

112,162.—Treadle for Sewing-Machines. Francis E. Mills, San Francisco, Cal.

Claim.—1. In combination with a sewing-machine treadle, pivoted at the sides, making that portion of the foot-board on which the heel rests adjustable to different heights relative to the pivot.

2. In combination with a sewing-machine treadle, pivoted at the sides, a foot-board, with its forward part hinged to the oscillating frame and its back part resting on a pendulous rod or some other movable support, capable of being raised or lowered with reference to the axis of the treadle, substantially as and for the purpose described.

3. In a sewing-machine treadle, pivoted at the sides, the sliding heel-stop, substantially as described, or any other equivalent device for holding a movable ledge against the heel.

112,163.—Explosive Compound.—William Mills, New York, N. Y.

Claim.—1. The within-described wax-like production, which I have named oxidized carbolic acid, as a new article of manufacture.

2. The oxidized carbolic acid herein described, in combination with metal, or metallic, or earthy oxides, or their carbonates, substantially as herein described.

3. The oxidized carbolic acid herein described, in combination with metal or metallic and earthy oxides, and sawdust, or any other ligneous substances, treated with niter, substantially as and for the purpose herein set forth.

4. The oxidized carbolic acid herein described, in combination with alcohol, spirits, or ether, and metal or metallic oxides, for the purpose of producing an explosive varnish, substantially as and for the purposes herein set forth.

112,164.—Portable Furnace.—Dwight B. Montague, Springfield, Mass.

Claim.—1. The combination of the outer case B, inner shell C, openings I at the bottom, openings *b* at the side, ports *x* at the bottom, space D, and gate F, with flange G and ports *d*, the parts being all constructed and arranged together, as described.

2. The cover, formed of a number of rings fitting into each other, when provided with teats *p p*, as described.

3. In combination with the gate F, the triangular projections *f f*, as described.

112,165. — Portable Book-Holder.—Charles C. Moore, New York, N. Y.

Claim.—The shaft C or its equivalent, with one or more catches at *b*, the tube *g*, attached or detached, and square hole *c* in handle, the handle F, the wheel D, and toothed tube E or its equivalent, the spiral spring B or its equivalent, in combination with plates U and L and cord A, substantially as herein set forth, and for the purposes described.

112,166. — Harvester. — Daniel Mulock, Mount Hope, N. Y.

Claim.—1. The brace H, bolt *l*, and adjustable wedge *r*, combined as described, with the finger-bar L for adjusting the finger-bar, as set forth.

2. The rack-lever N, pinioned shaft *w*, drum *t*, spring *o'*, and chain M, combined, as described, with the hinged finger-bar, for the purpose specified.

112,167.—Wheel for Vehicles.—Daniel Mulock, Mount Hope, N. Y.

Claim.—1. The flange *a*, combined, as described, with the detachable and adjustable flange *b*, for the purpose of tightening or readily removing the spokes.

2. The wrought-iron tire D, rolled with outwardly-extending indentations *e* thereon, as and for the purpose described.

112,168.—Stair and Floor-Plate.—Peter W. Neefus, New York, N. Y.

Claim.—A sheet of elastic material, *s*, arranged in alternating ridges and grooves, and combined with stripe *c* in the depressions, substantially in the manner and for the purposes specified.

112,169.—Combined Cotton-Planter and Guano-Distributer.—John H. Nicholes, Sumter, S. C.

Claim.—1. The combination of the plows Q R T, shaft B', bar C' D', bars G, levers E, clutches C C, wheels A, shaft B, gears I J, and stirrers N, all arranged to operate substantially as shown and described.

2. The spouts W Y, coverer Z, plows Q R T, shaft B', lever E, pawl-lever F', and ratchet G', all arranged as specified.

3. The shaft B', lever E', bar C' D', sliding bars G, levers E, clutches C, wheels A, axle B, gears I J, shaft K, stirring-wheels N, and hopper L, all constructed and arranged as specified.

112,170.—Steam-Engine.—Powell F. Nickerson, Smyrna, Del.

Claim.—The cylinder B, stationary head E, moving piston M, and sliding steam-chest H, constructed and arranged to operate substantially as and for the purposes herein shown and described.

112,171.—Cotton-Planter.—Rufus F. Norwood, Charlotte, N. C.

Claim.—1. The combination, with the hopper A, of the grooved and toothed roller K, spring gate H, and the gates L, substantially as specified.

2. The spring cutting-off gate H, combined as described, with pins I projecting from the grooves of the roller D, for the purpose specified.

112,172.—Chandelier Gas-Burner.—Rufus Nutting, Randolph, Vt.

Claim.—1. The combination of the lower chamber G and socket H with the base E and upper chambers A A A.

2. The combination of the whole device, including the socket, lower chamber, base, upper chambers and their sockets, and the burner-tips with an ordinary gas-burner, or directly with the end of the gas-pipe, substantially as and for the purposes herein described.

112,173.—Faucet. — Cornelius B. O'Sullivan, New Orleans, La.

Claim.—The chamber B B, in combination with the gland C C, valve-rod D, and the body of the faucet, substantially as described and set forth.

112,174.—Gate.—Charles N. Owen, Salem, Ohio.

Claim.—In combination with a gate, the spring E, vibrating arm D, chain or link F, and latch G, these parts being arranged for joint operation as set forth.

112,175.—Mattress.—William H. Pack and Joseph S. Vanhorn, Jersey City, N. J.

Claim.—As an article of manufacture the improved mattress described, having its central part stuffed with hair and its two ends stuffed with inferior material, the head part being wedge-shaped or not, at option.

112,176.—Countersink.—Frank H. Palmer, Foxcroft, Me.

Claim.—The apertured lug E, having threaded shank H, and the slotted bridge D, combined, as described, with a thumb-nut, I, to fasten the counter B and reamer A to the boring-bit, so that either tool will come into action according as the lug E is at the upper or lower side of the bridge D.

112,177.—Pump.—John S. Patric, Rochester, N. Y., assignor to Hiram Lawton, same place.

Claim.—The arrangement of the connecting-rods *e*, cross-bar G, piston-rod *f*, and compound lever H, as and for the purposes set forth.

112,178.—Stove-Pipe Thimble.—James D. Pierce, Milwaukee, Wis, assignor to himself and John B. Smith, same place.

Claim.—1. A stove-pipe thimble-head, with groove or indentation C in it for the outside band to rest in, substantially as described.

2. A thimble-head, A or B, with groove C, in combination with cover D, with buttons E E to hold it in place, substantially as described.

112,179.—Adjustable Animal Power.—Nicholas Potter, East Troy, Pa.

Claim.—1. The sleeve-boxes C, in combination with the frame A and with the track-frame B, substantially as herein shown and described, to pivot or hinge the said frame B to the said frame A, as and for the purpose set forth.

2. The combination of the shaft D, rigid arms E, friction-rollers F, long lever G, rope or chain H, drum or pulley I, crank or lever J, and pawl K, with each other and with the frame A and track-frame B, substantially as herein shown and described, and for the purposes set forth.

112,180. — Baldric. — Virgil Price, New York, N. Y.

Claim.—1. An ornamental baldric, belt, or chain, made in sections of metal plates, substantially as herein shown and described.

2. The plates A, having the T-shaped pins *a*, in combination with the plates B, which contain slots for the reception of pins *a*, all arranged substantially as set forth.

112,181.—Method of Coating and Finishing Sword-Scabbards.—Virgil Price, New York, N. Y.

Claim.—1. A process, herein described, for securing a bright and durable surface on steel and iron sword-scabbards, the same consisting in polishing and coating, substantially as described.

2. The improved scabbard herein described, produced of material and by the process described.

112,182, antedated February 24, 1871.—Lamp-Chimney.—James M. Rankin, Jr., Brooklyn, N. Y.

Claim.—An improved lamp-chimney, the parts of the broader sides of the body A of which are made flat, meeting each other at an obtuse angle and with a slight swell or convexity, with its narrower sides projecting downward into the round convex base A, and with its upper end C flaring or bell-shaped, substantially as herein shown and described, and for the purpose set forth.

112,183.—Valve for Condensers.—George H. Reynolds, New York, N. Y., assignor to himself, Cornelius H. Delamater, and Alexander K. Rider, same place.

Claim.—1. The within-described arrangement of the passages A' A relatively to the steam coming

from the engine and to the condenser, and to the large tight self-acting valve D, the latter being provided with means for holding it steadily open, in addition to being free to act automatically, all substantially as herein set forth.

2. The within-described construction and arrangement of the valve with India-rubber or other elastic and noiseless seat, and with a separate seat to serve when the rubber shall fail, all substantially as herein specified.

112,184.—SEWING-MACHINE TREADLE.—Leo W. Sapp, Cleveland, Ohio.

Claim.—1. The rocking-lever D, in combination with the treadles pivoted at the heel, and operating substantially as and for the purpose described.

2. The arrangement of the foot-treadles E E, as described, namely, pivoting them at the heel to the front bar B and connecting them at the toe to the rocking-lever D, as and for the purpose set forth.

112,185.—BOTTLE-STOPPER.—Fredrich Schlich, New York, N. Y., assignor to himself and Adrian Feyh, same place.

Claim.—The collar or band *b*, made as a closed ring, with the projecting lugs *c d* and bow or loop *e*, to be closed by bending after the band is placed upon the bottle, as set forth.

112,186.—LUMBER-WAGON.—Jacob Skeen, Mound City, Mo.

Claim.—1. The combination of the fifth-wheel B B′ B″, the plate D, the rails E, and the arch cross-bar H, all constructed and arranged substantially as described and shown, for the purpose set forth.

2. The fifth-wheel B, B′, and B″, constructed substantially as described and shown.

3. The combination of the lower portions B B′ of the fifth-wheel, made in two pieces, constructed and arranged substantially as described and shown, for the purposes set forth.

4. The combination of the lower portion B of the fifth-wheel and bounds C, made together in one piece, and the part B′, all constructed and arranged substantially as described and shown, for the purposes set forth.

5. The combination of the tongue C′, provided with the dowel *i*, with the bounds C, provided with the hollow radial arm *f*, all constructed and arranged substantially as described and shown, for the purposes set forth.

6. The means employed for lengthening and adjusting the length of the wagon, consisting of the rails E, provided with sleeves F, the hollow rails Q, the slot *p″*, stay-pins *p‴*, and holes *p⁗*, all constructed and arranged substantially as described and shown.

7. The means employed for raising the load to be carried, consisting of the truck I, provided with the shaft K, lever M, ratchet-wheels L L′, pawl L″, and chains O, all constructed and arranged substantially as described and shown.

8. The means employed for moving the load to be carried into a desired position, consisting of the truck I, rails E, and pins *l″*, all constructed and arranged substantially as described and shown.

9. The combination of the casing R, the hind wheels P, and the spindles *n*, all constructed and arranged substantially as described and shown, for the purposes set forth.

10. The combination of the casing R, hind wheels P, the spindles *n*, and the friction-rollers S, all constructed and arranged substantially as described and shown, for the purposes set forth.

11. The combination of the windlass U, provided with bars V, the casing R, and the hind wheels P, arranged with an open space between them, all constructed and arranged substantially as described and shown, for the purposes set forth.

12. The arrangement of the side rails Q and E, the cross-bars Y, the rails G, and the plate D, all constructed and arranged substantially as described and shown, for the purposes set forth.

13. The timber-wagon above described and shown, as an entire organization, with its several parts constructed, combined, arranged, and connected substantially as and for the purposes set forth.

112,187.—GEARING AND UNGEARING PINIONS AND WHEELS.—John Skinner, Hadley, Mich.

Claim.—1. The combination of the mechanical devices herein described, by means of which motion is given to machinery by friction, with the device for throwing the pinion and spur-wheel into gear, substantially as and for the purposes herein set forth.

2. The pinion D, provided with a plain face, E, outside the cogs, as described, and for the purposes set forth.

3. The band C, provided with right-angle flange *c*, in connection with the spur-wheel B, when constructed, secured, and operating as and for the purposes specified.

4. The lever F, provided with arms *f* and friction-wheels G, in connection with the band C, as and for the purposes set forth.

5. The levers H J and bearing I, when constructed, combined, and operating as and for the purposes set forth.

112,188.—FIRE-PLACE.—John Smith, Brantford, Canada.

Claim.—1. The combination, with the fire-chamber A and descending and ascending sheet fire-flues B and C in rear of the fire-chamber, of the sheet air-heating flue E, between and against the sides *q* and *r* of the fire-flues, air-heating chamber F, over and against the top plate of the fire-chamber, and inlet and outlet air-passages *g g*¹ or *g*² and *h h*¹ or *h*², all arranged as described, when the ends *p p′* and *n n′* of the fire-flues, and the rear side *o* of the ascending one, are outside radiating plates, as set forth.

2. The combination of the fire-chamber A, descending and ascending sheet fire-flues B and C, having outside radiating plates, as described, sheet air-heating flue E, air-heating chamber F, sheet air-heating flue T, between and against the sides *o* and *e* of the fire-chamber and descending fire-flue, air-passage or passages *f* or *f*, and apertures to admit cold air and discharge it when heated, all arranged as herein set forth.

112,189.—SEWING-MACHINE.—William T. Smith, West Zanesville, Ohio, assignor to himself and William T. Maher, same place.

Claim.—1. The slotted adjustable support D of the supplemental needle *b*, in combination with the horizontal slotted arm C and the needle-bar B, which carries it, as hereinbefore described.

2. The vertical adjustable carrier *g* of the supplemental needle *b*, in combination with its horizontally adjustable support C, in the manner and for the purpose described.

3. The adjustable thread-guide *k* of the take-up arm I, for the supplemental needle, as described.

4. The flange *c* of the supplemental needle-support D, and the flange *g* of the carrier for said needle, arranged to brace each other when adjusted to work, as described.

5. The combination of the needle-bar B, the horizontal slotted arm C, the adjustable supplemental needle-support D, the adjustable needle-carrier *g*, with the adjustable thread-guide *k* of the take-up I, and the supplemental presser-foot F, the several parts being constructed, arranged, and operating as described.

6. The double-bearing saddle-shaped spring K, in combination with the staple *s*, frame J, adjusting screws *t*, and the thread-spools, as and for the purposes described.

112,190.—VENTILATOR.—Daniel M. Sprogle and Joseph E. Dickson, Annapolis, Md.

Claim.—1. The chamber D, constructed as described, and combined with a pipe or flue used for introducing air into buildings, chambers, or apartments, substantially as and for the purposes set forth.

2. The chamber D, constructed as described, and combined with the pipe or flue A by means of the pipe or flue E, either alone or in connection with the tank or chamber H, substantially as and for the purposes set forth.

3. The pocket I, combined, as described, with the pipe or flue A and the water-pipe J, substantially as and for the purposes set forth.

4. The system of pipes, flues, and chambers, consisting of the water-pipe F, the chamber D, the flue E, the tank or chamber H, the flue A, the pocket I, the water-pipe J, and the tank or reservoir M, for the purpose of producing pure, warm, or hot moist air, or pure, cool, moist air, for ventilating, warming, and supplying hot-air chambers, substantially as herein set forth

112,191.—CORN-HARVESTER.—Clement Smith Stull, Poolesville, Md.

Claim.—The combination and arrangement of the gathering-arms E E, guide-rod G, receiving-board H, and discharging-rack I, substantially as and for the purpose herein specified.

112,192.—TUYERE.—Peter Sweeny, New York, N. Y.

Claim.—The pipes A, B, C, and G with the valve D, combined and arranged substantially as and for the purpose described.

112,193.—FLEXIBLE FASTENING FOR GLASS.—Warren H. Taylor, Stamford, Conn.

Claim.—The combination of the guard-wires E E and flexible washers R R with a suitably-formed metallic door or window, substantially as and for the purposes hereinbefore described.

112,194.—FENCE.—Jeremiah W. Teller and William Townsend, Lapeer, Mich.

Claim.—In combination with the posts A, the bars B, cleat-bars C, and slats *a*, when arranged and operating substantially as herein described.

112,195.—STEAM-HEATER.—Walter Thomson, Detroit, Mich., assignor to "Detroit Novelty Works."

Claim.—The arrangement of the pipes B, provided with slots *b*, with the pipes C and steam-chamber A, substantially as and for the purposes set forth.

112,196.—HORSE-COLLAR.—William J. Thorn, New York, N. Y.

Claim.—1. Wooden collar-bars, when said bars are steamed and bent in the manner substantially as described.

2. The curved straps B B B′ B′, united by the pintle *b*, adapted for the upper stays and joint of the collar-bars, and also as a support for the terrets, all in the manner described.

3. The sheath C and buckle D on one end of one of the collar-bars, in combination with the loop *c* on the other collar-bar, substantially as described.

112,197.—MACHINE FOR FELTING HAT-BODIES.—Joseph Vero, Dewsbury near Leeds, England.

Claim.—The felting or "planking" of the bodies of hats, or other coverings for the head, by means of the apparatus shown and described, the predominant features of such apparatus consisting in the nature and arrangement of the screws or worms.

112,198.—FENCE.—John Waddle, Bakerstown, Pa.

Claim.—An improved fence, consisting of the end posts A, braces B, iron rod C, short rods D, nuts E, iron supports F, panels G, and cross-bars H, said parts being constructed and arranged substantially as herein shown and described, and for the purpose set forth.

112,199.—FIRE-PLACE.—Jerome W. Wetmore, Erie, Pa.

Claim.—The shelf for fresh fuel in the fire-places or fire-boxes of stoves and other heaters, constructed as and for the purpose hereinbefore set forth.

112,200.—MODE OF ATTACHING SPOKES TO WHEELS.—Jefferson G. Wiggins, Lima, N. Y., assignor to J. S. Galletine, same place.

Claim.—The arrangement of the socket C, nut D, and felly-plate F, when each part is constructed substantially as described, with the spoke A and felly B, for the purposes set forth.

112,201.—MEDICAL COMPOUND OR LINIMENT.—Galen S. Wood, Vassalborough, Me.

Claim.—The manufacture or preparation of a compound, which is denominated Wood's Universal Liniment, in the proportions and for the purposes set forth.

112,202.—WATER-WHEEL.—Larnard M. Wright, Fort Edward, N. Y.

Claim.—1. The combination of the pipe B with the circular plate E, so as to make the upward pressure of water on the plate E equal to the pressure downward on the disk, added to the weight of the pipe B, disk C, plate E, and their attachments, which are moved by the screw F.

2. The combination of the cross-head L with the internal screw F and the upper box J, as and for the purposes set forth.

3. The arrangement of the boxes P and N N N with the holders R and O, as and for the purpose described.

4. The cylindrical part of the disk on its outer diameter, and fitting within the bed plate D, as and for the purposes described.

112,203.—JEWELER'S COMBINED CALIPERS AND POISING-TOOL.—Francis E. Allen, Keene, N. H.

Claim.—The jaws *e e*, provided with indentations, and combined with spindle *c* and arm *g*, substantially as and for the purpose set forth.

112,204.—TARGET-ALARM.—Andreas Anderhub, New York, N. Y., assignor to John Bayer, same place.

Claim.—The nose *c*, on the rod C, which carries the center-plug B of a target, in combination with the check-lever D and *d*, escapement-wheel E, lever *h*, and alarm shafts *i*, all constructed and operating substantially in the manner herein shown and described.

112,205.—COOPER'S CROZE.—Vincent Applegate, Marline P. Jacobs, and Samuel F. Roby, Harrison county, Ind.

Claim.—The combination of the plate A, bit-holder C, with rib *a*, V-shaped bit or knife D, and head-block E, with rib *b*, all constructed and arranged substantially as and for the purposes herein set forth.

112,206.—BURNING HYDROCARBON LIQUIDS FOR LIGHT.—Thomas J. Barron, Brooklyn, E. D., N. Y.

Claim.—The hydrocarbon candle herein described, having tubes A, *c*, and *d*, of prepared paper, metal tip *n*, filling B, wick *y*, chamber *z*, bottom *o*, and plug *r*, when constructed and arranged substantially as specified.

112,207.—ELECTRICAL TICKET-CHECKING APPARATUS.—Marcus Bebro, Manchester, Great Britain.

Claim.—The combination of the box *a*, its roller *c* having projecting points, and insulated wires, arranged to be struck by said points, as specified.

112,208. — Sad-Iron Heater.—George Benns, Rockford, Ill., assignor to Lucius M. West, same place.

Claim.—The specific device described, consisting of the vessels A B, bottom C D, cover E, and pipe F, when combined as described.

112,209. — Combined Cotton-Chopper, Scraper, &c.—William C. Bibb, Madison, Ga.

Claim.—The arrangement of the hoe D, operated as described, with the adjustable scrapers F and adjustable plows E, substantially as and for the purpose set forth.

112,210. — Door-Check. — Charles Bird, Lower Merion township, assignor to himself, Charles J. Field, and T. P. Sargent, Philadelphia, Pa.

Claim.—The bar D, hinged to a door, and having corrugations *f*, in combination with a fixed plate E, for guiding the bar, and elastic arms *d*, adapted to the corrugations, all substantially as set forth.

112,211.—Keyless Padlock.—Wilson Bohannan, Brooklyn, N. Y., assignor to American Seal-Lock Company, New York city.

Claim.—1. The tumbler F, constructed with a projecting heel, *f*, and so constructed and applied that it may be retracted by the action of the end *e'* of the shackle, substantially as and for the purposes described.

2. The combination of the shackle E, bolt B, tumbler F, and dog H, all constructed and arranged to operate substantially as and for the purposes set forth.

112,212. — Shovel-Plow. — Francis H. Bowlds, Fairfield, Ky.

Claim.—The combination of the beam A, standard B, tongued shoe D, and shovel C, the parts being constructed and arranged substantially as shown and described.

112,213.—Triturator.—Elijah Brady, New York, N. Y.

Claim.—1. The revolving adjustable bed-plate D, mortar H, connected therewith by means of clamps or equivalent devices, and the revolving pestles I, combined and operating substantially as described.

2. The shaft G, cross-head K, and spindles L, adjustable longitudinally on the cross-head and loosely fitted to enter the recesses *o*, thereby admitting an independent vertical movement of the pestles, as and for the purposes specified.

3. The combination of the standard B, shafts E, F, and G, revolving bed-plate D, mortar H, and pestles I, as and for the purposes set forth.

112,214.—Apparatus for Lifting Barrels, &c.—John S. Brewer, Chicago, Ill.

Claim.—The sling A, in combination with ropes or chains C C and hooks D D, or the equivalent, the whole arranged substantially as and for the purpose specified.

112,215.—Street-Car.—Charles B. Broadwell, New Orleans, La., assignor to himself and Ignatius Caulfield, same place.

Claim.—The application to a street or other railroad-car, at or near either or both of its ends, of a central vertically-adjustable wheel, made also capable of turning on its vertical axis, so as to steer the car onto or off the track, or around curves, substantially as specified.

112,216.—Stop-Valve.—Sidney Broadbent and Willard B. Culver, Scranton, Pa.

Claim.—1. The arrangement of the conical expander C, the external expanding-ring D, the stop-shoulder *d*, the spindle E, cylindrical seat *c*, and passages *a b*, substantially as and for the purpose herein described.

2. The combination of the spindle E, ring D, conical expander C, and spring *h*, substantially as and for the purpose herein specified.

112,217.—Shower-Bath Apparatus.—Cyril P. Brown, Hudson, Mich.

Claim.—1. The combination of the pump B C D, rod *b*, nut *d*, spring E, loop *f*, and food-pad G, with its slotted plate and hook *e*, all constructed and arranged to operate substantially as and for the purposes herein set forth.

2. The combination of the tub A, pump B C D, spring E, foot pad G, chamber H, conductor I, rose J, and curtain L, with the hoops *k k k'* and bar K, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

112,218. — Carpenter's Plane. — James Raymond Brown and William Brown, Boston, Mass.

Claim.—1. The combination of the two planes A and K and the sectoral plate or sword A', under the arrangement and for operation essentially as herein set forth.

2. The combination, with the two planes A K, of the tubular support X, the screw *r* contained in the same, the shelf *y*, and the stud *p*, said parts being arranged for joint operation, as herein shown and set forth.

3. The chuck *n*, constructed substantially as herein explained, in combination with the tubular support X, screw *r*, and shelf *y*, for the purpose stated.

4. The combination of the bar or rest D, the slot F, cam-block G, rack *b*, and iron E, the whole operating as herein explained.

5. The mode herein described of attaching the scoring-spur B to the beam L, the same consisting of the two screws U and V, formed and applied substantially as before set forth.

6. The combination, with the plane A, of the fence J, applied to the under side of the bed-plate, and the arms *g*, located on the upper side of said plate and hinged both to the plane and fence, for operation substantially as shown and set forth.

7. In combination with a matching-plane, an adjustable plate so made as to constitute a sword to such plane, and a carrier for the additional or second cutting-iron thereof, for purposes stated.

8. An adjustable plate, which combines a fence and iron-carriage so applied to the plane-beam as to be enabled to raise and lower the same from or into action, for purposes stated.

9. The combination of the planes A K, the beam L, the rod or screw S, and the adjustable sword or plate A, under the arrangement herein shown and set forth.

112,219.—Water-Wheel.—Henry Bushnell, New Haven, Conn.

Claim.—1. A tidal wheel with reversible curved floats or buckets, substantially as described, for the purposes specified.

2. The radial float-wheel C, fitted to turn for a limited distance on its shaft D, in combination with one or more reversible curved float-wheels, B B', and a lever mechanism, G H I, whereby the curved floats or buckets will be automatically reversed upon the changing of the direction of the current, as described.

112,220.—Apparatus for Heating Propagating-Beds.—William Chalmers, Philadelphia, Pa.

Claim.—The arrangement of the furnace A, circulating pipe or pipes B B, and the water-reservoir D, substantially as and for the purpose set forth.

112,221.—Hedge-Trimmer.—George Clark and Samuel P. Clark, Dover, assignors to themselves and Franklin B. Ives, Princeton, Ill.

Claim.—1. The combination and arrangement of the frames A and F, arm H, handle h, vertical arc *e*, crank-shaft *f'*, and roller I, all substantially as represented and described, for the purposes specified.

2. The knives E, operated from the wheel C' by belting or gearing and cranks, in combination with the frames A and F, arm H, handle h, and vertical arc *e*, all substantially as specified.

3. The roller I, for holding down the tops of the plants while being severed, in combination with the knives E, substantially as represented and described.

112,222.—Steam Safety-Valve.—Gilbert H. Clemens, Chicago, Ill.

Claim.—1. The valve H in combination with the chambers G and G', arranged as described, whereby the said valve is closed by the pressure of steam, substantially as and for the purpose described.

2. The primary valve K in combination with the main valve H, the whole arranged substantially as and for the purpose described.

3. The enlarged stem *e* of the primary valve K, in combination with opening *f* of valve H.

4. The adjusting-nut A', in combination with base A and bulk-head or cap F, substantially as and for the purpose described.

5. The bolt D and yoke E, in combination with base A, the whole arranged substantially in the manner and for the purpose specified.

6. The combination of the stirrup M with lever O, bolt *h* and valve-stem L with spring N, substantially as and for the purpose described.

7. In combination, the steam safety-valve, with adjusting-cup T and whistle, substantially as and for the purpose described.

112,223.—Binder for Sewing-Machines.—Jacob L. Coles, Newark, N. J., assignor to himself and James W. Corey, same place.

Claim.—1. The fellers D and E, adapted to operate upon both edges of the binding fabric, in combination with the U-shaped guide B, over which the binding fabric is folded, as and for the purpose specified.

2. In combination with the devices enumerated above, the auxiliary spring-presser F, substantially as described.

112,224.—Baling-Press.—Thomas J. Corning, San José, Cal.

Claim.—In a double-acting horizontal baling-press, having two chambers and followers B B', the combination of the rack A, segmented toothed wheel D, and lever E, operated by power applied to the ropes H H which pass over the pulleys F F', substantially in the manner and for the purpose described.

112,225.—Shutter-Fastener.—Jonathan L. Devol, Parkersburg, W. Va.

Claim.—In combination with the shutter-fastening herein described, composed of the frame C, hook-lever D, keeper E, and spring F, the cam-lever G G', arranged and operating as set forth.

112,226.—Fermentation and Purification of Organic Substances. — Rudolph D'Heureuse, New York, N. Y.

Claim.—The mode, to assist a fermentation or germination, the purification of organic fluids from nitrogenous or deleterious matter, the preservation, curing, or improving of organic substances, by artificial currents of air or other gases through said substances, in close receptacles, and at a higher than the common atmospheric pressure, substantially as, and for the purposes hereinbefore described and set forth.

112,227.—Saw.—Henry Disston, Philadelphia, Pa.

Claim.—The recess *e* in the blade, for the reception of a detachable tooth, in combination with holes *t t* bored in the blade, and arranged in respect to the corners of the said recess, substantially as and for the purpose herein set forth.

112,228.—Mortising-Machine.—William Downing and William H. Soley, Philadelphia, Pa., assignors to Westford Warner, same place.

Claim.—1. The flexible endless-chain cutter H, constructed and arranged as shown and described, and for the purpose specified.

2. The combination of the flexible endless-chain cutter, the sliding feed-table, the gauge, and the clamp, these members being constructed and operating as described.

112,229.—Railway-Car Spring.—Richard Dudley and Benjamin Hershey, Erie, Pa.

Claim.—1. The V-shaped springs D D when they are upset at the angles *d d' d'*, substantially as described, as and for the purpose specified.

2. The combination of the V-shaped springs D D, having lateral arms D' D', friction bed-plate B, and slide C or rocking-plate G, substantially as described.

112,230.—Operating Ordnance. — James B. Eads, St. Louis, Mo.

Claim.—The electric battery or machine N, and wires O and R *r*, in combination with a gun-carriage, substantially as and for the purpose described.

112,231. — Lozenge-Cutting Machine.—Winslow P. Eayrs, Nashua, N. H.

Claim.—1. The roller K, provided with the spirally-arranged spur *k*, wheel L, and spur *l*, in combination with the rollers B and C, apron D, cutters H', arms H, and springs I, when all are constructed and arranged substantially as and for the purpose set forth.

2. In combination with the elements of first claim, the feeding-roller B and inclined apron J, arranged as and for the purpose specified.

112,232. — Apparatus for Tanning.—Lewis C. England, Philadelphia, Pa.

Claim.—1. The frame F, provided with guides and bars, or other suitable devices, for suspending the hides, all arranged so as to operate substantially as described.

2. The diagonal braces B B' and upright shaft R, in the manner and for the purpose herein specified.

3. The guides U, U^1, U^2, U^3, and U^4, or their equivalents, so as to retain the frame F in a horizontal position, as herein specified.

4. The apparatus herein described, consisting of a frame, F, in combination with suitable devices for giving the same a vertical vibratory movement, substantially as set forth.

112,233.—Heating Apparatus.—Michel G. Fagan, Troy, N. Y., assignor to himself and Albert C. Corse, same place.

Claim.—In a stove-drum or other equivalent parts of heating apparatus, the means employed, or their equivalent, for securing a permanent gas-tight joint between the ends of the cylindrical portions thereof and the end plates or other contiguous portions of said apparatus, consisting of the rings C and C', attached to or upon the ends of said cylinders A and B, respectively, and from thence projecting horizontally outward or inward and thence upward, so as to form a rebate, D, for the reception of the cover E, in combination with said cover, and with suitable bolts G passing through said parts, substantially as shown and described.

112,234.—PLOW.—John B. Ferguson and Samuel M. White, Big Lick, Va.

Claim.—The within-described reversible point G, provided with a shoulder and notch near each end, secured under the edge of the notched landside D by means of the ear *d* and bolt *b*, and used in combination with the mold-board C and share E, all substantially as set forth.

112,235. — CLOTHES-RUBBER. — Seymour Foster, Lansing, Mich.

Claim.—The rubbing-block A herein described, having recessed upper surface to fit the knuckles of the hand, and corrugated under surface *b*, in combination with the elastic straps B B, substantially as and for the purpose specified.

112,236.—MODE OF FASTENING HARROW-TEETH.—George Fry, Newaygo, Mich.

Claim.—The slotted metal-plate *d*, in combination with bolt *c*, tooth *b*, and notched beam A, all arranged and constructed substantially in the manner and for the purposes set forth.

112,237.—NECK-TIE RETAINER.—Eli B. Gibbud, Waterbury, Conn., assignor to himself and Benjamin H. Bradley, same place; said Gibbud and Bradley assignors to John Bachelder, Norwich, Conn.

Claim.—The base of a neck-tie, consisting of the two plates *a* and *c* and the covering, all secured together in the manner herein set forth, as an article of manufacture.

112,238, antedated February 22, 1871.—WRENCH AND OILER.—Edwin B. Gifford, Westport, Mass.

Claim.—1. The combination and arrangement of the socket A, the curve B, and annular handle H, as described, and for the purpose specified.

2. The combination and arrangement of the curved tube B, spring-valve *c*, discharge nozzle *a*, and cap C, substantially as and for the purpose described.

112,239. — WOODEN PAVEMENT.—Jackson Grant, Milwaukee, Wis.

Claim.—1. In a wooden pavement, an upper block, B, with a bed-block, C, each constructed and connected with the other, substantially as described and shown.

2. The arrangement, in a wooden pavement, of the upper block B, constructed substantially as described and shown, so that it shall rest upon and be connected with four of the bed-blocks C, constructed substantially as described and shown.

3. The means employed for connecting two or more longitudinal series of blocks B or C, consisting of the hooks D D', constructed and arranged substantially as described and shown.

4. The blocks B C, provided each with a rectangular and beveled tongue, and corresponding recesses, substantially as described and shown.

112,240.—SPOON.—Florian Grosjean, Brooklyn, N. Y.

Claim.—A sheet-metal spoon with both the shank of the handle stiffened by lips of the same sheet metal turned inward, and the junction of the shank with the bowl stiffened by a forked hollow bead, substantially as before set forth.

112,241. — STRAW-CUTTER.—Phillip Peter Gross, Palmyra, Mo.

Claim.—The combination of the clamping-block R, lever T, rod U, lever V, spring-bar W, link Y, and arm K, fastened to the rock-shaft J, to work the clamping-block, when arranged substantially as described.

112,242.—ELECTRO-MAGNETIC SIGNAL APPARATUS.—Augustus Hahl, Washington, D. C., assignor to "The Electric Clock and Bell Company," same place.

Claim.—The combination of a movable permanent magnet and a fixed coil, arranged and operating as described, with a slotted or perforated plate or case, *w*, and a movable signal, *m*, as shown, whereby the reversal of a single current is caused to reverse the position of the signal with relation to the apertures *v* in the plate or case, substantially as set forth and for the purpose specified.

112,243. — BEE-HIVE.—Hiram S. Harned and Frank S. Elliott, Boonesborough, Iowa.

Claim.—1. The movable bottom C, and grooved entrance blocks D, in combination with the brood-chamber A, all substantially as described.

2. The division-board G, provided with the screens *d d* and pins *f f f f*, and placed between the brood-chamber A and chamber H, all as and for the purposes set forth.

3. The combination with the brood-chamber A, constructed as herein described, of the nucleus-cap I, chambers J J, frames K K, troughs or feed-boxes *m m*, and entrances *m' n*, all substantially as and for the purposes herein set forth.

112,244, antedated February 17, 1871.—LADY'S SUPPORTING-BRACE.—Mary Harris, New York, N. Y.

Claim.—1. The back connecting-strap G, shoulder-straps A A, adjustable breast-strap E, and waist-strap F, arranged substantially as and for the purpose described.

2. The combination of an adjustable breast-strap, E, adjustable waist-band F, and adjustable supporting-straps A A, substantially as described.

3. The breast-strap E, in combination with the straps A A.

4. The pockets B D' D'' C, in combination with the breast-strap E and waist-band F, substantially as and for the purpose described.

112,245.—GUIDE FOR SEWING-MACHINES.—Franz Herterich, Jersey City, N. J.

Claim.—The combination of the slide D D', sliding guide E E', spring F or its equivalent, and the toggle-joint G, substantially as set forth.

112,246. — GRATE FOR BURNING COAL-SCREENINGS.—George W. Hildreth, Lockport, N. Y.

Claim.—1. A fire-grate, consisting of rocking bars, which, when closed, form a level, smooth, and imperforate upper surface, and which, when open, admit the air through side upward apertures, substantially as herein set forth.

2. A grate composed of bars, whether movable or stationary, having each an inclined upper surface, upon which coal-dust or fine coal may rest and burn, while air is admitted between the lower edge of that surface and the upper edge of the next bar, substantially as herein set forth.

112,247.—ANCHOR.—William M. Hughes, San Francisco, Cal.

Claim.—1. An anchor, having the double shank A A', the flanges B B', the shackles or ring-plate D, with the flukes E E', and grooves or slot H, and the rivets or joint-pins F, when combined and arranged to operate substantially as herein described.

2. The combination of the shackle-plates with the flukes E E' and the double shank A A' of the anchor, as described.

112,248.—BOLT-HEADING MACHINE.—Thomas Hull and Nicholas Thomas, Chicago, Ill.

Claim.—1. The combination of die-blocks W W', levers V V, pitman T², lever O², and rock-shaft B², all constructed and arranged as described.

2. The combination of the U-shaped spring H², cross-head G², bracket C, pitmen I 2, the collar-arms K, and header F², when arranged substantially in the manner and for the purpose specified.

112,249.—PRINTING PRESS.—George Washington Hunt, New York, N. Y., assignor to himself, George Place, and Charles F. Hardwick, same place.

Claim.—1. A crank-shaft, revolving at a uniform speed, in combination with the hinged or vibrating platen of a printing-press, and with a knee-joint, one link of which is constructed and acted on by the said crank, substantially as set forth.

2. The combination of the platen, the slide P to which the platen is jointed, and the stationary segments *i i*, all substantially as and for the purpose described.

3. The projections *i i*, arranged on the cross-bar I around the tension-rods, in combination with tube having like projections, and so attached to the said rods as to admit of being turned thereon, all substantially as set forth.

4. The revolving cylinder Q and its pin S, in combination with the shaft *w* on which the cylinder slides, and which imparts a rotating motion to the same, and with the stationary hub R and its scroll-groove, arranged substantially as set forth.

112,250.—FLOOD-FENCE.—Charles R. Hunter, Douglas, Ill.

Claim.—The combination of the anchor A and the pintle E, provided with horizontal bearing-arms *m m'* and washer *f*, with the fence-sections B B, provided with the hinge-arms C C, substantially as specified.

112,251.—HORSE-POWER.—James W. Huntoon, St. Louis, Mo.

Claim.—The bed-piece A, provided with standards *a a' a²*, combined with top piece B, cog-wheels C C' C², pinions *b b' b²*, and shaft G, all arranged in the manner shown and for the purpose described.

112,252.—WAGON-BRAKE.—Reuben Hurd, Morrison, Ill.

Claim.—1. The frame A, in combination with the eye-screw bolts *a³ a³* and screw-bolts *a' a'*, substantially as shown and described.

2. The brakes or stops E E, constructed as shown, in combination with the frame A, rod B, sleeve C, movable connecting-bars D D, link *f*, lever F, and rod G, substantially as set forth.

3. The combination of the brake-handle H, pinion *h'*, pawl *h³*, spring *h⁴*, and segmental bar *h²*, substantially as shown and described.

112,253.—MACHINE FOR WARPING YARN.—Daniel Hussey, Lowell, Mass.

Claim. — 1. In combination with a warper, a mechanism, substantially as described, or its equivalent, for running the warp-cylinder at a rate of speed such as will allow an attendant to change each spool and substitute a fresh one, and tie its thread to the warp, such mechanism being the arm H, its latch *b*, stud *c*, shaft *d*, worm *e*, bevel-gears *f g*, and driving-pulley *k*, arranged with the warp-cylinder operative machinery, and to operate therewith, as explained.

2. The said additional mechanism, or combination and arrangement of the arm H, the latching devices *b c*, the bevel-gears *f g*, the worm *e*, and the driving-pulley *k*, applied together and for use in manner as described.

112,254. — ROCK-DRILL.—Simon Ingersoll, Brooklyn, N. Y.

Claim.—1. The feed-rod *d'* and plunger *e*, in combination with any suitable feeding device, and the piston P, substantially as and for the purpose set forth.

2. The combination of the feed-rod *d'* with the crank-lever *h'*, pawl *l'*, ratchet-wheel nut *m*, and feed-screw D', all constructed and operated substantially as and for the purpose described.

3. The legs B B B, with their extensions *b b b*, adjusted with screws, working into the inclined longitudinal grooves *b' b' b'*, substantially as and for the purpose set forth.

112,255.—METHOD OF FORMING SPUR-LIPS OF AUGER-BITS.—William A. Ives, New Haven, Conn.

Claim.—The process herein described for forming the spur-lips of auger-bits.

112,256, antedated February 23, 1871.—LOW-WATER INDICATOR. — Hiram Kimball, Randolph, Vt.

Claim.—1. The elevated reservoir A, connecting-pipe H, test-pipe F, float B, lever C, slotted valve-stem R, and guides G G', when constructed, combined, and arranged to operate as described.

2. The removable chamber Q and separable valve and stem R E, as and for the purpose specified.

112,257.—HEAD-BLOCK FOR SAW-MILLS.—William A. L. Kirk, Hamilton, Ohio.

Claim.—1. The sliding bar D, in combination with the sliding knee of a head-block of a saw-mill, and an eccentric or cam for holding the bar in position, substantially as and for the purpose set forth.

2. The serrated or toothed rack upon the sliding knee, when used in combination with the sliding bar D, substantially as and for the purpose set forth.

3. The adjustable knee of a head-block, when composed of the parts B and C, arranged in the manner and for the purpose specified.

112,258.—CHEST-PROTECTOR.—Peter Lear, Boston, Mass.

Claim.—As a new article of manufacture, the chest or lung and spine-protector, constructed as herein shown and described, viz., with elastic connecting straps at top and bottom.

112,259.—SOAP COMPOUND.—Henry Loos, Lawrence, Kansas.

Claim.—A soap compound, made of the ingredients herein described, and mixed together about in the proportion specified.

112,260. — STOVE-PIPE DAMPER.—William H. Lutz, Lancaster, Pa., assignor to himself and William Boas, same place.

Claim.—The combination and arrangement of the bar A *a a'*, lever-bar B, rack C, a simple or elbowed lever, D, and tension-rod F, together with the damper E, operating substantially in the manner and for the purpose specified.

112,261.—LATH-MACHINE.—John C. Mackay, Ionia, Mich.

Claim.—1. The fibrous non-conductor *a* on the saw-arbor C, in combination with the cylinder or sleeve *a'*, saws *b b b*, and washers *a''*, in the manner and for the purpose described.

2. The pivoted grooved guide-way H, having points 1, 2, and 3, arm *h*, and weight *h'*, in the manner and for the purpose described.

3. The friction-pulley *e*, when constructed from disks of pasteboard, as described, and used in combination with the pulleys D' D', in the manner and for the purpose shown.

112,262. — BEE-HIVE. — Gideon Marsh, Steamburg, N. Y.

Claim.—The inverted tub A, tubular post B, and arms C C, in combination with the honey-box D, slide *h*, and inverted tub or cap E, all constructed and arranged substantially as and for the purposes herein set forth.

112,263.—HARVESTER.—James S. Marsh, Lewisburg, Pa.

Claim.—1. One or more laterally-compressing or directing grain-guides, projecting forward of the ordinary guard-fingers, arranged between the extremities of the cutting apparatus of a reaper, and adapted to direct the standing grain toward the draft-frame and to otherwise operate, substantially as described.

2. The grain-guides made adjustable by means of devices under control of the attendant when the machine is in operation, substantially as described.

3. A flexible guard or fender, G, applied to the revolving rake and beater-arms, substantially as described.

4. The auxiliary draw-rod D', in combination with the transverse rod *b*, the draw-bar D, and an adjusting device, substantially as described.

5. The cast-metal platform F, with the depressed corner portion F', in combination with the shaft and wheel of the crank-wheel C, and with the cover-plate *c*, when all these parts are constructed in the manner described and shown.

112,264.—PAPER-FOLDING MACHINE.—John McAdams, Brooklyn, N. Y.

Claim.—1. The doubler or folder E, in combination with feeding-rollers and belt, arranged to work through the bottom of said folder, substantially as specified.

2. The presser, composed of endless traveling-belts F F', in combination with a doubler or folder, and the feeding devices arranged as described and in front of said presser, essentially as described.

3. The combination and arrangement of the belt H and its pulleys *i j k* with the follower I of the packing-receptacle or receiver J, essentially as shown and described.

112,265. — FEED-CUTTER.—James B. McClinton and William McClinton, Galion, Ohio.

Claim.—1. The rollers B B', plates C C, cap D, having a retaining pawl or dog, H', attached, rods *d d*, and spring D', when the same are combined and arranged substantially as described.

2. The T-shaped lever J, pitman-rods K K, dogs H H, ratchet-wheels G G, and connecting-bar L, secured to the fly-wheel as stated, when the same are so combined and arranged as to impart to the feed-rollers an adjustable and uniform movement, substantially as described.

112,266. — TEA-KETTLE.—Charles W. McClure and William A. Shepard, Wooster, Ohio.

Claim.—The combination of breast B and handle A, latch *d*, and catch G, all arranged to operate substantially as described.

112,267. — COMBINED HARVESTER AND BINDER.—John M. McKesson, Lincoln, Nebraska.

Claim.—1. The combination of the concave elevating-apron H^1 of the segmental grain-platform and the rake-floats K^1 of the reel, by the combined action of which the cut grain is elevated.

2. The spring-finger O^1 O^2, in combination with the receiver O, substantially as and for the purpose set forth.

3. The revolving frame Q^1 and sliding bottom Q^2 of the hopper Q, in combination with the operating mechanism composed of the cranked rock-shaft Q^3, connecting-rods *q* and q^4, oscillating lever Q^5, sliding bar q^3, and spring q^7, substantially as set forth.

112,268.—SASH-HOLDER.—Joseph W. Megaw, Wilmington, Del.

Claim.—The W-shaped spring *d*, attached to the window-sash firmly at one end, and slotted at *s* to receive the pin *n*, and forced against the sash by the rollers on the opposite side, substantially as specified.

112,269.—DEVICE FOR TRANSMITTING AND REVERSING ROTARY MOTION.—William Henry Merrick, Philadelphia, Pa.

Claim.—The combination of two friction-wheels, to which a positive rotary motion is imparted in contrary directions and in fixed bearings, with a friction-wheel, D, also, arranged to revolve in fixed bearings, and an adjustable idler-wheel, E, the whole being arranged for operating substantially in the manner described.

112,270.—APPARATUS FOR USING ELECTRICITY AS A REMEDIAL AGENT.—George Munro, Philadelphia, Pa.

Claim.—The arrangement of the platform A, the adjustable stand D, vessel B, and wires *e f*, connected to a battery, all as and for the purpose described.

112,271. — CRADLE. — Richard W. Myers, Glen Gardner Station, (Clarksville Post Office,) N. J.

Claim.—1. A cradle composed of several sections, A B C C, provided with loop-plates and hooks, arranged substantially as described.

2. In combination with the within-described arrangement of sections, loop-plates, and hooks, the side slats *a' a'*, applied to lock the whole together in the manner set forth.

112,272.—SPOOL SHOW-CASE.—Richard H. Norris, Paterson, N. J.

Claim.—The combination of the case A, having a slanting front, and the drawers with glazed fronts, having a corresponding slant, substantially as herein described.

112,273.—COUPLING FOR PLOWS.—George Owen, Jacksonville, Ill.

Claim.—1. The improved coupling-joint, composed of the roller K, with its stem *l* and key *m*, and the eyes L L, all constructed and arranged substantially as and for the purpose herein specified.

2. The double cultivators or plows, provided with the coupling-bars D and E, jointed thereto by the couplings K L L, with the coupling-bar G jointed thereto by the slotted clevises H H and pins or bolts *k k*, and with the side clevises M M, all constructed and arranged substantially as and for the purpose herein specified.

112,274.—CASE-SHOT.—Seth White Paine, Williamsport, Pa.

Claim.—A shot, A, having the form of a short cylinder, with its ends correspondingly doweled and recessed, substantially as and for the purpose specified.

112,275.—WASH-BOILER.—Thomas U. Parker, Mifflintown, Pa.

Claim.—The improved wash-boiler, formed by the combination with the vessel A, of the bottom *a* provided with the base *b c*, the ribs *d d*, tubes *e e*, and caps and rose-heads *f f*, all constructed and arranged as herein shown and described, to operate as specified.

112,276.—FIRE-ESCAPE LADDER.—William B. Peregoy, Baltimore, Md.

Claim.—In combination with the drum *b*, provided with the offset *f*, the jointed ladder, or its equivalent, as shown and described.

112,277.—SHOW-CASE FOR SPOOL-THREADS.—Alexander C. Phillips, Chicago, Ill.

Claim.—1. The combination of a glazed inclosing-case and a revolving reel of vertical wires, as and for the purpose specified and shown.

2. The combination of the vertical shaft B, carrying wheels C and E, with the wires D and springs G, substantially as described and shown, and for the purpose specified.

112,278.—LOCKING DEVICE FOR WINDOW-CORDS. — Charles R. Rand, Dubuque, Iowa.

Claim.—The locking device, consisting of the case E, pivoted lever U, rollers T T', pawls U', and springs V, all arranged and operating substantially as described, for the purpose specified.

112,279.—SPOKE AND FELLY-MACHINE.—David Reed and Thomas E. Pierce, Sullivan, Ind.

Claim.—1. The combination of the screws *f f* with cranks *e e* and plate *h*, for raising and lowering the felly-table K, substantially as herein set forth.

2. The slotted hub-table M, raised and lowered as described, and provided with the adjustable center block N, as herein set forth.

112,280.—NAIL-MACHINE.—Henry Reese, Baltimore, Md.

Claim.—1. The combination of the quadrant-blocks provided with transverse grooves *d'*, the dies *f*, and knife-edges m^1, substantially as shown and described.

2. The combination of the quadrant-blocks, provided with sliding boxes, the toggle-levers *g n*, connecting-rods *i*, arm *a'* and eccentric *y*, as specified.

3. The combination of the quadrant-blocks, collars *q t*, cogged sectors *r u*, crank *v*, connecting-rod *w*, and eccentric *y*, as described.

4. The arrangement of the toggle-levers *g n*, ties *e*, ribs *a*, rollers *f*, and boxes *h o*, as set forth

112,281. — INSULATOR FOR TELEGRAPH-WIRES.—Zenas C. Robbins, Washington, D. C.

Claim.—1. A new manufacture in the shape of an improved insulator for telegraph-wires, said manufacture being composed of two metallic portions of substantially the within-described shape, combined with and insulated from each other, substantially as herein represented and described.

2. The longitudinally-open and, at the same time, the retaining shape of the body *a* of the metallic supporting portion *a b* of my improved insulator for telegraph-wires, combined with and insulated from the wire-holding portion of said insulator, substantially as herein set forth.

112,282.—SAD AND FLUTING-IRON.—William D. Robertson, Knoxville, Tenn.

Claim.—1. The stand A, in combination with an invertible flat-iron, C, and a removable fluting-iron, B, substantially as and for the purposes specified.

2. The invertible flat or steaming-iron C, having a removable handle, D, with pivoted branch E, and provided with a slotted lug, C', ear F, and thumb-screw H, substantially as and for the purposes specified.

3. In combination with the invertible iron C, the thumb-screw H, when placed in the back of said iron, and employed to hold the heater in close contact with the face-plate when in an inverted position, as specified.

112,283.—SAFETY-PLUG ATTACHMENT TO STEAM-BOILERS.—Andrew Robes, Somerville, and John C. Chapman, Cambridgeport, Mass.

Claim.—The pipe B, leading from the interior of the boiler to the fire-box or furnace, and provided with a plug or disk of fusible alloy, in combination with an auxiliary pipe, D, communicating with a supply of water, operating substantially in the manner and for the purpose described.

112,284.—ICE-MACHINE.—Adolphe Rock, Boston, Mass.

Claim.—1. In an apparatus for cooling and freezing liquids, the employment of two or more "chargers" interposed between and connected with the condensing and evaporating parts of the apparatus, substantially as and for the purposes herein set forth.

2. The combination, in an apparatus for cooling and freezing liquids, of one or more "chargers," and the pump, fig. 3, interposed between and connected with the condensing and evaporating parts of the apparatus, for the purpose of rendering said apparatus automatic in its operation, substantially as set forth.

112,285. — PROCESS AND APPARATUS FOR CURING HIDES.—Adolphe Rock, New Orleans, La.

Claim.—1. The within-described compound or liquid, composed of the ingredients substantially as set forth.

2. The method herein described of preserving and curing hides, by means of immersing the same in a liquid composed of pyroligneous acid, glycerine, crystallized carbolic acid, and water, substantially as herein set forth.

3. The piston C, with sleeve D and hooks *a a*, constructed and arranged substantially as and for the purposes herein set forth.

4. The combination of the cistern A, shaft B, piston C, sleeve D, hooks *a a*, platform E, rollers G G', and a suitable mechanism for raising and lowering the piston, substantially as and for the purposes herein set forth.

112,286.—MODE OF MOLDING AND CASTING PIPE-ELBOWS.—George Ross, Newport, Ky.

Claim.—The mode of molding and casting pipe-elbows by a self-supporting core, when arranged and adapted to be operated substantially as herein described, and for the purpose set forth.

112,287.—SELF-LOADING SCRAPER.—Ansell P. Routt and John J. Keeton, Liberty Mills, Va.

Claim.—1. The hoes *f h*, operating as specified, in connection with the body A of the cart, which is arranged to oscillate on the axle B, substantially as shown and described.

2. The device, composed of the fixed arm or bracket *b*, and the rod *d*, provided with rigid arm *e* and handle *c*, arranged, as specified, in connection with the axle B and body A of the cart, to lock said body in the forwardly-inclined position, as specified.

112,288.—HARVESTER.—Jacobs W. Schuckers, Philadelphia, Pa., assignor to Jonathan W. Grubb, same place.

Claim.—The combination of the coupling-frame, the finger-beam hinged thereto, the pitman working in a guide in the coupling-frame, the cutter-bar, and the link-rod pivoted both to the pitman and cutter-bar, all these parts being constructed and operating as described, to insure the working of the cutters at varying inclinations of the finger-beam, as set forth.

112,289.—HARVESTER-RAKE.—Francis B. Scott, Lancaster, N. Y.

Claim.—1. The roller H, when provided with sliding bearings I, arranged with the rake-arms D, and tracks G^1 G^2, and operating substantially as hereinbefore set forth.

2. The combination of the shifting-bar J with adjustable roller H, and tracks G G^1 G^2, substantially as and for the purpose hereinbefore set forth.

3. The spring-guard N, arranged with the camway G G^1 G^2, and combined and operating with the adjustable roller H and shifting-bar J, substantially as hereinbefore set forth.

4. The combination, with the laterally-adjustable roller H, of the projection *o* and flanged guard *f*, as hereinbefore specified.

112,290.—STOVE-PIPE SHELF.—Jerome D. Scott, Friendship, N. Y.

Claim.—The combination of the two plates A A', connected together by means of arms a a' and screws s s, with the independent ring R, constructed of two segments hinged together at one end, and fastened at the other by the screw-bolt c, substantially as and for the purposes set forth.

112,291. — VAPOR-BURNER.—James Shay, Cincinnati, Ohio.

Claim.—The described arrangement of neck C, having the orifices I I' and e e', the nipple B, bar D, chamber E, and adjustable cap or cover F, for the purpose explained.

112,292. — NUMBERING AND PAGING-MACHINE. — Alpheus C. Sine, Cincinnati, Ohio.

Claim.—1. In connection with the pad or table B and inking-roller C, the swinging arms D D', when the arms are provided with swinging frame L, and revolving figure-disks P, as and for the purpose specified.

2. In connection with the swinging frame D D' E', frame L, and revolving figure-disks P, the pawl W, wheel S, disks R, springs r t, and retaining-pawls d, constructed and operating substantially in the manner and for the purpose specified.

112,293.-AUTOMATIC FAN.-Charles Bridges Smith, Griffin, Ga.

Claim.—The fan-motor herein described, consisting of the clock-work B', the vertically-vibrating rods C and E, the adjustable horizontal connecting-rod b, and the adjustable fan-slide E', when constructed and arranged to operate substantially as specified.

112,294.—COOLING, FREEZING, AND PRESERVING SOLIDS, LIQUIDS, AND GASES.—Daniel E. Somes, Washington, D. C.

Claim.—1. The process of preserving food, hides, or other animal or vegetable substances by the application of cold to tight vessels, in which the same are placed, and the conduction of the electricity therefrom, substantially as set forth.

2. The method of atomizing liquids by forcing them against wire gauze or its equivalent.

3. The atomizing device C C¹ D, in combination with the shaft A, substantially as set forth.

4. The elements in the preceding clause, in combination with the tank B, substantially as set forth.

5. The combination of the atomizing devices C C¹ D, shaft A, evaporating-tubes E, and blower F F¹, substantially as set forth.

6. The combination of the shaft A, box I², evaporating-tubes E, pumps C, air-chamber H h, and tubes h', substantially as shown in figs. 7 and 8.

7. The combination of the shaft A, atomizing devices C C¹ D, and condenser L, substantially as set forth.

112,295.—RUBBER TIRE FOR STEAM-CARRIAGES.—Louis Sterne, London, England.

Claim.—1. A wheel-tire, constructed of segmental blocks of India rubber, and secured to the rim of the wheel, as shown in figs. 1 to 4, and herein described.

2. In combination with the rubber tire B and rim D of the wheel, the staples G, secured by bolts, having a sliding motion in a radial direction in suitable guide-ways H H, substantially as herein shown and described.

112,296. — SAW-JOINTER FOR CIRCULAR-SAWS.—John H. Stevenson, Birmingham, Ohio.

Claim.—1. The segmental blade B, provided with a lip, h, and capable of two-fold adjustment, one upon its pivot, and the other out and in from the main stem, substantially as and for the purposes herein set forth.

2. The arrangement within the main stem A of the bent screw-rod a and nut b, for the purpose of adjusting the blade B, substantially as herein set forth.

3. In combination with the stem A and blade B, the slotted brace C, constructed and arranged substantially as and for the purposes herein set forth.

4. The combination of the stem A, screw-rod a, nut b, blade B, lip h, brace C, and bar D, all constructed and arranged to operate substantially as and for the purposes herein set forth.

112,297.—WASHING-MACHINE.—John Taylor, Philadelphia, Pa.

Claim.—The combination of the vessel C and its stationary rubber with the movable rubber, and with devices, substantially as described, for imparting a horizontal and intermittent reciprocating motion to the said rubber.

112,298.—STEAM AND HYDRAULIC PRESS.—John F. Taylor, Charleston, S. C.

Claim.—1. The method herein described of raising the platen by hydraulic pressure, when the latter is applied directly from the pistons of steam-engines through the medium of their piston-rods of unequal diameter, substantially as described.

2. The method herein described of passing live steam that has been used for one propulsion of the piston of a steam-cylinder around from the rear to the front of the piston, and then passing it to another cylinder to operate the piston therein.

3. The external chamber y, in combination with a steam-cylinder, in the manner described, and for the purpose of forming a cushion to prevent the concussion of the piston against the cylinder-head.

4. The method herein described of raising the platen by an initial hydraulic pressure applied with exhaust steam, and a completing hydraulic pressure applied with live steam.

112,299.—GRAIN-DRILL.—John H. Thomas, Springfield, Ohio, assignor to himself and Phineas P. Mast, same place.

Claim.—1. In combination with a cup, A, having its interior of a volute form, substantially as described, the feed-wheels B, having a groove around its periphery, substantially as set forth.

2. A feed-wheel, B, consisting of a cylindrical body, having journals, m, at each end, with radial flanges, e, having ribs, c, arranged radially on their inner faces, substantially as described.

3. The seed-cup A, having its opposite sides provided with holes I to form bearings for the journals of the feed-wheel or the shaft, and having the gradually-increasing and laterally-projecting ledge l formed thereon concentric with holes I, substantially as herein set forth.

112,300, antedated February 18, 1871.—HEDGE-TRIMMER.—James M. Vannosdall and Oliver W. Vannosdall, Newark, Ill.

Claim.—The combination of the projecting frame A and pivoted frame B with the rock-shaft O and cross-piece L, substantially as and for the purpose specified.

112,301. — CONSTRUCTION OF WOODEN BOXES.—William F. Veber, Perrysburg, Ohio, assignor to S. P. Tolman and C. C. Roberts, same place.

Claim.—A wooden box sewed in one or more places, substantially as and for the purpose set forth.

112,302.—PLOW.—Harvy Washburn, Pultney, N. Y.

Claim.—The beam D, mold-board A, land-side B, standard B', brace-rods E F, in combination with the handles A', when the handles are on a line with the beam at the heel of the mold-board, as set forth.

112,303, antedated February 25, 1871.—CLOTHES-PIN.—Hiram J. Wattles, Rockford, Ill.

Claim.—1. A clothes-pin, provided with a supplemental spring-clamp for grasping the line, as described.

2. The pin described, with its parts a a and spring b b', when constructed specifically as shown and described, for the purpose set forth.

112,304.—FRUIT-PRESS.—Gabriel J. Wells, South Vineland, N. J., assignor to John W. Snyder.

Claim.—1. The double lever c c', constructed with central longitudinal apertures, and arranged in connection with the ratchet-bars k k and the plunger-rod A, in the manner specified.

2. The combination of the lever c' with the block having convex ends, and with a guide-way for said block, as described.

3. The arrangement of the ratchet-bars k k, guide-block l, dogs m, and weighted levers n, all constructed and operating substantially as set forth.

112,305.—CARTRIDGE.—Rollin White, Lowell, Mass.

Claim.—The combination of the cartridge-case and cap herein described, one provided with an annular tongue and the other with a groove, all substantially as set forth.

112,306.—PAPER BOX.—John Warren Wilcox, New York, N. Y.

Claim.—The paper box herein described, that is, provided with the strengthening central overlap e at the sides, as set forth, and also the closing laps g, h, and f f, cut and folded, as and for the purposes specified.

112,307.—UMBRELLA.—James Willis, Stockbridge Works, Near Sheffield, England.

Claim.—1. The constructing an umbrella with a runner, which is opened, and held open, (at the time when the umbrella is opened,) by means of strips of metal or springs, connected at one end to the ribs, and at the other end to the fabric forming the gutter, as herein described.

2. The umbrella runner, constructed with the sides of its slot strengthened by doubling the metal, substantially as before set forth.

112,308.—SEWING-MACHINE.—William C. Winters, Rochester, N. Y.

Claim.—The arrangement, in connection with a cloth-supporting bed, having needle-hole or groove and feed-openings, as shown, of the feeding-dog, having the feeding-points e¹ and e² and guide g, all as described.

REISSUES.

4,277.—HAT. — John P. Beatty, Norwalk, Conn.—Patent No. 68,116, dated March 23, 1869; antedated February 2, 1869; reissue No. 3,855, dated March 1, 1870.

Claim.—1. A ventilator for hats, consisting of corrugated or crimped wire, substantially as described.

2. The ventilator or corrugated wire F, when attached to the leather or sweat E, as a new article of manufacture.

3. A hat having its sweat secured in place by a wire, arranged and attached in a zigzag form between its lower edge and the body of the hat, and so as to leave its upper edge loose, substantially as herein shown and described.

4,278.—GLOVE.—Remus D. Burr, Kingsborough, N. Y.—Patent No. 80,707, dated August 4, 1868.

Claim.—1. In a glove or mitten, the palm portion or inside of the hand and the thumb, formed from a single or continuous piece, so united to the back portion that no seam shall be presented between the thumb and palm portion on the inside, substantially as described and shown.

2. The said continuous palm or inside piece, when extended to form the whole of the fore-finger, substantially as described.

3. The back piece, fig. 2, formed with a projecting gore-shaped piece, which fits into and forms the junction between the base of the fore-finger and thumb, substantially as and for the purpose specified.

4. As an article of manufacture, a glove formed of the palm piece, fig. 1, back, fig. 2, finger piece, fig. 3, and thumb piece, fig. 4, the several parts being shaped and united as shown and described, whether the wrist portion be extended to form a gauntlet or not.

4,279.—STEAM-ENGINE.—Philip Estes, Leavenworth, Kansas.—Patent No. 108,576, dated October 25, 1870.

Claim.—1. A variable cam, formed of two parts, S T, arranged and operating to move the cut-off point forward or backward, in the manner described.

2. A steam-supply chamber, C, and an exhaust-chamber, D, on opposite sides of a piston-cylinder, A, having inlets e e, outlets d d, and piston B, all combined as described, with double-headed valves F G, the one operating differentially, and the other always at full stroke, for the purpose specified.

4,280.—FOLDING-CHAIR.—Francis March Holmes, Boston, Mass. — Patent No. 111,455, dated January 31, 1871.

Claim.—1. The seat, as connected to its back-supporting rung F by double-jointed hinges G, and provided with one or more stops, H, to sustain it against the front rung E, such seat being to fold over the front rung and down in advance of it, as set forth.

2. In the folding-chair, the combination of the band I with the seat and its supporting-rungs E F, and one or more stops, H, and with the three-leaved hinges G fixed to the seat and the back rung F, all being substantially as described.

3. In a folding-chair, as made or composed of a back, D, a seat A, and two crossed sets of levers, B B' C C', pivoted together substantially as set forth, the seat A arranged and combined with the longer set of levers or a rung thereof, and a seat-supporting rung, E, of the shorter set of levers, in manner so that such seat, during the act of folding the chair, shall move or slide forward on or over and drop more or less below or in front of the said rung E, so as to have the top or sitting surface of the seat in front of and the bottom surface of the seat next to the said rung E, as described, the same being in order to show the upholstered or sitting surface of the seat in front with the front of the back of the chair when the chair is folded.

4. A folding-chair, composed of a back, D, two sets of crossed levers B B' C C', and a seat, A, arranged and combined so that when the chair may be folded the supports of the seats shall be between the seat and the back, substantially as represented.

5. A folding-chair, composed of a back, D, two sets of crossed levers, B B' C C', and a seat, A, arranged and combined substantially as described, so that when the chair may be folded the supports of the seat shall be between the seat and the back, and the chair be self-sustaining, as set forth, when its four feet may be resting on a floor, as explained.

4,281. — HARVESTER. — Henry F. Mann, Pittsburg, Pa., for himself and as assignee of Jacob J. Mann.—Patent No. 15,044, dated June 3, 1856; extended seven years.

Claim.—1. The guiding plate G arranged upon the front rail or finger-bar, over which the forward edge of the apron E extends, and under which the

guiding pieces *c* pass, substantially as and for the purpose described.

2. The bar or plate H at the back of the platform, arranged with its edge above the apron, in combination with the front guiding plate G, having its edge below the apron, substantially as described.

3. In combination with a conveying and elevating apron, having the top and bottom cleats affixed thereon, the recessed roller for giving a positive motion thereto, as and for the purpose described.

4. The stationary concave receiver I, having a continuous surface, arranged as described, at the side of a harvesting-machine having an elevated side delivery, so as to receive the cut grain from the elevating and delivery apparatus, and collect the same into gavels preparatory to their being discharged from the machine.

5. The revolving rake J, in combination with the stationary concave receiver I, having a continuous surface, as and for the purpose described.

4,282.—BREAST-PUMP. — Morris Mattson, New York, N. Y.—Patent No. 85,318, dated December 29, 1868.

Claim.—The combination, with a vacuum-glass, of an elastic exhausting bulb, A, having or employing a single valve or valvular apparatus located at the end of the bulb furthest from the vacuum-glass, substantially as and for the purposes set forth.

4,283.—LOCK-NUT.—John Miller, Jr., Marshalltown, Iowa.—Patent No. 106,927, dated November 1, 1870.

Claim.—The combination of the elongated plate a convex on its outer surface, the bolt C, and nut I concave on its inner surface, and the spring E, substantially as and for the purpose hereinbefore set forth.

4,284.—LAMP.—Albert H. North, Hartford, Conn., assignor to Rufus S. Merrill; said Merrill assigns two-thirds of his right to William B. Merrill and Joshua Merrill, Boston, Mass.—Patent No. 23,483, dated April 5, 1859.

Claim.—The employment in lamp-burners, for the purpose of raising and lowering the wick or wicks therein contained, of two or more ratchet or spur-wheels, arranged to impinge upon or engage with said wick or wicks, and geared to move in unison to effect the raising and lowering of the same, substantially as herein shown and described.

4,285.—SPRING FOR BEDS, &c.—Charles Rich, Poughkeepsie, N. Y., assignor to the Metallic Union Spring Company, same place.—Patent No. 106,980, dated August 30, 1870.

Claim.—1. The bearings B, constructed and arranged upon the upper and lower coils of the spiral springs, in the manner and for the purposes herein described.

2. The clasps or sleeves C, constructed and combined with the bearings B, so as to form a hinge-joint and allow the structure to be rolled or folded together, substantially as and for the purpose set forth.

3. The rod D, attached to the clasps or sleeves C, in combination with the coiled springs A, substantially as set forth.

4,286.—MODE OF SECURING SPRINGS IN UPHOLSTERY.—Wendell Wright, New York, N. Y.—Patent No. 16,254, dated December 16, 1856; extended seven years.

Claim.—1. The bed-bottom, cushion, or seat, whose upper slat or plate is supported by the upright springs only, as set forth.

2. The spring A, secured to its seats B B by having annular grooves *c* made in the seats, one in each, and having the greater portion of the coils at the ends of the spring made or bent in a horizontal form, and somewhat larger in diameter than the grooves *c*, substantially as and for the purpose herein shown and described.

DESIGNS.

4,676.—SCREEN.—William N. Bartholomew, Newton Centre, Mass.

Claim.—The design for drawing-charts, as herein shown and described.

4,677.—DRAWER-PULL.—Pietro Cinquini, West Meriden, Conn., assignor to Parker & Whipple Company.

Claim.—1. The design for a drawer-pull, as shown.

2. The design for the box-like elevation C C, as shown.

4,678.—DRAWER-PULL.—Partrick J. Clark, West Meriden, Conn.

Claim.—The design for a drawer-pull, as shown in the drawing.

4,679.—CARPET-PATTERN.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,680.—CARPET-PATTERN.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,681.—CARPET-PATTERN.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,682.—CARPET-PATTERN.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,683.—CARPET-PATTERN.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,684.—CARPET-PATTERN.—Jonathan Crabtree, Philadelphia, Pa., assignor to Horner Brothers, same place.

Claim.—The design for a carpet, as shown.

4,685.—CARPET-PATTERN.—Jonathan Crabtree, Philadelphia, Pa., assignor to Horner Brothers, same place.

Claim.—The design for a carpet, as shown.

4,686.—STOCKING FABRIC.—Thomas Dolan, Philadelphia, Pa.

Claim.—The design for a fabric for cotton hose, substantially as described and illustrated in and by the accompanying drawing.

4,687. — WINDOW-SASH HOLDER.—Cassius M. Drury, Granby, N. Y.

Claim.—The herein-described design for a sash-fastener.

4,688. — BED-QUILT.—Frederick William Eger and Henry H. Kunze, Philadelphia, Pa.

Claim.—The design for the configuration of a bed-quilt, consisting of the series of blocks A B, subdivided by crosses *c d*, and alternating with each other, as shown.

4,689.—SUGAR-BOWL, &c.—John H. Hobbs, Wheeling, W. Va.

Claim.—1. The design, encircled by the band B C D, consisting of the sheaf of grain.

2. The design, consisting of band or shield B C D, and the sheaf A arranged within such band or shield.

3. The design shown in the drawing, consisting of a series or succession of bands or shields, and sheaves of grain arranged within such bands or shields.

4,690.—SCHOOL-SEAT.—William H. Joeckel, New York, N. Y.

Claim.—1. The design for the legs or standards of a school-seat or bench, as shown.

2. The design for the side pieces or back-support of a school-seat or bench, as shown.

4,691.—OIL-CLOTH PATTERN.—Henry Kagy, Philadelphia, Pa., assignor to Thomas Potter, Son & Co.

Claim.—The design for an oil-cloth, as shown.

4,692.—WINDOW-FASTENER.—William Nelson, Anderson, Ind.

Claim.—The design herein shown and described for a window-sash fastener.

4,693. — REFLECTOR. — August Wilhelm, Philadelphia, Pa.

Claim.—The design for a reflector herein shown and described.

TRADE-MARKS.

175. — GLUE. — Baeder, Adamson & Co., Philadelphia, Pa.

176.—BEER.—Benjamin Bates, Baltimore, Md.

177.—CHICCORY.—Blume & Co., New York, N. Y.

178.—LOCKS AND HARDWARE.—Hillebrand & Wolf, Philadelphia, Pa.

179.—SHIRT.—Lewis Levi, New York, N. Y.

180.—WHISKY.—Vidvard & Sheehan, Utica, N. Y.

181.—SEWING-MACHINE.—Wheeler & Wilson Manufacturing Company, Bridgeport, Conn.

ISSUE OF MARCH 7.

PATENTS.

112,309.—HOSE-SPRINKLER.—William Anderson, San Francisco, Cal.

Claim.—The supplying-pivot with alternate holes and spaces, in combination with the rotating collar B, fitted to said pivot, with alternate holes and spaces, so as to cut off and renew the supply of water alternately as the collar revolves, and sprinkle the entire area within its reach around the pivot instead of a single track.

112,310.—LOCOMOTIVE SPARK-ARRESTER.—Joseph G. Armstrong, New Brunswick, N. J.

Claim.—1. The spark-arrester herein described, having a wide space between the internal casing M and the outer casing D, with provision, as specified, for inducing a descending current therein and throwing down the sparks, while the gases without sparks are drawn inward at the base of the casing M and carried upward again, as set forth.

2. The simply conical director or spreader M, turning the ascending current outward without turning it downward, when arranged, as represented, relatively to the casings M and D and to the top piece D', the latter being formed, as shown, to arrest and smoothly turn into the space between M and D the outer portion of the current rising near the axial line of the structure, as set forth.

112,311.—TOOL FOR CARRIAGE-MAKERS' USE.—George Atkinson, San Francisco, Cal.

Claim.—1. The adjustable tool-holder C, provided with dovetail grooves *d*, substantially as and for the purpose above described.

2. The bar A, in combination with the tool-holder C and wedge or key *b*, substantially as and for the purpose above described.

3. The gauge or fender E, provided with the guard *f*, and secured upon the tool-holder C by means of the set-screw *e*, in the manner and for the purpose above described.

112,312.—POTATO-PROBE.—John A. Beal, Waterford, N. Y.

Claim.—The within-described potato-probe, consisting of a cutting-tube open at both ends, and provided with a handle on one end, as set forth.

112,313.—HINGE FOR CARRIAGE-DOORS.—George W. Beers, Bridgeport, Conn.

Claim.—The combination of the socket C with orifice D and arm F, the lever part of the latter curved downward at an angle to correspond with the depression of the socket, and furnished with a pintle, G, all arranged as described.

112,314.—STOVE-LEG.—James Birckhead, Jr., Baltimore, Md.

Claim.—A stove-foot fastening, composed of the lugs B B, arm C, and its shoulder D, and the self-locking spring-bolt or key E passing through the lugs B B and against or behind the shoulder D, the whole constructed, arranged, and operating together, substantially as and for the purpose described and represented.

112,315.—CLOTHES-PIN.—Orris A. Bishop, Chicago, Ill.

Claim.—The clothes-pin, constructed as described, having the ends *a a'* bent into triangular loops, carrying the rollers *b b*, and having the ring *c* passed around the coil A, for the purposes specified.

112,316. — MANUFACTURE OF ROCHELLE SALTS AND BORAX.—Victor G. Bloede, Brooklyn, N. Y.

Claim.—The mode herein described for the purification of Rochelle salts or borax-lye by the application of blood, substantially in the manner and for the purpose herein set forth.

112,317.—BEE-HIVE.—Felix Brewer, Waynesville, Mo.

Claim.—The roof-shaped bars L L' I, in combination with the brood-chamber A a a' O O' and the detachable honey-chamber B b b' N N' P P', as and for the purposes described.

112,318.—THILL-COUPLING.—Theodore Burr, Battle Creek, Mich., assignor to Allen Muir and Henry Muir, same place.

Claim.—A thill-coupling, substantially as set forth and described in this specification.

112,319.—EVAPORATING-PAN FOR SACCHARINE LIQUIDS.—Francis G. Butler, Bellows Falls, Vt., assignor to himself and James B. Williams, Glastonbury, Conn.

Claim.—An evaporating-pan, having corrugs

tions running across the whole width of the bottom, in combination with a system of scum-arresters, forming elevated compartments upon the flaring sides, substantially as and for the purpose set forth.

112,320.—Door-Securer.—William H. Caldwell, Wheeling, W. Va.

Claim.—A portable door-fastener, consisting of the elastic plate A with the aperture *e* therein, studded plate B, and bar D, substantially as and for the purpose herein set forth.

112,321, antedated March 2, 1871.—Toe-Calk Bar.—Ralph B. Caswell, Springfield, Mass.

Claim.—The bar for toe-calks, constructed, as described, of steel center-piece A and iron side plates B D, the parts being formed, combined, and arranged substantially as shown.

112,322.—Glass-Flattening Furnace and Leer.—James Clabby, Lenox, Mass.

Claim.—1. In combination with the flattening and annealing ovens, the railway, shifting-table, and tracks, (placed between such ovens,) and the cooling-oven, into which the cars are alternately run, substantially as described.

2. The piling-box or car, made with provision for piling the sheets vertically, and so that the several piles shall stand independently each from the other, substantially as described.

3. In combination with the flattening and annealing-ovens, the cooling-oven, made with a series of compartments in line, and separated each from the adjacent ones by a damper or dampers, substantially as shown and described.

4. In combination with the main furnace and the flattening-oven, the arch g^3, forming, with the roof, a flue extending directly over the oven, said flue extending down the opposite side of the oven from the furnace, and opening into the oven through the openings, substantially as shown and described.

112,323.—Spring Bed-Bottom.—Alexander Cole, Manamuskin, N. J.

Claim.—1. The combination of the vertical strip A, having an inwardly-projecting seat, B, the fixed guide-rods D, bent, as shown, and secured in the said strip and seat, and coiled springs surrounding the guide-rods, as and for the purpose set forth.

2. The same, combined with slats E when the latter are made with notches or slots open at their ends, as shown and described, and permitting the removal and insertion of the slats without moving the rods.

3. The combination, with the fixed rods, the springs, and slats, of the removable strip, cord, or strap F, inserted between the upper face of the slats and the horizontal part of the guide-rods, as and for the purpose described.

4. The combination, with the bent wire-rods C, and with the spiral springs, tapering from the top toward the middle, of the tubular conical pieces H, as and for the purpose set forth.

112,324.—Water-Wheel.—Edward E. Coleman, West Cummington, Mass.

Claim.—1. The cylinder A, having the floats B B arranged upon the outside, in a curve unbroken from end to end, and in a curve constantly increasing from their tops to their lower ends, forming a wheel, to receive the water at its top, the parts being all constructed and arranged substantially as shown and described.

2. The arrangement and construction of the gates *t*, hinged at one side of their centers, and at the ends of the pieces *o o*, &c., and having the shields *g*, the whole being constructed and arranged as shown and described.

112,325.—Toy-Horse and Carriage.—John B. Cuzner, Bridgeport, Conn.

Claim.—1. The combination of the carriage-body, the hind wheels fixed thereto, the reach, the front wheels and axle pivoted to the reach, the driving mechanism, and the horse mounted on the front axle, all these parts being constructed and operating as set forth.

2. The combination of the carriage, the horse, its pivoted legs, and the mechanism to propel the toy and move the legs of the horse, all these parts being constructed to operate substantially as set forth.

3. The combination of the double crank-shaft, he horse, its pivoted legs, the trace-rods connecting the crank-shaft and the front legs of the horse, and the rods extending inside the body of the horse from the front legs to the hind legs, all these parts being constructed to operate as set forth.

4. The combination of the pivoted legs and pivoted feet, constructed and operating as set forth.

112,326.—Mackerel-Line Holder.—Ebenezer L. Decker, Southport, Me.

Claim.—The combination of the strip *a*, cleat *g*, cap *c*, annulus *f*, and spring *e*, substantially as herein described and for the purposes herein set forth.

112,327.—Sewing-Machine.—Joseph William Dufour, Stratford, Conn.

Claim.—The combination, with the slotted plate A, of the adjustable nut C, guide-pin B, and friction-roller D, substantially as described.

112,328.—Steam-Boiler.—Edward Evans, North Tonawanda, N. Y.

Claim.—1. The furnace F and water-jacket F', arranged with the smoke-chamber D, and in front of the main boiler or boiler proper, as hereinbefore set forth.

2. The arrangement, with the direct-flue B and man-holes *p*, of the transverse water-pipes H H, with a space B', left between each two rows of pipes, as hereinbefore shown and described.

112,329.—Medical Compound for Cure of Catarrh and Asthma.—Erastus Field, Ostrander, Ohio.

Claim.—The herein-named combination of ingredients, or their equivalents, for the purposes and in the manner set forth, substantially as described.

112,330.—Machine for Grinding the Cutters of Mowers, &c.—Henry Clay Fisk, of Wellsville, N. Y.

Claim.—A hand instrument for grinding reaper-teeth, provided with a flat stone, K, and having the shaft *d* of said stone K coincident or parallel with the plane of the crank-wheel G, and forming an angle with the connecting-shaft or main-bar, substantially as and for the purpose specified.

112,331.—Machine for Making Hooks and Eyes.—Jeremy Taylor Ford, San Francisco, Cal.

Claim.—1. The combination of the forming-plates L and P with their grooves and the curves *a a*, together with the sliding plates M and N, the incline O, and the punch Q, the whole operated substantially as and for the purpose herein described.

2. The combination of the sliding plate M and the loosely-attached inclined plane O with its springs N', or equivalent device, to raise the plate N and drop it behind the bight of the wire, substantially as herein described.

3. The combination of the sliding carriage *d* with the plates *c* and the peculiarly-shaped lever *e*, together with the vibrating bifurcated arm *g*, lug A, stub A', and the cam *f*, operating as described.

4. The combination of the bed-plate *r* with its gradually-curving sides, the pointed shouldered rods *i i*, and the curved rod *k*, together with the spring-bar *n* and bar *j*, for forming the eyes, substantially as herein described.

5. In combination with the main shaft B and the reciprocating-bar W, the two sets of feeding devices and the two sets of forming devices herein described.

112,332.—Churn.—Thompson Freeman, Westfield, Ill.

Claim.—The reciprocating frame, consisting of the bent bar *e*, with handle and shoulder-piece *h*, having the strap *f*, in combination with the drum *g*, rod *i*, dasher-handle *j*, connected by pin *u*, and churn A, for the purpose of obtaining a combined reciprocating and rotary motion of the dasher, substantially as described.

112,333.—Attachment for Revolving Mold-Boards for Plows.—Joseph S. Godfrey, Leslie, Mich., assignor to himself and Sears M. Loveridge, Pittsburg, Pa.

Claim.—1. The arrangement of the standard *d*, shank *c'*, and eye *c* with the box *a* and mold-board *a*, with suitable connections to the plow-beam, substantially as set forth.

2. The arrangement of the hollow standard *d* to admit the shank *c'*, with eye *c*, shank *c'*, and plow-beam *b*, substantially as described.

112,334.—Grain-Cleaner and Fertilizer-Sifter.—James A. Green, Mill Dale, Va.

Claim.—In the grain-cleaner and fertilizer-sifter herein described, the arrangement of the shifting shoe with the hopper V and spout V', eccentric L, adjusting-wheel T, and windlass R and cords S, when constructed and operating as shown, for the purpose set forth.

112,335.—Screw-Propulsion.—Erastus C. Gregg, Trumansburg, N. Y., assignor to Alexander H. Gregg and Chauncy P. Gregg, same place.

Claim.—The arrangement and combination of the whole, consisting of the anterior chamber or chambers, the funnel-shaped contractions, and the separated rear vents, as set forth.

112,336.—Seeding-Machine.—Philip M. Gundlach, Belleville, Ill.

Claim.—1. The hooking or latching devices M, pivoted to the rocking-beam bearings L of the longitudinally-shifting hoes, and applied to loops *p* on the stationary beam E, substantially as and for the purposes described.

2. The rope or chains *s s*^{1}, connected respectively to the latching device M and to an arm, *s*^{2}, rising from rocking beam F, and extending back to the rear of the machine, substantially as described.

3. The grain-conductor G^2, pivoted directly or indirectly to the drill-hoes, and supported above upon pins or rollers *d'* on bearings *d*, substantially as described.

4. The serrated or roughened surface *v* on the plate, beneath the valve or cut-off *b'*, over which surface the seed-slide moves, whereby the grain is prevented from escaping from the hopper except when discharged by the movements of the seed-slide, substantially as described.

5. The combination of the pivot *g*^{1} and the removable pin or key *g*^{2} with the drill-tubes, all constructed substantially as described.

112,337.—Compound for Kindling Fires.—Joseph L. Hannum and Samuel H. Stebbins, Berea, Ohio.

Claim.—The herein-described fire-kindler, when composed of the several ingredients specified, or their equivalents, substantially as described, and for the purpose set forth.

112,338.—Lawn-Mower.—Benjamin Harnish, Lancaster, and David H. Harnish, Pequea, Pa.

Claim.—1. The arrangement and combination, in a hand-mower, of alternate bill-hooked and star-pointed sickles I I', with their beaters *i i i i*, revolving horizontally over a circular row of radiating guards K, sustained by hangers L, in the manner specified.

2. In combination with the central disk and beaters *i*, the loose cylinder S surrounding the shaft H, when resting on the sickle-disk, in manner and for the purpose set forth.

112,339, antedated February 25, 1871.—Composition for Pavements.—Charles B. Harris, New York, N. Y.

Claim.—A composition for paving, flooring, and roofing, composed of steatite and clay, together with mica or micaceous rocks, crushed or pulverized, and mixed with asphalt, as herein described and set forth.

112,340.—Spring for Vehicles.—John R. Hiller, Woodland, Cal.

Claim.—1. The semi-elliptic wooden springs D, resting upon and secured to the reaches C, as described, and having their united ends provided with a slot, *e*, and secured to the plate *f*, or equivalent device, by the bolt *h*, substantially as and for the purpose above described.

2. The wooden springs or braces J, in combination with the boxes H and India-rubber buffers *i*, substantially as and for the purpose above described.

112,341.—Harvester-Rake.—Solomon T. Holly, Rockford, Ill., assignor to John P. Manny, same place.

Claim.—The combination of the reel revolving on a fixed stud, the rake rotating on a shaft eccentric to and passing through the reel-hub, and a link connecting the rake-arm with the reel-hub, all these members being constructed and operating substantially as set forth, so as to dispense with guides, cams, or gearing.

112,342.—Door-Clamp.—Henry O. Hooper, Diamond Springs, Cal.

Claim.—The upper and lower sets of worm-wheels G upon their respective screw-rods F, together with the shaft I and the worms H, when constructed to operate upon the posts C of the clamp, substantially as and for the purpose described.

112,343.—Taper-Holder.—Thomas W Houchin, Morrisania, N. Y.

Claim.—The combination of the tube A, yoke D, and spring E, when the same shall be constructed and operate substantially as and for the purpose set forth.

112,344.—Metallic Garter.—Henry A. House, Bridgeport, Conn.

Claim.—1. A garter, composed of dissimilar metals, substantially as described, and for the purpose set forth.

2. The combination of metallic stay-strips *c*, clasp-plates, and springs, substantially as described.

112,345.—Bobbin-Winder.—Henry A. House, Bridgeport, Conn.

Claim.—The within-described improved bobbin or spool-winder, consisting of the hand-wheel G, frame-section A *b* B *d*, hinged together at *g a*, spindle S, wheel C, and clamp-screw J, the said parts being constructed and arranged as shown.

112,346.—Method of Knitting Stockings, &c.—Henry A. House, Bridgeport, Conn.

Claim.—1. The method herein described of producing two or more stockings or socks in continuous lengths, when the two or more are made separable by a draw-thread introduced, during the process of knitting, between the ends of one and the selvedged top of the next, all as specified.

2. As a new manufacture, the continuous knit-work for forming two or more complete stockings,

made divisible by means of a draw-thread, b, and which, when divided, will leave each stocking with a selvedged top, as herein set forth.

112,347, antedated March 1, 1871. — APPARATUS FOR EVAPORATING AND CONCENTRATING LIQUIDS.—John Howarth, Salem, Mass.

Claim.—1. The combination of the boiler A, pipe D, and cistern G, substantially as described.

2. The combination of the boiler A, pipe D, cistern G, and column B, substantially as described.

3. The column B, having perforated bottom H and perforated vessel K, and cap F, as and for the purpose set forth.

4. The combination of the injector P, pipe S, boiler A, pipe D, cistern G, and column B, substantially as described.

5. The combination of the last combination with the pipes E E' and tank C, substantially as described.

6. The tanks C, constructed in compartments C^1 C^2 C^3, connected by siphon-pipes V V', and having pipes, O, running through the bottom, substantially as described.

7. The combination of the tank C, constructed substantially as described, pipe n, and column B, by which means I precipitate the impurities contained in the hot liquid to be evaporated, and whereby this liquid is purified before passing to and through the evaporating column, thus securing the greatest economy of the evaporating agent.

8. The combination of the steam and the waste products of combustion, and by the means substantially as described, for heating and evaporating liquids.

9. The process described, whereby I am enabled to use the heat from the waste products of combustion twofold; that is, in heating the liquid in tank C, and in evaporating or concentrating the same liquid when passing through the column B, the porous filling of which is first heated by the products of combustion passing through the coke or other agent on its way to the pipes in the bottom of tank C, substantially as described.

112,348, antedated March 1, 1871.—APPARATUS FOR EVAPORATING AND CONCENTRATING LIQUIDS.—John Howarth, Salem, Mass.

Claim.—1. The combination of tank B, injector K, and boiler A, substantially as described.

2. The combination of pipes or heaters F, connected as shown, pipes R T, and boiler A, substantially as described.

3. The combination of tank B, having divisions C, D, and E, connected by siphon-pipes n o, heaters F, and pipes R T.

4. The mode of utilizing the condensed steam used to charge the heaters F F, by returning the same to the boiler, after it has done its work, by the means substantially as described.

5. The mode of employing the waste products of combustion, by means of injector K, in the partial evaporation of liquids in pans or divisions C and D, and completing the evaporation in the division E by the employment of the balance of steam generated through heaters F, substantially as set forth.

112,349.—APPARATUS FOR REMOVING OIL FROM VEGETABLE AND OTHER MATTERS. Elias S. Hutchinson, Baltimore, Md.

Claim.—1. In combination with a separator for evaporating the chemical from the material treated, and a condenser for receiving the chemical, a treating vat, arranged to allow a portion of the chemical to be drained or dipped before the contents are discharged for drying.

2. A vat constructed and arranged to allow chemical to rise through the meal or other material, the mingled oil and chemical to flow off at top, and then the chemical to be drained off or partially drained off at bottom, and the treated material to be subsequently discharged without exposure to the air until the chemical has been separated therefrom by evaporation, substantially as explained.

3. A vat having a perforated bottom, diaphragm, a drip-pipe, and any arrangement for discharging the contents without exposure to the air.

4. A vat having, in connection with a discharge-opening or openings at or near the bottom, a rake, screw, or other mechanical appliance for discharging the treated material into a receptacle or drying apparatus, substantially as described.

5. The gate-valve G, or any substantially-equivalent valve or gate, kept up to its seat by openings to prevent the entrance of meal between the valve and seat, as set forth.

6. The eccentric K, in combination with the gate-valve G or its equivalent, substantially as described.

7. In combination with any arrangement of vats or receptacles for treating vegetable or other matter with a chemical for removing oil, an apparatus for separating the chemical by evaporation, having a conveyer or conveyers for moving the meal over heated surfaces, and afterward discharging it therefrom, without external openings through which vapor will escape.

8. An apparatus by which meal is conveyed over a heated surface by a mechanical contrivance such as will move the meal along a fixed course and discharge it at a desired point or points, in combination with oil-extracting vats and vapor-condenser of any suitable form.

9. The relative arrangement of the separator and condenser, substantially as described, with the latter chiefly or wholly below the level of the former, for the purposes explained.

112,350. — APPARATUS AND PROCESS FOR REMOVING OIL FROM GRAIN, SEEDS, &c. Elias S. Hutchinson, Baltimore, Md.

Claim.—1. The portable dumping-vat herein described, having a cap which can be opened sufficiently to allow the free discharge of the meal or contents, and yet be withdrawn with the vat, substantially as set forth.

2. The vat, having perforated diaphragms at bottom and top, and inlet and outlet-pipes, constructed to be moved with a derrick or windlass, substantially as shown.

3. The hopper, constructed to receive the contents of the vat, or a greater or lesser portion thereof, and having a screw-conveyer, substantially as set forth.

4. In combination with any apparatus for separating chemical from vegetable or other matter by evaporation, and afterward recovering it by condensation, one or more vats, arranged to be upset into a receptacle provided with a screw-conveyer, or its equivalent, to feed it into the separator.

112,351.—CHANDELIER.—Charles F. Jacobsen, New York, N. Y.

Claim.—1. In a double-cone reflecting-chandelier, having pipe rings or tiers of light, with flanges and glass pendants, the supplementary branch-lights c n, constructed and arranged substantially as described.

2. The spider or radiating pipes, so arranged as to form supports for the double-cone reflector and convey gas to the branch-lights without obstructing the rays of reflected light, substantially in the manner set forth.

3. In combination with a double-cone reflecting-chandelier, having pipe-rings, with flanges and glass pendants, the truncated diaphanous cones and chimneys B C and b b, constructed and arranged substantially as hereinbefore set forth.

112,352.—CULINARY VESSEL.—Carrie Jessup, New Haven, Conn.

Claim.—The herein-described cooking utensil or boiler A, constructed with two or more compartments within the same vessel by the divisions B C, and each compartment provided with its independent cover E, as and for the purpose specified.

112,353.—MACHINE FOR CUTTING LEATHER. Aberdeen Keith, North Bridgewater, Mass.

Claim.—1. The arrangement and combination of the pivoted feed-board B^2 with the conical rollers E F, the cutting-knife M, arranged with them, as specified.

2. The arrangement and combination of the pivoted feed-board B^2 with the conical rollers E F, the cutting-knife M, and mechanism as described, or its equivalent, for adjusting, substantially as and for the purpose as explained, the declination of the knife in accordance with the variation of the distance between the feed-rollers.

3. The arrangement and combination of the ledge B^3 and gauge E^3 with the pivoted feed-board B^2, the table or platform A^2, the conical rollers E F and their operative mechanism, and the knife M.

4. The arrangement and combination of the ledge B^3 and the gauge E^3 with the pivoted feed-board B^2, the table or platform A^2, the conical rollers E F and their operative mechanism, and the knife M, and mechanism as described, or its equivalent, for adjusting, substantially as and for the purpose as explained, the declination of the knife in accordance with the variation of the distance between the feed-rollers down to the varying thickness of the leather while passing between them.

112,354. — ATTACHING KNOBS TO THEIR SPINDLES.—John F. Keller and Nathaniel Sehner, Hagerstown, Md.

Claim.—The plate provided with a screw-threaded cylindrical aperture, and the rose-plate, constructed in two parts, and so connected as to revolve together, in combination with the flanged shank of the knob and the spindle, substantially as shown and described.

112,355. — MITER-MACHINE.—Theodore E. King, Boston, Mass.

Claim.—1. The horizontal guide I, extending longitudinally along the blade of the saw, substantially as and for the purpose set forth.

2. One or more looped springs L, in combination with the guide I, substantially as and for the purpose set forth.

3. The combination of the horizontal guide I, one or more springs, L, and the guide-frame G, with the centrally-pivoted table D, operating substantially in the manner and for the purpose described.

112,356.—TAKE-UP FOR CORSET-LOOMS.—Julius Kuttner, New York, N. Y.

Claim.—1. The rollers d, having yielding surfaces of bristles or their equivalents, to form a take-up in a loom for weaving corsets or gored articles, substantially as set forth.

2. The rollers d, having surfaces of the character specified, in combination with the pins e, bar b and loom for weaving corsets and similar gored articles, all arranged and operating as set forth.

112,357.—ELEVATOR AND CARRIER.—Timothy W. Lackore, Worth, Ill.

Claim.—1. The adjustable or swinging frame, consisting of the rails A, secured to the end pieces B, the latter being pivoted to their supports, substantially as set forth.

2. The combination of the swinging frame with the truck D, provided with the wheels a, the pulley b, and dog c, all constructed and arranged to operate substantially as described.

3. The dog c, provided with the arms g and d, and so pivoted to the rails a that it can be adjusted thereon to hold the truck at any desired point, substantially as set forth.

4. The trip, consisting of the arms m m, hinged to a central block having a hole through it for securing it to the rope, and having a set-screw, o, or its equivalent, whereby the trip may be adjusted higher or lower thereon, substantially as described.

112,358.—APPARATUS FOR BURNING HYDROCARBON OILS.—James R. Lee, Grass Valley, Cal.

Claim.—1. The independent pans D, with their supply-tubes a, and the regulating-boxes F, constructed and operating substantially as and for the purpose herein described.

2. The perforated pipe K, placed in the furnace as shown, with the perforations on the rear side so arranged as to direct the steam backward, and thus, by creating a partial vacuum, to cause the flame to tend in that direction, substantially as and for the purpose set forth.

112,359. — BURGLAR-ALARM.—Robert Lee, Cincinnati, Ohio.

Claim.—In combination with the laterally-yielding bolt A, forming a fastening and detent or trigger, as described, the hammer or percussor H, with its sear or heel G and spring J, for throwing and locking the said bolt and sounding the alarm, constructed and operating substantially as shown and set forth.

112,360.—TELEGRAPH APPARATUS.—Landy Tunstall Lindsey, Jackson, Tenn.

Claim.—1. The arrangement of levers L L', adjusting-screws i i' i'' i''', and the electrical conducting-wires connecting therewith as traced, in conjunction with toothed wheel W and spring N, or their equivalent, for causing an automatic movement of printing-lever L'', in the manner as described.

2. The arrangement of a lever, a, adjusting-screw m, post Q, having proper electrical conducting-wires connecting therewith, controlled and operated in the manner as described, and for purposes set forth.

3. The combination of lever L'', rubber roller I, magnets E E', controlled and operated as described, for giving the impression of the type to the paper.

4. The combination of the bar A, arms f f' thereon, rollers G H, arms n, adjusting-screws g g', constituting an adjustable feed movement for the paper, and controlled by the magnets E E', lever L'', and adjusting-screws p p', in the manner described.

112,361.—HARVESTER.—John Pells Manny, Rockford, Ill.

Claim.—1. The combination of the driving-wheel, tongue, gear-frame, movable driver's seat, hinged finger-beam, grain-wheel, the link K, and the lever L, in front of the axle, all these parts being constructed for joint operation, as set forth.

2. The combination of the tongue hinged to the main axle, the gear-frame vibrating on said axle, the finger-beam hinged to the gear-frame, the grain-wheel, the lifting-lever on the tongue, and the link-rod K, connecting the lever with a post on the finger-beam and crossing the joints of the tongue, the gear-frame, and the finger-beam, all these members being constructed and operating in combination, substantially as described.

112,362.—HARVESTER.—John Pells Manny, Rockford, Ill.

Claim.—The combination of the driving-wheel, tongue, gear-frame, movable driver's seat, hinged finger-beam, grain-wheel, the link G', and the lever secured to the finger-beam and crossing both its joint and the main axle, all these parts being constructed, as set forth, for joint operation.

112,363. — HARVESTER-RAKE. — John P. Manny, Rockford, Ill.

Claim.—1. The combination of the reel, rotating continuously on a horizontal axis with the continuously-rotating rake mounted on an axis intersecting that of the reel, and inclined backward and upward at an angle acute to the finger-beam, these parts being constructed and operating in combination substantially as hereinbefore set forth.

2. The combination of the horizontal reel-hub or shaft, the bevel-gear r', mounted thereon and concentric therewith, the rake-shaft, inclined at an angle acute to the reel-shaft, and the bevel-gear r', mounted on and concentric with said rake-shaft, all these parts being constructed to operate in combination, substantially as hereinbefore set forth.

112,364.—Cheese-Curd Sink.—Homer C. Markham, Collinsville, N. Y.

Claim.—A cheese-curd sink, having its bottom beveled toward the center and provided with the longitudinal channel B, the perforated metallic or wire-gauze strainer A, the aperture t, and funnel C, all constructed and arranged as described, and for the purpose set forth.

112,365. — Mowing-Machine.—Homer C. Markham and Dewitt C. Markham, Collinsville, N. Y.

Claim.—The combination of the flexible connection F G H with the cutter-bar E and frame C C', the several parts being constructed and arranged to operate as heretofore set forth.

112,366, antedated March 3, 1871.—Propeller.—Alexander J. Marshall, Warrenton, Va.

Claim.—The paddle G, formed and hinged as shown, and its cross-head F, the uprights H H, with their projections H' H' and their grooves *f f*, when each is constructed and all are arranged and combined substantially as and for the purpose described.

112,367. — Oiler. — Edward McDuff and Emory D. Forrow, Warwick, R. I.

Claim.—The combination and arrangement of the inclined tube E, annular air-chamber C C, annular opening I, and tube F, as shown, and operating substantially as described.

112,368. — Wash-Boiler.—John McInnes, Oxford, Pa.

Claim.—1. The combination of the plate A, tubes *g g g*, collars C C, detachable tubes B *b*, and detachable spray-tube D, all constructed as described, when said tubes B *b* are provided with openings *o'* corresponding to openings *o* in the collars, and with sockets *e e* adapted to receive the prongs of a lifting-fork, E, substantially as and for the purposes herein set forth.

2. In connection with a detachable and removable spouting apparatus, having a plate, A, and tubes B B, and adapted to be used in any common wash-boiler, as described, the application of sockets *e e* to the walls of the tubes B B, for the purpose of receiving the tines of a lifting instrument, substantially as herein set forth.

112,369, antedated February 25, 1871.—Propelling Canal-Boats. — Harrison B. Meech, Fort Edward, N. Y.

Claim.—The tube B, in combination with the inductions B' B' and wheels C and F, constructed and operating substantially as set forth.

112,370. — Water-proof Compound for Coating Cloth, Wood, Metals, &c.—Peter E. Minor, Schenectady, N. Y.

Claim.—The manufacture or preparation of the compound denominated "Minor's air and water-proof compound," of the ingredients substantially in the manner and for the purposes set forth.

112,371. — Cooking - Stove.—William N. Moore, Neenah, Wis.

Claim.—1. The plate I, when constructed and operating substantially as specified.

2. The combination of the flues R and L and damper O with the chamber G, plate I, and the flue or box J K, substantially as described.

112,372.—Boring-Machine.—John Henry Pardieck, Acton, Ind., assignor to himself and Samuel M. Brown, same place.

Claim.—1. The boring and spoke-tenoning machine, composed of the vertically and horizontally adjustable table J, provided with the movable rest K, boring apparatus B C D E F G, hub-holder Q *e e* R, and spoke-holder S T V, all constructed and arranged substantially as and for the purpose set forth.

2. The vertical rod Q, provided with nuts *e e*, and fixed in the adjustable bar R, in combination with the boring apparatus specified in the first clause of claim, and the spoke-holding device, composed of the vertically-adjustable plate S, arms T, and link V, arranged substantially as and for the purpose set forth.

112,373. — Vapor - Burner. — Robert W. Park, Philadelphia, Pa.

Claim.—1. The dome F and its perforated flange G, substantially as shown.

2. The tube C and the distributing-rod D, as shown.

3. The tube C, rod D, and the inner dome E, as shown.

4. The dome F, perforated flange G, and the clutch H, as shown.

112,374.—Machine for Pointing Blanks for Cultivator-Teeth.—John Pedder and George Abel, West Pittsburg, Pa.

Claim.—In a machine for cutting and pointing wrought-metal blanks, a pair of movable dies, each such die having a double-beveled cutting-edge coming to a point, *e'*, and a die-face extending therefrom of a form suitable for pointing the blank, in combination with top and bottom die-plates *h h'*, which prevent the vertical spread of the metal, but permit the plate and blank to move longitudinally while the cutting is being done, substantially as described.

112,375.—Bale - Tie. — James E. Perkins, San Francisco, Cal.

Claim.—A bale-tie, A, having the folding ends *c* and *d*, in combination with an open rectangular link *e* and the loop *f*, when constructed and operated substantially as herein described.

112,376.—Lining Walls with Felt, &c.—James Phillips, Chicago, Ill.

Claim.—The lining A, composed of felt, tarred paper, or other equivalent non-conducting material, placed between the different layers of a brick, stone, or concrete wall, for the purpose specified.

112,377.—Cooking-Stove.—Samuel Pierce, Boston, Mass.

Claim.—1. The sliding plates *a a*, when arranged to slide under the reservoir S, as and for the purposes hereinbefore described.

2. The combination of the cooking or fuel-chamber *u*, the fire-chamber *w*, the hinge or deflecting-plate *d*, the inclined or curved front plate *c*, the rear grate *g*, and the bottom-grate *h*, all constructed and arranged to operate as and for the purposes set forth.

3. The combination and arrangement of the fire-box *w*, feeding-chamber *u*, and register *v*, all constructed and arranged as and for the purposes hereinbefore set forth.

112,378, antedated February 25, 1871.—Tack.—Asahel A. Porter, New Haven, Conn.

Claim.—As a new article of manufacture, a tack, constructed as described, with a point, bent head, and flange, as set forth.

112,379.—Machine for Shaping and Cutting Gear-Cutters.—Francis A. Pratt, Hartford, Conn., assignor to "The Pratt & Whitney Company," same place.

Claim.—1. The combination of the templet O, lever K, adjustable fulcrum L, sliding carriage and tool-carrier H, with the slide G, substantially as described.

2. In combination with the subject-matter of the first claim, the slide D E and head-stock A B, substantially as described.

3. The combination of the templet O, lever K, adjustable fulcrum L, slide G, sliding carriage H, with the stand Q and milling-tool spindle *h*, substantially as described.

4. In combination with the slide G, sliding carriage H, stand Q, spindle-carriage shaft *h*, the double-jointed radius bars, the pulleys, support R, and head-stock A B, substantially as described.

112,380.—Combination Camera and Developing-Box.—Eneas C. Ratzell, Philadelphia, Pa.

Claim.—1. The combining of the camera and developing-box in such manner as described, as a new article of manufacture.

2. The combination called the carrier, and the mode of placing the dipper and ground glass therein, the whole to be used in the manner and for the purpose set forth.

3. The arrangement of the camera and bath receptacle in such a manner as described, for use and purpose set forth.

4. The tank for holding the developer and water in the manner and for the purpose set forth.

5. The placing of the pliers in the center of the door, for the use and in the manner set forth.

6. The manner of arranging the eye-hood so that the head can be tightly placed thereon without the difficulty of fastening it to the head, the whole to be used in the manner and for the purpose set forth.

112,381. — Punching - Machine. — J. C. Rhodes, South Abington, Mass.

Claim.—The combination of the cams *w* and *z*, or their equivalents, the intermittently-reciprocating slide *c*, operated thereby, the bed *g*, feed-roll *e*, shafts *j* and *n*, ratchets *i*, *k*, and *k'*, pawls *p* and *s*, and the punch or punches, the whole arranged in relation to one another and operating substantially as described.

112,382.—Washing - Machine.—John W. Ricker, Chelsea, Mass.

Claim.—1. A socket or bearing, L, composed of two pieces, *h i*, applied to the shaft of a washing-machine, in combination with an elastic band, I, operating substantially in the manner and for the purpose set forth.

2. The base B, formed in two pieces, *c d*, pivoted together and applied to a washing-machine, substantially in the manner and for the purpose described.

112,383. — Curtain - Fixture. — Charles Robin, Chester, Conn.

Claim.—The herein-described curtain-fixture, consisting of the chambered-plate A, constructed with the perforation *a*, bearing *d*, and V-shaped slits *e*, substantially as specified.

112,384.—Machine for Making Printers' Leads.—Isaac Schoenberg, New York, N. Y.

Claim.—The combination of the shouldered rolls B and C, the movable and interchangeable collar I, adjustable collar D, cap J, and set-screw H, substantially as described.

112,385.—Slide-Valve for Steam-Riveting Machines.—Coleman Sellers, Philadelphia, Pa., assignor to William Sellers & Co., same place.

Claim.—1. The combination, with a steam-riveting-machine, of the balanced equilibrium-valve L, constructed and operating substantially as and for the purpose described.

2. The combination of the openings 1' 2' 3', the connecting-duct *d*, the recesses *e e*¹ *e*², and the ducts or hollow bosses *f f f*¹ *f*² *f*³, substantially as and for the purpose described.

112,386.—Machine for Polishing Thread.—Samuel Semple, Sr., John Semple, Samuel Semple, Jr., and Robert A. Semple, Mount Holly, N. J.

Claim.—The combination, in a drying and polishing-cylinder, of the brushes *a a* and the grooved rollers or sections of rollers *b b*, constructed as shown, substantially as and for the purpose specified.

112,387. — Paint - Brush. — Frederick S. Shearer, Washington, Ill.

Claim.—The cylindrical or oval expanding spiral spring C, with its corresponding hollow cylindrical or oval base, in combination with the cone D, either circular or oval, the cup or shell B, either cylindrical or oval, with its socket *b*, screw *d*, handle A, and bristles E, substantially as and for the purposes described.

112,388.—Bee - Hive.—Samuel Archabald Short, Fredrick Jackson Short, John Bunion Short, and Jasper Kile, Decatur, Ala.

Claim.—1. In a bee-hive, comb-frames and honey-frames constructed substantially as herein described, so that the honey-frames will be within the upper ends of the comb-frames, as set forth.

2. The combination of the end pieces A A, bars B C C, bottom D, comb-frames E *b*, honey-frames G *d f*, glass plate *e*, and lid H, all constructed and arranged substantially as and for the purposes herein set forth.

112,389.—Apparatus for Removing Oil from Vegetable and other Matters.—Thomas Sim, Baltimore, Md.

Claim.—1. The inclined vats A A, &c., constructed, arranged, and operating substantially as and for the purpose specified.

2. The combination and arrangement of a series of inclined vats, as herein described, with an evaporating-cylinder, substantially as and for the purposes set forth.

112,390.—Retort for Producing Bisulphide of Carbon.—Thomas Sim, Baltimore, Md.

Claim.—1. The cleaning-out pipe A, provided with a vapor-tight cap or cover, in combination with a retort, constructed and operated substantially as herein described.

2. In combination with a retort and its connections, as herein described, the grate D, substantially as and for the purposes specified.

3. In combination with a tube, B, for introducing materials into the body of a retort, the hinged cover *b''* and forked lever or collar *b'*, substantially as and for the purposes specified.

4. In combination with a retort and its appendages, constructed and operating substantially as herein described, the arrangement of an interior and exterior wall, forming fire and air spaces above the furnace I, substantially as and for the purposes described.

112,391.—UTILIZING THE SILKY DOWN OF THE WILD COTTON. — Michael Hodge Simpson, Boston, Mass.

Claim.—1. The hereinbefore-described method of treating the *Asclepias* fiber or seed-down, as explained, such being for combining it, under circumstances as stated, with one or more other fibrous matters, as mentioned, and subsequently subjecting the mixture to the operations of a picker and a carding-engine.

2. The improved article or fibrous composition, made of the materials and in the manner as set forth.

112,392.—PRUNING SHEARS.—Frank Smiley, Batavia, N. Y.

Claim.—The arrangement, with the knife B and bearing A, provided with a flat face, of the cutter-blade D, having a beveled edge, *d*, arranged back of the face of the bearing B, so as to insure a slanting and easy cut, as hereinbefore set forth.

112,393.—WATER-CLOSET VALVE.—Alfred J. Smith, San Francisco, Cal.

Claim.—The compressing-spring G and cylinder D, in combination with the valve *b* and stem K, when these several parts are arranged and operated substantially as and for the purpose set forth.

112,394.—GANG-PLOW.—James W. Suras, San Leandro, Cal.

Claim.—The axles C and D, arms F and G, and link H, in combination with a single lever, I, when constructed to regulate the depth of the furrow without leaving the seat, substantially as described.

112,395.—GRINDING-PAN AND AMALGAMATOR. — William H. Thoss, West Point, Cal.

Claim.—1. In combination with the pan constructed as described, the revolving arms *f* and the mullers *e*, constructed wedge-shaped or tapering toward the front or inside, while the outside is so curved as to fit the inner periphery of the rim *b*, substantially as and for the purpose set forth.

2. In combination with the revolving arms *f*, the mullers *e*, when constructed wedge-shaped or tapering toward the front or inside, while the outside is so curved as to fit the inner periphery of the rim *b*, substantially as and for the purpose described.

112,396. — STREET-LANTERN. — Augustus Tufts, Malden, Mass.

Claim.—In combination with the cone-chimney *b*, and with the cylinder *c* and its air-openings or passages *e*, the shield or guard-cylinder *g*, when the parts are all constructed and relatively arranged substantially as shown and described.

112,397.—COOKING-STOVE.—Alvin Warren, Swanton, Ohio.

Claim.—In a cooking-stove, the arrangement of the oven H behind the smoke-flue, and on top of the stove, the triple flues F F F, the triple-winged damper F′, and the drying-chamber E, as specified.

112,398.—SAFETY-BRIDLE.—James Weatherhead, San José, Cal.

Claim.—In combination with the face-straps *d d* and side-straps *g*, the ring *f*, and single rein or strap D, and lines B B, substantially as and for the purpose above described.

112,399.—FIRE-GRATE.—George Wellhouse, Akron, Ohio.

Claim.—1. The revolving ring H, in combination with the stove A, substantially as and for the purpose set forth.

2. The combination of the ring H and web or blower I, in the manner as and for the purpose set forth.

3. The bar F, having a projecting oblique lug, G, for the purpose specified.

4. The ring H, blower I, and damper J, as arranged, in combination with the stove A, and operated in the manner as and for the purpose set forth.

112,400. — HAY-KNIFE.—George F. Weymouth, Dresden, Me.

Claim.—The improved hay-knife above described, consisting of the curved blade A, having knife-edged serrations B and handles C C placed as shown, all substantially as specified.

112,401. — CLAW-BAR. — Charles Winter, Chillicothe, Ohio.

Claim.—The combination, substantially as described, of the claw-bar A *a* B, recesses or sockets C C′, duplex claws D D′ *d d′* E, and retaining device F, for the purpose described.

112,402. — STEAM-GENERATOR. — John C. Woodhead, Pittsburg, Pa.

Claim.—1. A quadrangular steam-generator, constructed of sectional boxes, forming the walls of the furnace, and having its opposite sides connected by tubes, substantially as described.

2. In combination with the above, a furnace-crown, consisting of a series of cellular metallic boxes so arranged and connected that the steam arising from the furnace cellular walls will pass through the same, the said crown being fully in contact with the heat from the furnace, substantially as and for the purpose described.

3. In combination with the above, a furnace-crown, composed wholly or partly of cellular plates or cellular boxes, so relatively arranged with the furnace-walls that the steam arising therefrom will pass into said crown, substantially as and for the purpose set forth.

112,403. — ANIMAL-TRAP. — William D. Wrightson, Queenstown, England.

Claim.—The combination of the suspended tripping detent or stop *b* with the projecting lip *c* of the platform B, and the suspended self-setting guide-arm *d*, arranged and operating as described.

112,404. — BRUSH.—John Ames, Lansingburg, N. Y.

Claim.—The handle A, slotted side cars B, plate C, and bristles D, combined as described to form an improved sash-brush.

112,405.—CLOD-FENDER.—Fortune L. Bailey, Freeport, Ind.

Claim.—The construction of the head-block A, with mortise or cavities, into which the rods or slats are put, and made secure by set-screw, wedge, or rivet, that they may be moved or taken out at will, in combination with the rods, and for the purpose set forth, or its equivalent.

112,406.—RULER.—Hugh S. Ball, Spartanburg, S. C.

Claim.—The case A, spring *d*, and detachable end sleeves *e e*, combined, as described, with the blotter-roll B, to allow of its ready removal and replacement with new blotting-paper, as described.

112,407.—FANNING-MILL.—Benjamin Barney, Time, Ill.

Claim.—The fanning-mill herein described, having the suction-spout H, chest box J, air-passages K, riddle C, fan D, eccentric F, rock-shaft *g′*, and adjustable hinge G, all constructed substantially as described, and combined and arranged for operation in the manner and for the purposes set forth.

112,408.—ICE-CUTTING MACHINE.—Lafayett Barnum, Bridgeport, Conn., assignor to himself and A. R. Hale, same place.

Claim.—1. The driving-shaft *d*, crank and cam-shaft *e*, in combination with frame *a*, feed-foot *n*, and saw S, arranged and operating, as specified, to actuate the saw and at the same time propel the machine.

2. The feed-shoe *m* with adjustable steel toe, in combination with lever *k*, hinge-joint, and spring *g*, arranged as described, to compensate for curved motion of lever *k*, for the purpose specified.

3. The adjustable propelling-cam *i*, in combination with shaft *e*, lever *k*, feed-shoe *m*, and saw S, arranged as shown, to vary the length of cut.

112,409.—MANUFACTURE OF ICE.—Thomas J. Bigger, Kansas City, Mo.

Claim.—An ice-house, constructed as described, of double sides A A, sliding roof B, and iron bottom or floor C, for freezing ice, substantially as herein set forth.

112,410, antedated February 28, 1871.—MACHINE FOR HEADING BOLTS AND SPIKES. Reinhold Boeklen, Brooklyn, N. Y., assignor to himself and Henry Torstrick, New York city.

Claim.—Jointly, the application direct of the upsetting or heading die to the extremity of one of a pair of toggle-jointed bars, and the combination with said device of a crank and connecting-rod or other equivalent mechanism to operate said toggle-jointed bars in the usual manner, for the purpose of imparting to the die simultaneously a forward and a rolling movement, the former to stave up and compress the metal, the latter to reduce and spread the staved-up portions into the proper shape, substantially as described.

112,411.—WASHING-MACHINE.—Joseph Boswell, Levi M. Boswell, Jonathan Palmer, and Jonathan H. James, Wilmington, Ohio, assignors to themselves and Thomas Starbuck, same place.

Claim.—1. The combination of the vertical, corrugated, rubbing-board N and the cylinder J, carrying the radial wings K, when said wings are extended to bear against the rubbing-board, substantially as described, for the purpose specified.

2. The washing-machine, consisting of the box A, divided into two compartments, B C, by the partition D, the hinged cover, the removable dasher H, the cylinder J, having the radial India-rubber wings K, and the vertical rubbing-board N, all arranged and operating substantially as and for the purposes specified.

112,412.—WATER-WHEEL.—Ellery C. Boyles, New York, N. Y.

Claim.—1. The case A, constructed with a raised outer hollow rim, *c*, having a transverse section of an inverted V or similar shape, with alternately-disposed openings or passage-ways *d*, for the water through the opposite sides of said rim, substantially as specified.

2. The annular gate C, of an inverted V or similar shape in its transverse section between its peripherical rims *e* and *f*, and provided on opposite sides, between said rims, with alternately-arranged openings *i* and alternately-disposed chutes *h*, constructed to direct the water downwardly, forwardly, and in reverse lateral directions, essentially as herein set forth.

3. The hollow buckets *m*, set to incline upwardly in a forward direction, and made pointed at their upper ends, in combination with the raised hollow rim of the case A, essentially as described.

112,413. — COTTON-PRESS. — Rhodom M. Brooks, U. S., Ga.

Claim.—1. In the cotton-press herein described, the lever M and rope, in combination with the screw I, as shown and described, for the purposes set forth.

2. The arrangement of the bed E of the bale-box upon a single bottom timber, A, as herein set forth.

3. The combination of the screw I with one or more longitudinal grooves, *a*, collar J with one or more feathers, *b*, with or without the driver K, nut G, and top timber B, all substantially as and for the purposes herein set forth.

112,414.—PAPER-CUTTING MACHINE.—Samuel Brown, Philadelphia, Pa., assignor to himself and Cephas R. Carver, same place.

Claim.—1. The construction and arrangement of the rods G G, stub-ends H H, spheres B B and F F, yokes L, shaft D, and cranks E E, as and for the purpose herein specified.

2. The bar M of the clamping-frame, having a series of rectangular-shaped recesses N N N, in combination with the screw-shaft T, plate Q, arms R R R, plate O having openings P P P, and set screws S S, substantially as set forth.

3. The yoke L, constructed as herein shown, and applied in the socket of a ball-joint, substantially as set forth.

112,415.—GOVERNOR FOR DIRECT-ACTING ENGINES.—Adam S. Cameron, New York, N. Y.

Claim.—The mechanism, substantially such as herein set forth, whereby the steam-piston of a direct-acting engine is caused to partially or wholly close the throttle-valve whenever the stroke of said piston increases beyond the desired limit.

112,416.—GOVERNOR FOR DIRECT-ACTING ENGINES.—Adam S. Cameron, New York, N. Y.

Claim.—The mechanism, substantially as herein described, for regulating or stopping the supply of steam to the steam-cylinder of a direct engine, according to the greater or smaller speed of the piston, by the action of the said piston against a tappet or tappets extending in the interior of the cylinder, said tappet or tappets being connected with or acting on the throttle-valve in the manner substantially as set forth.

112,417.—BUTT-HINGE.—John W. Carleton, New Britain, Conn., assignor to the Union Manufacturing Company, same place.

Claim.—In the manufacture of butt-hinges, the pintle, previously prepared by roughening or equivalent devices, and inserted into the hinge after the two parts are set together, substantially in the manner described.

112,418.—MACHINE FOR CUTTING SHEET METAL.—Charles R. Choate, East Saginaw, Mich.

Claim.—The arrangement of the treadle J, two bars E, two cranks *b*, shaft *d*, balance-wheel I, two bars H, two arms G, and the movable rocking cutter-head E, substantially as described.

112,419.—BIT-BRACE.—William Cleveland, Lawrence, Mass., assignor to himself and James Swan, Seymour, Conn.

Claim.—The head B and body A, united by the stud *a d*, set into a corresponding recess in the body A, and so as to turn freely therein, substantially as and for the purpose herein set forth.

112,420. — STEAM-ENGINE GOVERNOR.—Charles A. Condé, Indianapolis, Ind.

Claim.—The segmental-toothed cams *d*, applied to the ball-arms of a governor, and connected with

the toothed tapering block *a* on the valve-rod, substantially as herein shown and described.

112,421.—CARPET-CLEANING MACHINE.—John Crew Craft, Baltimore, Md., assignor to himself and Antonio Rocello, same place.

Claim.—The arrangement of the carrying-belts *b'*, cords *b*, vibratory beaters, and rotatory brushes, as specified.

112,422.—STEAM-REGULATOR FOR PAPER-DRIERS.—Daniel Crosby, Hampden, Me.

Claim.—A safety-valve arranged substantially as described, with reference to the pipe by which steam is conducted from a boiler to the driers of a paper-machine, or any other vessel that communicates with the boiler, as to regulate by its movements the admission of steam to such vessel, allowing only enough to pass to maintain a constant quantity within the latter.

112,423.—METALLIC PISTON AND VALVE-ROD PACKING.—George M. Cruickshank, Providence, R. I.

Claim.—1. The improvement in metallic packing for piston and other similar rods, consisting of the segments B and C, corresponding in form, having parallel sides, and of a width sufficiently less than the diameter of the rod with which they are to be used to prevent their contact while compensating for their continuous wear, and at the same time to practically surround the rod, substantially as shown and described.

2. The segments B, C, F, and G, in combination with the guide-blocks D, E, H, and I, all provided with springs, arranged and operating as described.

112,424, antedated February 25, 1871.—GRAIN-THRASHING AND SEPARATING MACHINE.—John Culham, Grand Rapids, Mich.

Claim.—1. The combination, with the seive G, of the agitating-bars H and I, moving in opposite directions, substantially as herein described.

2. In combination with the seive G, of the endless belts N and P and the partition O, substantially as herein described.

3. The combination and arrangement of the endless belt P, elevator Q, and vibrating-chute R, substantially as and for the purposes set forth.

4. The arrangement of the hand-wheel W, endless screw U, and cog-wheel V, in combination with the rod Y and eccentrics *s s*, when used for the purposes herein described.

112,425.—COOKING-STOVE.—David Curtis, Mishawaka, assignor to himself and C. B. Graham, South Bend, Ind.

Claim.—The revolving drum D, in combination with the interior revolving shelf or shelves, substantially for the purpose set forth.

112,426.—LIGHTNING-ROD.—Sylvanus D. Cushman, New Lisbon, Ohio.

Claim.—1. A lightning-rod, composed of three or more iron wires, and three or more copper wires, said iron wires being laid together to form the body or core of the rod, and said copper wires being arranged between the iron wires on the outside of the rod, in such a manner as that an iron wire is interposed between any two adjacent copper wires, as is hereinbefore specified.

2. A lightning-rod, composed of three or more iron wires and three or more copper wires, said iron wires being coated with zinc or tin, and being laid together to form the body or core of the rod, and said copper wires being arranged between the iron wires on the outside of the rod in such a manner as that an iron wire is interposed between any two adjacent copper wires, as is hereinbefore specified.

112,427.—HOSE-BRIDGE.—Patrick Daily, New York, N. Y., assignor to himself and John J. Kehoe, same place.

Claim.—The improved hose-bridge, consisting of a pair of short rails, each composed of the grooved and tapered wood bar A and iron bar D, and provided with points E or I, connected by levers arranged for withdrawing them; also provided with the points K, connected by links, all substantially as specified.

112,428.—COVER FOR OPENINGS IN SIDEWALKS.—William Dale, New York, N. Y.

Claim.—1. The combination of the metallic dish A A^1, bull's eyes A^2, and wooden block C, or other non-slippery material, used as a filling for the cavity of the dish between and around the bull's-eyes, substantially as set forth.

2. In combination with the vault-cover composed of the parts A A^3 C, the openings A^4, near the periphery of the dish A, and surrounding the non-slippery filling C, substantially as and for the purpose set forth.

112,429.—ROTARY-PUMP.—Francis Oliver Deschamps, Philadelphia, Pa.

Claim.—1. A pump, in which are combined the following features, namely, an annular chamber, a piston adapted to the same and connected to a shaft arranged to revolve concentrically as regards the chamber, a sliding-head to move across or recede from the said chamber, and suction and discharge-valves and passages, all being arranged substantially as described.

2. In a pump, the sliding head M, adapted to a recess, *f*, in the casing, and operated by a rod, *g*, or its equivalent, in such a manner that it shall be caused to move across and recede from the annular chamber B', as set forth.

3. The said sliding head, when operated by a cam, *h'*, on the driving-shaft, through the medium of a spring-bar, P, and rod *g*, substantially in the manner described.

4. The combination and arrangement, substantially as described, of the inlet-branch H, semicircular passage B, annular chamber B', through which a piston traverses in one direction, and outlet-passage C.

5. The casing of the pump, consisting of plates A and A', bolted or otherwise secured together, and having formed between them the semicircular passage B, annular chamber B' communicating with the same, and recess *for* securing the edges of the disk G.

112,430.—MACHINE FOR CUTTING FILES.—James Dodge, Manchester, England, assignor to David Blake, Spencertown, N. Y.

Claim.—1. The combination of the presser h, link *l*, and weighted foot-lever *e*, for the purpose of steadying and elevating the presser at will.

2. The combination of the carrier *x*, grooved and otherwise constructed as described, the chisel *y*, provided with the pin, as set forth, and with or without the rubber springs *z z*.

3. The combination of the carrier *x* with the hammer by means of the slotted adjustable piece *v*, in the manner described.

4. The arrangement of the carrier within the recess in the end of the presser-lever, and of the bent lever *u* connected to said presser-lever, and designed to confine said carrier within said recess, as described.

5. The combination of the carrier *x* and chisel *y*, the pieces *v* and *a'*, the adjustable wedges *b'* and *c'*, and the hammer, all as and for the purposes set forth.

6. The combination of the moving pattern *f*, arm *j*, eccentric *i*, connection *k*, lever *l*, and screw *m*, for the purpose of automatically increasing and diminishing the tension of the spring *g*.

112,431.—COUPLING FOR RAILWAY CARS.—Henry Dübs and Sampson George Goodall-Copestake, Glasgow, Great Britain.

Claim.—1. The diagonal coupling-bars 6 and 7, pivoted within the lugs 10 of the detachable curved frame ends or abutments 2 and 3, arranged and operating together, as herein shown and described.

2. The transversely-movable and detachable metallic frame ends or abutments, applied to the ends of a car or locomotive in the manner herein shown and described.

112,432.—TOBACCO-PIPE.—Patrick J. Dwyer, Elizabeth Port, N. J.

Claim.—1. The herein-described pipe, constructed with the enlarged shank B, in which is the chamber *c*, the mouth of which terminates beneath the stem C, and provided with plug *e*, all arranged as shown.

2. In combination with the above, the passage *a*, when communicating with chamber *c* by means of passage *b*, said passage inclining inward to the center of the pipe, as shown, and for the purpose described.

112,433.—BASKET FOR HOUSE-PLANTS.—Albert P. Eastman, Washington, D. C.

Claim.—The basket for house-plants herein described, consisting of the rigid frame *c d*, and the movable sections *f*, substantially as and for the purpose specified.

112,434.—SULKY-PLOW.—Milo A. Elliott, Stratford Hollow, N. H.

Claim.—1. The arm J, projecting laterally beyond the plow, and following in the rear thereof, for the purpose of preventing the sod from falling back into the furrow.

2. The application of the downwardly-projecting and rearwardly-curved arm P to the cross-bar E of a plow-frame, for the purpose of balancing the machine and enabling the plow to run with uniform steadiness.

112,435.—STRETCHER FOR PAINTINGS.—James Fairman, New York, N. Y.

Claim.—1. The joining-plate C, provided with the rib *a*, and applied to a stretcher, substantially as herein shown and described.

2. The forked wedge D, combined with the joining-plate C, to straddle the same when spreading the stretcher, as specified.

112,436.—BODY LANTERN-HOLDER.—Samuel C. Fessenden, Stamford, Conn.

Claim.—A body lantern-holder, consisting of the pad A A, provided with the pocket C, match-case K, and straps H I F G, as and for the purposes set forth.

112,437.—STOVE-LEG.—Amon L. Finch, Sing Sing, N. Y.

Claim.—The stove-leg shank *b* and dovetail lugs *c c*, made in substantially the manner specified, for the reception of the transverse tapering key *d*, as set forth.

112,438.—PUMP-PISTON.—John S. Follansbee and George Doolittle, Bridgeport, Conn., assignors to the Forrester Manufacturing Company, same place.

Claim.—In combination with the tube or piston-rod A B, and piston *a b*, constructed with an annular groove, the cylinder C with its annular flange *c* corresponding to the said groove in the piston, in the manner substantially as herein set forth.

112,439.—SHOE.—Samuel W. Francis, Newport, R. I., assignor to himself and William Harrison Newton, same place.

Claim.—1. An overshoe or other covering for the foot, made of rubber, cloth, or other suitable material, combined with a spring united with the same, and arranged around or partly around the opening in the shoe, to operate substantially in the manner shown and set forth.

2. An overshoe or other covering for the foot, having a yielding or collapsible heel or rear portion, combined with a spring extending wholly or partly around and united with the upper part of the same, substantially as and for the purposes shown and described.

3. In combination with the collapsible heel and its recoil spring, arranged together as described, the stud or projection for facilitating the operation of drawing off the shoe, substantially as set forth.

112,440.—GUARD-FINGER FOR HARVESTERS.—George Fyfe and Chester Hard, Ottawa, Ill.

Claim.—The mode of attaching the steel plate A to the finger, by means of the dovetailed groove C in the finger, and the dovetail shank or tongue on the plate B, substantially as described.

112,441.—DINING-TABLE.—Samuel R. Garner, Independence, Iowa, assignor to himself and S. M. Marquett, same place.

Claim.—1. In combination with the slides C D E, the slats G H on the top, and the slats K on the leaves of the table, substantially as and for the purposes herein set forth.

2. In combination with the slides C D E, the levers L, arranged substantially as shown and described, and for the purposes herein set forth.

3. The combination of the slides C D E, legs I I, bars J J, slats G, H, and K, and levers L L, all constructed and arranged as described, and used in connection with a leaf-table, substantially as and for the purposes herein set forth.

112,442.—STEP-LADDER.—M. Boland Geary, New York, N. Y.

Claim.—The side pieces A A of the step-ladder, slit for the greater part of their length to form three strips, *a b c*, the outer ones, *a b*, being bent outwardly, and the inner one, *c*, laterally thereto, forming a triangular or compound truss, substantially as shown and described.

112,443.—OIL-CLOTH PRINTING MACHINERY.—Ebenezer A. Goodes, Philadelphia, Pa., assignor to Philadelphia Patent and Novelty Company, same place.

Claim.—1. The reciprocating carrier C and arm D, in connection with the oscillating frame B and rod K, and their operating mechanism, substantially as and for the purpose described.

2. The combination, in a printing-machine, of the reciprocating block-carrier C, the oscillating carrier-frame B, the intermittent feed mechanism N O P, and the endless band L, substantially as and for the purpose described.

3. In a machine for printing oil-cloth, the feeding device, consisting of the hinge-bar O, spring S, slide P, and ratchet N, and adjustably connected to its operating mechanism, all combined and arranged substantially as and for the purpose described.

4. The combination, with the oscillating frame B and the printing-frame C, of the cam H and set-screws A A, substantially as and for the purpose described.

112,444.—TENONING-MACHINE.—Lyman Gould, Norwich, Conn.

Claim.—The combination of devices for adjusting tenoning-machine cutter-heads, consisting of a screw, F, with a hand-crank, working within a tubular adjusting-screw, E, and clamp-nut, J, the latter on the lower cutter-head stock, and screw E working in the clamp-nut L on the frame, and the bearing C^3 on the upper cutter-head support, all for the purpose of operating either head independ-

out of the other, or both together, substantially in the manner described.

112,445.—PRINTER'S CASE.—William H. A. Gresham, Atlanta, Ga.

Claim.—The improved tabular case for printers' use, having the compartments arranged as specified, and the sliding bottoms, the latter being provided with spring stops, all substantially as specified.

112,446. — LAMP-CHIMNEY. — George W. Griswold, Factoryville, Pa.

Claim.—In combination with a glass chimney for lamps, a removable and replaceable and freely-expanding and contracting shield, suspended within the chimney, and that not only protects the glass from the heat of the lamp or burner, but also allows the glass surrounding it to contract and expand unrestrainedly, as set forth and described.

112,447. — GRAIN-SEPARATOR. — Philander Griswold, Hudson, Mich.

Claim.—The arrangement of the rock-shaft E, bent arms *e e*, and pivoted levers G G, substantially as shown and described and for the purposes set forth.

112,448.—CLAMP FOR THILL-COUPLINGS.—John W. Guider, St. Joseph, Mo., assignor to himself and John Kieffer, same place.

Claim.—The curvilinear pointed lever A, in combination with the pivoted link or frame B, constructed substantially as described and shown, as and for the purpose set forth.

112,449. — BIRD-CAGE.—Gottlob Günther, New York, N. Y.

Claim.—The arrangement, on a bird-cage, of a spring flap, forming an ornament for the cage, and being capable of closing the opening *a* when the feed-cup is removed, and serving to retain said feed-cup in position when the latter is inserted in the opening *a*, all as herein shown and described.

112,450. — STOP-COCK AND VALVE.—William Haas, New York, N. Y.

Claim.—The plug A of the stop-cock, fitted into the shell B and carrying the worm *a*, arranged and operating in connection with the worm *b* upon the spindle C, which has its bearings in the lugs *d* of the shell B, as herein shown and described.

112,451.—VALVE FOR STEAM-ENGINES.—Joseph L. Harley, Baltimore, Md., and Xaver Fendrich, Georgetown, D. C.

Claim.—1. In combination with the valve-rod, the shield *d* and steam-chamber *i* therein, communicating with the steam in the chest by means of the passages *e*, as and for the purpose described.

2. In combination with the valve open at top and bottom, the jacket *g* and exhaust passage *b'* through it, as and for the purpose described and represented.

3. The combination of the chest, valve, and inlet-ports with the exhaust-port *b*, when the latter is connected with the exhaust-passage *b'* or with a passage underneath the chest, or through the cylinder, so as to use one or both exhaust-passages at the same time, substantially as described.

112,452.—METALLIC HUB.—John H. Harper, Pittsburg, Pa.

Claim.—In combination with the spindle E, the box A with oil-chamber *f*, screw-flange B with oil passage and screw *a*, the spokes C C, flange D, and bolts *b b*, all substantially as and for the purposes herein set forth.

112,453.—COMPOSITION FOR LUBRICATING MACHINERY.—Edmond Q. Henderson, Charlotte, N. C., assignor to John C. Burroughs and Richard A. Springs, same place.

Claim.—The manufacture or preparation of a compound denominated anti-friction lubricating-paste and oil, of the ingredients, in the proportions, and for the purposes set forth above.

112,454.—POST-HOLE DIGGER.—Bryant B. Herrick, Decatur, Mich.

Claim.—The interior offset B formed in the lower end of a tubular spade or post-hole digger A, substantially as and for the purpose herein set forth.

112,455.—DOOR-CHECK. — Levi S. Hicks, Peoria, Ill., assignor to himself, J. Perrin Johnson, and John Buell, same place.

Claim.—The elastic single-wire spring-catch C, when secured to the wall as described, and combined with the eye or holder D, all substantially as and for the purposes set forth.

112,456.—RAILWAY-CAR BRAKE.—Luther Hill, Stoneham, and Seth D. Tripp, Lynn, Mass.

Claim.—The combination, with the rod C, of the studs F, levers G, shaft H, and brakes E, all substantially as specified.

112,457.—TRUSS.—Adam Hinoult, Montgomery, N. Y.

Claim.—The strap D, provided with loop E, and adjustably-attached to the pad by means of the staples C C and pin F, as shown and described.

112,458.—FEED-BAG FOR HORSES.—Walter A. Hough, South Butler, N. Y.

Claim.—1. The feed-bag, consisting of the parts A and B, arranged substantially as shown and described.

2. The strap F, in combination with the reservoir-tubes B B, provided with the valvular covers E E, arranged to operate as shown and described.

112,459.—SHADE-HOLDER FOR LAMPS.—Mark Wiggins House, Cleveland, Ohio.

Claim.—The improved shade-holder, constructed as hereinbefore set forth, with a series of hook-ended arms, hinged to a ring, and fitted at their butt with palms to embrace the lamp-font.

112,460, antedated March 1, 1871.—LAMP-CHIMNEY.—Mark Wiggins House, Cleveland, Ohio, assignor to the Cleveland Non-Explosive Lamp Company, same place.

Claim.—1. The lamp-chimney, constructed above the throat substantially in the form of a portion of a parabolic spindle, as hereinbefore described.

2. The slip lamp-chimney, constructed both with a choke between its base and support, and with the lower end of its base rounded inward, as hereinbefore described.

3. The slip-lamp chimney, constructed with a supplementary shoulder upon its base for engagement with the ends of slip-chimney fastenings, as hereinbefore set forth.

112,461.—HORSE HAY-RAKE.—James Howard and Edward Tenney Bousfield, Bedford, England.

Claim.—The combination of lever *g*, link A, arm *i*, frame *d*, shaft *k*, friction-rings *m*, and bands *l*, substantially as and for the purpose specified.

112,462.—TONGS FOR ROLLING BARRELS.—Mark W. Ingle, Indianapolis, Ind.

Claim.—The combination and arrangement of the levers A B C D and E F G H, the ratchet I K, with the pawl on the arm E F, and the centers *b* and *b*, when constructed and used in manner and form substantially as set forth.

112,463. — PITMAN. — George W. Jayson, Lodi, Ohio.

Claim.—The combination of the bisected head A with pipe-box C, oil-cup *a*, nut D, and the pitman B with its solid circular projection *b*, all substantially as and for the purposes herein set forth.

112,464.—PASTE FOR PAPER-HANGINGS.—John Jones, New York, N. Y., assignor to himself and Henry A. Smith, same place.

Claim.—A paste, composed of the ingredients in or about the proportions specified.

112,465.—TWINE-HOLDER. — Edward M. Judd, New Haven, Conn.

Claim.—1. The bracket *c*, having an eye or opening through which the cord is passed, in combination with the twine-holder *a*, that is supported by said bracket, as set forth.

2. The open hemispherical twine-holder *a*, made with an eye at one side to set over the pin *d* of the bracket *c*, as set forth.

112,466.—CLOTHES-PIN OR CLASP.—Amos L. Keeports and William Yount, Littlestown, Pa.

Claim.—As a new article of manufacture, the pin or clasp A, constructed as described, and provided with the locking-coil I, substantially as and for the purpose specified.

112,467.—PUTTING UP HAMS.—Samuel Edward Kelly, Philadelphia, Pa.

Claim.—As a new article of commerce, a ham or other joint of cured meat inclosed in an air-tight metallic integument.

112,468.—LIME-KILN.—Thomas A. Kirk, Kansas City, Mo.

Claim.—The plates of the side furnaces G G, inclined as specified, and arranged to leave a space, *g*, adjacent to the lining of the kiln, substantially as shown and described, for the purpose set forth.

112,469.—FASTENING FOR SEATS FOR WAGONS OR SLEIGHS.—John G. Knapp and John F. Robertson, Warwick, N. Y., assignors of one-third their right to James H. Holly, same place.

Claim.—The bar D, provided with the shoulder *d*, the lug E, and the spring F, when constructed as described, and combined with the seat C and rail B, in the manner and for the purpose substantially as specified.

112,470.—POTATO-PLANTER.—George Knowlton, Johnstown, Pa., assignor for one-half his right to N. Haynes, same place.

Claim.—The plow, the coverers, and cylinder, constructed and combined substantially as and for the purposes set forth.

112,471.—REVOLVING FIRE-ARM.—Edwin S. Leaycroft, Brooklyn, N. Y., assignor, by mesne assignment, to "Colt's Patent Fire-Arms Manufacturing Company," Hartford, Conn.

Claim.—The center pin d, free to turn on its axis, and the movable support *f*, in combination with a many-chambered cylinder, *e*, free to turn on the center pin, all constructed and arranged substantially in the manner hereinbefore specified, for the purpose set forth.

112,472.—REVOLVING FIRE-ARM.—Edwin S. Leaycroft, Brooklyn, N. Y., assignor, by mesne assignment, to "Colt's Patent Fire-Arms Manufacturing Company," Hartford, Conn.

Claim.—The combination of the ejector *k* and gate *g*, when located at opposite ends of the revolving breech, so that the act of operating the ejector effects the removal or opening of the gate, substantially as and for the purpose set forth.

112,473.—RAILROAD CATTLE-GUARD GATE.—James H. Mallory, La Porte, Ind.

Claim.—1. The combination, with the rising and falling platform B, of the gates E E, hinged on each side of the track, and arranged to close by falling transversely across the said track, substantially as specified.

2. The combination, with the reciprocating platforms B B', of the hinged gates E E and the guides *a a*, when constructed substantially as specified.

3. The combination of two platforms to operate a gate or gates, one closing the same when any additional weight comes thereon, and the other opening the same of its own weight when the additional weight from the former is removed, substantially as herein set forth.

112,474. — BACK-REFLECTING MIRROR.—Richard Mason, Newark, N. J., assignor to himself and Matthew Ely, same place.

Claim.—The bar D, lever-sided frame C, the frames F and E, and cord H, as and for the purpose specified and shown.

112,475.—VENTILATOR AND CHIMNEY-TOP.—James McGowan, New York, N. Y., assignor to himself and Daniel H. Waring, same place.

Claim.—The funnel-shaped cap B, in combination with the spiral fan or worm C and conical or concave fans F F F F, substantially as shown and described, and for the purposes set forth.

112,476.—APPARATUS FOR RECTIFYING AND REFINING SPIRITS.—Frederick Meaney, Philadelphia, Pa., assignor to himself and Henry D. Fling, same place.

Claim.—1. The combination of the stills A and B, arranged one above the other, and communicating by means of return-pipes *d*, substantially as described.

2. In combination with the above, the gauze partitions *a*, and masses of pumice-stone, or other equivalent material, above the same, in each of the said stills.

3. The return-pipes *d*, when perforated at or near the top or bend to prevent them from siphoning, as described.

4. The arrangement, in a still, of a flutter-wheel or wheels, *f*, for the purpose specified.

5. The tube *p*, its enlargement or boxes *q*, the short pipes p^1, and caps q^2, and the connecting-pipe *r*, when the whole is arranged within a vessel through which a cooling liquor is caused to pass.

6. The arrangement of the above in a chamber, *i*, surrounded by a chamber, *j*, containing cooling liquor, and surmounted by a chamber, *k*, containing a mass of pumice-stone or equivalent material, all substantially as specified.

7. The combination of the vessel C with the stills A and B, when arranged to communicate with the latter by separate pipes *s* and *s'*.

8. The combination and arrangement of the stills A and B, vessel C, and condenser D, the whole being constructed, connected together, and arranged for joint operation, substantially as herein described.

112,477.—Tin Can.—John F. Merrill, Cincinnati, Ohio, assignor to himself and Alexander Stewart, same place.

Claim.—The fruit-can A, having the swell or enlargement *a*, for the objects herein described.

112,478.—Take-up Mechanism for Looms. John Michna and George Fischer, New York, N. Y.

Claim.—1. The stationary pin-bar H, in combination with the take-up rollers and the depresser *e*, arranged and operating substantially as described, for the purpose specified.

2. The rocking flap *c* in the batten, to allow said batten to come close up to the pin-bar H, substantially as set forth.

3. The depresser *e*, in combination with the pin-bar H and with the batten of a loom, substantially as described.

112,479.—Combined Baker and Broiler. William H. Miller, Brandenburg, Ky.

Claim.—In combination with the centrally-perforated baking-pan A, having the downwardly-flaring funnel E, the cylinder B, open at the bottom and provided with the cover C, as and for the purposes specified.

112,480.—Shuttle for Sewing-Machines. James D. Moore, Grinnell, Iowa.

Claim.—1. The frame C, made of one piece of metal, and provided with holes *a a* and slots *b b*, substantially as shown and described, and for the purposes herein set forth.

2. In combination with the frame C, with its holes *a* and slots *b*, the block D, provided with a recess containing the headed pin *d* and spring *e*, all substantially as and for the purposes set forth.

3. The combination of the shuttle A, bobbin B, frame C, and block D, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

112,481. — Cotton-Chopper and Grain-Cultivator.—Daniel Mosely, Osark, Arkansas.

Claim.—1. The arrangement, with each set of three chopper-blocks A A, of the scoops *a a*, blades *b b*, and plow *d*, substantially as shown and described.

2. The arrangement of the adjustable bars J J, runner K, standards L L, and adjustable tongue M, substantially as shown and described.

112,482.—Sad and Fluting-Iron.—Frederick Myers, New York, N. Y.

Claim.—1. The employment of the convex-fluted plates, in combination with connecting apparatus for holding them together for use of one as a sad-iron, one of said plates being properly arranged therefor, while admitting of the required oscillation for fluting when disconnected for the purpose.

2. The combination, with the two parts A and B of the sad and fluting-iron, of the capped stud E, wedge M, and stud K, the latter fitting in a recess, G, and either provided with the pivot L, and the plate A with a bearing for it, or not, all substantially as specified.

112,483. — Reed for Organs and Melodeons. — Augustus Newell, Chicago, Ill.

Claim.—The tongue A of a melodeon-reed, having its shank *b* grooved on the upper face, to give elasticity thereto and enable it to spring closely to its seat, when combined with the rivet and block, as set forth.

112,484. — Straw-Cutter. — Amon Park, Germanville, Iowa.

Claim.—The described arrangement of the feeding-band J I, spring-bed M, bar K, and reciprocating each D, said hand and bar being adjustable for the purpose of varying their throw or movement, substantially as herein shown and described.

112,485.—Apparatus for Aging Whisky and other Spirits.—Josiah Peiffer and Samuel Richards, Valonia, Pa.

Claim.—1. Frame B B B C C C, placed upon grooved or equivalent rollers R R running upon the rails or tracks M, moved by cranks I, and pitman H O, all constructed and arranged in the manner and for the purposes set forth.

2. The combination of the frame B C, rolls R, track M, crank *i*, pitman H O, and heating-pipes *a a*, all constructed, combined, and arranged as and for the purposes set forth and described.

112,486. — Combined Cotton and Corn-Planter.—Louis A. Perrault, Natchez, Miss., assignor to himself and Joseph Huber, same place.

Claim.—1. The arrangement, with one track, drill-opener, and covering-scraper, of a corn-planting hopper, dropping-slide, and the operating devices therefor; also, the cotton-dropping devices, consisting of the vibrating shoe W, hopper R, cupped disk T, and the bristles V, all substantially as specified.

2. The corn-hopper D, cut-off slide F, lever H, rod K, dropper-slide G, eccentric M, rod N, all arranged substantially as specified.

3. The cotton-hopper R, cupped disk T, bristles V, and vibrating shoe W, all combined and arranged substantially as specified.

112,487.—Faucet.—Solomon Pfleger, Reading, assignor to himself and James Shoemaker Pfleger, Tamaqua, Pa.

Claim.—A faucet, consisting of a stationary conical tubular valve B, open at the end, and of a movable casing, A, having an outlet or nozzle, and fitted to and closing the end of the valve, so that the latter will be retained against its seat by the water with a pressure proportioned to the pressure of the water, as set forth.

112,488.—Treadle.—George Kendall Proctor, Salem, Mass.

Claim.—The connection of one treadle, A, to the crank, by the ordinary connecting-rod F, and the other, B, by the rigid arm and the connecting-rod H, all substantially as specified.

112,489.—Lubricating Compound.—Victory Purdy, Poughkeepsie, N. Y.

Claim.—The above-described anti-friction compound, substantially as specified.

112,490. — Fertilizer and Seeding-Machine.—Archibald Putnam, Owego, N. Y., assignor to Elizabeth Putnam, same place.

Claim.—1. The combination of the bent rods B B, as shown and described, with the rock-shaft E, all as set forth.

2. The arrangement of the slotted elbow-holder F, elbow I, eccentric R, and pitman G, all as and for the purposes set forth.

3. The arrangement of the cog-wheel T, eccentric R, lever S, and lever-catch M, all substantially as set forth.

4. In combination with the hopper A, with its openings P, the agitator-rods B, rock-shaft E, and slotted plates C C, all constructed and operated substantially as set forth.

5. The combination of the eccentric R, elbow I, shaft E, pitmen G and H, clutch D, elbow N, and seed-bar O, all arranged and operating substantially in the manner and for purposes hereinbefore set forth.

112,491.—Rotary Pump.—George W. Putnam, South Glens Falls, N. Y.

Claim.—The arrangement of the inlet-pipe A, with branches *a a'*, each with a valve, *b b'*, said branches leading into the cylinder B, one on each side of the partition C, in combination with the rocking piston D, with valves *d d'*, and discharge-pipe E, all substantially as and for the purposes herein set forth.

112,492.—Hat-Brush. — Robert Dunbar Radcliffe, Palmyra, N. Y.

Claim.—The within-described hat-brush, composed of the pieces A A and strips B B, substantially as herein set forth.

112,493.—Refrigerating Show-Case.—Thomas L. Rankin, Lyndon, Kansas, assignor to himself and D. W. Rockwell, Elyria, Ohio.

Claim.—The combination of the show-case A B C D, ice-pan E, trough G, and outlet-tube *a*, all constructed and arranged substantially as and for the purposes herein set forth.

112,494.—Device for Starting and Stopping Cars.—Philip Rhoads, Carlisle, Pa.

Claim.—1. The pins *i*, arranged diagonally upon the ratchet-wheel E, and operating in reference to the swinging lever F, substantially as and for the purpose described.

2. The guard V, in combination with the swinging lever F, substantially as and for the purpose described.

3. The swinging lever F, the chain or rope S, in combination with the gear-wheels E and F, and inclined hangers G, as and for the purposes herein described.

4. The two drums *a a'*, constructed as described, and arranged upon the brake-shaft of a car, one operating upon the car-starter and the other upon the car-brake, substantially as and for the purpose described.

5. The shifting-cylinder *b*, in combination with spring *t* and shaft T, as and for the purpose herein set forth.

112,495.—Pipe-Molding Machine.—George Richardson, Milwaukee, Wis.

Claim.—1. In combination with the central core C, bar F, and guide N', the bolt N and lever O, substantially as set forth.

2. The arrangement with reference to each other of the mold B, central core C, and lateral shoulder-ed cores P Q, substantially as and for the purpose set forth.

3. The core R, for the purpose of forming a shoulder on the outside of the pipe or coupling, around branch-openings therein, when arranged and operating substantially as set forth.

112,496.—Sulky-Cultivator.—Richard B. Robbins, Adrian, Mich.

Claim.—The spring *h*, connected with the shank of the side rail of the frame D, and the pendent arm of the cross-bar, and in combination therewith, substantially as specified.

112,497.—Hand-Plow.—Nelson Rue, Harrodsburg, Ky.

Claim.—The within-described hand-plow, composed of the bent bars A A, wheel B, perforated plates E E, and handles D D, adapted to receive either of the plow-beams C, L, or I, all constructed substantially as set forth.

112,498.—Mechanical Movement. — Edward G. Russell, Ravenna, Ohio.

Claim.—The combination of the oscillating beam A and crossed connecting-rods C D with the reciprocating rod B, substantially as and for the purpose specified.

112,499.—Railway Car-Brake.—Lyman Alphonzo, Russell, Shrewsbury, Vt.

Claim.—1. The spiral spring, working inside the buffer E, the lever H, pivoted at I, and the spring L on the movable block K, all combined, as described, with push-pin D in the buffer, to receive the back-acting force on said pin, in the manner specified.

2. The springs T L and lever H, combined, as described, with the movable buffer E, for the purpose of dividing up the strain thereon that occurs after the end of the slot in the shackle has reached the pin B.

3. The combination, with a brake-cord and winding-shaft, of movable block K, pulley O, pivoted lever H I, and push-pin D, all arranged, as set forth, to allow the slacking of the locomotive to operate or not to operate, the brake, as may be desired.

112,500.—Stove-Pipe Cleaner. — David Sanford, Ashton, Ill.

Claim.—A single round metal rod, C, having a spiral coil, B, in contact with the inner surface of the pipe A, and susceptible of being moved up and down therein, for the purpose specified.

112,501.—Twine-Holder.—Joseph B. Sargent and Purmort Bradford, New Haven, Conn., assignors to Sargent & Co., same place.

Claim.—1. The arrangement, in a twine-holder, of the independent or detached ball D, resting in the seat G, formed around the opening through which the twine passes, substantially as described.

2. In a twine-holder, the securing device, consisting of the ear *d* or the tongue *e*, one or both formed upon one part of the holder during the process of casting, substantially in the manner and for the purpose set forth.

112,502.—Dovetailing-Machine.—James M. Seymour, Newark, N. J.

Claim.—1. The tipping table C, having the adjustable stop or fence E, in combination with the saws or cutters M^1 and M^2 and form K, in the manner and for the purpose described.

2. The oscillating table G, in combination with the saws or cutters M^1 and M^2 and form J, in the manner and for the purpose described.

3. The tipping reciprocating table C, having the adjustable fence E, in combination with the removable form L, in the manner and for the purpose described.

4. The tipping reciprocating table C, having the indicator line *o o'*, in combination with the saws or cutters M^1 and M^2 and forms K or L, in the manner and for the purpose described.

5. The adjustable stop or fence E, in combination with the graduated scale R arranged upon table C, in the manner and for the purpose described.

6. The tipping reciprocating table C, having the adjustable stop or fence E, indicator line *o o'*, in combination with the temper or set-screw F, in the manner and for the purpose described.

112,503. — Wooden Pavement. — Eaton Shaw, Portland, Me.

Claim.—A pavement consisting of the wooden blocks B B, isolated from each other by the elastic material C, and resting upon sills A A buried in the sand, wooden strips *c c* being also inserted in the sand between the sills, substantially as and for the purposes described.

112,504. — Guard for Circular Saws.—George W. Shipman, Ischua, N. Y.

Claim.—A guard, E, for circular saws, arranged to be automatically moved back and forth, substantially as described.

112,505.—Breech-loading Fire-Arm.—Dexter Smith and Martin J. Chamberlin, Springfield, Mass.

Claim.—1. The swinging or oscillating bolt a, when retained in position by the spring d, and operated by the ordinary movements of the hammer, trigger, and breech-block, in loading and discharging the arm, substantially as described.

2. The breech-block D, when provided with trunnions or pivots e and e' firmly secured thereto, in combination with the lever d, whereby the said block is operated, substantially as described.

3. The friction-spring h, secured to the swinging breech-block D, in combination with the lock-frame and the operating lever c attached to the pivot or bearing of the said breech-block, substantially as herein described.

112,506.—Spark-Arrester.—James Smith, Altoona, Pa.

Claim.—The combination of the shield or casing B and a grated or wire-gauze pipe or casing, A^1 or A^2, the whole being arranged in the smoke-box of a boiler, substantially as described.

112,507.—Horse Hay-Rake.—Solomon P. Smith, Waterford, N. Y.

Claim.—1. The teeth C, drag-bars B, and the teeth support A of a horse hay-rake, connected with their holding-spring, as described, so that the force thereof will be at its maximum degree when the teeth are down and working, and will diminish in proportion to the height at which they may rise or be elevated from the ground, essentially as described.

2. In a horse hay-rake, the combination of the drag-bars B, yokes or arms D, springs E, and axle or rake-head A, these parts being constructed and arranged to operate as described.

112,508.—Plow.—S. M. Stewart, New Harrisburg, Ohio.

Claim.—The connecting-piece C, in combination with the slide F, substantially as and for the purpose set forth.

112,509.—Medical Compound for Treating Fever and Ague.—George E. Swan, Mount Vernon, Ohio.

Claim.—The medical compound herein described, compounded in the manner, proportions, and for the purpose specified.

112,510.—Device for Cooling Journals of Car-Axles.—Henry G. Thompson, Milford, Conn.

Claim.—1. An axle-box, with the chamber A extending from it, and having flaps, arranged substantially as set forth, in combination with the axle a b, having the opening passing from its end beyond the journal, and provided with lateral discharge-tubes, as specified.

2. The screen u and stopper w, in combination with the air-chamber A, flaps n, axle a b, and openings m^1 m^2, substantially as and for the purposes specified.

112,511.—Cooling Journals of Car-Axles. Henry G. Thompson, Milford, Conn.

Claim.—1. The tubular nozzle f, passing through the journal-box and entering the hole i, and acting as an injector to force a current of air through the hollow journal and out at the lateral openings, to keep the journal cool and prevent dust passing into the journal-box, as set forth.

2. A perforated screen, introduced in the air-passage, to exclude foreign substances, in combination with the tubular injector-nozzle f and hollow journal, as and for the purposes set forth.

112,512.—Cooling Journals of Car-Wheel Axles.—Henry G. Thompson, Milford, Conn.

Claim.—1. The cap-plate r and flat ring o, in combination with the tubular nozzle h and hollow journal b', substantially as and for the purposes specified.

2. The movable screen g, applied between the air-chamber e and the hollow journal, in combination with the nozzle h to convey air into the hollow axle, as and for the purposes set forth.

112,513.—Device for Cooling Journals of Railway Cars.—Henry G. Thompson, Milford, Conn.

Claim.—The tube d or division in the hollow journal or axle, combined with the lateral openings h i, to effect a circulation of atmospheric air through the hollow journal to convey away frictional heat, substantially as set forth.

112,514.—Non-heating Handle for Sad-Irons, &c.—William H. Towers, Boston, Mass.

Claim.—1. The improved method herein described, for preventing the heating of the handles of sad-irons, the same consisting in uniting the handle to the body of the iron by means of a non-conducting compound, so as to insulate the metal of the handle from the body of the iron, substantially as described.

2. The improved sad-iron herein described, composed of a body, A, handle B, and composition C, combined so as to operate substantially as described.

112,515.—Lubricator.—John Ernst Uhl, Renovo, Pa.

Claim.—1. The reservoir E, in combination with a rod, G, which receives an intermittent vertical movement from the valve or other part to be lubricated through the medium of mechanism, substantially as herein described.

2. The combined arrangement of the vertically-reciprocating tube or hollow rod G, collar H, groove g', and tube I, operating substantially, as herein described, to effect an intermittent discharge of oil from the reservoir and equalize the pressure above and below the oil, as explained.

3. The tappet movement K J, in combination with the vertically-reciprocating rod or tube G and reservoir E, as described.

4. The combined arrangement of the gauge-tube S, recess R, packing-rings s s', communication-ports r r', and screw-cap T, to indicate the quantity of oil contained in the reservoir.

5. The steam-pipe P and cock Q, employed in combination with the reservoir E, in the manner and for the purposes specified.

112,516.—Combined Corn-Planter and Cultivator.—Franklin Underwood, South Rutland, N. Y.

Claim.—1. The combination of the cups P, sliding plates L, sliding bar K, connecting-bar J, crank-gear wheel E, gear-wheel D, and roller T, with each other and with the boards N O, hoppers M, frame A, wheel C, and tongue S', substantially as herein shown and described, and for the purpose set forth.

2. The combination of the shaft R, spouts Q, bars S, braces T, plows U, covering wings V, lever W, and catch-bar or plate X, with each other and with the bottom boards N O, sliding plates L, sliding bar K, connecting-bar J, crank-gear wheel E, gear-wheel D, wheels C, and frame A, substantially as herein shown and described, and for the purposes set forth.

3. The combination of the racks A', gear-wheels B', shaft C', cranks D', connecting-bars E', bar F', jointed arms G', and guide-arms H', with each other and with the frame A and sliding bar K, substantially as herein shown and described, and for the purpose set forth.

112,517.—King-Bolt.—Wendel Vondersaar, Indianapolis, Ind.

Claim.—1. The head-block A, provided with notch b b', lugs c c', and constructed substantially as and for the purpose set forth.

2. The king-bolt N, provided with the male-screw thread o, shoulder p, and forks q q', and constructed substantially as and for the purpose set forth.

3. The combination of the head-block A, spring-block C, coupling H H', and king-bolt N, substantially as specified and shown.

4. The combination of the head-block A, spring-block C, spring D, coupling H H', king-bolt N, axle O, fifth-wheel G, and braces K and m, substantially as specified and shown.

112,518.—Wheat-Roaster.—George W. Waitt, Philadelphia, Pa., assignor to himself and Robert B. Fitts, same place.

Claim.—The apparatus hereinbefore described for roasting the grain, that is, the steam-chest A, chamber B, and rotating shaft E, with stirring parts F and G, arranged and combined substantially as and for the purposes specified.

112,519.—Plaster-Sower.—Thomas J. West, Alfred Centre, N. Y.

Claim.—1. The agitators, having their sides G arranged parallel with and in close proximity to the sides A of the hopper, and the points L in the throat B, substantially as specified.

2. The guard P, combined, as described, with the hopper, to prevent its bottom from being wetted by the damp grass.

112,520.—Ticket-Holder.—Henry Wexel, Providence, R. I.

Claim.—The spring H and shield I, combined, as described, with the cylinder and shaft of a ticket-holder, for the purpose specified.

112,521.—Tobacco-Press.—Abraham N. Zell, Lancaster, Pa.

Claim.—In the press herein described, the arrangement of the hinged rack-bar R, links K and L, lever E, with pin d, notch F, and platens A and B, when all constructed and operating as shown and described, for the purpose set forth.

112,522, antedated February 25, 1871.—Combined Bag-Holder and Scales.—William Zimmerman, Lebanon, Pa.

Claim.—The combination, in the bag-holder herein described, of the upright D, handle extension K, feet B, braced seat C, bag-rest F, and metal slide-way H, substantially as described and shown, and for the purpose set forth.

112,523.—Breech-loading Fire-Arm.—James M. Mason, Washington, D. C.

Claim.—1. A bolt for breech-loading fire-arms, provided with a cam upon it which causes the cartridge to be forced tightly into the gun when the same is rotated, substantially as set forth.

2. In combination with a breech-bolt, provided with a single or double cam on its forward end, a short cylinder or recoil-block having a single or double cam, substantially as set forth.

3. In combination with a breech-bolt, provided with a single or double cam or similar device, and the recoil-block resting against the front end of said bolt, with a corresponding single or double cam or similar device, an extractor for the cartridge-shell, as set forth.

4. In combination with a breech-bolt and recoil-block, both provided with corresponding cams on their front and rear ends, respectively, an elongated metal strap, D, connected with the recoil-block lying on top of the breech-bolt, and provided with a recess on its under side, which acts over a cam placed at the rear end of the bolt and causes the two to be drawn together, or their adjacent ends kept in contact, substantially as and for the purposes set forth.

5. The combination of the bolt C, provided with cam H, with the recoil-block D' connected with the strap D, having a recess, z, substantially as and for the purposes set forth.

6. The combination of the strap D, extractor d, recoil-block D', cam x', bolt C, provided with arm F and cams H and x, all constructed and operated substantially as and for the purposes set forth.

7. In combination with a breech-loading gun, provided with a mortise through the stock in the rear of the gun-barrel, a cartridge-shell receiver, substantially as set forth.

8. The combination of the beveled metal frame b and the extensible sack K with the gun-stock A, all substantially as and for the purposes set forth.

REISSUES.

4,287.—Treating Fruits to Dry, Saccharify, and Preserve Them.—Charles Alden, Newburg, assignor of part interest to Alden Fruit-Preserving Company, New York, N. Y.—Patent No. 100,835, dated March 15, 1870; reissue No. 4,011, dated June 7; 1870.

Claim.—1. The process of evaporating the moisture from vegetable and animal substances by exposing the same, first, to a comparatively low temperature and to currents of rarefied air of little force, and then advancing them gradually toward a higher temperature and to currents of air of an increased force and rarefaction, as specified.

2. Saccharified fruit, obtained by exposing fruits to a saccharifying or super-maturing process, substantially such as herein described.

4,288.—Device for Securing Pulleys to Shafts.—John H. Buckman, Cincinnati, Ohio, assignor to himself and Peter W. Reinshagen, same place. — Patent No. 98,144, dated December 21, 1869.

Claim.—1. A pulley or gear-wheel, with the solid or continuous hub A, and slitted projections a a, adapted to be contracted to fit its shaft, substantially as herein set forth.

2. The driving rings B B', adapted to surround and contract the hub of a pulley and fasten it to its shaft.

3. The truncated hub A, with slits a a, in combination with the tightening rings B B', operating in the manner and for the purpose specified.

4,289.—Shawl-Strap. — George Crouch, Westport, Conn. — Patent No. 82,606, dated September 29, 1868.

Claim.—1. The rigid cross-bar A, connecting the ends of the handle B, and provided with loops, c, for the straps D, substantially as and for the purposes set forth.

2. The loops C C, made of the leather of the handle, and secured to the rigid cross-bar A, as and for the purposes set forth.

3. The rigid cross-bar for a shawl strap, made of sheet metal, corrugated and covered with leather, as and for the purposes set forth.

4,290.—Atmospheric Dental Plate.—Nehemiah T. Folsom, Laconia, N. H.—Patent No. 60,871, dated January 1, 1867.

Claim—One or more packing-ridges of any suitable material, extending wholly or partially around at or near the edge and surface of a dental plate, substantially as and for the purposes herein set forth.

4,291.—Pessary. — William R. Gardner, Leonardsville, N. Y.—Patent No. 105,191, dated July 12, 1870.

Claim.—1. The pessary, made with the lips a and

d and intermediate notches upon a bottomless cup, for receiving the lips and neck of the uterus, in combination with the curved end *b* for resting upon the pubic bone, substantially as specified.

2. The lips *c* and *d* of the bottomless cup, united by the hinge *i*, in combination with the frame *a b*, substantially as and for the purposes set forth.

4,292.–Division A.–SKATE.–James L. Plimpton, New York, N. Y.—Patent No. 37,305, dated January 6, 1863; reissue No. 3,906, dated April 5, 1870.

Claim.—A skate, constructed with rollers or runners that cramp, arranged and operated substantially in the manner and for the purposes herein set forth.

4,293.–Division B.–SKATE.–James L. Plimpton, New York N. Y.—Patent No. 37,305, dated January 6, 1863; reissue No. 3,906, dated April 5, 1870.

Claim.—The plates H H, provided with hooks *g* at their ends, and racks *f* at their front edges, in combination with the spring I and plates G, the latter being applied to the stock or foot-stand A, and provided with slots *e* at their ends, and all arranged, as shown, to form a fastening at the front part of the skate, as herein shown and described.

4,294.–APPARATUS FOR PITCHING BARRELS. Louis Schulze, Baltimore, Md.—Patent No. 106,964, dated August 30, 1870.

Claim.—1. In an apparatus for pitching barrels, organized substantially as described, the arrangement of the pipe or conduit which conveys the blast from the air-forcing apparatus to the furnace, substantially in the manner set forth, whereby the air is caused to enter the furnace and, without change of direction, to pass up through the fire.

2. The retort-shaped furnace, provided with openings for the entrance and discharge of the air, arranged in opposite ends or sides of the furnace in such relation to each other that the air will enter the furnace, pass up through the fire, and escape or pass out from the furnace without abrupt change of direction, as shown and described.

3. In a barrel-pitching apparatus, substantially as described, the formation of the upper part of the furnace with sides gradually inclined or drawn in toward the opening or conduit, through which the heated air passes from the furnace to the barrel to gradually condense and direct the blast, substantially as shown and set forth.

4. A barrel-pitching apparatus, in which an air-forcing apparatus, an air-heating furnace, and a frame or stand to support the latter above the ground are combined with suitable pipes, for operation substantially as herein shown and described.

5. The formation of the air-heating furnace in two sections, provided with openings for the entrance and discharge of the blast, as described, the upper section being removable from the lower, for the purposes set forth.

6. The combination of the upper and lower furnace sections and the door formed in and making part of the upper section, substantially as and for the purposes set forth.

7. The formation in the upper section of the air-heating furnace of an opening, closed by isinglass or other transparent material, as and for the purposes described.

8. The employment, in connection with a barrel-pitching apparatus, organized and operating substantially as herein described, of a barrel-support or table, adjustable substantially in the manner set forth, so that the blast-pipe of the apparatus may be fitted to barrels of various sizes, as specified.

9. The combination, with the end of the blast-pipe within the barrel, of a revolving nozzle, substantially as shown and described, to direct the blast to any particular part of the barrel.

10. The formation, in the end or nozzle of the blast-pipe which is within the barrel, of slots, openings, or perforations, substantially as shown and described, for diffusing the blast through all parts of the barrel, as set forth.

11. The water-jacket or its equivalent, applied to the blast-pipe at the point where it passes through the barrel, substantially as and for the purposes described.

DESIGNS.

4,694.—PICTURE-FRAME.—John H. Bellamy, Charlestown, Mass.

Claim.—The design for a frame, as herein set forth and described.

4,695.—BELL-CRANK AND ESCUTCHEON.—Pietro Cinquini, West Meriden, Conn., assignor to Parker & Whipple Company.

Claim.—1. The design for a bell-crank, with the ledge *a* around its edge and the scroll or leaf-work in the space inclosed by said ledge, substantially as described and shown.

2. The design for a bell-shaft or door-knob escutcheon, with the ledge *a* around its edge, the central hub, and contiguous to the screw-holes, and raised ornamental work in the space inclosed by said ledge, substantially as described and shown.

4,696. — PEDESTAL FOR A CAKE-DISH. — George Gill, Taunton, Mass., assignor to Reed & Barton, same place.

Claim.—The design for a pedestal, as described and represented.

4,697.—TABLE-CASTER.—William Parkin, Taunton, Mass., assignor to Reed & Barton, same place.

Claim.—1. The design for a caster, as set forth and shown.

2. The design for the handle, as shown.

4,698.—BUCKLE-FRAME.—John E. Smith, Waterbury, Conn.

Claim.—The design for a buckle-plate, as described and shown, in the accompanying drawing, above the line *s s* in fig. 2.

4,699.—BACK OF A CHAIR OR SOFA.—George Unverzagt, Philadelphia, Pa.

Claim.—1. The design for the back of a chair or sofa, consisting of strips A and cross-pieces B, connected together and crossing each other substantially as described, and as represented in and by the accompanying drawing.

2. The design for the ornaments C and D, for the back of a chair or sofa, substantially as shown and described.

TRADE-MARKS.

182.—HAT.—Nathan A. Baldwin, Milford, Conn., James H. Prentice, Brooklyn, and John R. Waller, New York, N. Y.

183.—SPOOL-COTTON.—Lewis Coleman & Co., Boston, Mass.

184.—SALVE.—Robert Dobbins, Binghamton, N. Y.

185.—SOAP.—Leberman & Co., Philadelphia, Pa.

186.—MEDICINE.—Ridenour, Coblentz & Co., Springfield, Ohio.

187.—PAPER.—Union, Manufacturing Company, Springfield, Mass.

EXTENSIONS.

EDGAR HUSON, of Ithaca, N. Y.—Letters Patent No. 16,648, dated February 17, 1857; reissue No. 2,500, dated March 5, 1867.

"Improvement in Wagons."

Claim.—1. The use of two or more side splinter-bars, when they extend from any convenient point at or near the forward ends of the side springs to the head-block, and the use of the said splinter-bars, whether attached directly to the forward ends of the said side springs, or by any convenient means intervening between them, as described.

2. Also, fastening the pole or thills to the side splinter-bars or other convenient part of the platform or frame, at or near or in rear of the ends of the side springs, as described.

3. Also, so making the frame or platform as to leave the extremities of it open so as to receive the pole or thills between and back of the forward ends of the side springs, thus bringing the team or horse nearer the wagon, thereby lessening the draft and requiring less room in which to turn.

SAMUEL R. WILMOT, of Bridgeport, Conn. Letters Patent No. 16,668, dated February 17, 1857.

"Improvement in Operating Valves of Steam-Engines."

Claim.—The valve-motion, herein described, for operating the valves of steam-engines, and consisting essentially of a twisted traverse-rod, of a traveling slide, and of the stops which limit the turning of the slide, or their equivalents, combined together and operating, substantially as herein set forth.

JOHN DAVID BROWNE, of Cincinnati, Ohio. Letters Patent No. 16,678, dated February 24, 1857.

"Improvement in Hinges."

Claim.—In making one part, *b*, of the bearings of a hinge concentric to the other part *a*, as herein described and set forth.

CALVIN ADAMS, of Pittsburg, Pa.—Letters Patent No. 16,676, dated February 24, 1857.

"Improved Keeper for Right-and-left Hand Door-Locks."

Claim.—The use of a beveled keeper, such as described, when employed in connection with a double-faced lock, having a blunt bolt, so that the lock may be used on a right or left-hand door without changing any of its parts, as herein set forth.

DAVID A. WOODWARD, of Baltimore, Md. Letters Patent No. 16,700, dated February 24, 1857; reissue No. 2,311, dated July 10, 1866.

"Solar Camera."

Claim.—1. Adapting to the camera-obscura a lens or lenses and reflector in rear of the object-glass in such manner that it is made to answer the two-fold purpose of the camera-obscura and a camera-lucida, substantially as and for the purposes specified.

2. The arrangement and combination of the condensing lens H or lenses D′ and H, negative slide or holder N, and achromatic lens or lenses E, made adjustable, with regard to each other, for condensing the sun's rays upon and through the negative and focusing them upon prepared paper, cameras, or other suitable material for photographic purposes, substantially as described.

JOHN BENEDICT, of Kenosha, Wis., administrator of ANDREW LEONARD, deceased.—Letters Patent No. 16,688, dated February 24, 1857; reissue No. 575, dated July 27, 1858; reissue No. 1,229, dated October 8, 1861.

"Improved Cast Seamless Thimble-Skeins for Wagons."

Claim.—A cast seamless thimble-skein, substantially such as specified, which is not made seamless by lifting, turning, or otherwise being manipulated with after it leaves the mold.

JOHN BENEDICT, of Kenosha, Wis., administrator of ANDREW LEONARD, deceased.—Letters Patent No. 16,688, dated February 24, 1857; reissue No. 575, dated July 27, 1858; reissue No. 1,228, dated October 8, 1861.

"Improved Mode of Casting Seamless Skeins for Wagons."

Claim.—1. The manner, substantially as described, of producing the core I, which gives the internal form of the axle-skein, and that part of the mold which gives the external form of the butt thereof.

2. The manner, substantially as herein described, of producing that part of the mold which gives the external form of the wearing part of the thimble-skein.

3. The manner, substantially as herein described, of producing an unbroken impression in sand of the external shoulder *g* of the axle-skein.

4. The manner, substantially as herein described, of uniting the base of the green-sand core with the lower section of the sand-mold, which gives the external form to the thimble-skein.

5. The manner, substantially as herein described, of holding in true position or centering the green-sand cores.

6. The manner, substantially as herein described, of producing, as a whole, a sand-mold which turns out in one operation of casting a finished, seamless, and shouldered cast thimble-skein.

WILLIAM CLEVELAND HICKS, of Summit, N. J.—Letters Patent No. 16,797, dated March 10, 1857; reissue No. 1,952, dated May 9, 1865; reissue No. 3,798, dated January 18, 1870; reissue No. 3,880, dated March 1, 1870.

"Improvement in Breech-loading Fire-Arms."

Claim.—The combination, substantially as set forth, of the breech-closing piece, moving longitudinally with the barrel, the cartridge-chamber at the butt of the barrel, and the reciprocating extracting-hook, arranged in such manner that its bill enters within the periphery of the said chamber, so that it may engage with the flange of the cartridge therein when the breech is closed by the forward movement of the closing-piece, even though the cartridge be not expanded.

Also, the combination, substantially as set forth, of the breech-closing piece, moving longitudinally with the barrel, the cartridge-chamber at the butt

of the barrel, and the reciprocating extracting-hook, arranged in such manner that when the barrel is closed by the forward movement of the closing-piece, and when the bill of said hook is in its most forward position, the said bill is both within the periphery of said chamber and in advance of the rear of the space in which the cartridge is received, so that said bill may engage with the unexpanded front side of the flange of the cartridge when the latter is within the said space.

Also, the combination, substantially as set forth, of the breech-closing piece, moving longitudinally with the barrel, the cartridge-chamber at the butt of the barrel, and the extracting-hook described, arranged in such manner that but one side only of the flange of the cartridge is engaged with the bill of a hook inside of the cartridge-chamber, thereby enabling the cartridge remnant to be readily disengaged from the extracting-hook.

Also, the combination and arrangement, substantially as set forth, of the hook, with the breech-closing-piece, moving in the line of the barrel in such manner that the said hook performs the two functions of transmitting a blow to the primer and of extracting the cartridge remnant from the breech of the fire-arm.

LEWIS B. MYERS and HENRY A. MYERS, of Elmore, Ohio.—Letters Patent No. 16,772, dated March 3, 1857.

"*Improvement in Seeding-Machine.*"

Claim.—Measuring and distributing grain, seeds, or fertilizers, by two or more piston-heads and one rod, or their equivalent, operating in and out of an aperture, in the manner and for the purpose substantially as described.

DISCLAIMER.

DAVID A. WOODWARD, of Baltimore, Md. Letters Patent No. 16,700, dated February 24, 1857; reissue No. 2,311, dated July 10, 1866.—Filed February 23, 1871.

"*Solar Camera.*"

Disclaims the First claim of specification, and also all photographic instruments, except those in which the achromatic lens is placed at or near the condensing lens, so that the light from the latter may pass through the former.

ISSUE OF MARCH 14.

PATENTS.

112,524.—REIN-HOLDER.—John R. Ackenback, Saddle River, N. J.

Claim.—The combination with an arm and support, as described, of a curved spring, having the slot *b'*, to allow its tension to be graduated according to the thickness of the reins.

112,525. — DRY-DOCK.—George A. Albertson, New York, N. Y.

Claim.—The combination of the platform B, chains C, and heavy floats F with each other and with the piles A, forming the sides of the dock, substantially as herein shown and described, and for the purpose set forth.

112,526.—MACHINE FOR COILING WIRE.—Elias B. Allen, Charles O. Small, and Alonzo P. Small, Augusta, Me.

Claim.—1. The combination of the cam *e''*, the rod *f*, sector *l*, pinion and gear *o p*, the gear and hollow shaft *q r*, and the hoop *s*, together with the pins *t' t'*, substantially as described.

2. The combination of the cam *e'*, rod *f'*, and lever *l'*, the rods *o'*, *p'*, *q'*, and *r'*, coiling-pins *t'*, and the hoop *s*, substantially as described.

3. The winding-shaft *a'*, with its drum *b'* and friction-pulley *c*, as described, in combination with the hoop *s* and the coiling-pins *t' t'*.

112,527, antedated February 28, 1871.—GARDEN-HOE.—John P. Avery, Norwich, Conn.

Claim.—A hoe, constructed as described, as a new article of manufacture.

112,528. — CARRIAGE-PERCH.—Isaac Preston Bacon, Bedford, Mass.

Claim.—The improved perch as made, with its two connection-bars C C arranged as described, to form on their two opposite sides re-entering spaces for reception of the wheels, and also with strengthening plate or plates applied to the said bars at their junction, all being substantially as specified.

112,529.—CHIMNEY-CAP.—Thomas D. Bailey, Lowell, Mass.

Claim.—1. A bracketed chimney-cap, substantially as described, the brackets of which perform the three-fold office of holding the cap to the top of the chimney, of increasing the ornamentation, and of conforming to the architectural design of the structure, substantially as set forth.

2. In combination with a chimney-cap, constructed as described, the short adjustable wind-shields *f*, susceptible of being so arranged and disposed as to produce wide or narrow apertures between them, in the manner and for the purpose specified.

3. In combination with a chimney-cap, constructed and arranged substantially as described, a slide, guide, or bar, *g*, and removable sliding wind-shields *f*, operating in the manner and for the purpose set forth.

4. In combination with a chimney-cap, provided with sliding wind-shields, substantially as described, the top plate *a*, arranged in the manner and for the purpose set forth.

5. The top-slotted bracket, provided with a recess, *a*, when applied to the inclined plate A and the face of the chimney, in the manner and for the purpose specified.

112,530.—HARVESTER.—Lindley M. Batty, Canton, Ohio.

Claim.—1. The within-described harvester-frame and casing, the same consisting of the frame-plate A, having the crank-shaft standard *i* (with or without the shield N) and the partial cavity *h* cast at its ends, and with all the shaft-bearings 64 64 65 66 67 67 cast thereon, the covers B and *g*, the hinged cover C, and the sheet-metal plate 68, the several parts being constructed and arranged substantially as is herein specified.

2. The combination, with the crank-shaft standard *i*, of the plate *j* and the cover E, for the purpose of forming a receptacle for tools, substantially as is herein specified.

3. The combination of the brace-bar P, clamping-piece *a*, with flanges a^1 a^1 a^2 a^2, arranged as shown, coupling-bar Q, and brace-plate *b*, the several parts being arranged and connected substantially as and for the purpose specified.

4. The pivot-pin 4, formed on the finger-bar R, and fitting in a corresponding circular-shaped groove in back-arm of the heel-shoe T, substantially as and for the purpose herein specified.

5. The retaining-pin 3, secured in the shoe T and working in a slot in the finger-bar R, said finger-bar having a sliding pivot-joint, 4, with said shoe, substantially as and for the purpose specified.

6. The broad end-arm 6, at the heel of the finger-bar R, when said arm is constructed as shown, so as to serve both to control the rolling motion of the finger-bar and to protect the end of the knife-bar, substantially as is herein specified.

7. The spring 10 or its equivalent, when used in combination with the finger-bar R, hinged in the heel-shoe T, for the purpose of keeping the points of the fingers U elevated, when not forced down by the driver, substantially as is herein specified.

8. The lever 8, pivoted on the standard 7, provided with the stop 9, and fixed on the heel-shoe T, when said lever acts in combination with the arm 6 to control the rolling motion of the finger-bar R, substantially in the manner herein described.

9. The combination of the finger-bar arm 6, lever 8, rod *p*, double-crank shaft *n m*, rod *l*, and lever Z, the several parts being arranged substantially as and for the purpose specified.

10. The combination of the finger-bar R, provided with the V-shaped notch 27 on its front edge, and the finger U, provided with the backward-sloped face 26, the several parts being arranged and operating substantially as is herein specified.

11. The grain-shoe W, consisting of the bed-plate G, having a slot cut therein for the knife-bar, and with the upper central part cut away in the crescent-form 60, grain-side *c*, and standard *d*, for securing the tracker-rods, the several parts being arranged substantially as and for the purpose specified.

12. The combination of the spring runner *e*, with slot *e'*, grain-shoe W, and adjusting-screw *f*, the rear end of said runner being of a C-form, and the said adjusting-screw passing through the slot in the upper arm and bearing on the lower arm of said runner, substantially as and for the purpose specified.

13. The method herein described of securing the tracker-rods 24 in the grain-shoe W by inserting their bent ends in holes in the grain-side *c*, and dropping them between the side *c* and standard *d*, substantially as and for the purpose specified.

14. The circular nut 16, provided with the hole 61, having a square section at the center and at right angles to the axis of the hole, and with its upper and lower sides rounded off, when used in combination with the knife-bar shank 13 and the square-ended pitman-pin 15, substantially as and for the purpose specified.

15. The combination of the sliding clutch 36, forked lever 37, axle-pin 38, and horizontal shipping-lever 39, provided with the treadle-arm 43, the several parts being arranged substantially as and for the purpose specified.

16. The broad treadle-board 45, pivoted on the rods 44, hinged on the main frame A, when arranged and used in combination with the shipping-lever 39, substantially as and for the purpose specified.

112,531, antedated February 28, 1871.—FEEDING MECHANISM FOR SEWING-MACHINES. — Robert M. Berry, Brooklyn, N. Y.

Claim.—The feed-bar B, surface C, link E, slotted vibrating-lever D, with its pin *d*, fulcrum *e*, and operating crank-pin *b*, all constructed, arranged and operating substantially as and for the purpose hereinbefore set forth.

112,532.—FRUIT-DRIER.—Jacob S. Biddle and Theodore S. Lingenfelter, Pattonville, Pa.

Claim.—The fire-place A, constructed separate from the chamber B, with rims *a* and doors D, and so arranged as to form, with the bottom of chamber B, an air-chamber, E, substantially as herein described.

112,533. — SHIRT-POLISHING MACHINE.—Ezra B. Blackwell, Newton, Mass.

Claim.—1. The reciprocating hand-polisher A, pressed by a uniform weight, combined, as described, with a flat table, B, so that a pushing movement will operate it without the unequal pressure of the hand.

2. The improved ironing-tool, consisting of the part A *a*, strap *b*, and eye-piece *c*, put together as described.

3. The combination, with the eye-piece *c*, of the actuating-rod or handle *d*, having the adjustable weight *f* thereon, as and for the purpose described.

112,534.—CAR-BRAKE AND STARTER.—Eduardo Bonneval, Boston, Mass.

Claim.—1. The brake-shoes G, constructed in the form of a curved wedge, substantially as herein shown and described, to adapt them to the purpose set forth.

2. The combination of the braces E, plank, plate, or frame F, and shoes G, with each other, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the chains H and J, either or both, with the brake E F G, substantially as herein shown and described, and for the purposes set forth.

112,535. — TREATING MARINE PLANTS TO OBTAIN GELATINE, &c.—Gustav Bourgade, New York, N. Y.

Claim.—The herein-described process of treating marine plants and maritime lichens for extracting the gelatine contained therein, as set forth.

112,536. — CAR-COUPLING.—Godfrey Brenner and George T. Polk, Poughkeepsie, N. Y.

Claim.—The pivoted lever J, movable on one side of its fulcrum in the keeper L, and angled on the other side thereof, to connect one end with chain H at a point opposite to the guide I, combined, as described, with curved spring-hook F G, pivoted in the bumper B, for the purpose of enabling the cars to automatically uncouple if one is thrown from the track on either side of the road.

112,537.—OIL-CAN HOLDER.—William Stoddard Brick, Fitchburg, Mass.

Claim.—In combination with the cup-shaped holder B, legs *c*, and set-screw *e*, the spring *a*, when all are combined to operate as set forth.

112,538.—APPARATUS FOR CARRYING DRAIN-PIPES.—Daniel W. Brown, Woodbridge, N. J.

Claim.—1. The combination of the rotating platform C and apron E with the body A of the vehicle or apparatus, substantially as specified.

2. The combination of the adjustable rollers D D with the apron E and rotating platform C.

3. The combination of the lifting uprights H with the rotating platform C, the apron E, and the body A of the vehicle or apparatus, for operation in connection with the removable board I, essentially as described.

4. The combination, with the wheel B, of the ratchet *i*, the spring-borne pawl *k*, and the rod or handle *n*, essentially as and for the purpose or purposes herein set forth.

5. A hand vehicle or apparatus for handling and carrying pipes and other articles made of soft or plastic material, constructed and organized substantially as herein described.

112,539. — APPARATUS FOR EVAPORATING SACCHARINE LIQUIDS.—Francis G. Butler, Bellows Falls, Vt., assignor to himself and James B. Williams, Glastonbury, Conn.

Claim.—1. A series of dampers, *e*, arranged under an evaporating-pan or compartment, *c'*, or a finishing-pan, *c''*, substantially as and for the purpose set forth.

2. In combination with the dampers *e*, constructed and arranged as described, the fixed or hinged pans *c' c''*, substantially as and for the purpose set forth.

112,540.—COMBINED DRILL AND SEEDER.—John E. Buxton, Owatonna, Minn.

Claim.—The oscillating apron E, provided upon one side with the conveyer-spouts F, and arranged for operation between the bottom of the hopper and the spouts C D, in such manner as to discharge the grain into the drill-spouts in streams and into the broadcast spouts in a sheet, substantially as herein shown and described, for the purpose specified.

112,541. — SEEDING MACHINE. — John E. Buxton, Owatonna, Minn.

Claim.—1. The perforated bar E, interposed between the bottom of the hopper and the spouts C D, and adapted to be turned in its bearings to direct the seed from the hopper through the holes G, ei-

ther to the drill-spouts or broadcast spouts, substantially as described, for the purpose specified.

2. The perforated oscillatory bar E, in combination with the drill-spouts C and broadcast spouts D, substantially as described, for the purpose specified.

112,542. — POWDER-FLASK. — Joseph T. Capewell and George D. Capewell, Woodbury, Conn.

Claim.—1. The cap or cover for a powder-flask, composed of a plate, flange, and tube, all made in one piece by stamping, substantially as herein shown and described.

2. The rim *a*, having slots *e*, combined, as described, with the pins *f*, projecting from the flask, one of said pins being screw-shaped, and bearing with its head against the rim, to prevent accidental detachment, as set forth.

112,543. — TEA-KETTLE. — Edward Card, Providence, R. I.

Claim.—1. The hinged or pivoted half-covers, with their edges moving in opposite directions to open the kettle, substantially as described.

2. The flange *h*, extending beyond the division line of the cover when closed, substantially as described.

3. The combination of the plane surface *i i*, flange *e*, and groove *h*, substantially as described.

112,544. — MARBLEIZING PAPER. — Thomas Carson, Brooklyn, N. Y.

Claim.—The improved process herein described for marbleizing paper, substantially as specified.

112,545. — WATER-WHEEL. — Joel T. Case, Bristol, Conn., assignor to National Water-Wheel Company, same place.

Claim.—1. The case B, constructed with its chutes *a a'*, having inlets upon separate lines around the said case, substantially as and for the purpose described.

2. In combination with the foregoing, the rotating gate A, provided with openings *b*, corresponding with the inlets of the chutes in separate lines around the gate, substantially as and for the purpose described.

112,546.—ANIMAL POKE.—Harlow F. Chapin, Rochester, N. Y.

Claim.—1. The prick-pin or pins *i* and spring or springs *s*, applied to the girts *g* and *e*, substantially as described, in combination with the check-strap *n*, for the purposes set forth.

2. The neck-strap *d* and pad *e*, in combination with the side-bars and fixed cross-bar of an ordinary animal poke, substantially as and for the purposes set forth.

112,547.—REFRIGERATOR.—Andrew Jackson Chase, Boston, Mass.

Claim.—The improved refrigerator, composed of the case, and the two aprons and trough arranged within such case, substantially as described and represented, the arrangement involving the longer apron applied to the next adjacent side of the case, so that there may be no passage between such side and the upper edge of the apron for the air of the box to circulate through, all being as set forth.

112,548. — BURNISHER FOR BOOTS AND SHOES.—Robert Chauncey, Syracuse, N. Y.

Claim.—The burnishers A B, with covers *a b*, for forming the heating cavities, the clamping devices *h i e*, carriage C D, and bed E, all constructed and operated as and for the purpose specified.

112,549, antedated March 9, 1871.—CLIP FOR BUGGY-SPRINGS.—Richard A. Clark, Unadilla, N. Y.

Claim.—1. An improved clip, formed of the parts A and B, constructed and adapted to each other, in the manner described.

2. The packing and friction-plate, in combination with A and B, as described.

3. The packing, when turned up to cover the part A, as set forth.

4. The improved clip, when all the parts are constructed and arranged and operate in the manner described.

112,550.—CREEPING-DOLL.—Robert J. Clay, New York, assignor to himself and Tasker H. Marvin, Brooklyn, N. Y.

Claim.—1. A creeping-doll, having the arms and legs connected by a rod, *g*, and pitmen, with the crank-shaft *h*, substantially as herein shown and described.

2. The wheels *n m*, combined with a creeping-doll for propelling the same, while the hands and feet make the imitation motions, as set forth.

112,551. — KEYING WHEELS TO SHAFTS.—Charlie B. Cole, Chester, Illinois.

Claim.—The coupling, formed of two laterally and oppositely-beveled pieces A B, applied as and for the purpose specified.

112,552.—LADDER.—James H. Conley, Philadelphia, Pa.

Claim.—The side ropes A, steps B, suspension-rope C, body-brace E, outriggers F, man-rope G, and the guys K, when combined and arranged as shown and described.

112,553. — WOOD-BENDING MACHINE. — E. A. Comer, Metropolis, Ill.

Claim.—The lever E, provided with weight, bending-strap G, grooved former *a'* K, link-strap I *d e*, foot-lever B, and plunger *c*, combined as described, and for the purpose specified.

112,554.—MACHINE FOR FEEDING RIVETS AND INSERTING THEM IN SHOES, &c.—Lyman Arnold Cook, Woonsocket, R. I.

Claim.—1. The combination of the tube or conduit B, the magazine A, the force-pump *c*, the feeder *m*, and the awl *l*, all being arranged and applied together, substantially in manner and to operate as explained.

2. The tube B, as applied to the air-pump conduit and the frame, in manner so as to be capable of being moved to carry the work to be riveted either up to or away from the feeder, as occasion may require, being substantially as explained.

112,555. — HEATING-STOVE.—William Cottingham and John W. Stafford, Troy, Ohio.

Claim.—The improved furnace herein described, consisting of the jacket *m*, the feed-collar *r*, leading into the main drum and fire-box *a*, the concentric drums *b*, *c*, and *d*, provided with caps *n n*, and communicating with the flue *l* by means of pipe *i* and the connecting-pipes *e f h*, each of said parts being constructed and arranged as herein shown and described.

112,556. — MOP-HEAD.—James Davis, Chicago, Ill.

Claim.—1. The adjustable jaw E', screw-threaded as described, in combination with thumb-nut D, and grooves or channels *h h* of the handle, substantially as and for the purpose described.

2. The ferrules B B', in combination with the jaw E, substantially as and for the purpose described.

3. The combination of the jaws E E', ferrules B B', thumb-nut D, and handle A, substantially as and for the purpose described.

112,557. — GAS-RETORT. — Darius Davison, New York, N. Y.

Claim.—1. The inner retort B, made capable of being slid out or removed from the outer retort, and constructed with openings at its opposite ends, the one of which is provided with a lid, substantially as specified.

2. The lid *g* of the inner retort, constructed or provided with a triangular handle *h*, arranged to take its bearing on the outer retort, substantially as specified.

3. The combination and arrangement of the outer and inner retorts A and B, provided with lids at their approximate ends, and having an interposed space, *d*, between them in communication at reverse ends of the combined retort with the outlets *f* and *e*, whereby a uniform distribution and perfect circulation of the vapors and gases are established in intimate contact with the hot surfaces of the retorts, essentially as herein set forth.

112,558. — BITTERS.—Antoine Desaulniers, Oswego, N. Y.

Claim.—The manufacture or preparation of a compound, which is denominated French bitters, of the ingredients, in the proportion, and for the purposes set forth.

112,559. — WAGON-BOX AND HAY-RACK. — Samuel Dickson, Sandwich, Ill.

Claim.—1. The bottom board B, provided with cleats C and C', arranged as described, in combination with sides A A', the whole constructed substantially in the manner and for the purpose specified.

2. The girts E, provided with straps *f* and tie-girt G, in combination with side board A', the whole arranged substantially in the manner and for the purpose set forth.

3. The sides A A', girts E, straps *f*, tie-girt G, and upright H, the whole arranged in combination substantially in the manner and for the purpose described.

112,560.—STONE-CRUSHER.—Andrew Dietz, New York, N. Y.

Claim.—The combination and arrangement of the reciprocating tapering and toothed or ribbed breaker B, the crank or eccentric *d* on the revolving shaft *c*, the rod *f*, and the stationary tapering and toothed or ribbed outer surface or receptacle C, substantially as shown and described.

112,561.—PUMP.—Isaac Dillingham, Rockbottom, Mass.

Claim.—The described glass pump-cylinder *a*, having the segmental rings *f* provided with packings *i*, the hinges *k*, and the vertical connections *g*, as and for the purpose herein set forth and described.

112,562. — PROCESS OF MANUFACTURING TYPE-BLOCKS.—Daniel A. Draper, Cambridge, Mass.

Claim.—The herein-described process of manufacturing type-blocks or wheels; that is to say, heating the metal or blank to the degree indicated, subjecting it to the blow or pressure in the dies while in such heated state, and then repeating the blow or pressure upon the block after it has cooled and while it is in the dies, substantially as and for the purposes set forth.

112,563.—MAGAZINE-GUN.—Henry J. Drew, Dixon, Ill.

Claim.—The combination of the cover, cartridge-bearer, and connecting-rods, as specified.

112,564. — REPEATING FIRE-ARM.—Henry J. Drew, Dixon, Ill.

Claim.—The grooved cover *d*, arranged to slide on the flat upper surface of the breech-piece, in combination with the projection *b*, formed in one piece with the recoil-block of the breech or firing-pin, as set forth.

112,565. — BREECH-LOADING FIRE-ARM. — Joseph Duval, Laprairie, Canada.

Claim.—1. The slotted lever f^3, in combination with the tumbler d^1 and hammer e^2, the latter being adapted to operate the tumbler by means of the sliding movement of the lever, as shown and described.

2. The novel combination of the lever f^3, slotted hole f, pin g', slot h, pin e, tumbler d^1, and extractor h^4, all working together and with other parts of the gun, substantially in the manner and for the purpose described.

112,566.—SLEIGH.—Robert Elliott, Chester, Pa.

Claim.—1. The hubs G, in combination with the spokes F, attached directly to the sleigh-runners D, substantially as and for the purpose specified.

2. In combination with the foregoing, the running-gear A B C of two sets or pairs of sleigh-runners, one set being rigidly attached to one axle, and the other set oscillating freely on the other axle, and operating together, substantially in the manner and for the purpose described.

3. The braces H, rigidly connecting the front axle, hubs, spokes, and its set of runners, substantially as described.

112,567.—COTTON-PLANTER.—De Witt C. Ellis and George N. Deming, Rochester, N. Y.

Claim.—The arrangement, in a cotton-seed planter, of the horizontally-rotating feeding-arms *s* upon the bottom of the cylindrical hopper D, in combination with the vertically-rotating distributer *o*, working in a slot at the periphery of the hopper-bottom, the parts being constructed and operated by a system of gearing, substantially as and for the purpose described.

112,568. — ENVELOPE.—Edward S. Ellis, Trenton, N. J.

Claim.—The improved letter-envelope, having the lapel A notched and perforated, as shown, and provided with the lapel B, all substantially as specified.

112,569.—SAW.—James E. Emerson, Trenton, N. J.

Claim.—1. The clearer twin tooth *b*, having cutting-edges *b'* and *b''*, constructed in the manner herein described.

2. The saw-tooth *a*, having the points *a'* and *a''* set to the opposite sides of the blade by twisting them at an angle with the sides of the blade of the saw, in the manner shown.

3. The combination, in a saw, of the twin teeth *a*, having scoring-points *a'* and *a''* set to cut the width by twisting, as herein shown, and twin clearer-teeth *b*, having the planing-edges *b'* and *b''*, to cut on askew, in the manner and for the purpose described.

112,570. — CHILDREN'S CRIB.—George W. Ennis, Orange, N. J., assignor to himself and J. P. Ennis, same place.

Claim.—The frame A B, standards C, pivoted hangers F, buttons H, and projecting cross-pieces E, combined, as described, with an ordinary crib D, for the purpose specified.

112,571.—PAPER-COLLAR.—Nathaniel Evans, Jr., Boston, Mass.

Claim.—A paper-collar, when the same is made by uniting to a straight neck-band, A B, a curved check-piece, C D, substantially as described and for the purpose set forth.

112,572.—HEAD-BLOCK FOR SAW-MILLS.—John S. Everitt and Charles H. Avery, Oshkosh, Wis.

Claim.—1. The rotating dog-head A, provided with the blades C C, in combination with the inclines D D of journal-box B, substantially as and for the purpose specified.

2. The rotating dogs and shafts, provided with collars E and F and springs, as shown and described, in combination with the journal-box B, arms H, connecting-rod I, and lever G, substantially as and for the purpose set forth.

112,573.—ELEVATOR.—Zebulon C. Favor, Chicago, Ill., assignor to himself and Oscar C. Chase, same place.

Claim.—1. The improved elevator, formed by cars B B, wheels D D, axles E E, ropes C C, partition N, worm-shaft *g*, all arranged substantially as specified.

2. The partition N, for separating the ascending and descending cars, substantially as described.

112,574.—NUT-LOCK.—Lyman Fay, Worcester, Mass.

Claim.—The eye-formed washer, in combination with the holding-cap, having an elastic packing between it and the washer, and an eccentric-locking pin, substantially as described.

112,575.—TRACK-CLEARER.—Henry Fellows, Bloomington, Ind.

Claim.—A hinged track-clearer, constructed in the form described, consisting of a series of rods which have their front ends rigidly attached to a hinged block, and as they extend backward expand and curve inwardly and spirally, so as to present, when taken together, a form similar to that of the mold-board of a turning-plow, all as set forth.

112,576.—NEEDLE AND HOLDER FOR SEWING-MACHINES.—George M. Frary, St. Louis, Mich., assignor, by mesne assignments, to Carpenter Sewing-Machine Needle Company, New York city.

Claim.—1. The combination of a longitudinally-split eye-pointed needle, having the split extending from the eye upward through its top, with a needle-arm adapted to clamp or hold both of the divisions of the needle, as described.

2. The cleft swinging clamp *g*, in combination with the split needle *b*, arranged and operating as herein described.

3. The slide-piece *a*, with the spring *d*, in combination with the needle *b* and the thumb-screw *e*, constructed and operating as and for the purpose herein described.

112,577.—POTATO-MASHER.—Charles Adolph Frederick, San Francisco, Cal.

Claim.—The cylinder B, having perforated sides and bottom, and the jacket E, both provided with flanges, whereby they are suspended in the bed-plate *a*, and secured in place by buttons, in combination with the double convex plunger C, as shown and described.

112,578.—TUCK-CREASER FOR SEWING-MACHINES.—Henry W. Fuller, New York, N. Y.

Claim.—The combination with the tuck-marker, the operative members of which are connected and together adjustable with reference to the cloth-plate and needle, of the lever E, the reach and the follower, or their equivalent, for the purpose of actuating the tuck-marker by a motion imparted directly from the revolving shaft of a sewing-machine, substantially as specified.

112,579.—MOWING-MACHINE.—Solomon Fuller, Somers, Conn.

Claim.—1. The finger-bar jointed to the shoe, as described, in combination with the lever *i*, holder 4, and spring *k*, arranged and operating as set forth.

2. In combination with the divider *c'* and nose-piece *c''*, made adjustable by spring-catch *n*, the cutters *f f''*, constructed and operating as described.

112,580.—UNIVERSAL MANDREL.—James Gallatin, Jr., New York, N. Y.

Claim.—As my improvement in universal mandrels, of the species herein described, the split, tapered, and screw-threaded extremity *c* of the cone B, jointly with the nut *b*.

112,581.—TEA-KETTLE.—Peter V. B. Gantz, Albany, N. Y., assignor to Charles E. Gantz, same place.

Claim.—1. The combination of the gear E, or a section of the same, with the cover B, when the said cover is pivoted to the body of the kettle, substantially as and for the purpose set forth.

2. In combination with the bail-handle D, the gear F, or a section of the same, substantially as and for the purpose set forth.

3. In combination with the gear F and bail-handle D, the pressing-finger G, when all are arranged substantially as and for the purpose set forth.

4. Operating the cover B to uncover or cover over the opening A, by the movement of the handle or bail D, when the means used are the gears E and F, or sections of the same, combined with the cover B, arranged to swing on a pivot, the bail-handle to be operated substantially in the manner as set forth.

112,582.—HARVESTER-CUTTER.—Thomas Garrick, Providence, R. I.

Claim.—The spring-knife C, constructed as described, in combination with the harvester-finger, as and for the purpose specified.

112,583.—PLASTER-SOWER.—Charles E. Gladding, Towanda, Pa.

Claim.—1. The combination of the pivoted bars G, connecting-bar H, pivoted bars I, connecting-rod J, pivoted support K, and cam-wheel L, with each other and with the drive-wheel A, axle B, and hopper D, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the adjustable plate E, clamping-nuts *e'*, and pivoted arms F, with the discharge-opening in the bottom of the hopper D, when used in connection with the pivoted arms or bars G and I, substantially as herein shown and described, and for the purpose set forth.

112,584.—FANNING-MILL.—Reuben Gipson, Shelby, Ohio.

Claim.—1. The sieve C and board *c*, in combination with the hopper D, opening *d*, outlet *e*, and fan E, when said parts are constructed and arranged substantially as shown, and for the purpose specified.

2. The arrangement of the sieve C and board *c*, hopper D, opening *d*, fan E, sieve F, and drawer H, all substantially as shown, for the purpose set forth.

3. The combination of the hopper B, valve *k*, sieve C, board *c*, with the hopper D, opening *d*, outlet *e*, fan E, sieve F, drawer H, and opening *f*, when all constructed and arranged as shown and described, for the purpose set forth.

112,585.—ELECTRICAL ALARM-LOCK.—Fréjus Girard, Havana, Cuba.

Claim.—1. The spring E, arranged as represented relatively to the lock B C, and having connections, G H, to a battery, and to suitable alarm mechanism, so that the introduction of the key shall induce an alarm, substantially as set forth.

2. In combination with the above, the adjusting-lever M and its connections, by which the alarm may be thrown into and out of use, at pleasure.

112,586.—LAMP.—Henry J. Goff, Dubuque, Iowa.

Claim.—1. The flattened isolated wick-tube, one side of which is formed to a greater or lesser extent of wire-gauze, and said wire-gauze portion inclosed by an enlarged chamber, F, which connects with a small tube, E, leading from the oil-reservoir, all in the manner herein described and shown.

2. The flattened wick-tube J, with the enlarged surplus wick-holding tube portion J', constructed and arranged as described.

3. The flattened tube J, combining in its construction the enlarged chamber J', wire-gauze portion *g*, and enlarged chamber F, all as and for the purpose herein described.

4. The wire-gauze *a*, attached directly to the perforated cap *a'*, in combination with the wire-gauze *c* in reservoirs A, and the wire-gauze *g* of wick-tube J inclosed in a chamber F, as shown and described.

112,587.—COW'S-TAIL HOLDER.—William H. Gray, Ashfield, Mass.

Claim.—The combination of the pincers *a*, knobs *b*, spring *c*, and comb A, as specified.

112,588.—COATING SHEET-IRON WITH ZINC.—John D. Grey, Pittsburg, Pa.

Claim.—The process of coating iron with a film of zinc by passing sheets of the former through a flux of sal ammoniac, then through the molten zinc, again through the same flux, then through smoothing-rolls, and finally impinging thereon a current of cold air as it rises from the bath, all substantially as described.

112,589.—BREECH-LOADING FIRE-ARM.—Henry Hammond, Hartford, assignor to Lewis Hammond, Collinsville, Conn.

Claim.—1. The combination of the breech-block G, the thumb-piece H, with its projection *f*, and the ejector *j*, constructed and arranged substantially as herein described.

2. The combination of the projection *f* for operating the ejector, the oblique slot *i*, whereby the ejector is moved rearward more rapidly than the breech-block, and the beveled edge *o*, for allowing the projection *f* to pass over the ejector, substantially as herein described.

3. The peculiar form given to the heel *q* of the hammer, which, in connection with the breech-block, prevents its being snapped when at full-cock and the breech is open, the notch *s*, which will allow the breech-block to pass when the hammer is at half-cock, and prevent the hammer being moved when the breech is open, substantially as herein specified.

4. The checked or serrated rear of the breech-block, and the checks or serrations on the front of the hammer at the parts which come in contact when the block is open, or partially so, so that if the hammer is allowed to rest upon the block it will prevent the latter from being closed, substantially as herein specified.

5. The combination of the spiral groove G' with the locking-bolt *e*, for the purpose of forcing and guiding the breech-block to the rear, substantially as herein described.

112,590.—WINDOW-SCREEN.—John Hancock, Jr., Providence, R. I., assignor to Charles L. Spencer, trustee; and Charles L. Spencer, trustee, assignor to John Hancock, Jr., and Benjamin Morse.

Claim.—The sides A A and B B, in combination with the roller, when constructed to operate substantially as set forth, and for the purpose specified.

112,591.—ROTARY STEAM-ENGINE.—Aaron S. Harlan, Bloomington, Ill.

Claim.—1. The lower cylinder, provided with the flanges *g g' g*, the half rings *j*, the passages *h*, and the ribs *i*, all arranged together, as specified.

2. The upper cylinder, provided with the circumferential grooves *m* and the longitudinal recesses *n*, as described.

3. The combination of the upper cylinder, constructed as specified in the second claim, with the lower cylinder, constructed as specified in the first claim.

112,592.—POTATO-DIGGER.—William D. Harrell, Moore's Hill, Ind.

Claim.—A potato-digger, provided with teeth B (having heels D D) rigidly secured to the bar E, and the interchangeable and removable teeth designated by C C, and the one shown in fig. 2, all arranged in the manner shown, and for the purposes specified.

112,593.—GAS-RETORT.—George W. Harris, Elizabeth, N. J.

Claim.—1. A retort made of fire-clay or other suitable material, the form of which is produced by the combination of two retorts into one double retort, consisting of an upper and lower chamber, each of suitable size, the division or partition between said chambers being perforated with a number of holes about one-half inch in diameter, more or less.

2. A combination of a lower chamber, containing a false bottom of perforated tile, in connection with the upper chamber, having a perforated bottom or septum, all in the manner as and for the purposes substantially as hereinbefore set forth.

112,594.—SKY-LIGHT, CONSERVATORY, AND OTHER GLAZED STRUCTURES.—George Hayes, New York, N. Y.

Claim.—1. The hollow metallic bar or rafter C^1 or C^2, constructed, substantially as described, of plates *a* and *c*, bent to support or connect each other and to form gutters *b b*, arranged in juxtaposition to each other, and under cover of the base or bases which support the glass, as herein set forth.

2. The clip H, constructed of sheet metal bent to form a groove, *h*, a rebate, *i*, and a gutter, *k*, essentially as and for the purposes described.

3. The transom K, made of sheet metal, with cast-iron blocks *n*, and intermediate wooden filling *q*, substantially as specified.

112,595.—MEDICAL COMPOUND FOR TREATING BRONCHIAL AND LUNG DISEASES.—Shelby Wadan Helm, Bachalor Valley, assignor to Britton Capell and William J. Rose, Little Lake Valley, Cal.

Claim.—The medicine hereinbefore described and set forth, under the name and title of Helm's California Herb Bronchial and Lung Balsam.

112,596.—OIL-WELL DRILLING.—John R. Hill, Rouseville, Pa.

Claim.—The mode of closing the water-courses encountered in drilling oil and other artesian wells, herein set forth and described.

112,597.—CHEESE-HOOP.—Artemus Holdredge, West Burlington, and Benjamin F. Harrington and Henry H. Harrington, New Berlin, N. Y.

Claim.—1. A rectangular cheese-hoop, composed of the parts A B and C I, secured together by the fastening devices herein shown and described, or their equivalents, substantially as specified.

2. The improved rectangular pressing-case, composed of two or more horizontal sections, the sides of each being provided with cleats, and respectively with projections Q and notches P, and hinged and locked together, substantially as specified.

112,598.—CONSTRUCTION OF LAMP.—Jonathan J. Hoyt, Chelmsford, and John E. Crane, Lowell, assignors to the Lowell Oil-Cup Company, Lowell, Mass.

Claim.—The metallic ring *b*, when secured to the outside of the neck of a glass lamp, in the manner described, to facilitate the removal of the lamp-top, as set forth.

112,599.—SECURING WHEEL-TIRES.—Anthony Huegler, Sullivan, Mo.

Claim.—The metal corner-pieces F F, metal felly E, and bolts and nuts *d e f g h*, combined, as described, with the serrated ends of the tire B, for the purpose set forth.

112,600.—MACHINE FOR DRESSING YARN OR THREAD.—Gilman Jaquith, West Concord, Mass.

Claim.—The combination of corn-cobs with spooling or other machines used in the manufacture of thread, for trimming and dressing it, substantially in the manner described.

112,601.—EMBROIDERING ATTACHMENT FOR SEWING-MACHINES.—Albert W. Johnson, Middletown, Conn., assignor to himself, Rufus Baker, and Oscar D. Lee, same place.

Claim.—1. The combination, with the thread-carrier or carriers, of the twisted shank or spindle, and the fast-and-loose ratchets, and their pawls, operated by a connection with the needle or needle-bar, substantially as herein described, to produce the intermittent revolution of the carrier or carriers.

2. The inclined stationary guide, and vibrating and sliding connection, in combination with the revolving thread-carrier or carriers, substantially as herein described, for producing a movement of the said carrier or carriers toward and from the needle, as and for the purpose herein set forth.

112,602.—HAY-TEDDER.—William G. Kenyon, Wakefield, R. I.

Claim.—1. The combination of the hollow driving-wheels, the plates C, and the reel or reels that carry the forks, these parts being constructed and arranged as described, so that the reel passes through the wheel wholly on one side of its center, substantially as set forth.

2. The combination of the short stiff tines *i* with the elastic ones *e* and bars *c*, substantially as and for the purpose set forth.

112,603. — WASHING-MACHINE. — Osman Smith King, Painesville, Ohio.

Claim.—The combination of the lever, connecting-rod, and fly-wheel, operating to revolve the disk of the washing-machine, and arranged in relation thereto, as shown and described.

112,604.—SKATE.—Moses Kinsey, Newark, N. J.

Claim.—1. A heel-plate, B, having ears *a a*, slotted to fit over and be suspended from nails already attached to the boot, as described.

2. A foot-support, A, having perforated ears *c c*, curved forward to catch upon and firmly hold to the edge of the boot-sole, without pins, screws, or any other attachment.

112,605.—HARVESTER-RAKE. — David R. Kinyon, Raritan, N. J., assignor to himself and Job C. Kinyon, same place.

Claim.—The combination, with the reel or rake of a harvester, of the shaft F, having the universal joints I I, the pulley J, provided with the sleeve H, and secured in the bearing, made adjustable, as described, and the pulley K on the shaft B, all arranged to operate as shown and herein set forth.

112,606.—PROCESS OF REFINING AND WHITENING THE PRODUCT FROM SULPHURETS OF LEAD AND ZINC.—George T. Lewis, Philadelphia, Pa.

Claim.—The process of refining and whitening of the products obtained by reducing the sulphurets of lead and zinc with fuel, by passing these products through a heated tube, substantially as described.

112,607.—REFINING AND WHITENING THE PRODUCT FROM ORES OF LEAD AND ZINC. George T. Lewis, Philadelphia, Pa.

Claim.—The process of refining and whitening of the product obtained by reducing the sulphurets of lead and zinc with fuel, by subjecting it to the action of a highly-heated current of air, as above described.

112,608.—MANUFACTURE OF CARBONATE OF LEAD, &c.—George T. Lewis, Philadelphia, Pa.

Claim.—1. The manufacture of carbonate of lead or white lead directly from the sulphate of lead, through the agency of the soluble carbonates heated under pressure.

2. As a new article of manufacture, carbonate of lead, produced by treating sulphate of lead with soluble carbonates heated under pressure, as the basis of a pigment, or as a material to be used in the manufacture of acetates and other commercial salts of lead, or orange mineral, or other commercial oxides of lead.

112,609.—BASE-BURNING-STOVE.—De Marcus Madden, Penn Yan, N. Y., assignor of one-half his right to Ralph T. Wood and Farley Holmes, same place.

Claim.—1. The rotary conical grate U, arranged to be raised and lowered without rotation, while its axis remains vertical, substantially as specified.

2. The combination of a conical center grate, U, having vertical motion of translation, with a surrounding base-grate, V, substantially as specified.

3. The adjustable conoidal center grate, substantially as specified.

4. An adjustable magazine, capable of being raised and lowered by means of an elevating-screw, *s*, substantially as specified.

5. The combination of an adjustable magazine with an adjustable grate, capable of being moved toward or from each other, substantially as specified.

112,610.—MANUFACTURE OF BOTTLED MINERAL WATER.—Thomas Maloney, Des Moines, Iowa.

Claim.—1. The glass thimble, or its equivalent, substantially as described, and for the purposes specified.

2. The process of preparing effervescent mineral waters in bottles by introducing one of the component parts by means of a graduated measure or thimble, in the manner described.

112,611. — SAFETY-VALVE. — Stewart C. Marsh, Newark, N. J.

Claim.—The piston *a*, cylinder *b*, spring *d*, valve *j*, and guide-nut *k*, all constructed, combined, and arranged as and for the purpose hereinabove set forth.

112,612.—MACHINE FOR CUTTING SCREW-THREADS ON BOLTS. — Henry Martin, Louisville, Ky.

Claim.—1. In combination with a rotating spindle of a bolt-threading machine, a bolt-holding mechanism, comprehending a stock integral with or attached to the end of the spindle, a socket-piece connected to the extremity of said stock by gudgeons or otherwise, but so, nevertheless, that a rocking motion may be imparted to it in a plane at an angle to the plane of its rotation, and a device, also connected to said stock, to clamp and firmly hold the bolt in its socket, substantially as described.

2. In combination with the bolt-holding mechanism, set forth in the first clause of claim, a series of interchangeable chucks or bushings, P, as set forth.

3. The bolt-holding and centering device D, consisting of the slotted head S, the hand-lever S^1, and its head-holder, S^2, in combination with a rocking holder, N, substantially as described.

4. The frames C C, in combination with the outside guides B B of the main frame A, shaft *a'*, bolt-carrying spindles *b*, constructed and operating substantially as and for the purposes described.

5. The weight W', oscillating arm K K^1, union K^2, and adjusting device R', in combination with the suspending and spindle-driving shaft *a'* and with the movable spindle and gear-supporting frame C, substantially as and for the purpose herein described.

6. In combination with one or more rotating and vertically-movable bolt-holding spindles, and one or more screw-threading dies fixed upon a permanent table, a clutching apparatus located on said spindle, by which the motion of rotation of the latter may be reversed, a lever and a catch, the former weighted at one end for holding the movable section of the clutch-apparatus in contact with one of the stationary sections thereof, and a hook on the other end to engage with the catch when said central section of the clutch is brought in contact with the other stationary section, and a frame or other device integral with or attached to the spindle, the whole combination being such that the die, in drawing the spindle toward them, while cutting, shall force the frame to release the hook of the lever from the catch, and thus cause the reversal of the clutch apparatus and the reversal of the movement of rotation of the spindle.

7. The tripping device *g*, *g'*, *g''*, *g'''*, and *e''*, applied as and for the purpose described in both threading-machines.

8. The loaded lever G, rock-shaft g^4, clutch-arm I, and rod g^3, in combination with knife-edge g^2, tripping device *g g'*, and the vertically-movable spindle-frame C, substantially as described.

9. The combination of the tap-bed M, oil basin A^1 and V, gang of vertical spindles *b*, bolt-holders D, and vertically-movable frame C, substantially as described.

10. The machine, constructed as herein described, for threading bolts and withdrawing them from their taps, and also adjusting them to an inclined position for ready removal, all as set forth.

112,613.—MODE OF MAKING WELLS.—William Mason, Providence, R. I.

Claim. — The mode of constructing wells by means of the cement *a* and cylinder *d*, in the manner set forth.

112,614.—COMBINED CLOTHES-RECEPTACLE, IRONING-BOARD, AND DRIER.—Samuel T. McDougall, Brooklyn, N. Y.

Claim.—The combination of the receptacle A, board B, and drier C, when the same shall be constructed and operate substantially as and for the purposes set forth.

112,615.—MOP-HEAD.—Joseph Messinger, Springfield, Vt.

Claim.—1. A mop-head, wherein the binder is operated by means of a tubular screw, said screw being formed of skeleton or open screw-threads, in the manner and for the purposes herein described.

2. A mop-head, wherein the ends of the binder pass between the open threads of a screw and work up and down in grooves or guides formed in the handle, in the manner and for the purposes herein described.

3. A skeleton-screw, operating the binder of a mop-head by direct action, and without the medium of a collar, yoke, or nut.

4. The combination of binder, cross-head, and handle with a tubular skeleton-screw.

112,616.—TREADLE FOR SEWING AND OTHER MACHINES. — George W. Miles, Lynn, Mass.

Claim. — The combination of the treadle A B with the bar or lever C, the fulcrum D, and the sliding head G, when combined and arranged to operate substantially as set forth.

112,617.—POTATO-PLANTER.—John C. Mills, Rochester, N. Y., assignor to himself and Richard Leake, same place.

Claim.—1. The roller D, provided with grooves *i*, and operating substantially as and for the purposes herein set forth.

2. The arrangement, on the inside of the hopper E, of the clip H, slide G, and knives *f f*, substantially as shown and described.

3. The combination of the V-shaped frame A, handles B B, axle *a*, wheels C C, roller D, hopper E, slide G, with knives *f f*, shovels I I, and gauge-wheel K, all constructed and arranged substantially as and for the purposes herein set forth.

112,618.—PIPE-CONNECTION. — James M. Morehead, Brooklyn, N. Y.

Claim.—The improved unions herein shown, consisting of the parts B and C, formed with the inner threaded surfaces *b b'*, and concentric ridges E E', and groove to receive the packing D D', in combination with the threaded nut A and pipes F F', the whole constructed and operating as herein shown and described, for the purpose set forth.

112,619.—BURGLAR ALARM-DRAWER.—Jeremiah Murphy, Boston, Mass.

Claim.—The arrangement in the drawer A of an alarm-gong, B, and knob *b*, directly connected with the same, as described, and the latch or lock *a*, located in the front of the drawer and operated from the under side of the same, as and for the purpose shown and set forth.

112,620. — EARTH-CLOSET. — Solomon D. Newbro, Lansing, Mich.

Claim.—The cover C, bar A, and feeder B, in combination with the frame E, F, and D, and hopper Q, substantially as set forth.

112,621.—MODE OF ATTACHING PIPES TO SINKS, DRAINS, &c. — Aaron B. Nott, Fairhaven, Mass., assignor to himself and P. E. Merrihew, same place.

Claim.—1. The annular double-seat flange *e*, formed within a raised portion, *d*, of the flanged bowl A, in combination with lugs *i i n n*, substantially as and for the purposes described.

2. The flanged tube F, constructed as described, and combined with the seat *e*, substantially as described.

3. The flanged nut N and pipe P, in combination with the flange *e* and lugs *n n*, and with the flanged tube F, substantially as described.

112,622.—FRUIT-GATHERER.—Cornelius Ostrander, Poughkeepsie, N. Y., assignor of one-half his right to Alson Ostrander, same place.

Claim.—The combination of the rotary cutters *a a* and the frame D, substantially as and for the purpose hereinbefore set forth.

112,623. — PAPER-CUTTING MACHINE.—Charles Paine, Boston, Mass., assignor to himself and Cyril C. Child, same place.

Claim.—1. The revolving knife-bed D, operating substantially in the manner and for the purpose described.

2. The combination of the revolving knife-bed D, one or more guide-pieces *b*, and the table A, substantially as and for the purpose set forth.

112,624. — GLOBE-HOLDER AND COOLER COMBINED, FOR VAPOR-BURNERS.—Jason J. Palmer and Franklin G. Palmer, Pittsburg, Pa.

Claim.—A globe-holder, G, and cooling-tube, B, combined, substantially as described.

112,625.—SKIRT.—Charles W. Peirce, Jr., Bristol, Pa.

Claim.—As a new article of manufacture, a skirt, having its lower edge printed in imitation of a

binding, said printed portion being partially turned in and stitched to the inner face of the skirt so as to form a doubled edge, substantially as described.

112,626.—MACHINE FOR TAPPING BOILERS. Parley I. Perrin, Taunton, Mass., and Joseph L. Hewes, Newark, N. J., assignors to Parley I. Perrin.

Claim.—The spindle F and tool H, combined, as described, with an intermediate sleeve, *o*, having a slight lateral play upon said spindle, for the purpose of enabling the tool to get out of line with the latter without being strained thereby.

112,627.—WASH-BOILER.—Charles W. Powell, Bloomfield, Conn.

Claim.—1. The perforated frame A, circles C C, open bottom B, open space D, and adjustable or removable discharge-tubes E E, constructed and arranged with slides, to operate substantially as and for the purposes described.

2. The combination of the perforated frame A with circular slides and removable discharge-tubes, arranged substantially as and for the purposes described.

112,628. — TREATING COTTON-SEED. — Joseph J. Powers, Memphis, Tenn.

Claim.—The treatment of cotton-seed meal or hulled cotton-seed by a heating and drying process, previous to packing for shipment, substantially as herein specified.

112,629.—FINGER-BEAM FOR HARVESTERS. Amos Rank, Salem, Ohio.

Claim. — The longitudinally-corrugated sheet-metal finger-beam for harvesters, hereinbefore described.

112,630. — SLEIGH. — Amos Rank, Salem, Ohio.

Claim.—The combination of the elastic ⊃-shaped runners, the upper members of which support the seat of the sleigh, with a spring interposed between the upper and lower members of the runners, substantially as described.

112,631. — BELL.—Joshua Regester, Baltimore, Md.

Claim.—1. The bell A, which is operated by a rope attached to its crown, and which is also supported upon a vibrating yoke, D, with its mouth directed upward, and so that the center of gravity of the bell falls below the axis of motion of the yoke, in combination with spring-clapper supports *e*, substantially as described.

2. The perforated base-piece G, constructed with fulcrum-pins *t t*, isolated as described, the U-spring *s s*, when confined by the pin *g*, having a bearing against the inner side of the pins, and at the same time the whole length of the arms of this spring, from the head of the pin *g* to their tips, having freedom to play when under tension or released, substantially as and for the purpose described.

112,632. — HAIR-TONIC. — Sarah Amanda Reybert, Plainfield, N. J.

Claim.—An improved vegetable hair-tonic, prepared of the ingredients and in the manner substantially as herein set forth and described.

112,633.—CARPET-FASTENING.—Joseph A. Robbins, Medford, assignor to himself and Martin W. Ford, North Chelsea, Mass.

Claim.—The plate or lever A, provided with bent end B and orifice C, in combination with the wire D and staple E, substantially as described.

112,634.—MOLD FOR SUPPOSITORIES.—Joseph A. Robbins, Medford, assignor to himself and Francis V. Holmes, Boston, Mass.

Claim.—1. The mold D, arranged on rod E, with spiral spring H, substantially as described.

2. The mold D, constructed as described, in combination with the block A hinged at the larger ends of the conical recesses B, as and for the purpose set forth.

112,635. — SAFETY-HASP OR LATCH.—Charles E. Robinson, Boston, Mass., assignor to himself and Charles W. Brunner, Savannah, Ga.

Claim.—In a hasp, constructed as described and shown, the curved lip *e*, in combination with the spring-bolt E, when arranged thereon as specified, and so as to operate as and for the purpose set forth.

112,636.—MACHINE FOR FEEDING FUEL TO FURNACES.—Alexander Rodgers and Esau Tarrant, Muskegon, Mich.

Claim. — 1. The discharging-throat *e*, leading from a delivery apparatus outside of the furnace, combined, as described, with the transverse guide E, L-shaped in form, and arranged against the inner side *d* of the furnace, for the purpose specified.

2. The deflecting-plates *f f*, arranged within the furnace for the purpose of guiding the fuel in the desired direction, substantially as herein shown and described.

3. The L-shaped transverse guide E, combined, as described, with plates *f f* pivoted thereon, and adjustable with reference thereto, for the purpose specified.

4. The troughed screen-hopper D, the fuel-receiver and conveyer A B *a b c*, the guide E, and the deflectors *f f*, all combined, as described, to successively perform their respective functions and bring about the common result of depositing the comminuted fuel within the furnace, on the principle specified.

112,637.—GAS-BURNER.—Mark Rosenway, New York, N. Y.

Claim.—The gas-burner A, constructed to operate substantially as shown and described.

112,638.—BOOT-JACK.—Joseph Rouard, San Francisco, Cal.

Claim.—The combination of the foot-board A, frame G, and the vibrating arm H, when constructed so as to be adjustable by the handles K, as and for the purpose described.

112,639.—WINDOW FOR RAILWAY-CARS.—Ernest A. Schoeller, Connellsville, Pa.

Claim.—The detachable frame D, provided with stripe J, sash *e*, blind *f*, and springs *h*, the whole being constructed as described, and held in position through the medium of stripe *g* and *i* and the springs *h*, as and for the purpose set forth.

112,640. — HORSE-CAR STARTER.—Henry Schreiner, Philadelphia, Pa.

Claim.—The sliding rack-bars A A, the toothed eccentric swinging levers D D, the stationary block a^4, the slotted guides E E, pole or shafts F, and chains or ropes *c' c'*, the pulley G on the braking-lever, chain or rope *g'*, bar *g''*, and chains or ropes *g'''*, the said parts being constructed and arranged to operate in combination with the bottom frame and the four wheels of the car, substantially as and for the purpose hereinbefore set forth and described.

112,641.—SHAFT-COUPLING.—Freedom G. Shepard, Battle Creek, Mich.

Claim.—1. The combination of a separate smooth metal guard-ring, E, with the ordinary coupling-

ring C of a pair of forked shaft-couplings, when said guard-ring is so placed and attached as to cover the ends of the coupling-pins and secure them in place, substantially as and for the purpose specified.

2. In forked shaft-couplings, the arrangement and combination of the separate grooved and recessed guard-ring E, ordinary coupling-ring C, and projecting coupling-pins *p p'*, to the end that said pins and guard-ring may mutually secure and protect each other, substantially as set forth.

112,642.—SEALING CANS AND OTHER VESSELS FOR PRESERVING FRUITS, MEATS, &c. — Nicholas H. Shipley, Baltimore, Md.

Claim.—1. A can, provided with stay-rods *e*, as and for the purpose specified.

2. The combination of the notched rings *f* and *g* and the plug *h*, as and for the purpose described.

3. The method of closing a can by forcing a plug, inclosed within a ring, downward upon a notched ring secured to the top of the can in such manner that the notches of said lower ring pass between the plug and the upper ring, and are clinched by the latter upon the plug, as set forth.

4. The method of hermetically sealing a can during the process of ventilation, as set forth.

5. The method of connecting the rings *f* and *g* by passing the prongs *m* of the former through slits in the cover of the latter, and then turning the prongs down upon the cover, as explained.

6. The steamer, consisting of the basin *p* and adjustable cover *q*, for utilizing the steam generated in the process, as substantially set forth.

112,643.—SHUTTLE FOR LOOMS.—Charles Elbridge Smith, Lowell, Mass., assignor to himself, John S. Jaques, and Frank T. Jaques, same place.

Claim.—1. In the loom-shuttle the two springs C D, as combined and arranged with the spindle-arm *c*, as set forth, and provided with a stop-groove, *f*, arranged in the inner spring to receive the pin *e* under circumstances as hereinbefore explained.

2. The improved loom-shuttle, as made, with the springs C D, the notch *f*, and the pin *e*, arranged and applied to the shuttle-body, and the spindle-arm *c*, as set forth, and with the shuttle-body extended over so as to cover the spindle-head, all substantially as described and represented.

112,644.—SKY-LIGHT.—Charles Scott Snead, Louisville, Ky.

Claim.—1. The combination of the raised cover M with the hollow ridge-pole F, provided with perforations *m* and *t* in its sides and top, and with shoulders *a*, substantially as and for the purpose specified.

2. The combination of the ridge-pole F, provided with the cover M and perforations *m t*, the purlin I, gutters L, barge plates A B *s*, and eave-plate P *v*, substantially as herein shown and described.

112,645.—BOILER-FLUE BRUSH.—Benjamin M. Spencer, Newark, N. J.

Claim.—1. The divided or segmental cylinder A, as shown and described.

2. In combination with segmental cylinder A, flanged disks or heads *c* and *c'*, whereby said cylinder segments are held together, as and for the purpose shown and described.

3. In combination with segment cylinder A and flanged heads *c* and *c'*, the guard-ring G, by which the guards are secured, independent of said heads, all constructed and arranged substantially as described.

112,646.—VELOCIPEDE. — Manassa Staudt, Summit Hill, Pa.

Claim.—1. The combination of the levers E and I, links F, G, H, and J, and the cross-bar or stud D with the cranks *a* and *b*.

2. The axle B, ratchet-wheel L, spider-wheel M, pawls N, and the springs *h*, in combination with the cranked axle A and its attendant wheel.

112,647.—PACKING FROM ASBESTUS AND OTHER FIBROUS MINERALS.—Chase A. Stevens, New York, N. Y., assignor to Abijah Richardson, Boston, Mass.

Claim.—1. Packing of asbestus or other mineral fiber, made in the form of a rope, or in octagonal, square, or flat form, by compressing the fiber, prepared in a flocky state, and freed from silex or other gritty matter, into a dense and adhesive structure, substantially as specified.

2. Packing of asbestus or other mineral fiber, prepared in a flocky condition, and freed from silex or other gritty matter, compressed into the form of rope, or square or flat form, and having the strengthening-cords B or B' imbedded in the surface, and arranged either parallel, spirally, or braided on, all substantially as specified.

3. Packing of asbestus or other mineral fiber, prepared in a flocky state, and freed from silex or other gritty matter, compressed into the form of rope, or square or flat form, and having the strengthening-cords B or B' imbedded in the surface, as described, and also having the binding thread or cord C, all substantially as specified.

4. Packing of asbestus or other mineral fiber, prepared in a flocky state, and freed from silex or other gritty matter, made into the form of a compressed rope or other like structure, covered with canvas or muslin or any other equivalent fabric or material, substantially as specified.

112,648.—FIBROUS MINERAL PACKING FOR JOURNALS, BEARINGS, &c. — Chase A. Stevens, New York, N. Y., assignor to Abijah Richardson, Boston, Mass.

Claim.—A packing for journals and other parts of machinery, prepared from asbestus, amianthus, or other fibrous mineral, substantially as and for the purposes set forth, so as to free said fibrous minerals from all earthy matter and grit and produce a clean flocky fiber, highly lubricating, and indestructible by heat or acids.

112,649.—TREATING ASBESTUS AND OTHER MINERAL FIBERS FOR USEFUL PURPOSES. Chase A. Stevens, New York, N. Y., assignor to Abijah Richardson, Boston, Mass.

Claim.—1. The cleansing of mineral fibers from silex and all other earthy matters, and preparing the same for the uses and purposes as herein set forth.

2. For cleansing and preparing mineral fibers by a chemical process, or by the use of any or all of the machinery or mechanical appliances, as herein set forth.

3. The preparation of fibrous minerals and mineral fibers for the applications and purposes as herein set forth.

4. The preparation of fibrous minerals and mineral fibers for commercial, mechanical, manufacturing, and chemical purposes and uses, prepared chemically or by machinery, in whole or in part, as herein set forth.

5. The preparation of fibrous minerals and mineral fibers for the manufacturing of packing for steam and caloric engines, pumps, journals, and bearings, as hereinbefore set forth, by all or any portion of the machinery or the mechanical appliances.

112,650.—TREATING ASBESTUS AND OTHER FIBROUS MINERALS.—Chase A. Stevens, New York, N. Y., assignor to Abijah Richardson, Boston, Mass.

Claim.—1. The herein-described process for the treatment of asbestus, amianthus, hornblende, and other fibrous minerals, with fluorine gas or hydrofluoric-acid gas, for eliminating the silex and other foreign matters and producing a pure fibrous condition of said minerals.

2. The process of treating silex or silicates with fluorine or hydrofluoric acid, fibrous mineral substances, as and for the purpose set forth.

112,651.—Machinery for Forming Packing from Asbestus and other Fibrous Materials. — Chase A. Stevens, New York, N. Y., and Isaac Lindsley, Pawtucket, R. I., assignors to Chase A. Stevens; and said Stevens assignor to Abijah Richardson.

Claim.—1. The funnel-shaped fiber-compresser, consisting of the two sets of staves or bars, arranged for having the simultaneous to-and-fro radial movements, substantially as specified.

2. The combination, with the compressing-staves or bars, of the plates E F, having the radial grooves D, substantially as specified.

3. The combination, with the said compressing-staves or bars, of the tappet-ring K and springs R, substantially as specified.

4. The combination, with the compresser, of the cord-guide *x y*, substantially as specified.

5. The combination, with the compresser, of the covering-fliers *d* and bobbin-carrier *e*, substantially as specified.

6. The combination, with the compresser, of the drawing-rolls, substantially as specified.

7. The combination, with the drawing-rolls, of the guide K, substantially as specified.

112,652.—Stirrup for Riding-Saddles.—Leonard S. Taylor, Sigel, Mo.

Claim.—The combination, with the stirrup A, of the pivoted foot-piece B, springs C, and rods D, all substantially as specified.

112,653, antedated March 1, 1871.—Fertilizer. — Thomas Taylor, Washington, D. C.

Claim.—The combination of night-soil with peat, clay, soluble silicates, a persalt of iron, and tincture of quassia, in all proportions, when combined substantially in the manner and for the purpose as set forth and described.

112,654, antedated February 28, 1871.—Apparatus for Making Ice and Refrigerating. — Archibald B. Tripler, New Orleans, La.

Claim.—1. A vacuum, created in the cold-generating chamber A above the surface of the fluid which covers the heat-conducting coil or coils E, air-pump B, and expansion-chamber C, for the purpose of getting rid of the heat generated by the compressed air, substantially as described.

2. The revolving winged propeller J, located and arranged at the bottom of the refrigerating-case for the purpose of imparting to the fluid surrounding the receiver a continuous circulating motion, substantially as described.

3. The intervening fluid-chamber G of the refrigerator, having its continuity interrupted by means of the partition *a*, located and arranged near the winged propeller for the purpose of accelerating the circulation of said fluid, as herein shown and described.

4. The circulating-chamber G, closed on one side of the receiver and open only at its bottom, for the purpose of causing the flow of the liquid over, upon, and through the reticulated diaphragm on to the top of the receiving-chamber F and down the opposite side of said chamber G, as herein shown and described.

5. In the process of making ice, the gradual reduction of the temperature of the air to the freezing-point by producing a vacuum within said freezing-chamber, substantially as herein described.

6. A chemical absorbent, used for condensing purposes, injected in a state of solution in a pipe or pipes leading to the vacuum-pump, for the purpose of condensing the vapors produced by the vacuum, substantially as described.

7. The slide-valve *s*, or its equivalent, at the top of the receiver F, for the purpose of opening communication with the receiver and vacuum-chamber, in order to produce a vacuum in said receiver, substantially as described.

8. The article under preservation covered with an antiseptic compound, and, while in this condition, submitted to vacuum, for the purpose of more thoroughly diffusing the antiseptic compound in the animal matter under preservation, as herein described.

9. For the purpose of ventilating and cooling, a current or currents of air, while under compression, passed through a coil or coils of pipe, or other conductors, while submerged in a liquid partially non-congealable and under the influence of vacuum, as herein described.

10. The compressing air-pump B, the heat-conducting pipes E, and the expansion-chamber C, located and arranged within a single receiver and connected directly to each other, so that they will all be subjected to the same degree of cold, in the manner herein described.

11. The combination of a refrigerator having an inner receiving-chamber, F, surrounding-case D, and intervening vacuum and liquid-chamber G, with a cold-generating chamber, A, having a compressing air-pump, B, a coil or coils of pipe, E, for transmitting heat, an expansion-chamber, C, and a vacuum-chamber for absorbing and vaporizing said heat, the two vessels A and F being connected to each other by an automatic pressure-valve, the several parts being constructed and arranged as herein shown and described.

112,655.—Fastener for Spinning-Rings. Charles Edward Trowbridge, Whitinsville, Mass.

Claim.—The spring-catch or ring-fastener, arranged on the under side of or underneath the ring-rail, and extended up within the spindle-opening thereof, and constructed substantially in the manner described, so as to enable such fastener to catch or take upon the inner flange of the lower race of the ring, or upon a shoulder or its equivalent made in or on the ring, all substantially as set forth.

112,656.—Machine for Blocking Ribbons, &c. — George Vincent, Stockton, Cal.

Claim.—The disks C and D, with the grooves H H and the points I I I I, in combination with the standards A B, substantially as and for the purposes hereinbefore set forth.

112,657.—Attaching the Hair-Springs of Watches. — Constant W. Wadsworth and Carl Cullberg, Peekskill, N. Y.

Claim.—The collar or sleeve D, having a screw-thread cut upon its outer or inner surface, in combination with the balance-wheel staff B and the hair-spring collet C, one or the other of the parts B C having a screw-thread cut upon it corresponding with the screw-thread of the said collar or sleeve D, substantially as herein shown and described, and for the purposes set forth.

112,658.—Wire Fence.—Charles A. Wakefield, Pittsfield, Mass.

Claim.—1. The combination, with a weight A and yoke *m*, to which it is attached, of a series of levers *n*, or *n* and *r*, for operation on the wires *d*, substantially as specified.

2. In combination with the wires *d*, attached at their one end to a pendent weight or weights, of the adjusting-pins *e*, formed with an annular shoulder, *f*, and the locking recess *g* in the post within which said pins are fitted to turn and slide, essentially as described.

112,659.—Refrigerator.—John H. Welsh, Erie, Pa.

Claim.—1. The vase G, on the top of the refrigerator, in combination with the cloth-covered body A A, as and for the purpose specified.

2. The acid-vessel or disinfectant-chamber C, with its porous cork D, the movable bottom E E, the body A A, covering I, and vase G, in combination, constructed and operated substantially as set forth for the purpose specified.

112,660.—Anti-friction Journal-Box.—Henry P. Westcott, Seneca Falls, N. Y.

Claim.—1. The hub or box F, with a head or cap, E, made in two parts, designed to fit into a groove, D, cut in an axle, A, to hold the axle in place, and for the purpose of an oil-box, arranged substantially in the manner as and for the purposes set forth, and described.

2. An axle, A, in combination with sleeve H, rollers B B, and separating-rings E, all constructed and arranged substantially in the manner as and for the purposes set forth.

3. The loose thimble or sleeve H, upon an axle or shaft A, in combination with the anti-friction rollers B B, the separating rings C, the groove D in the axle A, the hub F, and the cap E, in two segments, substantially in the manner as and for the purposes set forth and described.

112,661.—Hat.—William H. White, Baltimore, Md.

Claim.—1. Appliances on a detachable hat-brim frame and hat-brim, by which the two are held together at desired points, for the purpose substantially as shown and described.

2. Appliances on a detachable hat-brim frame, to which can be fastened the draw-strings run into the fabric-brims for the purpose of holding the desired tension, substantially as shown and described.

3. The method of joining the brim and sweatband or body of a hat by the use of three seams, as and for the purpose set forth.

112,662.—Child's Carriage.—William B. Whitney, Leominster, Mass., assignor to himself and F. A. Whitney, same place.

Claim. — The cross-bar G, upper and lower springs E B, braces H, and bracket D, combined, as described, for hanging the body of a child's carriage.

112,663.—Broadcast Seeder and Cultivator Combined.—Lyman Wight, Whitewater, assignor to himself and Orison G. Ewing, La Grange, Wis.

Claim.—1. The hollow axles F, cast solid with the ends B of the seed-box A, substantially as herein shown and described, and for the purpose set forth.

2. The cone-pulley E′ fast to the hub of the wheel, the endless chain F′, and the pulley D′ fast to the end of screw-rod N, all combined as described, for the purpose of revolving the latter as the vehicle moves forward.

3. The combination of the brackets or supports V, shaft W, pivoted lever X, chains Y, and cross-bar A′, with each other and with the plow beams A, substantially as herein shown and described, and for the purpose set forth.

4. The spring I′, pivoted lever H′, and pulley-block of G′, combined, as described, with the band F′, for the purpose of holding the latter in sufficient frictional contact with the pulleys to rotate the screw.

5. The rod J′, passing loosely down through bar A′, and collared at K′, above it, combined, as described, with lever H′, to allow the elevation of said bar A′ to raise the end of lever, slacken the chain, and stop the rotation of screw, as set forth.

112,664.—Copy-Holder.—Henry R. Williams, Buffalo, N. Y.

Claim.—The combination of the spring-holder I and pieces A E, provided with the loops or ferrules D F, spring H, and clamping device B C, when constructed and arranged as herein described, and for the purpose specified.

112,665. — Carriage-Brake. — August Wnuck, Cincinnati, Ohio.

Claim. — In combination, substantially as described, with the sliding bars H H′ J J′, rubbers I I′, levers L L′, or their equivalent operating medium O P R, the radius-rods G G′, to be hinged or pivoted to the body of the vehicle and to its rear axle, as and for the purpose explained.

112,666. — Blind-Slat Machine.—George F. Woolston, Washington, D. C.

Claim.—1. The gang of circular saws C′, each having the teeth *c*, *c′*, and *c″*, in combination with the metal disks *c*, constructed and arranged to operate in the manner described.

2. The adjustable guides *f f f*, in combination with the gang of adjustable saws having the slitting teeth *c* and planing teeth *c′* and *c″*, and edge-planing cylinders E and E′, with cutters E″, constructed and arranged to operate in the manner described.

3. The bent and coiled spring O, screw *n*, rock-shaft *m*, and frame K, with the revolving shaft *j′*, connecting-stirrups *p*, and feed-roller F, all constructed and arranged to operate in the manner described.

4. The blind-slat machine above described, consisting of the combination of the adjustable feed-rollers F F′ F″ and the means of operating them, the gang of adjustable circular and planing saws C′, adjustable guides *f f f*, and planing cylinders E and E′, with their cutters E″, when constructed and arranged in its several parts to operate in the manner and for the purpose set forth.

112,667.—Water-Wheel.—Pierce W. Yarrell, Littleton, N. C.

Claim.—1. The series of buckets G G united at their ends, as shown and described, and arranged horizontally on the periphery of the wheel, substantially as and for the purpose described.

2. The combination, with the casing, of the removable foot and the removable arms, substantially as and for the purpose described.

3. In combination with the shaft of the wheel and the arms D, the removable piece E, arranged and operating as described.

112,668.—Roll for Forming Horseshoe-Blanks.—William Acheson, Pittsburg, Pa., assignor to Charles L. Fitzhugh, same place.

Claim.—The construction of the collars E E′, with the recesses *e e′*, jointly, with the cutters G G of sufficient length to cross the groove *b* and extend into said recesses *e e′*, as shown and described.

112,669.—Clothes-Wringer.—August Albrecht, Philadelphia, Pa.

Claim.—1. The lever D, carrying the roller G, in combination with a non-adjustable spring, E, situated between the said roller and the fulcrum of the lever.

2. The combination of the frame A, having fulcrum-pins *f*, and the lever D, having a forked end, *h*, as specified.

3. A clothes-wringer, consisting of two frames A A, two rollers G G′, and two levers D D, when the spindles of said rollers are the sole means of connecting the frames and levers together.

112,670.—Railroad-Station Indicator.—Granville W. Alexander, Chicago, Ill.

Claim.—The combination of the frame L, carrying-rollers N, with the levers G G, carrying-clutches I, and the plates C C′, exhibiting the names of cross-streets or stopping-places, substantially as specified and shown.

112,671.—Railroad-Station Indicator.—Joseph Bell Alexander, Washington, D. C.

Claim.—1. The combination of the slider N with

the springs S, S′, S″, and S‴, as arranged in the box-frame C, C′, D, and D′, for the purpose of indicating streets, stations, names, or numbers of separate printed cards operated in continuous rotation either directly or reversely, substantially as described and set forth.

2. The combination of the pulley E with the pawls *f* and *f′*, chain F, spiral springs R and R′, and with the crank-wheels L and L′, substantially as described, and for the purpose set forth.

3. The combination of the indicator above described with the setting-pulley G, substantially as described, and for the purpose set forth.

4. The combination of the chains *l* and *l′*, the pulley and pinion 8, rack 3, bar 4 and 3 with its notch 2, forked lever Z, lever Y, axle X with its spiral spring 1, and the trip 9, as arranged, substantially as described, and for the purpose set forth.

112,672. — FENCE. — William Altick and Franklin P. Grimes, Dayton, Ohio, assignors to Wilson & Grimes, same place.

Claim.—1. The hereinbefore-described post A, provided with the cross-bar B and offsetting ground pieces C, substantially as and for the purpose specified.

2. The adjustable clips E, constructed as described, and combined with the posts A and a suitable horizontal board, substantially as and for the purpose shown.

112,673. — DOOR-CHECK.—Charles R. Anderson, St. Louis, Mo.

Claim.—The door-check, consisting of a lever, B, carrying a roller E, the axes C *c* of which are perpendicular to the face of the door, so that the movement of the latter will not act to raise the lever nor rotate the roller, all substantially as described.

112,674. — VENTILATING MILK-CAN.—Lauren B. Arnold, Lansing, N. Y.

Claim.—1. A ventilator inserted into the cover or other part of the top of a can, composed of the tubular part or parts B and D and the transverse section or sections C, substantially as set forth.

2. The section or sections C, when the perforations or series of holes F, or equivalent holes, are made in one or more of them, as described.

112,675.—BENCH-PLANE.—Joseph R. Bailey, Woonsocket, R. I., assignor to himself and Selden A. Bailey, same place.

Claim.—In a bench-plane, the eccentric or curved bar E, for securing the bit, when combined with a plate, F, interposed between it and the bit, and arranged to slide at right angles to the latter, substantially as and for the purpose set forth.

112,676.—ROTARY HARROW.—John W. Barton and Thomas Holmes, Emporia, Kansas.

Claim.—The combination of the harrows A A, bearings B B, cross-bar C, with iron stirips D D, brace-rods E E, set-screws G G, and draft-rods H H, all constructed and arranged to operate substantially as and for the purposes herein set forth.

112,677. — HAT-PRESS. — Samuel Beatty, Norwalk, Conn.

Claim.—1. The combination of an elastic cushion of confined air or similar elastic medium with the diaphragm and die of a press, in which the pressure to press the hat, bonnet, or other article to be pressed is applied to the press-head and die to bring them together to press the hat, substantially as hereinbefore described.

2. The combination and arrangement of the diaphragm clamping-ring and flange of the die, whereby the annular elastic fold *m* of the diaphragm is employed to press the brim of the hat, and protected from rupture when under pressure, substantially as hereinbefore described.

112,678.—SEWING-MACHINE.—Joseph Bennor, Philadelphia, Pa.

Claim.—1. The cam-disk J, having one edge permanently secured in position, in combination with the pivoted lever K, and screw-rod L, located within the shaft, with its head extending outside for regulating the throw of the cam, and thereby the length of the stitch, substantially as described.

2. The shuttle-carrier Q, constructed and arranged substantially as described, whereby the shuttle is carried with its point lower than its heel, as set forth.

3. The needle-bar G, in combination with the jaw *y* and cam-ring *z*, all constructed and arranged to operate as herein described.

4. The arrangement of the spring *r* within a cavity formed in the upper end of the presser-bar I, in connection with the adjusting-pin *q*, said bar and pin having their bearings in the head *a a′*, as herein described.

112,679.—LOOM.—William H. Booser, Potter's Mills, Pa.

Claim.—The pattern-chain for looms, composed of blocks or sections linked together and grooved in the sides, and operating to move the harness through levers intervened for that purpose, substantially as described and represented.

112,680.—CARVING-TOOL.—Myron T. Boult, Battle Creek, Mich.

Claim.—The within-described carving and molding tool, as shown and set forth.

112,681. — HOOP-SKIRT.—Morris P. Bray, Birmingham, Conn., assignor to himself and Downs & Bassett, same place.

Claim.—In a hoop-skirt, in which are combined transverse springs D and vertical springs F to form the bustle, the arrangement of diagonal springs I I, substantially in the manner and for the purpose specified.

112,682. — SAWING-MACHINE.—George W. Braymer, Penn Township, Mich.

Claim.—The combination of the grooved sill D, chain E, sheave F, post G, lever H, sliding-bar *m*, stirrup N, saw-guide *i*, and hand-lever K, when constructed, arranged, combined, and operated as set forth.

112,683.—CLASP FOR ARTIFICIAL LIMBS.—Samuel F. Burd, Mercer, and Joseph F. Denniston, Pittsburg, assignors to Artificial Limb Manufacturing Company, Pittsburg, Pa.

Claim.—The combination of the lacings and the metallic clasp, constructed as described, when used in connection with an artificial limb, substantially as and for the purposes set forth.

112,684.—STEAM-VALVE.—Adam S. Cameron, New York, N. Y.

Claim.—1. The arrangement of a supplementary steam-passage, *e*, extending from the valve-seat to the end of the cylinder, between the ordinary port *a′* and the cylinder-head, and controlled by the main slide-valve C, the whole being constructed and operating substantially as shown and described.

2. The arrangement of a pipe situated on the outside of the steam-chest, and forming the connection between the supplementary port *e* and the interior of the main cylinder, said pipe being provided with a valve, *f*, substantially as and for the purpose set forth.

3. The recess *h* and passage *g*, in combination with the cavity *d* and stop-valve *i*, substantially as and for the purpose shown and described.

112,685.—PISTON-PACKING.—Adam S. Cameron, New York, N. Y.

Claim.—The screw-wedges *a a′*, fitted to screw on the piston-rod, and provided with shoulders or cups, *c c′*, in combination with the split rings *c c′*, all constructed and operating substantially in the manner and for the purpose herein shown and described.

112,686. — FURNITURE-PAD. — David H. Clark and Henry Winson, New Haven, Conn.

Claim.—As an article of manufacture, the herein-described furniture-pad, consisting of the securing-band C, cushion A, and covering B, all secured together and to the furniture, substantially as set forth.

112,687.—FANNING-MILL.—George E. Clarke, Racine, Wis.

Claim.—The fanning-mill herein described, as a new article of manufacture, consisting of the said several parts, constructed and arranged as specified and shown, to allow of said mill being set up and taken apart with facility and dispatch for the purpose of transportation, as aforesaid.

112,688, antedated March 3, 1871.—ROTATING CYLINDER-ENGINE.—Robert Livingston Cohen, Philadelphia, Pa., assignor to himself and William L. Lance, Plymouth, Pa.

Claim.—1. In a rotary engine, consisting of a cylinder supported in a trunnion eccentric to the shaft of a fly-wheel, to a pin on which the piston-rod is connected, the combination of ports *w w′* in the face of the cylinder with a steam-port *n* and exhaust-port *q* in the bearing, when the said ports are arranged as described.

2. The slotted trunnion *e* and bearing *f*, in combination with the washer *x*, key *v*, set-screw *y*, and pulley G, as set forth.

112,689.—CUTTING APPARATUS FOR HARVESTERS. — George W. Cook, Genesco, and Francis M. Duncan, Aledo, Ill.

Claim.—1. The curved guards *d*, having a gradual upward inclination from the finger to the top of the finger-bar, and constructed with the guiding-surface *c* and wedging-point *e*, substantially as and for the purpose herein described.

2. In combination with the guards, constructed as specified in the preceding clause, the slotted fingers *m*, having the side opening *n*, and arranged in line with the cutters *a*, substantially as and for the purpose set forth.

3. A series of concavo-convex serrated knives, *a*, arranged upon a horizontal shaft, in combination with guides, constructed substantially as herein described.

4. An improved cutting apparatus for mowers, reapers, and harvesters, composed of a series of concavo-convex cutters serrated as herein described, and as shown at *b*, in fig. 1, arranged upon a horizontal shaft, a series of curved guards, *d*, with guiding-surfaces *c e* and slotted fingers *m*, in line with the knives, all applied to a finger-bar, *g h*, and constructed and operating substantially as herein described.

112,690. — GRAPPLE.—Edwin G. Crandal, Belfast, N. Y.

Claim.—The adjusting instrument herein described, consisting of the elevating-pole F, recessed arm A, and forked lever H, provided with notched tines *f*, when constructed substantially as and for the purpose specified.

112,691. — MOLDING-MACHINE.—James H. Culver, San Francisco, Cal.

Claim.—1. The combination of the rotating rollers W W and feeders M and M′, as and for the purposes herein set forth.

2. The spindle Y, with the carving attachment N′, in combination with the rollers W W and feeders M and M′, as and for the purposes herein recited.

112,692. — HARVESTER-CUTTER. — Henry Cutler, Central Village, Conn.

Claim.—The combination of the outer guard-finger or shoe, the outer cutting section beveled upon its under side, and the elastic shear-plate G, secured at its rear edge to the finger-bar, its forward part being left free and bearing with a yielding pressure on the cutter, all as herein specified.

112,693. — LOCKING STOP-COCK.—Ellwood Davis and Jacob M. Stiles, Camden, N. J.

Claim.—A faucet-lock, securing one end of a sliding key passing transversely through the plug of the faucet, and held securely at its point of entrance, all substantially as set forth.

112,694. — BREECH-LOADING FIRE-ARM.—William C. Dodge and Philip T. Dodge, Washington, D. C.; said Philip T. Dodge assigns his right to said William C. Dodge.

Claim.—1. A frame for a breech-loading gun, having the cheeks I, with the locking-recess formed therein, substantially as described.

2. The compound breech-block, composed of the parts B and C, the latter being provided with thumb-piece E, and said parts being united by socket-joint, substantially as described, whereby the bearing is thrown upon the solid metal of the parts, substantially as set forth.

3. The hammer D, provided with the shoulder *r*, arranged to operate in relation to the part C of the compound breech-block, substantially as described.

4. The combination of the breech-block B C with the cheek-pieces I of the frame, constructed with the locking-recess, substantially as described.

5. The shoulder *r*, with the incline *o* at its front, in combination with the locking part C for forcing the latter to its seat in the recess, substantially as set forth.

6. The swinging breech-block, having its locking-face or shoulder constructed substantially as described, whereby the breech is locked before it is entirely closed, and the arm thereby rendered more safe, substantially as herein set forth.

112,695. — SPRING-SEAT FOR WAGONS.—Willoughby P. Elam, Petersburg, Ill.

Claim.—A spring-seat for wagons, consisting of the seat D, the springs A, and cross-bar or bottom C, all constructed and arranged substantially as described.

112,696. — CHILD'S CARRIAGE.—Roscoe G. Elder, New York, N. Y.

Claim.—The arrangement in a perambulator of a body with flat or partially flat bottom, straight sills, springs below the sills, and cross-bars connecting said sills in front and rear, all constructed and operating in the manner substantially as herein set forth.

112,697. — LADDER.—George Henry Ellis, London, England, assignor to Augustus Salem Dimsdale and Edward Bovino Lovell, same place.

Claim.—A sheet-metal ladder, formed of the hollow pillars *a a*, connected in lengths, in combination with the hollow rounds *b b* and the rods *c c*, constructed substantially as herein described.

112,698, antedated March 7, 1871.—FURNACE FOR TREATING ORES, &c. — William Ennis, Philadelphia, Pa.

Claim.—1. The chambers J J′, with their steam-pipes *r*, openings *h l*, and covers *m*, arranged in re-

spect to the chamber H, communicating with a fire-place, F, substantially as described.

2. The openings *c'* in the arch *c*, arranged in respect to the passages *k* of the partition *i*, substantially in the manner described.

3. The combination of the fire-place F, arch *c* with its openings *c'*, partition *i* with its passages *k*, and two or more chambers, J and J'.

4. The chambers J and J', communicating with each other and with a fire-place below, but having independent valves or dampers above, substantially as set forth.

5. The openings *g*, arranged in the side walls A in respect to the partitions *c* and *i*, substantially as set forth.

112,699.—MECHANICAL MOVEMENT.—William A. Fenn, Rochester, N. Y.

Claim.—1. The divided pulley D, having one-half stationary and the other adjustable on its shaft, when combined with the interior wheels C C receiving motion from an external source, as herein described.

2. The construction and arrangement of the pinion D, interior wheels C C, and external driving rim B, as herein described, whereby a square contact surface is attained with the outer rim and an angular one with the pinion, as specified.

3. In combination with the interior wheels and pulley, the swinging boxes or bearings *d' d' f*, as described.

112,700.—GRAIN-DRILL.—Silas N. Gallup, Macedon, N. Y.

Claim.—1. The combination of cogged wheels I I' and strap K with the oscillating bars F G, substantially as set forth.

2. In combination with the bars F G and drag bar H, the movable frame D E E, substantially as set forth.

112,701. — ALE OR BEER-COCK.—Henry Getty, Hoboken, N. J.

Claim.—1. The hollow-box or projection B, with its recess C, and thumb-screw A, for the purposes shown and described.

2. The coupling O, constructed as shown, for the purposes specified.

3. The combination of the hollow box or projection B with the recess C, thumb-screw A, and coupling O, the whole arranged substantially as shown, and for the purposes specified.

112,702.—MACHINE FOR MAKING BOOT AND SHOE-HEELS.—Charles W. Glidden, Lynn, assignor to McKay Heeling-Machine Association, Boston, Mass.

Claim.—1. A series of radial slide-blocks, arranged and operating substantially as described.

2. The combination, substantially as described, of the positioning slide-blocks, the block for clamping the lifts in place, and the mechanism for tacking the lifts together.

3. In combination with each slide-block, an elastic presser, *l*.

4. The radial placing blocks *k* and vertically-moving clamp-block A, made adjustable for heels of various sizes, substantially as described.

5. In combination with the sliding blocks, a swiveling lift-receiving plate, *d*, and a breast-gauge, *i*.

112,703. — STAINING GLASS.—Ebenezer A. Goodes, Philadelphia, Pa.

Claim.—1. The photochemical process, as above described, for permanently staining designs upon glass.

2. The application of light and heat to a salt of silver for the purpose of producing and permanently staining upon glass, letters, designs, &c.

3. The combined use of collodion, salts of silver, iron, potassium, &c., when subjected to light and heat, for the purpose of permanently staining designs upon glass.

112,704.—ELECTRO-MAGNETIC BURGLAR-ALARM.—William B. Guernsey, Jersey City, N. J.

Claim.—1. An electro-magnetic alarm, provided at each window, door, or place to be protected, with means or appliances for forming two distinct connections, one for giving an alarm and the other for locating the point at which the alarm is given, substantially as explained

2. The switch S, or substantially-equivalent device, in combination with a second or indicating circuit, and a circuit which is previously closed, to give an alarm.

3. Conducting-wires arranged in two or more circuits in such a manner that the closure of one circuit may be caused either by the breaking or closure of another circuit, substantially as herein explained.

4. The short-circuiting switch-lever L, or its equivalent, in combination with the resistance-magnet and closed and open circuits, substantially as herein described.

5. A resistance, located in near proximity to an alarm, and employed to control a number of openings which the said alarm is to protect.

6. The device by which the alarm is made to break the main circuit so as to render the alarm continuous, substantially as set forth.

112,705.—ELECTRO-MAGNETIC BURGLAR-ALARM.—William B. Guernsey, Jersey City, N. J.

Claim.—1. The arrangement of my continuous conductor or conductors, patented October 11, 1870, to serve as a barrier for the protection of safes, vaults, windows, &c., substantially as herein set forth.

2. The combined coils W and W', arranged substantially as represented, so that they will be either severed or brought into contact by an attempt to pass through an opening, or to pierce a door, wall, or other object which they are employed to protect.

112,706.—ELECTRO-MAGNETIC BURGLAR-ALARM.—William B. Guernsey, Jersey City, N. J.

Claim.—A battery, a conductor, and an alarm mechanism, so arranged and combined that the short-circuiting or severing of the conductor, or the doing of any act which is to be detected, will cut out or disconnect the battery from a magnet or other electro-motor, and thereby cause an alarm.

112,707.—DOUGH-KNEADER.—Herbert Henry Hawes, Mount Meridian, Va.

Claim.—1. In a dough-kneader, the combination of the roller E with the adjustable guide-board K and box A, provided with parallel adjusting-grooves *h h*, substantially as specified.

2. In a dough-kneader, the combination of the roller E with the box A, inclined guide K, small roller F, and scraper H, substantially as herein shown and described.

112,708.—SWING.—Francis Hovey, Ipswich, Mass., assignor to himself and John Albert Brown, same place.

Claim.—The pole D, joined to the swing, as described.

112,709.—TRUSS. — Henry Howe, Council Bluffs, Iowa.

Claim.—The flat metallic plate F, covering the entire outer face of the pad, in combination with the diagonal groove in the wooden back, in which the belt A closely fits, as herein set forth and shown, for the purpose specified.

112,710.—CONFECTIONER'S MOLD.—Henry S. Howe, Rutland, Vt.

Claim.—The grooved bars A A, in combination with the plates C C, arranged as and for the purpose set forth.

112,711.—SAW-GUMMER.—David Huffman, Luray, Va.

Claim.—1. The combination of the frame A, its adjustable mandrel on which to suspend a circular saw, and the arm B, carrying a rotating cutter in a curved path eccentric to the center of the saw, said cutter being driven from a shaft the axis of which coincides with the fulcrum of said arm B.

2. The combination of the frame carrying the arm B and its rotating cutter, and the split nut *e* and screw-shaft C connected to the arm B, and operated through the medium of devices substantially as described.

3. The arm B carrying the cutter, and having its pivot coinciding with the axis of the driving-shaft, and provided with detachable pulleys *e* or equivalent devices, whereby the arm may be adjusted without interfering with the operation of the cutter, substantially as described.

4. The combination of the cutter, capable of a limited lateral movement, and the forked lever A' and cam *f*, or their equivalent.

112,712.—SHOW-CASE.—John A. Hughes, Somerville, assignor to John A. Hughes & Co., Boston, Mass.

Claim.—1. The application of the plate *a*, arranged, constructed, and combined, as above set forth, to a glass show-case, the frame-work of which is covered with metal drawn upon it for the purpose of avoiding a sharp corner.

2. A show-case, constructed as above described, as an article of manufacture.

112,713.—PAD FOR HORSE-COLLARS.—Lemuel L. Hull, Oskaloosa, Iowa.

Claim.—A solid molded India-rubber collar-pad, substantially such as set forth.

112,714.—FIRE-ESCAPE.—John Ivory, New York, N. Y.

Claim.—The shanks or offsets B B of the lower ends of the upper sections of the ladder, having slots *a a* and notches *b b* in them, in combination with the rounds C and *c*, as described, and for the purpose set forth.

112,715.—DRAFT-EQUALIZER FOR THREE HORSES.—Henry F. Jerauld, Vandalia, Ill., assignor to Jerauld & Stolle, same place.

Claim.—1. The strap C, bar F, strap G, pins E and J, and double and single-trees I and L, all combined and arranged substantially as set forth.

2. In combination with the elements C F, G, E, J, I, and L, the sleeve K, as described.

112,716.—BEDSTEAD.—George A. Jeremiah, New York, N. Y.

Claim.—The combination of the bedstead A with rollers D in its frame, and with folding legs C, and with or without the folding head-board, substantially in the manner herein shown and described.

112,717.—WINDOW-BUTTON. — Albert D. Judd, New Haven, Conn.

Claim.—1. The lever B, constructed or provided with the stud *b*, and combined with the plate A, constructed with the slot E to receive the said stud and form a bearing for the lever, substantially as set forth.

2. In combination with the lever B and plate A, constructed and arranged to operate as described, the spring F, and flange *d* on the stud, as and for the purpose specified.

112,718.—BRUSH.—David L. Keeler, Norwalk, Ohio.

Claim.—1. A shoe or other brush, A, provided with a hinged end piece, B, extension handle D, and loop C, substantially as shown and described, and for the purpose set forth.

2. In combination with the brush A, the loop C, and extension handle D, when constructed and arranged to operate as and for the purpose set forth.

112,719.—MACHINE FOR MAKING AND SETTING BLIND STAPLES.—Jeremiah Keith, Charlton, Mass.

Claim.—1. In combination with the supporting-table *c*, the carrier-plate *f*, sliding forward and feeding the wire, and back and slipping upon the wire, the severing cutter *s*, the bender-plate *t*, and the driver b^3, all combined and arranged to operate substantially as described.

2. In combination with the mechanism for cutting, forming, and driving the wire-staples, the cutters t^2, for nicking the wire, substantially as shown and described.

3. In combination with the bender and driver, the beak *q*, made to retreat after the wire is bent and before the driver descends, substantially as described.

4. In combination with the feeding, cutting, bending, and driving mechanism, the arm P^2 and link m^2, for effecting the feed movement of the slat-rod, substantially as described.

112,720. — TREADLE-MOTION. — Eben B. Keyes, Charlestown, Mass.

Claim.—In combination with the stand or frame and crank-shaft, a vibratory treadle-lever, pivoted at its upper end vertically above the shaft, and provided with a diagonal or oblique slot, in which the crank or wrist-pin moves during the vibrations of the treadle, substantially as shown and described.

112,721.—MACHINE FOR CUTTING SPLITS.—Ebenezer Knight, Elizabeth, Ind., assignor to himself, Rufus S. Mitchell, and Edward S. Compton, same place.

Claim.—1. The arrangement of the frame A, slides B B, pins *a a*, and screw *b*, substantially as shown and described, and for the purposes set forth.

2. The combination of the slide D with bit *d*, guide *f*, cutters *e e*, and cam-lever E, substantially as and for the purposes herein set forth.

3. In combination with the cutting-slide D, the lever G and spring or weight H, substantially as and for the purposes herein set forth.

112,722.—METER.—Albert D. Laws, Bridgeport, Conn.

Claim.—1. The auxiliary valve-pistons *f g*, rod *h*, and reciprocating and rotatory valve *m*, said valve being loosely hung upon the rod *p*, and so as to be capable of radial play and rotative movements with respect to the rod and pistons.

2. In combination with the reciprocating and rotatory valve *m*, auxiliary cylinder *e*, main cylinder *a*, and main cylinder-pistons *c d*, the valve-pin *r*, extending directly from the auxiliary cylinder into the main cylinder, and into position to be alternately operated by direct contact with the main cylinder-pistons.

3. In combination with the reciprocating and rotatory valve *m*, the meter-wheel *t*, intermittently and progressively rotated, substantially as described.

112,723.—MODE OF ATTACHING SEATS TO WAGONS.—Joseph L. Linville and William Shimanour, Findlay, Ohio.

Claim.—A seat-raising attachment, consisting of the upper rail D, standards F F, and lower rail G, provided with dowel-pins *k k*, and the pivoted clasp L, having the flange *o* and the thumb-screw *m*, all arranged relatively one to the other, as set forth.

112,724. — PERMUTATION-LOCK.—Samuel Loyd, New York, N. Y.

Claim.—The bolt-plate C, provided with openings H H H H, in combination with the notched wheels *a*, arranged within the tumblers D, substantially as shown and described.

112,725.—MANUFACTURE AND TREATMENT OF ALCOHOLIC SPIRITS.—Orazio Lugo, Baltimore, Md.

Claim.—1. The process herein described of treating alcoholic spirits or solutions containing alcohol, substantially as herein described, and for the purpose set forth, the same consisting in the purification and deodorization of high-wines, low-wines, whiskies, rums, brandies, wine, must, and fermented beer, by the use of the chemical agents herein mentioned.

2. The successive treatment of alcoholic spirits, first by a compound of chlorine, and then by a compound of sulphur, as set forth.

3. The treatment of spirituous liquids with the herein-mentioned chemical agents during the process of distillation, substantially as herein described, and for the purpose set forth.

112,726.—COOLING AIR IN THE MANUFACTURE OF ICE.—Orazio Lugo and James B. McPherson, Baltimore, Md.

Claim.—1. The free-working piston-pump, substantially such as herein described, in combination with suitable devices for cooling the air compressed by the pump, and subsequently expanding the same so as to cool or refrigerate air for making ice, cooling, and refrigerating, as set forth.

2. The process of cooling and saturating with watery vapors or moisture the air before compressing the same, as and for the purpose herein described.

3. The process herein described of cooling compressed air by passing said air through coolers filled with a porous material saturated with cold water.

4. The method of cooling air by letting it expand in comparatively large chambers before using it for making ice or cooling purposes, substantially for the purpose herein set forth.

5. The railway N N and trucks *o o*, carrying pans O O, and the ice-house M, substantially as herein described and shown, when used in combination with currents of cold air for the purpose of making ice.

6. The pressure-blower A, in combination with the cooler B and the pump D, substantially as and for the purpose set forth.

7. The cooler E, in combination with the pump D and the chamber H, substantially as shown and described.

8. The chamber H and pipe L, in combination with the galleries *m m* of the ice-house M, substantially for the purpose set forth.

9. The pipe or conduit E, in combination with the ice-house M and the interior of the cooling-house S, for the purpose set forth.

10. A house for forming ice, having non-conducting walls, and tracks for trucks or cars suitable for introducing water and removing ice when formed.

112,727. — COMBINED BAG-HOLDER AND FILLER.—William F. Lum, Waterloo, Wis.

Claim.—1. The shovel A, having handles, B, in combination with the flexible tube or slack-bag C and holder D, having hooks E, in the manner herein described.

2. The shovel or bag-filler A, having handles, B, when constructed in the manner and for the purpose described.

3. The bag-filler and holder herein described, as a new article of manufacture.

112,728. — COMPOUND FOR LUBRICATING WOOL.—John James Lundy, Leith, near Edinburgh, North Britain.

Claim.—1. The manufacture or use of a mixture or emulsion produced by adding Gallipoli, olive, or other saponifiable oil to a solution in water of a caustic alkali, soda ash, or potash, or mixture thereof, and then incorporating the same therewith.

2. The employment, either separately or in conjunction with the before-mentioned or other lubricants, of solutions of tungstate or phosphate of soda, chloride of magnesium, or of such salts or compounds as shall possess the power of preventing or arresting the effects of fire arising from spontaneous combustion or otherwise.

112,729.—DRESS-SWORD.—James M. Mason, Washington, D. C., assignor to Alexander & Mason, same place.

Claim.—1. A dress-sword, made in two or more parts, capable of being disconnected and connected together, substantially as described.

2. In combination with a dress-sword blade, as above, the handle C, made partially hollow, and provided with the screw-driver D, substantially as set forth.

3. The combination of the sword sections A A', whose upper and lower ends are each formed with extension-pieces one-half the thickness of the blade, and with dovetailed shoulders *s* of any suitable form, and the parts connected together by one or more screws *z*, all substantially as and for the purposes set forth.

112,730.—PUMP.—Benjamin Franklin McKeehan, Clarksburg, W. Va.

Claim.—1. The combination of the bell-shaped plunger J, with its disk *d*, valve *e*, leathers *f f*, and hole *i*, with the pipe D and casting A, all substantially as and for the purposes herein set forth.

2. The combination of the casting A, handle B, standard E, spout C, pipe D, plunger J, chamber G, pipe H, and valve I, when all are constructed and arranged substantially as shown and described, and for the purposes herein set forth.

112,731.—HOSE-TUNNEL FOR CITY RAILWAYS.—Laurence Myers, Philadelphia, Pa.

Claim.—The within-described box D, with its recesses *f f*, ribs *e e*, and covers F G, as set forth.

112,732.—COMPOUND FOR DESTROYING POTATO BUGS.—Lemuel Pagin, Niles, Mich.

Claim.—1. The combination of the fine flour and middlings with the Paris green, for the convenience of scattering the Paris green evenly over the vines, as set forth.

2. The combination of all the ingredients herein named, compounded as and for the purpose herein described.

112,733.—MACHINE FOR GRINDING WOOD-PULP.—Sanford A. Perkins, Topsham, Me.

Claim.—1. A device for raising the weights of a wood-pulp grinding-machine, consisting, essentially, of a series of screws, with pinions fixed thereon, and operated by cog-wheels, substantially as described.

2. The central shaft R, and wheel A, with its cog-wheels D and C, acting in connection with the pinions and their screw-rods, as set forth.

3. In combination with the rods and pinions, arranged as described, the carriages and weighted levers, operating as set forth.

4. The latches H, with catch at the extremities, arranged to hold the lever G out of perpendicular line to be lifted by the rising of the weight, as set forth.

5. In combination with the screw-rods I, the cross-head J, nut K, and rods L L, connecting the cross-head to the guides or weight, as set forth.

6. The rods *i*, when made with a neck in the extreme end, and provided with a spring, as set forth.

7. The guides O, sliding on rods, and connected to the lifting-rods and weights, as described.

112,734.—WOOD-PULP MACHINE.—Sanford A. Perkins, Topsham, Me.

Claim.—A band, placed, as described, on the stone of a pulp-grinding machine, for the purpose set forth.

112,735.—ROLL FOR HUSKING CORN.—Peter Philip, Stockport, N. Y.

Claim.—1. The arrangement, in a pair of husking-rolls formed substantially as described, of the spiral series of spikes D, in relation to the spiral grooves E, whereby said spikes are made to enter said grooves as near the edge *d'* as practicable, as and for the purpose specified.

2. In combination with the spiral grooves E, of the husking-rolls A A', the partitions D', when the upper surfaces of said partitions are made concave, as shown in fig. 2 of the drawing, and for the purpose set forth.

3. The differential husking-rolls A A', provided with spiral grooves E and partitions D', formed as shown, and the spiral series of spikes D, all combined and arranged as described, and operated by equal gears C C', in the manner specified and set forth.

112,736.—DEVICE FOR PREVENTING BACK-LASH IN MACHINERY.—John L. Post, Ashley, Pa.

Claim.—1. The combination of the wheel A, having flanges A^1 and A^2, with projections *e* and *e'*, and stops *g'*, springs C, rod c^1, washer *c*, ring-plate F, having lugs *d* and d^1, recesses *g*, and projections *h* and *h'*, all constructed and arranged as and for the purposes set forth.

2. The wheel A, having a channel or chamber for the reception of springs, and projections for the support of the springs, all substantially as shown and specified, and for the purposes set forth.

3. The combination of the springs C, washers *c*, and rod c^1, all constructed and arranged substantially as and for the purposes set forth.

4. The ring-plate F, having recesses *g*, and projections *d* and d^2, and grooved projections *h* and *h'*, all substantially as specified and shown, and for the purposes set forth.

112,737.—MACHINE FOR SLOTTING AND CUTTING METAL.—Salmon W. Putnam, Jr., Fitchburg, Mass.

Claim.—The combination of a work-supporting table, mechanism to impart feed-movements to said table, a reciprocating cutter, and mechanism to impart to the work-supporting table slight reciprocal movements to remove the work away from the cutter after every forward thrust thereof, and before it commences to retreat, and back again to the cutter after every backward movement thereof, and before it is again thrust forward, substantially as and for the purpose herein described.

112,738. — POLISHING COFFEE. — John T. Randall, Baltimore, Md.

Claim.—1. The employment, substantially in the manner herein described, of turmeric in the process of renovating coffee.

2. The employment of turmeric and soap-stone conjointly in the process of renovating and polishing coffee, substantially in the manner set forth.

112,739.—WASH-BOILER.—Henry R. Robbins, Baltimore, Md.

Claim.—1. The trap *b*, provided with the external flaring guard *i*, and with internal partitions of any desired number, and with a central pipe passing down through the bottom of the boiler, said partitions and pipe being provided with openings located with respect to each other, as described.

2. The plate *l*, arranged beneath the boiler, and secured between the nuts *v* and the shoulders or ends of the elbows *e e*, as herein shown and described, for the purpose specified.

112,740.—CASTER FOR SEWING-MACHINES. Benjamin F. Ryder, New York, N. Y., assignor to Sargent & Company, New Haven, Conn.

Claim.—The arrangement of a caster upon a swinging slide, combined with a clamping device, when arranged to be thrown out of a perpendicular position, and by its own gravity returned to a perpendicular position, substantially in the manner described.

112,741.—SEED-TUBE FOR CORN-PLANTERS. Levi Scofield, Watertown, assignor to himself and Justin B. Wait, Farmington, Wis.

Claim.—1. The discharge-valve of a seed-planter, constructed with apertures to permit the operator to see the grain in the receptacle or spout on the opposite side of the valve, substantially as herein described.

2. In combination with the slotted or perforated valve the seed-tube, provided with one or more side openings, so that the seed to be dropped is held in view of the operator from the outside, at or near the point at which the seed enters the ground, substantially as herein described.

112,742. — BEER-COOLER FOR BEER ON DRAUGHT.—Hugo Sell, New York, N. Y.

Claim.—The combination of a vat, C, containing a serpentine pipe, D, with a frame, A, capable of supporting one or more barrels B, substantially in the manner herein shown and described.

112,743.—CARRIAGE-CLIP.—Moses Seward, New Haven, Conn.

Claim.—As an article of manufacture, the herein described carriage-clip, having a central sharp bend, *a d*, substantially as and for the purpose set forth.

112,744.—SEWING-MACHINE NEEDLE.—John J. Sibley, New York, N. Y.

Claim.—As a new article of manufacture, the sewing-machine needle herein described, having the form, and grooved as set forth.

112,745.—SEWING-MACHINE.—William Sidenberg, New York, N. Y.

Claim.—The combination, with the presser-arm H, of the adjustable and removable arm J, for guiding the needle-bar, the latter being operated from the arm F, all substantially as described.

112,746.—SUSPENDER.—Sydney E. Smith, Washington, D. C., assignor to himself and Frederic G. Ford.

Claim.—A pantaloon-suspender constructed of a single piece of webbing, with an adjustable tag at one or both ends, for operation as shown and described, as a new article of manufacture.

112,747. — SEWING-MACHINE.—Greenleaf Stackpole, Elizabeth, N. J.

Claim.—1. The combination, with sewing-machines, of the feeding-chains, adapted to receive the material between their faces, hold it firmly while passing beyond the needle, and discharge it.

2. The combination of feeding-chains and the horizontally-reciprocating needle, when operated, substantially as described, to form stitches alternately through the material and over the edge.

3. The gear-wheels B^2 E and their connections, communicating a slower movement to the shuttle-mechanism than to the needle, so as to perform only a half-reciprocation of the shuttle for each complete reciprocation of the needle, as specified.

112,748. — FLORAL-BRACKET.—Elizabeth Mary Stigale, Philadelphia, Pa.

Claim.—1. A bracket, arranged for attachment to

a wall, window-frame, or other object, and having a recess or trough for the reception of earth, all substantially as described.

2. The said bracket, when combined with a glazed frame and adapted to a window, as set forth.

3. The said bracket, when provided with a detachable trough or basin, C, suspended within the bracket by flanges a a, substantially in the manner described.

4. The short tubes or perforated projections b in the bottom of the said trough or basin, for the purpose specified.

5. The combination of the said trough with a drip-receiver, D, arranged beneath and within the hollow bracket, as described.

6. The projecting ledge or dasher h, at the back of the bracket, for the purpose specified.

112,749.—HAIR-RESTORATIVE.—William P. Thomas and Joseph F. Boardman, Elko, Nevada.

Claim.—The said compound, prepared substantially as described.

112,750.—HARVESTER.—Ausbert H. Wagner, Chicago, Ill.

Claim.—1. In a reaping or mowing-machine, a male and a female spur-gear wheel, positively driven in opposite directions by the same gear-wheel, and caused to mesh with, and impart motion to, a crank-shaft pinion upon opposite sides of the same, substantially as and for the purpose specified.

2. In combination with the main frame A, the hinged frame B′, the pole A′, the segment C′, and the detent D′, the foot-lever E′, the lever V, and the toothed segment Z, for the purpose of securing vertical adjustment to the forward end of said main frame, substantially as shown and specified.

112,751.—APPARATUS FOR DISTILLING PETROLEUM AND OTHER LIQUIDS.—William Gray Warden, Philadelphia, Pa.

Claim.—1. A still or boiler, consisting of a vessel, A, having an internal flue, B, closed at the top, so as to have a downward draught, in combination with a continuous annular flue surrounding the vessel and communicating with the fire-place, and, through tubes a, with the said internal flue, all substantially as set forth.

2. The combination of the vessel A, the continuous annular fire-place surrounding the vessel, and the annular flue E, substantially as described.

112,752.—MACHINE FOR CUTTING TEXTILE AND OTHER MATERIALS.—Albin Warth, Stapleton, N. Y.

Claim.—1. The face of the feed-wheel G, provided with two, more or less, annular grooves, l, combined and operating in connection with the scrapers m, as and for the purpose herein shown and described.

2. The combination of a feed-wheel, G, and rotary platform B, with a rising-and-falling cutter-bar, F, substantially as set forth.

3. The standard L rising from the rotary platform B, and forming the guide for the presser-foot H, in combination with the rising-and-falling cutter-bar, F, substantially as described.

4. The trigger L, with its adjustable fulcrum, in combination with the standard I, handle K, and presser-foot H, substantially as set forth.

112,753. — FASTENING FOR TEXTILE FABRICS.—Albin Warth, Stapleton, N. Y.

Claim.—The guide-plate A, carrying the curved needle B, constructed and operating in the manner shown and described.

112,754.—WOODEN SHANK FOR SHOES AND BOOTS.—Jeremiah Mears Watson, Sharon, Mass.

Claim.—A wooden shank-stiffener, made from several separate strips or layers of wood, substantially as herein described.

112,755. — APPARATUS FOR VULCANIZING RUBBER. — Henry W. Weicker, Woonsocket, assignor to himself and George W. Miller, Smithfield, R. I.

Claim.—1. A steam-heating press-box for vulcanizing rubber or other substances, having hollow sides, top, and bottom for the admission of steam into the same, substantially as herein set forth.

2. One or more hollow doors hinged upon hollow journals to a steam-heating press-box, having hollow sides, top, and bottom, substantially as and for the purposes herein set forth.

3. A steam-heating press-box, constructed with hollow sides, top, bottom, and door or doors, having its entire outer surface covered with non-conducting substance, held in place by any suitable means, substantially as and for the purposes herein set forth.

4. In combination with the steam-heating press-box herein described, the arrangement of pipes and stop-cocks, as and for the purposes set forth.

112,756.—SHUTTER-FASTENER.—Peter L. Weimer, Lebanon, Pa.

Claim.—The combination of the interlocking turn-buttons F, with recessed in their shanks to receive the projecting arms of the respective buttons, the plates D, pins H, and springs K, the arms serving also to hold the shutters open by engaging in a catch in the wall, all arranged as and for the purpose set forth.

112,757.—CARRIAGE-AXLE.—Edward Wells, New Haven, Conn.

Claim.—1. The combination of the cap E, provided with the chamber h, with the box B, axle-spindle A, and nut C, when the said box is provided with openings from the chamber to the axle, and the said cap threaded to take hold of the box both in front and rear of said chamber h, substantially as set forth.

2. In combination with the foregoing, the arrangement of the internal annular chamber d in the box at its rear end, as specified.

112,758. — LANDAU CARRIAGE. — Edward Wells, New Haven, Conn.

Claim.—In Landau carriages, the construction of the top in two or more parts, constructed and arranged to close into or onto the other, substantially as described.

112,759.—LATHE-DOG.—Henry K. White, Chelsea, Mass.

Claim.—A lathe-dog, having an encompassing sleeve, the sharpened front edge of which is or may be brought into a plane with the dog-teeth or bits, so that the edge of the sleeve, as well as the edges of the teeth, enter the wood, substantially as described.

112,760.—WASH-BOILER.—Wolcott B. White, Rome, N. Y.

Claim.—The combination of the perforated diaphragm or bottom, B, and the upright, hollow, perforated chamber and conductor E, with the perforated cylindrical top or cover I, all constructed as shown and described, for the purposes specified.

112,761, antedated March 6, 1871.—PORTABLE STEAM-GENERATOR.—James E. Woodruff, Buffalo, N. Y., assignor of one-half his right to James F. Rowley, same place.

Claim.—1. The oval-shaped cylinder A, having the oval-shaped fire-box C, provided with the diaphragm P, and surrounded by the water-space D, all constructed and arranged as herein described, and for the purpose specified.

2. In combination with the above, the hinged ash-pan Q, for the purpose specified.

112,762.—GATE. — Claiborne Wright, Mason, Ill.

Claim.—In combination with the gate B, with its post C and latch E, the cross-piece H, cords e e, and swords or levers G G, all substantially as and for the purposes herein set forth.

112,763.—BREECH-LOADING FIRE-ARM. — William C. Dodge, Washington, D. C.

Claim.—1. A frame for a double-barreled breech-loading gun, consisting of an arm at the front for hinging the barrels to, a breech or recoil piece for covering the rear open ends of the barrels, and a neck or rear portion, constructed substantially as described, whereby the locks may be located within the same, while the hammers are located outside thereof, substantially as set forth.

2. The lever-guard L, provided with the hook P, or its equivalent, arranged to lock the barrels in position, substantially as described.

3. One or more adjustable wedges, applied to the arm A of the frame, substantially as set forth, for adjusting or tightening up the barrels to the breech, to compensate for any wear of the parts.

REISSUES.

4,295.—HARNESS-RING.—Horace N. Eames, Newport, assignor to Hiram R. Olmstead and Richard W. Jones, Syracuse, N. Y.—Patent No. 100,384, dated March 1, 1870.

Claim.—A harness-ring, having one or more radial projections constructed on a plane with the body of the ring, and having straight slots cut therein, substantially as described.

4,296. — CARPET-LINING.—Joel F. Fales, Walpole, Mass.—Patent No. 52,835, dated February 27, 1866.

Claim. — A carpet-lining, substantially as described, the filling of which and the paper adjoining such filling are retained together by means of stitches or sewing.

4,297. — ELECTRO-MAGNETIC BURGLAR-ALARM.—William B. Guernsey, Jersey City, N. J., assignor to Cyrus B. Martin, Newburg, N. Y.—Patent No. 108,257, dated October 11, 1870.

Claim.—1. A continuous conductor or conductors, the severing of which or of either of them will cause an alarm to be sounded, said conductor or conductors being arranged in relation to the several elements of the alarm in such manner that the short-circuiting of such conductors, or of the two parts of such single conductor, shall also cause an alarm; an electrical conductor or conductors (for protective purposes) which, or the parts of which, are so arranged with regard to the other elements of the alarm that they can neither be severed nor short-circuited without causing an alarm.

2. In an alarm, such arrangement of continuous conductors, or of a conductor, which cannot be severed without causing an alarm, with regard to the various points to be protected, that the attempting of acts which the contrivance is intended to prevent will create a short-circuit between such conductors or between two parts of a single conductor, and so cause an alarm to be sounded.

3. The combination, in an electro-magnetic alarm, of a continuous circuit or circuits with a sufficient resistance or resistances, and an alarm or alarms, when the said combination is so arranged that the severing or interrupting of the said circuits, or of either of them, shall cause the said alarm or alarms to sound; and also, that the short-circuiting or diverting the course of the electrical current in said circuit or circuits around or past the said resistance or resistances shall sound an alarm, or cause an alarm to be sounded, this when the whole arrangement is properly combined with a sufficient battery, and with "connections" or contrivances at points to be guarded, which will, upon the doing of certain acts, or the happening of certain things, short-circuit the said electrical current or currents past or around the said resistance or resistances, and so to give the desired alarm.

4. In a burglar or fire-alarm, the combination of an open and a closed circuit to operate, substantially as set forth.

4,299.—DEVICE FOR CUTTING BOLTS AND RIVETS.—Jesse Johnson, Cochransville, Pa.—Patent No. 65,391, dated June 4, 1867.

Claim.—1. In bolt-cutting devices, the combination of the toothed stock of the movable cutter, integral therewith or otherwise, and the toothed segment levers, arranged and operating therewith, substantially as described.

2. The combination of knives A and B with levers E and F, screw D, frame C, and top and bottom plates, figs. 3 and 4, all constructed, arranged, and operating in the manner and for the purpose shown and explained.

4,300.—MAKING THICK PAPER.—Samuel G. Levis, Kellysville, Pa., assignor to James C. Beach.—Patent No. 10,519, dated February 14, 1854; reissue No. 2,789, dated October 22, 1867; extended seven years.

Claim.—1. Running or operating two or more forming-cylinders, in connection with the press-rolls, by means of or in combination with two endless felts, so arranged that the water passes through the felts and runs off at the ends of the rolls.

2. Passing or carrying a sheet of paper-pulp through or between the press-rolls, and expressing the water therefrom between two endless felts, so arranged that the water may pass through the felts in front of the rolls and run off freely at the ends.

3. The combination of the two forming-cylinders, C and D, the two endless felts, E and H, the guide-roll K, and the two squeeze-rollers F F′, arranged and operating substantially as described.

4,301. — STEAM-GENERATOR.—Abraham L. Pennock, Philadelphia, Pa.—Patent No. 103,363, dated May 24, 1870.

Claim.—1. A boiler, in which a partition or partitions is formed by circulating-tubes, constructed substantially as described, and supported between the ends of the boiler so that they may be turned to bring their edges against the adjacent tubes, substantially as specified.

2. A partition, consisting of circulating tubes, each rounded at one edge, and bearing with its opposite edge against, or overlapping, the adjacent tube, as specified.

4,302. — STEAM-BOILER. — Patrick Quinn, South Newmarket, N. H.—Patent No. 110,158, dated December 13, 1870.

Claim.—1. A combustion-chamber placed between tubes in a tubular upright boiler, and having the flames admitted into it both through the bottom and sides of the boiler, substantially as herein set forth.

2. A hollow perforated drum, or its equivalent, provided with hollow arms or pipes, and placed within the combustion-chamber of a steam-boiler, the hollow arms or pipes communicating with the outside air, substantially as and for the purposes herein set forth.

3. The feed-water pipe m, inclosed within one of the vertical tubes c, so arranged as to conduct the feed-water through the boiler and combustion-chamber and deliver at the bottom of the boiler.

4,303.—BUTTON-HOLE.—Benjamin M. Smith, New York, N. Y., assignor to Charles Goodyear, Jr., and Leonard A. Sprague, same place.—Patent No. 75,212, dated March 3, 1868.

Claim.—The shield-piece a, made from a single piece of metal folded to overlap and protect the wearing portion of a button-hole, the other part of said button-hole being left flexible, substantially as described.

4,704.—LAMP.—Lewis White, Waterbury, Conn., assignor, through mesne assignments, to Rufus S. Merrill, Boston, Mass.; said Rufus S. Merrill assignor of two-thirds of his right to William B. Merrill and Joshua Merrill, same place.—Patent No. 25,475, dated September 13, 1859.

Claim.—1. The arrangement, in a lamp-burner, of shafts or spindles carrying two or more wick-raising toothed wheels which impinge upon the wick, and provided with pinions, geared together, substantially in the manner shown and described, so that by rotating one shaft the other will also be put in motion, thereby causing all the wheels upon the shafts to act in unison upon the wick.

2. The combination of the wick-tube with the parallel shafts, arranged on opposite sides of the tube, carrying two or more toothed wick-raising wheels, and geared together, substantially in the manner shown and described, so that the rotation of the one shaft will cause the rotation of the other in the opposite direction, for the purposes set forth.

3. The combination, with the wick-tube and wick-raising devices, of means, substantially such as herein shown and described, whereby the said wick-raising devices may be removed, when required, from contact with the wick contained in said tube.

DESIGNS.

4,700.—ORGAN-CASE.—Charles Edwin Bacon, Buffalo, N. Y., assignor to himself and George A. Prince.

Claim.—The design for reed-organ cases, as shown.

4,701.—HAME-TOP.—Mathew F. Boland, Philadelphia, Pa.

Claim.—The design for hame-top, as shown in the accompanying photographic illustrations.

4,702.—MUFF.—Simon Herzig, New York, N. Y.

Claim.—The design for a muff, as herein shown and described.

4,703.—FRAME OF A SHOW-CASE.—Benjamin Hill, Malden, Mass.

Claim.—The design, as described and represented.

4,704.—STOCKING.—James Hogg, Philadelphia, Pa., assignor to Fleming Brothers, same place.

Claim.—The design for stocking, as shown in the accompanying photographic illustrations and diagrams 1 2.

4,705.—INKSTAND.—Thomas S. Hudson, East Cambridge, Mass.

Claim.—The design for an inkstand, consisting of a representation of the hull of a vessel, with two "inks" forward and aft, as shown, and with or without a sponge-cup between the inks.

4,706.—SAW.—William Kidd, Duncan's Mills, Cal.

Claim.—The design for a saw, as shown.

4,707.—ORNAMENTATION OF GLASS-WARE.—Frederick Ladner, Philadelphia, Pa., assignor to Ladner & Bird, same place.

Claim.—The design for the ornamentation of glass-ware, substantially as shown and described.

4,708.—FASTENING FOR BEDSTEAD.—William H. McPherson, Nashville, Tenn., assignor to himself and William N. Carr, Sr., same place.

Claim.—1. The shape or conformation of the tenon C, as shown and described.

2. The shape or conformation of the socket E, as represented and set forth.

3. The shape or conformation of the wedge G, as shown.

4,709.—GARDEN-TOOL.—Roswell A. Moore, Kensington, Conn.

Claim.—The design for a miniature garden-tool, substantially as set forth.

4,710.—SPOON OR FORK-HANDLE.—William Parkin, Taunton, Mass., assignor to Reed & Barton, same place.

Claim.—The design, substantially as shown and described.

4,711.—FLOOR OIL-CLOTH PATTERN.—Joseph Robley, Brooklyn, N. Y., assignor to William M. Brasher & Co., same place.

Claim.—The configuration of the design hereunto annexed, when made by being wrought upon floor oil-cloth in the form similar to the drawings accompanying this specification.

4,712.—FLOOR OIL-CLOTH PATTERN.—Joseph Robley, Brooklyn, N. Y., assignor to William M. Brasher & Co., same place.

Claim.—The configuration of the design hereunto annexed, when made by being wrought upon floor oil-cloth in the form similar to the drawings accompanying this specification.

4,713.—FLOOR OIL-CLOTH PATTERN.—Joseph Robley, Brooklyn, N. Y., assignor to William M. Brasher & Co., same place.

Claim.—The configuration of the design hereunto annexed, when made by being wrought upon floor oil-cloth in the form similar to the drawings accompanying this specification.

4,714.—GROUP OF STATUARY.—John Rogers, New York, N. Y.

Claim.—The design for a group of statuary, as herein shown and described.

4,715.—SPOON OR FORK HANDLE.—George Sharp, Philadelphia, Pa.

Claim.—1. The contour or profile of the side and end edges of the handle A B, substantially as shown.

2. In combination with the said contour or profile of the side and end edges of the handle A B, the ornamental configurations on the upper surface of the same, substantially as shown in fig. 1.

3. In combination with the said contour or profile of the side and end edges of the handle A B, the ornamental configurations on the under surface of the same, substantially as shown in fig. 2.

4,716.—BACK OF MITTEN.—William S. Tooker, Kingsborough, N. Y., assignor to himself and Elliot Thomas, same place.

Claim.—The design for the back piece of a mitten, substantially as described and illustrated.

4,717.—CARPET-PATTERN.—John T. Webster, New York, N. Y., assignor to Daniel M. Read and Charles A. Read, Bridgeport, Conn.

Claim.—The design for a carpet, as shown.

4,718.—PAINT-BRUSH.—John L. Whiting, Boston, Mass.

Claim.—The design, substantially as described, for a paint-brush, such design being composed of the four characteristics hereinbefore first enumerated.

4,719.—SPOON OR FORK-HANDLE.—George Wilkinson, Providence, R. I., assignor to Gorham Manufacturing Company, same place.

Claim.—The design for spoons and forks, substantially as herein set forth.

4,720.—INKSTAND.—Lucius L. Woodruff, Cleveland, Ohio.

Claim.—This particular shape of cottage-bottle, with a gable roof, as shown in the annexed drawings, to be used for containing writing-inks.

TRADE-MARKS.

188.—BOOT-HEEL.—Francis Hacker and Frederick Richardson, Providence, R. I., assignors to "Reversible Boot-Heel Company," same place.

189.—SOAP.—Leberman & Co., Philadelphia, Pa.

190.—DRESSING COMPOUND.—E. R. Millard, Waltham, Mass.

191.—WHISKY.—Mills, Johnson & Co., Cincinnati, Ohio.

192.—WHISKY.—Mills, Johnson & Co., Cincinnati, Ohio.

193.—WHISKY.—Mills, Johnson & Co., Cincinnati, Ohio.

194.—WHISKY.—Mills, Johnson & Co., Cincinnati, Ohio.

195.—SIRUP.—William Moller & Sons, New York, N. Y.

196.—GRAY CLOTH.—L. Pomeroy's Sons, Pittsfield, Mass.

EXTENSIONS.

FRANKLIN N. CLARKE, of New Haven, Conn., administrator of ELIZUR E. CLARKE, deceased.—Letters Patent No. 16,719, dated March 3, 1857.

"Machine for Cutting Pasteboard for Boxes."

Claim.—1. The method of attaching and adjusting the cutters, in combination with the main cylinder, when the whole is constructed, arranged, and made to operate substantially as herein described.

2. The combination of the spring-clamp M with the main cylinder and cutters, when constructed and made to operate substantially as herein described.

G. F. HUTCHINS, of East Douglas, Mass., administrator of CHARLES HUTCHINS, deceased.—Letters Patent No. 16,732, dated March 3, 1857.

"Improvement in Machines for Making Axes."

Claim.—The preparation of the bar or block of iron by longitudinal rolling between rolling dies, operating substantially as herein described, to form it with a projection on one face in the middle of its length, and two projections on the opposite face, one at each end, substantially as described, in combination with the cross-rolling between segment-dies under a mode of operation, substantially such as herein described, to reduce the thickness of the cheeks toward the edges and to form the required swell on the edges of the cheeks, substantially as described, and for the purpose specified.

ISSUE OF MARCH 21.

PATENTS.

112,764.—COMPOSITION FOR PAVEMENTS.—Nathan B. Abbott, Brooklyn, N. Y.

Claim.—The composition, formed of coal-tar, pitch, or asphalt, and creosote, with the other ingredients named.

112,765.—BED-BOTTOM.—John H. Allyn, Whitesborough, N. Y.

Claim.—1. The manner of connecting or tying the cross-slats together by means of the long and short connections, substantially as shown and described.

2. Holding the ends of three slats over one spring by means of long connections, as shown at E E; also, the ends of two slats over one spring by means of short connections, as shown at D D, substantially as shown and described.

112,766.—PRESSING AND BALING HAY.—George H. Aylworth, Brighton, Ill.

Claim.—The arrangement, in the press herein described, of the vertical frame A, presser-bar B, cords *c d*, and eccentric pulley C, when all these parts are constructed and operated as shown and described, for the purpose set forth.

112,767.—HAT AND CAP-HOLDER.—Charles Beeny, Albany, N. Y.

Claim.—The spring A, plate B, and staple C, with or without rubber D, combined and arranged in the manner and for the purpose herein shown and described.

112,768.—PUMP-PISTON.—Daniel W. Bell, St. Louis, Mo.

Claim.—1. As a new article of manufacture, a packing, D, for piston-heads, made of vulcanized rubber, substantially of the shape and form as shown and described.

2. The piston-head B, rubber ring D, having a beveled edge, *b*, and follower H, its edge *a* beveled to correspond with the bevel of *b*, the edge of the latter rising and playing freely above the follower, and the pressure of the follower on the ring maintained and adjusted by bolts and nuts, and all arranged and constructed for joint operation, as and for the purpose shown and specified.

112,769.—HORSESHOE-MACHINE.—Uriah Billings, Cambridgeport, Mass.

Claim.—1. The endless chain E, one or more carriages, F, formers H, and actuator G, the frame or table A, the rails *i i*, the rollers L L, the presser, the creaser I, the spreading-die K, and the heel-contracting dies N N, all arranged and combined as and to operate as specified.

2. The shears *p n*, the rails *i i*, the abutment *k*, the rollers L L, the presser, the creaser I, the spreading-die K, the heel-contracting dies N N, all the endless chain E, and one or more formers, H, and actuator G, arranged and combined substantially and to operate as explained.

3. The arrangement and combination of the fingers P P with the heel-contracting dies N N, combined and to operate with a spreading-die K, a creaser, I, a presser, bending rollers L L, one or more formers, A, and actuators G, and an endless chain, E, in manner substantially as described.

4. The combination of the sectoral creaser-block I, grooved as described, the arms *w* and *x*, and the nose *a* of the actuator, as and for the purposes set forth.

112,770.—PISTON-ROD PACKING.—James H. Blessing, Albany, N. Y., assignor to himself and Frederick Townsend, same place.

Claim.—1. The combination of the vulcanized rubber cylinder G, made long enough to be compressed endwise, in combination with the chamber B, compressible metallic sectional packing-cylinder

b' b' b' b', gland C *c*, and steam inlet-passage *a*, all substantially in the manner and for the purpose herein described.

2. The channels formed on the compressible sectional packing-cylinder *b' b'* with the chamfered edges, in the manner and for the purpose herein described.

3. The combination of the steam-channels and chamfered edges of the packing-rings with the intersecting splits of said rings, said intersecting splits being arranged to break joints, substantially in the manner described and for the purpose set forth.

4. The combination of the split ring *b*, which is not grooved, with the split rings *b'*, which are chamfered and grooved, and with the vulcanized rubber cylinder G, chamber B, gland C *c*, and steam-passage *a*, substantially in the manner described.

112,771.—TAP AND NOZZLE FOR OIL-CANS.—Jabez A. Bostwick, New York, N. Y.

Claim.—1. As a new article of manufacture, the within-described metallic tap for oil-cans and other vessels, constructed of the opened-bottomed cup D, threaded to screw into the nozzle of the can, the recessed or countersunk lid F secured thereto, and the valve H K, operated by a screw, G, working centrally through the lid, said parts being formed and combined substantially in the manner herein set forth.

2. In combination with the subject-matter of the first claim, the within-described metallic, countersunk, scored, and threaded nozzle A, as herein set forth.

112,772.—GLASS-BLOWER'S MOLD.—Samuel R. Bowie, New Bedford, Mass., assignor to himself and William L. Libbey & Brother, same place.

Claim.—1. The rotary mold for forming the outer surface of a blown-glass article, when constructed substantially as herein set forth.

2. The combination of a stationary axial bed or bottom-former with the rotary mold or body-former, substantially as and for the purpose set forth.

3. As a mold made with a series of peripheral rollers, as and for the purpose set forth.

4. In combination with a rotating mold made in two sections or parts, B B, as described, mechanism as specified for opening and closing the same, as set forth.

5. In combination with the stationary axial support or bottom-former and the rotary mold or parts B B, mechanism for rotating the latter, substantially as set forth.

112,773.—HORSE-SHOE.—Joseph Brackett, Lynn, Mass.

Claim.—1. The flexile metallic band B, as provided with the tongue or tongues *b*, arranged as described, in combination with the horse-shoe A, as furnished or made with a peripheral groove or grooves, *a*, to receive such tongue or tongues, all being substantially as specified.

2. The combination of such and a fastening, either elastic or melastic, applied to the band for connecting its ends and holding it in place in the shoe and on a hoof, as set forth.

112,774.—STREET-LAMP.—George Brandon, New York, N. Y.

Claim.—1. The glass top B, corrugated as and for the purposes herein set forth.

2. The ring G^1 G^2, made in separate pieces, matching upon the ring H, and holding the parts A B of the lamp together, as specified.

3. The felt E, or its equivalent, arranged, as represented, relatively to the parts A B of the lamp and to the confining means, as specified.

112,775.—MACHINE FOR UPSETTING BOLTS.—Benjamin Briscoe and Joseph A. Briscoe, Detroit, Mich., assignors to The Michigan Bolt and Nut Company, same place.

Claim.—As an improvement in the method of forming the heads of bolts, supplementing the upsetting action of the heading-tool, when forced up and held by a cam in the usual manner, by another action of said heading-tool, effected by forcing the wedge K down between the rear end of said tool and a solid bearing in the block H, as herein described.

112,776.—GREEN GLAZE FOR FLOWER-POTS.—John E. Brooks, Yarmouth, Me.

Claim.—An improved green glaze for flower-pots, prepared of the ingredients in the proportions and manner substantially as herein described and set forth.

112,777.—HORSE HAY-FORK.—Benjamin F. Brown, Catlin, Ind.

Claim.—The combination, with the barbed bars A B, pivoted together, and having the eyes E for the attachment of the hoisting-rope, of the bars F H, the toggle-jointed bars O, and the trip-catch, all arranged substantially as specified.

112,778, antedated March 9, 1871.—DEVICE FOR TRANSPORTING EGGS.—Abner H. Bryant, Chicago, Ill.

Claim.—The pockets for egg-carriers, herein described, formed by the strips A A, slit at *b*, the transverse strips B, slit at *c*, and the partition-sheet D, as and for the purpose specified.

112,779.—PNUEMATIC TELEGRAPH.—Edward A. Calahan, Brooklyn, and George B. Field, New York, N. Y.

Claim.—1. The mode herein specified of operating a printing-telegraph instrument by alternate pressure and exhaust pulsations of air or gas, substantially as set forth.

2. The valves *c d*, operated alternately by a rocking-lever, combined with the pressure and exhaust-pipes and the tube connecting to the distant instrument, substantially as set forth.

3. The cylinder *m*, piston *n*, and escapement *s*, for moving the type-wheel *p* by the alternate pressure and exhaust pulsations, substantially as specified.

112,780, antedated March 18, 1871.—COMBINED GAUGE AND TRY-SQUARE.—Frederic Castle, Montana, Iowa, assignor to himself and Newbury J. Eaton, same place.

Claim.—The construction of a combined sliding-gauge and try-square, wherein the stock A, eccentric B, blade C, studs D and E, bracket F, set-screw *b*, square G, and set-screw *c* are arranged relatively to each other, and operate in the manner and for the purpose set forth.

112,781.—PEN-HOLDER.—Benjamin Charles, Akron, Ohio.

Claim.—1. The elastic band *f*, in combination with the clamp *c*, as set forth.

2. The metal slips or springs *h*, in combination with the cap or cover B, as and for the purpose set forth.

112,782.—THRASHING-MACHINE.—Francis G. Chesman, Lemont, Ill.

Claim.—1. The combination of the revolving grain-meter D with a thrashing-machine, when arranged to receive, measure, and deliver the grain, substantially as described.

2. The combination of the measuring-buckets *e*, pins *i*, lever *h*, and scale-beam *g*, substantially as specified.

3. In combination with the revolving meter D the hinged board or flap *e*, arranged to operate as set forth.

4. The trough for the reception of grain from the meter, having the sliding bottom F, arranged to operate substantially as described, whereby it can be made to deliver the grain at either side of the machine, as set forth.

112,783.—THILL-COUPLING.—Newton J. Clark, Clarkston, Mich., assignor to himself and Milton H. Clark, same place.

Claim.—The spring G, provided with latch or stud H, in connection with the strap C, bolt or rivet D, and hook E, when each part is constructed substantially as described, and arranged to operate as set forth.

112,784.—EGG AND FRUIT-CARRIER.—William J. Clark, Lena, Ill.

Claim.—A series of compartments formed of a face-plate of paper, or similar material, and a series of bent pieces attached thereto, forming the main portion of the compartments, as set forth.

112,785.—LAPPET-LOOM.—Joseph Clough and Joseph Crompton, Chicopee, Mass.

Claim.—1. The cam-wheel E, provided with one set of fixed tappets, H, the two sets of adjustable tappets G I, and combined with the sliding rods for working the needle-bars, the wheel *i*, chain, lever, and pattern-wheel *m*, all substantially as specified.

2. The combination, with the cam-wheel E and pattern-wheel *m*, of the friction-wheel *g*, wheel *r*, friction-disk *y*, and the eccentric shaft *s*, all substantially as specified.

112,786.—COATING GAS AND WATER-PIPES.—Nicholas Clute, Schenectady, N. Y.

Claim.—The composition, for the purposes set forth, composed of the several ingredients in quantity and proportion of each as herein described.

112,787.—BLOTTING-PAD.—Alfred Q. Collins, Cambridge, Mass.

Claim.—The combination and arrangement of the springs *g* and *e* with the raised pieces *d d*, screw *c*, and top *a*, all constructed as and for the purposes set forth.

112,788.—SAWING-MACHINE TABLE.—Jonathan Creager, Cincinnati, Ohio.

Claim.—The described arrangement of veneer-saw C, supporting-rollers D, obliquely-ascending series of gauge-rollers M N, and the bearing-off rollers H, for the purpose set forth.

112,789.—FIRE-SHOVEL.—Isaac W. Denning, Allegheny City, Pa.

Claim.—Fastening the shank to the blade of a shovel in the manner shown and described, that is to say, by riveting the shank through the blade and grooving the blade, and applying the strap G, substantially as set forth.

112,790.—WASHING-MACHINE.—William James Dodge, Syracuse, N. Y., assignor to himself, Alanson T. Briggs, and William Henry Thrall, New York city.

Claim.—A washing-cylinder, constructed with openings A A, rods or bars B B B B B, partition C, corrugated periphery D D, and with plain or corrugated sides, substantially as and for the purpose hereinbefore set forth.

112,791.—BLIND-WIRING MACHINE.—Elijah F. Dunaway, Cincinnati, Ohio.

Claim.—1. The slotted slide G, combined with the screws *h*, having beveled heads, as and for the purpose described.

2. The pawl *m*, combined with treadle mechanism L O P Q R S F, for the purpose described.

3. The combination broad-faced and slotted standard A *e*, table B, beds C D, and parts E, all constructed and applied to form the supporting-frame of a blind-wiring machine.

112,792.—BALANCING VERTICAL-RECIPROCATING MASSES.—William F. Durfee, Bridgeport, Conn., assignor to himself and Jackson & Wiley, Detroit, Mich.

Claim.—A piston, P', and cylinder C, combined, as described, with a pipe, T, receiving steam at boiler-pressure, for the purpose of neutralizing vertically-movable masses of matter, as described.

112,793.—ADJUSTABLE BEVEL.—Willard C. Ellis, Springfield, Mass., assignor of one-half his right to Rufus A. Russell, same place.

Claim.—In combination with the beam and blade of a bevel, the device for adjusting the same, consisting of the nut *c*, screw *d*, and recessed cam-lever *e*, the parts being constructed and arranged substantially as shown.

112,794.—SAWING-MACHINE.—Jacob Felton, Fairmount, Ind.

Claim.—The hollow pivoted beam G, rope *i*, and roller *j*, combined, as described, with beam F, for the purpose specified.

112,795, antedated March 10, 1871.—MAGAZINE FIRE-ARM.—Harbert K. Forbis, Danville, Ky.

Claim.—1. In combination with the sliding barrels A B, the spring-feeding device M *m' m''*, the parts being constructed and arranged substantially as set forth.

2. In connection with the barrels A B and feeder M *m' m''*, the lipped spring-jaws J J' *d*, operating as described, and for the purpose specified.

112,796.—CHURN.—David Frankfoder, Wakarusa, Ind.

Claim.—The combination of the beaters E', rock-shafts E, rocker-arms F, connecting-rod I, lever H, and standard G, arranged with relation to each other and the churn-box A, and detached lid A', as and for the purpose set forth.

112,797.—HORSE-COLLAR PAD.—John Fraser, Dowagiac, Mich., assignor to himself and John J. Hardy, same place.

Claim.—In a horse collar pad, wherein a metallic shield is interposed between the cushion and cover, the lining A, where its ends are extended, worked up, or drawn over the ends of the cover B and secured thereto, substantially in the manner and for the purposes herein set forth.

112,798.—TELEGRAPH-SWITCH.—Alexander H. Freeman, Chicago, Ill.

Claim.—1. The telegraph-switch connector, consisting of a pressure-rod, E, working in a tube, D, to which is attached a clasp, F, with hooks *f f*, constructed and operating substantially as described and shown.

2. The pressure-rod E, cut at its outer extremity to fit the wire of a switch-board, to increase the connecting-surface of the metals.

3. The clasp F, having bent hooks *f f*, shaped to surround the wire of a switch-board, to increase the connecting-surface.

4. The combination of the clasp F, the pressure-rod E, tube D, and spring G, when the said spring forms a solid connection between the rod E and tube D, substantially as and for the purpose set forth and shown.

5. The detachable forked connector, constructed to clasp under the lower switch-wire and press upon the upper switch-wire, whereby the connecting-surface is increased and holes in the switch-wire are dispensed with, as described and shown.

112,799.—BIT-BRACE.—Raymond French, Seymour, Conn.

Claim.—In combination with a split socket and screw-sleeve, the transverse mortise through the socket-head, as and for the purpose described.

112,800.—LOOP FOR STIRRUPS.—Josiah B. Gathright, Louisville, Ky.

Claim.—The method, substantially as herein shown and described, of attaching stirrups to saddles, and also, as specific means to this end, the

stirrup-loops operating substantially as shown and described.

112,801.—Vise for Joiner's Use.—Jonathan Good, Lancaster, Pa.

Claim.—1. The central four-sided column A, in combination with the jaws B C, operating at right angles, arranged substantially in the manner and for the purpose specified.

2. The top sliding plate D, with the screw arrangement I, in combination with the center A, jaws B C, slides G H, all operating in the manner and for the purpose herein set forth and shown.

112,802.—Machine for Sewing Boots and Shoes.—Charles Goodyear, Jr., New Rochelle, N. Y.

Claim.—1. The combination, with a boot and shoe sewing mechanism, of a jack adjustable on axes intersecting each other, as shown and described, such jack being mounted on a shaft which rests on a pedal, and is connected therewith, and with the column or other support of the sewing-machine, in the manner substantially as shown and described, so as to be capable of swinging within given radiuses, as herein set forth.

2. In a boot and shoe sewing-machine, in connection with which a jack is used, adjustable and supported substantially as herein described and claimed in the preceding clause, a jack-supporting shaft composed of two parts, jointed, to admit of their rigid adjustment, with respect to each other, below the pivot or support of the revolving jack.

3. The sleeve of the jack, its supporting shaft, and the spring, when arranged as described, and for the purposes set forth.

4. In a sewing-machine adapted for the sewing of boots and shoes, the curved needle actuated by geared lever segments, and provided with a guard or support constructed and operating substantially as herein shown and described, whereby the awl or other auxiliary piercing instrument is dispensed with.

5. The combination with the edge-gauge, whether the same to be movable or not, of a yielding auxiliary side gauge and its locking device, arranged to assist in holding the work firmly in position by pressing the side of the boot or shoe during the stitching process.

6. In a boot and shoe sewing mechanism, employing as the piercing and stitching instrument a curved needle mounted in a segmental needle-stock, for the purpose of dispensing with the cast-off, locating the barb on the side of the needle opposite to whence the material to be sewed is fed, substantially as herein shown and described.

7. The combined edge-gauge and welt-guide working concentrically with the needle, substantially as shown and described.

112,803.—Breech-loading Fire-Arm.—Gardner B. Gray and Joseph H. Romans, Mount Vernon, Ohio, assignors of one-third their interest to Davis T. Ruth, of same place.

Claim.—1. The combination of projections and corresponding cavities or seats on and in the breech and barrel of a breech-loading fire-arm, as herein described, whereby the parts may be readily coupled for operation or uncoupled, as set forth.

2. In a breech-loading fire-arm, the combination of the set-stud or button D with the coupling above claimed.

112,804.—Combined Ore-Crusher and Amalgamator.—Lyman Griswold, Denver, Colorado Territory.

Claim.—1. The elastic pads *k k*, secured to the sliding frames G, and connected with the levers *m*, substantially as herein shown and described.

2. The chute C, having its inner side open and bottom inclined, and the plates *c c* combined as described with case A, for the purpose specified.

3. The plate E, combined, as described, with strip F, yoke *g*, wedge *h*, and handle *i*, for the purpose of securing or detaching the said plate, as set forth.

112,805.—Railway-Rail Chair.—Samuel M. Guest, Ypsilanti, Mich.

Claim.—1. A rail-chair, having the flanged shoulders B C cast in one piece with the base-plate A, as herein described, in connection with the elastic cushion E, covering plate F, clamp G, and key H, arranged and operating in the manner and for the purpose set forth.

2. The combination of two rail-chairs, constructed as herein described, with a cast-iron cross-sleeper, as and for the purpose set forth.

112,806.—Churn.—Heman S. Gurney and Horace Merrill, Memphis, Mich.

Claim.—1. The dasher J, in combination with the rod I, when the former is constructed and operating as set forth.

2. The combination of the body A, standard B, plate C, shaft D, lever E, segment F, standard G, pinion H, rod I, and dasher J, substantially as and for the purposes set forth.

112,807.—Mouse and Animal-Trap.—George L. Hart, New Britain, Conn.

Claim.—1. In a mouse or animal-trap, the bait-hook *f*, having the counter-balance *f'*, for the purpose set forth.

2. In a mouse or animal-trap, the combination of the spring-bow *b* with the lever *c* connected to it by means of the loop *c'*, the whole constructed, arranged, and operated substantially as and for the purpose set forth.

112,808.—Apparatus for Cutting the Ends of Cigars.—Mathias Joseph Hinden, Detroit, Mich., assignor to Adolph Freund, same place.

Claim.—The device herein described, wherein the bed A, adjustable guide B, plate C, arm D, knife E, and spring F are constructed substantially as specified, and arranged to operate as and for the purposes set forth.

112,809.—Sand-Screen.—Samuel Holdsworth, Maspeth, N. Y.

Claim.—A wire-screen constructed with offsets, substantially as seen at C, and provided with the ties D in the angle formed thereby, substantially as and for the purposes herein described.

112,810.—Cord-Guide for Sewing-Machines.—Henry Horn, Milwaukee, Wis., assignor to John O. Fairbairn, same place.

Claim.—The trough-like shoe B, provided on its under side with grooves, and having projecting from it the spring arm and cord-guide, all constructed in a single piece, and adjustable on the presser-foot by means of the screw *e*, as described.

112,811.—Thill-Coupling.—Benjamin F. Horton, Ithaca, N. Y.

Claim.—1. In combination with the hook and disk, the arrangement of the locking-slot *f* in the upper and rearward part of the hook *d*, substantially as set forth.

2. The ear-pieces *g*, fast to the sides of the disk *e*, substantially as set forth.

3. The rubber *k*, when situated in the bottom of the slot *i*, and thrusting the cross or locking-piece *m'* against the hook *d*, as set forth.

4. The shaft-bar *h*, when it has the slot *j'*, made by the projections *j*, as set forth.

5. The combined whole, consisting of the upper and rearward slotted hook *d*, the deep-slotted disk *e*, with the rubber *k* and ear-pieces *g*, and shaft-bar *h*, with projections *j*, arranged and used substantially as set forth.

112,812.—Sash-Holder.—Philo B. Hovey, New London, Conn.

Claim.—The combination of the friction-stop B, pivoted to the arm E, which arm is pivoted to the case at F', and forced upward by the spring G, the stop B being released from the window-frame by depressing the thumb-piece, all the parts being arranged as and for the purposes set forth.

112,813.—Bee-Hive.—Washington J. Kelly, Commerce, Mich.

Claim.—The combination, in a bee-hive, of the case D, the cap F, honey-box F', provided with comb-frames, moth-traps B, detachable comb-frames A, and door E, the several parts being constructed, arranged, and operated substantially as described and shown.

112,814.—Curtain-Fixture.—William C. Kennedy, Commerce, Mich.

Claim.—The arrangement of the cords D D and H H, screw-eyes E, E, F, and I, rod B, roller C, and spools *a*, with relation to each other and the shade A, substantially as described, for the purpose set forth.

112,815.—Clothes-Wringer.—Alexander King, Philadelphia, Pa.

Claim.—1. The arrangement of the parts A and B, hinged together at C, and connected by one or more straight, loose bolts H, provided with thumb-screws, as shown and described.

2. The arrangement of the parts A and B, provided with elastic bearings for the wringer-rolls, the guards M, and the bolt H, provided with elastic bearing.

112,816.—Drawer-Pull.—Joseph Kintz, West Meriden, Conn., assignor to himself and P. J. Clark, same place.

Claim.—1. The improved drawer-pull, having the handle attached to the shank by a ball-and-socket joint, the socketed part having the notch G, to admit the stem D of the handle and allow it to hang vertically, all substantially as specified.

2. The socketed escutcheon-plate of the shank, consisting of the iron back I and sheet-metal cap, the latter having the socket either formed out of it or of another piece, and attached, all substantially as specified.

112,817.—Shaft-Coupling.—Darius Knickerbocker and Samuel Knickerbocker, Allegan, Mich.

Claim.—The construction and arrangement of the rim A, plugs C, and thongs *a*, or their equivalents, with relation to each other and the cross-pins B of a universal coupling, in the manner and for the purpose set forth.

112,818.—Rectifying High-Wines.—Archibald K. Lee, Galveston, Texas.

Claim.—The receiving-tub A, the distributing-tub C, the rectifying-tubs 1 2 3 4, having a pipe H, attached, each being constructed as stated, and so combined and arranged as to furnish a vacuum apparatus for the rectifying of high-wines or other like product of distillation, substantially as described.

112,819.—Physician's Saddle-Bag.—Andrew M. Leslie, St. Louis, Mo.

Claim.—A physician's saddle-bag, formed of two cases B B', hinged at C by the central uncut portion of the leather cover piece C, having the form shown, and the cuts or divisions *e f e' f'*.

112,820.—Wash-Board.—Charles Letterman, Syracuse, N. Y., assignor to John W. Throop.

Claim.—A finely-perforated sheet of metal, B, for the rubbing-surface of wash-boards, substantially as and for the purpose herein specified.

112,821.—Planing-Machine.—Charles Levey, Toronto, Canada.

Claim.—The arrangement, in the planing-machine herein described, of the swiveled screws W W, crank-shafts R T, bevel-gears U V, brackets or bearings S S, bars or nuts X X, tubular rods Y Y, journal-boxes H H, feed-roll C, with its worm-wheel I, the driving-shafts G G, arms or plates L L, carrying the sliding worms J J, rods Z Z, bars A' A', and coiled springs B', all constructed and operating as specified.

112,822.—Cotton-Press.—Eli W. Long and Isaac N. Patten, Memphis, Tenn.

Claim.—1. The combination and arrangement of the horizontal screw A with nuts D, arms *e e e e*, toggle-joints G G, and arms or levers F F and F' F', constructed substantially as shown and described.

2. The combination and arrangement of the arms F F and F' F', toggle-joint G, rods J J, dummy H, and platens K and I, constructed substantially as shown and specified.

112,823.—Toy Puzzle.—Samuel Loyd, New York, N. Y.

Claim.—Section C, with openings A and D, section H, with recess F and openings D and A, section I, with recesses D D and J J, and bolt E, all combined substantially as described.

112,824.—Boiler for Heating Purposes.—James A. Maynard, Newtonville, Mass.

Claim.—1. A boiler composed of two or more portions, connected by the tubes *h* or *i*, which serve as radiators for heating the air passing in contact with their external surfaces, as and for the purpose described.

2. The circulator E, in combination with the furnace B and a boiler provided with radiating-tubes *h* or *i*, operating substantially as set forth.

3. The combination of the portions *a c d e* with their radiating-tubes *h*, the radiating-tubes *h i*, furnace B, and circulator E, operating substantially in the manner and for the purpose described.

112,825, antedated March 2, 1871.—Hydrant.—John McCann, Albany, N. Y.

Claim.—The combination of the notched lever F and the stop-link H with the valve *a* and its rod G, and the spring *e*, which closes said valve in opposition to the pressure of the water in the main, substantially as and for the purpose set forth.

112,826.—Railway Shifting-Truck.—Patrick Henry McWilliams, Detroit, Mich.

Claim.—The combination of the truck-frames A and D, provided, respectively, with the axles B and E and the wheels C and F, with the platform M, the sockets *a*, the bearings *b*, the level-bolsters H, the lugs L, the fulcrums K, the levers J and I', and bolts I, all constructed substantially as described and shown, for the purpose of enabling either truck to be depressed and support the other truck and platform M, or be elevated and be supported in turn.

112,827.—Platen Feed-Guide.—Edward L. Megill, Brooklyn, N. Y.

Claim.—As an improvement upon feed-guides, consisting of the parts B, D, and A, providing the part B with teeth C C to penetrate the tympan, substantially as described.

112,828.—Manufacture of Iron and Steel.—John W. Middleton, Philadelphia, Pa.

Claim.—1. The combination, with a hot-blast ore-reducing furnace, of the deep crucible A, the adjustable tuyere-pipes *a'' a''*, and the vertical series of tuyere-holes *a' a'*, the said parts being constructed and arranged substantially as described, for the purpose of more effectually causing the separation of the metal and slag in the crucible, and allowing the tuyere-holes in the latter to be

successively closed with facility, as the melted metal and slag rise in the said crucible, until the same be full.

2. In an ore-reducing furnace, the annular shoulder or contraction a^4 a^5, in combination with the spherical chamber a''' and crucible A, substantially as and for the purpose hereinbefore described and set forth.

3. The hot-blast chamber, channel or flue B, around and under the crucible A, substantially as and for the purpose hereinbefore described and set forth.

4. The arrangement of the purifying, decarbonizing, and kneading-chamber E, aside from and in relation to the direct-blast passage-way D D, substantially as and for the purpose hereinbefore described and set forth.

5. The combination with the hot-blast of an ore-reducing furnace of a special heat-generating furnace C c', substantially as described, for the purpose of intensifying the heat of the blast sufficiently to enable the workmen thereby to melt either cast or malleable iron when the same has at any time become chilled or solidified in the said ore-reducing furnace, and thus avoid the great expenditure of time, labor, and money, heretofore required in clearing out such chilled or consolidated mass.

6. The combination with a hot-blast ore-reducing furnace of a special-blast superheating furnace, C c', in a close channel, D, which communicates with the said ore-reducing furnace, and contains a vessel, d', for refining by gravitation, substantially as described, for the purpose of producing refined cast-iron or malleable iron and steel direct from the ore, in a condition to be formed into ingots, and finally into bars, by the usual rolls or hammer, during the same heat, as hereinbefore set forth.

112,829. — CRANE. —John W. Middleton, Philadelphia, Pa.

Claim.—1. The attachment of a horizontally-swinging crane-bar, D, to the under side of an elevated bridge or truss-frame, A, by any suitable intermediate connecting device, in such manner as to leave the whole area of the ground or floor beneath its circuit clear and unobstructed by its support, substantially as and for the purposes hereinbefore set forth.

2. The combination of a horizontally-swinging crane-bar, D, with the under side of a traveling carriage supported upon suitable track-rails B B, secured along the inner sides of the bottom sills a'' a'' of an elevated bridge or truss-frame, A', substantially as and for the purposes hereinbefore set forth.

3. The combination of a series of deeply-grooved rim-wheels on each side of the carriage C with a corresponding track-rail or rails fixed on the inner sides of the sills of the bridge or truss-frame A, the said parts being arranged to operate together, substantially as and for the purposes hereinbefore set forth and described.

4. The circular double-track rail d'' on the bottom of the carriage C, in combination with the wheels 3 and 4 on the crank-bar D, and the central bolt d', the said parts being arranged to operate together substantially as and for the purposes hereinbefore set forth.

5. The combination of the circle of teeth 6 with the under side of the crane-bar D, supported as described, and with the operating-pinion 7 on the shaft 8, the said parts being arranged to operate together substantially as and for the purpose hereinbefore set forth and described.

6. The pulley-wheels 10 and 11, in combination with the hollow bolt d', the toothed cylinder 5, and the burden rope or chain E, the said parts being arranged to operate together substantially as and for the purpose hereinbefore set forth and described.

7. The combination, with an elevated bridge or truss-frame, A, of a carriage, C, provided with a swinging crane-bar, D, beneath, without any under-supports, and the said carriage being provided with any sufficient steam-power generator and operative engine, whereby the movements of the carriage forward and backward on the track-rails of the said elevated bride or truss-frame, and the operation of the crane, may be effected substantially as and for the purposes hereinbefore set forth.

112,830.—PEAT-MACHINE.—Hermann Mielisch, Racine, Wis.

Claim.—1. The combination of the rack-shaft H, pinion I, cutter-box L, sliding cutter N, straps P, and levers Q and R, substantially as described.

2. The shaft H, with its operating mechanism, in combination with the sliding frame and the stop F, substantially as set forth.

112,831.—APPARATUS FOR REFINING METALS. — Adolph Millochau, New York, N. Y.

Claim.—The crucible made with a descending tube, opening at the lower end into the fire-space below the crucible, as and for the purposes specified.

112,832, antedated March 14, 1871.—APPARATUS FOR REMOVING PAINT, VARNISH, &c.—Theodore F. Moody, Toledo, Ohio.

Claim.—The combination of the lamp A, generator B, provided with pipe C and rods *b*, when constructed and arranged substantially as shown and described, and for the purpose set forth.

112,833.—SASH-HOLDER.—James B. Morgan, Davenport, Iowa, assignor to himself and Maurice J. Keating, Rock Island, Ill.

Claim.—The shifting axle F, with shoulder *d*, fitting a corresponding countersink, *d'*, in the wheel or roller, in combination with the oblique or inclined slot, substantially as shown and described, and for the purposes set forth.

112,834.—WAGON-SEAT.—Valentine Myers, Cogan Station, Pa., assignor to himself and John M. Phelps, same place.

Claim.—1. In connection with a wagon seat, the double inclined wood springs M and spiral springs W, arranged for joint operation, as specified, so that the coiled springs perform the double functions of auxiliary springs, and of stops, to positively resist a too great descent of the seat, as herein set forth.

2. The wood spring M and metallic springs W, combined and arranged as represented relatively to each other and to the seat E, when provided with the adjustable straps C and saddles B, or their equivalents, connected as represented, and adapted to serve relatively to wagons of various widths, substantially in the manner and for the purposes herein set forth.

112,835. — ROAD-SCRAPER. — William T. Nichols, Chicago, Ill.

Claim.—The chain or other like connections *g*, applied between the draft-pole C and rear part of the hinged scraper-bed A, substantially as described.

112,836.—TELEGRAPH APPARATUS.—Henry C. Nicholson, Mount Washington, Ohio.

Claim.—1. The relative arrangement of the double-line telegraph herein described, for the purpose of communicating a double line of signals simultaneously or separately, at will, the signals being united by sound or printing to produce a single message.

2. The arrangement of the dots and dashes in the double-line alphabet, figures, &c., as described, and for the purpose specified.

112,837.—SWEEPING-MACHINE.—George S. Norris, Baltimore, Md.

Claim.—1. The case A, when mounted upon long rollers A^2, which form an unbroken support the entire length of the case, and closed at the ends by elastic sheets A^1, substantially as set forth.

2. In combination with the case A, mounted upon long rollers A^2, and closed at the ends by elastic sheets A^1, the hinged drop-pans H and I, substantially as and for the purpose set forth.

112,838.—MACHINE FOR GRINDING SAW-TEETH.—John L. Otis, Leeds, Mass.

Claim.—1. In combination with a stand for carrying and supporting an emery-wheel shaft, the tubular bearing, composed of the arms A' and cap or cover E, and their recesses *e*, projections *e*, and flanges *f*, as and for the purpose described and represented.

2. In combination with the stand, the arrangement of the arms F, G, H, and *p*, and their respective adjustments, as and for the purpose described.

3. In combination with the saw-plate clamp and its carriage, the ring or yoke *z*, for supporting the clamp in the carriage and allow it to be turned with the saw, substantially as described.

112,839.—PREPARING TIN SALTS FROM TINNERS' WASTE.—Adolph Ott, New York, N. Y., assignor to New York Metal and Chemical Manufacturing Company, same place.

Claim.—The process of preparing tin salts from tinners' waste, substantially as described.

112,840.—SHUTTER-FASTENER. — Charles Pabst, Wilmington, Del.

Claim.—The combination of plate I, the eye G, links E F, the keeps K, and fastening-pin H with its plate.

112,841.—ELECTRO-MAGNETIC MOTOR. — Henry M. Paine, Newark, N. J., assignor to Mahlon S. Frost, New York city.

Claim.—A box-frame with openings in its periphery to receive fulcrum-magnets, substantially as and for the purpose herein set forth.

112,842.—BIT AND DRILL-BRACE.—George G. Parker and William P. Dodge, Prospect, N. Y.

Claim.—1. The combination of the collar or coupler C, having the tightener D, with the disk and shank B^3, and tool-holder a^1, substantially as herein described and for the purpose set forth.

2. The combination of the brace or stock A, shank a^1, gearing B B^1 B^2, coupler C, and tightener D, substantially as shown and described.

112,843.—GATE. — Noah Parker, Trimble county, Ky.

Claim.—The slotted plate E provided with pintles, the bar or plate F provided with the catch *e*, the double and single-headed clamping-screws with their winged-nuts, arranged, as shown and described, in connection with the gate A and posts D D', whereby said gate may be adjusted and locked, as specified.

112,844.—ANIMAL-TRAP.—James D. Pell, New York, N. Y.

Claim.—1. The automatic self-catching trigger D D d' pivoted on the top of the trap, and bent into the shape described, when combined with loop B and spring C, for the purpose specified.

2. The central chamber a^3, to receive a single bait, combined, as described, with a series of open chambers, a^1, surrounding it, and each provided with a loop, B, and trigger D, operating, as specified, to catch the invader before he reaches the bait.

112,845.—PREPARING SEED-CORN.—John Meek Petit, Monroe township, Ohio.

Claim.—A compound for protecting seed-grain, composed of the three ingredients, tar, lime, and sulphur, applied as described, for the purpose set forth.

112,846.—BROILER.—Edward B. Phelps and James P. McLean, Brooklyn, N. Y.

Claim.—The independent cover A or A', with swinging damper E or slide-dampers G G', with or without the regulating cut-offs F F', all constructed, arranged, and operating in the manner and for the ostensible purpose of broiling meat, &c.

112,847.—LUBRICATOR. — Tapping Reeves, Little River, Cal.

Claim.—1. The valve D, two valve-seats c^2 f^2, valve-stem E, and notch i^2, in combination with the tube C, cap F, reservoir A, and plug I, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the tube L and passage g^4 i^4 i^3 with the reservoir A, top piece G, plug I, tube C, valve D, and stem E, substantially as herein shown and described, and for the purpose set forth.

3. An improved lubricator, consisting of the reservoir A, stem B, tube C, cap F, passage b' c^1 f^1, valve-seats c^2 f^2, valve D, valve-stem E, top G, plug I, cup H, notch i^2, passage g^1 i^1 g^2, passage g^3 i^3 i^4, and passage g^4 i^4 i^3, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

112,848.—MANUFACTURE OF NITRO-GLYCERINE. — Edward A. L. Roberts, Titusville, Pa.

Claim.—The process hereinbefore described of making nitro-glycerine by gradually increasing the amount of sulphuric acid in the acid bath simultaneously with the pouring in of the glycerine, substantially as described.

112,849.—MANUFACTURE OF NITRO-GLYCERINE.—Edward A. L. Roberts, Titusville, Pa.

Claim.—1. The process of mixing glycerine and mixed acids to form nitro-glycerine by introducing the glycerine into a bath of mixed acids, (nitric and sulphuric,) in which a rapid circulation of the fluid contents of the bath is maintained, substantially as and for the purposes described.

2. The apparatus, hereinbefore described, for the manufacture of nitro-glycerine, consisting of a mixing-vessel, having a diaphragm or diaphragms, in combination with a paddle-wheel for creating and sustaining a rapid circulation of the fluid contents of the mixing-vessel, substantially as and for the purposes hereinbefore described.

3. The mixing-vessel, traversed by hollow diaphragm or diaphragms, communicating with an exterior and surrounding vessel or reservoir of water, for the purpose of making nitro-glycerine, substantially as hereinbefore described.

112,850. — ELECTRIC AND OTHER FUSE-HEADS.—Edward A. L. Roberts, Titusville, Pa.

Claim.—The priming-chamber *d* in the fuse-head *a*, charged partly with a violent and not easily-exploding substance, such as nitro-glycerine or its compounds, and partly with gunpowder or other easily-exploding substance, communicating with an electric exploder or other means of firing, substantially as hereinbefore described.

112,851.—"CHAFE-IRONS" FOR WHEELED VEHICLES.—Edward P. Roche, Bath, Me.

Claim.—1. The combination, with the main frame or support A, of the chilled iron or hardened-steel bearing or block *l*, for purposes stated.

2. The combination, with the frame and roller of a chafing-iron, of the combined shield and scraper *k*, under the arrangement and operating as herein-before explained.

3. The spring-catch *g*, herein described, in combination with the offset *b* and pin *d*, for the purposes stated.

4. The general construction and arrangement of a chafe-iron for wheeled vehicles, composed of the main frame *a b c*, with its hardened bearing *l*, the

roller *e*, and the spring-catch *g*, the whole being in manner and for the purpose as hereinbefore explained.

5. The employment of the spring *i* in the locality and for the purpose explained.

6. The general frame or body of the chafe-iron, as composed of the rectangular portion *a*, the offset *b*, and the curved deflector or wheel-guard *c*, when such component parts are cast or produced in one homogeneous piece of metal, as explained and exhibited.

112,852.—WINE-BASKET.—Jean Roussillon, Epernay, France.

Claim.—A willow wine-basket, formed in two hinged parts A B, having covers D D and compartments F G H, all constructed and arranged as and for the purpose described.

112,853.—STEAM-ENGINE.—Stephen P. Ruggles, Boston, Mass.

Claim.—1. In combination with the spiral or cam-shaped piston, the spiral or cam-shaped stationary surfaces in the cylinder, for the purpose of imparting to the piston and its rod a rotating motion in addition to their reciprocating motion, substantially as and for the purpose described.

2. The combination, with a reciprocating and rotating piston, of inlet-ports, constructed as described, and so arranged as that the steam shall act upon one side only of the piston, substantially as described.

3. In combination with the piston and its rod, the pivoted connection *d* and springs *e*, for the purpose of allowing the steam to force the ends of the piston against the cylinder, substantially as described.

4. In combination with a reciprocating and continuously-revolving piston, the spiral-spring packing *f*, as and for the purpose described.

5. The combination of the regulator, cam-boss or sleeve F, rods *o p*, and cut-off valve *h*, for the purpose of operating said cut-off variably.

6. In combination with the balance or band-wheel G and the reciprocating and rotating shaft D, the cross-head and three-armed lever, so that, while the balance or band-wheel may rotate with the shaft D, it shall not partake of the reciprocating motion of said shaft, substantially as described.

112,854, antedated March 10, 1871.—HORSE HAY-RAKE.—John H. Schoonmaker, Bethlehem, assignor to himself and Alexander Selkirk, Albany, N. Y.

Claim.—In a horse hay-rake, the combination of the adjustable clevis M, draft-rod H, and loop G with the rake-head B, shafts C, and lever L, substantially as and for the purpose set forth.

112,855.—HOISTING-MACHINE.—John Scott, Pontiac, Mich.

Claim.—The combination of the driving and reversing-gear C D E G H I J, drum F, rope M, sheaves R S N, rollers O Q, guides P, platforms or chairs L, frame K, and latches T, when arranged substantially as and for the purposes set forth.

112,856.—HOISTING-MACHINE.—William Sellers, Philadelphia, Pa.

Claim.—1. The combination, with the brake-lever L, of the belt-shifter cam K, actuating the lever in the manner and for the purpose specified.

2. The combination of the belt-shifters, the brake, the geared clutch-shaft N, adjustable stops *r r*, and bell-crank O, the combination being and operating in the manner and for the purposes set forth.

3. The combination with a hoist of a swing-frame, H, as and for the purpose described.

112,857.—BUCKLE FOR SUSPENDERS.—Abraham Shenfield, New York, N. Y.

Claim.—The suspender buckle, formed of the body *a*, with openings 3 and 4 for the suspender, at the sides of the bar 2, and the hook 5, for the ring or attachment of the suspender ends, in combination with the swinging clamp *c*, connected to the body *a*, as and for the purposes set forth.

112,858.—COMPOUND FOR TREATING CATARRH, &c., BY INHALATION. — Dana Slade, Chicago, Ill.

Claim.—The mixture or compound called an "inhalent, for catarrh, sore throat, and bronchitis," made of the ingredients in the proportions and for the purposes set forth.

112,859, antedated March 7, 1871.—ELECTRIC FUSE.—Henry Julius Smith, Boston, Mass.

Claim.—1. A fuse, constructed with two chambers, when the shell forming one of the chambers with its wires and charge forms an independent fuse, as described, and fits closely within the shell containing the common powder, as specified.

2. Attaching the wires by passing them through the sides of the fuse-head, substantially as described.

3. A nick or nicks, cut into the side of the fuse, substantially as described, for the purpose described.

4. Securing the fuse-wires to the fuse-head by a plug driven into the mouth of the fuse, when the plug insulates the wires and closes the magazine, substantially as shown in fig. 3.

5. A fuse, consisting of one cup, with its wires entering through the sides and secured by a plug pushed in from the mouth, substantially as described.

112,860.—HAND-TOOL FOR CARVING AND ENGRAVING.—George B. Soley, Philadelphia, Pa.

Claim.—1. The hand-stem, consisting of the case A, the open frame *a'*, the rotary spindle B with the conical cavity in its upper end for the bearing-screw 3, and the fixed collar *b''* provided with the pulley-cord grooves around it, all constructed and arranged together substantially as and for the purpose hereinbefore set forth and described.

2. In combination with a hand-implement, constructed and arranged for engraving, carving, and routing, substantially as hereinbefore described, the endless cord G, take-up weight I, and pulleys D E F, arranged to operate together substantially as and for the purpose hereinbefore set forth and described.

112,861.—GAUGE FOR SAW-TABLES.—Franklin L. Sprague, Keene, N. H., assignor to William H. Doane, Cincinnati, Ohio.

Claim.—1. The sliding removable saw-gauge A', constructed as described, with the holding-screw E, in combination with the slide-way D and table A, arranged to operate in the manner set forth, and so that when detached from will leave the table-top smooth, as described.

2. The manner herein described of operating the sliding removable gauge A' upon a slide-way, D, on the edge or end below the top of the table A, substantially in the manner described.

112,862.—CULTIVATOR.—William D. Stroud, Oshkosh, Wis.

Claim.—The wing *c* and screw-bolt *e*, in their relation to the tooth *a*, friction-brace *d*, and lag-bar *b*, as hereinbefore set forth.

112,863. — DAMPER.—Leonard S. Taylor, Sigel, Mo.

Claim.—The combination, with a stove-pipe or other flue, of the transverse slotted tube B, open at the ends, and the revolving slotted tube D arranged therein, all substantially as specified.

112,864. — STUMP-EXTRACTOR.—Albert D. Tilyou, Norwich, assignor to Cornelius A. Church, New Berlin, N. Y.

Claim.—The combination and the application of

the lever A, as strengthened by the truss-braces B B and rods H, and block G, and band C, with eyes I I and chain attached, operated with the power or stump-extractor applied at the staple D, substantially as and for the purposes hereinbefore set forth.

112,865. — BRAKE FOR RAILWAY-CARS.—Lewis W. Tracy, New York, N. Y., assignor to himself and James E. Grannies, same place.

Claim.—1. The twisted blade or plate *l*, and the cross-head *n*, in combination with the spring *p* and connections to the brakes, substantially as specified.

2. The combination of the brake-shafts *u*, pulley *s*, drum *r*, twisted plate *l*, cross-head *n*, chain-wheel *g*, arm *h*, and chains or connections between the parts, substantially as and for the purposes set forth.

112,866.—TUYERE.—Eben Tracy, Vermontville, Mich.

Claim.—The cylindrical blast-pipe D, provided with a surrounding annular channel, *a*, and segments *b*, in connection with the cap G, provided with the flange *a'*, and segments *b'*, the movable bottom plate E, blast-pipe C, cylinder B, and box A, the whole arranged and operating as herein described, for the purpose set forth.

112,867.—ROLL FOR THE MANUFACTURE OF PLANTERS' HOES.—John T. Tyler, Pittsburg, Pa.

Claim.—The roll B', provided with a sunken die, *b'*, in combination with the roll B, substantially as described, and for the purpose set forth.

112,868. — MACHINE FOR COILING BED-SPRINGS.—Matthew Van Vleck, Albany, N. Y.

Claim.—In combination with the slotted table or its equivalent, the slides B and mechanism to draw them asunder, the cones *c* and mechanism for rotating the same, and the stop or support *a*, substantially as described.

112,869. — COMBINED HARROW, SEEDER, AND ROLLER.—Joseph Vessot, Sr., and Samuel Vessot, Jr., Joliette, Canada.

Claim.—The frame *f*, attached by pivots *f'* to the shafts, and the frame *g'*, attached by pivots *g* to it, with springs *f''* and *g''*, attaching the harrows *f'''* and *g'''* to the cross-bars *f''* and *g''*, substantially in the manner and for the purpose described.

112,870.—COMBINED POTATO-PLANTER AND DIGGER.—James Carroll Walker, Farmington, Mich.

Claim.—The combination of the wheels A, the axle B, and the frame C with the devices for planting and for digging potatoes, substantially as described and shown.

112,871.—HAND-STAMP. — John Walters, Norfolk, Va., assignor to William O. Hickok, Harrisburg, Pa.

Claim.—A slide B, spring C, and lever E, in combination with the head A of a hand-tool for paging and lettering, substantially as and for the purpose hereinbefore set forth.

112,872. — VEGETABLE-GRATER. — Jacob Wehrle and William Wittlinger, Cincinnati, Ohio.

Claim.—1. A "rotary grater," composed of centrally divided and hinged case A C D E, rotary cylindrical grater F, fitted with detachable head G and hopper H, located upon one side of the case A, operating in the manner and for the purpose specified.

2. The inclined knife-edged perforations *a* of the grater, designed to cut in one direction only, as and for the purpose specified.

112,873. — MACHINE FOR GRINDING CARRIAGE-SPRINGS.—Hebron Mayhew Wentworth, Gardiner, Maine.

Claim.—1. The combination and arrangement of the carriage B and the frame H, provided with adjustments, as described, with the main frame A and with the grinding and feed-wheels C D E, arranged in the adjustable carriage and frame H, as set forth.

2. The combination and arrangement of abutment *z* and the presser *t* with the grinding and feed-wheels C D E, arranged, supported, and provided with mechanism for revolving them, all being substantially as described.

112,874, antedated March 16, 1871.—FINISHING PAPER BOXES. — Seth Wheeler and Edgar Jerome, Albany, N. Y.

Claim.—The paper box which has been made by shaping unflocked paper into the form desired, and has the flocking applied directly to its surface, all in the manner herein set forth.

112,875. — BARREL. — Henderson Willard, Grand Rapids, Mich.

Claim. — A barrel or other similar package, constructed as described, in which the cylinder is formed by winding the material on itself two or more times around a form until the desired thickness and strength are attained, and in such a manner that the package shall have a vertical grain, substantially as shown and described, and for the purpose set forth.

112,876.—WINDOW-CURTAIN FIXTURE.—Thomas Charles Williams, East Randolph, Wis.

Claim.—The cords C C and balance-weight D, arranged in front of the curtain, and combined, as described, with the roller F and slat E, for the purpose specified.

112,877.—GLASS FOR THE MANUFACTURE OF SPECTACLES.—Thomas Atwood Willson, Reading, Pa.

Claim.—The alloy and process of making pink or colored glasses which will render the colored glasses apparently white to the eye of the wearer and relieve the eye from the effect of the bright penetrating rays of light, as herein described and set forth.

112,878.—BOLSTER-BLOCK AND PIER OR ABUTMENT PLATE FOR BRIDGES AND ROOF-TRUSSES.—Joseph M. Wilson, Philadelphia, Pa.

Claim.—1. The bolster-block B, constructed with cheeks or lugs A A.

2. The steel or wrought-iron plate D, in combination with the rollers C or blocks C', and with the steel or wrought-iron bolster-block, constructed as shown and described.

112,879. — COMPOSITION FOR STAINING WOOD.—John Winger, Kansas City, Mo.

Claim.—The above-described staining composition, substantially as specified, for the purposes set forth.

112,880.—MECHANISM FOR MANUFACTURING HEADS FOR PICTURE-NAILS.—Leopold Wolf, Meriden, Conn., assignor to the Meriden Malleable Iron Company, same place.

Claim.—The series of pairs of dies represented in figs. *a b c d* of drawing, when jointly applied on the method herein described, for the manufacture of caps for the heads of picture-nails.

112,881. — STEAM-HEATER. — Charles J. Wood, Baltimore, Md.

Claim.—1. The double-inclined partition C, in combination with the distinct inlet-opening 3 and the distinct outlet-opening 4, substantially as and for the purposes hereinbefore set forth.

2. The sloping or tapering upper and lower edges of the said shallow chamber, substantially as and for the purpose hereinbefore set forth and described.

3. The horizontal partition V and the open space W, in combination with the double-inclined partition C and plates A A', substantially as and for the purpose hereinbefore set forth.

112,882. — RUFFLING ATTACHMENT FOR SEWING-MACHINES. — Frederic B. Zay, Findlay, Ohio.

Claim.—1. In combination, the spring-plate separator M, secured to the elastic projection *e*, and provided with the slot *n*, the spring presser-foot I, secured to the projection *k*, and the gatherer E, provided with the slot *f*, and secured to the curved arm C, all constructed and operated substantially as and for the purpose hereinbefore specified.

2. The bed-plate A, straight arm B, curved arm C, slide A, and gatherer E, spring G, plate L, provided with elastic projections *k* and *e*, spring-presser foot I, and spring-plate separator M, all arranged relatively one to the other, as and for the purposes hereinbefore specified.

112,883, antedated March 10, 1871.—SAW-MILL. — Emanuel Andrews, Williamsport, Pa.

Claim.—The gange-bars F and G, arranged substantially as and for the purposes set forth.

112,884. — CLOTHES-WRINGER.—Alfred M. Bailey, Middlefield, Conn., assignor to "The Metropolitan Washing-Machine Company," same place.

Claim.—1. In a clothes-wringing machine of otherwise ordinary or suitable construction, the combination of a clothes-shelf or board hinged to the frame of the machine, and a support or supports for holding said shelf when unfolded in an inclined position, substantially as shown and described, so that the shelf, when unfolded, may be used to convey or direct the clothes away from the rolls, and when not in use may be folded up against the frame to cover, or partially cover, the rolls, as set forth.

2. The combination, with the frame of a wringing-machine, of a flap or shield hinged or otherwise secured to the same, and arranged in front of but below the lower roll, so that the water dripping from the clothes as they pass between the rolls may be returned to the tub and prevented from dropping upon the floor.

3. The combination of the fixed hinge or pivot-plates, arranged on each side of the frame as described, with the movable shelf and shield suspended between and supported by said plates, substantially in the manner shown and set forth.

4. The combination, with vertically hinged clamps or brackets, of the hinged flap or shield, so recessed at its ends as to hold the brackets when extended in proper position for the attachment of the wringer to the tub, substantially as herein shown and described.

5. The butt-hinge clamps or brackets secured to the machine on the inside of the legs of the frame, substantially as shown and described, so that when folded up they shall be contained on all sides within the frame of the machine, for the purpose stated.

6. The bracket-supporting hinge-leaf, provided with one or more ribs, in combination with corresponding grooves in the legs of the machine, into which the said ribs enter when the leaf is applied to the frame, as and for the purposes shown and set forth.

7. In a clothes-wringing machine such as described, the arrangement of the hinged shelf, flap, and brackets, substantially in the manner shown and set forth, whereby the machine is rendered compact, and may be packed without danger of injury to the parts above specified.

112,885.—ROCK-DRILL.—Albert Ball, Claremont, N. H., assignor to Sullivan Machine Company, same place.

Claim.—1. The combination of the rack-pivot R', operated by the pinion R and lever S, with the platform L and the adjustable legs L *g*, substantially in the manner and for the purpose set forth.

2. The wheels B and C, combined with the sliding shaft D and the nut-gear H, in order to feed the right-hand spindle *l* in one direction, or so as to operate the wheel E' and the nut-gear H', in order to feed the left-hand drill-spindle *l'* in the opposite direction, substantially as hereinbefore described.

3. The sliding shaft D, wheels E and E', clutches F and F', rests G and G', the wheel B, and lock-bar K, so combined with a right or left-hand nut-gear and drill-spindle that when operated in the manner described they will reverse the movement of the drill-spindle, substantially as hereinbefore set forth.

4. The combination of the spring-bolt *d* and the shaft D, substantially as and for the purpose set forth.

5. The pivoted lock-bar K, combined with the nut-gears and spindles described, substantially as and for the purposes set forth.

112,886.—SASH-HOLDER.—William Thomas Bausmith, Aberdeen, Md.

Claim.—In combination with the plate A, handle B, flange C, rubber ring D, and screw E, the face-plate G and central screw *d*, substantially for the purposes herein set forth.

112,887.—IRON RAILING.—Samuel S. Bent, Port Chester, N. Y.

Claim.—The sockets *d*, cast upon the rails or frame *b c*, and receiving the ends of the parallel bars *a*, as and for the purposes set forth.

112,888.—CLEVIS-HOOK FOR DOUBLE-TREES. Warren W. Bently, Lee township, Mich.

Claim.—The vibrating clevis-bar *b*, having a triple bend, consisting of the hook A and guard-prong *j*, arranged and combined with the double-tree A for the detachable connection of the whiffle-tree B, substantially in the manner and for the purpose set forth.

112,889. — ATTACHMENT FOR HARNESS.—William A. Blundell, St. Louis, Mo., assignor to himself, William P. Nelson and Mathew C. Tully.

Claim.—The straps E E' E' and inflexible tugs A, having slots *a* and hooks B at each end, relatively arranged to form a harness-attachment, as described, and operating in the manner specified.

112,890. — ADVERTISING-LAMP. — Emil Boesch, San Francisco, Cal.

Claim. — 1. The above-described advertising lamp, made in an oval or oblong form, and provided with the glass panes D D', parabolic reflectors F F, and side panes G, substantially as and for the purpose above specified.

2. The metallic binding I, in combination with the screw J, provided with a flanged head, *k*, for securing panes of glass in sash or frames, substantially as and for the purpose above described.

112,891.—WHIP-STOCK. — John J. Bohler, Westfield, Mass.

Claim.—The leather whip herein described, constructed of the core A and beveled strips C, glued together in the manner specified, as a new article of manufacture.

112,892.—MOWING-MACHINE.—Aaron Bolander, Akron, Ohio.

Claim.—1. The spring D, when constructed with the slotted brace or arm E, and having a flange, A, substantially as and for the purpose set forth.

2. The eccentric bolt E, in combination with the section H of the grass-divider and guard-shoe A, in the manner substantially as described, and for the purpose set forth.

112,893.—PORTABLE RAILWAY.—Theodore Bootzmann, Tompkinsville, N. Y.

Claim. — The inclined projecting noses *f* and notches *g*, constructed as described, in combination with each other and the sections of a portable railroad.

112,894.—CORN-PLANTER.-Richard A. Boulware, Doniphan, Kansas.

Claim.—1. The wheel H, in combination with the marker K, when constructed to operate substantially as and for the purpose specified.

2. The wheel H, in combination with the marker K and roller P, when constructed and arranged substantially as and for the purpose specified.

112,895.—DEVICE FOR OPENING OYSTERS.-Michael C. Boyer, Norristown, Pa.

Claim.—An oyster-opener, consisting of pinchers or nippers and blade, combined in one instrument, substantially as described.

112,896.-APPARATUS FOR TEMPERING SAND. John C. Broadmeadow, Bridgeport, Conn.

Claim.—1. The combination of the open tilting box A of the elevator with the rotating sand-cylinder B, substantially as specified.

2. The rotating sand-cylinder B, constructed with a revolving cylindrical screen, C, at or near its one end, and with a sheath, D, arranged to close said screen, essentially as shown and described.

3. The combination of the ventilating-screen F and opening *d* with the cylinder B, substantially as specified.

4. The combination and arrangement of the elevator box A, the revolving sand-cylinder B, the rotating screen C, covered by a sheath D, and the mud-box table or stand G, essentially as herein set forth.

112,897.—RAILWAY-CAR TRUCK.—Chauncey S. Buck, St. Louis, Mo., assignor to himself and James Lovett, same place.

Claim.—A swing-motion car-truck, having transverse springs Q R applied to the intermediate cross-ties D D', and connected at their ends by shackles *o q p r*, and longitudinal springs or bars O P to the bolster N, as herein represented and described, for the purposes set forth.

112,898.—ROOFING-BRACKET. — Jonathan W. Cadwell, Springfield, Mass.

Claim.—An adjustable roofing-bracket, formed of the pieces A A, with the pins *c c c*, &c., pieces B and F, plate G, having the holes *f f* and *g*, and hook R, and cross-piece W, the parts being combined and arranged substantially in the manner and for the purpose shown and described.

112,899.—VALVE-GEAR FOR STEAM-ENGINES. — Adam S. Cameron, New York, N. Y.

Claim.—1. The arrangement of the auxiliary valve-chest F and the auxiliary cylinders D D' in one and the same piece of casting, as set forth.

2. The tubular bearing *d*, provided with a collar, *f*, and screw-thread *e*, in combination with the rock-shaft *c* and the auxiliary valve E, situated in the opposite side of the chest B from that where the rock-shaft *c* connects with the piston.

112,900.—STILL.—James A. Campbell, Dayton, Va., assignor to himself, Abraham K. Layman, and Lewis W. Myers.

Claim.—The detachable or removable cap cylinder C, tube B, and spring D, combined and arranged within the still A, substantially as described.

112,901.—THREAD-GUIDE FOR WINDING-MACHINES. — Dwight Madison Church, Holyoke, Mass.

Claim.—A thread-guide or thread-carrier, composed of a detachable wire and a clamp, for the purposes herein set forth.

112,902.—SHOEMAKER'S HAMMER.—Arthur Clarke, Boston, Mass.

Claim.—1. The head *g*, constructed upon the convex side of the pane C, substantially as described.

2. The semicircular ridge *i* of the head *g*, rising acutely from the convex side of the pane C, substantially as described.

3. The shoemakers' hammer constructed with the serrated-faced head *a*, the smooth-faced head *g*, and the curved pane C, substantially as and for the purpose described.

112,903.—DOOR-BELL. — John P. Connell, Kensington, Conn.

Claim.—In a gong and door-bell, the combination and arrangement shown of the primary arm *k*, having the triangular tumbler *n* in the loose end thereof, with the hammer-arm *c*, the whole constructed, arranged, and operated substantially as and for the purposes set forth.

112,904.—GATE.—Peter S. Crawford, Union, Ill.

Claim.—The arms D attached to the posts M, in combination with the brace C, levers A, cords E, gate N', incline G, center piece I, rollers J H, and braces K, as set forth.

112,905.—CARRIAGE-GEARING. — Cornelius Custer, Norristown, Pa.

Claim.—1. The shaft C, shaft-box D, washer B, cover J, and brace M, all constructed and arranged substantially as shown, and for the purpose set forth.

2. The braces O V, pivoted to the hind axle and to a support and the support of the carriage-step, substantially as shown and for the purpose set forth.

112,906.—HARNESS-ROSETTE. — Walter D. Davis, Charles W. Blakeslee, and Joseph C. Peck, Watertown, Conn.

Claim.—A harness-ornament, composed of the following elements, to wit: A base-plate, center-support, length of coiled wire, and finishing-cap, combined substantially as described.

112,907.—CALL-BELL. — Henry A. Dierkes and John Fretts, New York, N. Y.; John Fretts assigns his right to Henry A. Dierkes.

Claim.—The combination of the tube *a*, rod *b*, sliding within it, and the spring-dog *d* pivoted thereto, for actuating the arm *c* of the hammer, substantially as described, for the purpose specified.

112,908.—CIRCULAR-SAW BENCH.—Benn F. Dunklee, Concord, N. H.

Claim.—The combination of the arm C, nut E, screw G, pinion H, worm I, and hand-frame K, when all the parts are constructed, arranged, and operating in the manner and for the purpose shown and described.

112,909.—ADJUSTABLE MILL-FEED. — William T. Duvall, Georgetown, D. C.

Claim.—1. The combination and arrangement of

the vertically-adjustable tube G with its toothed segmental lever I and the revolving cup *e*, for regulating the feed, constructed for operation substantially as described.

2. The combination of the adjustable collar *c*, having wrist-pins *n* and set-screws, with the elbow-lever I, its sector, and the worm-wheel J, for adjusting the tube G, substantially as set forth.

3. The mill-head or pulley L, adjustably arranged to operate the feeder G from above, or by means of a cord, *m*, from below, as shown and described.

4. The frame E, constructed as shown and described, and rigidly attached to the bridge-piece D, for supporting the adjustable feed devices, in combination with the case C, substantially as set forth.

5. The combination of the tubular frame E, adjustable feed-tube G, it sadjustable collar *c*, segmental elbow-lever I, and worm-wheel J, all arranged for operation substantially as shown and described.

112,910.—Locked Cock. — Henry Essex, Meadville, Pa.

Claim.—The plug B, provided with two holes, D D, crossing each other at right angles, and used in combination with the holes E in the socket A, the key C, and padlock F, substantially as and for the purposes herein set forth.

112,911.—Sand-Screen.—George W. Fair, Dayton, Ohio.

Claim.—1. The frame *a b c*, in combination with the wires *d*, sliding head-block *h*, and screws *n*, substantially as specified.

2. The combination of the wires *d*, head-block *h*, notched plate *i*, and back-plate *f*, constructed as described.

112,912.—Bed-Bottom.—Matthew Faloon, Bloomington, Ill.

Claim.—1. The spring C, formed of two or more leaves, *a a*, which are connected together at their lower ends, and disconnected at their upper portions, as and for the purposes herein set forth.

2. The combination of the frame A, slats B B, and end springs C C, constructed and arranged substantially as and for the purposes herein set forth.

3. In combination with the frame A, slats B B, and end springs C C, the cross-bars D E and center springs C' C', constructed and arranged substantially as and for the purposes herein set forth.

112,913. — Plow. — Lawrence F. Frazee, Jersey City, N. J.

Claim.—The diggers J, the colters H, and the plows B, arranged in relation to each other, substantially as described.

112,914.—Tuyere for Blast-Furnaces.—John Fry, Salisbury, Conn.

Claim.—The rectangular orifice A B through the rectangular water-chamber box, substantially as herein described, combined with the series of blocks or plates D and D', or 2 and 3, or 4 and 5, or 6, or 7, or substantially the same, for graduating or directing the blast, as and for the purpose set forth.

112,915.—Center-Point Trimming.—Ansel Hecht, New York, N. Y.

Claim.—A trimming, presenting a succession of central points, formed by gathering in the edges in the manner described, at regular intervals, and folded and stitched, in the manner substantially as shown, without cutting the edges of the material.

112,916.—Culinary Vessel.—Levi Hermance, Lansingburg, N. Y., assignor of one-half his right to Peletiah J. Marsh, same place.

Claim.—1. The casting of the utensil A and flue-strip or plate B in separate pieces, and combining or joining them together, substantially in the manner as herein described and set forth.

2. Forming the steam-flue or flues H on the outside of a cast-iron culinary utensil by the employment of the flue-piece B, or its equivalent, when attached to the utensil A, substantially as herein set forth.

3. The projecting flange D, in combination with the kettle A and plate B, when constructed and combined substantially in manner and for the purpose as described and set forth.

112,917.—Pencil-Case.—William S. Hicks, New York, N. Y.

Claim.—1. An extension pencil-case, having its outer shell A arranged to turn loosely on its body B, and independently of the other parts of the pencil or case, substantially as described.

2. The arrangement of the tubes *d* and *e* and the tubes *a* and *b*, the latter having reverse spiral slots, all sliding telescopically within one another, as set forth.

112,918, antedated March 10, 1871.—Ore-Separator. — William Hooper, Ticonderoga, N. Y.

Claim.—1. A driving mechanism, constructed with cams or trip-wheels, or eccentrics mounted on the driving-shaft, and acting on shoes in cages supported by springs, and connected to the flexible diaphragm F, said cages being so arranged that they can be adjusted, in relation to their cams, or trip-wheels, or eccentrics, substantially in the manner described.

2. A feed mechanism, composed of hoppers, which can be raised and lowered, and which are connected to gauges controlling the depth of the ore-bed, substantially in the manner herein set forth.

112,919, antedated March 10, 1871.—Ore-Separator. — William Hooper, Ticonderoga, N. Y.

Claim.—1. The endless apron F, having an intermittent motion imparted to it, substantially as and for the purpose described.

2. The endless apron F, with its surface in the sluices indented, corrugated, roughened, or riffled, substantially as described.

3. The arrangement of strips of blanket or other woolen fabric, or its equivalent, on the endless apron F in the sluices, substantially as described.

4. The arrangement of longitudinal strips on the endless apron, substantially as described.

5. The shoe K, divided in two parts, connected by hinge-joints, in combination with the adjusting-screws and with the endless apron, substantially as set forth.

6. The agitating-hammers *q*, in combination with the endless apron, substantially as described.

7. The cross-ribs *d*, extending over the inner surface of the apron F, substantially as set forth.

8. The tank L, oscillating or with plunging block, in combination with the endless apron, substantially as described.

9. The roof-shaped bottom M, in combination with the endless apron, substantially as set forth.

10. The perforated water-pipe *w*, extending across the bottom M, in combination with the endless apron, substantially as described.

112,920.—Medical Compound or Salve.—Martha Huddleston, Jackson, Tenn.

Claim.—The within-described salve, composed substantially of the ingredients herein set forth.

112,921.—Fan and Fly-Driver.—Frank M. Hunt, Clinton, Ga.

Claim.—The combination of the treadle L with its slotted arm I, the bevel-wheel H with its pin *c*, the fan-staff C with its bevel-pinion G, socket *a*, rods E E, and fans D D, arranged and operating substantially as and for the purpose herein specified.

112,922.—Cattle-Tie.—Seth T. Hutchins, North Anson, Me.

Claim.—The cattle-tie C, provided with ring *a* and spring hook *c*, in combination with the stanchion A, substantially as and for the purpose specified.

112,924.—Rolling-Mill. — Asa Johnson, Brooklyn, N. Y., assignor to himself and William H. Johnson, New York city.

Claim.—1. A pair of rolls, of which the surface of one is smooth and that of the other studded over with hemispherical protuberances, substantially as described.

2. The construction of rolls, for rolling metal, of an inner solid or tubular cylinder, and an outer shell composed of a series of removable segmental plates or staves studded on their convex surfaces with protuberances, and attached to the outer surface of said cylinder, substantially as described.

3. The construction of rolls, for rolling metal, of an inner solid or tubular cylinder, and an outer shell composed of a series of removable segmental plates or staves studded on their convex surfaces with the projecting heads of rivets, screws, or bolts, of which the shanks pass into or through said plates, substantially as described.

4. The construction of rolls, for rolling metal, of an interior tube of sheet metal corrugated longitudinally, an exterior shell of plain metal, and an intermediate cylinder of cast metal, the inner sheet-metal tube being retained in place by the shrinking of the cast metal upon it, and the outer shell being attached to the cast intermediate portion by keys or otherwise, substantially as described.

5. In combination with the journal-bearings of the hollow rolls, constructed as described, the connecting-tube *v*, substantially as and for the purpose herein set forth.

6. The combination of the hollow removable journal E, rubber head *f*, metal head *e*, bisected sleeve *h*, and tube *k*, with a hollow metal roller, all substantially as and for the purposes herein set forth.

7. The combination of the tube *k* with collars *i i*, and the grooved bisected sleeve *h* with the removable journal E and a hollow roller, all constructed and arranged substantially as and for the purposes herein set forth.

8. The combination of the tube *k*, grooved head *m*, slotted standard G, journal E, a hollow metal roller, and the journal-bearing C, all substantially as and for the purposes herein set forth.

9. The combination of the screw H, screw-sleeve I, with flange *p*, washer *r*, key *t*, and wheel J, all constructed and arranged substantially as and for the purposes herein set forth.

112,925.—Hollow-Tile Wall.—George H. Johnson, New York, N. Y.

Claim.—A wall, composed of the runners B, with air-channels *a* and lugs *a*, in combination with the binders C, having air-channels *c* and lugs *c*, said runners and binders being arranged in relation to each other substantially as described, for the purpose specified.

112,926.—Hollow-Tile Floor.—George H. Johnson and Balthasar Kreischer, New York, N. Y.

Claim.—1. A hollow arched tile, provided with recesses *e* in its convex upper surface for the reception of floor-supporting strips *d*, substantially as shown and described.

2. The removable clay filling-strips D, in combination with the hollow arched tiles A and double-flanged girders B, as herein set forth, for the purpose specified.

112,927. — Reservoir for Grain and other Materials.—George H. Johnson and Balthasar Kreischer, New York, N. Y.

Claim.—1. A reservoir for grain and other material of a similar nature, having its floor constructed of rectangular hollow porous tiles *a*, supported by beams *b*, in the manner substantially as herein shown and described.

2. A reservoir for grain and other material of a similar nature, having its sides constructed of U-shaped porous tiles, in the manner set forth.

112,928.—Fire-Escape.—Charles P. Kenyon, Selma, N. C., assignor to himself and J. W. Sharp, same place.

Claim.—The fire-escape, consisting of the post A, which is provided with the spiral channel *a* and flanges *b b*, and with or without the rods B, substantially as herein shown and described.

112,929.—Composition-Tile for Fire-Proofing Buildings.—Balthasar Kreischer, New York, N. Y.

Claim.—A compound for tiles, made of the ingredients herein specified, and mixed together in about the proportions above set forth.

112,930.—Hollow-Tile.—Balthasar Kreischer, New York, N. Y.

Claim.—A hollow arched-tile, made in three sections, *a b c*, the end sections having recesses *d*, and the middle section *b* forming a wedge-shaped key for the end sections, substantially as herein shown and described.

112,931.—Stove-Pipe Shelf and Clothes-Drier.—George W. Langdon, Greene, N. Y., assignor to himself and Lewis Seneare, same place.

Claim.—1. A stove-pipe, or section thereof, provided with collars *a a'*, when used in combination with a support for clothing, said support arranged to operate in connection with the collar, substantially as set forth.

2. The damper *g*, arranged in combination with the clothes-support, substantially as and for the purpose described.

112,932.—Bell-Hanging.—Auguste Laroÿe, Sas Slykens, near Ostend, Belgium.

Claim.—1. In a bell having a clapper or hammer divided into two nearly equal lengths, one fixed rigid and the other pendent from it, swinging such pendent part from a point in line with the axis or center of gyration of the bell when such axis or center is between the crown and the lower part of the bell.

2. The long flat stationary bearings for the trunnions to roll upon, as described.

3. The arrangement, described and shown in fig. 4, or its equivalent, for limiting the volley of bells, for the purpose of preserving the harmony desired.

112,933.—Leggotyping.—William Augustus Leggo, Montreal, Canada.

Claim.—1. The operation, in Leggotyping, of polishing the photograph, substantially in the manner and for the purpose described.

2. The use, in Leggotyping, of hyposulphite of soda, or its equivalent, substantially in the manner and for the purpose described.

3. The use, in Leggotyping, of protosulphate of iron, or its equivalent, substantially in the manner and for the purpose described.

4. The reapplication, or any number of applications other than the first, of a sensitive gelatinous compound and their corresponding exposures to the action of light, &c., with or without the aid of stopping-out plates, substantially in the manner and for the purpose described.

5. The construction and operation of "Leggo's stopping-out plates," substantially in the manner and for the purpose described.

6. The use, in Leggotyping, of stopping-out plates of any kind.

112,934. — Hinge. — Martin R. Lemman, Hamilton, Ohio.

Claim.—1. A hinge having an anti-friction ball E, between the parts C and D, when the latter are constructed with annular horizontal concentric grooves *c* and *d*, of equal depth throughout, and

pintle d', working loosely in the aperture of the lower part C, substantially as set forth.

2. In combination with the elements enumerated in the first claim, the overhanging lip on the part D, substantially as and for the purposes set forth.

112,935.—WOOD-SCREW.—Andrew B. Lipsey, West Hoboken, N. J.

Claim.—A wood-screw, one end of which is provided with a thread, *d*, and the other end with a head, B, having a slot, *f*, for turning it, and an under lip or flange, *e*, substantially as and for the purposes set forth.

112,936.—BASE-BURNING STOVE.—Lyman Litchfield, Gouverneur, N. Y., assignor to himself and Horace K. Osborne, Arlington, Mass.

Claim.—In combination with the conical rotary grate *g*, the central post or spindle *i*, friction-rolls *y*, and driving-pinion *v*, for supporting and rotating the grate, when constructed and arranged substantially as shown and described.

112,937.—TRAVELING-TRUNK. — John C. Locke, Rochester, N. Y.

Claim.—1. The spring-staples D D, in combination with the catches G G, all constructed substantially as described, for the purpose specified.

2. The pivoted or hinged stays H H, provided with the slots *s s'*, when arranged to lie flat between the ends of the body and cover when the trunk is closed, as herein shown and described, for the purpose specified.

112,938.—CHAIN FOR HANGING SASH.—Michael Magrath, New York, N. Y.

Claim.—1. A chain, having its links composed of flat strips or pieces of different widths, arranged substantially as described, whereby the chain has a rounded outline or surface, to adapt it to run in a circular groove, substantially as described.

2. The links, composed of flat strips or pieces, and having the hole *e* through their center, substantially as and for the purpose set forth.

112,939.—BOAT-LOWERING APPARATUS. — George W. Mallory, Mystic Bridge, Conn.

Claim.—1. The combination, with the slotted bearer G and hinged chock F F', of the boat-davit herein described, hinged at its lower end, substantially as specified.

2. The sectional chock herein described, having its outer half hinged, when constructed and arranged substantially as specified.

112,940.—HARVESTER-RAKE.—John P. Manny, Rockford, Ill.

Claim.—1. The platform, constructed as described, in the form of the segment of the frustum of a cone, with its concave side uppermost, and having a horizontal ledge on its rear edge, for the purpose set forth.

2. The combination of the inclined reel-shaft with the inclined rake-shaft passing through the reel-hub or shaft at an angle acute to its axis of rotation, these parts being constructed to operate in combination, substantially as hereinbefore set forth.

3. The combination of the inclined reel-hub and its eccentric gear with the rake-shaft and its eccentric gear meshing into that of the reel-hub, these parts being constructed to operate in combination, substantially as hereinbefore set forth, to produce a differential movement of the reel and rake.

4. The combination of the flanged reel-hub, the reel-arms, the corrugated lugs *m* and sockets *m'*, these parts being constructed as set forth, to permit the radial adjustment of the reel-arms.

5. The combination of the reel-arm, the slotted beater, the flanged and corrugated plate *n*, the corrugated cap *n'*, and the clamp-screw, all constructed for joint operation, as set forth.

112,941. — HARVESTER-RAKE. — John P. Manny, Rockford, Ill.

Claim.—The combination of the fixed stud, inclined backward relatively to the finger-beam, and having its outer end bent eccentrically to the reel axis, the reel-hub rotating on said stud carrying reel-beaters rigidly attached thereto, and revolving in a uniform path, the rake-arm hinged to said hub, and the links swiveled both to the eccentric part of the stud and to the rake-arm, all these members being constructed and operating in combination, substantially as hereinbefore set forth.

112,942.—HARVESTER. — John P. Manny, Rockford, Ill.

Claim.—1. The combination, with the finger-beam, of the caster-wheel and its arms *g g'*, and screwed spindle, for supporting and adjusting the heel end of the finger-beam, these parts being constructed, as set forth, for joint operation.

2. The combination, with the divider, of the doubly-adjustable arm, constructed as described, and adapted to receive caster-wheels of different sizes and still to keep the guards horizontal, as set forth.

3. The combination, as described, of the driving-wheel, hinged gear-frame, finger-beam, lifting-lever, the caster-wheels G H, and their adjustable arms, all constructed, as set forth, for joint operation.

112,943.—SAW WITH DETACHABLE TEETH.—Thomas P. Marshall, Trenton, N. J.

Claim.—The spring-catch, secured to but detachable from a recessed saw-blade, and having an elastic stem, *f*, inclined head, and a shoulder, *h*, in combination with a tooth, B, adapted to the recess in the saw-blade, and having a recess, *j*, and shoulder, *i*, as specified.

112,944.—APPARATUS FOR MANUFACTURING WIRE.—Benjamin A. Mason, New York, N. Y., assignor to Thomas L. Carpenter, same place.

Claim.—In combination with a drum or reel within the furnace, and the rolls, the drum or reel outside of the furnace between the latter and the rolls, substantially as described, and for the purpose set forth.

112,945.—WOOD-PAVEMENT. — Gordon A. May, Chicago, Ill.

Claim.—A wood-pavement, consisting of the rabbeted blocks *a a* and stripe of board *c c*, arranged as herein described, with the pieces of wood *e e* or wedges *f f* inserted between the blocks, as and for the purposes set forth.

112,946.—BRAIDING-MACHINE.—John McCahey and Stephen B. Salisbury, Providence, R. I., assignors to the New England Butt Company, same place.

Claim.—1. A run or guiding-groove for the spool-carriers, formed of two circles or ovals overlapping each other so as to form a circular space between them, substantially as herein shown and described, and for the purpose specified.

2. The arrangement of the wheels *b c d* and the horns *c' c'' c'''*, whereby the studs or lower ends of the spool-carriers are carried in between the horns *c' c'''* and the centers of the wheels *b* and *d*, on which those horns are placed, substantially as and for the purpose specified.

3. The combination of the run S and driving-wheels *b c d*, substantially as herein described, whereby the carrier-studs are made to pass between the horns *c'* and *c''* and the centers of the wheels on which those horns are placed.

112,947.—BUCKLE.—Duncan McMillan and Abram Rowan, Webster City, Iowa.

Claim.—The within-described buckle, consisting of body A, diaphragm *d*, loop *a*, tongue C *b*, and spring *g*, all arranged and operating substantially as set forth.

112,948, antedated March 10, 1871.—STEAMING ATTACHMENT FOR KEROSENE STOVES. Robert B. Mitchell, Chicago, Ill.

Claim.—1. The steaming attachment above described, consisting of the pipes A B C D, frame-work H, flexible tubes E E, with their nozzles F F, stop-cocks G, &c., and ball-valve J, all constructed, arranged, and operating substantially as described, and for the purpose specified.

2. The combination of the tubes A B C D with the frame-work H and the ball-valve J, substantially as and for the purpose specified.

112,949.—MOLDING-PLANE.—Ellis H. Morris, Canton, Ohio.

Claim.—1. A plane-stock, having an adjustable face, capable of being varied in form to suit bits having differently-shaped cutting-edges, substantially as specified.

2. The combination, with a plane-stock provided with a slotted ledge, G, of the slotted gauge Z, cross-extension arms H H', and clamps K K, substantially as specified.

3. The combination, with a plane-stock having an adjustable face, of a bit provided with a forming indentation, substantially as specified.

112,950.—KEEP AND BRACE FOR FIFTH-WHEELS.—Francis B. Morse, Plantsville, Conn., assignor to H. D. Smith & Co., same place.

Claim.—As an article of manufacture, the herein-described keep and brace for fifth-wheel of carriages, formed of one and the same piece, substantially as herein described.

112,951. — PENCIL-SHARPENER.—Elias P. Needham, New York, N. Y.

Claim.—The combination of two elastically-connected inclined plates or leaves, A B, and the interposed sheets or leaves of sand-paper or other similar cutting or abrading material, substantially as herein described.

112,952. — ANKLE-BRACE.—Jacob S. Niswander, Oakland, Cal.

Claim.—The ankle-brace, constructed as described, viz., with the stirrup A, curved plate D, perforated or slotted at their edges, and united by the cup-shaped joint *a*.

112,953.—PIE-CASE.—Henry H. Olds, New Haven, Conn.

Claim.—The herein-described pie-case, consisting of the drawers *a*, provided with the depression or seat *d* for the pie, and combined with the net-work C, in the manner and for the purpose described.

112,954.—CAR-BRAKE AND STARTER.—Joseph Paradis, Brooklyn, N. Y., assignor to himself and Sarah Parker, same place.

Claim.—The barrel *h'*, disk *n'*, pawl and ratchet on one axle, and a barrel, *f*, on the other axle, in combination with the springs and rope or chain passing around said barrels and leading to a hand-shaft and barrel for compressing the spring in stopping the car, and applying its power in starting the car, substantially as set forth.

112,955.—LIFTER FOR FRUIT-JARS.—Stephen R. Pinckney, New York, N. Y.

Claim.—The box A, provided with bails B B and a slotted handle, E, combined and arranged substantially as and for the purpose described.

112,956. — GATE FOR TURBINE WATER-WHEELS.—Samuel A. Prescott, Sutton, Mass.

Claim.—The combination, with the curb A, and cap B provided with flanges *a c*, of the gate-ring E F *e*, stationary guide-plates D, and tongued lugs I *w*, substantially as and for the purposes set forth.

112,957. — APPARATUS FOR ESTABLISHING ELECTRICAL COMMUNICATION IN RAILROAD-TRAINS.—Pierre Désiré Prud'homme, Paris, France, assignor to Charles De Frondat and Alfred Michant, Boston, Mass.

Claim.—The combination of the ring and its hook, and the knob, with the positive and negative wires of a battery, as and for the purpose specified.

112,958. — PIPE-COUPLING. — Joseph B. Ramp, Cuyahoga Falls, Ohio.

Claim.—In a pipe-coupling, the combination of the flanges and sectional screw-threads on the pipes, with the shoulders, recesses, and screw-thread in the coupling, boss, or sleeve, substantially as and for the purpose described.

112,959.—PRESSED-FRUIT LIFTER.—Ennis A. Raymond, Waterloo, Iowa.

Claim.—As a new article of manufacture, the within-described pressed-fruit lifter, made of an iron rod bent so as to form the point *a*, scrolls *d d* and *e e*, stem *b*, and handle *f*, or a separate handle attached to the stem, all substantially in the manner herein set forth.

112,960.—BROOM.—Charles L. Reid, Louisville, Ky.

Claim.—The broom-clamps herein described, consisting of the clamping-plates C C', having the concave projections *b b*, secured by keys *a a' a''* passing through the slots in the clamp C' and holes in the clamp C, substantially as shown and described.

112,961.—PORTABLE FURNACE.—Jesse Reynolds, Philadelphia, Pa.

Claim.—The portable furnace *a b c*, having air-tight doors *d e f*, the body of the furnace being made of plate or wrought-iron riveted together like the plates of a steam-boiler, i nclosed in a sheet of galvanized iron or similar material, and constructed substantially as herein recited.

112,962.—REVERSIBLE BOOT-HEEL.—Frederick Richardson and Francis Hacker, Providence, R. I., assignors to Reversible Boot-Heel Company, same place.

Claim.—The double or single reversible rubber heel-cap C, provided with a central flange, B, and adapted for use with a socket-plate, A, as and for the purposes specified.

112,963.—FRUIT-DRIER AND FOOD-WARMER.—Seelye Richmond, Annapolis, Md., assignor of one-half his right to Joseph E. Dickson, same place.

Claim.—1. The oven or chamber E, constructed as described and shown, and combined, as described and shown, with the stove-pipe D or any hot-air flue or cylinder passing from the stove A, all substantially as and for the purposes set forth.

2. The combination of the hot-air chamber E with the stove-pipe D or any hot-air flue or cylinder passing from the stove A, and the flue C, substantially as described, and for the purposes set forth.

3. The oven or chamber B, when constructed as described and shown, and used in combination, as described and shown, with the stove A, the stove-pipe D, or any hot-air flue or cylinder passing from the stove A, the flue C, and the oven or chamber E, all substantially as and for the purposes set forth.

112,964, antedated March 13, 1871.—TILE STOVE.—Edward Y. Robbins, Cincinnati, Ohio.

Claim.—1. A stove, consisting of two or more

detachable sections, J K L, each of said sections including either the fire-chamber or the oven or some other part of the apparatus, and being surrounded by a wall of tile or tiles, which are retained in position by angle-iron rings O P, or their equivalents, said angle-irons being secured to the front plate of their detachable sections, for the purpose described.

2. Constructing the wall of the detachable sections of a stove of one or more tile or tiles L, whose upper and lower edges are confined within angle-iron rings O P, that are united by rods R, which pass through them, and also through recesses r or apertures in said tile or tiles, as herein explained.

3. Providing the tiles which compose the wall of the detachable sections with a series of air-chambers I, for the purpose herein explained.

4. Arranging the outer wall K or L around the flues or smoke chambers E F G in such a manner that spaces B or C, that wholly inclose said flues or chambers, are formed between said wall and flues, for the purpose described.

5. The arrangement, substantially as herein described, of the fire-chamber A, lower oven B, upper oven C, flues E, F, and G, rear pipe H, and side pipes N N', for the purpose set forth.

6. Locating the pipes H N N' within the ovens B C of the stove, when said pipes and ovens are employed in connection with the flues E F G, arranged as herein stated.

7. Providing the oven of a stove with a fume-flue b', that is partially closed by shutting the door of said oven, and which flue is opened by the opening of said door, as herein shown and described.

8. The tea-kettle door V v v', as herein described and set forth.

9. In combination with the grate a and tea-kettle door V v v', the skeleton-door W, for the object stated.

112,965. — PORTABLE FURNACE.—William D. Robertson, Knoxville, Tenn.

Claim.—The combined stove and boiler, constructed with a furnace, F, drum D, boiler or heater C, flue E, partitions d d', and deflecting plate A, all arranged to operate substantially as and for the purposes herein set forth.

112,966. — HAY AND COTTON-PRESS.—Charles A. Robinson, Florence, Ind.

Claim.—1. In the cotton or hay-press herein described, the brace H on sweep G, in combination with shaft E and levers C D, all arranged as set forth.

2. The within-described cotton or hay-press, consisting of frame A, box N, levers C D, windlass E, sweep G, brace H, lever-rest I, and follower M, all constructed and arranged as described.

112,967.—MACHINE FOR HUSKING CORN.—Jacob Russell, Brooklyn, N. Y.

Claim.—1. The combination and relative arrangement of the guide-strip D and husking-rollers B C, as shown, to form the sides and bottom of the husking-trough, as described.

2. The combination of the stripping-rollers P and Q, when the latter is provided with the transverse V-shaped notches W on its surface, substantially as described, and for the purpose set forth.

3. The combination of the adjustable slide V with the apron Y and the hood X, made as described, and all arranged and operating for the purposes hereinbefore set forth.

4. The improved corn-husking machine herein described, consisting of the said several parts and mechanisms specified and shown, constructed, combined, and arranged to operate in the manner and for the purpose set forth.

112,968.—END-GATE FOR WAGONS.—John Frederick Sener, Lancaster, Pa.

Claim.—The construction of the end-gate, attached permanently to the bottom and sides of the wagon or cart by the plates B and D, with hooks or fastenings C C at the top, and an incline chute below, formed by two or more adjustable gates J and G, that are hinged as as to fold up together and form an open or closed end-gate, when arranged, combined, and operated as herein described, and for the purposes set forth.

112,969. — HYDRAULIC-NOZZLE. — Henry Shaw, Nevada City, Cal.

Claim.—1. The combination of the C-shaped pipe D with the chest A and section B, arranged as described, to form a double-jointed connection between them, substantially as specified.

2. The combination of devices for connecting the two ends of the pipe D to the pipe B, consisting of the loose trunnions e e, rings f f, and wedges g, arranged to operate as described.

3. The glass lining P, fitted in the nozzle H, by making it conical on the outside, and fitting its base against the end of the pipe G, to which the nozzle H is fastened.

4. The arrangement of the conical guides n upon the interior surface of the section F, substantially as and for the purpose specified.

112,970.—SAW-SET AND FILER.—Thomas L. Shaw, Omaha, Neb.

Claim.—1. The annular file i, in combination with the wing l, as specified.

2. The reciprocating saw-set n, in combination with the adjustable wrist-pin q and disc r, as described.

3. The vibrating-block v, in combination with the arm s and eccentric b', as set forth.

4. The vibrating-block v, in combination with the plate y and adjustable-block d', as explained.

5. The improved saw-filing and setting-machine, formed by the combination of rotary file i, saw-set n, vibrating-block v, and the parts connected therewith, for operating upon and feeding a saw, as set forth.

112,971.—TURNING-LATHE. — Samuel D. Sheldon, Fitchburg, Mass.

Claim.—The combination, with the spindle C and movable cone-pulley D, of the flanged friction-plate I J, operating-lever E, and stopping-brake K, substantially as and for the purposes set forth.

112,972.—SHAFT-COUPLING.—James Sherry, Watertown, N. Y.

Claim.—The arrangement of the shafts b provided with pins i, the coupling a provided with the longitudinal grooves c and the transverse grooves d, and the set-screws e bearing upon the exterior of the shafts b, all constructed and operating as specified.

112,973.—MANUFACTURE OF EYELET-STOCKS. Stephen N. Smith, Providence, R. I.

Claim.—1. The herein-described process of forming continuous stripe of eyelet-blanks, that is to say, successively projecting from said strip cups of depth equal to and of diameter greater than that of the finished eyelet, and then contracting the diameter of said cup by forcing it, by a punch of suitable size and shape, into a die, the latter being so shaped as to impart to the blank the proper eyelet form.

2. The series of dies and punches, constructed and operating as described, whereby eyelets are made in the manner and by the process above described.

112,974.—HOLDER FOR DRINKING-GLASSES. John Vaughan Snider, Philadelphia, Pa.

Claim.—1. As a new manufacture, a tumbler-holder having at the base a receptacle extending beyond the sides of the tumbler, as set forth.

2. The within-described holder and drip-catcher, consisting of a vessel, A, arms B, and band or holder C, with its handle c and lugs b adapted to slots or openings in the said arms, all substantially as described.

112,975, antedated March 10, 1871.—GAS-MACHINE. — Theodore G. Springer, St. Louis, Mo.

Claim.—1. A mixing-tube, with rod or thread running through the contracted vent, substantially as and for the purposes herein set forth.

2. The combination of the diaphragm A, rod B, valve E, seat K, vent C, and pipe P, all constructed and arranged to operate substantially as and for the purposes herein set forth.

3. In combination with the vaporizing-chamber F, the heating-chamber G, worm N, diaphragm X, and lever Y, or their respective equivalents, constructed and arranged to operate substantially as and for the purposes herein set forth.

112,976.—WHISK-BROOM.—Greenleaf Stackpole, Elizabeth, N. J.

Claim.—The paper or pasteboard core B, when covered with the hurl C, substantially as set forth.

112,977.—CHEESE-HOOP.—William Sternberg, Bridgeport, N. Y.

Claim.—The grooved hoop A a, in connection with the expansible ring B, substantially as and for the purpose herein specified.

112,978.—HINGE FOR SEWING-MACHINES.—Roswell H. St. John, Bellefontaine, Ohio.

Claim.—A hinge for sewing-machines, having a central socket, a, enlarged, and provided with flanged elastic bushings D d D d, and metallic facings E F for the same, constructed, applied, and operating substantially as and for the objects herein set forth.

112,979, antedated March 14, 1871.—SAW-GUMMER.—Nathaniel F. Stone, deceased, (Amanda Stone and Benjamin Holbrook, administrators,) Chicago, Ill.

Claim.—1. The revolving shaft A, in combination with the rotary cutter, substantially as described.

2. The stop N, in combination with the shaft A, frame F, and pin P, when constructed and operating substantially as set forth.

3. The combination and arrangement of the shafts A and I with the wheel A' and the worm B, substantially as described.

4. The pivoted frame C, when so constructed and attached that the worm can be disengaged or adjusted, substantially as specified.

5. The combination and arrangement of the shaft A, provided with the adjustable bearings M for shaft I, cutter H, wheel A', worm B, gauge-screw K, and stop N with the frames F and C, substantially as and for the purposes described.

112,980.—NEEDLE FOR SEWING-MACHINES. Edwin Strain, Newton, Mass.

Claim.—A needle, having a diagonal straight slit or opening, d, communicating with the eye c, and inclined to the axis of the needle, the corners p and r of the slit being beveled off and extending to or beyond the top and bottom of the eye, substantially in the manner and for the purposes set forth.

112,981.—HYDROCARBON-GAS APPARATUS. Myron H. Strong and William I. Reid, Brooklyn, N. Y.

Claim.—1. A double-acting valve-stem, combined with a nozzle and tube, supplying gasoline or other hydrocarbon-vapors, and automatic mechanism for moving such valve-stem, substantially as set forth, so that the said hydrocarbon-vapors are supplied in the proportion required for consumption, or stopped off at the extreme movement in either direction.

2. A nozzle for a jet of hydrocarbon-vapor to issue and commingle with atmosphere, in combination with a conical plug or valve acting within said nozzle, and means for moving said valve and regulating the escape of such gaseous hydrocarbon in proportion to the amount consumed, substantially as set forth.

3. Two valves, actuated by a moving diaphragm, to close the escape for the gaseous hydrocarbons into the gas-holder at the extreme movements in each direction of said diaphragms, substantially as set forth.

4. The rock-shaft d for the lever c, provided with a shoulder, f, and spring n, as and for the purposes set forth.

112,982.—FIRE-ESCAPE.—Thomas L. Summeril, Juda, Wis.

Claim.—The combination and arrangement of the car A, frame B, pulleys C C, ratchets D D, windlass E, cords G G and H, bale I, windlass J, and cords K K, substantially as described.

112,983.—SOAP-DISH.—John Merritt Thatcher, Bergen, N. J.

Claim.—1. A soap-dish formed either with or without projections on the bottom, and having lateral openings b, as set forth.

2. An open cover, B, constructed substantially as described, so as to serve as a cover, or cover and receptacle, to the soap-dish A, as specified.

112,984.—BOOK-SUPPORT.—S. Millett Thompson, Providence, R. I.

Claim.—The improved hand book-rest, herein described, consisting of the base, standard, hinged cross-bar, brace-wires d e f, and holders g, in combination with the holding-finger p, spring-fingers h, and thumb-piece k, all constructed and arranged as and for the purposes specified.

112,985.—SASH-HOLDER.—Alexander Thomson, Champaign, Ill.

Claim.—The combination of the double-beveled key A, the case C holding the key, with its flange, and containing a roller B, all arranged as set forth.

112,986. — FIRE-PLACE GRATE.—James W. Thorniley, New Brighton, Pa.

Claim.—The end C, provided with the flange D, brace g, and projections h and i, in combination with the grate B, for the purpose of holding the grate off from the jambs and back walls of the fire-place, as herein described.

112,987. — ALARM-LOCK. — James Harry Thorp, New York, N. Y.

Claim.—1. The sliding bar D, provided with projection E, prong a, and spring b, all constructed as shown and described, and arranged within the keeper of a lock, substantially as and for the purposes herein set forth.

2. The combination of the keeper C, bar D, with projection E, and the bolt B of a lock, all constructed and arranged to operate in connection with a burglar-alarm, substantially as and for the purposes herein set forth.

112,988.—ELASTIC ROLL.—William H. Towers, Boston, Mass.

Claim.—1. The improved roll herein described, composed of a shaft, A, water-proof fabric or fibrous material, B, and rubber shell or covering D, substantially as set forth.

2. The combination of shaft A, body B, of rubber-coated fabric, and washers C C, all substantially as described.

112,989. — THILL-COUPLING. — Charles Twombly, Boston, Mass.

Claim.—1. The recessed head C, provided with washer-head b and plate a, with the set-screw G and nut f, substantially as and for the purposes herein set forth.

2. The combination of the recessed head C with loop h, thill-iron D, follower a, piece b, screw G, and nut f, all constructed and arranged substantially as and for the purposes herein set forth.

112,990. — WALKING-CULTIVATOR. — John Vanluvanee and Hugh Smith, Moline, Ill.

Claim.—The combination of the grooved hub D, made adjustable on the axle A, with the circular T-head F, secured to the hub by means of the segmental clamps e, substantially as set forth.

112,991.—Apparatus for Converting Reciprocating into Rotary Motion.—Franz Wagner, New York, N. Y.

Claim.—The dogs *d d'*, overlapping the rim of a wheel, E, on opposite sides thereof, and inserted loosely in the ends of levers D D', in combination with springs *f f'*, rods C C', and reciprocating slide A, substantially as and for the purpose shown and described.

112,992.—Meter. — Franz Wagner, New York, N. Y.

Claim.—1. In a fluid-meter, the combination of a piston-valve, F, which reciprocates in the core of a hollow piston, E, being moved by the direct action of the fluid, with a piston which reciprocates in a cylinder, A, by the direct action of the fluid, said piston-valve, piston, and cylinder being provided with suitable ports, substantially such as herein described, for the purposes set forth.

2. The piston E, provided with an internal valve-chamber and with chambers *g h k l m n*, communicating with said valve-chamber through ports *i j q u s t w w*, substantially as herein shown and described.

3. The piston-valve F, divided in two chambers, e^2 d^2, the chamber e^2 being provided with ports e^3 f^2 f^3, and the chamber d^2 with ports g^1 h^2 h^3, substantially in the manner set forth.

112,993.—Cooking-Stove. — George W. Walker, Boston, Mass.

Claim.—1. In combination with a cooking-stove or range, a sliding shelf, substantially as described.

2. A stove having a flue-pipe recess, *n*, substantially as shown and described.

3. The combination, with a stove, of an auxiliary flue-pipe, *o*, brought within the plane of the vertical stove-plate or the adjacent sides of the plate, substantially as shown and described.

4. The combination of the flue-connecting box and the vertical flue-pipe relatively arranged, substantially as shown and described.

5. The combination, with the recessed stove, of the box *s*, for the connection of the stove-flue and the flue-pipe and regulation of the draught, substantially as shown and described.

6. The supporting stop *q*, substantially as shown and described.

112,994.—Cultivator.—Francis N. Welden, Rockford, Ill.

Claim.—1. The iron *a*, bent as described, in combination with the beams E, when attached to the tongue at or near the center, as described.

2. The spring-bolt A, constructed specifically as described, that is, with its covering-plate extending over and about the lever, for the double purpose of preventing the lever from moving laterally, and for protecting the internal bolt mechanism, as described.

3. The combination of the standard F, rack-bar I, lever H, and brace-rod *i*, the parts being arranged as described, that is, the rack-bar being secured above to the standard, and held below from vertical and lateral movement by the brace-rod, without other support, the lever also being hinged to the standard and secured to the rack-bar, as described.

112,995.—Fuel and Kindling-Wood. — Woodward E. Wertenbaker, Washington, D. C.

Claim.—The composition, consisting of coal-tar and acid tar, when combined in the proportions and employed in the manner and for the purpose substantially as described.

112,996. — Zinc-Board for Stoves.—William Westlake, Chicago, Ill.

Claim.—As a new article of manufacture, the herein-described zinc-board or platform for stoves, consisting of the sheet A, provided with the flange *a*, and having blocks secured at suitable points underneath for supporting the legs of the stove, substantially as described.

112,997. — Breech-loading Fire-Arm.—Eli Whitney, New Haven, Conn.

Claim.—1. In combination with the breech-block B and hammer D the cam or cams *d*, provided with thumb-piece, operating upon the same center with the hammer, but independent of the same, to release and lock the breech-block, substantially as described.

2. The cam or cams *d*, provided with thumb-piece, combined and operating upon the same center with the hammer D, and arranged as described, whereby the hammer may be set at half-cock by means of the said cam, substantially as set forth.

3. In combination with the breech-block B, the hammer D, and cam or cams *d*, the arrangement of a latch, substantially as described, to catch and hold the said cams and be tripped by the movement of the breech-block, substantially as specified.

4. The combination of the hammer D with the cam or cams *d* and the latch or catch *n*, arranged and operating as described, to couple and hold the said cams and hammer together on the cock-notch, as and for the purpose specified.

112,998. — Railway-Rail and Chair.—William Edward Winby, Edgbaston, England.

Claim.—1. The improvements in rails for railways and tramways, hereinbefore described, and illustrated in the accompanying drawing; that is to say, rolling a longitudinal lip or rib on one side of each head of the rail, for the purpose of supporting the said rail in its chairs and preserving from wear the working-surface of the inverted head of the said rail, substantially as described and illustrated.

2. The improvements in chairs for railways and tramways, hereinbefore described, and illustrated in the accompanying drawing; that is to say, making the jaws of the said chairs with two bearings for seating the lips or ribs of the rail, hereinbefore described, and also making the upper jaw to receive the fastening-key, by which the rail is fixed in the chair, substantially as described and illustrated.

112,999. — Ship's Compass. — George W. Wood, Brooklyn, N. Y., assignor to Marion A. Wood, same place.

Claim.—1. The arrangement of the needles J J K, by which the magnetism of the ship is neutralized, in the manner and for the purpose set forth.

2. The construction of the stand with movable and stationary disks A B, the stationary disk having marks of a compass-card, but lettered in reverse order, substantially as and for the purpose described.

3. The opposite poles of the needles being brought close to each other, so that their magnetism may be maintained indefinitely.

4. The pointer L of the compass-card K, in connection with the lubber mark of the compass-bowl, substantially as and for the purpose described.

5. The compass-card K, constructed substantially as described, in connection with the needles J J, and operating as set forth.

113,000, antedated February 14, 1871.—Tying Brooms and Brushes.—James H. Anderson, Terre Haute, Ind., assignor to Thomas Marston, Jr., Walter L. Peck, and Clarence L. Peck, Chicago, Ill.

Claim.—1. The improvement in tying brooms, brushes, or whisks, herein described, with two or more wire or metallic braces, with projections secured down by pressure or percussion to such an angle to the plane of the broom-handle as to thoroughly fasten the cross-wires binding the corn or other material to the handle.

2. The arranging the said wires or other metallic braces with projections, so secured down by pressure or percussion, as described, upon the corn, or other material, on the handle in a winding or cork-screw form, substantially as set forth.

3. The broom, brush, or whisk, herein described, with two or more wire or metallic braces, with projections secured down by pressure or percussion to such an angle to the plane of the handle as to fasten the cross-wires binding the corn or other material, whether said braces are applied vertically or in a winding or cork-screw form, as an article of manufacture.

REISSUES.

4,305. — Sewing-Machine. — Chauncy O. Crosby, New Haven, assignor to N. A. Baldwin, Milford, Conn. — Patent No. 21,745, dated October 12, 1858.

Claim.—1. A work-supporting or holding surface, adapted to bear on one side of the material being sewed, in combination with a reciprocating surface adapted to bear on the other side of such material, and which acts to bend such material, substantially as described, prior to the puncture of the needle, so that the needle-point may pass into and out of the material on the same side or face.

2. In combination with supporting and bending surfaces, operating substantially as described, to present the material to the action of the needle, as set forth, a feeding surface adapted to move the said material along at determined intervals, substantially as described.

3. In combination with a slotted supporting surface, the slot being transverse to the movement of the material, a reciprocating surface, adapted to press the material into such slot, and provided with a notch for the passage of the needle through the material folded or bent over it.

4. The combination of the cloth-holder with the needle-bar and thimble-bar, when constructed and made to operate substantially as herein described.

5. The combination of the needle-bar and thimble-bar with a common needle, when made to operate substantially as herein described.

6. The combination of the needle-bar with the hooks and endless tapes, when arranged and made to operate substantially as herein described.

4,306.—Copying-Press.—E. W. Frost, New York, N. Y., assignee of Francis Hovey.—Patent No. 42,141, dated March 29, 1864.

Claim.—1. Connecting the screw to the platen of the copying-press by locking it with softer metal than iron, applied in a melted state in a cavity around the screw, substantially as and for the purposes herein set forth.

2. In connection with the above, a chamber, *c*, in the connected platen and foot-piece of a copying-press, and introducing a more fusible metal to fill such chamber and to harden in the groove *a* of the screw C, all the several parts being combined and arranged substantially as and for the purpose herein set forth.

4,307.—Seed-Drill.—Frederick H. Mahny, Rockford, Ill., assignee of Moses C. Younglove. — Patent No. 20,603, dated June 15, 1858.

Claim.—1. The combination of the rotating cylinder-shaft, the series of sectional simultaneously-adjustable cups mounted on said shaft, and the rotating endwise-moving sleeve in which the shaft revolves and by which the cups are adjusted, substantially as hereinbefore set forth.

2. The combination of the revolving cylinder-shaft, the sectional simultaneously-adjustable cups, the rotating endwise-moving sliding sleeve, the adjusting-screw, retaining-wheel, and catch, all these parts being constructed to operate in combination, substantially as hereinbefore set forth.

DESIGNS.

4,721.—Carpet-Pattern.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

4,722.—Ornamental Chain-Link.—Virgil Draper, Attleborough, Mass., assignor to Oscar M. Draper, same place.

Claim.—The new design for an ornamental chain-link, substantially as herein described.

4,723.—Chain-Link.—Virgil Draper, Attleborough, Mass., assignor to Oscar M. Draper, same place.

Claim.—The new design for an ornamental chain-link, substantially as herein described.

4,724.—Show-Case.—William Henry Grove, Philadelphia, Pa.

Claim.—The design for a show-case, having a waved front, substantially as described, and as represented in and by the accompanying drawings.

4,725.—Side-Frame of School-Desks.—Ausborn Franklin Old, Philadelphia, Pa., assignor to J. A. Bancroft & Co., same place.

Claim.—1. The design for the ornaments *e*, *e'*, and *f*, arranged substantially as shown and described.

2. The design for the lattice-work *g* between the ribs *c* and *d* of the frame, substantially as described and illustrated.

3. The design for the whole side frame, including the ornaments *e*, *e'*, and *f*, and the lattice-work *g*.

4,726.—Type.—William H. Page, Norwich, Conn., assignor to William H. Page & Co., same place.

Claim.—The design for letters, as shown.

4,727.—Type.—William H. Page, Norwich, Conn., assignor to William H. Page, & Co., same place.

Claim.—The design for letters, as shown.

4,728.—Type-Border.—William H. Page, Norwich, Conn., assignor to William H. Page & Co., same place.

Claim.—The design for border, as shown.

4,729.—Whisk Broom.—Greenleaf Stackpole, Elizabeth, N. J.

Claim.—The whisk-broom handle, as above shown and described.

4,730.—Sword.—Edwin S. Warren, Springfield, Mass.

Claim.—A design for sword, substantially as shown.

4,731.—Handle for Spoons or Forks.—George Wilkinson, Providence, R. I., assignor to Gorham Manufacturing Company, same place.

Claim.—The design for spoons and forks, substantially as herein set forth.

TRADE-MARKS.

197. — Plumbago-Grease. — American Graphite Company, New York, N. Y.

198.—Pump.—Charles G. Blatchley, Philadelphia, Pa.

199.—Woolen Goods.—William P. Gibbs, Reuben G. Ross, Isaac N. Field, and William B. Field, St. Charles City, Mo.

200.—Weighing-Scales.—Edward F. Jones, Binghamton, N. Y.

201.—WHISKY.—Mills, Johnson & Co., Cincinnati, Ohio.

202.—SHIRTS.—Morison, Son & Hutchinson, New York, N. Y.

203.—TOBACCO.—Edmund J. Oppelt, Baltimore, Md.

204.—BURNING-FLUID.—Robert G. Richards, New York, N. Y.

205.—SLATES, &c.—The Silicate Slate Company, N. Y.

206.—WINE.—M. Werk & Sons, Cincinnati, Ohio.

EXTENSIONS.

SAMUEL REYNOLDS, of Ellisburg, N. Y.—Letters Patent No. 16,881, dated March 24, 1857.

"Improved Water-Wheel."

Claim.—The radial floats above the horizontal plane, in combination with the buckets or floats below said plane, constructed substantially as described, that is, narrowest where they join the radial floats, gradually increasing in width outwardly, and in depth downward with an inclination toward the center to their termination, making the outlet to discharge the water deeper toward the center than toward the periphery.

THEOPHILUS E. SICKELS, of Omaha, Neb. Letters Patent No. 16,884, dated March 24, 1857.

"Improvement in Steam-Brakes for Railroad Cars."

Claim.—The so combining the use of steam, or its equivalent, with the brakes of railroad cars as that the steam shall hold the brakes from the wheels, and its partial use or disuse admit a weight or spring to apply said brakes, in a manner substantially as herein described.

ISSUE OF MARCH 28.

PATENTS.

113,001.—FLOOD-GATE.—August H. Adams Piqua, Ohio.

Claim.—A flood-gate, provided with two or more sets of floats, constructed and operating substantially as shown and described.

113,002.—APPARATUS FOR OPERATING RAILWAY-SWITCHES.—James Alcorn, Charlestown, Mass., assignor to George R. Kelso, same place.

Claim.—1. As a means of operating the switch-rail of a turnout in railway-tracks, the lever D, formed and pivoted to the car or segmental plate C in manner as described, and so as to be capable of being moved vertically and vibrated laterally, as and for the purpose set forth.

2. In combination with the same, the retracting mechanism or rod K and spring I, and the check or guard H, as and for the purposes set forth.

113,003.—PLANE-STOCK.—Leonard Bailey, New Britain, Conn.

Claim.—In a flexible-faced plane-stock, substantially as described, the rocking-shaft *c c*, pivoted in the stock A, and receiving the arms *a a'*, of the face-plate B, all substantially as and for the purpose described.

113,004.—PATCH FOR RAILROAD-RAILS.—John T. Barnett, Decatur, Ill.

Claim.—The split or forked patch B, made and used in the manner as hereinbefore set forth.

113,005.—ROTARY STEAM-ENGINE.—William Barry, Carthage, N. Y.

Claim.—The combination of the bevel-faced grooved hub, the bevel-faced case, stop E, and the sliding pistons H, all substantially as specified.

113,006.—WOOD SCREW.—Jason A. Bidwell, East Boston, Mass.

Claim.—1 The combination of the spiral concave score *c'*, forming the point of the screw, with the flat bottom thread *c*, forming the body of the screw, substantially as described.

2. The combination of the spiral concave score *c*, at the shank of the screw, with the flat bottom thread *c*, substantially as described.

3. The combination of the spiral concave score *c c'* with the intermediate flat bottom score *c*, substantially as described.

113,007.—COMBINED BORDERING AND DRAIN-TILE.—Charles Biehl, Albany, N. Y.

Claim.—The combined bordering and drain-tile herein shown, consisting of the tube *a*, base-plate *b*, and comb *d*, constructed and arranged substantially as set forth.

113,008.—AWL FOR HEEL-MACHINES.—Horace H. Bigelow, Worcester, Mass.

Claim.—1. The combination of the peculiarly-constructed awls B, with their supporting-plate A, substantially as shown and described.

2. The peculiarly-constructed awl B, the point of which is made in form as fully shown in the drawing.

113,009.—MACHINE FOR TURNING RANDS FOR SHOES.—Horace H. Bigelow, Worcester, Mass.

Claim.—1. The combination, with the forming-cams or jaws P P', of the pressing-cam N, substantially as and for the purposes set forth.

2. The combination, with the shafts E and H, of the center rod O, forming-cams or jaws P P', pressing-cam N, and spring Q, substantially as and for the purpose set forth.

3. The combination, with the shafts E and H, center rod O, and cams N P P', of the bearing piece G G', spring L, and adjusting-screw M, substantially as and for the purposes set forth.

4. The combination, with the shaft E and rod O of the clutch-ring T, starting-lever W, and spring Q, substantially as and for the purposes set forth.

5. The combination, with the cams or jaws P P', of the bar R, provided with guide-pins *c*, substantially as and for the purposes set forth.

6. The combination, with the cams or jaws P P', of the holding-stud or point *a*, substantially as and for the purposes set forth.

113,010.—NEEDLE FOR SEWING-MACHINES.—Joseph B. Blanchard, Boston, Mass.

Claim.—A sewing-machine needle, having the eye slotted, substantially as described and shown.

113,011.—CULINARY-BOILER.—Peter Boesen and Michael Bedessem, Kenosha, Wis.

Claim.—1. The rod E, headed at one end and hooked at the other, combined, as described, with the bottom-perforated vessel D and perforated plate B, for the purpose of enabling them to be lifted out and removed together, in the manner specified.

2. In combination with vessel A, bottom-perforated vessel D, and perforated plate B, the tightly-fastened and perforated cover F, for the purpose of enabling the water to be poured from the three chambers, in the manner described.

113,012.—LOUNGE-BED.—John Brada, New York, N. Y.

Claim.—1. A lounge-bed, having three series of springs, one series, D^1, serving as the springs for the seat when used as a lounge, and the other two series, D^2 C, serving when the structure is used as a bed, as herein described.

2. The swiveling support M, turning on the pivot *m*, and arranged to serve, relatively to the folding head-rest E^1 E^2 and to the main parts A^1 A^2 of the lounge-bed, as and for the purposes herein specified.

113,013.—DUMPING-CAR.—Daniel J. Brimmer, North Petersburg, assignor to Martin E. Brimmer, Rensselaer county, N. Y.

Claim.—1. The arrangement and combination of two or more dumping-boxes B with the platform A and tilting-bars *f*.

2. In combination with a dumping-box, the triangular tilting-bar *f* and the pivoted hooked lever *e*, arranged and operating as shown and described.

113,014.—MANUFACTURE OF WHITE-LEAD.—Ludwig Brumlen, Hoboken, N. J.

Claim.—1. The revolving tubular perforated shaft A, perforated cross-pipes C, cross-arm D, and fingers E, combined, as described, with an air-pipe, B, for the purpose of distributing the carbonic acid in close contact with as many particles of the basic solution of lead as possible.

2. The process of applying to the basic solution of lead continuous fine streams of carbonic acid under the pressure of a current of air, as described.

113,015.—INDEX.—O. Flagg Bullard, Media, Pa.

Claim.—Providing a key or supplemental index, consisting of the ordinary index margin, each one with all the letters of the alphabet preceding the right-letter, in the manner and for the purpose set forth.

113,016.—REGULATING CLASP FOR ELASTIC TUBES.—William Bunce, Oberlin, Ohio.

Claim.—A hollow clasp, with a central fulcrum in combination with an elastic band, constructed and applied substantially as and for the purposes described and set forth.

113,017.—LIQUID-METER.—Anna Büttner, administratrix of the estate of Friedrich Büttner, New York, N. Y.

Claim.—A case, *p*, applied as described, to the valve R, for the purpose of preventing the latter from being weighted by the liquid.

113,018.—CORN-PLANTER.—James B. Conaty and Milton Catt, Indianapolis, Ind.

Claim.—1. A tooth or pin, revolving independently about the hub or axis of a wheel supporting the beam of a corn-planter, in combination with a lever operating the dropping device in the hopper thereof, when the revolution of said radial arm is controlled or arrested, substantially in the manner and for the purpose herein set forth.

2. The tooth or pin W, upon a slide working in a slot in the radial arm S, in combination with said arm, all substantially as and for the purpose herein set forth.

3. The combination of the adjustable slotted lever P with the end of the axis *c* of the lever O operating the seed-slide, and with the adjustable tooth or pin W, revolving about the hub of the supporting-wheel D, all substantially in the manner and for the purpose herein set forth.

113,019.—CULTIVATOR.—Lee W. Conner and Richard G. Conner, Troy, Iowa.

Claim.—1. The axle A, constructed as described, and combined with the beam D and eye-bolt *d*, substantially as described, and for the purpose specified.

2. The arrangement of axle A and tongue B, double-tree C' and rods *e e*, with beams D D, shanks E and F, forks G G, and braces H and P, substantially as and for the purpose specified.

113,020.—GATE.—James B. Cottom, Dayton, Ohio.

Claim.—The double-crank pivot-rod H, in combination with the gate and its supporting and operating mechanism, constructed, arranged, and operated in the manner and for the purposes described.

113,021.—CONDENSER FOR STEAM-ENGINES.—William Craig, Newark, N. J., and Henry L. Brevoort, Brooklyn, N. Y.

Claim.—The combination, with the body or main chamber A, of the upper chamber A', the perforated tube E, the steam-inlet *e*, the float G with its tube F, and the jacket C, through which the water is conducted to the upper chamber A', substantially as specified.

113,022.—GRAIN-DRILL.—Jesse W. Craven and Albert Clark, Centre Valley, Ind.

Claim.—1. The arrangement of the series of holes *a b d* in the hopper bottom, and the corresponding holes in the slide.

2. The arrangement, with the dropping-slide and the driving-wheel, of the disks P, the rods M O, and the lever N, the said disks having two or more holes adapted to receive the wrist-pin at different distances from the axis, to vary the feed, all substantially as specified.

3. The arrangement of the drills L with the tubes *g* and the pins *i*, for holding the said drills above the ground, all substantially as specified.

113,023.—APPARATUS FOR PURIFYING COAL-OIL.—Benjamin Crawford, Allegheny, Pa.

Claim.—1. An apparatus for evaporating benzine and other light volatile fluids, which produce explosive gases at low temperature, from illuminating oils, constructed substantially as described.

2. The combination with the oil-receiver of the apparatus of an agitator for facilitating the escape of the most volatile fluids from the fluid under treatment, substantially as described.

3. The tubular handle C of the agitator, adapted to receive a thermometer, D, substantially as described.

4. The treatment of explosive burning fluids to a hot-water bath, by means substantially as described.

113,024.—WASHING-MACHINE.—Elias Crick, Phillipsburg, N. J.

Claim.—The combination and arrangement, with the box or tub A B, of the cleats C and D, roller E F, bars H, cross-bar I, shaft J, bars L, and cross-bar M, as herein shown and described.

113,025.—STEERING APPARATUS.—Alonzo G. Crossman, Huntington, N. Y.

Claim.—1. The combination of the parts C and D of the rudder, the strap-joints E and F, and the pintles or axes *a b c d*, substantially as hereinbefore set forth.

2. The combination of the rudder-post B, the cross-heads H and J, the connecting-rods I I, and the axis K, substantially as hereinbefore set forth.

113,026.—PAPER-CLIP.—Jacob M. Crull, Harrisburg, Pa., assignor of one-half his right to George S. Crull, same place.

Claim.—The returned spring-loop N W, in combination with shank A N', provided with claw K, substantially as and for the purposes herein set forth.

113,027.—NEEDLE-HOLDER AND TENSION DEVICE FOR SEWING-MACHINES.—Edwin L. Crumb, South West, Pa.

Claim.—In combination with the needle-carrying

arm B, the needle-holding pin A, provided with the spiral groove *b*, for the purpose of producing tension on the thread, as specified.

113,028.—STOP-MOTION FOR WARPING-MACHINES.—Edwin H. Cummings, Lewiston, Me., and Grimshaw Heyes and Thomas Entwistle, Accrington, England.

Claim.—1. The oscillating box C, constructed and arranged substantially as described.

2. The arm g^1, provided with its tapering face, in combination with the arm A^1, as described, for the purpose set forth.

3. The combination of the box C and bar G, as described.

4. The combination of the toothed wheel L, friction-collar *l*, and its adjusting-nut, with the pawl I and the arm A^1, or its equivalent, for operating the latter, as described.

5. The combination of the slotted beam, oscillating box, bar G and its connections, with the arm A^1 and its connections, as described.

6. The described method of stopping the motion of a warping-machine by means of a wire held by an oscillating box coming in contact with a beam or bar which operates the shipping-arm.

113,029.—NAIL-PLATE ROLLING.—Orville C. Dewey, Joseph Dudley, and Friedrich Lindemann, Wheeling, W. Va.

Claim.—1. The nail-plate rolls A B, combined with a movable roll, J, for receiving, as described, the plate at its lowest point of depression, then rising with it and clamping it against the bottom of roll B, as and for the purpose specified.

2. The mechanism for operating the roll J, consisting of the cam-lever D F, lever G, shaft H, and arms I, when arranged with respect to the rolls as and for the purpose specified.

3. The guides K L, combined with roll J, provided with mechanism to cause it to rise and clamp the blank to the roll B, as and for the purpose specified.

113,030.—BRIDGE.—Ferdinand Dieckmann, Cincinnati, Ohio.

Claim.—The described arrangement and combination of arches A B, diagonal braces C, abutments F F, cable G, truss-timbers H, either with or without the posts O, as and for the purpose set forth.

113,031.—DEVICE FOR PIERCING AND LINING EARS FOR THE RECEPTION OF EAR-RINGS.—William Charles Edge, Newark, N. J.

Claim.—As an article of manufacture, an eye let sharpened at one end to pierce the lobe of the ear, and formed of soft metal, to allow its ends to be upset on each side of the ear, for the purpose of thus perforating and lining the cut surface by the same operation.

113,032.—PURCHASE FOR CAPSTANS.—Joseph Edgecomb, Gardiner, Me.

Claim.—In a purchase for capstans, the combination of the spring-slide *e* and the arm *i*, attached to one of the pawls, as set forth.

113,033.—PRINTING-TELEGRAPH APPARATUS.—Thomas A. Edison, Newark, N. J.

Claim.—1. A polarized bar or switch and connections, acting as a relay to electro-magnets placed in a local circuit, in combination with an electro-magnet in the main line, acting upon such polarized bar or switch to complete the local-circuit through one of the two electro-magnets, according to the polarity of the current sent, substantially as set forth.

2. A local-circuit, two electro-magnets, a type-wheel and impression mechanism, in combination with the polarized bar or switch and electro-magnets, substantially as and for the purposes set forth.

3. A series of polarized relays, worked in one main circuit, and controlling local-circuits that operate either type-wheel magnets or printing-magnets, substantially as set forth.

4. A polarized relay, having its tongue or switch centered between the poles of an electro-magnet and between the circuit-closers when in a normal condition, substantially as set forth.

5. A type-wheel, having letters, figures, and fractional signs arranged in groups for numerators and for denominators on opposite sides of a fractional sign, substantially as set forth, to print letters, figures, and fractions, as specified.

6. A type-wheel, with figures arranged on each side of a hyphen or fractional sign, as and for the purposes set forth.

7. The type-wheel motor, composed of a vibrating arm and pawls 12 and 13, combined with a wedge-acting tooth, in the manner and for the purposes set forth.

113,034.—PRINTING-TELEGRAPH APPARATUS.—Thomas A. Edison, Newark, N. J., assignor to The Gold and Stock Telegraph Company, New York city.

Claim.—1. A shield, with an opening adjacent to the pressure-pad and moving with the same, in combination with two contiguous type or character-wheels and mechanism for actuating the same in a printing-telegraph instrument, substantially as set forth.

2. A movable pressure-pad, mounted upon the printing-lever, and two contiguous type-wheels on one shaft, in combination with two electro-magnets and armature, and a circuit-changer, substantially as set forth, whereby the type-wheels are set by one electro-magnet, and the pressure-pad is either changed in position or the printing effected by reversing the polarity of the electrical current, substantially as set forth.

3. The movable pad, mounted upon a transverse slide in the impression-lever, in combination with the shifting-dog *s*, and fingers 5 and 6 upon the type-wheel shaft, substantially as set forth.

4. The notched disk *u* and inclined holder *t*, in combination with the shifting-pad *o*, substantially as and for the purposes set forth.

5. The unison-stop lever *v*, in combination with the shifting-pad and two contiguous type-wheels, substantially as set forth.

113,035.—FLOWER-STAND.—Garrett Erkson, Brooklyn, N. Y.

Claim.—The base or stand A, pilar D, disks E, arms G, and cup-plates I, constructed and arranged substantially as and for the purposes herein shown and described.

113,036.—ELECTRO-MAGNETIC BURGLAR-ALARM.—Wilson E. Facer, Philadelphia, Pa.

Claim.—1. The armature-lever C, frame D, electro-magnets E E, armature F, depending arm or lever H, adjusting and raising-spring and screw K, adjusting-screws L L', and the indicator-plate N, as shown.

2. The indicator A and burglar-alarm B, when constructed, arranged, and operated as shown and described.

3. The bell-lever T, spring *f*, and the hammer Z, as shown and described.

113,037.—WATER-GRATE BAR.—William H. Farris, Cairo, Ill.

Claim.—1. The hollow upright back bars F, in combination with the hollow grate-bars A, substantially as herein shown and described, and for the purpose set forth.

2. The stiffener G, constructed as herein shown and described, in combination with the tubular grate-bars A, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the elbow I, pipe H, back bar F, rod J, tubular grate-bar A, stiffener G, head B, pipe C, and elbow D, with each other, and whether the pipe C be connected with the head B or back bar F, substantially as herein shown and described, and for the purpose set forth.

113,038.—HAND-TURNING AND BORING-MACHINE.—John Franklin Finger, Wilmington, N. C.

Claim.—The mandrel A, disks C C', clamp G, arm E, feed-screw K, star-wheel M, pins *o o*, and clamp N, combined and arranged substantially as and for the purposes described.

113,039.—PITMAN-ROD CONNECTION.—Edward G. Fish, Colfax, Iowa.

Claim.—1. The parts B, B', and A, socketed and slotted as described, to receive the enlargement *c* on the pitman-rod C, and secured together, in combination with screw-bolts, substantially as described.

2. The oil-cup *p*, formed into the base of the socket of the fixed elevation B, substantially as described.

113,040.—COATING IRON AND STEEL WITH MOLTEN IRON.—Rufus B. Fowler and Daniel F. Brandon, Chicago, Ill.

Claim.—The process of coating the surfaces of plates or other articles of wrought-iron or steel with molten iron by the use or application of pressure, substantially as described.

113,041.—MECHANICAL TELEGRAPH-INSTRUMENT.—James Gamble, San Francisco, Cal.

Claim.—A telegraph-key sounder, secured upon the hollow or convex base A, and consisting of the two vibrating levers C and B, either hinged together or connected by a link or plate, *l*, and arranged as described, so that between a pressure applied to the knob D and the spring *f* one end of the lever B shall vibrate between two metallic points, *i* and *m*, and by its contact produce the clicking sound, substantially as above described.

113,042.—SCROLL-SAW.—William Gardner, Glen Gardner Station, (Clarksville Post Office,) N. J.

Claim.—The flexible connections P and P', arranged to operate the saw through medium of the walking-beam W, as shown and described.

113,043, antedated March 23, 1871.—STAVE-SAWING MACHINE.—Robert W. George, Boston, Mass.

Claim.—1. The combination of the arc B^2, the carriage B, and the guide B^3, substantially as described, and for the purpose set forth.

2. The combination of the latch E with the arc B^2, operating substantially as described, and for the purpose set forth.

3. The combination of the carriage B, rack B^1, pinion D, ratchet-wheel D^1, and pawl P with the incline *d d'* and hanger D^2, operating automatically, substantially as described, and for the purpose set forth.

113,044.—METHOD OF BANDING COMPRESSED WOOD.—Charles B. Gilman, Brooklyn, N. Y.

Claim.—1. A die composed of two or more sections *f f f*, and provided with recesses *i i* for the reception of the bands, substantially as and for the purpose set forth.

2. The combination of the sectional die O with the compressing-die D, substantially in the manner and for the purposes set forth.

3. The annular seat or recess in the die D, and plates or follower G, for holding the sections *f f f* in connection when used, substantially as set forth.

113,045.—MANUFACTURE OF SALT FROM BRINES.—Samuel D. Gilson, Syracuse, N. Y.

Claim.—1. A movable or revolving hollow cylinder or a series of hollow cylinders hung in suitable bearings on a brine-tank, when said cylinder or cylinders are plated, coated, or covered with a metal or other material different from that of which the cylinder or cylinders are composed, substantially as described.

2. In an evaporating or saturating salt-engine, a movable or revolving hollow cylinder or cylinders, in combination with a vat or tank which is supplied with salt water or brine, substantially as described.

3. The head or heads of a hollow cylinder provided with a non-conductor, substantially as described.

4. Collecting and discharge-cups or pipes, arranged within a hollow cylinder or cylinders, for a purpose substantially as described.

5. A valve or cock arranged upon the eduction and induction-pipes of a salt-evaporating or saturating-engine, substantially as described.

6. A hollow steam or hot-air cylinder revolving in a brine-tank provided with pipes or cups within its interior, in combination with the exhaust return-pipe *b''*, for a purpose substantially as described.

7. A partition arranged in a brine-tank between an evaporating and saturating hollow cylinder, substantially as set forth.

8. A hollow adjustable knife, capable of being located and so constructed and arranged as to produce coarse or fine salt, substantially as described.

9. The method of drying salt by passing the same over a hollow steam-chest or a knife, substantially as described.

10. A hollow knife moving horizontally, and so arranged as to be adjusted toward the periphery of the cylinder or cylinders, for the purpose of removing impurities collected thereon, substantially as described.

11. A hollow cylinder or cylinders revolving or moving within a brine-tank, when said cylinder or cylinders take up the different impurities produced by the chemical action of the salt water or brine upon the surfaces of said cylinder or cylinders of the same, and precipitating a portion into the bottom of the tank, substantially as described.

12. Evaporating and saturating-cylinders, communicating with each other through the medium of an induction and eduction-pipe, substantially as described.

113,046.—CONSTRUCTION OF PIER-GLASS FRAMES AND CORNICES.—Daniel A. Hall and David Garrison, Philadelphia, Pa.

Claim.—1. A pier-frame, composed of a cornice, stiles or their substitutes, and bases, and made to embrace a pier-glass and windows, substantially as described.

2. In combination with the pier-frame embracing or surrounding a pier-glass and windows, as above set forth, a corner table or tables, I, attached to or connected therewith, substantially as described.

113,047.—CONFECTIONERY OR COCOANUT-CANDY.—Horatio N. Harbach and Theodore J. Harbach, Philadelphia, Pa.

Claim.—1. The within-described article of confectionery, prepared of the ingredients, in about the proportion, and in the manner substantially as set forth.

2. The article of cocoanut-candy prepared of the ingredients as set forth, and coated or covered for the purpose stated.

113,048, antedated March 24, 1871.—TURNING-LATHE.—Pierre J. Hardy, New York, N. Y.

Claim.—The hollow mandrel, with lateral openings between the straps *b*, and means for holding

and clamping the curved piece to be turned, substantially as and for the purposes set forth.

113,049, antedated March 16, 1871.–Coach-Painter's Easel.—D. R. Harris, South New Berlin, N. Y.

Claim.—The standard, composed of the three parts A, A′, and A″, when arranged and combined with each other and the gauge-plates D, substantially as described and set forth.

113,050.—Wheel for Vehicles.—James Harris, San Francisco, Cal.

Claim.—The tire B, rabbeted as described, or provided with equivalent projections for holding the circular plates C, in combination with the flanged hub A and nuts *b b*, the whole forming a wheel, as described.

113,051.—Mouse-Trap.—Hubert C. Hart, Unionville, Conn.

Claim.—As an improvement upon the trap covered by patent No. 110,337, the constructing of the bait-hook described herein, having the projection d^3, for the purpose set forth.

113,052, antedated March 11, 1871.—Tubular Steam-Generator. — James M. Hicks, New York, N. Y.

Claim.—The combination, substantially as set forth, of a tube-sheet and a tube of a steam-generator or heater, with a deflector arranged in such manner before the tube as to prevent the currents of heat from concentrating toward the center of the tube directly, and to compel them to strike toward the tube-sheet before entering the tube.

113,053.—Revolving Fire-Arm.—Samuel S. Hopkins, Norwich, Conn., assignor to "The Hopkins & Allen Manufacturing Company," same place.

Claim.—1. The combination of the swinging link *c* and longitudinally-adjustable base-pin with the pivoted link *b*, tube *d*, and cylinder D, all arranged to operate substantially as herein shown and described.

2. The spring-catch *g*, arranged at the side of the frame for locking into the sliding base-pin of the fire-arm, substantially as herein shown and described.

113,054.—Ventilator for Hats.—Henry A. House, Bridgeport, Conn.

Claim.—The combination, with a head-covering and its sweat-band, of two spring-coils, *a b*, and an intermediate chamber, *c*, said coils being sewed to the hat and sweat-band, as shown and described.

113,055.—Dental Plate from Pyroxyline.—Isaiah Smith Hyatt, John Wesley Hyatt, Jr., and Jesse A. Perkins, Albany, N. Y., assignors to "Albany Dental-Plate Company," same place.

Claim.—The dental plate or base for artificial teeth, hereinbefore described, as a new article of manufacture.

113,056. — Refrigerator and Water-Cooler.—Anthony Iske, Lancaster, Pa., assignor to Daniel H. Lintner, same place.

Claim.—The arrangement of the combined ice-chamber E with its conic base L and screen K, when inclosed within a double cylinder, D, provided with air-tubes *d*, a vessel, A, side vessels C^1 C^2 C^3, and extended draught or pipe M, substantially in the manner and for the purpose shown and set forth.

113,057.—Sawing-Machine.–Pierson Jacobus, Romulus, N. Y.

Claim.—The circular-saw N and apple-mill D F, combined, as described, with the same rotating-shaft B, as and for the purpose specified.

113,058.—Former for Baskets.—Horace C. Jones, Dowagiac, Mich.

Claim.—The stave-basket former-block A, provided with a shoulder, *b*, arranged as described, for the purpose set forth.

113,059.—Stave-Basket.–Horace C. Jones, Dowagiac, Mich.

Claim.—Constructing a basket of two thicknesses of staves or splints, the outer thickness or covering being composed of splints which extend from side to side of the basket, forming its bottom, and the inner thickness or lining being composed of a series of splints which terminate at or near the lower inside hoop B of the basket, substantially as and for the purpose described.

113,060.—Adjustable Seat for Vehicles.—Richard E. Jones, Goldsborough, N. C.

Claim.—1. The jumping-seat E, standards F F, with springs F' F' attached, bed-piece B′, and rods B B, and sockets *b b*, when the same are so combined and arranged as to operate substantially as described.

2. The jumping-seat E, brace-lever G, and bed-piece B′, when the same are combined and arranged substantially as described.

3. The seat D, when the same is provided with folding arms D' D', and so hinged to the frame C as to operate substantially as described.

113,061.—Police-Baton. — Charles Kast, Williamsport, Pa.

Claim.—1. A police-baton, formed in part or wholly of the circular leather disks *s s*, substantially as specified.

2. The combination of the head A and case B bolted therein, with the disks *s s* and wire *v*, substantially as specified.

113,062.—Skate.—David Kerr and Asa Ebenezer Hovey, San Francisco, Cal.

Claim.—1. The plate or box *g*, provided with the lag *i*, in combination with the journal *f* and crossbar *h*, substantially as and for the purpose set forth.

2. The hollow standard L, cast upon the frame B, and provided with the flange *n*, in combination with the cushion P and foot-block A, substantially as and for the purpose described.

3. The adjustable screw *r*, in combination with the cushion P, block A, standard L, and frame B, substantially as and for the purpose set forth.

113,063.—Meat-Biscuit.—Alexander Kirkwood, Toronto, Canada.

Claim.—The composition of matter, as and for the purpose above set forth.

113,064. — Washing-Machine. — Edwin Knock, Vermont, Ill.

Claim.—An improved washing-machine, formed by the combination of the semi-cylindrical box A, semi-cylindrical movable receiver C c^1 c^2, semi-cylindrical rubber D *d′*, standard L, connecting-rod K, crank-shaft G g^1 g^2, connecting-rod J, and crank I, with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

113,065.—Check-Rein Hook. — Alexander Ladd, St. Lawrence, N. Y.

Claim.—A check-hook of a harness-saddle, when provided with a coiled spring and attached to the top of said saddle, so that the hook will slide back and forth in relation to the saddle, substantially in the manner set forth.

113,066.—Combined Hay-Rake and Tedder.—Charles La Dow, South Galway, N. Y.

Claim.—1. The pivoted bar N, arranged to support the tedder-forks horizontally when not at work, to act as clearers for the rake, and to serve as a fulcrum to said forks when at work, substantially as herein shown and described.

2. The combination of the rake D E F and tedder K L M N with each other, and with the frame D, wheels B, and axle A, substantially as herein shown and described, and for the purposes set forth.

113,067.—Photographic Camera. — William A. Leggo, Montreal, Canada.

Claim.—1. The novel arrangement of the lens *d*, vertical slide *e*, face of camera-box *f*, screw *g*, eye f', collar g^2, plate g^3, horizontal slide *h*, grooves *h′*, or their equivalents, all working together substantially in the manner and for the purpose described.

2. The novel construction and arrangement of the frame *k*, guides k^1, clamps k^2, shutters *l l*, clamps l^2, screws l^3, vertical holdfasts *m*, and slides *n*, or their equivalents, all working together substantially in the manner shown, and for the purpose of excluding from the interior of the camera-box all rays of light but those coming directly from the object to be photographed.

3. The novel combination and arrangement of the frame *k*, guides k^1, clamps k^2, shutters *l l*, clamps l^2, screws l^3, vertical holdfasts *m*, and slides *n*, or their equivalents, all working together for the purpose of producing at two exposures a picture having the two exposures blended together, with no apparent dividing line, substantially in the manner and for the purpose described.

113,068. — Steaming Apparatus. — Otto Lehmann, Columbus City, Iowa.

Claim.—The combination of the base F, generator A, reservoir J, smoke-flue K, water-pipe L, cock N, and steam-pipe U, arranged and operating substantially as and for the purposes described.

113,069.— Steam and Water-Pressure Regulator.—Nathaniel C. Locke, Salem, Mass.

Claim.—1. The combination, with the supply-valve of the receiver and loaded diaphragm controlling the same, of an independent safety or relief-valve, and an elastic connection or device interposed between the diaphragm and supply-valve, for operation of said safety-valve, substantially as specified.

2. The combination of the check-valve C, the supply-valve F, the receiver A, the loaded diaphragm D, the relief-valve G, and the yielding connection H, essentially as herein set forth.

3. The combination with and arrangement within the receiver A of the safety or relief-valve G, operated by the yoke of the yielding connection H, substantially as specified.

4. The diaphragm D, composed in part of rubber and in part of sheet metal, for operation in combination with or as applied to a water-pressure regulator, essentially as described.

5. The combination of the adjusting-nut or box M with the graduated stem I, the spring S, and diaphragm D of the regulator, substantially as specified.

113,070.— Sash-Holder for Railroad-Cars. — Adam Loeffelholz and Anton Prier, Milwaukee, Wis.

Claim.—An arrangement of lifts, levers, springs, and bolts, in combination with a tumbler, *i*, to be operated upon by a key, for the purpose of allowing the sash to be detached or removed from the frame, substantially as herein recited.

113,071.—Machine for Cutting Veneering into Strips.—George W. Manton, Fredonia, N. Y.

Claim.—The combination of the rotary series of disk-knives *g*, the series of stationary bed-bars *f*, the cutter-carriage or frame F, and the arched guides E, arranged with and applied to the supporting-frame A, as and for the purpose as specified.

113,072.–Machine for Threading-Bolts.—Henry Martin, Louisville, Ky.

Claim.—1. In a bolt-threading machine, in which the bolt is held in a vertical position while being threaded, the stop *i*, fixed for the time being in an unchangeable relation to the shaft *c*, which carries the bolt to be threaded, and the shoulder *g*, (which forms a part of the device that is attached to or that may be made to interlock with the gear *c′*, for the purpose of transmitting the motive power of the machine to the said shaft *c*,) in combination with a screw-cutting and feeding-die so constructed that it can readily be opened to release the bolt after the cutting of the thread thereon is completed, the whole being so constructed, arranged, and adjusted that when the threading of the bolt is completed the said stop shall pass clear of said shoulder into the open space beyond, so that the bolt shall cease to revolve, all substantially as and for the purpose described.

2. In a bolt-threading machine, such as is above intended and described, the thimble h, co-operating with the combination set forth in the foregoing claim, by virtue of which the threadings of the screw-bolt may be continued for a longer or shorter distance, and made to terminate automatically at the pleasure of the operator, substantially as described.

3. The jaws E E *n n*, pivots *j j*, screw-cutting dies F F, cylinder G *o o* o^2, and bed D, constructed, arranged, and operating in the manner described.

4. The combination of the adjusting devices *l l*, the adjusting devices *s* s^1, dies F F, jaws E E, cylinder G *o o* o^2, and bed D, constructed and arranged and operating as described.

5. The within-described clutching and unclutching device or its equivalent, whether used in the cutting of only one length of screw-thread or different lengths of screw-threads, combined with the sliding and rotary spindle *e* of the bolt-threading machine placed in a vertical position, and with a screw-cutting and feeding-die made to close and open around the bolt which is being threaded, substantially as described.

113,073.—Piano. — Frederick Mathushek, New York, N. Y.

Claim. — The brass compensating-wires *s s*, strained across the under side of the piano-frame, substantially as specified.

113,074.—Piano-Forte Action.—Frederick Mathushek, New York, N. Y.

Claim.—The bent key-lever E, substantially as specified.

113,075.–Chisel for Mortising-Machines.—Edgar McConnell, Sharon, Pa.

Claim.—1. A pair of mortising-tools, A B, detachably united by male and female dovetails a^1 b^1 upon their respective shanks, as described, and for the purpose specified.

2. The shouldered flanges a^2 b^2, combined with the intermediate channel between the blades and the inclined shoulders D, to enable the chisel to draw its own core, as described.

113,076.—Separator for Thrashing-Machines.—Curtis Miller, Clay township, (Lincoln Post Office,) Pa., assignor to himself and Jeremiah R. Rogers.

Claim.—1. The arrangement of the fans K L, elevator E, shaft W provided at one end with pulleys I G H and eccentric *q* at the other, branch-rod S, elbow-levers N, and the shoes *g h*, as and for the purpose specified and set forth.

2. In combination with the shoes *g h*, the spout O, when constructed as described, and provided with the hinged trap 6, substantially as and for the purpose specified.

3. In combination with the conveyer U and support S the partitions T V, to form, in connection with the rear end of the machine, the chaff and white-cap receptacles, substantially as shown and described.

113,077.—FOLDING-CHAIR.—George Miller and Phillip Hannah, Rochester, N. Y., assignors to themselves and John Gorton, Jr., same place.

Claim.—1. The plate E, constructed with two beveled slots *i i* and projecting ends for the screw-holes *o o*, in combination with the chair legs, to form a double fastening thereof, connected, arranged, and operating substantially as and for the purpose described.

2. The self-adjusting clasp F in combination with hinged-arm D, applied and operating in the manner and for the purpose described.

3. The combination of slotted plate E and pivotal clasp F, with the legs, seat, arm, and back of folding-chairs, substantially as and for the purposes described.

113,078.—MACHINE FOR TURNING AXLES.—Arthur F. Moore, Florence, Ind.

Claim.—The main frame A, adjusting-frame C, cylinder D, transverse-bar E, carrier-bar F, handle and spindle H, nut S, lead-screw T, cutter-head G, and all the minor parts appertaining thereto, when the same are constructed, arranged, and combined in the manner shown, and for the purposes set forth.

113,079.—MAKING FLOUR.—George Motley, Rochester, N. Y., assignor to himself and Jirah B. Mosely, same place.

Claim.—The removal of the chits and seam impurities of the berry by first cracking and then sifting or subjecting to a light blast, as herein described.

113,080.—CATARRHAL DOUCHE.—Richard M. Moylt, New York, N. Y.

Claim.—As an article of manufacture, a spirit-bottle, with an outlet-pipe having an extra upward turn to adapt it for insertion into the nose.

113,081.—GANG-PLOW.—John Murray, Silveyville, Cal.

Claim.—The arrangement of the frame A, bars C, axle E, lever K, balance-beam H, connecting-rod G, and link I, as described, for the purpose set forth.

113,082, antedated March 15, 1871.—BURGLAR-ALARM.—John T. Mygatt and John Downing, Binghamton, N. Y.

Claim.—The combination and arrangement of the gas-pipes F and G, main pipe H, valves I and J, hooks D, and connecting-projection C, substantially as and for the purpose hereinbefore set forth.

113,083.—COMPOSITION-FUEL.—Jotham Newton, Providence, R. I.

Claim.—The improvement in the manufacture of composition-fuel, substantially as described, which consists in first roasting the coal-dust; secondly, mixing such dust so prepared with coal-tar and the proportions of alumina and potassa, substantially as given, or with the equivalents of the two latter; and, thirdly, in subjecting the mass to the action of heat while in a retort sufficient to drive off the more volatile constituents of the coal-tar and bake the composition, as herein set forth.

113,084.—BEE-HIVE.—Philip Nicolle, Lindsay, Canada.

Claim.—1. The cross-shaped metal ears A, arranged on the frames D, for supporting the same and holding them properly apart, substantially as herein shown and described.

2. The board G, interposed between the end of the case A and the adjustable board E, for the purpose and in the manner specified.

113,085.—GRINDING-MILL FOR ORES.—Jacob S. Niswander, Oakland, Cal.

Claim.—1. The rings or bands *c*, in combination with the disk A, with its flange *c*, and a filling or bed composed of rock, substantially as and for the purpose set forth.

2. The muller F, with the openings *m'*, and divided into two or more compartments, *m*, which are partially filled with loose rock, substantially as and for the purpose set forth.

113,086.—COOKING-STOVE.—Daniel Eldon Paris, Troy, N. Y.

Claim.—1. Upright illuminating mica lights or windows formed on or connected with a rearwardly-sloping surface in front of the fire-box of a cooking-stove, for the purpose and substantially in the manner herein shown and described.

2. Movable doors to the front of the fire-box of a cooking-stove, containing upright illuminating lights or windows, when the lower, rear, or general surface of said doors connects with or corresponds with an upwardly and rearwardly-sloping surface to said fire-box, made for the purpose and substantially in the manner herein shown and described.

3. An illuminating light or mica window formed in or through the front wall of the fire-box of a cooking-stove, when the space into which they open is above the fire, a flat top, with boiler-holes immediately above, and the exit-flue or smoke-passage directly and horizontally opposite, substantially as herein shown and described.

4. The reservoir cover B, provided with the journals C, which rest in recesses in the top edge of the reservoir, in combination with the stop or lug D, or any equivalent therefor.

113,087.—REVERSIBLE SETTEE.—Robert H. Paton, New York, N. Y.

Claim.—The standards B, pivoted at *c*, provided with the slot Y, through which the pivot-bolt *i* passes, in combination with the tilting-seat O, frame A, and pivoted back D, all operating as shown and described.

113,088.—HORSE-POWER.—Thomas D. Pennington, Forsyth, Ga., assignor to himself and R. G. Anderson, same place.

Claim.—The combination of the wood and metal frames for the support of the operative mechanism, when constructed and arranged substantially as specified.

113,089.—CHURN.—George S. Perfater, Camp Point, Ill.

Claim.—The jointed guide D, composed of the parts *b c*, and combined with the twisted dasher-rod C, substantially as herein shown and described.

113,090.—ELECTROPLATING LETTERS AND NUMBERS ON METALLIC PLATES FOR SIGNS, &c.—John J. Pratt, New York, N. Y.

Claim.—1. The improved process for forming letters, figures, and the like on metal plates, herein shown and described.

2. The new manufacture herein described, using metal-plates suitable for signs, door-plates, or labels, with letters or figures formed by electroplating, as set forth.

113,091.—SHOE-BRAKE FOR WAGONS.—Abraham Quinn, Brooklyn, N. Y.

Claim.—1. The combination with the shoe, suspended from the axle so as to turn around a center eccentric to the axis of the said axle, of the chain-lever H, guide-rollers, and holding-pawl, substantially as specified.

2. The drag-chain attached to the shoe, extended through the ring O, and connected to the check-rein, and provided with a stop-ring, all substantially in the manner described.

113,092.—RUNNING-GEAR FOR CARRIAGES.—John Rancevan, Carthage, Ohio.

Claim.—The combination of the spring C, continuous head-block and coupling A B B', fifth-wheel D, spring-bolt H, and axle K, substantially as described.

113,093.—BUTTON-HOLE CLAMP AND GUIDE.—Loyal Reding, Norwalk, Ohio, assignor to N. S. C. Perkins and M. P. Smith, same place.

Claim.—1. The curved clamp and guide-plates C, provided with holding-edges, and made self-adjusting to each other and to the material between, as described.

2. The hinged arms A, in combination with the self-adjusting clamp-plates C.

3. The arms A, one of them being serrated at one end, provided with the clamp-guides C, when attached by the hinge H, and operated by the lever L and pins P P' P'', or their equivalents.

113,094, antedated March 16, 1871.—MACHINE FOR PULLING FLAX.—Benjamin M. Reeves, Franklin, Pa.

Claim.—1. In a flax-pulling machine, the combination of the reel K, rollers L L', and endless apron M, substantially as and for the purpose specified.

2. The flax-pulling machine herein described, having the reel K, rollers L L', endless apron M, tapering guide-way N, pivoted frame B, inclined plane F, and cam-lever G, substantially as shown and described.

113,095, antedated March 27, 1871.—CHUCK FOR LATHES.—John Rich, Painesville, Ohio.

Claim.—1. The improved tool, herein described, consisting essentially of the disk A and the raised collar *a*, the clamping-screw C, and two or more split cylinders, *b c*, to be inserted one within the other, or not, as occasion may require.

2. The coiled spring D, in combination with the disk A, collar *a*, cylinders *b* and *c*, and screw C, substantially as and for the purpose as hereinbefore set forth.

113,096.—REVERSIBLE KNOB-LATCH.—Henry M. Ritter, Cincinnati, Ohio.

Claim.—The sliding-plate A, carrying the pin *d*, in combination with the lever B and latch E, when constructed and operating substantially in the manner and for the purposes set forth.

113,097.—REVERSIBLE KNOB-LATCH.—Henry M. Ritter, Cincinnati, Ohio.

Claim.—The catch-lever A, having a tail-piece extending under the holding-screw or other device, and provided with a catch at *e*, and projection *f*, in combination with the yoke B and reversible latch C, for the purpose set forth.

113,098.—PLOW.—Hamilton Roney, Dayton, Ohio.

Claim.—In a sod-plow, the arrangement of the frame A B C and auxiliary frame D E F in relation to each other and to the roller H, cutters *a b*, seat J, beam I, share G, and rods *e*, substantially as described.

113,099.—SOLDERING SPIRAL BANDS.—Elijah H. Russell, Providence, R. I.

Claim.—The employment, in combination with an elastic of the character described, of an interior core or threaded dowel, B, soldered to the elastic, as a means of securing the two ends of the elastic together, substantially as described.

113,100.—SUSPENSION TOILET-MIRROR.—Ransom Truman Sargent, Norwich, Vt.

Claim.—1. The combination of the mirror and the supporting-frame, made and connected together, as set forth.

2. The combination of the mirror, the shelf, and the supporting frame, as constructed, connected, and arranged, substantially as specified.

113,101.—CUT-OFF ATTACHMENT TO SLIDE-VALVES.—Thomas Sault, New Haven, Conn.

Claim.—1. The arm *d* and yoke *e*, combined with the hinged valve C and with the snap *f*, for opening and holding open said valve C, as specified.

2. The rod *i*, connected with the governor of the engine, and combined with the hinged valve C on the slide-valve B, substantially as herein shown and described.

3. The recess *m* in the valve-seat, for the purpose of admitting steam under the hinged valve C preparatory to the opening of the same, as specified.

113,102.—ANTI-FRICTION BALANCED-VALVE.—William Siefert, New York, N. Y., assignor to himself and Matthew T. Kane, same place.

Claim.—The case B, made in two parts, and held together by springs, and tubular rock-valve A, arranged within said case in the manner specified.

113,103.—BABY-TENDER.—Samuel M. Simonds, Lynn, Mass.

Claim.—1. In combination with the base A the annular table B, for purposes stated.

2. In general combination, the bottom or base-board A, table B, and seat D, substantially under the arrangement and for the purposes hereinbefore set forth.

113,104.—LAMP-BURNER.—George L. Smith, Bridgeport, Conn., assignor to the Bridgeport Brass Company.

Claim.—1. The combination of the vertically-slotted wick-tube, the spirally-slotted or grooved adjusting-tube mounted thereon, and the wick-carrier arranged within said wick-tube, and provided with a pin or other projection passing through the vertical slot in the wick-tube, and into the spiral groove or slot in the exterior adjusting-tube, substantially as and for the purpose shown and set forth.

2. In combination with the elements claimed in the preceding clause, the clutches, or the equivalent of the same, on the removable portion of the burner, engaging with corresponding clutches on the adjusting-tube, substantially as shown and described, whereby the rotation of the adjusting-tube is effected by revolving the said removable portion of the burner.

3. An Argand or round-wick burner, made substantially as herein described; that is to say, of the screw-neck or base, perforated air-distributer, inner and outer wick-tubes, wick-carrier, and adjusting-tube of the one part, and the spring chimney-holder, clutch-plate, or its equivalent, and guide-tube of the other part, said parts being constructed and combined for joint operation, as herein shown and set forth.

113,105.—PORTABLE FENCE.—Frank Sproul, Doniphan, Kansas.

Claim.—The arrangement, substantially as herein described, of the sills A B, panels D *d d'*, inclined braces F F', clamps G, keys I, and retaining devices *a* or *b*, for the purpose set forth.

113,106.—CLOTHES-DRIER.—August Stechschult, Glendorf, Ohio.

Claim.—The block N, provided with an adjust-

ing-pin, in combination with the cords L, revolving standard A, pulley K, hinged arms D and F, cords H and I, centers C, E, and J, and stool or pedestal B, all constructed and arranged, as shown and described, to form an improved clothes-drier.

113,107.—ROCK-DRILL.—James M. Stephenson, Pendleton, Ind.

Claim.—The suspended sliding ratchet-plate E and the loosely-pawled collar I J, combined, as described, with the drill, for the purpose of giving a slight turn after each blow upon the rock, as described.

113,108.—AUTOMATIC WATER-SPOUT CUT-OFF.—Edward Stowart, Fort Madison, Iowa.

Claim.—1. An automatic water-conductor, consisting of the pendent chute E, controlled and operated by the weight of the accumulated water in the vessel J, substantially as specified.

2. The combination of the chute E and its counterbalance G with the vessel J and lever H, all arranged within the chamber A, provided with outlets C and D, substantially as and for the purpose set forth.

113,109. — CULTIVATOR. — Michael Stoll, Conestoga township, Pa., assignor to himself and Jacob G. Peters, same place.

Claim.—The construction and arrangement of the three curved adjustable shovel-arms 1 2 3 when on each side of the pole A, so shortened from the center that the two central pairs will be in the desired position for the scraper H, bolted to each pair, in combination with an advance shovel on the outer side of each, all combined and operating in the manner shown and for the purpose specified.

113,110. — BOILER-FURNACE. — Uriah B. Stribling, Madison, Ind.

Claim.—1. The system of draught-pipes E and F and draught-tubes *a a*, when used in connection with the hollow grate-bars J, and all arranged to operate in the manner substantially as shown, and for the purposes set forth.

2. A grate-bar, J, with a hollow, G, perforations *b b*, groove *c*, and corrugated edges *e e*, substantially as shown, and for the purposes set forth.

113,111.—SHEET-METAL FRUIT-CAN.—Columbus F. Sturgis, Buena Vista, Ala.

Claim.—Two rectangular sections A B, interlocked at their edges by flange and groove combined, as described, with corner-notched top and bottom *a' b'*, for the purpose specified.

113,112.—RAILWAY-SWITCH LOCK.—Archibald Thomson, St. Louis, Mo.

Claim.—An improved switch-lock, consisting of the tumbler C', spring *e*, switch-bolt C, having groove *c'* and inclined notch *c²*, face-plates D D', when all said parts are arranged and combined to operate within slots B *b* of the lever A, in the manner and for the purpose described.

113,113.—APPARATUS FOR TRANSMITTING POWER TO MACHINERY. — William H. Thorne, Philadelphia, Pa.

Claim.—1. The frame I, carrying the idler-pulley H, and rotating on the stud K in such a manner that the delivering edge of the idler-pulley H will always be in line with the receiving edge of the driving-pulley B, for the purposes specified.

2. The weighted frame F, carrying the idler-pulley E, used in combination with the swinging-frame I, in the manner described and for the purposes specified.

113,114.—MANUFACTURE OF COMPOSITION-ROLLER BUSHINGS.—Francis B. Torrey, Bath, Me.

Claim.—The manufacture of composition-rollers for bushings of pulley and other blocks, substantially in the manner and by the means herein described.

113,115.—FORCING LIQUIDS. — Jacob Van Norman, Easton, Pa.

Claim.—The combination of the air-tank B B', tubes C and D, and movable liquid-tank E with each other, substantially as herein shown and described, to apply an air-pressure to a cask of beer or other desired object, as set forth.

113,116.—AXLE AND AXLE-BOX FOR VEHICLES.—Ernest Von Jeinsen and James Monroe McDonald, San Francisco, Cal.

Claim.—The axle B, constructed specifically as described, with its oil-chamber 6 and projecting shoulder provided with screw-holes, in combination with the axle provided with the orifice 4 5 and flange, the parts being united by a collar, as and for the purpose set forth.

113,117.—CANDLE-MOLDING MACHINE.—Joseph Wales, New York, N. Y.

Claim.—1. The employment, with the molds and pistons, of detachable caps C, of different sizes for varying the length of the molds, for making candles of different sizes in one machine, all substantially as specified.

2. The combination, with the caps C and pistons A, of the elastic packing-disks F, substantially as specified.

3. The divided plates K L M, of the clamp, having the semicircular notches for clamping the candles connected to the end-pieces Q, Q', and Q², which are hinged together and provided with the jointed rods U and the elastic bands or springs, all substantially as specified.

4. The attachments of the molds B to the plates X by the screw threaded portions *a b*, substantially as specified.

5. The application to the cooling and heating-tank of a candle-molding machine, arranged for making different sizes, as herein described, of the glass water-gauges B', substantially as specified.

113,118.—WASHING-MACHINE.—George S. Walker, Erie, Pa., assignor to himself and Frank F. Adams, same place.

Claim.—The top or binding-piece B, with the metallic plates F F' and screws H H, in combination with the facing or guide-piece P, sliding journal-box *c*, spring *e*, and rubbing-rollers, when arranged and operated as and for the purposes set forth.

113,119. — MAN'S GAITER. — Edmund R. Ware, Worcester, Mass., assignor to William A. S. Smyth and Robert L. Smyth, same place.

Claim.—1. A gaiter or boot, composed of the leather uppers A B, elastic gores E, and double-quilted front and back top pieces C D, arranged substantially as described, and for the purposes set forth.

2. The outside seam re-enforces and protecting pieces G, applied to the back and front top pieces C D, and the elastic gore-pieces E, as and for the purposes set forth.

113,120.—MEANS FOR DETECTING AND SIGNALING FIRES. — William B. Watkins, Jersey City, N. J.

Claim.—1. In a fire-detecting and locating system, the combination of one or more main or fire-locating lines R, embracing break-circuits in buildings, with closed local circuits J and heat-detecters arranged therein for breaking said closed circuits upon an increase of temperature, and suitable mechanism brought into operation thereby for operating the break-circuits of the main line or lines R, so as to strike the number of the building and that of the street, or any desired signal, at different points through the main line or lines connecting therewith, as described.

2. The combination of heat-detecters with a closed local circuit J, with its alarm mechanism and with an open local circuit, or a series of open local circuits, connecting with an indicator or annunciator, W, both circuits operated by the same heat-detecter, for the purpose described.

3. The combination of the compound strips B, index-arm E, thermometer-scale H, adjustable pin I, and circuits J J, when said parts are so arranged that the circuit will remain closed below any pre-determined degree of temperature, but will be broken, and thereby cause an alarm, when the temperature increases, as described.

4. The combination and arrangement of the compound strip B, index-arm E, thermometer-scale H, and adjustable metallic pin *c'*, or its equivalent, for the purpose described.

113,121.—HORSE-RAKE.—Benjamin Webb, Unadilla Forks, N. Y.

Claim.—The shoe or cover *i*, made as described, so as to entirely cover the spring, in combination with the block *h* and revolving rake, as set forth.

113,122.—BUTTER-TUB.—Charles H. White, Emmett township, Mich.

Claim.—1. The method or process of preserving butter, substantially as herein described, consisting essentially in packing the butter in reversible conical tubs having tight heads, whereby the mass of butter is allowed an end motion when the tub is reversed, which causes the brine to surround the butter, as set forth.

2. The conical reversible butter-tub A, having tight heads H and H', and furnished with an opening and plug *p*, for the passage of the brine, when employed and manipulated substantially as and for the purpose herein set forth.

3. In combination with the conical reversible tub A, the bag *b*, made and employed substantially as described, for the purpose specified.

113,123.—SASH-HOLDER.—Barnet M. Whiting, San Francisco, Cal.

Claim.—The vertical shaft *d* with its toothed segment *e*, and thumb-lever or plate *f*, the lug *i* in combination with the partially-toothed locking-wheel *g*, and rack-bars *k* and *k'*, substantially as and for the purpose above described.

113,124.—TINTED GLASS FOR SPECTACLES, &c.—Thomas Atwood Willson, Reading, Pa.

Claim.—The pink tint or colored lens of a uniform color or shade in the different focal numbers of spectacles or eye-glass lenses, so that each and every number has a like tint yet appears colorless to the eye of the wearer, as herein described and set forth.

113,125. — BEAN-HARVESTER. — Jacob A. Wood and Thomas Wood, Chemung, Ill.

Claim.—1. In a bean-harvester, of the construction shown and described, the arrangement of the standard B, share or cutter D, slightly inclined on one side, and the rod *d* attached thereto, and bent and operating, all as set forth.

2. In a bean-harvester, thus provided with cutter D on one side of standard B, and provided further with rod *d*, the rake arranged to swing on the bar F, and operated by handle F', all as set forth.

113,126.—GRAPPLING-HOOK.—Elias Ziegler and Charles Cable, Harmony, Pa.

Claim.—As an improvement in mechanism for operating the grappling-hooks of hoisting apparatus, the pivoted rolls B and hooks E, located between bars A A, combined, as described, with chains C, arranged as and for the purpose specified.

113,127, antedated March 25, 1871.—COLORING AND STAINING MARBLE. — John Zengeler, Chicago, Ill.

Claim.—The method herein described for the delineation of colored designs upon marble, stone, &c., by means of the anhydrous volatile oily paste or liquid above described, or its equivalent, and by means of the processes also above described, or their equivalents.

113,128. — SKIN UNDER-GARMENT.—John H. Andrus, New York, N. Y.

Claim.—Garments, worn in contact with the person, formed of animal skin in all parts except under the arms and between the legs, combined with woven or knit fabrics at said last-mentioned places, as and for the purpose specified.

113,129.—CLOTHES-RACK.—Henry M. Andrus and Jehiel H. Cleveland, North Bay, N. Y.

Claim.—The combination of the main frame A with loop or hook *a*, and the pivoted frames B B, projecting one over the other from the bottom upward, and held in position by the hooks *b b*, all substantially as and for the purposes herein set forth.

113,130. — WASHING-MACHINE.—Alfred M. Bailey, Middlefield, Conn., assignor to The Metropolitan Washing-Machine Company.

Claim.—1. The combination, with the dasher and handle in a clothes washing-machine such as described, in lieu of or in connection with the ordinary springs around the journals of the dash-board, of a weight for counterbalancing said parts, substantially as and for the purposes set forth.

2. The combination, with the dasher and its segmental arm or frame, of the socket connected with the said arm, and the weight provided with a shank fitting said socket, under the arrangements substantially as shown and described.

3. The metallic segmental arm for supporting the dasher and handle, when formed with a socket for the reception of the shank of the weight, as shown and set forth.

4. The combination, with the tapering socket formed in the swinging dasher-frame or arm, of a removable weight, provided with a correspondingly-tapered shank which fits said socket, substantially as and for the purposes shown and set forth.

113,131.—CHECK-HOLDER.—Andrew A. Baker, Camden, N. J.

Claim.—The improved fruit-check holder, consisting of the box A, provided with the perforated lid, the hinged side, the bar *b*, and the fingers *c*, all constructed and arranged as shown and described, for the purpose specified.

113,132.—DOUBLE-ACTING FORCE-PUMP.—Jeremiah Barney, Perry's Mills, N. Y.

Claim.—The combination, in a double-acting force-pump, of the center stops I I, valves *a a*, and tail-pieces *i i*, constructed and arranged substantially as and for the purposes herein set forth.

113,133. — GRAIN-WEIGHING REGISTER.—William Henry Baxter, Brixton Hill, England.

Claim.—1. The grooved cam *f* fixed on the end of the drum, with the shoulders *f'* arranged to operate in combination with a pin or pins, *g*, fixed on the frame of the machine, substantially as set forth, for the purpose specified.

2. In combination with the above, the drum *d*, hopper *e* provided with the cut-off mechanism described, and the registering device, when the same are constructed and operate together substantially as and for the purpose specified.

113,134. — HARVESTER.—Jacob H. Beam, Springfield, Ill.

Claim.—The combination of the traction-wheel G provided with cog-gear H, the pinions I, K, and L, the shaft M provided with the shackle *m*, the drums *r*, rake-bands *s*, rod *p'*, cut-off V, and lever U, all constructed and arranged substantially as described and shown, for the purposes set forth.

113,135. — SEWING-MACHINE CASTER.—Thomas T. Bishop and Henry J. Merret, Evansville, Ind.

Claim.—The slats A, provided with casters *e e* and set-screw *g*, arranged to elevate one end of the platform, and operate substantially as and for the purpose set forth.

113,136. — HARNESS-SADDLE. — Valentin Borst, New York, N. Y.

Claim.—1. The combination of the sheet-metal frame E, constructed as described, so as to form the foundation of a saddle-tree and a channel-way for the back-band, with the wooden mountings A A and the front and rear metallic braces F F, substantially as set forth.

2. The transverse terret-hook braces J, in combination with the sheet-metal frame E and wooden mountings A, substantially as described.

3. The combination of the cantel I of a metallic bed-plate, O, arranged upon the wooden portion of the cantel, substantially as and for the purpose described.

113,137.—NOZZLE FOR OIL-CANS.—Jabez A. Bostwick, New York, N. Y.

Claim.—The combination, substantially as herein described, of the flanged nozzle A, the valve-cap E, and the inclosed valve H working within said cap, and operated by a screw, G, to fit upon the flange of the nozzle and close the opening therein, as specified.

113,138. — COMPOSITION BURIAL-CASE.—Frederic W. Brown, Albany, N. Y.

Claim.—As a new article of manufacture, a burial case, formed of the material and in the manner substantially as set forth.

113,139.—SHOT-CHARGER.—George D. Capewell, George A. Capewell, and Joseph T. Capewell, Woodbury, Conn., assignors to George D. and George A. Capewell.

Claim.—1. The shot-charger B, provided with a stud or projection, *a*, combined with a cylinder, A, and gate or cut-off, when the said cylinder is constructed with a recess and notch, *d*, corresponding with the stud *a*, arranged relatively to the gate and inclined end of the charger, as and for the purpose described.

2. In combination with the cylinder A and charger B of a shot-pouch, the gate C, arranged to operate diagonally across the said cylinder, substantially as and for the purpose set forth.

113,140.—TOP-ROLL FOR SPINNING, &c.—William A. Caswell, Providence, R. I., assignor to himself, Albert F. Allen, and William D. Hilton, same place.

Claim.—A top roller, having a metallic interior, a foundation of textile fabric, an intermediate layer of cork, and an exterior covering of leather, substantially as described.

113,141.—ROTARY-HARROW.—John Francis Chase, Westbrook, Me.

Claim.—As a new manufacture, a rotary harrow-tooth, composed of the prongs *b* and a sharp-edged base, *a*, arranged and formed in one piece of metal, and provided with a central pivot or bearing, all substantially as described.

113,142.—STOVE-LEG.—Thomas Jefferson Close, Philadelphia, Pa.

Claim.—The lugs *b b*, arranged on the bottom plate of a stove and inclined at their inner edges, and the projection *f* of the foot B extending between said lugs, in combination with the screw or wedge for forcing the said projection away from the base-plate and wedging it between the lugs, as specified.

113,143, antedated March 24, 1871.—MARINE PROPELLER. — George B. Cocks, Cincinnati, Ohio.

Claim.—The propeller H A *h'*, substantially of the form described, operating as stated, and for the purpose specified.

113,144.—PUMP.—Nathan T. Coffin, Knightstown, Ind.

Claim.—1. The pump-stock A, open at its upper end, in combination with the waste-valve *g* and surrounding casing B, the latter being arranged to form a chamber above the stock, all substantially as and for the purpose set forth.

2. The bracket J O S, and pin *x*, and button *y*, all constructed and arranged substantially as set forth.

113,145.—GARDEN-BED BORDER.—Joseph Edgar Dickson and Seelye Richmond, Annapolis, Md.

Claim.—1. The molded bordering block or tile herein described, provided with the projections *a*, recesses *b*, and transverse arch or conduit B, constructed and arranged substantially as shown and described.

2. The molded bordering block or tile herein described, provided with the projections *a*, recesses *b*, and recess C, constructed and arranged substantially as and for the purposes set forth.

3. In the blocks or tiles herein described, the recess C and passage D, substantially as and for the purpose set forth.

113,146.—SASH-HOLDER.—Jacob J. Diehl, Harrisburg, Pa.

Claim.—The combination of the spindle, grooved its entire length, and the bolts with lugs in their perforated end or eye, said bolts carrying springs in slots near the eyes, and being operated separately by the revolutions, in different directions, of the shaft, substantially as set forth.

113,147.—CARBURETING-MACHINE. — Antoine Ernest Dupuy and Arthur Barbarin, New Orleans, La.

Claim.—The arrangement, within the channels formed by the spiral or volute scroll metallic curtains of a carbureting float, substantially such as described, of curtains of fibrous material, extending longitudinally through said channels, and dipping at their lower ends into the carbureting liquid, thus subdividing the channels into smaller scroll-passages, and extending the hydrocarbon surface over which the air or gas must pass, substantially in the manner set forth.

113,148.—CULTIVATOR. — David Edwards, Marong, near Sandhurst, Australia.

Claim.—1. The teeth N, or plowshares, figs. 3 and 4, constructed substantially as herein shown and described.

2. The zigzag bars M, teeth N, clasps O, center-bar A, cross-bar D, in combination with the crank-axe E, the whole arranged and operating substantially as described.

113,149.—SHOE AND OVER-GAITER.—Thomas R. Evans, Philadelphia, Pa.

Claim.—The combination with the shoe, constructed substantially as described, of the side pieces C C' and loose flap D, the whole being arranged as specified.

113,150. — CHIMNEY. — Alvan B. Ewing, Lewisburg, Tenn.

Claim.—1. The combination in a cast or wrought-metal fire-box, of the front and rear plates B D, jambs or side plates *c*, case-plate A, and cap-plate I, united together by rods *g h*, substantially as described.

2. The sheet-metal casing F, in combination with the fire-box, and so arranged in relation thereto as to form an air-space, in the manner and for the purpose described.

3. The plates A B C D E, provided with grooved flanges *b b d* in such a manner as that the several plates mutually support one another, as herein set forth and shown.

4. The cast or wrought-metal fire-box, constructed as herein described, in combination with the tube G and casing F, in the manner and for the purpose specified.

113,151.—MEDICAL COMPOUND FOR CURE OF SCROFULA, LIVER COMPLAINT, &c.—Philip Fay, Sr., Lacon, Ill.

Claim.—The medical compound, prepared of the ingredients, and in the proportions, and manner, and to be used substantially as described.

113,152.—SPUR.—Henry Fellows, Bloomington, Ind.

Claim.—The spring-shield C, having a ring-head as described, in combination with the rowel B, substantially as specified.

113,153.—VALVE FOR OIL-TANKS.—Daniel Fisher and William Cumming, Oil City, Pa.

Claim.—1. The tubular valve F, constructed substantially as herein described, permitting the passage of steam or hot water within it when closed upon its seat, for the purpose specified.

2. The combined hollow valve and valve-stem F, constructed with plane parallel sides, as herein set forth, for the purpose stated.

3. The valve-seat D, constructed with guide-fingers or wings *e*, as and for the purpose set forth.

4. The sleeve G, collars H I, combined nut and step E, and hand-wheel *g*, in combination with a valve, F, of substantially the form herein described, as means for operating the said valve, the same being constructed and arranged to operate as set forth.

113,154. — LIGHTNING-ROD. — David A. Foot and George S. Knapp, Winona, Minn.

Claim.—A lightning-rod, consisting of a continuous copper star-pipe or tube, with a continuous steel-wire filling the body of its interior, and annealed wires the spaces in its points, substantially as herein described.

113,155.—SPARK-ARRESTER FOR LOCOMOTIVES.—Benjamin P. Freeman and Pat. Payton, Macon, Ga.

Claim.—In combination with the arrester *e* and flue *d*, the pipe *c*, constructed as described, so as to form around the upper end of said flue the opening *f*, substantially as and for the purposes herein set forth.

113,156.—COFFEE-POT.—Daniel S. French, Montgomery, Ala.

Claim.—1. The combination of the rings B and C, hinged together so as to close or fold one within the other, and held by the catch *b*, for securing the bag E, substantially as herein set forth.

2. In combination with the rings B C, the bars G G, segments H H, and foot I, all constructed and arranged substantially as and for the purposes herein set forth.

3. The combination of the rings B C, bag E, and the perforated metallic piece J, substantially as and for the purposes herein set forth.

113,157. — FEATHER-RENOVATOR. — Jonathan Garrett and Jonas E. Rauch, Selin's Grove, Pa.

Claim.—The construction and arrangement of the outer cylinder A with perforated bottom, the lid D, trough C with inlet *a* and outlet *b*, the inner cylinder E, and fans G G, all substantially as shown and described, and for the purposes herein set forth.

113,158.—TREATING THE TIMBER OF OLD FIELD-PINES.—James H. Gatling, Murfreesborough, N. C.

Claim.—1. The process herein described of preparing the old field-pine tree, as specified.

2. The timber, provided with an external layer of resinous wood, when obtained from the old field-pine tree by the process specified.

113,159. — COTTON-PICKER. — Williamson Goodwin and Sinclair D. G. Niles, Helena, Ark.

Claim.—1. The combination of the toothed belts G G, brush-cylinders I I, and the fluted cylinders J J, all constructed and arranged substantially as and for the purposes herein set forth.

2. The frame A, with passage C, in combination with the toothed belts G G, guides H H, brush-cylinders I I, fluted cylinders J J, aprons K K, boxes L L, and hinged cover M, all constructed and arranged substantially as and for the purposes herein set forth.

113,160.—CAR-COUPLING.—Stephen Gregory, Jonesville, Mich.

Claim.—1. The bifurcated coupling A, having the part *a* provided with the vertical bar *b*, while the branch *a'* has the flaring jaws *j j*, pins E F, and spring, the coupling being pivoted to the draw-bar D, so that either branch *a* or *a'* can be brought into line with the center of the track, all operating substantially as described.

2. The arrangement and combination of the transverse coupling-pin E, spring *i*, and uncoupling-pin F with the draw-head *a'*, substantially as set forth, for coupling the link and draw-head automatically together, when arranged relatively, as provided in the preceding clauses.

113,161.—HORSE-COLLAR.—Lyman Guinnip, Danville, Ill.

Claim.—An improved horse-collar, consisting essentially of the side sections A A and bearing-block B, arranged to operate substantially as set forth.

113,162.—WATER-METER.—Thomas C. Hargrave, Boston, Mass.

Claim.—1. The receiving-pan B, constructed and operated as described, in combination with the measuring-chamber C, substantially as and for the purpose set forth.

2. The oscillating chamber B', having a bottom constructed of two inclines, connected with a curve, and controlled by a ball, in combination with the measuring-chamber C, substantially as and for the purpose described.

3. The inlet-pipe L, constructed with a closed bottom and side openings, in combination with a receiving-pan, substantially as and for the purpose described.

4. The slotted sample-tubes *m'* and *n'*, with their sliding cases *s s*, substantially as and for the purpose set forth.

5. The two-way delivery-cock K, constructed as described, in combination with the rod *f*, cross-head *m*, arranged and operating substantially as and for the purpose set forth.

6. The two-way cock K, constructed as described, in combination with the rod *f*, lever *s'*, and slides *s s*, substantially as and for the purpose described.

7. The spring stops *o' o'* and *p p*, constructed so as to be doubly adjustable, and operating as described.

113,163, antedated March 21, 1871.—PROPELLER FOR VESSELS.—Calvin A. S. Harris, St. Louis, Mo.

Claim.—The vertical-guided shafts F F, reciprocated in the manner set forth, and carrying arms L and pivoted blades M, as herein shown and described.

113,164, antedated March 20, 1871.—MACHINE FOR FORMING CARRIAGE-SPRINGS. William Harty, Bridgeport, Conn.

Claim.—In combination, with the vertical rack L and its pinion N, the inclined racks I, with their respective pinions H arranged in bearings connected to said inclined racks, so that, by means of the said racks I, both a reciprocating and a rotary movement is imparted to the pinions H.

113,165.—HORSE HAY-RAKE.—John F. Henkle, St. Louis, Mo.

Claim.—The improved arrangement, hereinbefore described, of the rollers *c c c*, mounted in brackets applied to the under side of the rake-head A B, with the center bracket forming part of the joint of the same, as and for the purpose specified.

133,166.—TORSION-SPRING FOR CARS.—Benjamin Hershey, Erie, Pa.

Claim.—A V or angular-shaped torsion-spring for railroad cars and other vehicles, substantially as described.

113,167.—MACHINE FOR FORMING PIPE-ELBOWS. — Charles Hoeller, Cincinnati, Ohio, assignor to himself and Henry S. Hoeller, same place.

Claim.—1. The cylinder-head D, compressor F, and clamps G G', combined, constructed, and operating substantially in the manner herein shown and described.

2. The combination of cylinder B D, sliding collar M, and mechanism for feeding the sliding collar by successive steps, substantially as and for the purpose specified.

3. The clamp G, hinged compressor F, and piston E, when constructed and operating substantially in the manner and for the purpose described.

4. The combination and arrangement of the open cylinder B, head D, compressor F, clamps G G', collar M, piston E, and pinions K, with their appurtenances, operating substantially as and for the purpose set forth.

5. The provision, in the head D and clamp G, of a bead and groove, substantially as shown, or equivalent crimping device, as and for the purpose specified.

113,168.—ANIMAL-TRAP.—James William Fishback How, Douglas county, Oregon.

Claim.—1. The combination of the wheel C with its several parts, with the drawer B and screen G, substantially as and for the purposes herein set forth.

2. The combination of the box A, containing the drawer B, and provided with the inclined and horizontal bait-holders I and K, with the wheel C and its several parts, substantially as and for the purposes herein set forth.

3. The combination of the box A, wheel C, inclined and horizontal bait-holders I K, with the dumping-wheel M, and water-receptacle W, substantially as and for the purposes hereinbefore described.

113,169.—LAND-ROLLER.—John T. Hudnet, Reaville, and Holloway W. Mathews, Frenchtown, N. J., assignors to J. W. Priestly & Co.

Claim.—The H-shaped frame A B D, with its rigid rear extension E E C, the frames I, roller H, and pivoted tongue F, all relatively constructed and arranged as herein shown and described to form an improved land-roller.

113,170.—COTTON-PICKER.—John Hughes, New Berne, N. C.

Claim.—The combination of the cylindrical case D having combs *g*, cylinder B having inclined channel *c*, and spout *c'* opening into trough E, all constructed and arranged in relation to the wagon A, as shown, and for the purposes specified.

113,171. — HUB FOR WHEELS.—William Coale Johnson, Philadelphia, Pa.

Claim.—1. The combination of the metallic axle-box A and two detachable hollow sections, D D', each having at its inner end a flange, *e*, on which are projections *h h'*, forming mortises of the character described.

2. The combination of the sections D D' and their projections *h h'*, when the latter are of the form described, so as to prevent the longitudinal withdrawal of the spokes when one series of projections is shorter than the other, to prevent the lateral withdrawal of the spokes when the sections are separated, all as set forth.

3. The combination of the said box A, two detachable hollow sections D D', their flanges *e*, and projections *h h'*, when the said sections have internal braces *k*, as described.

113,172. — CHURN-DASHER. — Columbus Johnston, Clarksville, Mo.

Claim.—The revolving dasher, with the paddles *a a a a*, constructed and operating as described.

113,173.—HORSESHOE-MACHINE.—William R. Justus, Pittsburg, Pa., assignor to Shoenberger & Co., same place.

Claim.—1. The arrangement, above the table upon which the blank is placed, of the shoe-form G, side forms or ways H H, swaging-rollers I L and K K, and boxes I I', with reference to one another, substantially as and for the purpose set forth.

2. The form G, when constructed with side recesses *g'''*, as described, and for the purpose specified.

3. In the described combination with the reciprocating shoe-form G, constructed with a projection, *g''*, inclining upward, the projection *s* of the frame A, as and for the purpose set forth.

113,174. — CORN-PICKING AND HUSKING-MACHINE.—Silas R. Kenyon, Greenville, R. I., assignor to himself and William D. Vernam, Elizabeth, N. J.

Claim.—1. The picker-plate *f*, made adjustable in the arc of a circle, parallel or nearly so to the picker-cylinder *b*, in combination with said cylinder *b* and roller *c*, substantially as and for the purposes set forth.

2. In combination with the husking-rollers *i*, the caps *n* of the journal-boxes *m*, when said caps are made to extend over the upper ends of said rollers, as described and shown, and for the purposes specified.

3. In combination with the husking-rollers *i* and inclined conductor *t*, the cover *s* provided with the curved end *s'*, when arranged in relation to said conductor, as shown, and for the purpose described and set forth.

4. The cover *s*, formed with a curved inclination *s'* at the receiving end, in combination with the adjustable suspending-rods 6 and cross-bar or bars 7, substantially as and for the purposes set forth.

113,175. — HARVESTER-CUTTER.—William G. Kenyon, Wakefield, R. I.

Claim.—The combination and arrangement of the two ledger-blades *a a'*, guard-finger A, and knives *s s*, the ledger-blades extending over the knives to bearings in the guard-finger back of the knife-bar, the whole being constructed substantially as and for the purpose specified.

113,176.—COMPOSITION FOR LUBRICATING JOURNALS.—Rudolph C. Klein, St. Louis, Mo.

Claim.—The hereinbefore-described lubricating compound, substantially as and for the purpose specified.

113,177.—FASTENING FOR NECK-TIES.—A. Kemp, New York, N. Y.

Claim.—The binding-clasp uniting the ends of the loop B, in combination with the retaining-clasp, the loop, and the neck-tie frame A, all arranged, constructed, and operated in the manner and for the purpose set forth.

113,178. — VAPOR-BURNER. — William H. Lawrence, Baltimore, Md.

Claim.—1. The perforated sleeve or jacket-cylinder B, when the same is provided with a disk, C, and an inner shoulder, C', substantially as described.

2. The tube B, having a shoulder, C', and a disk, C, when the same is provided with jets *b b* and *c c*, one being above and the other below the disk, in combination with the tube A, having orifices or jets *a a*, substantially as described.

113,179.—GRINDING-MILL.—Edwin D. Little and Edgar C. Little, Shabbonas Grove, Ill.

Claim.—1. The cylinder M in the grinding-mill herein described, having the graduated diamond-shaped teeth *a' a'' a'''*, constructed as shown and described, for the purpose set forth.

2. The arrangement, in the grinding-mill herein described, of the cylinder M and adjustable concave G, hopper H, cut-off *i*, frame A B, and fly-wheels *f*, when all constructed and operating as shown and described, for the purposes set forth.

113,180. — PEAT-MACHINE.—Zalmon Ludington, Fayette county, Pa.

Claim.—The radial frames I, attached to the shaft and forming a molding-wheel, in combination with the adjustable molds C, outer and inner broken mold-rings E and F, and the spring *d*, as and for the purpose set forth.

113,181, antedated March 18, 1871.—SHADE-HOLDER FOR LAMPS.—James W. Lyon, Brooklyn, N. Y.

Claim.—In combination with a central support the double-hinged or jointed arms, whereby the shade-holder can be adjusted to different sizes and different elevations of shades, as desired.

113,182.—MACHINE FOR SCOURING NEEDLES.—Francis W. Mallett, New Haven, Conn.

Claim.—A device for scouring needles, consisting of a pair of plates, *c d*, one or both of which are inclined so as to make the space between the two plates narrower at the bottom than at the top, in combination with mechanism for imparting a reciprocating movement to both of said plates, substantially as set forth.

113,183.—LAMP-BURNER.—Charles B. Mann, Baltimore, Md., assignor to himself and Stephen S. Mann, same place.

Claim.—1. The filling-tubes *a b*, constructed as explained, each tube having an orifice of discharge within the lamp, and the inner tube being provided with the groove *h*, and the outer tube with orifices for allowing air from the lamp to enter and escape from said groove and from the lamp.

2. The wick-tube *i*, attached to the burner and extending to near the bottom of the lamp, and the filling-tube *a b*, constructed with orifices and groove, as herein shown and described, for the purpose specified.

113,184.—SIEVE.—Robert J. Mann, Dallas City, Ill.

Claim.—1. The metallic sieve-band A, with upturned bottom edge *a*, to receive a removable sieve-bottom, substantially as and for the purpose specified.

2. The combination of the sieve-band A and removable bottom B C, substantially as specified and shown.

113,185.—BRICK-KILN.—James M. McCarthy, Canal Dover, Ohio.

Claim.—1. A series of hollow benches, arranged as shown and described, the spaces between the same forming the furnaces of the kiln, as herein set forth.

2. The benches H H, made of brick, iron, or other suitable material, and provided with flues L L and inlets *g g*, substantially as and for the purposes herein set forth.

113,186.—EARTH-CLOSET.—James Megratten, Wilmington, Del.

Claim.—1. The double-hinged chute K, the first hinge in the rear of the axis of the hopper-operating shaft, when so constructed as to be moved back out of the way, and brought into line by raising and lowering the lid, in combination with the levers I L, substantially as shown and described.

2. The rotary pocket-wheel or feeder O, having curved and cutting-blades, in combination with the double-hinged chute K, substantially as shown and described.

3. The shaft E and eccentric G, in combination with the vertical moving stirrer H, substantially as described.

4. The feeder or cylinder O, constructed as described, in combination with the dog N, spring *u*, and lever D, substantially as specified.

5. The levers D' and F, crank *i*, shaft E, cam G, stirrer H with its arms A and spring *g*, when all are combined as set forth.

6. Lid C, levers D, D', I, L, and F, dog N, chute K, feeder O, shaft E, cam G, and stirrer H, when all are combined to operate substantially as shown and described.

113,187.—BEE-HIVE.—John F. Metherd and Solomon Young, Union City, Ind.

Claim.—The moth-chambers D, with entrances *d d*, glass doors E E, and central chamber C, and opening *b*, to a comb-frame hive, constructed substantially as and for the purposes set forth.

113,188.—VEGETABLE-CUTTER.—Francisque Monnet, New York, N. Y.

Claim.—1. The tubular knives *g*, shown in figs. 5 and 6, in combination with the holder *m*, for vegetable substances, sustained in the slides *o*, and reciprocated, as set forth.

2. The frame of knives *s*, within the box *m*, to separate the vegetable material, in combination with the follower *n* and knife *g*, for the purposes set forth.

113,189.—MACHINE FOR STRIPING AND CUTTING LEATHER.—John E. Coffin, Portland, and Charles E. Morrill and George F. Hall, Westbrook, Me.; Coffin and Hall assign to Charles E. Morrill.

Claim.—1. The vibratable cutter-bar *k* in the carriage *b*, and the roller *n*, in combination with a striping mechanism, as herein set forth.

2. The grooved roller *n*, in combination with the carriage *b*, to operate as herein set forth.

3. The combination of the coloring apparatus with its movable fingers *p*, with the conductors *q* and coloring-vat *r*, with the roller *m* and carriage *b*, as herein set forth.

4. The combination of the cutter-bar *k*, roller *n*, and pressure-bar *t*, as herein set forth.

5. The combination of the carriage *b*, with its cutter-bar, roller, and coloring apparatus, with the elastic bed *a*, as herein set forth.

6. The reciprocating carriage *b*, in combination with the trucks *c d*, tracks *e f*, and racks *h*, as herein set forth.

7. The coloring-vat, with the adjustable conductors *q* on the rod *s*, in combination with the rollers *u* and carriage *b*, as herein set forth.

8. The method of striping and cutting skins herein set forth; that is, by means of the reciprocating carriage *b* with its devices, an elastic bed, *a*, and a tin or other supplemental sheet, as and for the purposes herein set forth.

9. The combination of the carriage *b*, with its devices, with the bed *a*, table, tracks, racks, and trucks, as herein set forth.

113,190.—ROTARY-PLOW.—Joseph R. Morris, Houston, Texas.

Claim.—A shaft, having thereon a series of disks, to the circumference of each of which are attached, at an obtuse angle to the radiuses, spades, operating as set forth.

113,191.—FURNACE FOR PRODUCING HYDROGEN AND TREATING ORES.—Joseph R. Morris, Houston, Texas.

Claim.—A cupola or furnace, combined with a water-chamber, a steam-chamber, and converting vessels, or a converting-chamber containing iron filings or scraps, said furnace being so placed with reference to the other chambers as to heat the water in one and the iron in another, and superheat the steam in the third, and the converting-chamber being so placed with reference to the steam-chamber as to receive steam therefrom, and with reference to the furnace as to discharge hydrogen thereinto.

113,192.—PRODUCING GASES FROM HYDROCARBONS. — Xavier Mousseard, Paris, France.

Claim.—The combination of the tube *b'*, provided with apertures, with pipe *y*, bell *t*, perforated chamber *c*, the burner *s*, and casing *m*, arranged substantially as and for the purpose specified.

113,193.—BUGGY-BRAKE.—Isaac Lamborn Myers, Ferguson township, Pa.

Claim.—1. The combination of the brake-bar D with spring E and rest C, lever *c* and rest *g*, all substantially as shown and described.

2. The dog *h*, lever *c*, and rest *g*, in combination with the spring E, brake-bar D, and rest C, when all constructed, arranged, and operated substantially as shown and described, for the purposes set forth.

113,194. — BREECH-LOADING FIRE-ARM.—Robert Nenninger, Newark, N. J.

Claim. — 1. The perforated revolving breech-block, in combination with a plunger which serves to open the breech-block to carry the cartridge home, and to close the breech-block, substantially in the manner herein shown and described.

2. The lever G, crank *e*, pin *j*, and slot *k*, in combination with the plunger E and breech-block B, substantially as and for the purpose set forth.

3. The recess *l* in the plunger, in combination with the lever G, substantially as specified.

4. The combination of the lever G, plunger E, breech-block D, main-spring H, and firing-pin *p*, substantially in the manner herein described.

113,195.—SKIRT-BOARD.—John F. Nettleton, New Haven, Conn.

Claim.—The combination of the skirt-board A, legs B, hinged to the table, and the brace C D, jointed and hinged to the table and legs, the whole constructed and arranged to fold in the manner substantially as described.

113,196.—MOLDED SADDLE-TREE AND COMPOSITION FOR THE SAME.—Ernst B. Newman, St. Louis, Mo., assignor to Newman Erb, same place.

Claim.—1. As an article of manufacture, a molded plastic composition saddle-tree.

2. The plastic composition, composed of the ingredients specified.

113,197. — HOT-AIR FURNACE.—James R. Nichols, Boston, Mass.

Claim.—1. In the construction of hot-air stoves or furnaces composed of wrought or malleable iron, constituting the heat-radiating surface, the adjustment and application to the body thereof of flanges, in the manner and for the purpose herein described.

2. The heat-radiating device H, in combination with the flanges I I and covering D, in the manner and for the purpose herein described.

113,198. — MEDICINE OR POWDER FOR HORSES, &c.—John Norcross, West Newton, Pa.

Claim.—The medical powders for veterinary purposes, composed of the ingredients herein described, and compounded in the proportions and manner set forth.

113,199. — OILER FOR LOOSE-PULLEYS.—Stephen R. Norris, New York, N. Y.

Claim.—The combination of the driving-tube *b*, discharge-tube *c*, and screw-regulating plug or valve *d*, with the annular oil-cup A, all arranged and operating essentially as shown and described.

113,200.—LUBRICATOR.—Thomas J. Nottingham, Cincinnati, Ohio.

Claim.—1. In combination with the chambers A E, the valves C H, when the latter are located and operated between the chamber E and the discharge exit, as and for the purpose specified.

2. In combination with the chambers A E and valve C, the double-seated valve H, fig. 1, operating in the manner and for the purpose specified.

113,201.—SEWING-MACHINE.—Charles O. Parmenter, Amherst, Mass.

Claim.—1. The combination, with an organized sewing mechanism, having a curved plate adapted to enter and support a hat, of a band-guide, substantially as described, capable of conducting the band to the hat supported by said plate, said band-guide being secured to the front of the arm forming the bearings for the needle-slide and the presser-slide of the sewing-machine, substantially in the manner herein shown.

2. The combination, with an organized sewing-mechanism, of a plate capable of supporting a hat, a band-guide capable of conducting the band to the outside of a hat, and a sweat-guide capable of conducting the sweat to the inside of said hat, all substantially as and for the purpose set forth.

3. The guide C, attached to a lever which is hinged to the front of the arm B, said guide being composed of a curved face-plate, with two guides, one at the top, the other at the bottom, and with two gauges, *d e*, substantially in the manner shown and described.

113,202.—METHOD OF SCENE-SHIFTING FOR THEATRICAL AND ANALOGOUS PURPOSES.—John L. Peake, New York, N. Y.

Claim.—1. The piston and cylinder, in combination with scene-shifting mechanism, and with means for admitting and discharging water to shift the scenes, substantially as herein specified.

2. The reservoir N, in combination with scene-shifting-mechanism, for the purpose of supplying large quantities of water rapidly, as specified.

3. In combination with theatrical scenery and the scene-shifting mechanism G H I, and their connections, the reservoir cylinder N, piston *n*, connected frame n^1, and variable load n^2, arranged as herein specified.

4. The adjustable stops R^1 R^2, and their connections, in combination with the hydraulic scene-shifting means G H I, with the cock P or its equivalent, for automatically stopping the motion, substantially as herein set forth.

113,203.—ROCK-DRILL.—George B. Phillips, Poughkeepsie, N. Y., assignor to himself, Adrian M. Cornell, and James V. Harbottle, same place.

Claim.—1. The combination and arrangement of the wheel I, plate P, standard E, braces J, projection *i*, and stop *b*, substantially as described.

2. The combination of the sliding-bar A, plates *f* and *g*, lifting-bar D, and fixed bar E, provided with the beveled blocks M and N, arranged to operate substantially as described.

3. In combination with the drill-rod Q, the ratchet-wheels *n* and *n'*, provided with pawls *r* and *s*, vibrating-plate H, sliding rod C, provided with oblique slot *v* and stops *m* and *m'*, all substantially as described, for the purposes set forth.

113,204.—CLOTHES-DRIER. — Edward N. Porter, Morrisville, and Israel J. Currier, Wolcott, Vt.

Claim.—1. The combination of the brackets A A with their shoulders *c c*, arms B C, and rods *a b c*, all constructed and arranged substantially as and for the purposes herein set forth.

2. The combination of the brackets A A with their shoulders *c c*, arms B C D D' E E', and rods *a b c d f h*, all constructed and arranged substantially as and for the purposes herein set forth.

113,205.—CORN-DRILL.—Benjamin W. Remy and Noah T. Remy, Brookville, Ind.

Claim.—1. The arrangement of the axle A, wheels B B, metallic frame C, forked blocks D D with the pins *a a*, all substantially as shown and described.

2. The beam I, carrying the furrow-plow K and covering-plows L L, and supported by the pivoted stirrup O, adjustable stirrup H, and rods *b b*, substantially as and for the purposes herein set forth.

3. The lever M, placed on the axle A, and provided with the jointed brace N and rod *t*, and connected, by the rods *b b*, with the beam I, for the purpose of raising the plows out of the ground, and also for throwing the drill mechanism out of gear, substantially as herein set forth.

4. The combination and arrangement of the platform P, carrying the entire drill mechanism, and hinged or pivoted at its front end, while the rear end is provided with shaft *d* and pinion *f*, said pinion resting upon the cog-wheel R on the axle A, substantially as and for the purposes herein set forth.

5. The brush *i*, connected to the end of a spring, and suspended in the box S, over the slide, and operated substantially as set forth.

113,206.—CORN-PLOW.—Benjamin W. Remy and Noah T. Remy, Brookville, Ind.

Claim.—The combination of the beam A, shanks B C, plows E, handles G, braces E H, and double-tree I, all constructed and arranged substantially as and for the purposes herein set forth.

113,207.—BEE-HIVE.—William Reynolds and Joseph V. Brooks, Lexington, Ill.

Claim.—A bee-hive, having the notched strips B arranged at the sides, and the notched strip E at the bottom, for supporting the frames C and holding them in their proper positions, substantially as described.

113,208. — CHLORIDIZING SILVER ORE.—Eugene N. Riotte, San Francisco, Cal, assignor of five-fourteenths interest to Charles A. Stetefeldt, same place, and five-fourteenths to John H. Boalt, Sandusky, Ohio.

Claim.—The process of chloridizing silver ore by dropping a mixture of pulverized ore and salt through a vertical or nearly vertical shaft with the products of combustion.

113,209. — WARDROBE OR HAT-HOOK.—Charles Roe Scott, New York, N. Y.

Claim.—The wardrobe, clothes, or hat-hook C, when inserted in the ornamental plate A, having the part between the recesses raised so as to receive the shank or foot, of the removable hook C, all constructed and arranged in the manner and for the purpose described.

113,210.—TREADLE.—Al B. Shaw, Medford, Mass.

Claim.—The treadle, composed of the shaft *a*, fly-wheel A, pawl-case B, and a pivoted pawl, in combination with the spring C, foot-plate D, chain E, and connecting-rod F, all constructed and operated substantially as and for the purpose set forth.

113,211. — PUNCH AND EYELETING-MACHINE.—Elijah Shaw, Milwaukee, Wis.

Claim.—1. An eyeleting-machine, arranged to punch two holes, feed, and set two eyelets with one motion at the same time, substantially as described.

2. Roller K and lever L, arranged so that lever L will go down a certain distance pressed by roller K, and then it will assume a perpendicular position and remain pressed down that distance while the roller K passes on, substantially as described.

3. Punching-frame O, movable head X, spring V, spring T, set-screw W, and set-screw K', in combination with swinging frame A^2, substantially as described.

4. Bent lever B, links C, frame I, rods G', springs H', levers E, rollers F', rods B', springs C', lever Y, feet D', in combination with frames A and A^1, substantially as described.

5. Bent lever B, connecting-links C, frame I, rods G', springs H', roller K', levers L', lever M', shaft P', rod Q', carriage S', all in combination with frames A and A^1, substantially as described.

6. Carriage S', anvils U', with cover V', and springs W', all in combination substantially as described.

7. Inclined way *g'*, in combination with carriage S', for the purpose of keeping the elevation adjusted so that the punches P may keep an even bearing while they and the carriage S' are fed up.

8. Frame A^2 with punching-frame O, to swing open, so that the punches may not be used when not desired.

9. Locking-levers N', springs O', in combination with roller K' and lever L', substantially as described.

10. Frame Z', adjustable guides and springs Q, rollers R, and spring and pins S, in combination with rods D, substantially as described.

11. Inclined way *g'*, arranged in the center between the outsides of frame A, so that a shoe or other closed article may be fed up over and around *g'*, and the holes punched and eyelets set, substantially as described.

12. Annular rim *b*, perforated as described, with chamber *d'*, and pointer *m'*, with slide *y*, and set-screw *w*, substantially as described.

13. Outer pocket for eyelets at the head of chutes *r*, with pointer *m'* and slide *y*, and set-screw *w*, substantially as described.

14. Bushing G, with loose head and set-screws H, in combination with shaft F and setting-rods D, substantially as described.

113,212.—FORK, HOE, &c.—Samuel Sheble, Philadelphia, Pa.

Claim.—The combination of the fork A, the prongs of which are permanently united to a tang, the handle B, beyond the lower end of which projects a ferrule, *d*, and a body of metal filling the lower end of the ferrule, and through which the tang is driven prior to being secured to the handle B, as described.

113,213, antedated March 29, 1871.—MACHINE FOR REPAIRING HOSE, &c.—Alfred Shedlock, New York, N. Y.

Claim.—1. The combination of the row of nee-

dles, presser w^4, and guide k^3, operating so as to knit patches on knitted goods, for the purposes of repairing and strengthening the same, substantially as described.

2. The springs s s, in combination with the presser w^4 and guide k^3, substantially as described.

3. The presser w^4, provided with a series of projections, which lie between and prevent the needles from raising the goods as they pierce it, substantially as described.

4. The guide k^3, in combination with the presser w^4, substantially as described.

113,214.—STAVE-JOINTER.—John Sherman and William Marriott, Cleveland, Ohio.

Claim.—The jointing cylinder herein described, having depressions *c* and knives *d*, constructed, arranged, and operating in the manner and for the purpose specified.

113,215.—FASTENER FOR CARRIAGE-CURTAINS, &c.—Samuel Shute, Jr., Richmond, Va.

Claim.—A curtain-fastening, consisting of the plates I and B, wire springs C and C, and knob E, all constructed, arranged, and combined substantially as and for the purposes set forth.

113,216.—LOCOMOTIVE.—Albert S. Smith, Boston, Mass.

Claim.—1. The combination, with the exhaust-pipe of a locomotive-engine, of a valve, arranged to close such pipe during stoppage or reversal of the engine, an air-inlet valve for relieving the vacuum which arises within the pipe when the first-mentioned valve is closed, substantially as and for the purposes set forth.

2. The herein-described combination of stand-pipe A, and valves D and *d*, the same operating in manner and to effect purposes before stated.

113,217.—SAW-MILL.—W. Dean Smith and Andrew J. Chase, Union, N. Y.

Claim.—1. The combination of shaft F, gear-wheel F, shafts H N', gears M M^2 N, lever I, and pin I^2, substantially as described.

2. The combination of shaft F, H, and N', gear-wheels F M^1 M, pinions N M^3, levers I R, pin I^2, and bar R', substantially as described.

3. In combination with tubular shaft H and lever I, the tripping-rod K, bell-crank J, stop J', disk K', and nut H^1.

4. The combination of vibrating arm O^1, shafts O P', gears P O^1, and nut H^1, substantially as described.

5. The combination of shafts O P', gears P O^1 O^2 O^3 H^2 with nut H^1, tripper L *l*, and shaft H, as set forth.

6. The slotted side piece or stringer D, in combination with the tenoned girts E^1, bed-piece E, and ways E^2, these parts being constructed and arranged substantially as described, whereby the head-block may be adjusted longitudinally upon the carriage, as set forth.

113,218.—WINDMILL.—Bradley W. Stanton, Almena, Mich.

Claim.—The shafts C C, wind-boards D D, rods *a a*, plate *b*, collar *d*, rod *e*, and governor E, the several parts being constructed and arranged substantially as and for the purpose specified.

113,219.—GRAIN-DRIER.—William Stark and Joseph G. Fisher, Toledo, Ohio.

Claim.—1. The screen M, provided with funnel N and pipe L, substantially as described and shown, for the purposes set forth.

2. The arrangement within the bins B C of the pipes D D' E F G, provided with valves I I^1 I^2, and globular enlargements H and H', and perforations *c* and *d*, substantially as described and shown, for the purposes set forth.

3. The combination of the screen M and the pipe E, substantially as described and shown, for the purpose set forth.

4. The combination of the screen M and the pipes E, D D', F, G, K, and L, substantially as described and shown, for the purposes set forth.

5. The arrangement of the bins B and C, the partition *a*, the beam *b*, the pipes D D', E, F, G, and K, and the perforated tile-columns P P', substantially as described and shown, for the purposes set forth.

113,220.—HEATING-STOVE.—William Stark and Joseph G. Fisher, Toledo, Ohio.

Claim.—1. The application of water in drops to the top of the fire-pot, within a hot-air chamber, substantially as described and shown, for the purpose set forth.

2. The combination of the reservoir M, standard N, hot-air chamber H, and fire-pot G, substantially as described, for the purpose set forth.

113,221.—EXCAVATOR.—Barna T. Stowell, Quirley, Ill.

Claim.—The digger K M N *o*, endless chains D D, pivoted and braced scrapers E E, rag-wheels L L, and inclined plane C, constructed and arranged as herein shown and described, to form an improved excavator.

113,222.—FARMER'S BOILER.—Richard W. Thickins and David R. Sperry, Batavia, Ill.

Claim.—1. The caldron A, made with a central flue or passage for the heat B, constructed and arranged substantially as specified and shown, and for the purpose set forth.

2. The caldron A, made with a central flue, B, in combination with the coiled pipe C, substantially as and for the purpose specified.

3. The combination of the caldron A and cover *a*, with annular grooves, with the round packing *f*, substantially as and for the purpose specified.

4. The combination and arrangement of the caldron A, having a V-shaped flange, *e*, with the inclosing-jacket D, having a beveled edge, as described and shown, and for the purpose specified.

5. The construction and arrangement of the basket grate J, in connection with the fire-box G, whereby an air-space is made to surmount the said grate, substantially in the manner specified, and for the purpose of preventing the loss of heat by radiation.

6. The conical basket-grate J, with bars at front and rear, in combination with the fire-box G, having the full-sized door H and the flanges *g*, as and for the purpose specified.

7. The combined safety-valve, low-water indicator, and hot-water faucet O, consisting of the tube P, levers Q R, chamber S, and tube S', when constructed and operating substantially as and for the purpose specified.

113,223.—CULTIVATOR.—Jacob S. Thomas, Mifflintown, Pa.

Claim.—The cross-bar *d*, provided with a series of grooves or notches to receive the spring-shanks *b b* of the shovels *c c*, and with the transverse slot *e* for the clamp-bolt *f h*, all arranged as shown and described, in connection with the beam *a*, whereby the shanks and shovels may be laterally adjusted by moving the cross-bar lengthwise of the beam, as set forth.

113,224.—COMPOSITION FOR PRINTERS' INKING-ROLLERS.—Andrew Van Bibber, Cincinnati, Ohio.

Claim.—Chloride of calcium in the composition of printers' inking-rollers, as described, and for the purposes specified.

113,225.—HARVESTER.—Joseph Van de Water, Whitewater, Wis., assignor to himself, George Esterly, and George W. Esterly, same place.

Claim.—1. The platform B, hinged to the cutter-bar B' by means of the joints *f*, *h*, and *u*, whereby the inner front corner of the platform is made to swing to or from the cutter-bar when its rear end is adjusted, substantially as described, for the purpose of adjusting the relative position of the cranks, as set forth.

2. The combination of the rock-shaft U and V with their pinions attached, the shaft R with its sleeve M, pinions P and N, and yoke X, and the rake-shaft *w* with the tripping-arm *q* attached, substantially as described.

3. In combination with the mechanism last above enumerated, the shaft G with its two cranks, and the pitmen *m* and *m'*, arranged and operating as set forth.

4. The compound rake, consisting of the rake-head H with its teeth, and the bar I with its teeth *t*, the springs *a'*, and straps *f'*, all arranged as shown and described.

113,226.—FLOUR-BOLT.—Thomas M. Walker, Bellefontaine, Ohio.

Claim.—1. The pull-rods *v*, springs *u*, rocking eccentrics *t*, knockers *w*, and tappet *s*, combined and operating substantially as represented and described, for the purpose set forth.

2. In combination with a trip-knocker on the reel, as herein described, the stationary tappet *s*, composed of a crank-shaft adjustable by arm 9, pin or stop *g*, and holes *s s' s²*, substantially as represented and described, for the purpose specified.

113,227.—WASHER AND WRINGER.—Paul Weatherbee, Port Washington, Ohio.

Claim.—The combined washer and wringer herein described, consisting of the frame A A', braces *f* and *f'*, spring *e*, bearing and connecting-rods *b*, rollers C and C', and crank *i*, all constructed, combined, and arranged substantially as and for the purpose specified.

113,228.—COMPOSITION FOR TREATING IRON.—Samuel Weaver, Pottstown, Pa.

Claim.—The herein before-described composition substantially as and for the purpose specified.

113,229.—BLOWER.—William W. Webb, Indianapolis, Ind.

Claim.—1. The wheels O and arms S, attached to the fan-blade shaft G, in combination with the cam-groove formed by the pieces T, arranged as and for the purpose set forth.

2. The ring E, in which the hub C and fan-blade shaft G are arranged, in combination with the case A, substantially as set forth.

113,230.—GLOVE.—William W. Whitaker, Gloversville, N. Y.

Claim.—1. The inner or palm portion of a glove when provided with the slits 3, 5, and 6, substantially as and for the purpose set forth.

2. The quirk D when constructed as shown, and so arranged as to cover the seam upon the inner side of the thumb, and upon the upper side of the fore or index-finger, substantially as and for the purpose set forth.

3. The combination and arrangement of the portions A and B of a glove, and the quirk C and D, substantially as and for the purpose set forth.

113,231.—FOLDING-BED.—Lewis Whitehead, Sr., Brooklyn, N. Y.

Claim.—1. The slotted and recessed braces B B, pivoted to the part A, in combination with the headed projections *c c*, fastened to the part A' of a bed, substantially as and for the purpose set forth.

2. The plates C C, constructed as described, and supplied with the projections c^1 c^1, and apertures c^2 c^2, substantially as and for the purpose set forth.

113,232.—CUT-OFF VALVE-GEAR.—Seth H. Whitmore, Decatur, Ill.

Claim.—1. The combination of the vibrating arms A A, catches 2 2, and the sliding arms 3 3, working on the ends of the levers 5 5, with the adjustable weights, and the eccentrics and hooks for operating the same, substantially as and for the purpose hereinbefore set forth.

2. The two T-shaped arms working with their faces one upon the other, and the adjustable weight which, by its own weight, shall close the valve or valves of a steam-engine by transmitting its power to the valves, by means of the lever and the two T-shaped arms, substantially as described.

113,233.—CORN-PLANTER.—Uriah T. Wilson, De Soto City, Miss.

Claim.—In a corn-planter, the combination of the spring cut-off Z with the adjustable dropper-sleeve L, provided with sets *a b c* of one, two, three, or more pockets, and set-screw Z', substantially as specified.

113,234.—SULKY ATTACHMENT FOR PLOWS.—John Worrell and James H. Rynerson, Clayton, Ind.

Claim.—In a sulky attachment for plows, the combination of the bent lever G and adjustable bar F with the foot-lever L, shaft *f*, forked arm N, and clamp *e d*, substantially as specified, as an improvement upon our patent of July 26, 1870.

113,235.—SULKY ATTACHMENT FOR PLOWS.—John Worrell and James H. Rynerson, Clayton, Ind.

Claim.—1. In a sulky for plows, the axle herein described, having the double bend *k z*, substantially as specified.

2. In a sulky attachment for plows, in combination with the square axle bent in U shape and pivoted, as described, the bent arm *c*, cam-hook *e*, and stop *f*, substantially as specified.

113,236.—LIGHTING ATTACHMENT FOR ALARM-CLOCKS.—Henry X. Wright, Memphis, Tenn.

Claim.—The arrangement of the wheel A, provided with a trip-pin, *a*, trip-shaft B, spring *m*, shaft *c*, friction-disk C, match-holder D, and candle-holder E, when operating together as and for the purpose described.

113,237.—LIQUID-MEASURE.—William M. Wright, Chambersburg, Pa., assignor to himself and Harrison Phoebus, Fortress Monroe, Va.

Claim.—1. The discharge-pipes *d* and *f*, supply-pipe *h*, and nozzle *i*, arranged in connection with the key *k*, provided with passages *l m*, as herein shown and described, whereby liquid may be fed from any suitable reservoir into a single measuring-vessel, or two separate ones, through pipes *d* and *f* simultaneously, and drawn off through said pipes, the supply being meanwhile closed, in the manner herein set forth.

2. The measuring-vessel *a*, provided at the center of its bottom with the discharge-pipe *f*, projecting into the same, and the discharge aperture *b*, as and for the purpose specified.

REISSUES.

4,308.—BREECH-LOADING FIRE-ARM.—Kiel V. Barnekov, Cornwall, assignor to himself and George W. Greene, New York, N. Y.—Patent No. 104,100, dated June 14, 1870.

Claim.—1. The hammer H and pin I, in combination with the breech-block E and slotted plate F, all as herein shown and described.

2. The slots G^1 G^2 G^3 in the projection F, made as shown and described, for the purpose specified.

3. The combination of the hammer H and its pin I with the slotted plate F, when constructed and operating substantially as shown and described.

4. The combination of the pivoted hooked levers M M, springs N N, and grooved side pieces D D, for extracting the empty shell, when constructed and operating as herein shown and described.

4,309.—CULTIVATOR.—Theophilus Bertrand and Peter Sames, Rockford, Ill.—Patent No. 60,916, dated January 1, 1867.

Claim.—1. The combination, substantially as described, of the tongue D with the axle C, arranged in the manner and for the purpose described.

2. The cross-piece E, attached to the tongue D, substantially in the manner and for the purpose described and shown.

3. The standards *e* and *e'*, having pulleys *g* and *g'*, when arranged upon and attached to the axle C, in combination with the chains and rods 7 and 8 and the hinged inclined auxiliary frame H and H', arranged to operate substantially as shown and described.

4. The curved notched bars *d d'*, secured at their upper ends to the standards *e* and *e'* by rods 5 and 6, and to the cross-piece E by rods 3 and 4, in the manner and for the purpose set forth.

5. The combination of two supporting-levers F and F', with their spring-bolts and curved notched bars *d* and *d'*, with the hinged inclined auxiliary frame H and H', when constructed and arranged to operate in the manner shown.

6. The adjustable foot-rest M, notched standards L, and holding-wedge 9, when constructed and arranged to operate together in the manner and for the purpose described.

7. Adjusting the auxiliary frame H and H' with the plow standards, to different widths by means of the arched coupling-bar K and screw staple-clamps *k*, as described and shown.

8. The screw eye-bolts P and socket-plate or block Q, in combination with bed-plate R, constructed and arranged to operate as shown.

9. The standard O, screw-eye bolt P, socket-plate or block Q, and bed plate R, in combination with beams H and H,' substantially as shown and described.

10. The safety-pin *f*, in combination with the standards O, screw eye-bolt P, rings *l*, brace-rod *k*, and auxiliary frame H and H', in the manner and for the purpose described.

11. The combination of the rigid frame, consisting of the tongue D and axle C, the hinged auxiliary frame H and H', carrying the plows, and their means of adjusting the same laterally, consisting of the arched bar *k* and screw-staples *k*, with the foot-supports M M and the lifting and holding devices supported upon the tongue and axle, in the manner and for the purpose shown and described.

4,310.—GRINDSTONE JOURNAL-BOX.—Thomas W. Brown, Boston, Mass., assignor, by mesne assignments, to Harbster Brothers & Co., Reading, Pa.—Patent No. 58,678, dated October 16, 1866.

Claim.—1. The close protecting-box A, in combination with the friction-wheels B B and a cover, C, constructed so as to fit closely upon the said box, and with it completely inclose the friction-wheels and the grindstone-shaft, substantially as and for the purposes set forth.

2. The combination of the said box A, wheels B B, cover C, and projections extending over and protecting from above the journals of said friction-wheels, substantially as and for the purposes set forth.

3. The combination of the said box A, wheels B B, cover C, and projections *c c c c*, extending over and about, and projecting from above and at the ends of the journals of said friction-wheels, substantially as and for the purposes set forth.

4. The combination of the said box A, wheels B B, and cover C, with or without either of the above-described and claimed projections, when said cover is provided with a hinge at one end, substantially as and for the purposes set forth.

5. The combination of the said box A, wheels B B, and cover C, when said cover is provided with an adjustable catch or fastener, by which the said cover may be secured to or released from the box at pleasure, substantially as and for the purposes set forth.

6. The arrangement of the spring-catch E, with the projections *d d* from the cover, and with the sides of the box, as specified.

7. The close protecting-box and cover C, substantially as and for the purposes specified.

4,311.—STEAM ROAD-WAGON.—Charles W. Hermance, Schuylersville, N. Y.—Patent No. 111,644, dated February 7, 1871.

Claim.—1. The horizontal frame E, or its equivalent, attached at one end to the rear axle, and resting upon springs at the other, thereby suspending the boiler, engine, and machinery, and permitting of all necessary vertical motion of the same between the axle and parts which they support, substantially as and for the purposes herein set forth.

2. The springs *a a*, or their equivalents, attached to or supporting the front of the horizontal frame E, which suspends the boiler and machinery, for the purposes set forth.

3. In a steam-wagon, a double train of gears, or their equivalents, in combination with the boiler and engine, with single or double cylinders connecting with fly-wheel and crank-shaft, for the purposes herein set forth.

4. In combination with the double train of gears a movable clutch, *k*, attached to the axle, and operated by a lever, M, and rod *m*, for the purpose of changing the speed, as herein set forth.

5. The horizontal frame E and springs *a a*, or any other device that shall operate as their equivalents, to suspend the boiler, engine, or machinery, and allow of vertical motion to the same between the axle and parts which they support, without ungearing itself or changing the distance between the axle and cylinders, as herein set forth.

4,312.—MACHINE FOR OPENING COTTON.—William C. Jillson and Amos B. Palmer, Willimantic, Conn.—Patent No. 110,368, dated Dec. 20, 1870.

Claim.—1. In a machine for opening cotton, the combination of revolving pivoted whipper-rods or arms, and an inclosing shell or case, for confining the cotton while being acted upon by the whippers, all substantially as described.

2. In a machine for opening cotton, two or more reels or pulleys, provided with hinged or pivoted whipping-rods, in combination with two or more shells or concaves, these parts being constructed and arranged substantially as shown and described, whereby the cotton, after being partially opened by the first set of whippers, shall be fed to the second set of whippers by the action of the first, substantially as set forth.

3. In combination with the whipper-rods and reel-bars, constructed as shown, the elastic sleeves for separating the whipper-rods and allowing them to yield laterally, substantially as set forth.

4,313.—MUFF AND COLLAR-BOX.—James P. Jones, Bloomfield, N. J., assignor to Jason Crane, same place.—Patent No. 96,118, dated October 26, 1869.

Claim.—The combination, in a fur-set box, of a cylindrical compartment with a rectangular compartment, substantially as described.

4,314.—MANUFACTURE OF STEEL.—Solomon W. Kirk, Philadelphia, Pa., assignor of part interest to Henry Thomas, same place.—Patent No. 53,307, dated March 20, 1866.

Claim.—Manufacturing steel from tinned iron or from iron fused with tin, substantially as herein set forth.

4,315.—MACHINE FOR MAKING HORSE-SHOES.—The Howe Horseshoe and Machine Company, New York, N. Y., assignee of Orial A. Howe.—Patent No. 82,409, dated September 22, 1868.

Claim.—1. The construction of the rotary die, the rotary pressure-disk, and rotary cone, severally, jointly with the combination of them, in the manner described.

2. The combination of the rotating pressure-disk G, the rotating die F, and the oscillating frame B, substantially as and for the purpose specified.

3. The arrangement of the rotating pressure-cone F* upon the oblique shaft I, when combined with the pressure-disk G and the rotating die F carried upon the oscillating frame B, substantially as and for the purpose specified.

4. The arrangement of the guide-notch *b'* and the wheel *c* upon the frame B, and in relation with the rotating die F carried thereby, and the presser-disk G, substantially as and for the purpose specified.

5. The arrangement of the spring J with reference to the rotating die F, presser-disk G, and pressure-cone F*, substantially as and for the purpose specified.

4,316.—HOOP-SKIRT.—William H. Towers, Boston, Mass., assignor to The Vertical Hoop-skirt Company, same place.—Patent No. 84,149, dated November 17, 1868.

Claim.—1. A skeleton hoop-skirt, consisting of an upper and a lower group of hoops with an intervening space, and suitably connected to each other, for accomplishing the purposes described.

2. In combination with the above, the suspending and bracing wires for holding down the flounce-group E F when the wearer sits, and counteracting horizontal oscillation thereof when walking, as described.

DESIGNS.

4,732.—STONE-DRAG.—Joseph P. Adams and George Hyde, Whitney's Point, N. Y.

Claim.—The design for front of stone-boat or log-boat, as herein shown and described.

4,733.—TOY STEAM-ENGINE.—Alexander Buckman and John W. Huffington, Brooklyn, N. Y.

Claim.—The design for the boiler and stand of a toy steam-engine, substantially as described and represented in the accompanying drawing.

4,734.—CARPET-PATTERN.—George Holdsworth, Halifax, England, assignor to W. & I. Sloane, New York city.

Claim.—The design for a carpet, as shown.

4,735.—BED-QUILT.—Louis Kreuzberger, Philadelphia, Pa., assignor to Braner & Co., same place.

Claim.—The design for a bed-quilt, as shown and described.

4,736.—SALT-CELLAR.—John B. Larner, Washington, D. C.

Claim.—The design for a salt-cellar, herein described and represented.

4,737.—CARPET-PATTERN.—William Mallinson, Halifax, England, assignor to W. & I. Sloane, New York city.

Claim.—The design for a carpet, as shown.

4,738.—CARPET-PATTERN.—Archibald McCallum, Halifax, England, assignor to W. & I. Sloane, New York city.

Claim.—The design for a carpet, as shown.

4,739.—CARPET-PATTERN.—Archibald McCallum, Halifax, England, assignor to W. & I. Sloane, New York city.

Claim.—The design for a carpet, as shown.

4,740.—CARPET-PATTERN.—Archibald McCallum, Halifax, England, assignor to W. & I. Sloane, New York city.

Claim.—The design for a carpet, as shown.

4,741.—CHAIR.—Henry Ocorr, Sheboygan, Wis.

Claim.—1. The design for the base of a chair, substantially as described and shown.

2. The design for the front of a chair-seat, substantially as shown.

3. The design for a chair, herein shown and described.

4,742.—CHAIR.—Henry Ocorr, Sheboygan, Wis.

Claim.—1. The design for a chair, substantially as herein shown and described.

2. The design for the base or lower part of a chair, substantially as shown.

4,743.—TYPE.—Richard Smith, Philadelphia, Pa., assignor to MacKellar, Smiths & Jordan, same place.

Claim.—The design for printing-type, as shown.

4,744.—STATUARY.—Ames Van Wart, New York, N. Y.

Claim.—The within design, substantially as shown.

4,745.—GLASS BOTTLE.—William R. Warner, Philadelphia, Pa., assignor to William R. Warner & Co., same place.

Claim.—The design for a glass vessel or bottle, substantially as described and as represented in and by the accompanying drawing.

TRADE-MARKS.

207.—WHISKY.—John L. Bernecker, St. Louis, Mo.

208.—MEDICINE.—Henry H. Hay, Portland, Me.

209.—WHISKY.—Daniel V. B. Henarie, San Francisco, Cal.

210.—WHISKY.—E. Martin & Co., San Francisco, Cal.

211.—BITTERS.—Adam Orth, Milwaukee, Wis.

212.—SALVE.—O. M. Palmer, New York, N. Y.

213.—MINERAL-WATER.—Saratoga Seltzer-Spring Company, Saratoga Springs, N. Y.

214.—TEA.—Williams, Blanchard & Co., San Francisco, Cal.

EXTENSIONS.

DAVID H. WHITTEMORE, of Worcester, Mass.—Letters Patent No. 16,666, dated February 17, 1857.

"*Improvement in Machine for Paring Apples.*"

Claim.—1. Giving the slide I, (with its slicing-knife attached) a curved or lateral motion, for the purpose of enabling the slicing-knife to leave the core in a shape for the easy removal of the apple, by means substantially as set forth.

2. The arrangement consisting of the traveling-knife carriage I, with its tilting-lever K playing

over the guard G, which keeps the lever engaged with the screw while the apple is being pared, and releases it for the free return of the carriage, as herein set forth.

HERMAN E. DAVIDSON, of Gloucester, Mass., for himself and CHARLES H. DAVIDSON, deceased.—Letters Patent No. 16,956, dated March 31, 1857; reissue No. 1,940, dated April 25, 1865.

"Enema Syringe."

Claim.—A syringe having an elastic bulb or chamber, flexible tubes, and a suitable valvular arrangement when organized so as to operate substantially as described.

ALONZO M. GILES, Boston, Mass.—Letters Patent No. 16,830, dated March 17, 1857.

"Improved Gas-Generator."

Claim.—1. The inner door E, operating in the manner substantially as described, whereby the heat of the retort is rendered much more intense and uniform, as set forth.

2. The pipes D, in combination with the inner door E, arranged and operating in the manner substantially as herein set forth, for the purpose specified.

ISSUE OF APRIL 4.

PATENTS.

113,238.—MACHINE FOR MAKING BOXES.—Elbridge G. Alden, Cambridge, Mass.

Claim.—The block or former B, clamps D, provided with arms C, slot S, and spring b, lever L, and treadle or follower T, provided with gauge i, all arranged and operating substantially as described.

113,239, antedated March 29, 1871.—MANNER OF PACKING AND CONVEYING ICE-CREAMS, WATER-ICES, &c.—Ignazio Allegretti, Philadelphia, Pa.

Claim.—As a new article of manufacture and commerce, ice-creams or water-ices put up in the manner herein specified, and kept for sale ready for use in rations, as it were, substantially as herein specified.

113,240.—MAGNETO-ELECTRIC DIAL-TELEGRAPH. — George L. Anders, Boston, Mass.

Claim.—1. The drum G, composed of rubber or other like material, provided with the pins *f*, arranged spirally, in combination with the spring-plate G^1 and keys H, all arranged and operated substantially as described.

2. The drum G, provided with arm K, having fingers *k k'*, in combination with arm *i*, pawl J, arm *j*, springs L *j'*, and ratchet I, substantially as described.

3. The drum G, in combination with friction-disk *l* and its operating-lever M, substantially as described.

4. The spring-plate G^1, provided with catch-springs *g*, substantially as set forth.

5. The combination, with a magneto-electric dial-telegraph, of a straight key-board, H.

113,241.—STEAM COOKING-RANGE.—John Ashcroft, Brooklyn, N. Y., assignor to Sarah Jane Ashcroft, same place.

Claim.—1. A steam cooking-range, consisting of the outer jacket B, ovens A, lids *a* and D, constructed and arranged substantially as shown and described.

2. The steam-generator C, having the straight-elbowed pipes P, constructed and arranged substantially as shown and described.

3. The combination of the jacket B, its ovens and lids, with the generator C and its pipes P, arranged and operated substantially as shown and described.

113,242.—FLUTING-MACHINE.—S. William Babbitt, West Meriden, Conn.

Claim.—A fluting-machine, composed of the hollow removable roll *f* mounted loosely on shaft I, having a vertical movement in the slot *i* of the upright *a'*, the rod *k*, spring *o*, and cam-lever *e e'*, the roll *e*, shaft *e*, and crank *d*, and the frame *a a a'*, provided with the screw-clamp *b*, all constructed, arranged, and operating substantially as herein described

113,243.—WINDMILL.—Peter Bailey, Smyrna, Iowa.

Claim.—1. In a windmill two oppositely-revolving wind-wheels *a a*, mounted upon one shaft and connected with independent gears, which engage with one and the same mechanism, as and for the purpose specified.

2. The combination of the wheel or wheels of a windmill with the rudders *u y*, one placed in line with the shaft of the wheels, and the other at right angles thereto, both rudders being furnished with adjustable wings *t*, as specified.

3. The combination of frame *u*, wings *b'*, connecting-rods *e' g'*, lever *h'*, and rack *l'*, as described.

4. The combination of the wheels *a a'*, rudders *y*, rings *e f h*, and standards *g*, as set forth.

5. The combination of the frames *u y*, brace *s*, and bar *s*, as explained.

113,244.—BRUSH, BROOM, AND MOP-HOLDER.—Charles L. W. Baker, Hartford, Conn., assignor to C. L. W. Baker & Co., same place.

Claim.—A brush-holder, consisting of a claw L and slotted arms *d d*, connected to the handle or to the socket for receiving the handle, and a yoke or clamp, D, the arms of which extend through the slotted arms *d d* and are connected to a ring, C, adjustable on the handle or socket, as specified.

113,245.—DAMPER FOR CHIMNEYS.—Peter Baker, Oakland, Md.

Claim.—The cone A, pendent wire C, and key B, when combined with the chimney, in the manner and for the purpose as set forth.

113,246.—POWER-PRESS.—Charles J. Beasley, Petersburg, Va., assignor to Tappey, Lumsden & Co., same place.

Claim.—1. The loose and shifting driving or band-pulley G, having its hub provided with clutches for adapting it to engage with collars H and I, which are fixed on the shaft, as and for the purpose specified.

2. The stop-rod R, having the stop-nuts U arranged to be acted on by the projection S of nut T, combined with the shifting-lever L, by means of the oscillating shaft, cranks, and link for shifting said lever, all substantially as specified.

113,247, antedated March 23, 1871.—VALVE FOR STEAM-PUMPS. — John V. V. Boorem, Jersey City, N. J.

Claim.—The flexible and elastic induction-valve F, arranged for operation in relation to the inlet-opening *b* and passages connected therewith, in combination with the sliding valve-carrier or hub E, for action on it by a moving diaphragm or piston, substantially as herein set forth.

113,248, antedated March 23, 1871.—VALVE FOR STEAM-PUMPS. — John V. V. Boorem, Jersey City, N. J.

Claim.—A valve, having combined with it a piston or diaphragm, substantially as herein described, and operating by differential pressure on the one side or face of the piston to close the valve, and allowing of the valve to open when pressure is established on both sides of the piston, as specified.

113,249.—APPARATUS FOR CASTING.—John P. Broadmeadow, Bridgeport, Conn.

Claim.—1. The combination of the movable bed or beds C with attached clamps E, lever *e*, and locking-hook *f*, for carrying and securing the molds, substantially as specified.

2. The combination of the ladle, float, and water-trough, essentially as and for the purposes herein set forth.

3. The arrangement of a ladle, supporting-float, and water-trough, with relation to a movable mold-bed or beds having attached clamps, substantially as specified.

4. The combination and arrangement, essentially as herein described, of the reel A, with its pendulous shelves C and attached clamps E, the water-trough H, and the float G, with its ladle-yoke or frame A.

113,250, antedated March 21, 1871.—MANUFACTURE OF SALT.—Joseph R. Buchanan, Louisville, Ky.

Claim.—1. The combination, with a salt-boiler, of a pump to establish a rapid current through it.

2. The combination, with a salt-boiler, of the ascending and descending channels A C D C, to establish a rapid current through it by the force of ebullition.

3. The combination of the channels A C D C in a concentric manner, as shown in figs. 8 and 9, and their prolongation through the boiler.

4. The combination, with a salt-boiler, of the circulator and salt-pockets, fig. 13, being the series of inclined planes *i p i p* and *i p*, to establish currents between the pockets *po po*.

5. The combination, with a close salt-boiler, of the revolving spiral scraper, fig. 3ª, to effect the removal of salt while under pressure.

6. The combination, with a revolving scraper for a close salt-boiler, of the propelling floats *p p p* and the steam-caps *c c c c*, substantially as described, for the purposes mentioned.

7. The combination, with a vertical salt-boiler, of the vertical rotary scraper, fig. 4, and the propelling-paddles *p p p p*, substantially as and for the purposes described.

8. The combination, with a monothermal series of boilers, of double steam-pipe connections, in such a manner as to make their serial action reversible, substantially as described.

9. The combination of two or more monothermal series of boilers into combined parallel series, substantially as described.

10. The combination, with a brine-boiler, of the compound tubular steam-heating and condensing structure, shown in figs. 10, 11, substantially as described.

11. The combination, with a brine-boiler, of the feed-heater or condensing-vessel, as shown in fig. 12, substantially as described.

12. The combination, with a monothermal series of brine-boilers, of the compound vacuum evaporator, fig. 16, or equivalent structures, for vacuum evaporation by the heat of vapor.

13. The tilting boiler, fig. 15, substantially as described, for serial or detached use.

14. The brine-boiler, fig. 14, with the mushroom heater and serial connections, substantially as described.

15. The combination, with a brine-boiler, of a series of concentric cylinders, forming condensing steam-heaters, figs 5 and 5ª, substantially as described.

16. The combination of narrow descending smoke-channels and ascending cold-air channels to effect the condensation of the vapor and recovery of the latent and sensible heat in the products of combustion.

17. The combination of the parallel flattened air-channels *a c*, sliding upon a rack in a smoke-chamber, to extract the caloric of the smoke, substantially as described.

18. The combination, with the flue which conveys the products of combustion, of the two inverting-cylinders *o o*, fig. 4, sheet 1, and their appendages, the channels *h a* 1 2 3, for the recovery of heat and condensation of vapor by an upward current of cold air.

19. The method of transferring heat from a furnace by a concentrated solution of caustic soda or potassa circulated in tubes or equivalent arrangements.

113,251. — CHURN. — William E. Budd, Chatham, N. J.

Claim.—The combination of a rotary dasher, having perforated blades, with a series of spirally-arranged fixed blades in the barrel of the churn, substantially as and for the purpose herein set forth.

113,252.—STEAM AND HYDRAULIC PACKING. William M. Canfield, Philadelphia, Pa.

Claim.—The arrangement of the central cords C or C', braids *b*, b^1, and b^2, in combination with the compound P, composed of the ingredients set forth in my patent of December 27, 1870.

113,253. — HORSE-COLLAR AND HAME.—Otho Cann, Coldwater, Mich.

Claim.—The elastic metallic plate *a*, forming the foundation of a horse-collar, and provided with the projecting lugs *s*, each formed in one piece with the plate, for the attachment of the tugs, and constructed as specified.

113,254.—WASHING-MACHINE.—Cyrus E. Carter, Martinsville, Ohio.

Claim.—The box A, divided by partition B, the vertical revolving fingers E, rigidly attached to heads F F, and thereby connected to shafts G G, the crank-mechanism J K L M N O, and the hinged cover H, all combined and arranged as and for the purpose specified.

113,255.—ROLL FOR ROLLING HORSESHOE-BARS. — Ebenezer Cate, East Woburn, Mass.

Claim.—The roller, consisting of the parts D E F F, each constructed in the form and arranged in the manner herein set forth, when combined with the roller A C C', constructed as described, for the purposes herein specified.

113,256.—PAPER-CUTTING AND FOLDING-MACHINE.—Cyrus Chambers, Jr., Philadelphia, Pa.

Claim.—1. The folding-rollers F F' having cutters *a b* attached, when made to slide endwise by means of screw X, yoke R, and spring *g*, for the purpose of adjusting the position of the cutters relatively to the sheet to be severed, as specified.

2. The folding-blade N, having two strokes imparted to it by the double cam at one revolution of the main shaft, and to a single stroke of the other folding-blades, as and for the purpose specified.

3. The reciprocating plunger, in combination with two sliding plungers, C D, working in the double packing-box B, as described, for the purpose of packing different signatures folded by the same mechanism, either separately or together, as preferred.

113,257.—PAPER-CUTTING AND FOLDING-MACHINE.—Cyrus Chambers, Jr., and William Mendham, Philadelphia, Pa., assignors to Edward Chambers and Cyrus Chambers, Jr., same place.

Claim.—1. The described combination and ar-

rangement of the drop-roller M with the folding-blade J, for carrying positively the once-folded sheet to the folding-rollers G G', as and for the purpose shown and set forth.

2. A drop-roller, whose journal-boxes slide up and down in the knife-arms carrying them, as described, so as to allow an independent movement to the blade when said drop-roller rests upon the folding-roller, as specified.

3. The trough B, provided with plungers E and E', operated by the segment-levers X X' in the manner and for the purpose specified.

113,258.—RUBBER AND BRUSH.—Augustus Charles, Pittsburg, Pa.

Claim.—In combination, the grooved handle A and adjustable rubber or brush C, the elastic strap D', substantially as and for the purpose described.

113,259.—GAITER.—Peter E. Clark, Hartford, Conn.

Claim.—1. A new improved manufacture of boots, shoes, or gaiters, having a strengthening-cord or support, d, stitched to the same around the button-holes, substantially as and for the purpose described.

2. The back or front seam *f*, supported by one or more cords or bands *g*, substantially as and for the purpose described.

113,260.—DEVICE FOR PREPARING BEEF-STEAK FOR BROILING.—William A. Clark, Woodbridge, Conn.

Claim.—In a machine for treating or preparing beef-steaks or other meats for broiling or cooking, the combined use of, or combination of, the series of puncturing or abrading-teeth *b*, the spring-clearer *c*, for preventing the meat from adhering to or following said teeth, and whether arranged to reciprocate or rotate, substantially as herein described and represented.

113,261.—SHOEMAKER'S PINCERS.—Alfred Clarke, Philadelphia, Pa.

Claim.—The combination and arrangement of the circular head C, having a swelled and roughened face, with the jaw B' of the pincers, substantially in the manner and for the purpose above set forth.

113,262.—CUTTER-HEAD FOR PLANING-MACHINES.—Henry Climer and Charles E. McBeth, Hamilton, Ohio.

Claim.—The cutter-head provided with arms *b b'* and bits *c c'*, constructed and arranged in relation to each other in the manner substantially as and for the purpose described.

113,263.—WAREHOUSE-TRUCK.—John S. Cochran, New York, N. Y.

Claim.—In the warehouse four-wheeled truck, the wheels O, arranged to operate substantially as and for the purposes described.

113,264.—BOLT.—William C. Coles, Williamsburg, N. Y.

Claim.—An improved bolt, consisting of the circular slotted cap or case A made with teeth upon its edge, screw B, slotted bolt D, eccentric disk E, knob F, and guard-plate G, said parts being constructed and operating in connection with each other, substantially as herein shown and described, and for the purpose set forth.

113,265.—COTTON-PRESS.—Champ C. Conner, Ripley, Tenn.

Claim.—The arrangement of the shafts *n*, platen *e*, platen-bar *f*, cables *k*, cords *o*, stirrups *s*, and sheaves *g i m q s*, as set forth.

113,266, antedated March 24, 1871.—STOOL OR TABLE.—Albert O. Crane, Boston, Mass.

Claim.—A platform, A, resting upon hinged supports B and C, operating and locking together by means of the bar *h*, slot *d*, the shoulders *g g*, lock-bar *j*, cleats *e* and *i*, and the button *k*, constructed and operating substantially as and for the purposes hereinbefore set forth.

113,267.—CAMERA-STAND.—Aylett R. Crihfield, Lincoln, Ill.

Claim.—The arrangement of the notched uprights C C, fig. 2, and the hinged piece I, fig. 3, and the notched piece E, fig. 2, arranged and operated together for the uses and purposes substantially as described.

113,268.—STAVE-JOINTER.—Harry A. Crossley, Cleveland, Ohio.

Claim.—The wheel A, constructed as herein shown and described, the face being in a straight line from the periphery to a point three-fourths the distance therefrom of the width of the face, and then curved down to the inner circle, as at *x*, the cutters being ground in conformity with the said curve, for the purpose specified.

113,269.—CHEMICALLY-PREPARED LAMP-WICK.—Aaron M. Daniels, Hartford, Conn.

Claim.—1. A wick prepared with camphor, alum, and oil, substantially as herein described.

2. A wick prepared with camphor, alum, oil, and petroleum, substantially as herein described.

113,270, antedated March 21, 1871.—SPRING FOR VEHICLES.—John N. Decker, Covington, Ky., assignor to himself and Thomas J. Smith, same place.

Claim.—The hereinabove-described adjustable auxiliary spring, when the same is constructed substantially in the manner and for the purpose shown and described.

113,271.—FLUTING-MACHINE.—Edward Mortimer Deey, New York, N. Y.

Claim.—The arrangement of the frames E D, roller I', link X, lever W, springs *a a*, and bar Y, substantially as shown and described.

113,272, antedated March 22, 1871.—MANUFACTURE OF BILLIARD-BALLS AND OTHER COMPOSITION ARTICLES.—Lewis Deits, Benjamin P. Wayne, and Albern Stone, Albany, N. Y.

Claim.—The coating or lining B, of tin-foil or other similar substance, between the composition ball A and the collodion coating C of a billiard-ball, in the manner and for the purpose hereinbefore set forth.

113,273.—EXTENSION-LADDER.—Rensselaer F. Delmont, Flemington, Pa.

Claim.—1. The combination of two or more sections of a ladder, the yokes C D, the slotted angle-plates F, and stud-pins M, all substantially as specified.

2. The combination, with the rails A, of the wheels N and yokes O, substantially as specified.

3. The combination with the rails B and yokes D, of the tool-box P, when provided with the pieces Q, all substantially as specified.

113,274.—FELTED FABRIC.—Theodore Demuth, Danbury, Conn.

Claim.—An improvement in the process of manufacturing mixed felted fabrics, by applying an adhesive liquid to each different-colored yarn, and drying the same thereon before the intermixture of wool therewith, for the purpose of preventing the colored fibers from becoming entangled with the wool, and to preserve the individuality of the several colors.

113,275.—SASH-HOLDER.—John F. Dingee, Bedford Station, N. Y.

Claim.—The pivoted roller C, ratchet F, and spring-hook pawl G *n*, combined as described with pivoted plates D, movable plate *i*, and swiveled screw J, for the purpose specified.

113,276.—LITHOGRAPHIC-PRINTING.—Otto Dubois, Fall River, Mass.

Claim.—The improvement in the art or process of printing pictures from the lithographic-stones, substantially as hereinbefore described, for the purposes set forth.

113,277.—CEILING FOR STAGES.—John W. Dunne, New York, N. Y.

Claim.—1. The jointed ceiling for stages, suspended from lines *d d*, of varying lengths, to thereby receive the desired shape, as set forth.

2. The bar E, combined with the jointed ceiling, and with the battens C, for the purpose of suspending the ceiling flat between the other scenery, as specified.

3. The frame B, composed of the flexible profile strips *a* and jointed stretchers *b*, substantially as and for the purpose herein shown and described.

113,278.—EEL-TRAP FOR WATER-PIPES.—Josiah J. Dutcher, New Haven, Conn., assignor to Godfrey W. Dutcher, same place.

Claim.—An eel-trap, applied to the water-pipe so as to project beyond the inner end of the same into the main or reservoir.

113,279.—PURIFYING ANIMAL CHARCOAL.—Hermann Eissfeldt, Sollingen, Duchy of Brunswick, and Camillo Thumb, Magdeburg, Prussia.

Claim.—1. The treatment of animal charcoal in the process of revivification with concentrated ammonia, at the time and in the manner substantially as and for the purpose herein described.

2. The combination and arrangement of the cooking vessels A A', condensing vessels D E, and receiving vessel I, and their several contained worms and connections, the whole operating substantially as and for the purpose herein specified.

113,280.—BOLT-HEADING DIE.—Philip Eley, New York, N. Y., assignor, by mesne assignments, to Charles Wallich, George Hicock, and Alexander Young.

Claim.—The combination of the stationary heading-anvil B, stationary guide C, movable heading-plunger P, and heading-hammer H, with the gripping-dies A, all arranged as and operating substantially in the manner specified, and for the purpose set forth.

113,281.—WATCH-REGULATOR.—Julius Elson, Boston, Mass.

Claim.—The regulator A, provided with the curved lever D, having bent end and screw E, arranged and operating over segmental edge C, substantially as described.

113,282.—GATE.—James B. Erwin, Pittsburg, Pa.

Claim.—A pair of inclines, *e e*, pivoted at or near their respective centers, tilting simultaneously in the same direction, each carrying, by an interposed roller, one of the posts *a* of the gate, in combination with the bar *i*, arranged between and connecting such tilting-levers, and, by means of slots and wrists, operating the same, substantially as described.

113,283.—CIDER AND WINE-MILL.—William B. Farrar, Greensborough, N. C.

Claim.—1. The combination and arrangement of platen *h*, crushing-cylinder *a*, and press-box *b*, in such manner that the latter serves to hold the unbroken fruit during the process of grinding, and also to hold the pomace during the process of compressing, as specified.

2. The combination of the crushing-cylinder *a*, cam *l*, and combs *m* and *n*, as described.

3. The lever *s*, provided with the prongs *t t* and lip *t'*, in combination with disk *r*, as set forth.

113,284.—WATER AND WIND-WHEEL.—Andrew Folsom, Eastport, Me.

Claim.—The buckets B separately pivoted to the drum C, opened against the stops *b*, and arranged in two or more tiers, as and for the purpose specified.

113,285.—WAGON-JACK.—George Benedict Fowler, Brooklyn, N. Y.

Claim.—1. The arrangement in the lifting-jack herein shown and described, of the lever E, swinging-pawl F, rack G, T-shaped bearings *b*, the whole constructed and arranged to operate substantially as set forth.

2. The rod *c'*, lever E, swinging-pawl F, rack G, and the T-shaped bearings *b b*, constructed, arranged, and operating substantially in the manner as herein shown and described.

113,286, antedated March 18, 1871.—HARROW.—William Fox, Beaver Dam, Wis.

Claim.—A harrow made in pairs, with joints C to hold the pairs together, the chains D to hold the hind ends together, with draft-irons F at either end, so as to haul it in either direction.

113,287.—CHAIR.—George Gardner, Glen Gardner, N. J.

Claim.—A chair constructed with braces F F, the front ends thereof being secured to the front legs E E and to the side rails A A, as shown, and their rear ends being secured to the hind legs D D at a point below the side rails, as shown and described.

113,288.—LOOM.—William R. Giffard, William R. Giffard, Jr., and James A. Giffard, Milo, Me.

Claim.—1. The combination, with the spring *b* and the lathe, of the bell-cranks and drop-pawls *l l*, when arranged for setting the spring while the lathe is moving backward, substantially as specified.

2. The combination, with the drop-pawls and the bell-cranks, of the levers *p* and tappets *r*, the latter being on the cam-shaft, and arranged for operating the said levers alternately, substantially as specified.

113,289.—CLOTHES-PIN.—Keyes H. Goss, Cedar Springs, Mich.

Claim.—As an article of manufacture, the clothes-pin herein described, formed of a single wire, having the spring-coil or coils A and the bends D D and C C arranged to operate as specified.

113,290.—RAILROAD-CAR BRAKE.—John C. Gove, Cleveland, Ohio.

Claim.—1. The clamps E E', pivoted below the axle, in combination with the drum D, levers J, and axle, substantially as and for the purpose set forth.

2. The brake, consisting of the drum D, clamps

E E', and levers J, suspended upon the axles by means of boxes G, substantially as and for the purpose set forth.

113,291, antedated April 1, 1871.—PAPER-FEEDER.—John A. Graves, Washington, D. C.

Claim.—1. The feeding-roller B, provided with elastic rubber coverings *b b*, in combination with the balance-board C and feed-board D, arranged substantially in the manner and for the purpose set forth in the preceding description.

2. The shaft E and eccentric G attached thereto, in combination with the lever H and balance-board C, provided with a crank-axis, all arranged in relation to each other in the manner described, and for the purpose specified.

113,292, antedated March 24, 1871.—FISH-TRAP.—Job E. Hammond, New Bedford, Mass.

Claim.—The fish-trap A^2, with springs a^2 a^2 a^2 a^2, snoods b^2 b^2 b^2 b^2, hooks a^3 a^3 a^3 a^3, and bait-basket D^2, all constructed, combined, and operating substantially as and for the purpose set forth and described.

113,293.—DUMPING-CART.—William Hand, Plainfield, N. J.

Claim.—1. Attaching the body of a dumping-cart to the axle, and the shafts or thills to the body of the cart, substantially as shown and described, and for the purposes set forth.

2. The shafts D and body B of the cart pivoted together in advance of the axle at E E, as and for the purpose specified.

3. Drawing upon the body of the cart to bring the body into position, substantially as described.

4. The right-angled hook G, having the projecting portion H, when applied to a dumping-cart, for the purpose specified.

5. The body and shafts pivoted together in front of the axle, the inwardly-inclined stationary tail-board on the body, the axle turning in the wheels, the connecting and supporting-bar, and the catch-lever, all combined for the purpose of forming an improved dumping-cart.

113,294.—GATE.—Uriah W. Hardy, Abingdon, Ill.

Claim.—The stay G, when constructed as described, with an inclined top, and combined with the posts D, levers E E, and bar A, substantially as described, and for the purpose specified.

113,295.—PIN-LOCK.—August Hermann and Warren H. Taylor, Stamford, Conn., assignors to The Yale Lock-Manufacturing Company, same place.

Claim.—1. The combination, with a movable post or plug B, of one or more safety-rings, K K K.

2. The movable post or plug B, when constructed with one or more suitably-formed holes, apertures, projections, or notches J J, substantially in the manner as and for the purposes described.

3. The combination of a movable post or plug, B, having a key-hole formed therein, all the sides of which are entirely closed, save where the necessary apertures for the insertion of pins, sliders, or tumblers occur, and provided with one or more stop-notches, J J, with one or more safety-rings, K K K.

4. The combination of a movable post or plug, B, having thereon stop-notches J J, with tumblers, pins, or sliders E E, any of the dimensions of which are greater than the thickness of the key D.

5. A safety-ring K, one portion of the circumference of which is wholly or in part removed or cut open, or is raised, indented, or expanded, when constructed and used in the manner as and substantially for the purposes hereinbefore described.

113,296.—GRAIN-SCOURER AND SEPARATOR.—Samuel H. Hinsdell, Henry W. Drake, and Cornelius B. Way, Camillus, N. Y.

Claim.—1. The scourer (or scourers) D, composed essentially of the revolving disk *d*, with its plate-beaters *g g* beneath, and the stationary bed *a*, with its bed-plate or plates *p p p*, having oblong perforations oblique to the said beaters in position, constructed and operating substantially as and for the purpose herein specified.

2. The screening-chamber E, constructed with the draught-opening *e* beneath the grain-spout or hopper *b*, its vertical draught-space through which the grain falls from the spout, and its self-acting valves V V' below, all substantially as specified.

3. The separate successive screening-chambers F G, arranged in connection with the successive scourers D D', as set forth.

4. The grain-scourer and separator, composed of successive scourers D D', separate screening-chambers E F G, to receive the grain before and after passing through the several scourers, and a suction-fan or blower, C, which produces the several draughts for the screening-chambers, all arranged, connected, and operating substantially as and for the purposes herein specified.

113,297.—WOOD-PULP-MACHINE.—William M. Howland, Topsham, Me.

Claim.—1. The bevel-wheels arranged on the sleeve and shaft, in combination with the pinions and suitable intermediate devices for raising the weights, as set forth.

2. In combination with the pinion and bevel-wheels, the shaft, with its worm-screw, cog-wheel, and drum *o*, pulley and chain, all as described.

3. The tipping-carriage, carrying the shaft of the pinion and worm, and operating in connection with the other parts, as set forth.

4. The downward-projecting arm of the carriage, in combination with the pin *f*, as shown and described.

5. In combination with the arm of the carriage and the pin *f*, the latch.

6. The spring combined with the carriage, and operating in connection with other parts, as set forth.

113,298.—TUBULAR STEAM-BOILER.—James Howard and Edward Tenney Bousfield, Bedford, England.

Claim.—1. The vertical tube *a*, combined with the series of horizontal tubes *b* and their centrally-arranged circulating tubes *f*, as and for the purpose described.

2. The arrangement of the circulating tubes *f* upon spurs axially within the horizontal tubes *b*, and projecting therefrom at one end, as and for the purpose specified.

3. The construction of the circulating tubes *f* each with projecting end cut obliquely, as and for the purpose specified.

113,299.—AUTOMATIC APPARATUS FOR OPERATING THE VALVE OF THE EXHAUST-PIPE OF LOCOMOTIVES.—Ralph Cross Huse, Jr., Georgetown, Mass.

Claim.—1. The arrangement and combination of the auxiliary cylinder E and its piston F, the lever C' and weighted arm *b*, with the blast-pipe A and its valve B.

2. The combination of the auxiliary cylinder E and its piston F, the lever C', and weighted arm *b* with the blast-pipe A and its valve B, the conduit H and the main steam-supply pipe I of the steam-chest of the driving-cylinder of a locomotive-engine, all being substantially as specified.

3. The combination of the aperture *c* and smaller damper or valve *f* and the cock *h*, to be operated as described, with the valve B, the blast-pipe A, and the auxiliary cylinder E, piston F, weighted arm *b*, lever C', and conduit H connected with the supply-pipe I, all as set forth.

113,300.—BRICK AND TILE-MACHINE.—William Hutchinson, Salford, Great Britain.

Claim.—The loose top plate *g*, in combination with the mold A, top slide C, and follower B, as set forth.

113,301. — WINDOW-BLIND OPERATOR.—George Jennisen and Merrick F. Otis, Westborough, Mass.

Claim.—The combination, in a shutter-worker, of the operating-rod D, with a nut and screw-connection, and coil-spring E, all arranged as and for the purpose shown.

113,302, antedated March 21, 1871.—MILK-COOLER.—Nelson Johnson and Ransom E. Johnson, Jasper, N. Y.

Claim.—1. A milk-cooler, A B C, composed of a connected series of concentric ring-shaped milk-vessels, A A, alternating with water-spaces B C, opening from beneath, and provided with strainer-spout D, air-hole *a*, and tube *e*, all substantially as and for the purposes herein set forth.

2. In combination with the milk-cooler A B C, the shaft G, with crank I and shelf or arms *b b*, the spider or support H, and stepping *d*, all substantially as and for the purposes herein set forth.

113,303. — SASH-HOLDER. — William G. Jones and Samuel M. Rankin, Long Green, Md.

Claim.—The combination of the metallic friction-surface plate and elastic block with the catch D and pin *d*, when these latter are attached to the plate and block, for locking both the upper and lower sash, substantially in the manner shown and described, for the purpose set forth.

113,304. — COMBINED CHAIR AND STEP-LADDER.—Ib Jörgenson and Rasmus Olsen, Racine, Wis.

Claim.—1. The combination and arrangement of the parts A and A^1, connecting-bars B B, steps C^1, C^2, C^3, and C^4, the adjustable back of the chair and the hooks G.

2. The combination and arrangement of the additional step C^5, the bars D D provided with slots in which are inserted the belts E E' secured to the inner sides of the hind legs of a chair, substantially as and for the purpose set forth.

113,305.—FOUNTAIN PAINT-BRUSH.—Daniel J. Kellogg, Toledo, Ohio.

Claim.—The perforated tube D, for holding the brush C, in combination with the reservoir or fountain A B, substantially as herein shown and described, and for the purpose set forth.

113,306.—CULTIVATOR.—Albert H. Kennedy, Oberlin, Ohio.

Claim.—The combination of the rod F with the slides I I and the braces G G, substantially as and for the purpose hereinbefore set forth.

113,307. — ROLLING BED.—Julius Krisch and Charles Thoener, New York, N. Y.

Claim.—The bed A, provided with rollers B B or rigid stretchers at its ends, and straps C C and D D attached to said rollers or stretchers, substantially as and for the purpose herein set forth.

113,308. — POTATO-DIGGER.—Joseph Preston Lafetra, Shrewsbury, N. J.

Claim.—1. A shovel, D, combined with the shaker F, pivoted to an arm, H, and extending upwardly and rearwardly, as described.

2. The rakes T, having springs, S, constructed as described, in combination with a shaker, for the purpose specified.

113,309.—ROTARY STEAM-ENGINE.—Truckson S. La France, Elmira, N. Y.

Claim.—The rotary drums B C, made extensible on their shafts, their contiguous being on the contiguous faces, provided with [illegible] and grooves, as set forth.

113,310.—FEEDER FOR NAIL-MACHINES.—Henry B. Landers, Williamsburg, N. Y.

Claim.—1. The combination of the nipper-levers H and feed-case *c* with the hooks *f* and an eccentric disk, or its equivalent, for actuating the hooks to open and close the nippers, substantially as described.

2. The combination of the nipper-levers H and feed-case *c* with the hooks *e* and the eccentric and irregularly-grooved cam I, as and for the purpose set forth.

3. In combination with the subject-matter of the preceding claim, the eccentric sleeve *c* and support *d*.

4. In combination with the tube E and its toothed segment, the toothed wheel or segment F, the slotted plate and the pins K thereon, the pawl J and mechanism for actuating said pawl, substantially in the manner described.

5. In combination with the slotted plate and pins K, the pawl J, rod L, and mechanism to impart to said rod vertically-reciprocating movement, substantially as described.

113,311. — FIRE-ESCAPE.—George Laynor and Harry Helmling, Baltimore, Md.

Claim.—1. The device *h h'*, constructed and arranged in connection with the parts *d f g*, as herein shown and described, whereby it is adapted to fold with the ladder into the sill-box, as specified.

2. A fire-escape ladder, constructed in sections, the rounds and tie-pieces of which are of such comparative lengths as to fold one section within another, as set forth.

113,312.—COVERING FOR MELTING-POTS.—Albert C. Lewis, New York, N. Y., assignor to himself, H. A. Richardson, and N. A. Boynton, same place.

Claim.—An improved covering for melting-pots or crucibles, formed of abestus, twisted, wound, or braided around and upon said pot, so as to cover its entire outer surface, substantially as herein shown and described, and for the purpose set forth.

113,313.—CLOTHES-PIN.—Andrew B. Lipsey, West Hoboken, N. J.

Claim.—The combination, with body A and the fingers B B, provided with depressions *b b*, of the tongue C and ring E, substantially as shown, and for the purposes set forth.

113,314. — MACHINE FOR TAPPING GAS AND WATER-FITTINGS.—Charles B. Long, Worcester, Mass.

Claim.—1. The combination, with the tapping-spindle J and feed-screw L, of the screw-cap M, lock-nut J', and center-pin *m*, substantially as and for the purposes set forth.

2. The combination, with the tapping mechanism and locking-clutch, of the shipping devices, consisting of the worm T, segment T^1, arm T^2, link 4, slide 5, collars 1 and 2, spring 7, rod Y, levers W W^1 W^2, and spindle *t*, substantially as and for the purposes set forth.

3. The combination, with the arm T^2 and levers 8, 9, 10, of the latch 14, rod 15, lever 16, and adjustable collar 17, substantially as and for the purposes set forth.

4. The combination of the rotary spindle J, pivoted to feed-screw L, arm L', guides *n*, revolving nut N, gear-wheel N', sliding bearing O, and fork Q, constructed and arranged to operate as described.

5. The combination of the swiveled frame 27, slide-plate 21, swing-bar 25, levers 28, clamp-screws 29, and holding-boxes 33, substantially as described.

113,315.—COVER AND DESK FOR SEWING-MACHINES. — Benjamin T. Loomis and James A. Carey, New York, N. Y.

Claim.—The combination, with a sewing-ma-

E E', and levers J, suspended upon the axles by means of boxes G, substantially as and for the purpose set forth.

113,291, antedated April 1, 1871.—Paper-Feeder.—John A. Graves, Washington, D. C.

Claim.—1. The feeding-roller B, provided with elastic rubber coverings *b b*, in combination with the balance-board C and feed-board D, arranged substantially in the manner and for the purpose set forth in the preceding description.

2. The shaft E and eccentric G attached thereto, in combination with the lever H and balance-board C, provided with a crank-axis, all arranged in relation to each other in the manner described, and for the purpose specified.

113,292, antedated March 24, 1871.—Fish-Trap.—Job E. Hammond, New Bedford, Mass.

Claim.—The fish-trap A^1, with springs c^1 c^2 c^3 c^4, snoods b^1 b^2 b^3 b^4, hooks a^1 a^2 a^3 a^4, and bait-basket D^2, all constructed, combined, and operating substantially as and for the purpose set forth and described.

113,293.—Dumping-Cart.—William Hand, Plainfield, N. J.

Claim.—1. Attaching the body of a dumping-cart to the axle, and the shafts or thills to the body of the cart, substantially as shown and described, and for the purposes set forth.

2. The shafts D and body B of the cart pivoted together in advance of the axle at E E, as and for the purpose specified.

3. Drawing upon the body of the cart to bring the body into position, substantially as described.

4. The right-angled hook G, having the projecting portion H, when applied to a dumping-cart, for the purpose specified.

5. The body and shafts pivoted together in front of the axle, the inwardly-inclined stationary tail-board on the body, the axle turning in the wheels, the connecting and supporting-bar, and the catch-lever, all combined for the purpose of forming an improved dumping-cart.

113,294.—Gate.—Uriah W. Hardy, Abingdon, Ill.

Claim.—The stay G, when constructed as described, with an inclined top, and combined with the posts D, levers E E, and bar A, substantially as described, and for the purpose specified.

113,295.—Pin-Lock. — August Hermann and Warren H. Taylor, Stamford, Conn., assignors to The Yale Lock-Manufacturing Company, same place.

Claim.—1. The combination, with a movable post or plug B, of one or more safety-rings, K K K.

2. The movable post or plug B, when constructed with one or more suitably-formed holes, apertures, projections, or notches J J, substantially in the manner as and for the purposes described.

3. The combination of a movable post or plug, B, having a key-hole formed therein, all the sides of which are entirely closed, save where the necessary apertures for the insertion of pins, sliders, or tumblers occur, and provided with one or more stop-notches, J J, with one or more safety-rings, K K K.

4. The combination of a movable post or plug, B, having thereon stop-notches J J, with tumblers, pins, or sliders E E, any of the dimensions of which are greater than the thickness of the key D.

5. A safety-ring K, one portion of the circumference of which is wholly or in part removed or cut open, or is raised, indented, or expanded, when constructed and used in the manner as and substantially for the purposes hereinbefore described.

113,296.—Grain-Scourer and Separator.—Samuel H. Hinsdell, Henry W. Drake, and Cornelius B. Way, Camillus, N. Y.

Claim.—1. The scourer (or scourers) D, composed essentially of the revolving disk *d*, with its plate-beaters *g g* beneath, and the stationary bed *e*, with its bed-plate or plates *p p p*, having oblong perforations oblique to the said beaters in position, constructed and operating substantially as and for the purpose herein specified.

2. The screening-chamber E, constructed with the draught-opening *c* beneath the grain-spout or hopper *b*, its vertical draught-space through which the grain falls from the spout, and its self-acting valves V V' below, all substantially as specified.

3. The separate successive screening-chambers F G, arranged in connection with the successive scourers D D', as set forth.

4. The grain-scourer and separator, composed of successive scourers D D', separate screening-chambers E F G, to receive the grain before and after passing through the several scourers, and a suction-fan or blower, C, which produces the several draughts for the screening-chambers, all arranged, connected, and operating substantially as and for the purposes herein specified.

113,297.—Wood-Pulp-Machine.—William M. Howland, Topsham, Me.

Claim.—1. The bevel-wheels arranged on the sleeve and shaft, in combination with the pinions and suitable intermediate devices for raising the weights, as set forth.

2. In combination with the pinion and bevel-wheels, the shaft, with its worm-screw, cog-wheel, and drum *o*, pulley and chain, all as described.

3. The tipping-carriage, carrying the shaft of the pinion and worm, and operating in connection with the other parts, as set forth.

4. The downward-projecting arm of the carriage, in combination with the pin *f*, as shown and described.

5. In combination with the arm of the carriage and the pin *f*, the latch.

6. The spring combined with the carriage, and operating in connection with other parts, as set forth.

113,298.—Tubular Steam-Boiler.—James Howard and Edward Tenney Bousfield, Bedford, England.

Claim.—1. The vertical tube *a*, combined with the series of horizontal tubes *b* and their centrally-arranged circulating tubes *f*, as and for the purpose described.

2. The arrangement of the circulating tubes *f* upon spurs axially within the horizontal tubes *b*, and projecting therefrom at one end, as and for the purpose specified.

3. The construction of the circulating tubes *f* each with projecting end cut obliquely, as and for the purpose specified.

113,299.—Automatic Apparatus for Operating the Valve of the Exhaust-Pipe of Locomotives. — Ralph Cross Huse, Jr., Georgetown, Mass.

Claim.—1. The arrangement and combination of the auxiliary cylinder E and its piston F, the lever C' and weighted arm *b*, with the blast-pipe A and its valve B.

2. The combination of the auxiliary cylinder E and its piston F, the lever C', and weighted arm *b* with the blast-pipe A and its valve B, the conduit H and the main steam-supply pipe I of the steam-chest of the driving-cylinder of a locomotive-engine, all being substantially as specified.

3. The combination of the aperture *e* and smaller damper or valve *f* and the cock *h*, to be operated as described, with the valve B, the blast-pipe A, and the auxiliary cylinder E, piston F, weighted arm *b*, lever C', and conduit H connected with the supply-pipe I, all as set forth.

113,300.—Brick and Tile-Machine.—William Hutchinson, Salford, Great Britain.

Claim.—The loose top plate *g*, in combination with the mold A, top slide C, and follower B, as set forth.

113,301. — Window-Blind Operator.—George Jennisen and Merrick F. Otis, Westborough, Mass.

Claim.—The combination, in a shutter-worker, of the operating-rod D, with a nut and screw-connection, and coil-spring E, all arranged as and for the purpose shown.

113,302, antedated March 21, 1871.—Milk-Cooler.—Nelson Johnson and Ransom E. Johnson, Jasper, N. Y.

Claim.—1. A milk-cooler, A B C, composed of a connected series of concentric ring-shaped milk-vessels, A A, alternating with water-spaces B C, opening from beneath, and provided with strainer-spout D, air-hole *a*, and tube *e*, all substantially as and for the purposes herein set forth.

2. In combination with the milk-cooler A B C, the shaft G, with crank I and shelf or arms *b b*, the spider or support H, and stepping *d*, all substantially as and for the purposes herein set forth.

113,303. — Sash-Holder. — William G. Jones and Samuel M. Rankin, Long Green, Md.

Claim.—The combination of the metallic friction-surface plate and elastic block with the catch D and pin *d*, when these latter are attached to the plate and block, for locking both the upper and lower sash, substantially in the manner shown and described, for the purpose set forth.

113,304. — Combined Chair and Step-Ladder.—Ib Jörgenson and Rasmus Olson, Racine, Wis.

Claim.—1. The combination and arrangement of the parts A and A^1, connecting-bars B B, steps C^1, C^2, C^3, C^4, and C^5, the adjustable back of the chair and the hooks G.

2. The combination and arrangement of the additional step C^5, the bars D D provided with slots in which are inserted the bolts E E' secured to the inner sides of the hind legs of a chair, substantially as and for the purpose set forth.

113,305.—Fountain Paint-Brush.—Daniel J. Kellogg, Toledo, Ohio.

Claim.—The perforated tube D, for holding the brush C, in combination with the reservoir or fountain A B, substantially as herein shown and described, and for the purpose set forth.

113,306.—Cultivator.—Albert H. Kennedy, Oberlin, Ohio.

Claim.—The combination of the rod F with the slides I I and the braces G G, substantially as and for the purpose hereinbefore set forth.

113,307. — Rolling Bed.—Julius Krisch and Charles Thoener, New York, N. Y.

Claim.—The bed A, provided with rollers B B or rigid stretchers at its ends, and straps C C and D D attached to said rollers or stretchers, substantially as and for the purpose herein set forth.

113,308. — Potato-Digger.—Joseph Preston Lafetra, Shrewsbury, N. J.

Claim.—1. A shovel, D, combined with the shaker F, pivoted to an arm, H, and extending upwardly and rearwardly, as described.

2. The rakes T, having springs, S, constructed as described, in combination with a shaker, for the purpose specified.

113,309.—Rotary Steam-Engine.—Truckson S. La France, Elmira, N. Y.

Claim.—The rotary drums B C, made extensible on their shafts, their seat-line being on the contiguous faces, provided with ribs and grooves, as set forth.

113,310.—Feeder for Nail-Machines.—Henry B. Landers, Williamsburg, N. Y.

Claim.—1. The combination of the nipper-levers H and feed-case *c* with the hooks *f* and an eccentric disk, or its equivalent, for actuating the hooks to open and close the nippers, substantially as described.

2. The combination of the nipper-levers H and feed-case *c* with the hooks *e* and the eccentric and irregularly-grooved cam I, as and for the purpose set forth.

3. In combination with the subject-matter of the preceding claim, the eccentric sleeve *c* and support *d*.

4. In combination with the tube E and its toothed segment, the toothed wheel or segment F, the slotted plate and the pins K thereon, the pawl J and mechanism for actuating said pawl, substantially in the manner described.

5 In combination with the slotted plate and pins K, the pawl J, rod L, and mechanism to impart to said rod vertically-reciprocating movement, substantially as described.

113,311. — Fire-Escape.—George Laynor and Harry Helmling, Baltimore, Md.

Claim.—1. The device *h h'*, constructed and arranged in connection with the parts *d f g*, as herein shown and described, whereby it is adapted to fold with the ladder into the sill-box, as specified.

2. A fire-escape ladder, constructed in sections, the rounds and tie-pieces of which are of such comparative lengths as to fold one section within another, as set forth.

113,312.—Covering for Melting-Pots.—Albert C. Lewis, New York, N. Y., assignor to himself, H. A. Richardson, and N. A. Boynton, same place.

Claim.—An improved covering for melting-pots or crucibles, formed of abestus, twisted, wound, or braided around and upon said pot, so as to cover its entire outer surface, substantially as herein shown and described, and for the purpose set forth.

113,313.—Clothes-Pin.—Andrew B. Lipsey, West Hoboken, N. J.

Claim.—The combination, with body A and the fingers B B, provided with depressions *b b*, of the tongue C and ring E, substantially as shown, and for the purposes set forth.

113,314. — Machine for Tapping Gas and Water-Fittings.—Charles B. Long, Worcester, Mass.

Claim.—1. The combination, with the tapping-spindle J and feed-screw L, of the screw-cap M, lock-nut J', and center-pin *m*, substantially as and for the purposes set forth.

2. The combination, with the tapping mechanism and locking-clutch, of the shipping devices, consisting of the worm T, segment T^1, arm T^2, link 4, slide 5, collars 1 and 2, spring 7, rod Y, levers W W^1 W^2, and spindle *t*, substantially as and for the purposes set forth.

3. The combination, with the arm T^2 and levers 8, 9, 10, of the latch 14, rod 15, lever 16, and adjustable collar 17, substantially as and for the purposes set forth.

4. The combination of the rotary spindle J, pivoted to feed-screw L, arm L', guides *n*, revolving nut N, gear-wheel N', sliding bearing O, and fork Q, constructed and arranged to operate as described.

5. The combination of the swiveled frame 27, slide-plate 21, swing-bar 25, levers 28, clamp-screws 29, and holding-boxes 33, substantially as described.

113,315.—Cover and Desk for Sewing-Machines. — Benjamin T. Loomis and James A. Carey, New York, N. Y.

Claim. — The combination, with a sewing-ma-

chine table or cabinet, of a cover and writing-desk, substantially as described.

113,316.—Combination Lock.—Samuel Loyd, New York, N. Y.

Claim.—1. Slotted movable guards, rollers, or segments thereof, which are connected to the shaft of the handle of locks by friction springs, and by the strength of which springs they are guided to their proper positions by turning the axle upon which they revolve, as described, by E F J, substantially as and for the purpose hereinbefore set forth.

2. A wheel or other segment thereof revolving upon the same axis with the other rollers by means of a friction-spring, furnished with a small slot for receiving the dog, and also provided with projections which limit its movements by coming in contact with the dog, substantially as and for the purpose hereinbefore set forth.

3. The combination of the bent tooth of the roller F with the stationary pin I, and the series of holes in the back plate, as in fig. 4, for making changes without taking the lock apart, as and for the purposes hereinbefore set forth.

112,317.—Apparatus for Carbureting Air and Gas.—Francis H. Lutkewitte, St. Louis, Mo.

Claim.—The sectional carburetor herein described, consisting essentially of the horizontal sections A B C, placed one above another, and subdivided into a series of sub-sections, which are subdivided into small apartments D, by vertical partitions, every alternate one of which is open at both top and bottom, and the others at bottom only, the said horizontal sections being connected at one end by the inlet-pipes *a b c*, and at the other end by the outlet-pipes *a' b' a'*, and each provided with a gauge, E, all constructed as and for the purpose specified.

113,318.—Swivel-Pin for Tethering Animals.—William Lyon, Camp Halleck, Nev.

Claim.—The improved tethering-pin herein described, consisting of the body A provided with the neck A', the yoke C', the swivel-clevis D, and swivel-loop E, all constructed and arranged as shown and described.

113,319.—Paper Box.—Bernard J. Magee and James F. Wall, Watertown, Mass.

Claim.—The cover B, provided with a catch, *a*, at each corner, in combination with the body A, having a notch or projection, *d*, at each corner, constructed to operate substantially as and for the purpose set forth.

113,320.—Cotton-Scraper, Hiller, and Cultivator.—Cyrus Marsh, 2nd, Natchez, Miss.

Claim.—The beam A, with its wheels H G, adjustable arms C C', scrapers E E' and O, the latter acted upon by the wheel L, which receives its motion from the pinion K gearing with the cogs on H, and all combined, constructed, and arranged for joint operation as and for the purpose shown and specified.

113,321.—Harvester-Rake.—Alexander McArthur, Booneville, Mo.

Claim.—1. The rake-head F, compresser G, and lever H, in combination with the groove K, these parts being arranged for joint operation, substantially as described.

2. In combination with the rake-head F and compresser G, the lever H and spring pin *i*, or its equivalent, and groove K, provided with inclines *k k'*, substantially as set forth.

113,322.—Padlock.—George Merkel and Charles H. Meyer, New York, N. Y.

Claim.—The combination, within one lock, of the swinging bolt B, tumbler C, and sliding plate E, the bolt and tumbler having projecting pins that pass through slots in the plate E, as set forth.

113,323.—Awning for Animals.—Simon Moffitt, Minneapolis, Minn.

Claim.—The awning herein described, composed of the standard A, vertically-adjustable block I, and two sets of sectional bows *c c* secured together by bands and screws, all arranged to operate as herein shown and described.

113,324.—Furnace-Grate.—George R. Moore, Philadelphia, Pa.

Claim.—1. A series of grate-bars, *b*, constructed and arranged in relation to each other and their pivots, substantially as shown and described, whereby the said grate-bars can be turned or swung upon their pivots or hinges to admit air, and for the removal of ashes, without danger or liability of dumping the coal.

2. The combination, with the hinged grate-bars *b*, when constructed and arranged as set forth, of the connecting-rods *g* and operating-lever, substantially as shown and described.

113,325.—Machine for Winding Bobbins.—Franklin H. Morrill, Philadelphia, Pa.

Claim.—1. The compound gear-wheels G, G^1, G^2, and G^3, and pulley N, arranged as described, on the shaft E, in combination with the heart-shaped gear H, pinions P P', pulley N^1, and belt J, in the manner and for the purpose herein specified.

2. The combination, with the cams C C' and traversing guide-bars F F', of the fixed studs V V', sliding bolts W W', and casings Y and Y', as and for the purpose herein described.

113,326.—Machine for Corking Bottles.—David Mueller, New York, N. Y., assignor to himself and Franz Wagner, same place.

Claim.—1. The combination of the plunger G, the hand-wheel T, the crank S, pitman U, gears T' and R', and balance X, when operating as and for the purpose substantially as set forth.

2. The construction of the table A, the rods D D, the support C, the platform O, the bars H H, the couplings J, and treadle M, arranged substantially as and for the purpose described.

3. The needle Q, with the guide F, when pivoted and attached substantially as and for the purpose herein shown.

113,327.—Mode of Preparing Paper for Photographic Purposes.—Peter H. Murray, Portsmouth, Ohio.

Claim.—1. The application of chlorine gas for the purpose of rendering photographic paper more stable after it has been sensitized by nitrate of silver preparatory to its being converted into a photograph by the solar rays.

2. The application of hydrogen gas for the purpose of re-rendering the paper, afore-rendered insensitive by the action of chlorine, sensitive to the action of the solar rays.

113,328.—Water-Proof Cellar.—Tobias New, Brooklyn, N. Y.

Claim.—A solid foundation, formed of concrete or wood, a layer of asphaltic cement, several layers of roofing-felt, a layer of concrete or stone of sufficient weight to counterbalance the upward pressure of water, and a layer of brick to form the floor, all arranged successively from the bottom upward, as and for the purpose specified.

113,329.—Fire-Escape.—George H. Nichols, Richmond, Virginia.

Claim.—The bent tube, suitably strengthened, as shown, and provided at its lower end with the hinged handles, the whole being adapted to the rope, and operating as set forth.

113,330.—Comb.—Charles Horace Noyes, Brooklyn, N. Y.

Claim.—1. The combination, in a head-band, comb, or similar article to be worn upon the head, of the piece A, and the auxiliary perforated or notched piece B, adapted to retain and expose an ornamental fabric, substantially as hereinbefore set forth.

2. The combination, in a head-band, comb, or similar article adapted to be worn upon the head, of the parts A and B, and the ornamental fabric C, substantially as hereinbefore set forth.

113,331.—Ornamenting the Surface of Metals by Electro-depositions from Solutions.—Richard O'Neil, New York, N. Y.

Claim.—The within-described process of producing a deposit or plating of metal upon the surface of another metal by painting the latter with a salt or solution of a salt of the metal to be deposited, by means of a pencil which is in metallic connection with a galvanic battery, the other pole of which is in galvanic connection with the metal to be operated upon.

113,332.—Machine for Rolling Hollow Bars for Nuts.—Jonathan Ostrander, Manchester, Va.

Claim.—The combination, with the rolls B, of the correspondingly-grooved table L and the rest-bar M, arranged to be adjusted substantially as herein shown and described.

113,333.—Extension Lounge.—John Shearer Paine, Cambridge, Mass

Claim.—The improved extension lounge, as composed of the frame A with its arm-rest and back, and the seat-frame B, and the auxiliary frame C, all constructed, arranged, and applied together, substantially in manner to operate as described.

113,334.—Gate.—Benoni F. Palmer, Baraboo, Wis.

Claim.—The pivot-bars H H J J, placed at both sides of a gate, and operated by means of the levers E E, or their equivalents, so as to serve the double function of hinges and latches, substantially in the manner specified.

113,335.—Platform-Spring Coupling.—Benjamin T. Parsels and John L. Hedges, Hanover, N. J.

Claim.—The cross-block C, combined with yokes F H and bolts D E I, as and for the purpose specified.

113,336.—Lawn-Mower.—Everett G. Passmore, Philadelphia, Pa.

Claim.—1. The flanged frame-piece A constructed as described, with a shoe, a^1, flanges a^2 a^3 to protect the driving-belt, a guide, *e*, through which the belt runs, bearings for the cutters, rollers, and driving-drums, and a stop, a^5, for the guiding-rail.

2. The combination of the grooved driving-drum, the flanged frame-piece, the pulley fixed therein, the driving-belt, the endwise-moving rotary cutter, and the clutch-connection between the fixed pulley and the cutter, these parts being constructed and operating in combination, as herein set forth.

3. The combination of the frame, the driving-drum, the balancing guiding-rail pivoted behind and below the axis of the driving-drum, the shoes, the roller, and the horizontally-swinging draft-pole, to the front of which the horse is attached, these parts being constructed and operating as described.

113,337.—Stop-Valve.—John L. Peake, New York, N. Y.

Claim.—1. The two wedges A^1 A^1, arranged to serve, as represented, relatively to the two gates D^1 D^1, formed in distinct pieces loosely locked or connected to the operating stem C, and caused to operate relatively to the water-passages and to the surfaces *a*, as herein set forth.

2. The gates D^1 D^1, made with the lower edges thin and sharp, so as to cut into and dislodge any accumulation of solid matter in the cavity at the base and allow it to be retained in the space provided below the connection to the stem C, and be carried away by the current on opening the valve, as set forth.

113,338.—Portable Apparatus for Preserving Wood.—William Tilden Pelton, New York, N. Y.

Claim.—1. The whole combination of machinery and parts constituting the apparatus, as herein substantially described, and for the purposes set forth.

2. The combination of a treating apparatus for seasoning or preserving wood with a truck or trucks or other running-gear so as to be capable of being propelled or drawn on a railroad or other track or roadway.

3. The combination, with a treating apparatus, of an engine, E, placed upon a truck or running-gear, substantially as described, and for the purposes set forth.

4. The combination of receiving and discharge-tanks R^1 R^2 with a treating-chamber T, connected and used as a wood-treating apparatus, and, at the same time, constructed with running-gear and as a separate and complete vehicle, substantially as described, and for the purposes set forth.

5. The combination of the pieces of machinery included in the last two claims.

6. The combination of two or more treating-cars, substantially as described, and for the purposes set forth.

7. The construction of a treating apparatus for seasoning or preserving wood in such a way that it shall be divisible into several complete vehicles adapted to an ordinary railroad-track, so as to be conveyed separately as a train or part of a train of cars, drawn by a locomotive, either together or separately from the wood treated, or to be treated.

8. The combination of a wood-preserving apparatus with wheels, that shall be adapted to, be movable upon, and used in connection therewith and with the ordinary railroad-track, and be transportable at will from point to point upon said track or branches, to reach and treat ties, posts, and other timber, without the difficulty or expense of removing it from distances to a fixed and immovable apparatus, and its employment for such purposes, substantially as described.

113,339.—Apparatus for Stripping the Top Flats of Carding-Machines.—Ernest Constantin Pfaff, Chemnitz, Saxony, assignor to Dobson & Barlow.

Claim.—1. The combination, with the cam-wheels and the radial arms of top-flat stripping apparatus, of the disk *g* with notches and projections in the periphery, and the slides *i i'*, and weighted catch-lever *j*, the same being arranged for varying the order of succession of the rising of the top-flats, substantially as specified.

2. The combination, with the cam and disk *e* and notched disk *g*, of the toothed wheel or rim *g'*, pinions *h* h^1, and curved-edged plate h^2, substantially as specified.

113,340.—Comb.—Leonce Picot, Hudson City, N. J.

Claim.—A comb, having a metallic back, A, non-corrosive teeth, and body C, and the central, lateral, and non-corrosive ribs B B, combined as described, and for the purpose specified.

113,341.—Shovel-Plow.—Samuel W. Pope, Louisville, Ky.

Claim.—The metal plate attached to the end of the standard, and provided with a recess for the reception of the shovel, and with the projection *x'*, as described.

113,342.—ADJUSTABLE SEAT.—Louis Postawka, East Cambridge, Mass.

Claim.—The hinged legs C C, bars B B, screw F, and guide-rods I I, constructed and arranged to operate substantially as and for the purposes described.

113,343.—PRINTING SILKS AND OTHER TEXTILE FABRICS.—Louis Prang, Boston, Mass.

Claim.—The process of imprinting colors upon textile fabrics by applying thereto a paper back coated with dried paste dampened just before the fabric is attached, then imprinting it, and again dampening and detaching the fabric from the paper, all as described.

113,344.—DRILL-STOCK.—William H. Rand, Brooklyn, N. Y.

Claim.—The spring-barrel *d* upon the gudgeon *c*, that projects from the stock *a*, and yoke *h* and socket *i*, connected to such spring-barrel, in combination with the volute spring *e* and the cord or strap *f*, as and for the purposes set forth.

113,345. — FIELD THRASHING-MACHINE.—George Rieke, Kairo township, Minn.

Claim.—1. In combination with the frame D, adjusting devices $d\ d^1\ d^2\ d^3$, and inclined gathering-apron D′, the adjustable roller G G′, arranged to operate in the manner and for the purpose substantially as described.

2. The field thrashing-machine herein described, consisting of the frames A D E, drum F, aprons D′ E′ H, rollers G G′, fan J, incline I, wheels B B *b c c′*, pawl and ratchet *a a*^{1}, eccentric-lever a^2, and adjusting devices $d\ d^1\ d^2\ d^3$, said parts being constructed and arranged for operation, substantially as described and set forth.

113,346.—PRINTING-PRESS.—Judah Touro Robertson, New York, N. Y.

Claim.—1. A table, carrying a series of plates, and traversing between the rollers with an alternate rectilinear motion and a compound motion, for the purpose of presenting the plates in succession to the rollers, substantially as described.

2. The pawl *i*, mounted on a vibrating lever, sliding over an adjustable stationary point, substantially as described.

113,347. — CLOTHES-WRINGING PRESS.—Charles Robinson, Boston, Mass.

Claim.—1. The combination and arrangement of the hinged or tilting pressing-box A, cross-bar or support *b*, and pressing-screw *c*, substantially as and for the purpose herein specified.

2. A clothes-wringing press, having the following elements in one combination, namely: a pressing-box or receptacle, A, having a perforated or open false bottom, *f*, and a close drip-chamber, *h*, below, a removable follower, B, a pressing-screw, C, and a frame, D, in which the other parts are mounted so as to operate together substantially as herein specified.

113,348.—RAILROAD-CAR HEATER.—Augusta M. Rodgers, Brooklyn, N. Y.

Claim.—1. The mode of heating cars by means of a heating medium, consisting of metallic balls or bars heated prior to application to the car, substantially as described.

2. The boxes C, receiving the heated objects D, substantially as and for the purpose described.

3. The combination, with the heating apparatus of a car, of the receiving-boxes C, made non-conductible, for the purpose described.

113,349.—ASH-SIFTER.—George W. Rogers, New York, N. Y.

Claim.—The box A, having springs *g g* on its inner sides, the rock-shaft B, composed of parts *a a b b c c*, and the sieve C, grooved in the middle thereof at *f f*, all combined as described, to form an improved ash-sifter.

113,350.—MACHINE FOR CHANNELING AND BEVELING SOLES FOR BOOTS AND SHOES.—John G. Ross, Philadelphia, Pa.

Claim.—1. The adjustable channeling-knife *e*, cap *v*, screw *w*, feeding-disk *k*, shaft *c*, frame *a*, bearings *b b*, spring-support *l*, and wheel *j*, edge-guide *b*″, when constructed, arranged, and operating together, as described.

2. The adjustable beveling-knife *x*, spring-support *l*, feed-wheels *j* and *k*, cap *p*, screw *v*, bar *q*, pin *u*, spring *t*, screw *y*, when constructed, arranged, and operating together as described.

3. The spring-support *l*, bearings *b b*′, wheels *j* and *k*, shaft *m*, nut *n*, and spring *l*, when constructed and arranged as described.

113,351.—FOOT-SCRAPER.—August Sahlstrom, Chicago, Ill.

Claim.—1. The frame A A′, provided with scraper C, substantially as and for the purpose described.

2. In combination, the frame A A′ with brush B, substantially as and for the purpose described.

113,352.—WASHING AND WRINGING-MACHINE. — Jacob S. Sandt, St. Joseph, Mo.

Claim.—The combination of the frame A with slotted uprights *a a*′, rollers C C′, corrugated roller D, cross-bar H, springs *d d*′, blocks *e e*′, cleats S G with their hooks *s s*′, all arranged for joint operation, and constructed substantially as and for the purpose shown and specified.

113,353.—COAL-DELIVERING SACK.—William S. Shackleton, Cleveland, Ohio.

Claim.—1. The sack or bag A made, as described, with the lip or shield *a*″, substantially as and for the purpose set forth.

2. The bag A and handle B arranged in relation to each other substantially as and for the purpose described.

3. A new article of manufacture—the bag A, made of tarred canvas or sacking, the lip or shield *a*″, and handle B, constructed and arranged substantially as and for the purpose set forth.

113,354.—HOLDBACK FOR VEHICLES.—Norris W. Simons, Williamsfield, Ohio.

Claim.—A self-detachable holdback, consisting of the plate A, hollow post *a* supplied with the recesses or ears *a*′ *a*′, spring B, and ring or holder C constructed on its transverse portion with the shoulder or tenon *c*′, all constructed, arranged, and combined substantially as and for the purpose set forth.

113,355.—FEED-WATER HEATER.—Thomas D. Simpson, Mount Vernon, Ohio.

Claim.—The combination, in a water-heater, of a pipe, D, and cap C, when they are so arranged with reference to each other as to form between them a contracted or narrow passage for the purpose of causing an increased draught through the small tubes of the heater, substantially as set forth.

113,356.—CRACKER-MACHINE.—George R. Skillman, Baltimore, Md., assignor to himself and James Beatty, same place.

Claim.—1. The combination and arrangement of the cutting-frame E, the rock-shaft *i* with its connections, and the eccentrics *g*, on the rear driving-shaft *b* and at both or opposite sides of the machine, substantially as specified.

2. The combination of the sliding boxes F, the cutting-frames E, the guides G, and the eccentrics *g*, with their connections, essentially as shown and described.

3. The arrangement of the springs H and adjusting-clamps I with the cutting-frame E, the sliding boxes F, and guides G, substantially as specified.

4. The combination and arrangement, with the apron D, of the rock-shaft J and eccentric K, with its connections, the pawl-lever *w*, and the ratchet *v*, essentially as shown and described.

113,357.—FIRE-ESCAPE.—George C. Smith and Frank M. Burrows, Baltimore, Md.

Claim.—1. The sectional frame B, provided with a board N, so that when said frame is folded said board will form the top and cover for the inclosing sectional frame, as described.

2. The sectional frames C or D, one or both, provided with a platform, L, extending over and beyond the window-sill to form a safe communication with the escaping devices, and to fold with said sections, as described.

3. The flexible braces K of the hinged section D, in combination with the rigid braces F of the hinged section C, as and for the purpose described.

4. The traveling-bag G, in combination with the projecting frame D, braces F and K, the suspending swiveling-pulley, and the rope T, all arranged as and for the purpose described.

5. The supports E for the knuckles or hinges of the frames C and D, arranged as described.

6. In a fire-escape, the combination of the hinged sections A B C D, the wire-platform L, the supports E, the flexible and rigid braces K and F, and the traveling and fixed means of escape, the several parts being constructed, arranged, and operating as described.

113,358.—WHISK BROOM.—Greenleaf Stackpole, Elizabeth, N. J.

Claim.—The combination, with a whisk broom, of an erasing-brush of bristles or their equivalent, substantially as and for the purpose set forth.

113,359.—MAIL-BAG FASTENER.—Hugh M. Stephenson and John B. Tyer, Wabash, Ind.

Claim.—The combination of the four several parts A, B, C, and D, united with hinges at their ends, the parts A and B surmounted at the top with a double flange bent outward, so as to include an even slot along their whole length; and the parts C and D being surmounted at their top with a single flange, bent inward, so adjusted by the hinges, in the manner described, that, when shut, the single flanges of the parts C and D shall enter and close the slot of the double flanges A and B, substantially as described and for the purposes set forth.

113,360.—MATCH-SAFE. — William Stine, Elmore, Ohio, assignor to himself and Henry R. Lyle, Pilatka, Fla.

Claim.—A match-safe, having one side, *b*, which carries a lip, *c*, hinged so as to be opened by pressure on top and bottom of the safe, as and for the purpose specified.

113,361.—CHURN-DASHER.—Stephen Stout, Tremont, Ill.

Claim.—An improved churn-dasher, formed by the combination of the handle A *a*′ and dasher B *b*′ *b*′ with each other, substantially as herein shown and described, said parts being constructed and operating as and for the purposes set forth.

113,362, antedated March 23, 1871.—HOISTING APPARATUS.—Leverett W. Stuart, Narrowsburg, N. Y.

Claim.—The elevating and traveling-pulley A B C, in combination with the rope *a*′ and the brake D, when the same are arranged for operation by attaching the rope *a*′ to the end of the brake-lever, substantially as and for the purpose specified.

113,363.—HAY-LOADER.—Luman D. Taylor, Granville Centre, Pa.

Claim.—The combination of the vibrating toothed beams G with the platform H, which has the teeth *k*, substantially as herein shown and described.

113,364.—WINDOW-SHADE FIXTURE.—Nathan Thompson, Brooklyn, N. Y.

Claim.—The combination of the box C, grooved blocks *b b*, follower D, and screw S, substantially as and for the purpose herein described.

113,365. — COATING LAMPS. — George W. Thomson, Buffalo, N. Y.

Claim.—The coating of shellac, prepared and applied to copper lamps for an external coating, as herein described.

113,366.—WATER-METER.—Isaac P. Tice, New York, N. Y.

Claim.—1. The arrangement of two cylinders, A A′, and two independent or separate valve-chests, D D′, connected with a common inlet-pipe, G, substantially as and for the purpose set forth.

2. The combination of the inlet and outlet-pipes G H, valve-chambers D D′, and the cylinders A A′, substantially as and for the purpose specified.

3. The combination of the two cylinders A A′, valve-chests or chambers D D′, and the single and double valves E E′, substantially as and for the purpose described.

4. The arrangement of the valves E E′, piston-rods C C′, and the independent valve-chests or chambers D D′, substantially as shown and described.

5. The resisting mechanism applied to a water-meter in the manner substantially as shown and described, so as to compel the pistons to make complete or entire strokes at all times.

6. The arrangement of the cylinders A A′, and the valve-chests or chambers D D′ in such a manner that the piston-rod of one cylinder will pass or work directly into the valve-chamber of the other cylinder, as set forth.

113,367, antedated March 29, 1871.—COTTON-SCRAPER.—Thomas H. Trantham, De Soto county, Miss.

Claim.—The combination and arrangement of the slotted share C, slotted plate E, screw F, and standard G, as and for the purpose hereinbefore set forth.

113,368.—RUBBER PAINT.—Samuel Truscott, Cleveland, Ohio.

Claim.—The manufacture or preparation of a compound called rubber paint, of the ingredients, in the proportions and for the purpose set forth.

113,369. — PORTABLE DUMPING-HOD FOR EARTH-CLOSETS.—Elias W. C. Vanderveer, Elizabeth, N. J.

Claim.—The combination of the hod A, the slides C C, trap T, lever L, and cranked yoke Y, substantially as and for the purpose herein set forth.

113,370.—ELECTRIC GAS-LIGHTING AND EXTINGUISHING APPARATUS. — John Vansant, San Francisco, Cal.

Claim.—1. The pipes *b d* extending from the gas-pipe A below and above a partition or stop within the same into a cylinder or vessel C, within which an adjustable valve, *e*, is arranged for regulating the passage of the gas, as specified.

2. The cylinder C containing the pipe *b e*, and the adjustable valves for opening or closing the same, and the mercury or liquid for receiving the lower end of the closed valve, as set forth.

3. The valve *e*, connected with the arm *h*, and combined with the disk D and pins *i*, so that rotary motion of said disk in the same direction will

serve to alternately open and close the said valve, as specified.

4. The reciprocating electro-magnet F, connected with the claw m, and combined with the fixed magnet G and rotary disk D, to operate substantially as herein shown and described.

5. The coils H H, combined with the magnets F G to operate in conjunction with the same, substantially as herein shown and described.

113,371.—ANIMAL-TRAP.—Cornelius B. Veronee, Athens, Ga.

Claim.—The open-bottomed open-sided box B and the trap-door D, pivoted at *e* and weighted at F, combined as described, and arranged on the open-topped receiving-vessel A, as and for the purpose described.

113,372.—BED-LOUNGE.—Valentine von Dissen, New York, N. Y.

Claim.—1. The combination and arrangement of the parts of the head-board A and *a* with the back C and bed F and G, substantially as shown and described.

2. The combination and arrangement of the parts F and G with slides R and pieces N with the bottom B or D, substantially as shown and described.

3. The combination and arrangement of the back C with horizontally-projecting pieces E, vertically projecting pieces *p*, apertures *t*, and frame B, substantially as shown and described.

4. The combination and arrangement of the bed-lounge F and G with back C and bottoms B and D, substantially as shown and described.

113,373.—POTATO-DIGGER.—John A. Wadhams, Blue Island, Ill.

Claim.—1. The combination of the frames C and D connected by the chain *a*, and the scoop H, all constructed and arranged substantially as described and shown, for the purpose set forth.

2. The combination of the frames C and D connected by the chain *a*, the scoop H, and the lever L provided with a slot, all constructed and arranged substantially as described and shown, for the purposes set forth.

113,374.—COFFER-DAM.—John E. Walsh, New York, N. Y.

Claim.—1. The coffer-dam herein described, having a double wall, B, at its rear end, with opening O, flanges C′, and removable doors A, constructed and arranged in the manner and for the purpose set forth.

2. The flanges C′ of the coffer-dam herein described, in combination with the interposed packing *d*, metal eyes or staples E, clamp-piles F, and clamp *f*, constructed and arranged in the manner and for the purpose described.

113,375.—SAWING-MACHINE.—William W. Waterbury and John M. Waterbury, New Canaan, Conn.

Claim.—The tread-wheel K, combined with spur-wheel H on same shaft, the pinion G and pulley E on a second shaft, and the balance-wheel D and rotary saw on the two ends of a third shaft, driven by belt F, when all are arranged as and for the purpose specified.

113,376.—VOTE-RECORDING MACHINE.—Adan Weston, Keeseville, N. Y.

Claim.—1. The combination of the levers B with the pins A and the voting knobs *a* or *b* in such a manner as to enable the voter when he pulls the knob to thrust forward the pin either in the yea or nay-series, substantially as described.

2. The combination of the pins A with the endless chain F in such manner that the pins, when thrust out by the pulling of the knobs *a* or *b*, become cogs in the chain for the turning of the serrated wheels G or G′, substantially as described.

3. The combination of the endless chain F, the sliding pins, the wheels G or G′, and the endless chains H in such manner as to enable the operator, by rotating the chain F, to cause the chains H to display the footings-up of the votes on both sides of the question, substantially as described.

4. The combination of the chain F, pins A, and inclined blocks *m*, in the manner and for the purpose specified.

5. The pins A, provided with recesses *x*, and confined with the bar W or W′, the lever *w* or *w*′, and the bars *s*, in the manner and for the purpose specified.

6. The combination of the pins A, bar W or W′, block *p*, and block L, provided with columns of type, the sections of which bear the names of the several voters, substantially as described.

7. The combination of the printing-press L, frame N, sliding bars *s*, and shaft O provided with pinions *O*′, in the manner and for the purpose specified.

8. The combination of the sliding bars *s*, spring-plates *j*, and frame K, in the manner and for the purpose specified.

9. The combination of the block L, hinged plate M, and fingers *r r*′, in the manner and for the purpose specified.

10. The combination of the chain F, detent *z*, knob *s*, and wire *s*′, in the manner and for the purpose specified.

113,377.—COMBINED LOCK AND LATCH.—Shepherd H. Wheeler, Dowagiac, Mich.

Claim.—The combination of the U-shaped bolt B, having the shoulder *a*, slot F, stem G, recess H, and notch *d*, with the case A, cam D, and any suitable catch and knob, all substantially as and for the purposes hereinbefore set forth.

113,378.—HINGE.—Shepherd H. Wheeler, Dowagiac, Mich., assignor to himself, Enos L. Chappell, and Guy E. Chappell, same place.

Claim.—The hinge A, in three parts, being a combination of the leaf B, constructed with recess and short pintles, the U-shaped eye-piece slotted, with lug to engage a hook, and the leaf I, with projecting hook H and screw-holes countersunk on both sides, all substantially as described, and for the purposes hereinbefore set forth.

113,379.—FOOT-LIFTER FOR BLACKSMITHS.—Thomas C. Williams, Warrenton, Mo.

Claim.—1. The combination of the saddle B and the bar *d*, and the straps *m*, *n*, and *r*, with buckles *o*, substantially as and for the purposes hereinbefore set forth.

2. The combination of the saddle B and the bar *d*, and the straps *m*, *n*, and *r* and *p*, with the buckles *o*, substantially as and for the purposes hereinbefore set forth.

113,380.—SPINDLE-BEARING.—Charles F. Wilson, Brooklyn, N. Y.

Claim.—1. A coiled bearing, C, combined as described with a cup, B, ribbed at *g*, to retain it in position.

2. A spindle-journal, A, combined with a spiral bearing in a close stationary box, B, having oil-space D at the top and E at the bottom, with vertical channels *h* on the sides, so that as the oil is forced up from F through the coil and scattered centrifugally upon D, it will trickle back through *h*, and thus keep up a continual circulation until consumed.

113,381.—LIFTING-JACK.—Hiram J. Wilson, Mason, Mich.

Claim.—The sliding block B *b b*, supplied with a series of apertures, *b*′ *b*′, in combination with the pin or supporting-plate C, uprights A A, connecting-rod D, and lever E, the block B, when elevated, being on the same vertical plate as the rod D, substantially as and for the purpose set forth.

113,382.—CRIB ATTACHMENT FOR BEDSTEADS.—James Henry Laurence Wilson, Auburn, Kansas.

Claim.—1. The combined crib and seat attachment for bedsteads, consisting of the head-board B, side and bottom A and X hinged to the bar C, or to one another, in combination with the arms D provided with the bends Z, and having on them the followers E and sliding clamp F, all arranged and operated in the manner and for the uses illustrated and indicated.

2. The combination of the arm D, as described, with the follower E and sliding clamp F, as a means of attachment, substantially as illustrated and indicated.

113,383.—COMBINED COTTON-SEED PLANTER AND CULTIVATOR.—James A. Wright, Marietta, Ga.

Claim.—1. The combination of the beam A, handles B, standard C, furrowing-plow D E *e*′, wheel F, adjustable bars G, seed-hopper H, band I, pin or bolt J, toothed stirrers K *k*′, cranks *l*¹ *l*¹, shaft L, crank *l*², connecting-rod M, crank *f*′, and covering-plows N O, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the plow P Q *q*′ with the beam A, handles B, standard C, plow D E *e*′, plows N O, and adjustable gauge-wheel F G, substantially as herein shown and described, and for the purpose set forth.

113,384.—CHEST-EXPANDER.—Samuel L. Barnett, New York, N. Y.

Claim.—The handles A A, with their cylindrical chambers *e e*, grooves *f f*, and pins B B, substantially as and for the purpose hereinbefore set forth.

113,385, antedated March 27, 1871.—SPRING BED-BOTTOM.—Lyman M. Bates, Cleveland, Ohio.

Claim.—1. A spring bed-bottom, consisting of canvas or other suitable material drawn over a series of springs, and rendered detachable by being hooked or buttoned to the bed or frame, substantially as herein described.

2. The sides and ends of the frame, when provided with grooves in which the canvas is secured by hooks, buttons, or other suitable means, and which grooves may be covered by molding, substantially as described.

113,386.—CHEEK-PIECE FOR SHIPS' MASTS.—Joseph Baymore, Philadelphia, Pa.

Claim.—A cheek-piece for ships' masts, constructed with a metallic plate at the back, between it and the mast-head, as herein described, and for the purpose set forth.

113,387.—ADJUSTABLE CARRIAGE-SEAT.—Sylvester W. Beach, Ypsilanti, Mich.

Claim.—1. The rounded end of the arm B, with central hole and flange *a*, in combination with the circular box D with hollow cone *b*, or *vice versa*, and the bolt *d*, all constructed and arranged substantially as and for the purposes herein set forth.

2. The mode of attaching the handles G to the ends of the seat by means of the metal stop-plates I, substantially for the purposes herein set forth.

113,388.—ATTACHING MARBLE TOPS AND BACKS OF WASH-STANDS.—William J. Bender, Cincinnati, Ohio.

Claim.—The right-angled brace or fastening A and B, provided with the stud C and opening D, for application to the vertical and horizontal slabs of a wash-stand top, substantially as and for the purpose specified.

113,389.—DOOR-MAT.—Norborne Berkeley, Aldie, Va.

Claim.—1. The mat-stand or frame C C D, with attached trigger and locking device, substantially as represented and described, for the purposes specified.

2. The mat-frame *a a*¹ *a*² *a*³, constructed and arranged substantially as specified.

3. The combination and arrangement of the bent lever *d*, wire *d*′, and bolt F, in connection with the stand B C D and rotary mat A, substantially as specified.

113,390.—GANG AND SUBSOIL-PLOW.—Joel L. Bond, Marshalltown, Iowa.

Claim.—1. The arrangement of the beams A A′, cross-bar H, bent brace J, plates G G′, clamps *a a*′ and *b*, bolt and nut *d*, and the plow-bars C C′, all substantially as shown and described, and for the purposes herein set forth.

2. The arrangement with the frame-beams A A′ of the adjustable rods K K′, frame L, bar *e*, loop *f*, seed-drill box N, and gauge-wheel M, all constructed and operating substantially as set forth.

113,391.—SEWING-MACHINE.—Thomas W. Bracher, New York, N. Y.

Claim.—1. The feed-wheel I, constructed and operating substantially as shown and described.

2. In combination with an organized sewing mechanism, the guide for the spring and the feed-wheel for moving it, substantially in the manner herein set forth.

113,392.—CORSET.—Morris P. Bray, Birmingham, Conn.

Claim.—As an article of manufacture, a corset cut and formed substantially as herein described.

113,393.—MODE OF MAKING TELEGRAPH-INSULATORS.—William Brookfield, New York, N. Y.

Claim.—The within-described process for making screw-telegraph insulators, said process consisting of the following successive operations: first, filling the mold with molten glass and depressing the plunger; second, releasing the plunger and raising the spindle of the press; third, removing the plunger and the mold from under the press; fourth, inserting a new plunger and fastening the same to the spindle, and introducing a fresh mold, all as herein set forth.

113,394.—PACKAGE FOR HYDROCARBON AND OTHER LIQUIDS.—Morgan W. Brown, New York, N. Y.

Claim.—A bag for hydrocarbon and other liquids made of paper or cloth, substantially in the manner herein described.

113,395.—PACKAGE FOR OYSTERS, CLAMS, &c.—Morgan W. Brown, New York, N. Y.

Claim.—As a new article of manufacture, a package for oysters or clams made of paper or cloth, rendered tough, pliable, and impervious to air, water, or fat, substantially in the manner set forth.

113,396.—COVERING FOR SAUSAGES AND OTHER MEATS.—Morgan W. Brown, New York.

Claim.—A case or integument for sausages or other meats or extracts of meats, made of paper prepared as herein described.

113,397.—PUMP-VALVE.—Adam S. Cameron, New York, N. Y.

Claim.—1. The arrangement, in the valve-chest, of partitions provided with conical sockets to receive the valve-seats, and giving access to said seats from above and below when the bonnet is removed, substantially as described.

2. The tail or extension of the removable valve-seat, receiving the pivot on which the valve swings,

and throwing the joint outside of the diameter of the seat, and giving an unobstructed passage through the valve, as described.

113,398.—Towel-Bracket and Sponge-Holder.—J. Frank Chandler, Boston, Mass.

Claim.—1. A combined towel-rack and sponge-holder, consisting of the ornamental back-piece A, brush-box B, arms *h h'*, rails *i i'*, and expansible sponge-holder *a b c*, all constructed and arranged as described.

2. The sponge-holder, made to open and shut, as described, the same consisting of the strips *a a' b b'*, pivoted to each other and to the angle-plate *c*, and having the wires *g g'* attached to form the basket, all in the manner and for the purpose specified.

113,399.— Electric Battery for Telegraphing and Other Purposes.—Daniel M. Cook, Mansfield, Ohio.

Claim.—1. The improved battery herein described, composed of a series of cups, B, arranged in a vessel, A, the separate positives and negatives being connected, as and for the purposes herein set forth.

2. The combination of the series of cups B and reservoir D, substantially as set forth.

3. The cups B, with wire coils applied, substantially as described.

4. The cups B, constructed and arranged substantially as set forth in the above specification.

113,400.—Water-Wheel. — Gardner Cox, Pierpont, N. Y.

Claim.—The buckets *a b*, united at *c* to the external cylinder, arranged as shown, when said buckets are attached to the concave periphery of the downwardly-diminishing hub or body F of a wheel, as and for the purpose herein set forth.

113,401.—Smelting Iron and other Ores. Richard Darnel Cox and William Franklin Cox, Philadelphia, Pa.

Claim.—1. The reduction of a mass of ore in a chamber, by causing jets of steam to direct to the ore the products of combustion or gases united with the said steam, all substantially as set forth.

2. A furnace in which the products of combustion, with air, and jet or jets of steam, are united at the tuyere-openings, as set forth.

3. A smelting-furnace in which a reducing-chamber for containing the ore, a fire-place or places, and a steam-nozzle or nozzles are combined and arranged substantially in the manner described.

4. The combination, substantially as described, of the air-pipe G and its internal steam-nozzle H, with a fire-place and with a tuyere-opening, *e*, of a reducing-furnace.

5. The combination of the reducing-chamber A, recessed bed *x*, tuyere-openings *e*, and passages *h*, for the escape of the molten metal.

6. The central reservoir K, arranged below the reducing-chamber A, and communicating with the same through openings *h*, as set forth.

113,402.—Child's Carriage or Perambulator.—Benjamin P. Crandall, Jr., Williamsburg, N. Y.

Claim.—A toy-box combined and arranged with the body or seat of a child's carriage or perambulator, substantially as described, for the purpose set forth.

113,403. — Suspending-Sign, &c.—John H. Crane and Charles W. Crane, Boston, Mass.

Claim. — Suspending flexible street-signs from cords or wires by means of the pendent traversing-journal or hook *h*, lock-bearing *g*, furling-roller *e*, and cords *f f*, said roller operated by a pulley and cords, or crank, when the several parts are constructed and arranged substantially in the manner herein described.

113,404.—Street-Sprinkling Machine.—Samuel E. Cursons, Buffalo, N. Y.

Claim.—1. The combination and arrangement, with the perforated discharge-pipe of a street-sprinkling machine, of the waste-pipe F, provided with a cock, G, substantially as and for the purpose described.

2. The combination, with the hand-lever E and cock G of the waste-pipe, of the spindle H, arm I, and connecting-rod K, substantially as and for the purpose heretofore set forth.

113,405. — Sediment-Collector for Steam-Boilers.—Collins Wood Deane, Philadelphia, Pa.

Claim.—1. A mud-trap, having the within-described slotted filtering-plates so arranged within a steam-boiler as to intercept the entire surface current.

2. The mud-trap B, with its filtering-plates, the whole extending across and connected to the shell of a boiler, as set forth.

3. The surface-mud trap C, with its slotted filtering-plates extending across the boiler, in combination with the perforated discharge-pipe I.

4. The within-described combination and arrangement of the two mud-traps B and C with their filtering-plates.

113,406.—Trace-Buckle.—Myron H. Densmore, Shickshinny, Pa., assignor to himself, Milton J. Snyder, and Aaron Briggs, same place.

Claim.—The plate *a*, provided with the flanges *f* and *g* and the lips *h*, in combination with the frame *a*, having the inclined guides *i*, all constructed as described, for the purpose hereinbefore set forth.

113,407. — Sewing-Machine. — Alfred S. Dinsmore, Boston, Mass.

Claim.—1. The combination of a swinging arm, *p*, or its equivalent, the arm *r*, and a spring serving as a take-up, substantially as shown and described.

2. The combination, with a swinging arm, *p*, or its equivalent, of the arm *r*, a spring serving as a take-up, and means for adjusting the throw of the swinging-arm, substantially as shown and described.

113,408. — Breech-loading Fire-Arm.—William C. Dodge, Washington, D. C.

Claim.—The combination in a breech-loading gun of the swinging breech-block and the locking-brace C, or its equivalent, with the swinging shoulder *c*, substantially as described, whereby the breech-block is prevented from being blown open by an accidental or premature explosion, as set forth.

113,409.—Advertising Device.—James F. Emery, Albany, assignor to himself and James E. Thomson, Buffalo, N. Y.

Claim.—Writing-paper having the guide-lines thereon for writing purposes formed of fine printed matter, substantially as and for the purposes set forth.

113,410. — Horse-Power.—Thomas Addis Emmet Evans, Albany, Ga.

Claim.—The combination of the lever F, driving-wheel A having cams B, supports D having rollers C and C', beam *h h* having angles and rollers E, all constructed and arranged substantially as and for the purposes set forth, upon a suitable base, Y Y'.

113,411.—Earth-Closet.—Benjamin Ferris, Wilmington, Del.

Claim.—1. The shaft I, provided with the cams P, for operating the chute O, substantially as closed.

2. The stirrer-shaft *a*, provided with the curved cutting-blades *b*, in combination with the slotted crank or lever S, centrally-pivoted lever H, levers E G, and lid C, when combined to operate as set forth.

3. The lid C, levers E G H S, stirrer *a b*, the feeder L, shaft I, provided with the cams P, so as to operate the chute O, when all are arranged and combined to operate substantially as specified.

113,412.—Saw-Mill.—George Finnegan, Dublin, Ireland.

Claim.—The band-saw *a*, mounted upon two horizontal rollers, *b*, and arranged in combination with the bed or table *c*, and with the devices for operating or driving the saw and adjusting the same to or away from its work, and with the mechanism for moving the bed or table in either direction, and for varying the speed thereof, all substantially as and for the purpose set forth.

113,413.—Stove-Drum.—Charles Fisher, Niles, Mich., assignor to himself and Henry N. Wilcox, same place.

Claim.—The stove-drum described and shown, provided with the radiating-chambers A and B, the vertical connecting-flues C and D, the smoke-pipe opening F, the damper E, and the exit-pipe G, all constructed and arranged substantially as and for the purposes set forth.

113,414. — Tumbler for Permutation-Locks.—Charles Flesch, Rochester, N. Y.

Claim.—The pin *i* and stops *k k*, combined with the cam E and lever D, which acts upon the double-ratcheted pawl C in the manner and for the purpose specified.

113,415.—Let-off Mechanism for Looms. William Thomas Flinn, Philadelphia, Pa., assignor to himself and Jacob Steinmetz Thorn, same place.

Claim.—The combination of the clamps and the warp-beam resting thereon, the said clamps being constructed substantially as described, so that the pressure of the beam upon the lower ends of the clamps will cause them to grasp the beam.

113,416.—Treatment of Sewage and the Manufacture of Fertilizers.—David Forbes, York Place, Portman Square, and Astley Paston, Price, Lincoln's-Inn-Fields, England.

Claim.—1. The treatment of sewage or the production of manures by the use of the natural phosphates of alumina and of other natural phosphates, such as hereinbefore mentioned, or mixtures of the same, substantially in the manner herein described—that is to say, by first submitting such natural phosphates to the action of sulphuric acid, hydrochloric acid, or mixtures of the same, and employing such resulting products either alone or in conjunction with a base, such as lime, for the purposes set forth.

2. The treatment of those natural phosphates of alumina, such as herein referred to, for the production of compounds capable of being employed as fertilizing agents, in the manner hereinbefore described.

113,417.—Motive-power Apparatus. — John T. Gilbert, Asbury, Ill.

Claim.—1. The method herein described of utilizing the force resulting from the explosion of substances by means or any equivalents thereof substantially such as herein described.

2. The combination of the endless belt or ratchet, having upon its outer surface serrations for the pawls to fall into, and the sprocket-wheels around which it passes.

3. The combination and arrangement of the spring or springs B, the cross-head C, belt or ratchet D, and the sprocket-wheels D', their arrangement with reference to each other being such as to cause the expansion of the springs to give a rotary motion to the sprocket-wheels, substantially as and for the purpose set forth.

113,418.—Skeleton Corset.—Thomas S. Gilbert, Birmingham, Conn.

Claim.—The skeleton corset herein described, consisting of vertical or longitudinal tapes, woven with shirrs or pockets for the reception of the springs, and circumferential tapes horizontal at the waist, and with the successive tapes above and below the waist diverging more and more from horizontal lines toward the front and back, as represented.

113,419. — Corset. — Thomas S. Gilbert, Birmingham, Conn.

Claim.—1. A corset formed with a central zone made in two parts connected by a circumferential waist-seam, and with additional sections above and below the said central zone, to admit of imparting the necessary fullness to the upper and lower parts of the corset.

2. In a corset constructed as specified in the first claim, uniting the transverse sections by circumferential tapes with open edges, so that the intermediate central parts of said tapes will constitute portions of the web of the corset, as explained.

113,420.—Boot and Shoe-Sole.—Charles Goodyear, Jr., New Rochelle, and Jozo Da Silva, Williamsburg, N. Y., assignors to Charles Goodyear, Jr.

Claim.—A boot or shoe sole provided with an edge, lip, or flange, formed substantially in the manner described, and an inner channel or groove, the two following lines parallel with the edge of the sole, substantially as shown and set forth.

113,421.—Plow-Colter.—Charles M. Gordon, La Porte, Ind.

Claim.—The combination of the reel D and cutter A B, as and for the purposes set forth.

113,422.—Corn-Planter.—Lewis Graham, Plymouth, Ill.

Claim. — 1. The combination of the hinged lever *d* and pivoted lever D and cams *b b* on the wheels C C, to operate the feed-slide, substantially as herein set forth.

2. The arrangement of the frame A with wheels C C, having cams *b b* and markers *a a*, wheels J J, levers *d* and D, feed-slide E, hoppers G G, conductors H, shoes I, and the hinged tongue K, all constructed to operate as and for the purposes set forth.

113,423.—Manufacture of Peat-Fuel.—Robert Arthur Griffin, Montreal, Canada.

Claim.—1. The excavator *h*, in its parts of vessel h^2, rollers h^3 and h^4, chains h^5, hangers h^6, buckets h^1, segments *i*, spout i^2, screw i^3, all working together, substantially in the manner and for the purpose described.

2. The curers f^1, in their parts of timbers c^1 and c^2, scantling *d* and *e*, with openings *d'* and e^3, beams e^1, wale pieces g^1, rails g^2, planks *f*, all working together, substantially in the manner and for the purpose described.

3. The curves f^1, with openings or spaces *d'* and e^3 in the scantling *d* and *e*, working together and with other parts of the curers, substantially in the manner and for the purpose described.

113,424.—Furnace for Steam-Boilers.—John C. Gripp, Pittsburg, Pa.

Claim.—The solid bridge-wall A, having its top inclined to the solid arch-wall B, projecting from the bottom of the boiler immediately in rear of the bridge-wall, the cold-air tubes D, supported by the

plates f between the bridge-wall and bed of the furnace, so as to leave the combustion-chamber C above them and immediately beneath the arch-wall B, all constructed and combined as described, for the purpose specified.

113,425.—Railway-Bridge Signal Apparatus.—Thomas S. Hall, New Haven, Conn.

Claim.—1. The draw-bridge key U, having a slotted or reduced part, as set forth, in combination with the flattened shaft of the drum Q, to which the signal is connected, substantially as and for the purpose described.

2. In combination with the rails and the chair E, the sliding key U, standard H, and the hand-crank K and its connections, as herein set forth and shown, for the purpose specified.

113,426.—Composition for Coating Photograph-Pictures. — Henry Happel, New York, N. Y.

Claim.—A compound for improving the effect of photograpic pictures, made substantially as herein described.

113,427.—Rolled Metallic Strips for Washers.—Thomas C. Hargrave, Boston, Mass.

Claim.—Strips of metal rolled into sheets with ribs thereon, as specified, for the purpose of making washers, substantially as set forth.

113,428.—Valve and Valve-Gear.—William Z. Hatcher, Plymouth, Pa., assignor to himself and William L. Lance, same place.

Claim.—1. The combination, with a steam-cylinder and piston, of a valve, F, and devices, substantially as described, whereby the valve is operated partly by a positive movement derived from the piston and partly by the action of steam passing directly from the boiler.

2. The ports q q', p p', and h h^1, arranged in respect to the grooves in the valve F, as described.

3. The ports h h h^1 h^1, arranged in relation to the valve F covering said ports, and communicating with the interior of the valve-chest, substantially as described.

4. The arrangement of the ports h h^1 in respect to the ports q q' and to the valve F, as and for the purpose specified.

113,429.—Coal-Scuttle.—George H. Hazelton and Dwight W. Hazelton, Philadelphia, Pa.

Claim.—The improved coal-hod herein described, consisting of the body C having the bead or shoulder c, the flat bottom B, and the foot A having the flange b, all the parts being arranged and united as set forth.

113,430.—Boot-Crimper.—Henry Henley, Shoals, Ind.

Claim.—The boot-crimp herein described, composed of the clamp A A, and the saddle formed of the jaws B B, spring bars C C, crimping-board G, and leather pieces D D, all constructed and arranged to operate substantially as and for the purposes herein set forth.

113,431.—Bullet-Patch.—Alfred C. Hobbs, Bridgeport, Conn.

Claim.—A patch for bullets composed of paper-pulp applied to the bullet, substantially as described.

113,432.—Machine for Forming Heel-Rands.—Sumner Holmes, North Brookfield, and Joseph F. Sargent, Melrose, Mass.

Claim.—1. For forming heel-rands or runners, a machine, substantially as described, which crimps the thin edge of the leather strip and bends the strip into form.

2. The combination with an edge-feed-wheel of two face-wheels or collars, (between which the strip is received and fed,) a guard for keeping the strip in the curved path, and a stripper for releasing the formed runner, all substantially as shown and described.

3. The guide-piece n, provided with an angling under-side, to deflect and strip the rand after it has been crimped.

4. The combination, with a feeding mechanism composed of a throat or guide and feed-wheels, of bending and crimping-wheels, substantially as described.

113,433.—Grinding-Plate. — Edmund S. Howland, Batavia, Ill.

Claim.—The grinding-rings A of a feed-mill, provided with the furrowed curved projections B, arranged as described, for the purpose specified.

113,434.—Steam-Trap.—John Joseph Jordan, Philadelphia, Pa., assignor to himself and George T. Carter, same place.

Claim.—The adjustable tubular and perforated valve-spindle E, its valve F, and the vessel I arranged for receiving the water of condensation, in combination with a casing constructed substantially as described, and having a seat for said valve.

113,435. — Apparatus for Operating Churns.—Preston L. Jordan, Lexington, Miss.

Claim.—The plates or brackets A B a b and screw C in the described combination with the shafts D E, wheels F G H, and wheel J, constructed in the manner and for the purposes described.

113,436.—Plow.—John Lane, Jr., Chicago, Ill.

Claim.—In combination, the landside-bar B, steel plate E, mold board W, share A, and flange K, all as herein set forth.

113,437.—Cooking-Stove.—Ezekiel C. Little and David H. Nation, St. Louis, Mo.

Claim.—1. The roasting or warming-oven D, with the hot-air flue G between its top and top plate of stove, and the downward flue E between it and the baking-oven C, substantially as herein set forth.

2. The arrangement, in a stove, of the fire-chamber A, ash-box B, baking-oven C, roasting or warming-oven D, flues G E J I, and water-reservoir H, with or without the direct draught-flue K, and with suitable damper or dampers, substantially as herein set forth.

113,438.—Apparatus for Cooling Milk.—John R. McKay, Rockton, Ill.

Claim.—1. The double pan or cooler, constructed of pans I and K, the tube G, and gutters i and k, substantially in the manner and for the purposes set forth.

2. The tank D, placed in relation to the cooler or double pan so that the head of water shall be higher than the point of discharge of water from the water-pan K, for causing a constant pressure or contact of the water in its upward flow against the bottom of the milk-pan I.

3. The milk-vat B, with cover C and strainer c, in combination with the double pan or cooler, when constructed and operating substantially in the manner and for the purposes set forth.

4. The water-vat or tank D, with valve E, in combination with pipe F and the double pan or cooler, when constructed and operating substantially in the manner and for the purposes set forth.

113,439. — Manufacture of Emery-Wheels and Artificial Stone.—Edgar C. Merrill, Charleston, Vt.

Claim.—1. A composition consisting of carbonate of baryta with oxide and chloride of zinc, made as herein described, or any other substantially the same, when used in emery-wheels or artificial stone.

2. Carbonate of baryta as an ingredient or component part of emery-wheels or artificial stone, as herein set forth.

113,440.—Apparatus for Drawing Water from Wells.—Merrick A. Mihills, Lodi, Ohio.

Claim.—The reacting windlass, consisting of the ratchet-wheel J, dog-wheel K, crank L, dog f, arms h h, and pawl m, all constructed and arranged to operate substantially as and for the purposes herein set forth.

113,441.—Wheel for Vehicles.—James R. Mills, Macon City, Mo.

Claim.—The combination of the rear section A, front section B, washer C, spokes D, and spindle E with rubber collars d, all constructed and arranged substantially as and for the purposes herein set forth.

113,442. — Culinary Vessel. — William H. Murch, Portland, Me.

Claim.—The combination of two or more compartments, one above another, each containing the vessel d, and so arranged and constructed that the top of each compartment forms the bottom of the one next above it, and has the upward and downward flanges f h and the uppermost compartment, the cover i having flanges j, all in the manner and for the purposes set forth.

113,443.—Flour-Sifter.—Oliver D. Myers, Doylestown, Pa.

Claim.—1. The sifter J, with pins f g and spring h in combination with the cams or inclines k k on the cog-wheel H, substantially as and for the purposes herein set forth.

2. The combination of the box A, hopper-bottom B, hopper D, toothed-cylinder E, sifter J, and wheel H, provided with cams or inclines k k, all constructed and arranged to operate substantially as and for the purposes herein set forth.

113,444.—Washing-Machine.—John Osmun and John Curl, Rockport, N. J.

Claim.—1. The combination of the lever G, rod H, elbow-lever I, and board J with levers D and board E, when constructed and arranged as herein described, for the purpose of applying a variable pressure and a rubbing surface at the same time, as set forth.

2. In combination with the boards E and J and the elbow-lever I, the spring L and rollers K, or their equivalents, substantially as and for the purpose set forth.

3. The combination of the swinging board E and reciprocating board J, when constructed and arranged to be operated substantially as and for the purpose set forth.

113,445.—Self-acting Mule for Spinning.—Charles Braham Parkinson, Aaron Metcalf, John Metcalf, and William Hesketh Heald, Preston, Great Britain.

Claim.—The combination of the carriage A, connecting-rod O, radius-rail M, radius-arm D provided with the endless screw T, and pulley E, eccentric G, pulley I, and chains C and J, when operated in the manner substantially as described.

113,446.—Machine for Pouncing Hats.—Augustus Pelisse and George W. Stoute, Newark, N. J.

Claim.—The combination, with a block for holding a hat, of an endless belt faced with sand-paper, or composed wholly or in part of some other properly-rough material, substantially as and for the purposes herein specified.

113,447.—Hot-Air Register.—Hugh M. Phinney, Boston, Mass.

Claim.—1. A hot-air register-plate, having the four-side vertical flanges d d e e connected to and forming part of it, without intermediate joints, substantially as shown and described.

2. The cast-metal coupling or connector, having the tube h, flanges f g and web i formed in one piece, substantially as shown and described.

113,448.—Sad-Iron.—Mary Florence Potts, Ottumwa, Iowa.

Claim.—1. The sad-iron base E, made of metal hollowed out in the center, with the end or ends made solid and the cavity filled with non-conducting material, as shown and described.

2. The combination of the plate B, provided with raised beveled end-pieces b b, the latch C, and lip or tongue D, all constructed and arranged substantially as and for the purposes herein set forth.

3. The combination of the semicircular handle A, plate B, latch C, tongue D, cross-bar d, and spring f, all constructed and arranged substantially as and for the purposes herein set forth.

4. The combination of the handle A, plate B, latch C, tongue D, iron E, and non-conducting-filling G, all constructed and arranged substantially as and for the purposes herein set forth.

113,449.—Potato-Digger.—John P. Radley, Albany, N. Y.

Claim.—1. Tines H, constructed with a divided or branched knife at their upper ends, substantially as above described.

2. The revolving wheel K, constructed with tines H cutting at their upper ends, and divided or branched, or neither, in combination with cutter-bar F and cutters h, substantially as and for the purpose herein described.

3. The arrangement and combination of axle E, hanger L, and guides g, with cutter-bar F, as herein shown and described.

4. The arrangement and combination of internal gears R, combined pinion and ratchet-wheel N, bevel-wheel and pinion r and s, shafts D and e, with cutter-bar F and wheel K, as herein shown and specified.

113,450. — Ice-Cream Freezer. — John Franklin Rote, Reading, Pa.

Claim.—1. A blade or blades, K, hinged to a fixed rod or frame within the inner revolving vessel of an ice-cream freezer, and operated substantially in the manner described, by a reciprocating rod, F′, or its equivalent.

2. The combination of the said blade or blades, to which the within-described movements are imparted, with the scraper J.

3. The combination of the freezer, the adjustable rod j connected to the square end of the sleeve k, the reciprocating rod F having a socket and set-screw, i, and the rod F′ operating the blades K, all substantially as specified.

113,451. — Spring for Wheeled Vehicles.—Cyrus W. Saladee, St. Catharine's, Canada.

Claim.—1. Forming, securing, and operating torsion-springs by firmly and rigidly holding their center portion C to the frame or base on which they are placed, and allowing their outer ends at S to vibrate freely in the bearings D, in combination with the cranks or levers A–I, the outer ends of said levers being hinged or jointed to the frame or body L, substantially as and for the purpose described.

2. The arrangement and combination of the levers A–I with the springs A and frame or body L, in such manner that they may vibrate on lines parallel to each other, and so as to impart to the frame or body L a parallel circular motion—perpendicularly and longitudinally—like the opening and closing of a parallel rule, substantially as shown and described.

3. The parallel arms B and B, in combination with the spring levers A–1, as and for the purpose set forth.

113,452.—TABLE-LEAF SUPPORT.—Daniel Saylor and Laurits Anderson, Chicago, Ill.

Claim.—1. The combination of the lever-arm or brace C with the semicircular bolt-head *c*, which interlocks with the socket-piece D, for the purpose described.

2. The socket-piece D, for receiving the bolt-head *c* of brace C, and having lugs or bearings *d d'*, in combination with the spring G, as described.

113,453.—APPARATUS FOR SPREADING MEDICAL PLASTERS.—Adolph J. Schafhirt, Washington, D. C.

Claim.—A device for spreading medical plasters, composed of two plates, the one movable upon the other, so as to enlarge or contract the form or pattern of the plaster, substantially as shown and described.

113,454.—TREATING PAPER AND VEGETABLE FIBROUS SUBSTANCES.—Augustus T. Schmidt, Pittsburg, Pa.

Claim.—1. The treatment of paper, (sized or unsized,) paper-pulp, and other vegetable fabrics and substances, with a bath of the mother-water of the chlorides of zinc, tin, calcium, magnesium, or aluminum, or either of them, with or without the admixture of carbonates and oxides or other substances, and the subsequent washing with water or alkaline solution, substantially as and for the purposes described.

2. The treatment of paper, paper-pulp, or other vegetable fabrics and substances (which have been previously saturated with or immersed in a concentrated solution of chloride of zinc, or other chlorides hereinbefore specified, or of the mother-liquor of such chlorides or their equivalents) with a solution of glycerine and water, or sugar and water, substantially as and for the purposes described.

3. The combination of a layer or layers of paper, treated in the manner hereinbefore described, with a layer or layers of vegetable cloth similarly treated, for the production of a new manufacture suitable for belting, packing, and other purposes, substantially as described.

4. The combination of paper, paper-pulp, or other vegetable fibrous substances, treated, substantially as hereinbefore described, with emery, powdered glass, sand, or other pulverized or granular metal or mineral, as a new article of manufacture.

113,455.—SAFETY-VALVE.—Matthew Scrannage and Edward Scrannage, Jr., Boston, Mass., assignors to Scrannage, Bate & Co., same place.

Claim.—A spring, *b*, and diaphragm *c*, inclosed within a casing, A, and connected with a spindle, *e*, with its adjusting nut *f* for operating a safety-valve, substantially in the manner described.

113,456.—CORN-SALVE.—Anthony Seabold, Florence, Ohio.

Claim.—The corn-salve, composed of the ingredients compounded in the manner and by the process substantially as herein described.

113,457.—MOP-HEAD.—Samuel Selden and Matthew Griswold, Jr., Erie, Pa.

Claim.—The combination of jaws A A', hinged shanks B B', and thumb-screw D, substantially as set forth.

113,458.—WAGON-BOLSTER STAKE.—Lewis Washington Shaeffer, Elizabethtown, Ky.

Claim.—1. The combination of the inside part B and the outside part D, both attached to bolster F, both of which parts (B and D) can be made of malleable iron, wrought-iron, or cast-steel.

2. That part D, having a slot cut in it through which the bolt G passes, makes it convenient to be moved either way to allow a larger or smaller upright standard to be placed in it.

113,459.—COMPOUND FOR CURE OF FOOT-ROT IN SHEEP.—William T. Sherman, Marengo, Ohio.

Claim.—The compound, composed substantially of the ingredients herein named, for the purpose set forth.

113,460.—FIRE-ALARM.—Horatio N. Shultz, Mechanicstown, Md.

Claim.—A metal casing, as described, when containing one or more fire-crackers and fuse, the whole arranged and operating in the manner and for the purpose set forth.

113,461.—BIRD-CAGE MAT.—Isaac A. Singer, New York, N. Y.

Claim.—1. The combination, in a mat for bird-cages, of cloth or other fibrous material, bird-seed, either mixed with sand or gravel or not, and a farinaceous paste or cement, substantially as hereinafter set forth.

2. The combination, in a mat for bird-cages, of felt or woven cloth, either pasted upon paper or not, sand or gravel, or bird-seed or other food, and farinaceous paste or cement, substantially as hereinbefore set forth.

113,462.—CAR-COUPLING.—George C. Spangler, Allegheny City, Pa., assignor to himself and Simpson H. Daft, same place.

Claim.—1. The sliding shaft D, pinions *m n*, and spring *s*, in combination with the independent racks F G, the former operating the link-guide and the latter the coupling-pin, substantially as and for the purposes set forth.

2. The apparatus herein described, consisting essentially of the shaft D, pinions *m n*, spring *s*, racks F G, link-guide I, spring *t*, and sockets C H, when supported by a single plate, B *e e'*, whereby it can be strapped, bolted, or otherwise fastened to any of the old-fashioned draw-heads, substantially as herein set forth, for the purposes specified.

113,463.—FRICTION-CONDENSER FOR ILLUMINATING-GAS.—William H. St. John, Brooklyn, N. Y., and Samuel O. Rockwell, Jersey City, N. J.

Claim.—1. The application of the hydraulic seal to the whole volume of gas at the entrance of the condenser.

2. The adjustable lattice-work and appliances.

3. The corrugated plates dividing the vertical pipes in compartments; also, the corrugated covers as herein described and substantially set forth in the specification.

113,464.—CUTTER-HEAD.—Alonzo Louis Sweet, Norwich, Conn.

Claim.—1. The revolving feeding-disk or cutter G, in combination with a cutter-head, arranged and operating substantially as and for the purposes shown and described.

2. The combination of the feeding-disk G, supporting-block I, cutters C and D, and washer with the head B, arranged and operating substantially as and for the purposes described.

113,465.—PERMUTATION-LOCK.—William Terwilliger, New York, N. Y., assignor to himself and Frederic H. North, New Britain, Conn.

Claim.—The compound fence and gate oscillating upon the stud *e*, when the parts are constructed and arranged substantially as specified, and the gate is moved by the fence and tumbler-notch, moving together, in the manner set forth.

113,466.—TUBULAR STEAM-BOILER.—Charles A. Thompson, Flushing, N. Y.

Claim.—The boiler, made with ranges of tubes of different diameters, the lower range or ranges being of the largest diameter, in combination with the water shield, for the purposes set forth.

113,467.—FASTENING FOR MEETING-RAILS OR SASHES.—Nathan Thompson, Brooklyn, N. Y.

Claim.—The combination of the tapering-pointed screw C with the button A moving at right angles to the plane in which the sash is moved, and tapering recess *e* in the adjacent plate or surface *f*, substantially as specified.

113,468.—HALTER.—James Thornton, Wellsville, N. Y., assignor to himself and E. G. Latta, same place.

Claim.—1. The halter-rings *a b*, provided with projecting strengthening supports *c c d*, substantially as and for the purpose herein shown and described.

2. A halter provided with rings *a b*, having projections *c c d*, for the purpose set forth, and the buckle, loop, and ring, all constructed and arranged substantially as herein shown and described.

113,469.—ATTACHMENT TO HAMES.—James Thornton and Emmit G. Latta, Wellsville, N. Y.

Claim.—1. A breast-strap ring cast with a sunken bar, *a*, and with projections forming eyes *c c'*, substantially as herein shown and described, for the purposes specified.

2. The improved attachment for hames, composed of the ring with sunken bar *a* and eyes *c c'*, the hame-loop *e*, and staple *f*, all constructed substantially as described, and applied to the hames in the manner specified.

113,470.—BREECH-LOADING FIRE-ARM.—Frank Tiesing and Charles Gerner, New Haven, Conn., assignors to Eli Whitney, same place.

Claim.—1. The relative arrangement of the latch or locking-brace F, breech-block D, and hammer E, when combined for operation, as set forth.

2. The finger *e*, in combination with the hammer, the latch, and the breech-block, substantially as described.

3. The combination and arrangement herein shown of the breech-block and finger, whereby in the act of throwing the breech-block back the finger is operated to release the latch, as set forth.

4. The spring *d*, in combination with the latch F, finger *e*, hammer E, and the breech-block D, substantially as and for the purposes described.

113,471, antedated March 22, 1871.—SHIP'S TRESTLE-TREE.—Henry Townsend, Philadelphia, Pa.

Claim.—A cross-tree for a ship's mast, with projecting brackets for the reception of friction-rollers, and constructed with a plate of metal for strength, as shown and herein described, instead of a straight piece of wood, as heretofore.

113,472.—LAMP-BURNER.—Joseph Trent, Millerton, N. Y.

Claim.—1. The combination, with a lamp-burner, of the spring G *g*, constructed in one piece, and arranged to perform the two-fold purpose of holding the chimney by pressure at two remote points, and also locking the hinged cone securely in position, substantially as herein specified.

2. The combination, with the primary and secondary cones E E, of the chimney I, whose base *n* constitutes a third cone, substantially as and for the purposes herein specified.

113,473.—BASE-BURNING STOVE.—Jasper Van Wormer, Albany, N. Y., assignor to himself and Michael McGarvey, same place.

Claim.—1. In connection with a central magazine, D, and an oven, O, directly above it, a feeder E, inclined from the top of the magazine to the side of the stove so as to expose nearly the whole bottom of the oven, substantially as described.

2. In a base-burning stove, having a central magazine, D, and an inclined feeder, E, the arrangement of the oven O, the chamber H' above it, the passages at the sides of the oven leading from the fire-chamber to the chamber H' above the oven, and the space at the rear of the oven leading to the exit-flue *b*, substantially as and for the purposes set forth.

3. The arrangement of the pot-hole G with relation to the oven, the feeder, and the magazine D, substantially as described.

4. The arrangement of the oven O, door *d*, feeder E, and lid F, in connection with a base-burning stove, substantially as described, and for the purposes specified.

113,474.—HARVESTER-RAKE.—Cyrenus Wheeler, Jr., Auburn, N. Y.

Claim.—1. The rocking rake-heads, in combination with the controlling-cam or track L, made in the manner substantially as described, to impart the several rocking or rolling movements to said rake-heads during their passage over the same, substantially as described.

2. The adjustable track M, provided with the way or opening M^1, in combination with the stationary cam or track L, substantially as described.

3. The adjustable extension-piece M^2, in combination with the track M for adjusting the point of discharge of the gavel, as described.

4. The combination of adjustable track M and independently-adjustable extension or tail-piece M^2 with the stationary track or cam L for regulating the point of delivery of the grain upon the platform or upon the ground (either or both) without changing the point at which the rakes enter the standing grain for gathering the same to the cutters, as described.

5. The inclined way or ways M^1 m^2, in combination with the rocking rake-heads for giving a vertical or nearly vertical lift to the points of the rocking teeth as the latter leave the grain, substantially as described.

6. The slide O for closing the opening M^1 in the track M, in combination with the rocking rakes, operating as described.

7. The slide O, in combination with the lever R and locking-dog T, substantially as described.

8. The removable pins Q, in combination with the slide O, constructed and operating as described, for automatically closing the opening M^1, substantially as described.

9. The dog T, in combination with lever R, for locking the slide O, arranged as described, whereby said dog is automatically tripped by the crank-roller *j* for releasing the slide after the roller has passed by and been operated upon by the slide, as described.

10. The tripping-cord R', in combination with the dog T, for enabling the driver to control the slide O when the latter is thrown out automatically, as described.

11. The combination-track M, hinged rail U, rocking rake-head, vibrating rake-arm, and carrying-wheel or sheave F, substantially as set forth.

113,475.—HARVESTER.—Cyrenus Wheeler, Jr., and Calvin Young, Auburn, N. Y.

Claim.—1. The sector-plate or quadrant E, provided with the removable part E', and arranged in the described relation to the overhanging rake-standard, substantially as set forth.

2. The adjusting hand-lever G, provided with the arms or spurs *g g'*, in combination with the adjustable link *f*, and quadrant or rock, as described.

3. The guide-pulley arm I and link K, in combination with the rake standard, substantially as described.

4. The sprocket-wheel or pulley M, mounted loosely on the end of the axle, and connected therewith for operating the rake by means of the sleeve or hub L and clutch-plate L', substantially as described.

5. The treadle T, provided with the arm t and loop t^2, constructed as described.

113,476.—MOVABLE PARTITION.—Douglas Joseph Williams, Birmingham, England.

Claim.—1. The upright spindle D, forming a swivel in the part or division, and used in conjunction with the cross-head C, which is carried by the rollers A A rolling on the bars B B, substantially as and for the purpose herein described and shown in the drawing.

2. In combination with the said upright spindle D, the pinions H H and the racks K K, substantially as and for the purpose described and shown.

113,477.—BLOCK FOR TOP-PROP JOINTS FOR CARRIAGES.—John J. Wilson, New York, N. Y.

Claim.—The prop-block tube, made of India rubber, in lengths of a uniform or nearly uniform section throughout, and with the elastic cushion upon its upper surface, as and for the purposes set forth.

REISSUES.

4,317.—SLIDE FOR EXTENSION-TABLES.—Merrill E. Carter, Syracuse, and Elisha Mets, Rochester, N. Y.; Elisha Mets assignor, by mesne assignments, to Hayden & Hahn.—Patent No. 44,073, dated September 6, 1864.

Claim.—1. A metallic connecting-slide, D, with flanges, to be inserted in the grooves E E of the wooden bars A B C, when constructed, arranged, and operating in the manner and for the purpose specified.

2. A metallic connecting-slide, D, for the bars of extension-tables, having the flanges on one side cast thicker than upon the other, so as to hold fast in the groove of one bar and slide free in the groove of the other, as herein described.

3. The pin A and notches or holes g, when combined with and used to hold a metallic connecting slide, D, in its proper position in the groove E of the bars of an extension-table, as herein specified.

4,318.—WATER-PITCHER AND OTHER VESSELS.—Kingston Goddard, Richmond, N. Y., assignor to himself and John P. Adams.—Patent No. 97,390, dated November 30, 1869.

Claim.—The improved ice-pitcher or other vessel, composed of a body of wood or other suitable non-conducting material plated or covered with metal, substantially as described, as a new manufacture.

4,319.—PISTON-STEAM VALVE.—Robert C. Gray and William B. Brittingham, La Fayette, Ind., assignors to themselves and John Fordyce.—Patent No. 86,067, dated January 19, 1869.

Claim.—1. A piston-valve which has both a longitudinally-reciprocating and an oscillating motion on its axis, derived from the current of fluid which passes through the valve.

2. In combination with induction and eduction-openings in a cylinder, A, a cylindrical valve, when such valve has both a longitudinally-reciprocating and a vibratory motion, derived from the pressure of the fluid which passes through the valve.

3. The arrangement, within the case through which the fluid flows, of a valve and cam in such relation to one another that the cam shall communicate a vibratory movement to the longitudinally-reciprocating valve.

4. The piston-valve B, constructed with ports or passages in its periphery, which ports act alternately as induction and eduction-passages, the necessary changes of position being effected by a cam actuating the valve and operating by the pressure of the current which passes through the valve.

5. A piston-valve having parallel induction and eduction-ports, when such ports are cut in its periphery, to maintain the constant flow of the operating fluid while it traverses the bore of the cylinder, substantially in the manner set forth.

6. The combination and arrangement of the ports d d of the valve and the passages b, b', and c of the cylinder.

7. The combination of the piston-valve B and stem or lug a with the part D, supported on the cylinder, when the surfaces are so formed that the pressure of the fluid on the piston will cause it to partly rotate.

8. The arrangement of the partitions within the chest C, substantially as set forth.

9. The arrangement of the ports and pipes of induction and eduction in relation to the compartments of the chest C, substantially as set forth.

10. The combination of the cylinder A, pin f, piston B, and groove e, substantially as described.

4,320.—Division A.—MANUFACTURE OF ALIZARINE.—Charles Graebe, Frankfort-on-the-Main, and Charles Leibermann, Berlin, Prussia.—Patent No. 95,465, dated October 5, 1869.

Claim.—The within-described process for the production of alizarine, by first preparing bibromanthrakinon or bichloranthrakinon, and then converting these substances into alizarine, substantially as above set forth.

4,321.—Division B.—DYE OR COLORING MATTER FROM ANTHRACINE.—Charles Graebe, Frankfort-on-the-Main, and Charles Liebermann, Berlin, Prussia.—Patent No. 95,465, dated October 5, 1869.

Claim.—Artificial alizarine produced from anthracine or its derivatives by either of the methods herein described, or by any other method which will produce a like result.

4,322.—CARRIAGE-WHEEL.—Robert W. McClelland, Springfield, Ill.—Patent No. 99,691, dated February 8, 1870.

Claim.—1. The combination of a wooden hub having a raised center with dodged spokes and metal bands, substantially as and for the purpose set forth.

2. The combination of the hub A, provided with the raised center B, the spokes C C, and the bands D D provided with the pins or studs d d, substantially as and for the purpose herein setforth

4,323.—MANUFACTURE OF GERMAN HAND-CHEESE.—Francis C. Mendo and Theodore F. Mendo, Philadelphia, Pa.—Patent No. 95,500, dated October 5, 1869.

Claim.—1. The above-described process of curing the cheese known as German hand-cheese by subjecting the milk and curd to the various successive manipulations and changes of temperature and moisture, as above substantially set forth.

2. The product obtained by subjecting milk to the various successive manipulations herein specified, as a new article of manufacture and commerce.

4,324.—MACHINE FOR TIGHTENING ROPES, &c.—Arthur Paget, Loughborough, England.—Patent No. 105,240, dated July 12, 1870, antedated April 21, 1868.

Claim.—1. A ratchet-pulley having a groove, the sides of which, when in use, shall take a bite on the rope, cord, or chain to be operated therein, in combination with a fixed holding-pawl and lever or levers, carrying a pawl in gear with the ratchet of the grooved pulley, arranged and operating substantially in the manner set forth.

2. A ratchet-pulley having a groove, the sides of which, when in use, shall take a bite on the rope, cord, or chain to be operated therein, in combination with a fixed holding-pawl or its equivalent, arranged with reference to the grooved ratchet-pulley, substantially as described.

3. The arrangement of cleats or apparatus for holding or making fast ropes, cords, strings, or other mechanical equivalents, wherein such cleats are held by one or more bolts or pins or other convenient fulcrum or fulcrums, in such manner as to act with shifting, variable, or differential leverage, and at variable angles upon the rope, substantially as described.

4,325.—HARNESS FOR HORSES.—John Rouse, Palmyra, N. Y.—Patent No. 25,587, dated September 27, 1859.

Claim.—The combination, with the breast-strap of harness, of the U-shaped yoke D, provided with a loop at each end, substantially as herinbefore set forth.

4,326.—ELECTRO-MAGNETIC REGULATOR FOR TEMPERATURE IN ROOMS, &c.—George Miller Sternberg, New York, N. Y.—Patent No. 100,462, dated March 1, 1870.

Claim.—1. The combination, with the armature of an electric apparatus, of the lever M, provided with spur-gears b^1 b^2, cog-wheels C^1 C^2, loose cog-wheels I^1 I^2, and double system of train-work B^1 B^2, operated substantially in the manner described, for the purpose of communicating motion alternately in opposite direction to the valve mechanism, as specified.

2. The within-described means for controlling the temperature of a building or an apartment; that is to say, the thermometer controlling an electro-magnet, the electro-magnet controlling an independent power, and the independent power operating directly to open and close a valve, which valve raises and lowers the temperature of the apartment, as herein set forth.

4,327.—COTTON-PRESS.—Paul Williams, Winona, Miss., assignor to Robert A. Williams and James L. Williams.—Patent No. 73,683, dated January 21, 1868.

Claim.—1. Combining the lever-beam A with the screw H, follower J, and thrust-beam M, to form a cotton-press, substantially as shown and described.

2. The partially-revolving tap I, combined with its recess m and the screw H and lever-beam A of a cotton-press, substantially as shown and described, and for the purpose specified.

DESIGNS.

4,746.—HITCHING-POST CAP.—Roger S. Austin, Wallingford, Conn.

Claim.—The design for cap for hitching-post, as herein described, and shown in the accompanying illustration.

4,747.—GANG-PRESS.—Wellington Denison, Rome, N. Y., assignor to himself and Joseph H. Knight, same place.

Claim.—The design for a gang-press, as shown and described.

4,748.—TELEGRAPHER'S BADGE-PIN.—Orrin C. Dow and Alford C. Harvey, St. Johnsbury, Vt.

Claim.—The design for a badge-pin, substantially as herein shown and illustrated.

4,749.—CHAIN-LINK.—Virgil Draper, Attleborough, Mass., assignor to Oscar M. Draper, same place.

Claim.—The new design for an ornamental chain-link, substantially as herein described.

4,750.—STATUE.—Angelo Fusary, New York, N. Y.

Claim.—The design as shown.

4,751.—ORNAMENT FOR THE BACKS OF LOUNGES.—George Hartzell, Philadelphia, Pa., assignor to John P. Reifsnieder, same place.

Claim.—1. The design for the ornament A united with the edge of the molding on a back of the lounge, substantially as described and illustrated.

2. The design for the ornament B on a back of a lounge, substantially as shown and described.

3. The whole design, consisting of the ornaments A and B, arranged substantially as described, and as illustrated in and by the accompanying drawings.

4,752.—CASTER-BOTTLE.—John Hoare, New York, N. Y.

Claim.—The design for caster-bottles herein shown and described.

4,753.—ORNAMENTATION OF TABLE GLASSWARE.—William C. King, Pittsburg, Pa., assignor to King, Son & Co., same place.

Claim.—The design for the ornamentation of glassware, as described and shown.

4,754.—JELLY-GLASS.—William M. Kirchner, Pittsburg, Pa.

Claim.—1. A design for a jelly-glass having a triangularly-shaped mouth, as described and shown.

2. A design for a triangularly-shaped cap for a triangularly-shaped jelly-glass, as described and shown.

4,755.—JELLY-GLASS.—William M. Kirchner, Pittsburg, Pa.

Claim.—1. A design for a jelly-glass having a hexagonally-shaped mouth, as described and shown.

2. A design for a hexagonally-shaped cap for a hexagonally-shaped jelly-glass, as described and shown.

4,756.—JELLY-GLASS.—William M. Kirchner, Pittsburg, Pa.

Claim.—1. A design for a jelly-glass having a septangularly-shaped mouth, as described and shown.

2. A design for a septangularly-shaped cap for a septangularly-shaped jelly-glass, as described and shown.

4,757.—JELLY-GLASS.—William M. Kirchner, Pittsburg, Pa.

Claim.—1. A design for a jelly-glass having an oval-shaped mouth, as described and shown.

2. A design for an oval-shaped cap for an oval-shaped jelly-glass, as described and shown.

4,758.—JELLY-GLASS.—William M. Kirchner, Pittsburg, Pa.

Claim.—1. A design for a jelly-glass having a pentagonally-shaped mouth, as described and shown.

2. A design for a pentagonally-shaped cap for a pentagonally-shaped jelly-glass, as described and shown.

4,759.—JELLY-GLASS.—William H. Kirchner, Pittsburg, Pa.

Claim.—1. A design for a jelly-glass having an octagonally-shaped mouth, as described and shown.

2. A design for an octagonally-shaped cap for an octagonally-shaped jelly-glass, as described and shown.

4,760.—CARPET-PATTERN.—Levi G. Malkin, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

4,761.—CARPET-PATTERN.—Levi G. Malkin, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

4,762.—CARPET-PATTERN.—Levi G. Malkin, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

4,763.—CARPET-PATTERN.—Levi G. Malkin, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

4,764.—CARPET-PATTERN.—Levi G. Malkin, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

4,765.—CARPET-PATTERN.—Levi G. Malkin, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

4,766.—CARPET-PATTERN.—Levi G. Malkin, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

4,767.—CARPET-PATTERN.—Levi G. Malkin, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

4,768.—SODA-FOUNTAIN.—George F. Meacham, Newton, assignor to James W. Tufts, Medford, Mass

Claim.—The design for the casing of a soda-water apparatus, herein shown and described.

4,769. — ORNAMENTATION OF RUBBER-SHOES.—Christopher Meyer, New York, N. Y.

Claim.—The design for the ornamentation of India-rubber shoes, as shown.

4,770. — LAMP-BRACKET. — Frederick R. Seidensticker, West Meriden, Conn., assignor to Bradley & Hubbard, same place.

Claim.—The design for lamp-bracket, as herein described and shown in the accompany photographic illustrations.

4,771.—CARPET-PATTERN.—John H. Smith, Enfield, assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

4,772.—CARPET-PATTERN.—John H. Smith, Enfield, assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting, in the form similar to the drawings or photographs accompanying this specification.

TRADE-MARK.

215.—WHISKY.—Mills, Johnson & Co., Cincinnati, Ohio.

EXTENSIONS.

ELLIOT SAVAGE, of West Meriden, Conn.—Letters Patent No. 16,853, dated March 17, 1857.

"Improved Machine for Cutting and Bending Sheet Metal."

Claim.—Constructing and arranging the frame which carries the clamps, with respect to that which carries the cutters, substantially as described, that is, so that while the clamps are being forced together or made to seize a plate of metal, they shall not spread the cutters apart.

Also, the mode of constructing the compound lever of the bending-rollers and arranging the rollers thereon, the said compound lever being composed of a bent lever and an arm, and the rollers being applied to them respectively in manner as above explained.

Also, combining with the clamps, their crank-shaft, and the bending-rollers, the auxiliary crank-shaft or equivalent means, by which the bending-roller N may be rotated independently of force applied through the clamps, and so that the middle of the metallic plate shall not be subjected to injurious strains by the bending-rollers.

ISAAC HAYDEN, of Lawrence, Mass.—Letters Patent No. 16,833, dated March 17, 1857.

"Improvement in Machinery for Clearing and Separating Cotton, Wool, Fur, and other Fibrous Materials."

Claim.—1. Increasing the area of the trunk above the screen, or making it larger toward its rear end by increasing its height, or width, or both, as may be desirable, so that the blast of air which conveys the materials into or through the trunk will move gradually slower, so as to allow the light and fine or such portions as are intended to be separated time to be precipitated and pass through the screen before the air which holds them in suspension escapes from or passes out of the trunk.

2. And, in combination with a trunk made gradually larger toward its rear end, as above claimed, a screen of woven wire or twine, arranged upon a series of partitions, substantially as described, for the purposes set forth.

GEORGE ESTERLY, of Whitewater, Wis.—Letters Patent No. 16,873, dated March 24, 1857.

"Improvement in Harvesting-Machines."

Claim.—1. Connecting the leading-truck to the main frame by means of a rigid reach or secondary frame, H I K, when said reach or frame is pivoted to the rear end of the main frame and united to the truck by a king-bolt, and arranged in relation to the driving-wheel, main frame, and platform substantially as set forth.

2. The forked lever P, lifting-piece N, and springdogs *g*, combined and operating together for lowering the sickle-beam, as set forth.

JAMES COCHRANE, of New York, N. Y.—Letters Patent No. 16,945, dated March 31, 1857.

"Improved Fluid-Meter."

Claim.—1. In combination with a tilting measuring-vessel, or its equivalent, inclosed within an air-tight vessel, a secondary air-tight vessel connected with the former, substantially in the manner and for the purposes herein described.

2. Combining with a measuring-vessel, located in and combined with an air-chamber, an apparatus, substantially such as is herein described, which shall from time to time introduce portions of the outer air into the interior of the air-chamber, the whole being and operating substantially in the manner and for the purposes hereinbefore specified.

ISSUE OF APRIL 11.

PATENTS.

113,478.—MANUFACTURE OF PEAT-FUEL.—David Aikman, Montreal, Canada.

Claim.—1. The cells *b*, being counterparts one of the other, and being interchanging the one with the other, forming an advancing and movable curing-vessel, *a*, substantially in the manner and for the purpose described.

2. The cells *b*, having grooved sides and bottoms, and otherwise constructed, substantially in the manner and for the purpose described.

113,479.—TICKET-HOLDER.—Albert F. R. Arndt, Cleveland, Ohio.

Claim.—The box, having compartments E F G, doors C D, rods E', apertures B', and guard-plate C, and, in combination with the slide M, springs O L, and plate K, substantially as and for the purpose set forth.

113,480.—PITCHING BARRELS. — William Anheuser, St. Louis, Mo.

Claim.—The process of pitching barrels with pure superheated steam or air by forcing the same through a heated pipe or coils of pipes before passing it into the barrels, preventing the immediate contact between the melting medium and the fire, substantially as above described, and for the purpose herein mentioned.

113,481. — FIRE-CHAMBER OF PUDDLING, STEAM-BOILER, AND OTHER FURNACES.—William Fordyce Beecher, Pittsburg, Pa.

Claim.—1. The combination of the perforated pipe D with the conduits A B, the latter being constructed with perforated waved surfaces or extensions, *g g*, substantially as described.

2. The conduits A B, constructed as described, and partly imbedded in the furnace-walls, substantially as described.

3. The arrangement, in the throat of a furnace, between the bridge-wall C and crown E, of a perforated pipe, D, and perforated conduits A B, substantially as described.

113,482.—COMBINED PLOW AND SEEDER.—William C. Bibb, Madison, Ga.

Claim.—The beveled wheel D, actuating the seeding and fertilizing devices by cranks I I, in combination with the plow C and seed-spout E, substantially as and for the purpose set forth.

113,483.—LET-OFF MECHANISM FOR LOOMS. Erastus Brigham Bigelow, Boston, Mass.

Claim.—The combination, with a power-loom, of a let-off mechanism, such as is herein described, said let-off mechanism being capable of giving out the required warp when the loom is in operation, and of winding it up when the movement of the loom is reversed, and being governed in its action by a vibrator, substantially as specified.

113,484.—PLOW.—Jerome Blanchard, Iowa Falls, Iowa.

Claim.—The combination of the land-side B, share C, connecting-bars D, bars G G with adjustable connections *d d*, and the wheels *a b* and A A, all constructed and arranged substantially as and for the purposes herein set forth.

113,485. — ELASTIC CEMENT FOR LINING PETROLEUM-BARRELS. — John James King Boote and William Anderson Gibson, Cleveland, Ohio.

Claim.—The herein-described compound, consisting of the ingredients and in about the proportion prepared, as and for the purpose set forth.

113,486.—MANUFACTURE OF RUBBER-BELTING.—Augustus O. Bourn, Providence, and Isaac F. Williams, Bristol, R. I.

Claim.—The method herein described of imparting a smooth and true surface to belts or bands of India rubber or like vulcanized gums, the same consisting in subjecting the surface of a vulcanized belt to the action of a grinding-wheel in the manner substantially as herein described.

113,487.—EDGING-MACHINE. — Henry E. Bradt, Manistee, Mich.

Claim.—The arrangement of a serrated disk or disks, L, in a drum or collars, J, sliding on the feed-shaft C simultaneously with the saws G on the mandrel B, as and for the purposes set forth.

113,488.—MACHINE FOR REDUCING WOOD FOR THE MANUFACTURE OF PAPER PULP. James Bridge, Augusta, Me.

Claim.—1. The disintegrating-drum A, made as described.

2. The rotary hollow disintegrating-drum A, and the peripheral bars or blades D, combined and arranged to operate substantially as and for the purpose as specified.

3. The hollow disintegrating-drum A, the series of peripheral bars D, and one or more shutters F F', combined and arranged as and so as to operate substantially as explained.

4. The rotary hollow disintegrating-drum A, the series of peripheral bars D, one or more shutters F, and the elastic chute G, arranged and combined in manner and so as to operate substantially as and for the purpose as hereinbefore specified.

113,489.—TURBINE WATER-WHEEL.—McKendre A. Brooks, La Porte, Ind.

Claim.—The construction and arrangement of the threaded hollow standard C, geared collar K, rod M, pinion N, spider J, rods R, and ring-gate S with relation to each other and the buckets and chutes of a turbine water-wheel, substantially as described, for the purpose specified.

113,490.—JOURNAL-BOX.—Arthur Gibson Brown, Wareham, Mass.

Claim.—The journal as constructed with the grooves *a a*, and the box and cap as provided with the flanges *b b c c* and the tongues *d d* and rebates *e e*, all arranged as specified.

113,491. — FILTER. — James Brown, San Francisco, Cal., assignor to Ira D. Thompson, same place.

Claim.—A filtering-vessel or sack constructed as above described, and lined with pulped paper, substantially in the manner set forth.

113,492.—HEATING-STOVE.—Esek Bussey, Troy, N. Y.

Claim.—The cover G, provided with the hooklug H, in combination with the pan C, when operating therewith, as and for the purpose described.

113,493.—WASHING-MACHINE. — John E. Carroll, and John Lord, Philadelphia, Pa.

Claim.—The arrangement of the casing C, provided on the interior with the corrugated surfaces and frames S F, as shown and described.

113,494.—JOURNAL-BOX.—William T. Carroll, Medway, Mass., assignor to George Draper & Sons.

Claim.—1. The arrangement and combination of the movable bearings E and their spring F with the journal-box and the rollers D D disposed therein, as described.

2. Each journal-bearing E as made with the lips *f f* and the spring-receiving recess *b*, arranged as described, the whole forming passages for circulation of the oil alongside of and through the bearing.

113,495.—CORN-HUSKER.—Erastus H. Carver, Humberstone, Canada, and George M. Baker, Buffalo, N. Y.

Claim.—In combination with the arm *b* and bearing I, the flipper G and tooth-plate D, when the latter are pivoted together and made adjustable on said arm, as and for the purpose specified.

113,496.—HASP-LOCK.—William N. Chamberlain, Denton, Mich.

Claim.—The construction and arrangement of the lock-case D D′, key-stump *a*, bolt or tumbler-studs *b b*, and tumbler E with the hasp A, and the notched cylinder F′ with the latch-dog F appended thereto, as and for the purpose set forth.

113,497.—CRADLE.—John B. Charlton, Kalamazoo, Mich.

Claim.—The combination of the cradle and crib by the swing-bars B and B′, in the manner and for the purpose set forth and described hereinbefore.

113,498.—SEWING-MACHINE.—Milton Chase, Haverhill, Mass.

Claim.—1. A sewing-machine and its table, arranged and pivoted together in the manner as hereinabove described and shown, and provided with a train of driving-wheels d G E, arranged and connected by pitmen as specified, the same enabling the sewing-machine to be moved and set at any desired angle relative to the table top, for the purpose set forth.

2. In combination with a sewing-machine and its table, pivoted together as set forth, and provided with a train of wheels connected by bands and pitmen as described, a means or mechanism for clamping the machine at any desirable inclination to the table, as and for the purpose set forth.

113,499.—LOCK FOR HAND-CUFFS.—Horace H. Cheney, East Saginaw, Mich.

Claim.—The construction and arrangement of the bolt *g*, spring *h*, stud *f*, and spring *e* in the head *a* of the shackle-segment A, the segment A′ provided with a socket, *b*, at its end, having the ratchet notches *c* and key-holes *d* formed therein, as described, said shackle-segments being hinged together, and arranged to be operated by means of the key B, all substantially as herein described.

113,500.—WEATHER-STRIP.—Franklin A. Coats, Kelloggsville, Ohio.

Claim.—The arrangement of the cap D, strip B, and the arms C C′ hinged to the door between said cap and strip, in combination with the spring *a*, lug E, door, and casing, operating conjointly as and for the purpose substantially set forth.

113,501. — PLATED BUTT-HINGE.—John J. Crooke, Southfield, and Lewis Crooke, New York, N. Y.

Claim.—The art or process hereinbefore described of manufacturing plated hinges by pickling the iron plates, whether first annealed or not; afterward reducing them to a smooth and even surface by rolling; afterward annealing them out of contact with the atmosphere; afterward making them up into hinges; and afterward plating them by the battery process, substantially as hereinbefore set forth.

113,502, antedated March 24, 1871.—PREPARATION OF PAPER PULP AND MANUFACTURE OF PAPER.—Julien Denis, Stamford street, Blackfriars, Great Britain.

Claim.—1. The new machinery, pans, vats, and drying-machine hereinbefore described, for the conversion of textile plants into pulp.

2. The arrangement of the machinery and the particular building for the said machinery.

3. The baths of chlorine combined with carbonated agents containing, among others, carbonate acid, and which are used in a heated state.

4. The treatment of textile plants by means of hydrochloric and sulphuric-acid baths, combined or not with nitrate of soda.

5. Protochloride of tin to neutralize the acids and disinfect the pulp.

6. Generally the method of proceeding in converting textile plants into brown or white pulp for paper, hereinbefore described, especially the *ayres tic littoralis*.

113,503. — COMPRESSION-COCK. — William Dinnen, Detroit, Mich., assignor to The Detroit Novelty Works, same place.

Claim.—The combination of the packing D, constructed as described, with the valve-stems C C′, washer *f*, valve *g*, nut A, and the cap-cylinder A′ and cap B of a compression-cock, when the several parts are constructed, arranged, and operating substantially as and for the purpose set forth.

113,504.—CARRIAGE-SEAT AND TOP.—Lewis Z. Dodds, South Bend, assignor to himself and John B. Moulton, La Porte, Ind.

Claim.—1. The combination of the rail A A, having knob-standards and hooks, the spring catches *g g*, and the seat-fastenings *a a*, *b b*, *c c*, *d*, all constructed and arranged substantially as and for the purposes set forth.

2. The bow-support B B, having spring 2 and pad 3, constructed and arranged in relation to a buggy-top, substantially as and for the purpose set forth.

3. The combined self-fastening shifting-rail and bow-support, consisting of the rail A A, having knob-standards and hooks, the spring catches *g g*, seat-fastenings *a a*, *b b*, *c c*, *d*, all constructed and arranged in relation to the seat and top of buggy, substantially as and for the purposes set forth.

113,505.—PRESERVING AND TRANSPORTING FRESH MEATS.—William Dugan, Chicago, Ill.

Claim.—The process herein described for the temporary preservation of meats for transportation.

113,506.—DRAWER-PULL LABEL-HOLDER.—John A. Evarts and Pietro Cinquini, West Meriden, Conn., assignors to Bradley & Hubbard, same place.

Claim.—As an article of manufacture, the herein-described drawer-pull, consisting of the pull A and frame B, the said pull being provided with suitable grooves to receive the said frame, substantially as herein set forth.

113,507.—HYDRANT.—James Farnan, Cleveland, Ohio.

Claim.—1. The chamber D, in line with the pipe A and chamber B, cylinder F, and outlet *b*, in combination with the valve G and nut L, arranged and operating in the manner and for the purpose substantially as set forth.

2. The stuffing-box P, nut N, chamber B, screw J, collar R, and stem H, as arranged to operate in combination with the valve G and chamber D, in the manner substantially as described, and for the purpose specified.

113,508.—CONSTRUCTION OF STEAM-HAMMER STANDARDS.—Oscar C. Ferris and Frederick B. Miles, Philadelphia, Pa.

Claim.—The standards E E, cast separately, with guides *g g* and bases *f f*, cast half upon each, said separate parts being bolted together, substantially as and for the purposes set forth.

113,509, antedated March 30, 1871.—FIRE-ESCAPE. — William Gardner, Boston, Mass.

Claim.—1. The combination of the stationary ways D′, sliding beams D, and folding beams C, each constructed and operating as described, with the car, sustaining ropes, and winding mechanism, as above described.

2. The arrangement of the ways D′, beams D and C, car, ropes, and winding mechanism with a safe, when the whole constitutes one article of furniture and is constructed as above described.

3. The uprights *d d*, pieces *c c* and their springs, in combination with the car and its sustaining ropes, as described.

4. The combination of the car A and pieces *e e e′* and *e″* with the folding beams C, sliding beams D, ways D′, ropes, and winding mechanism, as and for the purpose above specified.

113,510, antedated March 29, 1871.—RAILROAD-SPIKE. — Charles Gaylord, Washington, D. C.

Claim.—1. The two half-spikes A B, grooved on their inner surfaces, and connected together to form a spike by any convenient fastening, the half-spike B being provided with a half-head, *d*, and perforation *c*, in combination with a wedge, substantially as described.

2. In combination with the semi-cylindrical half-spike B with a rectangular opening, the wedge W with a bent lower end, *c*, and groove *s*, substantially as described.

113,511.—CULTIVATOR.—Julius Gerber and Horace Brown, Rockford, Ill.

Claim.—1. The seat A′, constructed specifically as described, in combination with the curving serrated support A, as set forth.

2. The combination of the auxiliary frame with the main frame when the former is hinged to the latter forward of the neck-yoke, as described.

3. The adjustable foot-rest P, when constructed as described, and combined with the supporting-beam, as set forth.

4. The jointed shovel-beam M N, provided with means of adjusting and securing the relative position of the parts M N without interfering with the free movement of the auxiliary frame relatively to the main frame, as described.

5. The combination of the seat A′, adjustable as described, with the adjustable seat-arms attached to the main frame, as set forth.

6. The bar C provided with pulleys *c c*, rigid pendants C′ with pulleys *c′ c′* and stay-rod *d*, in combination with the rod *e* and chain *f*, as described.

113,512.—MACHINE FOR TAPPING NUTS.—John L. Gill, Jr., Columbus, Ohio.

Claim.—1. The arrangement, in nut-tapping machines, of the nut-holder vertically above the tap, with its stem or spindle within a guiding-socket, or its equivalent, wherein it is free to slide downward by gravity as the tap penetrates the nut held by it, and upward by hand or otherwise, when necessary to remove the tapped nut or to insert in the holder a fresh one.

2. The sleeve-bracket or brackets X, in combination with the vertically-sliding nut-spindle or spindles, G, and nut-holder or holders, D, when so constructed and arranged, substantially as hereinbefore described, as to permit of a vertical and prevent a rotary motion of the nut-holders.

3. The arrangement of the nut-holder D inverted, as shown and described, with the hollow spindle G and oil-reservoir E, or its equivalent, as set forth.

4. An oil-drip pan, constructed with a central vertical sleeve, which surrounds the tap-spindle, in combination with a shallow tray having a wire-gauze or perforated bottom arranged therein, substantially as and for the uses set forth.

5. The chuck or tap-wrench I, recessed on the under side around the tap-spindle so as to prevent the oil and cuttings from reaching the tap-spindle below the chuck, substantially as hereinbefore described.

113,513. — GASOLINE ATTACHMENT FOR COOKING-STOVES. — Frederick Hainsworth, Chicago, Ill.

Claim.—1. One or more perforated disks, G, provided with projection H, flange J, and openings A and K, substantially as and for the purpose described.

2. The bridge-plate E of a cooking-stove, provided with apertures *c c*, substantially as and for the purpose described.

3. In combination with the bridge-plate E, the tubes *d d*, disks G G′, and reservoir A, the whole arranged substantially as and for the purpose described.

113,514. — BRICK-MACHINE.—Enoch Hallett, Hillsdale, Mich.

Claim.—1. In combination with the chains F I, pulleys G, segment H, and the plunger-rod in brick-machines, the chain J and weight K, constructed and arranged substantially as described, for the purposes set forth.

2. In combination with the frame A and table B, in brick-machines, the plate B′, provided with ledge *d*, when constructed, attached, and operating substantially as and for the purposes set forth.

3. In combination with the plate B′, provided with ledge *d* and the table B, in brick-machines, the cam E, when the several parts are constructed and arranged to operate substantially as and for the purposes set forth.

113,515.—FLY-TRAP.—Clinton R. Hardy, Lexington, Ind.

Claim.—The concentrically-corrugated disk C, when used in a fly-trap, in combination with the movable gauze chamber J, all constructed and arranged to operate substantially in the manner and for the purposes set forth.

113,516.—FILTER.—Birdsill Holly, Lockport, N. Y.

Claim.—In a water-filtering vessel, A, the perforated pipes B B B, discharge-pipe C, inlet-pipe D, and cocks *c b*, when said vessel is constructed without any diaphragm, or its equivalent, so placed as to prevent the filtering materials from being

freely and thoroughly cleansed, the whole constructed and arranged substantially as and for the purpose above described.

113,517.—REGULATING AND SAFETY-VALVE. Birdsill Holly, Lockport, N. Y.

Claim.—1. The balanced steam and water-valves A A', working in boxes B B', in combination with piston *p* and its cylinder P, substantially as described.

2. The slot *a'* and pin *a*, connecting the rod *c* of the water-valve A to the lever E, whereby the steam-valve will receive a slight movement from piston *p*, independently of the water-valve, substantially as described.

3. The chain-weight D on lever E, in combination with the balanced valves and the piston *p*, substantially as described.

113,518. — BALE-TIE.—John Holmes and James Corbett Holtzapfell Slack, Manchester, England.

Claim.—The combination (on the ends of a cotton-bale tie) of the projections *a b* with the intermediate projections *c d*, respectively and independently operating as and for the purpose described.

113,519.— FINGER-GUARD.—Levi Holmes, Green Point, N. Y.

Claim.—A finger-guard, consisting of a shield, *a*, of the form described, and a band, *b*, inclined at its lower edge, the whole forming the section of a tapering tube, as set forth.

113,520.—CULTIVATOR.—Almon Hunt, Macomb, Ill.

Claim.—1. A wheel-cultivator composed of frame A A', axles E, bolts G, thimbles H having studs A, beams D, plates I, and bolts J, pole B, and equalizer K L N, the whole constructed and operating substantially as and for the purposes set forth.

2. The thimbles H, constructed as described, and arranged to operate with axles E and beams D, as and for the purpose set forth.

113,521.—KING-BOLT FOR CARRIAGES.—Dwight Hyde and Ephraim H. Andrews, Bridgeport, N. Y.

Claim.—An improved king-bolt, composed of the swiveled clip E *h*, which embraces the axle and the double clamps D *d f*, secured to the head-block and holding the spring, the clip E being provided with the plate and pin *e g*, and all the parts being constructed and arranged substantially as and for the purpose herein described.

113,522.—SEED-DRILLING MACHINE.—Oliver Hyde, Oakland, Cal.

Claim.—1. The hoppers A A, connected together by flexible joints or hinges, in combination with the beam D and wheel C, the whole hinged or linked to the transverse timber G, or equivalent device, substantially as and for the purpose above described.

2. The screw-blade *q* and pins *r r* in combination with the shaft *p*, arm *i*, and the slide *s*, substantially as and for the purpose above described.

113,523.—BALANCE-VALVE FOR STEAM-ENGINES.—Nelson Jenkins, Detroit, Mich.

Claim.—The valve B, when constructed and operating substantially as set forth.

113,524. — PACKING-TUBE FOR VAPOR-LAMPS. — William E. Jervey, New Orleans, La.

Claim.—The packing-tube, constructed as described, with a joint, and with a polygonal enlargement on said joint to permit the tube to be removed or replaced without injury to the tube, as set forth.

112,525.—THILL-COUPLING. — Daniel A. Johnson, Boston, Mass.

Claim.—The yoke A, constructed as described, in combination with packing H, band D, and lugs F F', screw I, and loose plate C, substantially as described.

113,526. — SOAP FOR POLISHING METALS, &c.—Ezra A. Johnson, Philadelphia, Pa., assignor to himself and Alexander Warfield, same place.

Claim.—A cleansing and polishing-soap, composed of soap, cocoa-nut oil or cocoa-nut butter, lye, and prepared silex, with or without sal-soda, substantially for the purposes herein set forth.

113,527.—CHIMNEY-TOP.—Michael S. Kavanagh, Detroit, Mich.

Claim.—The construction and arrangement of the chimney-top B, provided with a hood, D, vane E, spindle *d*, valve-sector F, bridge-pieces *a a*, inclined flanges *b b*, and plates C with relation to each other and the chimney or flue A, substantially as and for the purpose set forth.

113,528.—SPARK-ARRESTER FOR LOCOMOTIVES.—Francis Kearney and Luke F. Tronson, Newark, N. J.

Claim.—The grate D with longitudinal bars, as and for the purposes specified and shown.

113,529.—PLATFORM-SCALE.—Michael Kennedy, New York, N. Y.

Claim.—1. In combination with a lever which vibrates in a horizontal or inclined plane, and whose axis of vibration is a knife-edge, substantially as described, a point or pivot at the lower end of its fulcrum and in line with the knife-edge, and a bearing for the said point or pivot, substantially as and for the purpose described.

2. The knife-edges formed with end shoulders, in combination with the sides or ends of the bearing-blocks beveled to a point, or nearly as may be in line with the knife, substantially as and for the purpose described.

3. In combination with the secondary levers and a transmitting-lever interposed between and receiving action from both simultaneously, a connecting-tube, or the equivalent thereof, for transmitting the action by thrust, substantially as and for the purpose described.

113,530.—LIGHTNING-ROD.—Lewis King, East Cleveland, Ohio.

Claim.—The herein-described joint, when arranged in the manner as described, with a dowel, C, and one or more pins, D, substantially as specified, for the purpose set forth.

113,531.—SAWING-MACHINE.—Phineas F. King and Edwin A. King, St. Louis, Mo.

Claim.—1. The arrangement of the parallel slides D D' with adjustable stop-block I^3, for regulating the stop motion of said slides, in combination with the gauge F, substantially as set forth.

2. The gauge F, small slides e^1, when combined with the broad slide C, table B, arbor and saw attachments E E^1, frame A, and arranged to operate substantially as and for the purpose set forth.

3. The parallel slides D D', having slots I, stop motion-regulating devices I^1 I^2, gauge F, protractor H, when arranged in combination with the broad slide C, table B, saw E^1, arbor E, and frame A, to operate for sawing angular and irregular work, as described.

113,532.—DOLL.—Jacob Laemann, Philadelphia, Pa.

Claim.—The inelastic flexible cores *a a*, in combination with the fingers and thumb of the hand of a doll, substantially as and for the purpose hereinbefore set forth.

113,533.—STEAM-GENERATOR.—Erasmus D. Lacy, Rockford, Ill., assignor to Barnas C. Sears, same place.

Claim.—1. The chamber B, in combination with the furnace A, when constructed and arranged substantially as described.

2. The chambers B and C, when constructed and arranged substantially as described.

3. The generator described, consisting of the furnace A, boiler, with chambers B and C, and supply and steam-pipes, arranged as described.

113,534.—GRINDING-MILL.—Franklin H. La Port, Clarinda, Iowa.

Claim.—The arrangement of the blower D with pipe E, eye C of the millstone A, casing B, and pipe F, when all are constructed and operated as herein shown and described, for the purposes set forth.

113,535, antedated April 1, 1871.—BASE-BURNING STOVE.—Silas Hoffman La Rue, Allentown, Pa., assignor to himself and W. J. Hoxworth, same place.

Claim.—1. A fuel-reservoir, B, which is corrugated or internally ribbed, in combination with the air-inlet passage *g'*, between the extremities of this reservoir, substantially as described.

2. The air-circulating chamber J arranged directly beneath the water-tank G, and its water-jacked cover A, substantially as described.

113,536.—DEPURATOR.—Frederick C. Leland and Samuel W. Poland, Lowell, Mass.

Claim.—1. The combination, with a depurator of an apparatus to supply the patient *in vacuo* medicaments in the form of vapor or fluid, operating in the manner and for the purpose specified.

2. A valve combined with the inducting-tube of the depurator.

113,537.—WINDOW-SCREEN.—Charles F. Linscott, Chicago, Ill.

Claim.—1. The supplemental frames and screens, arranged for adjustment upon opposite sides of the main frame, substantially as shown and described, for the purpose specified.

2. The combination of the folding wire-screen F with the supplemental frame and the main frame A, substantially as described, for the purpose specified.

3. The combination of the roller I with the supplemental frame, the netting-screen H, and the main frame A, substantially as described, for the purpose specified.

4. The adjustable slides D, constructed substantially as described, in combination with the rails C and the main frame A, arranged as shown, for the purpose specified.

113,538.—BUREAU TRAVELING-TRUNK.—Hector Mackinnon, Cleveland, Ohio.

Claim.—1. In combination with the body A and drawers B B of the trunk, the rod E, secured by a separate locking device, as at *e*, substantially as and for the purpose set forth.

2. An improved bureau-trunk, composed of a body A A', with raised portion F, drawers B, and locking device E' *e'*, detachable top D, and the detachable front side A'', all constructed and arranged substantially as herein shown and described.

113,539.—BERTH FOR SLEEPING-CARS.—Benjamin F. Manier, Green Island, N. Y., assignor to himself and Thomas R. Smith, same place.

Claim.—1. The adjustable attachment of the weights to the chains by means of the adjusting screw and nut, substantially as specified.

2. The arrangement, with the weights or the stops K, of the cushions I, substantially as specified.

113,540.—BRICK AND OTHER MOLDS.—Henry Martin, Brooklyn, N. Y.

Claim.—The feet or stops E, in combination with the plunger-frame C and mold-frame A, essentially as and for the purpose specified.

113,541. — HARNESS SADDLE-TREE.—John H. Martin, Columbus, Ohio.

Claim.—The retaining-plate C, its screw *t*, and the capped plate B, constructed and adapted for use with a yoke having T-shaped heads on its extremities, substantially as described.

113,542.—NEEDLE-SETTER AND THREADER. Charles F. Martino, Boston, Mass.

Claim.—1. The plate A, in combination with the pivoted gauge-plate D and plate B, having clamps C C', substantially as described.

2. The needle F, provided with one or two hooks, and attached to spring H, in combination with plate A, substantially as described.

3. The combination in one instrument of the reversible and adjustable needle F with its spring H, the pivoted plate B with its clamps C, and the pivoted gauge-plate D, all arranged and operating substantially as described.

113,543. — WEIGHING ATTACHMENT TO WAGONS.—William H. McCormick, Muncie, Ind., assignor to himself and John T. Williams, same place.

Claim.—The transverse interlocking levers B B', arranged alongside the bolsters so as to be protected thereby from disarrangement, and provided with anti-friction rollers *c* hung between lugs, in combination with the levers D, F, and E, cap *h*, and anti-friction roller *f*, all constructed, arranged, and operated as set forth.

113,544. — SPINDLE FOR WRINGER-ROLLERS.—Thomas E. McDonald, Trenton, N. J.

Claim.—A spindle for rubber wringer-rollers, constructed with dovetailed grooves cut or cast longitudinally in the manner and for the purpose substantially as herein set forth, shown, and described.

113,545.—Suspended.

113,546. — MACHINE FOR TRIMMING THE SOLES OF BOOTS AND SHOES. — Daniel McLaughlin, Baltimore, Md.

Claim.—1. The revolving cutter-heads D and E, arranged with guides or guards F and G, substantially as and for the purpose herein set forth.

2. The revolving cutter-heads D and E and guides or guards F and G, in combination with rest or platform K, substantially as and for the purpose herein described.

113,547.—PACKING PISTON OF STEAM-ENGINES, &c.—John C. Merriam, Olneyville, R. I.

Claim.—1. The mode of preparing piston-packing herein set forth and described; that is to say, by covering the core or roving of the packing while saturated or wet with a solution of argillaceous clay or other mineral.

2. An improved packing, formed by braiding a cover upon a core or roving while said core or roving is saturated or wet with a solution of argillaceous clay, substantially as herein shown and described, and for the purpose set forth.

113,548. — FOLDING TABLE-TOP.—Charles W. Mills, Chicago, Ill.

Claim.—The toggle-joints G and K, the double hinge J, rod H, and chain M, so arranged as to operate the leaves C, D, and E at one and the same time, substantially as herein described, and for the purpose set forth.

113,549.—Fire-Pot for Stoves and Furnaces.—Edward Mingay, Boston, Mass.

Claim.—1. The metallic lining when constructed with hollow perforated spurs or partitions walls D, between the spaces occupied by the fire-bricks, as herein shown and set forth.

2. In combination with a metallic lining, constructed as specified, and provided with recesses G and air-inlets *d*, the fire-bricks fitting in the said lining and recesses G, and provided with air-channels or ducts communicating with said inlet *d*, under the arrangement shown and described.

3. In combination with the metallic lining and fire-bricks, constructed and arranged as specified in the preceding clause, the cap plates *f*, applied to said lining and bricks, and joined together, substantially in the manner shown and set forth.

4. The construction of the cap plates *f*, as provided with a hanging lip for retaining in place the upper ends of the fire-bricks F; of an inclosing ledge for compelling the deposit of ashes upon their upper surfaces; of an air-port to permit oxygen to pass the fire; and lastly, of tenon-and-socket connections at their mitered corners, all substantially in manner and operating as explained.

113,550.—Corn-Planter.—William Morrison, Carlisle, Pa.

Claim.—The India-rubber piece *s s*, in the top of the brush *m m*, pressing downward upon the clearer *w* in the manner and for the purpose herein set forth.

113,551. — Carriage-Step. — Francis B. Morse, Plantsville, Conn., assignor to H. D. Smith & Co., same place.

Claim.—1. A carriage-step, in which the pad A, shank B, and section of the loop C are produced in one and the same piece without welding, substantially as described.

2. The shank B of a carriage-step, formed of T-shape; or with a rib upon one side, substantially in the manner and for the purpose set forth.

113,552.—Horse Hay-Rake.—William A. Myers, York, Pa.

Claim.—1. The socket-plates, constructed as described, with open sockets *c* and open guides *c'* to receive the rake-teeth, so that each pair of teeth may be clamped to the axle by a single screw and the teeth can be separated by removing the socket-plate from the axle.

2. The combination of the cranked axle, the rake-teeth mounted on top of said axle, the draft-frame hinged to the under front corner of the axle, the clearing-teeth and driver's seat mounted on the draft-frame, and the pressure-lever pivoted to foot-lever and resting on the draft-frame; all these parts being constructed and operating as described.

3. The pressure-lever, pivoted to the foot-lever, and resting on the draft-frame, as described.

113,553. — Steam-Engine. — Nathan E. Nash, Westerly, R. I.

Claim.—1. The improved engine, having four cylinders radiating at equidistant points around the axis of the crank-shaft, the pistons of each coincident pair connected to a slotted yoke or bar, and said yokes or bars of both pairs connected to the one crank-pin, all substantially as specified.

2. The ports N and the annular exhaust-passage T, arranged in circles around the crank-shaft in the side of the block A, in which the cylinders are formed, and the combination therewith of the adjustable disk O, having the notch R and groove S', all substantially as specified.

113,554.—Weather-Board Gauge.—Matthew Newlove, Burlington, Iowa, assignor to himself and George Giebrick, same place.

Claim.—An improved weather-board gauge, consisting of the handle A, plates B, piece or block C, spring D *d*^{1} *d*^{2}, key E, and spur-plate F *f*^{1} *f*^{2}, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

113,555. — Hoisting Apparatus.—Charles R. Otis and Norton P. Otis, Yonkers, N. Y.

Claim.—1. The employment, in connection with a safety-hoisting apparatus, of the sheave H, arranged to change its axial position automatically in case of accident or derangement to any part of the apparatus with which it is connected, substantially as described.

2. The combination of the movable sheave H and connected weight with the lifting-rope, substantially as and for the purpose herein described.

3. The combination of the movable sheave, its connected weight, and the stop-lever or throttle-valve of the engine, substantially as and for the purpose herein described.

4. The combination of the movable sheave H with the brake-lever L of the safety-drum, substantially as and for the purpose herein specified.

5. The cab or platform, constructed with two sets of stop-pawls, *e e* and *k k*, arranged to operate independently of each other, substantially as specified, for the purpose of obtaining greater safety.

6. The combination of the two independent sets of stop-pawls with each other and with the lifting and safety-drum ropes, substantially as herein set forth.

7. The counter-balance O and its rope N in combination with the safety-drum M and its rope N', substantially as described.

8. The combination of the brake-lever L of the safety-drum with the stop-lever or throttle-valve of the engine, by connections for automatic action, essentially as specified.

113,556. — Cooking-Stove. — Daniel E. Paris, Troy, N. Y.

Claim.—1. The upright open-barred plate W, in combination with the upright mica door or windows O O, or any equivalent therefor, constructed substantially as herein described and set forth.

2. The rocker pieces *x x*, or any equivalent therefor, when made to support a coal-grate or coal-pan, one or both, for the purpose, or substantially in the manner herein shown and described.

3. The coal-pan A and the ash-pan B, the former above the latter, and each independent of the other, in combination with the fire-grate above and the door-openings in front of the same, when made for the purpose or substantially in the manner herein described and set forth.

4. The opening or openings Q' Q', formed between the hearth-plate P and the front fire-plate W, in combination with the pieces Q Q formed on the mica-door O O, or any equivalent for the same, when made for the purpose or substantially in the manner herein described and specified.

5. The movable rack S, or its equivalent, made for the purpose, and attached to the stove, substantially in the manner herein shown and described.

6. The mode of ventilating the oven and fire-box by means of the air-passages *d* and N, when connected and combined with each other, substantially in the manner herein set forth and described.

7. The construction of a stove-door knob or catch, made with the crooked shank 2, in combination with the wood attachment 3, when made for the purpose and substantially in the manner herein shown and described.

8. The revolving cake-griddle R, in combination with the central opening N in the stove top, or its equivalent.

9. The revolving flue-damper K, in combination with the flues *f f* and *g*, and the heating-chamber below the reservoir, made to operate substantially as herein described and shown.

113,557.—Metal Screw and Nut.—Henry G. Pearson, New York, N. Y.

Claim.—1. A bolt or screw having a series of indentations on one or both sides of the thread, substantially as described, in such manner that the indentations will act as a series of detents, for the purpose set forth.

2. A nut having a series of indentations on its thread, substantially as described, and adapted for use in connection with a bolt or screw indented as described.

3. Such a nut, when used in connection with a base convex steel-washer, or its equivalent, as described.

113,558.—Pen-Holder.—Oliver A. Pennoyer, Washington, D. C.

Claim.—The cylinder B having a single slot, *a*, and inwardly-projecting standing stud *c*, in combination with the sliding cylinder C having slot *a'* therein and stud *b* fast thereto, and sliding in slot *a*, in the manner and for the purpose described.

113,559.—Frame for Wire-Mattresses.—George C. Perkins, Hartford, Conn.

Claim.—The metallic corner connecting-pieces *c d* and *c' d'*, having the two angles or bearings *c c'* and *d d'*, for the purpose of sustaining the strain in the web *m*, and transmitting to the side pieces *c c'*, substantially as described.

113,560.—Dovetailing-Machine.—David Pomeroy, San Francisco, Cal., assignor to Elander Heath, same place.

Claim.—1. The turning or canting side H with its end pivots, in combination with the cam J, when constructed and operating substantially as herein described.

2. The cylindrical cam J, with its angularly-placed shaft either graduated or not, substantially as herein described.

3. The rocking-plate K with its lever L, and the arm M and set-screw N, when used as a gauge, substantially as herein described.

4. The ways E and the guides O, adjustable as shown, and the gauge, consisting of the lug T and the adjustable blocks U, the whole constructed and operating substantially as described.

113,561.—Paddle-Wheel.—Elijah Pratt, New York, assignor to himself, David Mundell, and Alfred Mundell, Brooklyn, N. Y.

Claim.—1. The guide cam-plates G G, provided with the outer cam grooves H H and inner cam-grooves J J, and with connecting passages controlled by the switch-blocks K K L, or their equivalents, substantially as and for the purpose herein specified.

2. The guide-rods F F, moving in inner slots of the wheel-arms, in combination with the cam-plates G G and paddles D D, substantially as and for the purpose herein specified.

3. The combination of the sliding-paddles D D, cam guide-rods F F, double-slotted wheel-arms *e e*, and cam-plates G G, constructed and arranged substantially as and for the purpose herein specified.

113,562.—Article for Food from Algæ or Sea-Mosses.—William J. Rand, Jr., Brooklyn, E. D., N. Y.

Claim.—1. *Chondrus crispus*, or Irish moss, and other species of algæ, as specified, washed in a light alkaline water, desiccated and put up in cloth or other bags, or an equivalent, suitable in size for the convenience of the consumer and the trade, as set forth.

2. The new manufacture of algæ, of the several species herein described, ground, powdered, cut up, shredded, or disintegrated, with or without the addition of other substances, so as to be put up and form an article of food, as set forth.

3. The above-described process for treating algæ, substantially as and for the purpose set forth.

113,563.—Clothes-Line Conductor.—David Reed and Amos Shaeffer, Medway, Ohio.

Claim.—1. The pulleys B of the above-described construction, arranged upon posts or other proper support, in combination with a reel having a short line attached, in the manner and for the purpose herein described.

2. The pulley B, having its upper flange provided with semicircular notches *b b*, as described, when arranged upon posts and used in connection with a clothes-line, as described.

3. The coupling D, with opening *d*, head *d*^{1}, head *d*^{2}, with slot *d*^{3}, in combination with the line C, as set forth.

113,564.—Grain-Drill.—Daniel Rentchler, Belleville, Ill.

Claim.—1. The rock-bar I, hinged to the hangers *i*, and provided with hooks *h* and toothed-wheel *k*, in combination with the drag-bars H, flukes F, and sliding toothed bar K, all constructed, arranged, and operating substantially as and for the purpose set forth.

2. The arrangement of the funnels L L', crank-shaft M, clamps *m*, pinion *n*, and sliding rack-bar K, and the rock-bar I, pinion *k*, drag-bars H, and flukes F, all constructed and operating substantially as and for the purpose set forth.

3. The cam *g'*, lever Q, and sliding pinion-clutch *p* on the crank-shaft P, combined with the lift-bar G hinged at *g*, the flukes F and the chains by which they are suspended, whereby the feeding mechanism is thrown out of gear simultaneously with and by the raising of the flukes from the ground, all operating substantially as herein described.

4. The pitmen R having a bearing, *r*, on the shaft P, when the bearing is provided with recesses *r'*, substantially as and for the purpose set forth.

5. The slide O^2, when made with a cavity *g*^{3}, and bearings *o*^{4}, and combined with the flange *o*, substantially as herein shown and described, for the purpose set forth.

113,565.—Machine for Sawing Staves.—Asaria Rewrick, San Francisco, Cal.

Claim.—1. The plate B, slotted as described, and having projections I I, forming supports for the pulleys *k l*, in combination with the adjustable boxes *d* and friction-rollers *e*, substantially as shown, and for the purpose described.

2. The pulleys *k l*, secured above and below and to one side of the center of the revolving saw *f*, and the large pulley H, in combination with the endless belt *m*, arranged to encircle the larger part of the saw, as described, for the purpose specified.

113,566.—Friction-Clutch. — George S. Reynolds, Lebanon, N. H.

Claim.—The clutch-lever D, slotted and grooved, and combined with the spring *d* and with the flange of the wheel C, substantially as herein shown and described, to operate as set forth.

113,567. — Gas-Heater. — Orlando McKnight Reynolds and David Tuttle Kitchell, Oil City, Pa.

Claim.—1. The construction of the base H of the reservoir with sloping plates in such manner as always to retain heated and protecting fluid.

2. The construction of a coiled siphon, *f*, within the chimney of a lamp-heating apparatus in such way as to receive fluid from and return it to the reservoir for the purpose of increased and equalizing heating facilities.

3. The combination of the tank *a* with sloping base H, lamp *b*, water-pipe *c*, chimney *d*, cover *e*, and coiled siphon *f*, all constructed, arranged, and combined as and for the purposes set forth and described.

113,568.—WHIFFLETREE.-Joseph H. Riggs, Chelsea, Mass.

Claim.—In combination with the cross-bar, shafts, and whiffletree of an ordinary wheeled vehicle, the clasps or yokes A A and the hooks *e e*, or their substitutes, the whole operating as hereinbefore explained.

113,569.—MEDICAL COMPOUND.—Joseph A. Robbins, Medford, Mass.

Claim.—1. The remedial agent, gasoic medicated cocoa-butter, substantially as described.

2. The process of making gasoic medicated cocoa-butter, substantially as set forth.

113,570.—OIL-CLOTH PRINTING-MACHINE.-Charles Rommel, Elizabeth, N. J.

Claim.—1. The prismatic printing-roller B, combined with the color-roller F, of same shape, both being turned at equal intervals and in equal degree, as specified.

2. The printing-roller B, suspended from the shaft D to receive vertical motion, and connected with the wheel *i* for receiving intermittent rotary motion, substantially as set forth.

113,571.—DENTIST'S INSTRUMENT-STAND.—John J. Ross, Hernando, Miss.

Claim.—The upright *a*, combined with the rotary top *b*, when the latter is provided on its upper surface with the central flat space *c* and the surrounding sloping spaces *f*, separated from each other by rails, as specified.

113,572.—FISH-NET SUPPORTER.-Benjamin Rider, Jr., South Orrington, Me.

Claim.—A net and net-frame combined, as described, with the triangular frame A, weighted, loosely attached to fixed pivot, and operating as and for the purpose specified.

113,573.—SPRING FOR VEHICLES.—Cyrus W. Saladee, St. Catharines, Canada.

Claim.—The arrangement and combination of the springs A A, when placed on a line with the axles of the vehicles, and operating in combination with the levers or cranks A′ and the bearings D, substantially as and for the purpose shown and described.

113,574.—SPRING FOR VEHICLES.—Cyrus W. Saladee, St. Catharines, Canada.

Claim.—Crossing torsion-springs A at or near their centers, and operating in combination with the cranks or levers A′, substantially as and for the purpose shown and described.

113,575.—RING-SPINNING MACHINE.-Jacob H. Sawyer, Lowell, Mass.

Claim.—1. The combination, with the stationary live spindle S, of a chambered bobbin, having such a conformation of the chamber as to allow the bobbin to receive and constantly retain the stationary upper bearing of the spindle within the body thereof, but without being in contact therewith, substantially in the manner and for the purpose specified.

2. The combination, with a stationary live spindle, of a stationary tube or standard, T, extending above the rail, and containing or supporting the upper bearing of the spindle at a fixed point within the bobbin when the latter is in place on the spindle, substantially as described.

3. The stationary live spindle having its bearing nearest the whorl of a less diameter than the other, in combination with the stationary tubular bearing T and the chambered bobbin D, the latter surrounding but not touching the tubular bearing, all substantially as and for the purpose specified.

4. The arrangement of the bearings of stationary live spindles of ring-spinning frames in the manner substantially as described, whereby the lower bearing is placed in a fixed position nearer to the whorl than the upper bearing without changing the relative position of the whorl to the bolster-rail, when such spindles are used in combination with the stationary tubular bearing T and the chambered bobbin D, as set forth, the bobbin surrounding but not touching the bearing.

113,576.—SOFA-BED.—Charles C. Schmitt, New York, N. Y.

Claim.—1. The sofa-back, composed of the parts C and D, between which part of the mattress can be concealed, substantially as herein shown and described.

2. The sofa-bed, composed of the parts A B C D, all hinged together to operate substantially as herein shown and described.

113,577.—BUTTON.-Gustav Adolph Schultz, Louisville, Ky.

Claim.—As an article of manufacture the button herein described, consisting of the disk E, provided with the shank carrying the rigid arm D and the spring-fastening device B A C, constructed and arranged to operate in connection with the notched lug, as specified.

113,578.—KINDLING MATERIAL.—Theodore Schwartz, New York, N. Y.

Claim.—1. A new article of manufacture which I call coal-matches, the same consisting of sticks, preferably of tinder-wood, one or both ends of which have absorbed an inflammable liquid varnish, or other suitable inflammable material, and been protected from tackiness by the application of sawdust to the varnished surface, all as herein-before fully set forth.

2. The special process or method of applying the inflammable material to the end surfaces of the sticks, as described.

3. Sticks of wood having special inflammability confined to one or both ends by an application of varnish, or other suitable inflammable material, restricted to said end or ends, for the purposes specified.

113,579.—FEED-CUTTER.—Joseph Seaman, Chicago, Ill.

Claim.—The improved construction and arrangement of the feed-cutter described and shown, consisting of the box A, the frame B, the spring face-plate M, the adjustable toothed feed-rollers E E′ having the crown-wheels F F′ driven by the worm-shaft G, the heavy crank-wheel I carrying the knives L, and the comb N, all substantially as and for the purpose set forth.

113,580.—CHURN.—Abraham Shaffer, Vandalia, Mich.

Claim.—1. In combination with the chamber D the spiral air-pipes L M, when constructed and operating as and for the purposes set forth.

2. The arrangement of the standard A, cross-tie C, cream-chamber D, door E, link F, cam-lever G, bar H, staple I, crank J, lip K, pipes L M, hook N, and staple O, in the construction of a rotating and rocking churn, when said parts are combined to operate as and for the purposes herein set forth.

113,581.—FLY-BRUSH.—David Shankland and Emerson B. Hopkinson, Nevada City, Cal.

Claim.—A fly-brush, consisting of the train of gears driven by a spring, in combination with the vibrating-arm *k*, connected with the vertical shaft *l* by means of the connecting-rod *n*, and the vertical shaft P with its radiating-arms *s*, substantially as and for the purpose described.

113,582.—WASH-BOILER.-John H. Siebcke, Ann Arbor, Mich.

Claim.—The construction and arrangement of the vertical chamber A, provided with the cover C and diagonal spouts D, as described, in connection with the flange B, as and for the purpose set forth.

113,583.—REFINING IRON AND STEEL.—Alexander H. Siegfried, South Bend, Ind., assignor to himself and George B. Garman.

Claim.—The within-described process of tempering and refining steel by the use of the before-mentioned compounds of chemicals in the manner as set forth.

113,584.—PROCESS AND APPARATUS FOR THE PRODUCTION OF CAST-STEEL FROM ORES.—Charles William Siemens, Westminster, England.

Claim.—1. Producing cast-steel by first converting ferruginous ore into lumps or loaves of partially or wholly-reduced metal, either with or without admixture of fluxing materials, and by then charging these lumps, in a heated condition, into an open-hearth steel-melting furnace, to be there liquefied by being brought into contact with a bath of cast-iron or other carbonaceous matter, substantially as hereinbefore described.

2. The method of reducing masses of iron ore, whereby the ore is subjected to the action of carbonic-oxide gas, generated from carbonaceous materials contained with the ore, inside a close chamber, heated externally, while the resulting carbonic-acid gas is again converted into carbonic oxide by contact with the heated fuel, substantially as set forth.

3. Preparing loaves of wholly or partially-reduced iron ore by melting the ore or mixture of ores with fluxing materials in contact with carbon, and by charging this fluid mass into molds containing coke, charcoal, or other solid carbonaceous matter, which loaves are thereupon maintained for some hours at a full red heat in a reducing atmosphere, within a heated chamber or hot-store furnace, before they are charged into the steel-melting furnace, substantially as described.

4. Preparing loaves similar to those aforesaid by crushing the ore, by mixing it intimately with fluxing materials and with binding-coal, by forcing or placing the mixture into molds and exposing the same for a considerable number of hours to a full red heat in a closed heated chamber or hot-store furnace, substantially as described.

5. Preparing loaves similar to those aforesaid from ores rich in manganese or other equivalent easily-oxidizable metal, together with an excess of carbon, to be charged into the fluid bath of the steel-melting furnace toward the end of each operation, in order to impart those metals to the bath, substantially as described.

6. Constructing hot-store furnaces, muffles, or kilns for reducing iron-ore, wherein the ore is contained together with carbonaceous materials inside a closed chamber or chambers situated inside a regenerative gas-furnace or other furnace, substantially as described.

7. Constructing hot-store furnaces, muffles, or kilns for calcining or reducing iron-ore, wherein the ore, in the form of lumps, is caused to descend through a vertical or inclined shaft onto the bed of a close chamber heated externally, in which chamber carbonaceous materials are placed, the excess of carbonaceous gases being caused to rise through the vertical shaft, where they are made to enter into combustion with atmospheric air introduced through side apertures, so as to effect the calcination of the descending ore, substantially as hereinbefore described with reference to figs. 14, 15, and 16 of the drawing.

8. Arranging in hot-store reducing-furnaces, as described in the sixth and seventh claims, a separate receptacle or receptacles for the carbonaceous material, so as to bring the ore only in contact with the carbonaceous gases generated from such carbonaceous materials, substantially as described.

9. Constructing the steel-melting furnace with a charging-chamber, through which a portion of the hot gaseous products of combustion can be made to circulate, into which the aforesaid lumps, as well as the pig-metal or other materials to be used, are introduced, to be thence pushed forward in a heated condition into the melting-chamber, substantially as described with reference to figs. 8 to 10 of the accompanying drawing.

10. Constructing the bed of the steel-melting furnace of a mixture of pure silicious sand with glass-powder, substantially as hereinbefore described.

11. Constructing the air and gas-ports of a steel-melting furnace in such manner that the vertical air-ports rise nearly to the roof of the furnace, while the side walls of the flues are extended forward in a convergent manner until they meet, in order that the air may issue into the furnace in diverse directions above the combustible gas, substantially as hereinbefore described with reference to figs. 8 to 10 of the accompanying drawing.

12. Arranging one or more rows of steel-melting furnaces with their tapping-holes facing a longitudinal trench, with lateral trenches leading to each of the furnaces, upon the edges of or over which trenches rails are fixed crossing the main trench, ladle-carriages being arranged to run over the lateral trenches in order that the fluid metal may be discharged into molds carried upon rails in the central trench, facilitating their preparation and removal, as hereinbefore described.

113,585.—HOISTING APPARATUS.—Thomas Silver, New York, N. Y.

Claim.—1. The combination, with the car or platform D and a fixed rack or racks, of the obliquely-disposed revolving shafts F F having the convolute flanged wheels E E firmly secured to them, and connected by a universal joint, H, the whole arranged for operation substantially as specified.

2. The combination of the grooved guide or guides C attached to the car or platform, with the roller-rack or racks B and the obliquely-disposed convolute flanged wheel or wheels E, essentially as herein set forth, whereby the rollers of the rack serve not only as climbing-points or surfaces, but also to ease and guide the car or platform in its travel.

3. The endless driving-rope or chain I, running directly from the driving-pulley J, or its equivalent, to and around one of the convolute flanged wheels E, substantially as herein described.

113,586.—CURRENT WATER-WHEEL.—Heman B. Sinclair, Paw Paw, Mich.

Claim.—The combination of a current water-wheel provided with the hub E, the radial arms *e*, the blades F, the brace-rods D, and the chains *f*, with the deflecting-guide G, all constructed and arranged substantially as described and shown, for the purpose set forth.

113,587.—MANUFACTURE OF STEEL.—Fred. J. Slade, Trenton, N. J.

Claim.—The manufacture of steel by the recarbonization of a bath of metal produced from iron sponge, or from a mixture of ore and carbonaceous matter previously melted and decarbonized, substantially as described.

113,588.—ROOFING COMPOSITION.—Jacob H. Smyser, Pittsburg, Pa.

Claim.—A roofing composition composed of vulcanized caoutchouc mixed or combined with the products of destructive distillation, or slow putrefactive change of organic matters, such as coal-tar, pine-tar, bitumen, or asphaltum, the resulting product being mixed with a salt of an alkaline metal, or salt of an earthy metal, or a mixture or chemical combination of salts of both.

113,589.—ELECTRO-MAGNETIC BURGLAR-ALARM.—James P. Snyder, Brooklyn, N. Y.

Claim.—1. The combination of the arms *c c′ c″*, springs *d*, *d′*, *d″*, and *d‴*, plate B, and spring *e*, for the purpose of changing and distributing circuits, all constructed, arranged, and operating in the manner and for the purpose of making more perfect connections, in the manner and for the purpose specified.

2. The non-conducting double wedge-shaped block *e*, and conducting metallic wedge-shaped blocks *e' e'*, rod F, and vertical springs M M' M'' M''' M'''' M''''', combined and arranged so as to produce the several circuits in a perfect manner, as well as preventing the corroding of metals.

3. The pawl H, eccentric G, combined with the rod I and stop-pin L, thereby relieving the lever P of any existing lateral strain which would occur if the rod was dropped into a notch in the eccentric G.

4. Counteracting the resistance of the coil of wire which surrounds the magnet O by means of the springs M M' and non-conducting block *e*, all arranged substantially for the purpose set forth.

5. The mode of regulating and adjusting the eccentric G and bar or shaft F, by means of the adjustable-rod I, with spiral or other spring, and stop-pin L, all constructed, arranged, and operating in the manner and for the purpose set forth.

113,590. — APPARATUS FOR EVAPORATING CANE-JUICE, &c.—Ebenezer Sperry, Chicago, Ill.

Claim.—1. The arrangement of the two fire-boxes A B, separated by the double wall A', and hinged damper B', with the bottom of the boiler C' forming the top of said fire-boxes, when constructed and operating as herein set forth.

2. The boiler C' provided with tubes *a' b'*, in connection with the two fire-boxes A B, when constructed and operating as and for the purposes herein specified.

3. The combination and arrangement of the tubes *a' b'*, and flues *c*, and flue D', with the two fire-boxes A B and boiler C', when constructed to operate as herein described.

4. The arrangement of the boiler C', evaporating-pan E', gates *d'*, sinks or wells *e*, drip-pipes F, leaders *f*, gates *e'*, fixed gates *f' g'*, and adjustable gates A, when constructed and operating as and for the purpose herein set forth.

5. In evaporators, the valve or gate F', when operating for the purpose specified.

6. The arrangement of the pipes N G' H H, the latter being provided with valves *i'*, for the purposes set forth.

7. The regulator I', when constructed and hung as described, in connection with the operating lever J, connecting-rods *k*, and valves *i'*, when operating for the purposes specified.

8. In evaporating-pans, the perforated distributer I, in connection with the stand-pipe G, for the purposes herein set forth.

9. The receiving-pan K', divided into two chambers *n n'*, provided with valves *o' o''* operated by the float M through the arm *p''*, rocker-arm *r*, rock-shaft L, and connecting-rods *p'*, when constructed and operating for the purposes herein specified.

10. The heater O provided with flues *r' O''*, chambers P, pipes *s*, jackets R T, openings and valves R', openings S, when constructed and arranged as herein set forth.

113,591. — LIQUID AND GAS-METER. — D. Brainerd Spooner, Syracuse, N. Y.

Claim.—An air or vacuum-chamber, F, formed by a cylinder or vessel, *f f*, and by two flexible diaphragms G *g* acting with each other in their movement, and being of unequal working areas, for supplying the power to actuate or throw the valves of liquid or gas-meters.

113,592.—WATER-WHEEL.—John H. Staples, Wells, assignor of one-half his right to John H. Ferguson & Samuel Clark, and one-half to Samuel Clark, same place.

Claim.—The straight back *c* of the buckets, and the inwardly concaved plates *b* of the top plate C, combined, as described, with concave faces *a*, for the purpose specified.

113,593. — SEWING BOOTS AND SHOES.—Michael J. Stein, New York, N. Y.

Claim.—1. The means hereinbefore described for securing the last to the carriage, consisting of the combination of the crutch, its base-block adjustable in ways on the carriage, and the mechanism for operating the crutch and securing its base-block in any desired position on the carriage to suit lasts of different sizes, substantially as described, and these I also claim in combination with the pin which enters a hole in the last and the base of which is adjustable longitudinally on the carriage for different lengths of last, as described.

2. In combination with the guide for directing the edge of the sole and holding the upper in position, the means herein described to enable the operator to adjust its position with the thumb and finger while his hand rests on the movable plate to which the sewing mechanism is attached, as herein described.

3. In combination with the self-adapting plate to which the sewing mechanism is attached, the mechanism, substantially as herein described, for holding the said plate in a fixed position at the time the needle enters the sole, and for liberating it that it may be self-adapting to the undulations of the sole during the feed motion.

4. The self-adapting rests which ride or bear on the sole hung or supported substantially as described, and adjustable to adapt them to lasts of different sizes and curvatures, substantially as specified.

113,594. — SPINNING-WHEEL. — Joseph Strain, Artemesia, Canada.

Claim.—The combination of the wheels B K, standard L, pulleys S, H', and H, pitman J, connecting-rod G, head I, spindle E, treadle M, and cords *a b d*, all constructed and arranged substantially as described and shown, for the purposes set forth.

113,595.—KING-BOLT FOR WAGONS.—Lee T. Swartwout, Locke, N. Y.

Claim.—A king-bolt for wagons, having the oblong head D and the bottom prongs B arranged in the same plane, as and for the purpose specified.

113,596. — BED-BOTTOM.—Joseph Tinney, Westfield, N. Y.

Claim.—The arrangement of the detachable and adjustable spring bed, constructed of bottom-pieces B B', top pieces C C', united in the center by stationary blocks D D', and having the corner spiral springs *b b b b* or their equivalents, and the whole made adjustable by means of the sliding or movable blocks E E', or their equivalents, as hereinbefore fully set forth.

113,597. — WATER-METER.—William Van Anden, Poughkeepsie, N. Y.

Claim.—The water-meter propeller-wheel when constructed from a single blank of sheet metal to form two or more wings, and the ferrule J therefrom, substantially as described, and for the purposes set forth.

113,598.—AXLE-GAUGE.—Richard K. Vestal, Santa Cruz, Cal.

Claim.—1. The bar A, with its arm *b* and guide *c*, in combination with the adjustable vibrating gauge-arms *e* and *f*, substantially as and for the purpose herein described.

2. The adjustable gauge-arm *m* and the guide *g*, in combination with the bar A, substantially as and for the purpose described.

3. In combination with the arms *e* and *f* and the guide *c*, the adjustable gauge *h*, substantially as and for the purpose described.

113,599.—OIL-RESERVOIR FOR AXLE-BOXES.—Ernest Von Jeinsen and James Monroe McDonald, San Francisco, Cal.

Claim.—1. The plate B, provided with an opening, E, and grooves F, substantially as described.

2. The combination of the box A with the plate B, as described, and for the purpose set forth.

113,600. — BALANCE-VALVE. — Alexander Wanich, Philadelphia, Pa.

Claim.—1. An inverted cup, *a*, in combination with an upright cup, *b*, pilot-valve *c*, and openings *d d*, constructed and operated substantially as described.

2. The combination of the two valves D C, fig. 2 constructed and operated substantially as described.

3. The combination of the two valves E F, fig. 3, constructed and operated substantially as described.

113,601.—COMBINED THIMBLE AND LOCKET.—William A. Wansleben, Washington, D. C.

Claim.—As a new article of manufacture, the combined thimble and locket herein described.

113,602.—SMOKE-HOUSE.—Asa Waterman, Providence, R. I.

Claim.—A smoke-house constructed as described, consisting of an upper chamber, A, with its movable beams *a a a*, perforated cone C, ventilator *a*, and gratings *c c*, *c' c' c'*, together with a lower chamber, B, containing a furnace, as F, with its radiator E, a smoke-pipe, as S, and the branching ventilating pipe V with its regulator *d*, as herein set forth, and for the purpose specified.

113,603.—BOTTLE-FASTENING. — Ephraim D. Weatherbee, Worcester, Mass.

Claim.—The combination, with the fire-fastener C, provided with a loop or stop, D, of the adjustable collar E, formed with ear pieces *e* and depressions *a*, substantially as and for the purposes set forth.

113,604.—MACHINE FOR THE MANUFACTURE OF COMPOSITION ROOFING.—Jay J. Wiggin, New York, N. Y.

Claim.—1. The machine herein described for covering fabric with roofing composition, the same consisting of the frame A, rollers B C D, and discharging-trough E, substantially as set forth.

2. The semi-cylindrical valve *e* arranged within the distributing-trough E, substantially as and for the purposes herein shown and described.

3. The trough E, containing the valve *e*, and provided with the hollow sides and ends for the reception of hot water or steam, as specified.

112,605.—FENDER OR CUSHION FOR FURNITURE. — George R. Willmot, Meriden, Conn.

Claim.—The combination of the block A, the covering B, and the wire or spring C, and the marginal ring or border casing D, with or without the elastic packing *b*, substantially as specified.

113,606.—PIVOT FOR SEATS.—John J. Wilson, New York, N. Y.

Claim.—The hollow metallic column *a* with a circular opening at its upper end, in combination with the movable socket *f* and pivot *b*, substantially as and for the purposes set forth.

113,607.—BRACKET SEAT.—John J. Wilson, New York, N. Y.

Claim.—1. The swinging latch A, combined with the swinging bracket *a* and seat, substantially as and for the purposes set forth.

2. The boxes for the pivots *b b* of the swinging bracket and seat, made with the block *e* and strap *f*, the latter being secured by bolts or screws, so as to apply the necessary friction to the pivots of said bracket, as and for the purposes set forth.

3. The lugs *n n* upon the seat *o*, with nearly flat bearing surfaces corresponding to the inclined surfaces *p p* on the bracket *a*, in combination with the spring *t*, as and for the purposes set forth.

4. The seat *o*, made of a wooden block, *o'*, with sheets of wadding introduced between such block and the covering fabric, in combination with the block *v* and attachments to the swinging bracket, as set forth.

113,608.—BUFFER-HEAD AND DRAW-BAR FOR RAILWAY CARS.—John T. Wilson, Pittsburg, Pa., assignor to himself, William D. Berry, and John A. Courtney, same place.

Claim.—1. In couplings for railroad cars, the combination of the curved buffer-heads with the hinged joints between said buffer-heads and the draw-bars, when said buffer-heads are curved in the arc of a circle of which the pivots *a a* are the centers, and when the hinged joints between the buffer-heads and the draw-bars are so arranged as to allow the buffer-heads to move or play laterally upon the draw-bars, as and for the purpose set forth.

2. In combination with the buffer-heads of car-couplings, the lateral arms *c d*, links *f*, rivets *e'*, and draw-bolts *g*, when the arms *c c* of the pairs are so made as that the links shall draw on said arms and against said draw-bolts, as and for the purpose herein described.

113,609.—WINE-PRESS.—Abraham F. Wyker, South Easton, Pa.

Claim.—The detachable perforated slide O P, formed of two sheets placed at right angles to each other, when applied to a press, as and for the purpose specified.

113,610.—ATTACHMENT FOR SEWING-MACHINES.—Enoch S. Yentzer, Ottawa, Ill.

Claim.—1. The spring arm G, furnished with the piercing-marker *t*, and constructed as described so as to be operated by the descending motion of a sewing-machine needle, in combination with the adjustable guide B, cloth-supporting and adjusting spring strip or plate D, smoothing-strip E, or its equivalent N *n o*, and plate A *a*, substantially in the manner and for the purpose described.

2. The tuck-marker, consisting of the strip D bent at *g* and perforated at *f'*, and the pricking-marker *i* on the arm G, all connected together and forming an attachment, substantially as described.

3. The strip N, formed with turned-up lapping lips *o o*, and extended from the guide-bar or from an adjustable guide-shoulder, B, a suitable distance, and carried back to within a short distance of said shoulder so as to form a tongue, all substantially in the manner and for the purpose described.

4. The combination of the hemming and tucking devices in one implement, substantially in the manner described.

113,611.—MACHINE FOR SCRAPING IRON.—Christopher Zug, Pittsburg, Pa.

Claim.—1. In combination with a pair of rolls, a scraping device adjacent thereto, a steam-cylinder and piston, and suitable mechanism connecting the upper one of said rolls with a valve of the steam-cylinder, and a piston-rod connecting the piston of the steam-cylinder with such scraping device, substantially as described.

2. The steam-pipe, communicating at one end with the interior of the steam-cylinder, and terminating at the other end above the path of the plate to be rolled, and between the scrapers and the rolls, substantially as and for the purpose described.

113,612.—ELECTROPLATING WITH NICKEL.—Isaac Adams, Jr., Boston, Mass.

Claim.—A cast nickel anode as a new article of manufacture.

113,613.—Steam-Generator.—John F. Allen, New York, N. Y.

Claim.—1. The combination of horizontal tubes A with the inclined pipes C, substantially as and for the purpose herein before described.

2. The combination of one of the last rows of pipes C, connections *w*, pipes *v v*, and steam-drum B, substantially in the manner and for the purpose described.

3. The combination of the horizontal tubes A, drum B, tubes C, and right-and-left-threaded nipples *m* and *w*, substantially as and for the purpose herein set forth.

113,614.—Pipe-Elbow.—William Austin and William Obdyke, Philadelphia, Pa.

Claim.—An elbow, constructed from a sheet of metal having a series of pieces cut therefrom to impart to the elbow when finished the required bend, substantially as described.

113,615.—Skate.—William Henry Barker, Windsor, Nova Scotia.

Claim.—The ordinary rack-jaws, turned up at J J, combined with a pinion fast to the runner, for the purpose of causing the runner to perform the function usually performed by an auxiliary lever, which is thereby dispensed with.

113,616.—Balanced Slide-Valve.—Albert G. Barrett, Barrett, Kansas.

Claim.—A pair of slide-valves, C, having domes F G, and arranged in a chamber, H, combined as described with a steam-chest, A, cylinder induction-ports B B, exhaust-ports D D, and steam-channels E E, all relatively arranged to act on the principle specified.

113,617.—Root or Tonic Beer.—Benjamin Bates, Baltimore, Md.

Claim.—1. Pulverized or concentrated hops, sassafras, ginger, and Southern prickly-ash in the manufacturing or compounding of all root or tonic beers made wholly or in part of the roots or barks herein set forth.

2. Glycerine, in the manufacture or compounding of root or tonic beer, for the purpose herein set forth.

113,618.—Machine for Cutting Leather.—Horace H. Bigelow, Worcester, Mass.

Claim.—1. The combination of the cutting-die, rotating bed or block G, ratchet-plate I, dog K, and arm M, substantially as and for the purpose set forth.

2. The combination, with the vertical operating bar E and die-spindle, of the platen N, supporting spider O, and ring P, substantially as and for the purpose set forth.

3. The combination, with the eccentric shaft C and driving-pulley B provided with ratchet-teeth *c*, of the crank S, pawl T, guard V, rods *z* and Y, bell-crank lever W, and treadle H, substantially as and for the purposes set forth.

113,619.—Perfuming and Disinfecting Apparatus.—Otto Boldemann, New York, N. Y.

Claim.—The improved mode of evaporating perfuming, disinfecting, or other liquids by means of a metallic platinum burner, suspended in or above a vessel containing the liquid mixed with alcohol or other liquid containing hydrogen, substantially as specified.

113,620.—Automatic Fan.—George C. Bovey, Cincinnati, Ohio.

Claim.—1. The combination of the rotary-fan R S T, shaft O, adjustable-bracket J, gearing F, cord D, and weights E E′, as and for the purposes specified.

2. The combination of the adjustable-bracket J, shafts I O, and rotary-fan R S T, substantially as set forth.

3. The combination of the brake U *u* with the rotary-fan R S T and its shafts I O, substantially as described.

113,621.—Key-hole Guard.—George C. Bovey, Cincinnati, Ohio.

Claim.—The pivoted elastic arm F, provided with a guard-plate, G, and a pin, *f*, and adapted to engage automatically with the bolt C, to be retracted therefrom by a key, I, and to be turned into an inoperative position from the inner side, all as herein described.

113,622.—Cask for Paste.—Henry Brannhold, New York, N. Y.

Claim.—In combination with the cask having the tapering seat *a*, the head B having the tapering projection *b* on its inner surface, and held to the seat *a* by means of the swiveled bar C and cam-hooks or catches, as herein set forth and shown, for the purpose specified.

113,623.—Shawl-Strap.—Gustavus Benson Broad, Waterville, Me.

Claim.—An improved shawl-strap, consisting of the metallic part A a^1 a^2, straps B C, hand piece D, cap-eyes E, and keepers F, said parts being constructed and arranged substantially as herein shown and described, and for the purposes set forth.

113,624.—Apparatus for Compressing and Inserting Rubber Blocks into Carriage-Clips.—Thomas H. Brown and Charles E. Gilman, Chicago, Ill.; said Gilman assigns his right to said Brown.

Claim.—The compression-hook herein described, consisting of the two parts A B, when said two parts are formed and pivoted together, as shown and described, and for the purposes set forth.

113,625.—Combined Plow and Scraper.—John Charles Cameron, Madison Station, Miss.

Claim.—In combination with a plow, the "scraper" or extension C, constructed and applied substantially as and for the purposes herein shown and described.

113,626.—Cotton-Seed Planter.—Francis F. Carroll, Midway, S. C.

Claim.—The combination of the rolling-drum, divided into two compartments, one of which constitutes a seed-holder and the other a distributer, and the seed-feeder F, adjustable on the shaft of the drum within an opening between the said compartments, substantially as and for the purpose herein specified.

113,627.—Gang-Plow.—Luke Chapman, Collinsville, Conn., assignor to himself and The Collins Company.

Claim.—1. In a gang-plow, the combination of the parts *f* and *f′* and the clamp *n* with the wheel *e*, the whole constructed, arranged, and operated substantially as and for the purposes set forth.

2. The combination of the frame *a*, cranked axle *e*, jointed lever *f f′*, clamp *n*, and wheels *e* and *f*, as parts of a gang-plow, the whole constructed, arranged, and operated substantially as and for the purposes set forth.

113,628.—Mastic Roofing.—John Clipperley, Galesville, N. Y.

Claim.—The within-described composition for mastic roofing, consisting of a mixture of coal-tar and moist sand, applied substantially in the manner herein set forth.

113,629.—Picket-Cutter.—James W. Clark, Outville, Conn.

Claim.—The combination, with the vertically-reciprocating knife A and the lever I, by which it is operated, of the clamping-lever M and rod L, substantially as specified.

113,630.—Faucet.—John S. Clute, Henry W. Trissler, and Walter D. Trissler, Cleveland, Ohio.

Claim.—1. The faucet-key B, having the tapered shoulders D E with the intervening recess to receive the leather packing F, and longitudinal grooves *a* in said recess, in which the leather packing is compressed, constructed to operate as herein described.

2. The removable tapered and chambered nozzle or filler B′, having the enlarged chamber at its upper end to offset *b*, in the manner and for the purpose described.

113,631.—Machine for Splitting and Skiving Leather.—Alexander Cochran, Athens, Ohio.

Claim.—In combination with the straight-edged knife of a machine for skiving and splitting leather, a gauge and pressure-roller having one or more circumferential depressions on its surface, each having a radial longitudinal section in form the reverse of that required in the leather strip which it is desired to produce therewith, all substantially as and for the purpose herein set forth.

113,632.—Harvester-Rake.—Otis B. Colcord, Greenville, Ill.

Claim.—1. The combination of the extended upper board C and a fork, D, substantially as and for the purpose described.

2. An improved rake and beater, composed, essentially, of the board C, having a curved and extended end, the adjustable lower board C′, a fork, D, connecting-braces, and a beater arm, all constructed, arranged, and operating substantially as herein described.

113,633.—Connection for Railway Car.—Joseph R. Crabill, La Crosse, Ill.

Claim.—The rock-shaft D, rigid arms E, connecting-bars F with their double-jointed connections, rigid arms G, and standards H, constructed and combined with each other, substantially as herein shown and described, to adapt them for attachment to the adjacent ends of two railroad cars, as and for the purpose set forth.

113,634.—Metallic Cartridge.—Silas Crispin, New York, N. Y.

Claim.—1. A solid metallic disk and a centrally inwardly-projecting cap and anvil-chamber or receiver made in one piece, in combination with an internally-flanged tube or cartridge-body, when secured thereto by means of a wad, as described.

2. The metallic disk B and cap-chamber *b*, made in one piece, in combination with the rear end of the cartridge-body A or its re-enforce, when secured thereto by means of solder, substantially as herein set forth.

113,635.—Machine for Cutting Lozenges, &c.—William Edward Damant, West Hoboken, N. J., assignor to himself and William Hossin, Toronto, Canada.

Claim.—1. The hinged feed-table carrying the apron G and platform H, to operate in conjunction with the stationary cutters, substantially as herein shown and described.

2. The reciprocating frame J, combined with the stationary cutters and swinging perforated platform H, substantially as herein shown and described.

3. The elastic blocks *u u*, interposed between the reciprocating frame J and swinging platform H, substantially as herein shown and described.

4. The cutters I I, affixed to a sliding plate, K, and applied below the reciprocating frame J, substantially as herein shown and described.

5. The combination of the roller E with the wheel *f*, arm *g*, pawl *h*, pitman *i*, and crank-pin *j*, all arranged to operate substantially as herein shown and described.

113,636.—Wagon-Brake.—Robert H. Dement, Hudson, Ill.

Claim.—1. The brake-shoes, combined by the yoke E, rod F, eccentric disk *b*, and stem C, so that they will be applied and locked by the turning of the stem, as set forth.

2. The yoke E, connecting with the brake-shoes, and secured to the rod F by means of the nuts *c c*, to be adjustable, as set forth.

113,637.—Stall for Horses.—Daniel M. Denison, Savannah, Ga.

Claim.—The sides A, cross-pieces F, fixed rack G, pivoted rack H, swinging door I, and oblique board K, all combined and arranged for the purpose of forming alternately-reversed stalls, as specified.

113,638.—Attachment to Oil-Well Tubing.—William W. Dewey, Tidioute, Pa.

Claim.—The sack C, open at both ends, and provided with the pipe *b*, substantially as specified, to be used for gathering oil from detached sections of oil-well tubing in the manner set forth.

113,639.—Buck-saw Frame.—Jerome C. Dietrich, Rochester, N. Y.

Claim.—A buck-saw frame, composed of the handle A, continuous straining-rod C D, stretcher B, and brace *b*, constructed, arranged, and operating substantially in the manner set forth.

113,640.—Cotton-Chopper.—Charles Bryant Douglas, Montgomery, Ala.

Claim.—The combination of the frame A, axle F, driving-wheels G G′, the latter with an elongated hub, the bevel cog-wheel H sliding upon said elongated hub, the pinion *n*, shaft *m*, arms *d d*, and hoes *f f*, all constructed and arranged as and for the purpose set forth.

113,641.—Ship-Pump.—David A. Dunham, Palatka, Fla.

Claim.—The improved self-acting pump, consisting of the weighted pendulum E, rigid arms A, pump-rods G, and pumps H, the pendulum being suspended from the block C, which is supported above the platform B by the slotted posts A, through which the arms F work, all substantially as specified.

113,642.—Mold-board for Plows.—Isaac T. Dyer, Macon, Ga.

Claim.—The skeleton mold-board, consisting essentially of the outside bars *c d* and the transverse clearing-bars *e*, in combination with the conical rollers *b*, as specified.

113,643.—Cooking-Stove.—James Easterly, Albany, N. Y., assignor to himself and James Gray, same place.

Claim.—1. Base B, constructed with doors or windows C, in combination with a fuel-reservoir, A, substantially as and for the purposes set forth.

2. The combination and arrangement of base B, reservoir A, and bail D, as and for the purpose herein shown and described.

113,644.—Nail and Tack-Plate Feeder.—David J. Farmer, Wheeling, W. Va.

Claim.—1. The sleeves C′ C′, the standards C C, hinged shoe D, and base-plate E, constructed and combined as shown and described, for supporting the rotary head A in proper working position, and permitting its retraction.

2. The friction-brake G, constructed and operating substantially as set forth, for regulating the movement of the rotary head A.

3. The combination of the feeders b, tubes c, and nipper-rods e, and mechanism to actuate said parts severally, substantially in the manner described.

4. The nipper-rod e, threaded tube c, nut h, and spring slide m working in guides n, in combination with a rotary feeder, b, and gauge H, for feeding the plate, as set forth.

113,645.—NON-FREEZING WATER-PIPE.—Valentine Fogerty, Boston, Mass.

Claim.—In combination with the water supply-pipe a, a lateral water-leg or chamber, b, to be heated by the flame of a lamp or gas-burner, substantially as described.

113,646.—PNEUMATIC SIGNALING APPARATUS.—William Foster, Jr., New York, N. Y.

Claim.—The combination of the bulbs A and B, tube C, disk D, axle or shaft G, and hammer-arm E, all arranged and combined substantially as described.

113,647.—PNEUMATIC SIGNALING APPARATUS.—William Foster, Jr., New York, N. Y.

Claim.—1. The adjustable or movable elastic bulb A and flexible tube B, in combination with a pneumatic telegraph mechanism, and adapted for use therewith, as specified.

2. The adjustable stop t, arranged relatively to the hammer G G′ and bell, or equivalent H, for signaling by delicate and feeble powers, as specified.

113,648.—MANUFACTURE OF BOLSTERS FOR CUTLERY.—James D. Erary, New Britain, Conn.

Claim.—1. The system of forming and swaging dies, substantially as shown and described, for the purpose of making bolsters for table-cutlery.

2. The improved ferrule-bolster for table-cutlery herein described, formed of a single piece of metal, provided with one partially-closed or swaged end, and arranged to spring into suitable recesses cut in the edges of the tang, as and for the purposes set forth.

113,649.—FIRE-ALARM TELEGRAPH APPARATUS.—John N. Gamewell, Hackensack, N. J.

Claim.—1. The circuit-wheel A as a part of a signal-box mechanism for fire-alarm telegraphs, so constructed and arranged that, while it closes the circuit when at rest, when put in motion immediately breaks the circuit and keeps it open during an entire revolution, except for an instant before each signal, when it closes the circuit preparatory to breaking it for the purpose of giving the signal, all arranged and operating substantially as and for the purpose described.

2. The construction and arrangement of the circuit-wires and locking devices herein described, whereby the motion of the winding-lever a′ in winding up the motor of the signal-box operates to lock the break-circuit wheel A in the electric circuit if at the moment when said lever is moved the circuit is closed, and to lock said break-circuit wheel out of the electric circuit if at the moment when said lever is moved the circuit is open, all constructed and arranged as described and shown, for the purpose specified.

113,650.—COMBINED LAMP AND REFLECTOR.—Henry J. Goff, Dubuque, Iowa.

Claim.—1. The combination of an oil-reservoir, A, and one or more burners, with downwardly-reflecting surfaces B, arranged substantially as described.

2. The downwardly-flaring reflector B having a perforated flange, n, in combination with an oil-reservoir, A, and one or more burners, substantially as described.

113,651.—TURNING AND BORING-MILL.—George A. Gray, Jr., Cincinnati, Ohio.

Claim.—1. The tool-bar balancing device herein described, consisting of rope or chain U, weight V, and pulleys R R′ S T, connected and operating substantially as and for the purpose specified.

2. In connection with the outer bearing g h, the grooves m m′, and lips n n′ p′, as described, and for the purpose specified.

113,652.—LIFE-PRESERVING MATTRESS.—James Durell Greene, New York, N. Y.

Claim.—1. A life-preserving mattress made with a rigid buoyant frame, having a stuffing of cork, surfaced in whole or in part with hair, such frame surrounding a removable center piece stuffed with hair, substantially as shown and described.

2. A life-preserving mattress having a rigid buoyant frame and a removable center piece, when the frame is provided with a flexible band extending across the central opening, and serving to support the person.

113,653.—MACHINE FOR FACING T-HEADS.—John Griffith and George W. Wundram, New York, N. Y.

Claim.—1. The combination of the rotary shaft D, chuck E, provided with the cutters c, wedge b, and nut a, operating substantially as described, for the purpose specified.

2. The wedges l, in combination with the slides j, cavities k, eccentrics e, and head-blocks B, substantially as set forth.

113,654.—TOY.—John Hamilton Harbison, Philadelphia, Pa.

Claim.—A toy, consisting of a ball or its equivalent, and a cord which passes through a spiral opening in the ball, so that a rotating motion will be imparted to the latter as it slides on the cord.

113,655.—DUMPING-CAR.—William Henry Harding and George Frederic Morse, Portland, Me.

Claim.—1. The ball c in combination with the car-body, as and for the purposes herein set forth.

2. The supports d, having the rollers at the tops, the joints and springs at the bottoms, as herein set forth, to operate as described.

113,656.—VISE.—William P. Harwood, Cambridge, N. Y., assignor to James F. Hall and John L. Marshall, same place.

Claim.—The semi-cylindrical piece H, fitted in the groove or recess in the face of the jaw F, and held therein by its slotted ears h′ and pins or projections on the jaw, as shown and described.

113,657.—FARM-GATE.—Henry P. Haskin, Roscoe, Ill.

Claim.—1. The connecting-bar D and cranks d d for the purpose of opening and closing the gates in opposite directions, as shown and described.

2. The arrangement of the oscillating levers e e, transverse rods f f, and crank-lever G, provided with the aforementioned chain, rod h, and latch H, as and for the purpose set forth.

113,658.—BOOT AND SHOE HEEL-BURNISHING MACHINE.—Gardner C. Hawkins and Albert G. Mead, Boston, and Vivian Kimball Spear, Lynn, Mass.

Claim.—1. In a machine for burnishing the heels of boots and shoes, the combination of the burnishing-tool and its carrier with mechanism substantially as herein described, for imparting to said tool a reciprocating motion in a curved path entirely around the curved portion of the heel to be burnished, for the purposes set forth.

3. The construction and application of the jack as seen in its staff or standard E, diverging arms F G, tubular head L, spindle M, curved wedge N, or its equivalent, with its staff pivoted at bottom in an adjustable manner, the whole being in manner and for operation as herein described.

3. The curved segmental wedge N for driving forward the spindle M, in combination with the spring R, or its equivalent, for retracting such spindle, essentially as and for the purpose herein described.

4. In combination with the burnishing-tool, operating substantially as herein shown and described, the edge-guard, for preventing the formation of a bur upon the tread of the heel during the burnishing process, substantially as shown and set forth.

5. The herein-described device for preserving intact the tread of a heel while undergoing the burnishing process, the same consisting of the rod T and its head or arm a, applied and operating as set forth.

6. The burnishing-tool carrier, pivoted or hinged to its rotary or oscillating support, substantially in the manner described and shown, in combination with a pressure-spring or equivalent device, so that said carrier may adapt itself to the irregular curve of the heel, as set forth.

7. The burnishing-tool, pivoted to its carrier substantially as shown and described, in combination with a spring, or the equivalent thereof, for holding down the said tool upon the heel with a yielding pressure, substantially in the manner set forth.

8. As a means of imparting a sweeping motion to the burnishing-tool in a segmental or eccentric path about the heel, as herein explained, the combination, with the burnishing-tool and its carrier, of the pinion k and sector l, with its curved rack m and oblique arm p, or its equivalent, and the crank-wheel t, or its substitute, properly mounted, the whole being substantially in manner, and operating as herein explained.

9. In combination with the burnishing-tool h when pivoted and supported as described, the means substantially as herein shown and described of imparting continuous heat to the same, for purposes stated.

10. In combination with the heel-rest or guide-plate f, the spindle M, actuated as explained, and the burnishing-tool h, pivoted at its rear to the carrier, as herein shown, the combination thus acquired operating as before stated.

11. In general combination, and as an organized machine for burnishing the heels of boots and shoes, the jack, adjustably supported and provided with adjuncts, as stated, the burnishing-tool and its carrier with its accessories, as shown, and the pinion k and sectoral rack m, or their mechanical substitutes, for imparting the desired motion to the said burnishing-tool, the whole being constituted, arranged, and operating as explained in the foregoing context.

113,659.—SHIRT.—James Hayden, Philadelphia, Pa.

Claim.—As an article of manufacture, a shirt having the front and back pieces B and A shaped at the sides in the manner substantially as shown and described, and for the purpose set forth.

113,660.—SHOW-CASE.—George A. Hearn, Jr., New York, N. Y.

Claim.—A show-case composed of two or more glass-covered compartments or tiers, constructed substantially as shown and described, and for the purposes set forth.

113,661.—CANAL-LOCK VALVE.—George Heath, Little Falls, N. Y.

Claim.—The valve A, hung upon journals C C, the distance from said journals to the lower edge being greater than to the upper, and the valve provided with the piece E, substantially as and for the purposes herein set forth.

113,662.—CHAIR AND BED COMBINED.—Gabriel D. Heatwole, Bridgewater, Va.

Claim.—In combination with the chair A B C, the back D, arm-rests E, braces H, foot-rest I, slides J with casters d, and slides K, all constructed and arranged substantially as and for the purposes herein set forth.

113,663.—STAPLE-MACHINE.—Benjamin Hershey, Erie, Pa., assignor to himself, E. Geer, Richard Dudley, and Richard F. Gaggin.

Claim.—1. The combination of the tubular feed-box A, tubes C C, water-pipes C′ C′, and gas-pipes a a, substantially as described.

2. The plunger-die G, having its rear face H wedge-shaped and its front face H′ formed as stated, in combination with the sliding plates D D and rollers E E′, substantially as described.

3. The horizontal sliding plate L and spring L², and plunger-die G having a slot, h, on its front face H′, when the same are so combined and arranged as to operate substantially as described.

4. The cutting-plate M and sliding plate N, when the same are arranged in the chamber L, in combination with mechanism, substantially as described, for operating said plates.

5. The improved machine for forming staples, when the same is constructed, arranged, and operated substantially as described.

113,664.—RUBBER SPRING FOR WAGONS.—Aaron Higley, Cleveland, Ohio.

Claim.—The conical cap J and spring I, with an annular space between said cap and spring, in combination with the flanged cap G, spring F, flanged shoe E, and bolt K, with a space between said bolt and spring, constructed and arranged substantially as and for the purpose set forth.

113,665.—ATTACHING PLOW-POINTS.—George W. Hildreth, Lockport, N. Y.

Claim.—The plow-point, when constructed with the shin-piece e boxed into the stock upon the land-side and bolted thereto, lapping over said land-side from e to h, as herein set forth and shown, for the purpose specified.

113,666.—MACHINE FOR SAPPING TIMBER FOR SHINGLES.—George M. Hinkley, Milwaukee, Wis.

Claim.—1. Revolving head B and carriage C, in combination with shaft L, plate N, and hoisting-lever O, substantially as and for the purpose described.

2. A sapping-machine, made with sapping-head b, in combination with revolving head B, carriage C, shaft L, and lever O, substantially as and for the purpose described.

3. Movable frame f, ways g, and lever h, in combination with sapping-head b, substantially as and for the purpose described.

113,667.—FIRE-ESCAPE.—Joseph Hoeflinger, Carrollton, Mo.

Claim.—The projecting bar A, roller B, disk B′, end-bar b, link c, pulley C, cord, rope, or chain attachment D, casing E, when combined and arranged below the sills of buildings, and operated substantially as and for the purpose described.

113,668.—SURFACE-CONDENSER.—Birdsill Holly, Lockport, N. Y.

Claim.—The chamber c, with its partition G and well C, all constructed substantially in the manner and for the purpose above described.

113,669.—RUFFLE-GUIDE AND BAND-FOLDER FOR SEWING-MACHINES.—Elijah Leavitt Howard, Malden, assignor to George Augustus Whiting, Charlestown, Mass.

Claim.—The ruffle-band folder, made substan-

tially as described and represented, viz., of the two band-guides D D, the hem-guide or channel d, and the ruffle-guide or passage e, all arranged and formed substantially as shown and explained.

113,670. — MACHINE FOR SHARPENING HORSESHOE CALKS.—Hamilton Howell, Salem, Ohio.

Claim.—The combination of the slotted fixed jaw, the slotted vibrating cutter-stock, its friction-roller and stop, with the curved vibrating lever pivoted to the handle and passing through the slot in the cutter-stock, all these members being constructed and operating as hereinbefore set forth, so that the cutter works with an increase of power from the beginning to the end of its stroke.

113,671.—COTTON-PLANTER.—John Hughes, New Berne, N. C.

Claim.—1. In combination with the valve-plates H H, the plunger Z, when arranged to operate in a cotton-seed planter, substantially as specified.

2. In a cotton-seed planter, the combination, with the central wheel B and conduit L, of the valve-plates H and plunger Z, substantially as specified.

3. In a cotton-seed planter, the combination with a planting-wheel, B, of the elastic teeth extending radially from its periphery, substantially as specified.

4. In a cotton-seed planter, the combination of the center wheel B and hinged lateral valve-plates H, provided with the edge-teeth *s s*, substantially as specified.

113,672. — MACHINE FOR DRESSING AND PUNCHING SLATES. — Julius Jaeger, Tompkinsville, N. Y.

Claim.—1. The two pairs of shears D D and F F, adjustable at their pivoted ends to the desired angle, and combined with the gauge h i and treadle B, substantially as described, for the purpose specified.

2. The lever C, carrying the punches *p*, in combination with the knives D D and treadle B, substantially as set forth.

3. The dies *r*, being connected to slides *t* by pivots *s*, and operating in conjunction with the punches *p*, substantially as described.

4. The retaining spring *w* on the punching-lever G to hold the slates down upon the stationary cutter-blades during the operation of cutting, substantially as described.

5. The arrangement of countersunk holes in the dies *r*, to act in conjunction with the punches *p*, as described, so as to produce countersunk holes in the slates exposed to the action of said punches.

113,673. — SASH-HOLDER.—Morton Judd, New Haven, Conn.

Claim.—The cap *g* applied to the socket *d*, and inclosing the spring *e* of the bolt *c*, the parts being constructed as and for the purposes set forth.

113,674.— COFFEE-POT.—Richard H. Kuper, Lockport, N. Y.

Claim.—1. In connection with the chambers B C D and tube or tubes E of a coffee-pot, the independent conical deflector *m*, supported by the walls of the vessel, and operating in combination with said parts, substantially as described, and for the purposes specified.

2. In a coffee-pot having a spouting-tube, E, operating as described, the fixed bail i of the cover, in combination with the bail H hinged to the pot A, when the latter is constructed to lock over the former, as herein set forth, and for the purposes specified.

3. The outward curving of said bail H, as shown at *x x*, whereby it is made to operate as a spring when employed in combination with the cover I of a coffee-pot, substantially as described and for the purposes set forth.

4. The slots *s s* in the cover I of a coffee-pot, in combination with the bails H i, substantially as and for the purposes described.

113,675.—MACHINE FOR COVERING CORD.—Reuben Lewis, New York, N. Y.

Claim.—1. The bobbin B, made of two longitudinal halves so that it can be removed from the spindle when empty, without requiring the cutting of the cord, as specified.

2. The tension-string *b*, spring *f*, and frame *e*, when combined as described with the divided bobbin B, arranged on the spindle A, as and for the purpose specified.

113,676. — MILLSTONE EXHAUST. — Jacob Lingenfelter, Bloody Run, Pa.

Claim.—1. At the lower end of a millstone exhaust-pipe, the enlarged chamber D, when constructed and arranged to operate in the manner and for the purpose shown and described.

2. In combination with the expanded chamber D, at the lower end of a millstone exhaust-pipe, the inclined elbow G and waste-pipe F, as specified.

113,677. — SHOT-CARTRIDGE.—Charles W. Lovett, Jr., Boston, Mass.

Claim.—A gun-cartridge, consisting of two or more spirals or coils of wire, or other similar material, arranged substantially as above described.

113,678.—SLATE-FRAME.—Peter Lugenbell and William A. Ford, Greensburg, Ind.

Claim.—The tubular elbow-band C for binding slate-frames at the corners, substantially as specified.

113,679, antedated April 4, 1871.—LUBRICATING WOOL DURING THE PROCESS OF MANUFACTURE. — John James Lundy, Leith, near Edinburgh, Great Britain.

Claim.—The manufacture or production of partially-saponified oils, prepared substantially in the manner hereinbefore described, and their use as an improved lubricant for carding and spinning wool and other animal fibrous material.

113,680.—BIT-BRACE.—John T. Lynam, Jeffersonville, Ind.

Claim.—The bit-holder B, having swiveled shank with toothed wheel *a* thereon, combined with a pair of spring pawls, *b b*, held apart by a plate, *c*, and operated by a cam, *d*, to lock the bit-holder, as set forth.

113,681.—AXLE-SKEIN.—Lorenzo Mayhew, Greenfield, N. Y.

Claim.—1. The method of fastening the small ends of the strips *c* and *c'* to the axle-tree by means of the ring *b* and rivets, as shown and described.

2. The skein, consisting of the strips *c* and *c'* and the ring *b*, cast in one piece, of steel, substantially as and for the purposes set forth, the lower strip being longer than the upper one.

3. The flanged ring *f*, constructed as shown, in combination with an axle-tree and a linch-pin, substantially as and for the purposes set forth.

4. The combination of the strips *c* and *c'*, the lower one being longer than the upper, the ring *b* with hole for a linch-pin, the flanged ring *f* with guard *f'*, and axle A, all constructed and arranged substantially as and for the purposes set forth.

113,682.—WHEEL FOR VEHICLES.—Robert W. McClelland, Springfield, Ill., assignor to himself and John McCreery, same place.

Claim.—The combination of the large and small spokes B C, alternating with each other and flush on the front side, with the two rings D E, each constructed and applied as shown, and the bolts *m m*, imbedded on one side of the metal *e*, and on the other in the beveled shoulder of the spokes, substantially as shown, and for the purposes set forth.

113,683.—EXTENSIBLE SHELF.—Sophia H. Mercer, Washington, D. C.

Claim.—An extensible sliding shelving, constructed essentially as described.

113,684.—HEEL-TRIMMING MACHINE.—John Q. Moulton, Lynn, Mass.

Claim.—1. A revolving knife, in a heel-trimming machine, whose axis is at right angles to the center of revolution of the heel to be trimmed, substantially as described.

2. The plates F F, formed and operated substantially as described, to determine the position of the heel, and to serve as a guide and protect the upper.

3. The plates F F and pattern-bar H, in combination, to hold the boot without the aid of a last.

4. The plates F F and pattern-bar H, in combination with the knife K and gauges O and P.

5. In a heel-cutting machine, a revolving knife made in the form of a screw, substantially as described, for the purposes described.

113,685.—LUBRICATING PIVOTS FOR TURN-TABLES.—John W. Murphy, Philadelphia, Pa.

Claim.—1. A pivot or step for turn-tables, composed of an under and upper piece, with grooves in their bearing or working surfaces running in contrary directions so as to distribute the oil or other lubricating compound in the grooves throughout the bearing surfaces, substantially as described and represented.

2. In combination with the two parts of the pivot or step and their oil-grooves passing each other in oblique lines, the oil-passage or passages *h e f g*, for introducing the oil or other lubricator from the exterior to the interior bearing surfaces, substantially as described.

113,686.—MACHINE FOR CLEANING GRAIN.—Moses T. Nesbitt, Colora, Md.

Claim.—The arrangement of two rock-shafts, *g* and *j*, the screens R and T, the rock-shaft *j* being provided with a crank or wrist, *k*, and spring-connection *l*, to traverse the screens, provided with delivering-spouts U and S, the whole being constructed to operate as described for the purposes set forth.

113,687.—MECHANICAL MOVEMENT.—Archibald Nimmo, Philadelphia, Pa., assignor to himself, Thomas Moran, and Valentine Stausse, same place.

Claim.—The system of graduated cams, or their equivalents, arranged to be operated and to impart the within-described movements, substantially in the manner described.

113,688.—PULLEY-BLOCK.—Joseph W. Norcross, Boston, Mass.

Claim.—1. The strengthening-frame E, when secured together by means of the cast connecting-pins B, having external heads C and inner shoulders D, and constructed substantially in the manner herein shown and described.

2. The key H, formed with an eye, I, when combined and operating with the axis G of a sheave which rotates freely on its axis, substantially as herein shown and described.

113,689.—TACKLE-HOOK.—Joseph W. Norcross, Boston, Mass.

Claim.—1. The combination of the bracing-strap D with the slots E E, made through the ribs of the hook, substantially as described.

2. The combination of the spring locking-bar M with the pin H and the bracing-strap, substantially as described, for the purpose of preventing the disengagement of the strap from the point of the hook.

113,690.—MILK-COOLER.—Albert Northrop, Elyria, Ohio.

Claim.—1. The combination of an interior tube or tubes and an exterior arm or tube, having free communication between them, to produce a circulation of the cooling liquid within and upon the exterior of the can, as described.

2. In combination with the vessel A the vertical supplying-tube C with its tubes D, and the central discharging-tube E, arranged to communicate with each other and to produce a circulation of cold water within said vessel, as described.

3. The combination of the vessel A, the vertical supplying-tube C, and the central discharging-tube E with the discharging-arms F, having their issues arranged as shown for the purpose of discharging the waste water upon and against the sides of the vessel or can, for the purpose described.

4. The combination of the automatic propelling and discharging-arms F with the felt jacket G of the can, for the purpose as described.

113,691.— EXCAVATOR.—Jason C. Osgood, Troy, N. Y.

Claim.—The friction-wheels B F F, arranged to act on the dipper-handle, and receiving motion through the cog-wheels, as set forth.

113,692.—COMBINED BEDSTEAD, BUREAU, AND STAND.—Anna Parker and Lewis A. Parker, Girard, Kan.

Claim.—The combination of the case A with ventilators *e*, bureau B, stand K, brace L, and button *f*, front D, bed H, springs L, hooks *d*, and shelf J, all constructed and used substantially as set forth.

113,693.—SELF-RECORDING BAROMETER.—David Peelor, Johnstown, Pa.

Claim.—1. The combination, with a barometer, of an automatic bent registering lever, operated directly by the rising and falling of the mercury in the tube, substantially as specified.

2. The combination, with a barometer, of a balanced lever, having a positive connection with the float which rests on the mercury, operated automatically by the rising and falling of the mercury in the tube, substantially as specified.

3. The combination, with a lever provided with a registering point and operated directly by the barometer-mercury of the moving record surface and the pressure rod, operated by clock-work, substantially as specified.

4. In a self-registering barometer, the combination with a rotating record cylinder, or its equivalent, of a registering lever, substantially as specified.

5. The combination, with the record cylinder E, the pressure-rod *w*, and the elastic arm *b*, of the beveled rectilinear guide R, substantially as and for the purpose specified.

6. The cross-shaped balanced lever herein described, provided with the vertical arms *b b'*, the lateral arms *d d'*, and the adjustable counterbalancing weights *e' f'*, substantially as and for the purposes specified.

113,694.—STOVE-PIPE DRUM.—William L. Phillips, Normal, Ill.

Claim.—The combination, with the drum B and smoke-pipe C, of the outside drums or jackets D E F and enlargement G, all constructed as described, and arranged above the fire-pot A of the stove, and provided with the cold-air pipe H, substantially as and for the purposes herein set forth.

113,695.—GLOVE.—John H. Putman, Gloversville, N. Y.

Claim.—The glove herein described, as an article of manufacture, when composed of the parts having the form herein described.

113,696.—WHIFFLETREE.—Samuel L. Reynolds and John W. Reynolds, Pittsburg, Pa.

Claim.—In combination with the pivoted and removable evener or whiffletree, the spring B, guide-loops C, and pivoted draft-links E, substantially as described, for the purpose specified.

113,697.—SLIDING-DOOR HANGER.—George Rumsey, Watkins, N. Y.

Claim.—The improved barn-door hanging herein described, consisting of the hanger A having offset *h* and recess *f*, and the jaw C, secured in said recess by rivets *d d*, and the sheave B with bearings *c c*, all arranged as set forth.

113,698. — SAWING-MACHINE.—Samuel S. Sherman and Hiram B. Gunn, Eau Claire, Wis.

Claim.—1. The combination of the press-roller E, frame H, and lever G, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

2. In combination with the roller E, frame H, and lever G, the rubber springs *i*, substantially as and for the purposes herein set forth.

3. The combination of the frame A, mandrel B, saws C C, guide-pins *e e*, guides *f f*, feed-rollers D D, press-rollers E, frames H H, and levers G G, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

113,699. — DIE FOR TAKING IMPRESSIONS FROM CLOTH, &c.—John Joseph Charles Smith, Somerville, assignor to Metallic Art Works, Boston, Mass.

Claim.—1. The method and process, substantially as described, for constructing molds for the casting of rollers or other dies, having *fac-simile* impressions, either positive or negative, of linen, cloth, or other material.

2. A die of cylindrical or other form cast under pressure, by a process substantially as herein described, producing on its surface an accurate positive or negative impression of linen, cloth, or other material, and adapting it to produce accurate imitations of such material.

113,700.—COTTON AND HAY-PRESS.—Reuben Stallings, Louisburg, N. C.

Claim.—The combination and arrangement, in the press herein described, of the suspended screws S S, nuts T T, supporting-frame Q, press-box C G H, cover K M N O O, and platen P, all constructed and arranged substantially as and for the purposes set forth.

113,701.—VARIABLE ECCENTRIC FOR STEAM-ENGINE GOVERNOR.—Samuel Stanton, New York, N. Y.

Claim.—The arrangement of the pinion *g*, screws A A, and nuts *i i* within the eccentric, and operated, through means of a rack, by a ball-governor, having the shaft B D *k*, all constructed and arranged substantially as herein described, and constituting a variable cut-off.

113,702. — MANUFACTURE OF PNEUMATIC GAS FOR ILLUMINATING, &c.—John W. Stow, San Francisco, Cal.

Claim.—The herein-described method of combining atmospheric air and carbureted air by means of the devices described.

113,703. — SAWING-MACHINE.—Jerome B. Sweetland, Pontiac, Mich.

Claim.—1. An adjustable or swinging buck, operated by means of a spring or its equivalent, substantially as and for the purposes herein set forth.

2. In combination with the shaft C and plate D, the lever L, substantially as and for the purposes herein set forth.

3. The combination of the shaft C, pulley K, chain *b*, and spring *d*, constructed and operating substantially as and for the purposes herein set forth.

113,704.—SEWING-MACHINE FOR UMBRELLAS AND PARASOLS.—William John Tate, Philadelphia Pa., assignor to William A. Drown & Co., same place.

Claim.—1. A presser-foot for sewing-machines, arranged to be moved laterally when raised above the work-plate, and having double inclined edges *s* and *s'*, all substantially as specified.

2. The presser-foot having inclined edges *s s'*, and pivoted to a fixed portion of the machine, slotted at the pivoting point, acted on by a suitable spring, and operated by a cam or lever, *j*, substantially in the manner described.

113,705.—CARRIAGE.—Chauncey Thomas, Boston, Mass.

Claim.—1. In combination with a metal body, *a*, and wood bottom *b*, a connecting bottom side or frame, *d*, having a top flange, G, supported upon a flange or flanges, *b*, projecting inwardly from the bottom of the body sides *a*, and a bottom flange, *i*, upon which the bottom strips are supported, substantially as shown and described.

2. In combination with the metal body *a*, the seat-posts placed against the inner surface of the opposite body sides, and riveted or bolted to vertical metal-strap pieces *s*, whose lower ends are fastened to the bottom-sides frame *d*, substantially as shown and described.

3. The method of forming the joints at the corners of the bottom side pieces *d*, substantially as shown and described.

4. Side springs, the rear ends of which have eye-pieces or runners *z* sliding upon rods *y*, fixed in heads or plates *x*, on the rear axle or axle-bed, substantially as shown and described.

113,706.—PRESERVING WOOD.—Nathan H. Thomas, New Orleans, La.

Claim.—The application of resin-oil, hot or cold, for the preservation of wood from decay, and from destruction by worms and insects, substantially as described.

113,707.—LEATHER-ROUNDING MACHINE.—James H. Tizzard, Eaton, assignor to himself and Samuel B. Tizzard, Dayton, Ohio.

Claim.—1. The blacker J, constructed as described, with trough *a*, chamber *b*, and sponge *d*, substantially as and for the purposes herein set forth.

2. In combination with the blacker J, the springs K K, and notched lid L, all substantially as and for the purposes herein set forth.

113,708.—ROLL FOR ROLLING HOOP, BAR, AND ROD-IRON.—James Tranter and Joseph Kinsey, Cincinnati, Ohio.

Claim.—1. Two or more pairs of grooved rolls, secured one behind the other in adjustable housings at right angles to one another, and at an angle of forty-five degrees to the horizon, substantially as described.

2. In combination with the subject-matter of the first claim, the bed-plate B and screw M, as and for the purpose set forth.

3. In combination with a train of rolls, the delivery-guide N' and roller P, for the purpose specified.

113,709. — SHOVEL-HANDLE. — Henry C. Traak, Vienna, Me.

Claim.—The improved shovel-handle herein described, formed with the bulge *b* and recessed faces *c c*, and provided with the cross-bar *d d' d'*, rivets *e f f*, and rod *g*, all as set forth.

113,710. — WAGON-SPINDLE.—James Monroe Walters, Schwenksville, Pa.

Claim.—The combination of the axle-skein A and nuts D and F, all of soft metal, with the sleeve B and washer E, both of chilled cast-iron or hardened metal, substantially as specified.

113,711.—STOVE-UTENSIL HOLDER.—Stewart Watt, Barnesville, Ohio.

Claim.—The within-described cooking-stove utensil-holder, composed substantially of the base A, post C, top D, projections *a a*, and hooks *b*, *d*, and *e*, for the purposes herein set forth.

113,712.—WASH-BOILER.—William A. Wells, St. Paul, Minn., and Lyman P. Converse, Milwaukee, Wis.

Claim.—In combination with a wash-boiler constructed substantially as herein described, the removable clothes-supporting rack, composed of metallic rim B and interlaced cords B', and the siphonic faucet F, as and for the purposes set forth.

113,713.—MEDICAL COMPOUND OR BITTERS.—Samuel R. Whitlow, Limestone township, Ill.

Claim.—The compound medicine called Democratic Bitters, prepared and compounded and to be used substantially as described.

113,714.—REED-ORGAN.—George W. Woodruff, Hartford, Conn., assignor to John Farris, same place.

Claim.—The combination of one set of valves, *c*, *c* sharp, *d*, *d* sharp, &c., with two sets of keys, C, C sharp, D, D sharp, &c., and C', C' sharp, D', D' sharp, &c., on the same key-board, by means of the two sets of levers 1 to 13 and 1' to 13', substantially as described.

113,715.—TRUNK. — John Young, Buffalo, N. Y.

Claim.—The sheet-steel trunk, provided with the steel clamps B B', each bent in a single piece to extend over the corners and around the outside and inside edges of the trunk-top and bottom, and provided with the rounded or notched edges which are riveted through and through, as and for the purpose specified.

113,716.—SURFACE BLOW-OFF PIPE FOR BOILERS. — James Perkins, Baltimore, Md., assignor to himself and Jacob Brandt, Jr., same place.

Claim.—1. The surface blow-pipe B, provided with perforations on all sides, when constructed and operated as herein shown, and for the purpose set forth.

2. The arrangement, within a steam-boiler of a cylindrical, hexagonal, or many-sided surface blow-pipe, in sections, perforated with holes on all sides, in combination with the blow-valve C, when constructed and operated as herein shown and described, and for the purposes set forth.

113,717.—CORN-PLANTER.—George W. Lewis, Winchester, Ky.

Claim.—1. The harrow, as made in the divergent bars *h''' h'''*, that connect the shovels A' to the frame A, for turning all obstructions out of the way of the driving-wheel and coverer.

2. The rod controlling the bolt, to check the deposit of the seed at pleasure.

3. The arrangement of the points on the top of the hopper for squaring the field and pointing out the first hill in each row.

4. The device and arrangement by which the plow or shovel, the harrow continuous therewith, the driving-wheel, the cylinder provided with suitable chambers, the markers, the rods and bolt, the points on the top of the hopper, the cleaner, and the funnel-shaped tube, are all combined and arranged in one comparatively light machine, easily managed by one person, and made subservient to the purposes hereinbefore named, the object of the whole being the rapid planting of corn in straight rows, at right angles and at proper distances apart.

113,718.—COMBINED PLANTER AND SEEDER.—Samuel Hiestand, Hillsborough, Ohio.

Claim.—The machine herein described, consisting of the frame A A', traction-wheel F, band-wheel G, seed-box K, and seeding device H I L M N O, all arranged as herein specified.

REISSUES.

4,328.—PRINTING PHOTOGRAPHS.—Joseph Albert, Munich, Bavaria. — Patent No. 97,336, dated November 30, 1869.

Claim.—1. Preparing photographic plates for printing with fatty inks by subjecting a film of chrome-gelatine, or other suitable material, spread upon glass or other transparent or semi-transparent substance, to the action of light, or otherwise hardening the film to render it insoluble upon the surface in contact therewith, and preserving the outer surface in a sufficiently-adhesive condition to unite with a second or sensitive film to receive the photographic image, substantially as herein set forth.

2. The employment of a fixing or cementing film to unite the sensitive film to the glass for printing in fatty inks, substantially as set forth.

3. The employment of glass plates for the printing of photographic pictures in fatty inks, substantially as herein set forth.

4,329.—Division A.—WATER-WHEEL.—Joel T. Case, Bristol, Conn., assignor to The National Water-Wheel Company.—Patent No. 108,757, dated November 1, 1870.

Claim.—The wheel A with its buckets *a b*, having respectively a downward and central discharge, and arranged alternately, substantially as described.

4,330.—Division B.—WATER-WHEEL.—Joel T. Case, Bristol, Conn., assignor to The National Water-Wheel Company.—Patent No. 108,757, dated November 1, 1870.

Claim.—1. The case G, with the chutes *a b c d* arranged in groups, substantially as and for the purpose described.

2. In combination with the foregoing, the gate H, the whole operating together, as and for the purpose set forth.

3. So combining the chutes *a b c d* of the case surrounding the wheel A with the gate for closing said chutes that a partial movement of the gate is made to fully open a portion of said chutes and at the same time to leave the remaining portion of the chutes closed, substantially as and for the purpose described.

4,331.—Division A.—LANTERN.—William H. Bonnell, Buffalo, N. Y., assignor to himself and Horace Parmelee, same place.—Patent No. 96,772, dated November 16, 1869.

Claim.—1. The arrangement in a lantern of the supporting base-plate A and a central burner, so as to leave an annular opening between the burner and base-plate for the transmission of the light downward, as hereinbefore set forth.

2. The arrangement in a lantern, and with a central lamp and surrounding annular opening, *f*, of the deflecting base-plate A, which reflects the light inward, so as to illumine the space under the lamp, as hereinbefore set forth.

3. The arrangement in a lantern of the base-plate A, ring D, and vertical wires B, as hereinbefore set forth.

4,332.—Division B.—Lanterns.—William H. Bonnell, Buffalo, N. Y., assignor to himself and Horace Parmelee, same place.—Patent No. 96,772, dated November 16, 1869.

Claim.—The wires A B, when secured together by passing one wire through the other and soldering in place, as hereinbefore set forth.

4,333.—Tool-Holder.—William W. Draper, Greenfield, Mass.-Patent No. 22,635, dated January 18, 1859.

Claim.—1. The combination, with the holder, embracing the parts A D, of the loose wedge-shaped jaws F F, and the revolving nut E for operating the jaws, substantially as described, and for the purpose set forth and specified.

2. The combination, with the holder embraced in the parts A D, jaws F F, and revolving nut E, of the centering-block C, and spring B, substantially as described and specified.

4,334.—Stem-Setting Watch.—Jules Jürgensen, Locle, Switzerland.—Patent No. 61,207, dated January 15, 1867.

Claim.—1. A stem-setting watch, so constructed that the setting mechanism is thrown into gear by turning down the pendent ring or bow when the front cap or case is open, substantially as shown and described.

2. The combination of the cap or guard E with the pendent bow C and hand-setting mechanism, whereby the said cap while closed is made to prevent the bow from throwing the hand-setting mechanism in gear, substantially as shown and described.

4,335.—Car-Spring.—Albert Hebbard and John P. Onderdonk, Buffalo, N. Y., assignees of Albert Hebbard.—Patent No. 53,222, dated March 13, 1866.

Claim.—1. A spiral nest-spring, composed of two or more coils, the adjacent coils being in contact, or nearly so, and wound in opposite directions, so as to make the spring self-supporting.

2. A self-supporting spiral nest-spring, composed of two or more concentric coils, without lateral support.

4,336. — Stock-Car. — Lee Swearingen, Grafton, W. Va., assignor to The National Cattle-Car Company, Salem, Ohio.—Patent No. 28,517, dated May 29, 1860.

Claim.—1. The combination, with a stock-car, of partitions operating substantially as set forth, so that when vertical they form stalls for large stock, but when horizontal they divide the car into two compartments, one above the other, for the purposes specified.

2. The combination, with a stock-car, of partitions swinging on horizontal axes parallel to each other, so that when horizontal one partition overlaps and is supported by the other, substantially as set forth.

3. The combination, with a stock-car, of partitions arranged parallel to each other lengthwise of the car and swinging on horizontal axes, substantially as set forth, so that when vertical the car is divided into longitudinal stalls, and when horizontal the inner portions of the partitions overlap each other, while their outer portions are supported by the sides of the car.

4. The combination, with a stock-car, of swinging end partitions arranged longitudinally at each end of the car, with swinging central partitions, arranged across the car, substantially as set forth, to facilitate the loading or unloading of the car and to economise space.

5. The combination, with a stock-car, of a swinging sidewise-moving partition, D^4, constructed and operating substantially as set forth, so that it may be swung out of the way when not in use.

6. The double-leaved swinging partitions, constructed substantially as set forth, so that one leaf may be turned up or down without the other, for the purposes specified.

4,337. — Air-Compressing Apparatus.—John S. Patric, Rochester, N. Y.—Patent No. 47,328, dated April 18, 1865.

Claim.—1. An air-compressing chamber, A′, provided with inlet and outlet-valves H′ G′, outlet water-valves E′, and inlet-pipe P′ and valve a, the area of which pipe is less than the area of a cross-section of the chamber in any direction, the parts being arranged to operate substantially as set forth, whereby the water is agitated upon its entrance into said chamber, for the purpose of preventing a rise of temperature of the air during the process of compression.

2. In combination with an air-compressing chamber, A′, the water outlet and inlet-valves a E′, and air-inlet and discharge-valves H′ G′, constructed and arranged to be automatically operated by the action or reaction of the air and water, substantially as set forth.

4,338. — Faucet.—James Powell, Cincinnati, Ohio.—Patent No. 25,349, dated September 6, 1859.

Claim.—1. The elastic annular valve-disk or seat S and yielding plate P, in combination with the valve-head L, of hard material, substantially as set forth.

2. The sliding collar O, in combination with the elastic valve-disk or seat S and valve-head L, as and for the purposes set forth.

4,339.—Car-Coupling.—Warren B. Snedaker, Phœnix, N. Y.—Patent No. 108,404, dated October 18, 1870.

Claim.—The coupling-pin D provided with flange *d*, the shaft E, crank-arms *e*, weighted arms *f f*, and the link B with loaded end *a*, combined with the slotted draw-head A, provided with stops *g*, all constructed and arranged in the manner shown and described.

4,340. — Cattle - Car. — John W. Street, Marshalltown, Iowa.—Patent No. 96,362, dated November 2, 1869.

Claim.—1. A stall partition, constructed in a single rack or gate attached near the head of the stall so as to swing horizontally, and fastened at the rear end to the side of the car by a detachable fastening, in the manner and for the purpose set forth.

2. The swinging partitions, in combination with the open spaceway at the head of the stalls, as and for the purpose set forth.

3. A railway car for live stock, when divided into stalls by swinging gates or partitions, provided with detachable hinges at both ends, so that either end may be swung around to admit or release the animals, and so that both ends of the gate may be detached, to clear the car for other kinds of freight, substantially as described.

4. A store-room or feed-bin in the top of the car, provided with doors or hatches in the roof for filling the same, and with openings through the floor at one side for dropping the feed into mangers or feed-boxes in the ends of the stalls below, substantially as herein described.

5. The arrangement of the reservoir O in the side of the car, at a suitable height to supply water to the drinking-troughs or basins, without the use of a pipe and stop-cock, substantially as described.

6. The arrangement of the troughs L with reference to the pipe O, whereby the water may be allowed to flow freely through the openings in the side of the pipe into the troughs and stand at the same level in both, substantially as described.

7. The arrangement of the pipe or reservoir O, whereby it is made to convey water from end to end of the car without obstructing the doorway, by passing under the same, substantially as described.

4,341.—Wheelbarrow-Frame.—Beckwith W. Tuthill, Oregon City, Oregon.—Patent No. 110,698, dated January 3, 1871.

Claim.—The wheelbarrow-frame, composed of the side pieces A with the front connection b, all made of one continuous piece of tubing, as specified.

DESIGNS.

4,773.—Bottle. — Thomas B. Atterbury, Birmingham, Pa.

Claim.—1. A bottle or other like vessel, showing an imitation of a fowl or bird, substantially as described.

2. A bottle or other like vessel, showing an imitation of feathers, substantially as described and shown.

3. A bottle-mouth, *c*, inclosed within the bill *d* of a fowl or bird, substantially as described and shown.

4,774.—Ornamentation of Glass-Ware.—Mary B. Campbell, Pittsburg, Pa., assignor to Campbell, Jones & Co., same place.

Claim.—The currant design as shown, for the ornamentation of glass-ware.

4,775.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply ingrain or other carpeting in the form similar to the photographic prints accompanying this specification.

4,776.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply ingrain or other carpeting in the form similar to the photographic prints accompanying this specification.

4,777.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply ingrain or other carpeting in the form similar to the photographic prints accompanying this specification.

4,778.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply ingrain or other carpeting in the form similar to the photographic prints accompanying this specification.

4,779.—Burial-Casket.—Edward L. Cooke and Jabez H. Whitmore, Hartford, Conn.

Claim.—The design for a coffin body, as shown.

4,780.—Handle for Stop-Cocks.—William Samuel Cooper, Philadelphia, Pa., assignor to Cooper, Jones & Co., same place.

Claim.—The design for a stop-cock handle, substantially as described and represented in and by the accompanying drawings.

4,781.—Carpet-Pattern.—Albert Cowell, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

4,782.—Carpet-Pattern.—Albert Cowell, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

4,783.—Carpet-Pattern.—Albert Cowell, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

4,784.—Carpet-Pattern.—Albert Cowell, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

4,785.—Carpet-Pattern.—Albert Cowell, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

4,786.—Carpet-Pattern.—Albert Cowell, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

4,787.—Carpet-Pattern.—Albert Cowell, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

4,788.—Fork or Spoon-Handle.—John M. Culver, Wallingford, Conn., assignor to Hall, Elton & Co., same place.

Claim.—The design for spoon and fork-handle, as herein described, and shown in the accompanying illustration.

4,789. — Bitter-Tube. — John L. Dawes, Pittsburg, Pa.

Claim.—The design for bitter-tube, substantially as shown.

4,790.—Hinge.—Thomas Drake, Cincinnati, Ohio.

Claim.—The design for the ornamental configuration of hinge, substantially as represented.

4,791.—Flange and Crank.—William W. Eastman, Meadville, Pa.

Claim.—The design for patterns for casting "rig irons" for boring artesian and oil-wells, and for other purposes, as shown and described.

4,992.—Printed Fabric.—Thomas Hardcastle, of the Bradshaw Works, near Bolton, England.

Claim.—The design for printed fabrics, as shown.

4,793.—Puzzle-Block.—Samuel Loyd, New York, N. Y.

Claim.—The shape or design of both the larger and smaller pieces, as shown and described.

4,794.—Steam-Engine-Governor Case.—John Augustus Lynch, Boston, Mass.

Claim.—The said described and represented ornamental design for an engine-governor case.

4,795.—Watch-Plate. — Eugene Marcile, New York, N. Y.

Claim.—As an improvement in designs for watch-plates, the above-described contour of the raised three-quarter plate C and C′, as represented in the accompanying drawing.

4,796.—Box.—Augustus H. Mershon, East Saginaw, Mich.

Claim.—The design of a box having tapering boards, as shown.

4,797. — Clock-Case. — Nicholas Müller, New York, N. Y.

Claim.—The design for a clock-case, as herein shown and described.

4,798.—Carpet-Pattern.—Elemir J. Ney, Dracut, Mass., assignor to Robert Beattie & Sons, Little Falls, N. J.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two-ply ingrain or other carpeting in the form similar to the photographic prints accompanying this specification.

4,799.—Watch-Plate.—Edwin Hathaway Perry, Boston, Mass.

Claim.—The design herein explained, and as particularly shown in the accompanying diagram.

4,800.—Revolving Grate.—John D. Vance, Cincinnati, Ohio, assignor to himself and Forace M. Eddy, same place.

Claim.—The design for a revolving grate, substantially as shown.

4,801.—Printed Material for Aprons.—William H. Walton, Brooklyn, N. Y.

Claim.—1. A piece of muslin or other woven fabric printed in a series of figures or patterns for aprons, said figures being printed in alternately reversed order across the web, substantially as shown and described.

2. A piece of muslin or other woven fabric printed in a series of figures or patterns for aprons, as above described, with an ornamental border around each pattern consisting of a broad stripe in imitation of binding, with or without an additional ornamental border.

4,802. — Printed Material for Gored Skirts.—William H. Walton, Brooklyn, N. Y.

Claim.—The within-represented shape or configuration of a series of patterns for gored skirts, printed upon a piece of muslin or other woven fabric, substantially as herein shown and described.

4,803.—Hand-Stamp.—Frank Waters, Philadelphia, Pa., assignor to Thomas W. Starr, same place.

Claim.—The design for a hand-stamp, consisting of the parts A B C D E F, as set forth and shown in the accompanying drawing.

4,804.—Ornament for Fountains, &c.—Jonathan Moore and William Wilkinson, Brooklyn, N. Y., assignors to Jonathan Moore and A. Horton, same place.

Claim.—The design herein shown, which we may denominate acanthus flutes and scallops, for ornamentation of fountains and vases.

4,805.—Ornament for Fountains, &c.—Jonathan Moore and William Wilkinson, Brooklyn, N. Y., assignors to Jonathan Moore and A. Horton, same place.

Claim.—The design herein shown, which we may denominate thistle, for ornamentation of fountains and vases.

4,806.—Ornament for Fountains, &c.—Jonathan Moore and William Wilkinson, Brooklin, N. Y., assignors to Jonathan Moore and A. Horton, same place.

Claim.—The design herein shown, which we may denominate leaf and shell, for ornamentation of fountains and vases.

4,807.—Ornament for Fountains, &c.—Jonathan Moore and William Wilkinson, Brooklyn, N. Y., assignors to Jonathan Moore and A. Horton, same place.

Claim.—The design herein shown, which we may denominate vine, for ornamentation of fountains and vases.

4,808.—Ornament for Fountains, &c.—Jonathan Moore and William Wilkinson, Brooklyn, N. Y., assignors to Jonathan Moore and A. Horton, same place.

Claim.—The design herein shown, which we may denominate leaf, shell, and frogs, for ornamentation of fountains and vases.

4,809.—Fountain-Vase.—Jonathan Moore and William Wilkinson, Brooklyn, N. Y., assignors to Jonathan Moore and A. Horton, same place.

Claim.—The design herein shown, which we may denominate stork and flag, for ornamentation of fountains and vases.

TRADE-MARKS.

216.—Thrashing-Machine.—James Brayley, Buffalo, N. Y.

217.—Plow.—Bucher, Gibbs & Co., Canton, Ohio.

218.—Bitters.—Dr. S. B. Hartman & Co., Lancaster, Pa.

219.—Stationers' Hardware. — Thomas S. Hudson, East Cambridge, Mass.

220.—Cotton Goods.—B. B. & R. Knight, Providence, R. I.

221.—Whisky. — Benjamin K. Reynolds, Boyd's Station, Ky.

ISSUE OF APRIL 18.

PATENTS.

113,719.—Whip-Rack.—Robert J. Anderson, New York, N. Y.

Claim.—The improved whip-rack, consisting of the tubes A and shelf B, arranged with relation to each other, as herein shown and described.

113,720.—Smoothing and Ruffle-Iron.—Aaron R. Armstrong and Charles S. Dudley, Nashua, N. H.

Claim.—The combination of the smoothing-iron A with the ruffling-iron B, constructed and arranged substantially as and for the purpose set forth.

113,721.—Paper-File, &c.—Albert Baker, Appleton, Wis.

Claim.—1. The convertible case A B B′, constructed, arranged, and operated substantially as described.

2. The envelopes and cases E E¹, constructed, arranged, and operated, in combination with the case A B B′, substantially as described.

3. The index case F′, constructed and operated substantially in the manner and for the purpose described, in combination with case A B B′.

4. The semi-transparent curtains C C¹, as constructed, arranged, and operated, in combination with case A B B′, substantially in the manner and for the purposes set forth.

5. The designating binding-tag M, with wire stem and hook h′ and gummed surfaces, in combination with index-case F′, substantially as described.

6. The convertible case A B B′, having curtains C C¹ and envelopes E E¹ E² E³ E⁴ and index-case F′, all constructed, arranged, and operated substantially in the manner and for the purposes set forth.

113,722.—Tile-Ditcher.—Isaac T. Baker, Gratiot, Ohio.

Claim.—The curved bed-plate or trough A, with the share B, adjustable beam D, and handles F, combined and arranged substantially as and for the purposes described.

113,723.—Expanding Pulley.—George S. Barton, Worcester, Mass., assignor to Rice, Barton & Fales' Machine and Iron Company, same place.

Claim.—1. The combination, with the hub B, boxes C, and arms D, of the screw-spindles E, bevel-gear K, and geared sleeve J L, substantially as and for the purposes set forth.

2. The combination, with the screw-spindles E, gears K, and geared sleeve J L, of the hand-wheel M and set-screw N, substantially as and for the purposes set forth.

113,724. — Sewing-Machine.—William G. Beckwith, Newark, N. J.

Claim.—The arrangement and combination of the levers A B provided with arms C D, reciprocating eye-pointed needle a, presser-spring J, looper G, rod F, and spring H, for opening the levers and reacting the needle from the cloth, the whole constructed and operating as described and specified.

113,725.—Steam-Pump.—William Baxter, Jr., Newark, N. J.

Claim.—1. In a steam-pump, the combination, with channeled pistons operating in pairs in axially opposite cylinders, of a stationary cam-groove or equivalent guide operating on the piston-rod connecting the pair of pistons, substantially as shown and described, to effect the rotation of both the piston-rod and pistons, thereby reversing the action of the fluid in the cylinders.

2. The combination of the connected channeled pistons and cylinders with a cam-groove or guide located between the cylinders to receive an arm or equivalent device, mounted on or projecting from the piston-rod so as to produce oscillation of the pistons upon their axes while reciprocating in their cylinders, substantially as and for the purpose set forth.

3. The cam-guide or groove, composed of inner and outer cam-pieces, substantially of elliptical shape, the longer axes of the two forming an angle with each other, substantially as and for the purpose described.

4. In combination with the arm mounted on the piston-rod, and the cam-guide or groove which controls the movement of the same, the springs or equivalent devices, as described, operating in connection with said parts, substantially as and for the purpose set forth.

5. The construction of the piston and cylinder, substantially as described and shown in fig. 5 of the accompanying drawing.

113,726.—Ruler Attachment for Drawing-Boards.—Theodore Bergner, Philadelphia, Pa., assignor to James W. Queen & Co., same place.

Claim.—The rulers D E, head C, and guides b b′, when combined with and arranged in relation to a drawing-board, in the manner and for the purpose specified.

113,727. — Washing-Machine. — Charles Hezleton Berry, Natick, Mass.

Claim.—1. The arrangement and combination of the loose tube D with the dasher, its shaft, and tub, as specified.

2. In the washing-machine, the tub, as provided with the lip *d*, or such, and the series of ribs *b*, constructed and arranged in manner as specified.

3. The improved washing-machine as provided with the tube D, the lip *a*, and the ribs *b*, arranged with and applied to its dasher and tub, and constructed substantially in manner and to operate therewith as specified, the dasher having the cleats and perforations and mechanism for putting it in revolution, as explained.

113,728. — Shaft-Coupling. — James H. Blessing, Albany, N. Y., assignor to himself and Townsend & Jackson, same place.

Claim.—A shaft-coupling consisting of a gib, G, a slotted key, C, and a sleeve, B, applied to shaft-sections, and constructed substantially as described.

113,729.—Door-Latch.—Eli S. Bitner, Lock Haven, Pa.

Claim.—A cylindrical revolving door-latch, having a portion of the cylinder removed, so that, when it comes in contact with the strike, it turns in its seat, raising the weight or knob, which, when the door is fully closed, causes the cylinder to turn and fall in the recess of the strike, thereby securing the door.

113,730.—Car-Coupling. — Lycurgus Jedson Bosworth, Monmouth, Ill.

Claim.—A sliding ring, C, combined with a pivoted jaw having downwardly-projecting ear *c* and a cavity between said lip and the center, for the purpose of enabling the twist, occasioned by a run off the track, to unseat the supporting ring, allow the jaw to fall, and uncouple the car.

113,731.—Tenoning-Machine.—Melton S. Bourland, Buena Vista, Texas.

Claim.—1. The improved tenoning-machine, consisting of the saw C, gauges G and H, the gauges I and F, and flange *a*, all arranged and connected with the hinged plates D and E, as shown and described.

2. The gauge I, combined with the gauge F, flange *a*, and saw C, for the purpose of operating substantially as herein shown and described.

113,732.—Cider-Mill.—Jesse Bowen and Aaron T. Foster, Clarksburg, Ohio.

Claim.—1. The cutting and rasping-drum G provided with series of knives L, and ribs or rasping-edges J, and grooves K, all being constructed and arranged substantially as and for the purposes shown and described.

2. The combination of the hopper H, revolving compressor R having arms T, the drum G, front-board U, shaft B, and friction-gears M N O, when said parts are constructed and arranged for operation substantially as shown and described.

113,733.—Plow.—Walter Britton, Truro, assignor to himself and Elmwood Mining and Manufacturing Company, Elmwood, Ill.

Claim.—1. The braces I I, cross-bar H, and nuts *i′ i″*, when arranged to operate with the beam G and extended standard D, substantially as and for the purpose specified.

2. The brace K, lug J, and nuts *k k*, when arranged to operate with the beam G and extended standard D, substantially as described, and for the purpose specified.

113,734.—Shawl-Strap.—Damon W. Brockway, Dover, Me.

Claim.—As a new article of manufacture, and as my invention, the combined shawl-strap and wrapper as composed of the handle *a*, the straps *b b*, the wrapper A, and the flaps C C, all arranged,

combined, and provided with the loops and fastenings, substantially as described.

113,735. — APPARATUS FOR COMPRESSING, STRAINING, AND MOLDING PLASTIC PYROXYLINE.—Josephus Brockway, Albany, N. Y., assignor to himself and Urial K. Mayo, Boston, Mass.

Claim.—1. The combination of the mold G, the gauge-cock F, the cylinder A, the piston B, the screw C, its frame D, and the strainer or strainers *e*, all arranged substantially in manner and for the purpose, and to operate as set forth.

2. The arrangement and combination of two or other suitable number of plates, *b*, as described, with the press-cylinder, or such, and the mold-frame and screw and piston thereof, as set forth.

3. The mold, as made, with the induction-tube *f* fixed to its matrix-plate, as set forth.

4. The press-cylinder, as constructed, with one or more channels, *d*, arranged in its bottom and relatively to the gauge-cock or cocks F, as set forth, in combination with the strainer or disk-sieves *e*, applied to the said bottom, as specified.

5. The combination of the mold G, the mouth-tube *f*, the tapering nose gauge-cock F, and the straining and condensing-press, as set forth, all made, arranged, and applied in manner and for the purpose of condensing, straining, and molding pyroxyline, substantially as explained.

113,736.—MANUFACTURE OF DENTAL-PLATES FROM PYROXYLINE.—Josephus Brockway, Albany, N. Y., assignor to himself and Urial K. Mayo, Boston, Mass.

Claim.—A dental-plate of pyroxyline, made by first forming the sheet by molding it, as described, and next boarding, and finally pressing and shrinking it, all substantially as hereinbefore specified.

113,737.—MACHINE FOR PUNCHING CORSET-SPRINGS. —Peter Brooks, Waterbury, Conn., assignor to Carrington Manufacturing Company, same place.

Claim.—1. Jointly, the lower die-block having the several dies *c c c c c c* and gauge-pin *d* secured thereto, and the upper punch-box having the punches *c' c' c' c' c' c'* and *a'*, the whole operating together as and for the purpose set forth.

2. The arrangement of the dies *c c*, each die being constructed of a separate piece, tapered as described, and both fitted in the dovetailed recess running from front to rear through the die-bed A, whereby either of the said dies may be adjusted forward or backward, as and for the purpose described.

113,738.—MODE OF ATTACHING TOPMASTS AND TOP-GALLANT-MASTS. — Leverett Brown, New York, N. Y.

Claim.—The method of fitting and securing the topmast and top-gallant-masts of vessels in the manner herein described, so that the masts above shall rest upon and be directly supported by the mast immediately below, instead of the trestle-trees of such masts, as and for the purposes set forth.

113,739.—SELF-CENTERING BOX OR BEARING.—Milan C. Bullock, Pottsville, assignor to himself and Samuel E. Griscom, Mahanoy Plain, Pa.

Claim.—1. The box D, constructed in one piece and cut through as shown.

2. The box D, constructed with a single flange, by means of which it is adjusted, as described.

3. The combination, operating as described, of the nut H with the box D, constructed in one piece and cut through as shown.

4. The combination, operating as described, of the box D, constructed with key-seats or notches G G, and the key or dowel-pin E.

5. The arrangement of the counter-bored head, the box constructed with a single flange, and the nut.

113,740.—MACHINE FOR CUTTING SCREWS. James M. Carpenter, Pawtucket, R. I.

Claim.—1. The combination of the die-stock, the dies, two or more, capable of moving radially therein, as described, and the rotating cam-plate and cams, or their equivalent, for moving the dies simultaneously, and the former or pattern for imparting said movement as the dies pass lengthwise over the screw to form the threads, substantially as described.

2. The combination of the die-stock, the radially-moving slides, the pivoted dies or cutters, and mechanism, substantially as described, for adjusting said cutters.

3. The combination of a die-stock, two or more multi-threaded dies arranged radially in said stock, and a leading-screw and movable nut to connect therewith, the threads of said screw and nut corresponding in pitch to the pitch of the die-threads, substantially as described.

4. The adjusting-screw K or its equivalent, in combination with the former and the devices that move the dies or cutters radially, substantially as described.

5. In combination with the die-stock and multi-threaded dies, the scaling-tool, substantially as described.

113,741.—TABLE FOR SEWING AND KNITTING MACHINES. — Edwin Chesterman, Tremont, N. Y.

Claim.—1. A sewing or knitting-machine table having a movable top, operating as described, the ends or standards of which are in two parts, hinged together as shown, and having the shaft of the driving-wheel D attached to or supported by the same portion H of the standard B as the table top, in order that the table top A and the driving-wheel D may move together radially on the pivot C, as shown, for the purpose described.

2. Supporting the back part of a movable table top or desk in a level position by means of an inclined plane or planes, irrespective of whatever inclination the front part may be placed at.

113,742. — COOKING-STOVE. — Franklin Clement, St. Louis, Mo., assignor to Charles H. Buck and Wiley S. Wright, same place.

Claim.—Cast-iron walls for the fire-chamber of a cooking-stove, constructed with chilled surfaces, substantially as described.

113,743.—MODE OF FORMING THE HEADS OF WRENCH-BARS.—Aury G. Coes, Worcester, Mass.

Claim.—Reducing the head B, shown in fig. 1, to the shape shown in figs. 4 and 5, in the manner substantially as described.

113,744.—HANGER FOR REVOLVING SHAFTING.—Alfred B. Couch, Worcester, Mass.

Claim.—1. The rods E cast into the arms H, for the support and adjustment of a journal-box.

2. The combination with the arm H and its supporting-bolts J, of the bolster-plate M, set-screws O, and rods E, for the support and adjustment of a journal-box, substantially as set forth.

3. The combination, with the arm H, of rods E, nuts F, clasps B B', and journal-box A, substantially as and for the purposes set forth.

113,745.—CUT-OFF FOR BLAST-FURNACES.—Henry Davies, Newport, Ky.

Claim.—1. The double-beat valve *b*, arranged within the case *c*, and actuated by the crank *g*, to operate substantially as herein shown and described.

2. The pump-plunger H, provided with the projection V so that it will be elevated by the beam E, but descend only by its own weight, substantially as specified.

3. The pump G, provided with the adjustable valve J, by which the discharge of water is regulated for allowing the descent of the plunger, as set forth.

4. The arm T, arranged on the pump-plunger, and provided with the projection 2 and loose rod R, to operate, by means of the attachments, substantially as herein shown and described.

5. The valve-lever P, balanced at one side by the weighted rod R and at the other by the valve M, and provided with the projection Q, to operate substantially as herein shown and described.

6. The quadruple valve M, provided with double heads, to close on two pairs of seats and regulate the flow of air to both ends of the cylinder A, substantially as herein shown and described.

7. The lever P and projection Q, combined with arm T and projection 2, to operate substantially as herein shown and described.

8. The cylinder A, provided with an aperture, *c*, in its bottom, leading to the air-channel 7, substantially as described, for the purpose of constituting an air-cushion which will retard the operation, as specified.

9. The combination of the air-cylinder A and piston B with the valve M, pump G, and plunger H, all arranged to operate substantially as herein shown and described.

113,746.—SHINGLE-MACHINE.—James Decker, Holmesville, Ga., assignor to himself and F. McRae, same place.

Claim.—1. The combination, with the main frame A of a shingle-sawing machine having the saw arranged as described, of the reciprocating carriage F and a set of feeding apparatus, substantially such as herein described, mounted on each overhanging end of the said carriage, all substantially as specified.

2. The combination of the slotted plates O, shafts I, pawls K, angle-plates L, spring shifting bars C, and the ratchet-bars Q Q', all substantially as specified.

113,747.—CORN-PLANTER.—J. Dyson Delap, Tyrone township, Pa.

Claim.—1. The combination of the rod *s*, bar N, roller P, connecting-rod *t*, and tube L, as and for the purpose specified.

2. The combination of the roller P, connecting-rod *t*, bar N, arm E, spring rod D, seed-slide A, connecting-rods I I, and arms H H, as and for the purpose specified.

3. The combination of the seed-slide A, connecting-rods I, arms H, bar N, arm E, spring rod D, rod *s*, tubes V and L, rod *t*, roller P, shovel *o*, and covering-wings *w*, as and for the purpose specified.

113,748.—SCARF.—George R. Dexter, New York, N. Y.

Claim.—The herein described scarf as a new article of manufacture, consisting of the combination of two or more single or double-fringed twisted strands, A, secured together at their ends, substantially as and for the purpose set forth.

113,749.—DIRT-CHAMBER FOR GAS-PIPES.—Martin N. Dial, Painesville, Ohio.

Claim.—The cylinder A and the interior dirt-cup B, said dirt-cup B being secured in the interior of the cylinder A, substantially as and for the purpose as hereinbefore set forth.

113,750. — HORSE-POWER. — William W. Dingee, Racine, Wis.

Claim.—1. The bridge-tree X'' X, provided with standards *e*, so combined with boxes Y Z that the latter are held in position by one cap-box U, as set forth.

2. The bridge-tree X' X'', arranged to support the box S of shaft G and the inner end of shaft *p* of pinion *e*, to give said pinion a double bearing, as set forth.

3. The combination of master-wheel A, shaft G, wheel H, pinions *l' l e d*, and bridge-trees X'', X', X''', X, and V, so arranged as to reverse the sides of the cogs, as set forth.

113,751.—BOTTLE-STOPPER.—Louis Dovell, Newark, N. J.

Claim.—The tube A, supplied with the corrugated blade B, in combination with the stopper C, when arranged and operating substantially as and for the purposes herein set forth and described.

113,752.—DRAWING-FRAME.—George Draper, Hopedale, Mass.

Claim.—1. In combination with the vibratory trumpet C, the vibratory pawls *d e*, and their gear G of a draught-regulator, the rocker-plate F as made with the elongation *s* of its saddle or flange *c*, arranged to operate substantially as described.

2. The combination of the adjustable stop K with the vibratory trumpet, the vibratory pawls and their gear, and the rocker-plate F as made with the elongation *s'* of its saddle, arranged to operate substantially as described.

113,753.—FENCE. — James T. Drummond, Mount Pleasant, Iowa.

Claim.—The locks or wedges N T', arranged to hold removable panels in place and support the panels of the fence running over undulated ground, as set forth.

113,754. — DRYING BONE-BLACK. — Peter Farley, New York, N. Y.

Claim.—1. The inclined slats B B applied to the heater A, substantially as and for the purpose herein shown and described.

2. The heater A, applied to a furnace, and provided with inclined sides and with shelves, as described, to utilize the waste heat for the drying of bone-black, as specified.

3. The slides *f*, applied to the perforated flanges *e*, and combined with the inclined slats and heater, as described.

113,755.—COMPOSITION FOR PRINTING OR PAINTING ON SURFACES.—Alonzo Farrar, Brookline, Mass.

Claim.—My new or improved composition, substantially as hereinabove specified.

113,756.—SIGNAL FOR RAILROADS.—John Fogarty, Brooklyn, N. Y.

Claim.—1. The lifting-rods E, bent inwardly at their lower ends, combined with the ordinary shades D, as described, for the purpose of preventing fracture of the same by percussive contact with the bottom of the case.

2. The bands F and hooks G, combined, as described, with the ordinary shades D, to prevent the latter from rising out of their seats.

113,757.—FIRE-PLACE GRATE.—William H. Garrett, Cannonsburg, Pa.

Claim.—The combination, with a fire-grate, B, of a sifter and fender, D, suspended under the grate by chains at the front and studs at the rear, and arranged for being supported perpendicularly by setting its hooks on one of the upper bars of grate and fastening it at the top by hook, staple, or otherwise, the whole substantially as in the manner described.

113,758. — ORNAMENTATION OF METAL, GLASS, &c.—Benjamin George George, London, England.

Claim.—The process herein described of transferring printed work on the surface of metal or other suitable material.

113,759.—SCUTTLE-FASTENING. — Thomas J. Gifford, Mass.

Claim.—In combination with the hinged frame, the curved and notched bar B, stationary catch C,

and U-shaped sliding bar D, with springs F F, the bar B passing through the bar D and acting as a guide for the same, all as set forth.

113,760.—REVOLVING MOLD-BOARD FOR PLOWS.—Joseph S. Godfrey, Rochester, assignor to himself and Sears M. Loveridge, Pittsburg, Pa.

Claim.—A revolving, flat, plain-faced, circular disk mold-board, arranged in connection with and with reference to the lower level of the point and shin-piece, substantially as described.

113,761.—CHECK-ROW ATTACHMENT FOR CORN-PLANTERS.—William C. Grimes, Decatur, Ill.

Claim.—1. The driving-pulley G and friction-pulleys D D, *d*, *e*, *f*, H, and *h*, in combination with the smooth cord B, pinion-wheel I, spur-wheel J, eccentric cam *k*, forked lever L, and connecting-rod M, arranged and operating as and for the purpose described.

2. The combination of the pulley G, coupling S, and pointer X, as and for the purpose hereinbefore set forth.

3. The combination, with the bar A, of the plates V V and pulleys D *d* H *h*, when the latter are arranged so that the cord will pass from one pulley to the other when the machine is turned, substantially as specified.

113,762.—WASHING-MACHINE.—Julius W. Groat, Fremont, Ohio.

Claim.—1. The washing-wheel, constructed with radial arched open-bottom ribs or beaters D and inclined perforated webs *g*, substantially as described.

2. The covers or guards E, having perforated sides *e*, and applied over openings *i i* between the radial ribs or beaters D, substantially as and for the purposes described.

113,763, antedated April 3, 1871.—CHEESE-PRESS.—Charles L. Haines, North Newburg, Mo.

Claim.—In combination, the perforated standards D and G, adjustable combined levers R and *k*, the follower K, presser shaft E, and weight L, when constructed and arranged to operate in the manner and for the purposes shown and described.

113,764.—CALORIC-ENGINE.—William T. Hallefus, New York, N. Y.

Claim.—The device herein described for keeping the journals of the cross-head K lubricated notwithstanding the high temperature of the air in the cylinder, consisting of the raised isolated box H having an oil-well or reservoir formed around the said cross-head journals, substantially as herein specified.

113,765.—CARPET-LINING.—John R. Harrington, Brooklyn, N. Y.

Claim.—1. A carpet-lining, composed of a continuous sheet of wadding glazed on both sides and both edges, and inclosed between two continuous sheets of paper.

2. A carpet-lining, composed of a continuous sheet of wadding glazed on both sides and both edges, and inclosed between two continuous sheets of paper, the wadding and paper being secured together by the pasted narrow stripe.

3. The combination of the narrow pasted stripe with two continuous sheets of paper and any suitable filling.

113,766.—PARLOR AIR-PISTOL.—Benjamin Haviland, Hudson, and George P. Gunn, Ilion, N. Y.

Claim.—1. The combination and arrangement of barrel B, arm C, and cross-head D, substantially in the manner and for the purposes herein set forth.

2. The combination and arrangement of piston *k*, spring *m*, and rod *e*, with the elements of claim 1, substantially as and for the purposes set forth.

113,767.—TRACTION-ENGINE.—John W. Hazen, West Hartford, Vt.

Claim.—1. The combination of the levers I J and pawls L, or equivalent, with the heads F, guide-rods G, piston-rods E, and wheels or pulleys D attached to the shaft B to be driven, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the pulley or pulleys P, shaft O, crank F, and connecting-rod M with the head F, guide-rod G, piston-rod E, levers I J, wheels or pulleys D, and shaft B, substantially as herein shown and described, and for the purpose set forth.

113,768.—CAR-SPRING.—Albert Hebbard, Cambridge, Mass., assignor to himself and John P. Onderdonk.

Claim.—The volute spring composed of two or more pieces, A and B, each of which is inserted between the coils of the other.

113,769.—PRINTING-PRESS.—Richard M. Hoe, New York, N. Y.

Claim.—1. Automatically separating and piling set-off sheets by means of tapes, or equivalent devices, constructed, arranged, and operating substantially in the manner and for the purpose specified.

2. The combination, with a printing-machine, of the mechanism for separating and piling the set-off sheets, substantially as described and specified.

3. Arranging the roller 9 in brackets 30, and with a clutch or coupling, 31 32, in combination with the books 29 for supporting the roller, substantially as described, and for the purposes specified.

113,770.—GRAIN-HULLING MACHINE.—Michael Hoffmann, Munich, Bavaria, assignor to Ludwig Kölbl, St. Louis, Mo.

Claim.—1. The rotating cylinder C having downwardly-obliqued grooves *g* arranged one above another, combined, as described, with the stationary cylinder A having internal and correspondingly-oblique ribs *h*, and the sieves *m*, arranged as and for the purpose specified.

2. The stones *i*, arranged separately above one another, and suspended on projecting pins *j* of the shell to form stationary ribs of a hulling-machine, as set forth.

3. The heads *b c*, frames E E, and metal case F, combined with the series of stones *e* ribbed on their inner faces, and arranged as and for the purpose specified.

113,771.—BARREL-ROLLING APPARATUS.—Lewis L. Hyatt, New York, and Adolph G. Hüpfel, Morrisania, N. Y.

Claim.—1. An improved barrel-rolling apparatus, formed by the combination of the frame A, inclined bars B, shafts C and D, bearings E, whether made with one or more notches, wheels F, gear-wheels G H, shaft I, and crank J, or equivalent, with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

2. The bearings F constructed as herein shown and described, in combination with the movable or loose shaft of a barrel-rolling apparatus, as and for the purpose set forth.

113,772.—APPLICATION OF BRONZE AND GILDING TO PLATE-GLASS.—Elias Ingraham, Bristol, Conn.

Claim.—The process of decorating glass plate in bronze and gilt, substantially as herein described.

113,773.—INNER SOLE FOR BOOTS AND SHOES.—Charles P. Johnson, Jamaica Plain, Mass.

Claim.—As a new article of manufacture, an inner sole for boots and shoes, consisting of a sheet or sheets of mica of greater or lesser thickness, inclosed between any protecting materials, such as leather, cloth, hair, &c., for the purpose and in a manner as herein fully set forth and described.

113,774.—WASH-BOILER.—Orlando L. Kenyon and Edwin B. Palmer, Rome, N. Y.

Claim.—The two corrugated plates D E, having chamber F between them, the top one being perforated and the shorter bottom one having discharge spaces L L, when combined with vertical tubes H I and horizontal partition-tube J, as and for the purpose specified.

113,775.—SHIFTING TOP FOR BASKET-PHAETONS.—Charles P. Kimball, Portland, Me.

Claim.—The shifting standing top to basket-phaetons, whether for two or more seats, supported by the posts E, which enter the sockets G in the cars C, as herein described.

113,776.—TREADLE.—George Byron Kirkham, New York, N. Y.

Claim.—1. The arrangement of the spool D E, bolt H, spring J, the pawl F, ratchet-wheel B, and bearing surface C, as arranged, and for the purpose specified.

2. The accessories to the pawl F, the pin L, spring N, and bearings M and O, for the purpose set forth.

113,777.—MOP.—Milton W. Kirkwood and Solomon H. Riley, Iowa City, Iowa.

Claim.—1. The grooved plate A, lever B, screw D, apertured plate E F, staples G, and rod I, combined, as described, with the end of handle and back of brush, for the purpose specified.

2. The block L, carrying a clamp, combined, as described, with the screw-threaded portion K of the handle, for the purpose of providing an adjustable dry-wiper.

113,778.—COMBINED CIDER-MILL AND PRESS.—Daniel H. Krauser, Pottsville, Pa., assignor to himself and Joseph C. Bright, same place.

Claim.—The rotary crusher R, having spirally-curved wings S, combined with ribs O, diminishing in height from apex to base, for the purpose specified.

113,779.—MACHINE FOR MAKING WIRE CYLINDERS.—Cyrus H. Latham, Lowell, Mass.

Claim.—1. The combination of the following elements: a supporting-mandrel, B, a holder or former, G, and a series of revolving mandrels, D, constructed, arranged, and operating substantially as described and specified.

2. The combination, with the revolving mandrels D, of the mechanism, or equivalent thereof, for clamping the wires to be twisted, substantially as described and specified.

3. The combination, with the former G, of the flanged cap H, or its equivalent, for covering and holding the curved ends of the wires *x*, substantially as described and specified.

4. The herein-described machine for making twisted-wire cylinders, constructed, arranged, and operating substantially as described and specified.

113,780.—NECK-TIE RETAINER.—Christopher P. Lawton, Webster, Mass., assignor to himself and Eben A. Day, same place.

Claim.—1. The combination, with the bow or neck-tie A, of the notched rubber shield or retainer B and the holding-pin C, substantially as and for the purposes set forth.

2. In the combination with the elements of the first claim, the loop D, or equivalent device, for attachment to the shirt-button.

113,781.—CLOCK-MOVEMENT.—Benjamin B. Lewis, Bristol, Conn., assignor to Solomon C. Spring, same place.

Claim.—1. The stationary socket and wheel B, in combination with the front plate E, substantially as set forth.

2. The combination and arrangement of stationary wheel B, movable and revolving wheels F^1 F^2, wheel C, and wheel D, all arranged and moving substantially as and for the purpose described.

113,782.—PURIFICATION OF OILS AND FATS BY ACIDS.—Robert G. Loftus, Chelsea, Mass.

Claim.—1. The employment of a naphtha or solvent with the oil and acid, substantially as and for the purpose as specified.

2. The employment of naphtha or a solvent in the process of treating oil with acid and alkali, as set forth, and subsequently subjecting the treated oil to the action of steam in a still, or to distillation, all substantially as and for the purpose of separating the solvent from the oil, as explained.

113,783.—PLUMBAGO OIL-CAN.—Donald D. Mackay, Whitestone, and Cyrus Butler, New York, N. Y.

Claim.—The combination, with the oil-can, of the stirrer, having the spirally-fluted or twisted shaft, and means for operating it, substantially as specified.

113,784.—SELF-ACTING JACK FOR SPINNING.—Peter McGovern, Lawrence, Mass., assignor to George L. Davis, John A. Wiley, Joseph M. Stone, George G. Davis, Joseph H. Stone, and James H. Davis.

Claim.—1. The curved bar *m* and the radial arm *k* and its accessories, combined with the carriage and winding mechanism, and arranged in the manner described, so that the said bar and radial arm may be placed below the carriage, substantially as described.

2. The combination of the counter-faller with the vibrating weighted lever l^4, pinion l^5, and rack m', for operating the screw in the radial arm *k*, under the control of the counter-faller, substantially as described.

3. The rocker-shaft *s* and arm X^6, carried by the carriage, and operating as described, in combination with the arm X^4 on the shipper Z, to stop the machine when the carriage runs in, substantially as described.

4. The combination of the shipper Z with the clock-slide by means of a yielding connection, which will permit the shipper to throw the belt onto the loose pulley to stop the machine, substantially as described.

5. The combination of the lever X^2 with the clock-slide X^1, substantially as described.

6. The combination of the latch X^3 with the clock-slide X^1, substantially as described.

7. Latch X^3, provided with the incline X^8, in combination with the shipper-shaft W, substantially as described.

8. The combination of the arm *d* on the carriage, with the arm W^5 on the shipper-shaft, substantially as described.

9. The combination of the clutch-lever U with the incline for operating the same, so that the clutch shall be thrown in by gravity or a spring instead of a positive motion, substantially as described.

10. The rocker-shaft *o* and arms fixed thereon, mounted upon the carriage, and constructed and operating substantially as described.

11. The combination of the stud *n*, or its equivalent, with the rod Y, substantially as described.

12. The combination of the rocker-shaft *o* with the latch-rod p^3, substantially as described.

13. The combination of the rocker-shaft *o* with the stud *n* or its equivalent, substantially as described.

14. The combination of the rocker-shaft *o* and its attachments with the pulley *q'*, on the drum-shaft D, and the faller *e*, by means of the chain *q* or its equivalent, substantially as described.

15. The combination of the rocker-shaft *o*, operated as described, the stud *n*, the latch-rod p^2, and the faller and faller-arm e^1 with the rod S', substantially as described.

16. The combination of the stud *n* with the rod V^2 and the bent lever V^1 and slide V, for working the clutches T^2 and Q^1, substantially as described.

17. The combination of the spring W^2 with the arm W^1 on the shipper-shaft W, and the stops Y^1 Y^1 on the rod Y, substantially as described.

113,785. — PIANO-FORTE ACTION.—Frazee B. McGregor, Pontiac, Mich., assignor to himself and George A. Hoyt, same place.

Claim.—1. The screw *a*, with buttons *b d* arranged through the rear end of the lever G, and operating in combination with the combination bar H, bar I, and key A, substantially as and for the purposes herein set forth.

2. The back-check J and lever K, hinged or pivoted within or upon the lever G, and operated by the motion of the key, substantially as and for the purposes herein set forth.

113,786.—LIQUID RECEPTACLE AND FUNNEL. — William H. Mumler, Boston, Mass.

Claim.—The valve C, with its lever D, rod E, and spiral spring *i*, in combination with the cover G provided with a hook, *l*, arranged and operating substantially in the manner and for the purpose described.

113,787. — WATER-PROOF FLOOR.—Tobias New, New York, N. Y.

Claim.—The blocks E, combined with cement layer D, felt layer C, and base floor A, all successively arranged and applied as specified, to form a water-proof floor.

113,788.—HINGE FOR GATES.—Edwin D. Norton, Cuba, N. Y.

Claim.—1. The eye of the hinge C when provided with the double-incline guiding-flange G upon the upper part, as and for the purpose described.

2. The combination of the post-plate A, projecting pin E, eye of the hinge C, double-incline flange G, and gate-plate F, when constructed and operating together as and for the purpose described.

113,789. — EXTENSION PULLEY.—William Onions and Isaac Bagnall, St. Louis, Mo.

Claim.—A hollow sectional pulley, C D E F I, fast upon its shaft, combined with a hollow cone, G J K, movable on the said shaft for the purpose of graduating the velocity imparted thereto without stopping the machinery.

113,790.—COOKING-STOVE.—Daniel E. Paris, Troy, N. Y.

Claim.—1. A reservoir for cooking-stoves, constructed with the movable piece D, or its equivalent, substantially as and for the purpose herein set forth and explained.

2. The lugs F F, or their equivalent, cast solid with a water-reservoir, at or near its lower bottom edge, when the reservoir is made larger at the top than at the bottom, substantially as and for the purpose herein shown and described.

3. The back flue-piece B, with its adjustable foot-piece C, in combination with the movable front-piece D, made for the purpose and substantially in the manner herein set forth and explained.

113,791.—AMALGAMATING-PAN FOR GOLD AND SILVER-ORES.—Ira S. Parke, Virginia City, Nev.

Claim.—1. An amalgamating and mixing-pan, tub, or receiver, composed of a metal base and a wooden top, as described, and with combined metal and wooden ribs *b b'* arranged therein, substantially as and for the purpose described.

2. In combination with the combined metal and wooden and ribbed pan, tub, or other vessel for containing the material to be mixed or amalgamated, the revolving mixing-wheel or stirrer C with its eccentric ribs I, constructed and operating as and for the purpose described and represented.

113,792.—GRAIN-BINDER.—Provize A. Perry, Perth Amboy, N. J.

Claim.—1. The combination of the nippers E, mounted upon the rod F, with the slot S and spring S', all these parts being constructed and operated substantially as and for the purpose set forth.

2. The combination of the nippers M and P, spiral arm Q, and reciprocating rod N, all these parts being constructed and operated as herein shown and described, and for the purposes set forth.

3. The combination of the nippers M and P, arm Q, rod N, slot T and U, springs S, and pins *t*, all these parts being constructed and operated substantially as herein shown and described, and for the purposes set forth.

4. The combination of the nippers M and P, arm Q, rod N, spring S, pins *t*, and jaws V and V', as shown and described.

5. The combination of the nippers E, rods F and G, levers *d*, *e*, and *e'*, wheel I, and driving-wheel J, substantially as shown and described.

6. The construction and arrangement of the nippers M and P, rods N and O, arms Q and E with the levers *o*, *o'*, and *m*, connecting-rod *p*, crank-wheel I, and driving-wheel J, substantially as herein shown and described, and for the purposes set forth.

113,793.—CEILING AND WALL FOR BUILDINGS.—Charles N. Poole, Sandwich, Ill.

Claim.—1. The sectional frames A B, filled by pressure with cement, molded and fastened to the joists by screws.

2. The frames B, made in sections A, the cement C pressed thereinto, and face-molded on the outer surface, and a series of fastening-screws, combined as described with the joists or timbers of a building, to form a new ceiling or wall finish.

113,794. — COUNTING-REGISTER. —Charles W. Pyle, Wilmington, Del.

Claim.—The series of disks *c*, notched at *g*, and apertured at *h*, combined as described, with a single pawl, I, operating through said apertures and upon said notches, as and for the purpose specified.

113,795.—MACHINE FOR TURNING BARREL-HEADS. — John Jackson Ralyn, Cleveland, Ohio.

Claim. — 1. The self-adjusting center A, with spring *n*, in combination with the disks C' G, arranged and operating in relation to each other, substantially as and for the purpose set forth.

2. The disks C' G, shaft F, and link M, in combination with the connecting-rod O and treadle P, connected to the sliding frame B, as and for the purpose substantially set forth.

3. The disks C' G and sliding frame B, in combination with the saw T and cutters U, with the shaft of said saw and cutters, arranged in connection with the adjustable table or carriage, substantially as and for the purpose set forth.

4. The bed-plate W and carriage V, provided with adjusting-screws, in combination with the saw T, cutters U, and disks C' G, attached to the sliding frame, as and for the purpose substantially set forth.

5. The saw-shaft Q, supported on the adjustable plate R, with the sliding plate or carriage V and bed-plate W, provided with adjusting-screws, in combination with the disks C' G, as and for the purpose substantially set forth.

113,796.—CANT-HOOK.—Alfred B. Reeves, Knightstown, Ind.

Claim.—The cant-hook composed of the lever A, hook B, stirrup D, and strengthening-plates C and E, all formed, constructed, and arranged substantially as set forth.

113,797.—GUANO AND SEED-DRILL.—Leonidas M. Rhodes, Warrenton, Ga.

Claim.—1. The wheel F with the wires H, and the hopper E with the stationary wires I, arranged substantially as and for the purposes described.

2. The removable band N, in combination with the wheel F, substantially as and for the purposes described.

113,798, antedated April 10, 1871.—LATHE. John F. C. Rider, South New Market, N. H., and Emerson P. Brownell, Providence, R. I.

Claim.—The improved spool-heading and boring apparatus herein described, consisting of the reciprocating spindles K, cutter-head H, combined cutter-head and auger I, levers F and B, and spool-clamp D C, with jaws parallel with the spindles, the whole being combined and operating as and for the purposes specified.

113,799.—BRICK-LIFTER.—K. Julius Rugg, Cincinnati, Ohio.

Claim.—The combination of the X-shaped jointed frames B B, provided with plates A A, with the shaft *f* and cams *e*, all constructed and arranged as shown, for the purpose set forth.

113,800.—PLANING-TOOL.—Nathaniel Russell, Plymouth, Mass.

Claim.—The improved planing-tool herein described, consisting of the metallic box A, steel plates C, and set-screw B, constructed and arranged in relation to one another as described.

113,801. — APPARATUS FOR CONVERTING ROTARY INTO RECIPROCATE MOTION BY MEANS OF FRICTION.—Richard Sammer, Vineland, N. J.

Claim.—The movable spring shaft-box and its combination with friction-power, substantially as shown.

113,802.—HORSE-COLLAR.—John W. Schwaner, Egg Harbor City, N. J.

Claim.—The bars F, in combination with the plates or shells A and wooden ribs B, substantially as herein shown and described, and for the purposes set forth.

113,803.—SOLDERING-FURNACE. — Conrad Seimel, Green Point, assignor to himself and J. Hubert Richardson, Brooklyn, N. Y.

Claim.—The coke-furnace A, provided with the grate *d*, damper *j*, air-space K, and slide *l*, all arranged and combined substantially as herein shown and described.

113,804.—DUMPING-CAR.—William A. Sharp, Tama City, Iowa.

Claim. — The longitudinally-divided bottom, formed of parts A, trunnioned cross-pieces B G, secured by staples H resting on rolls *c*, and sliding through notch D, chains C I, bent levers M N, and stop-pieces O, when all are combined as described, to enable the power that unloads to replace the bottom, and to cause the dirt to be left on both sides and in the center.

113,805. — FERRULE. — Dolphin G. Smith, Columbus, Ohio.

Claim.—The ferrule A, combined with a ring, B, applied to the end thereof, as and for the purpose specified.

113,806.—MILKING-STOOL.—George Smith, Rochester, N. Y.

Claim.—The spring-hooked yoke D, in combination with one or more sets of retaining-hooks, *a*, on the stool top A, substantially as described.

113,807.—COOKING-STOVE.—Samuel Smith, Philadelphia, Pa., assignor to himself and Charles Noble & Co., same place.

Claim.—The eye-plates *a' a'* and toes *a'' a''* cast on the vertical side plate A of the stove, and the projections and studs *b' b''' b' b'''*, and wedging-blocks b^4 b^4 cast on the boiler B, all substantially as and for the purposes hereinbefore set forth.

113,808.—HOOK FOR BIRD-CAGES.—John M. Spring, New Britain, Conn., assignor to P. & F. Corbin, same place.

Claim.—The hook *f*, made of one piece of wire bent up double and extending in the form of arms *d e*, that are secured at their ends to the plate *a*, as and for the purposes set forth.

113,809.—CHEESE-HOOP.—William Sternberg, Bridgeport, N. Y.

Claim.—In connection with the hoop A, the rim B having slits *b*, and spring hooks *c c*, substantially as and for the purpose described.

113,810.—STEAM-ENGINE VALVE.—Nathan Page Stevens, Hopkinton, N. H.

Claim.—The valve as made, with the receiving-chamber *h* open at top and bottom, and with the encompassing exhaust-channel *i*, in combination with the main parts *e e* and the lateral exhaust-passage or passages *f*, all arranged in or with respect to the chest in manner and to operate as specified.

113,811.—PETROLEUM-STILL. — John L. Stewart and John P. Logan, Philadelphia, Pa.

Claim.—1. The still A, with its top in the form of an annular corrugation, in combination with a series of pipes so arranged as to draw off the vapor from the still at the highest part of said corrugation.

2. The central dome D arranged upon the still A in the manner shown, as a receptacle for the vapors that pass from the still by the collecting-pipes C.

3. The arrangement of the dome E within the dome D, so as to bring the uncondensed vapors in contact with the cooling surface of the dome D, as herein described.

4. The dome E, made with passages for the free circulation of the air, as in fig. 3, in combination with the dome D, for the purpose herein described.

5. The valve *k*, arranged in combination with the dome D, or its equivalent, and still A, for the purpose of returning the condensed vapor to the still, as herein described.

6. The combination and arrangement of the still A, pipes C, domes D and E, pipes P and K, and valves L, as herein shown and set forth.

113,812.—CHAIR AND CRADLE COMBINED.—Edmund Stoney, Walkerton, Canada.

Claim.—The arrangement and combination of a chair and cradle, comprised of hinged rockers B B and casters C C attached to the rockers B B, buttons A A, spiral spring D D, back G, slides F F, and straps E E, and adjustable bow H, cord I I, and movable cushion L, as described.

113,813, antedated April 1, 1871.—HORSE HAY-RAKE.—Ole O. Storle, North Cape, Wis.

Claim.—The arrangement of iron I, lever K, iron L, stop M, and latch N with screw-bolts O, forming a locking device, substantially as described.

113,814.—Self-acting Mule for Spinning.—James Sutherland, East Hampton, Mass.

Claim.—1. The fall-off mechanism herein described, substantially as set forth.

2. The combination of the quadrant-screw with the winding-on drum and with the falling-off mechanism, as described, for the purpose of producing a regularly-decreasing series of decreases in the speed of the spindles.

3. The combination of the mechanism herein described, which automatically turns the quadrant-screw with a regulating apparatus, substantially such as is herein set forth, that, during those inward runs of the carriage in which the spindles revolve too fast, is automatically operated by the ends in a manner that diminishes the falling-off of the collar a^3 to such an extent as to cause the mechanism, of which said collar forms a part, to decrease the speed of the spindles during the next inward run after such diminution more than it would otherwise have been decreased, and enough to prevent the spindles thereafter from winding the ends too tightly upon the double conical bases of the cops until such time as they again revolve too fast.

4. The combination of the vertical regulator-rod f^6 with the jointed head m, weighted rod m^1, and horizontal arm m^2, in the manner described, and for the purpose of preventing the depressing of the regulator-rod out of season.

5. The arrangement of the horizontal arm k^2, jointed head k^7, spring k^9, or its equivalent, and rod k^8, projecting from the shoe P in the manner described, and for the purpose of automatically rendering the regulator apparatus inoperative after the double conical bases of the cops have been built.

6. The extension-rail, combined with the copping-rail and cop-builder, in the manner herein described, by which the intermittent motion of the latter, imparted to the extension-rail, may cause the same to practically lengthen the copping-rail at every inward run as much as may be necessary in order to prolong the first rise of the upper follower, until all of each end has been wound upon its cop, except just enough to make the spiral coil upon the naked parts of the spindle without allowing the formation of kinks in the thread.

7. A knock-off, separated from the copping-rail, and operated by a mechanism substantially such as herein described, which causes it to advance at every stretch a less distance than the extension-rail advances, but at the same time as far as may be necessary to prolong the second rise of the upper follower at each inward run, until the spiral coils have been wound upon the naked parts of the spindles tightly enough to prevent the formation of kinks in the ends.

8. The combination, with the quadrant and quadrant-chain, of the inclined traveling-shoe P, and the mechanism consisting substantially of the lever d^6, d^7, and striker d^8, all constructed and operating in the manner described and for the purpose specified.

9. The combination of the cop-builder, extension-rail, knock-off, and shoe P, in the manner described, and for the purpose of causing them all to move in unison.

10. The combination of the scroll-drum with the rocking-bar s^4, elbow-lever s^5, connecting-rod s^6, vertical lever s^1, and carriage-arm s, in the manner described, and for the purpose of throwing the scroll-drum out of gear at the completion of the second stretch.

11. The combination, with the mule-carriage, of a latch mechanism, consisting essentially of the block r, lug r^1, latch-bar r^2, latch r^4, and springs r^3 r^5, as and for the purpose specified.

12. The combination of the weight B with the rail R^2, when the same is provided with an inclination at its inner end, in the manner described, and for the purpose of keeping the pressure of the weight off from the upper follower until the latter has been thrown out of lock.

13. The combination of the weight B with a mechanism, substantially such as is herein described, that automatically serves to increase the pressure of said weight upon the upper follower directly as the lengths of the second rises of said follower decrease, in the manner described, and for the purpose of causing the times of said second rises to remain uniform.

113,815.—Drilling-Machine.—George C. Taft, Worcester, Mass.

Claim.—The combination, as herein described, of the shaft I, slide-bar H, bearing-piece G, adjustable fulcrum-pin K, the lever F and its operating-cam, for the purposes set forth.

113,816.—Machine for Making Pottery-Ware. — Samuel R. Thompson, Portsmouth, N. H.

Claim.—1. The carriage H, in combination with swinging lever V, rod X, and cam O, substantially as described.

2. The plunger C and rod D, in combination with cams P Q, substantially as described.

3. The core K and mold B, when provided with molding surfaces K' L of plaster, substantially as described.

4. The arrangement of sliding cams O P Q with relation to rods X D, substantially as described.

113,817.—Pound-Net for Fishing.—Patrick E. Tiernan, Waukegan, Ill.

Claim.—1. The folding net d, combined with the vertically-adjustable pound C to close the opening in the heart when the pound is elevated, as specified.

2. The heart B, provided with the openings a', combined with the leader A, so that there is an opening at each end of the leader, as set forth.

113,818.—Steam-Engine.—Samuel D. Tillman, New York, N. Y.

Claim.—Two back-acting engines, having cylinders in the same line and one common cylinder-head, when such engines are connected to separate cranks set at right angles on the same shaft, and are arranged and combined substantially as described.

113,819.—Corn-Planter. — Granville J. Vaught, Hanly, Ky.

Claim.—An improved corn-planter, consisting of the frame A, handles B, seed-hopper C, dropping-wheel F, guard H, shaft G, drum or long pulley J, belt K, cone-pulley L, shaft M, drive-wheel I, furrowing-plow O P, conductor-spout I, covering-plow Q R, and adjustable scraper S T, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

113,820.—Disinfecting Compound.—Guillaume Viqué, Aîné, Bordeaux, France.

Claim.—The disinfecting compound, consisting of the ingredients herein specified.

113,821.—Wardrobe and Book-Case.—Ferdenand F. Voight, New Orleans, La.

Claim.—1. The combination of the levers a and b, pivots a a', lug e, and spring f, constructed to operate substantially as and for the purpose specified.

2. The combination of the dowel-pin g, plate j, nut k, and socket-plate h, substantially as described, and for the purpose specified.

3. The wardrobe or book-case constructed of four principal parts, as described, held together by fastenings arranged and operated substantially as and for the purpose specified.

113,822. — Lifter for Spittoons, &c.—James Walker and Henry F. Lilly, Philadelphia, Pa.

Claim.—The bars A, rod C, tube B, central spider D, spring G, and jointed arms E, arranged to operate substantially as and for the purpose herein described.

113,823.—Water-Wheel.—John S. Warren, Fishkill-on-the-Hudson, N. Y.

Claim.—The chutes of a water-wheel moving endwise while reducing the breadth or area of the water aperture and the length of the jet, substantially as and for the purposes herein shown and described.

113,824.—Shaping-Machine.—William H. Warren, Worcester, Mass., assignor to Aurin Wood and Joseph F. Light, same place.

Claim.—1. The combination, with the reciprocating slide C and head-block D, which carries the cutting-tool, of the automatic feeding device, consisting of the parts F F', a, b, H, d, J, K, f, L, and L', arranged in relation to each other, substantially as shown and for the purposes set forth.

2. The combination, with frame A, of the table I Y B^1, vertical slide S, feed-screw V, shaft V^2, pinions V^1, rack X, and pinion W', constructed and arranged for operation substantially as and for the purposes set forth.

3. The improved machine herein described, consisting essentially of the adjustable crank device N, pitman M, slide C, with its cutting-tool and automatic tool-feeding devices, all arranged and operating substantially as described.

113,825.—Comb for Combing-Machines.—Charles Weiler, Landenberg, Pa., assignor to Martin Landenberger & Co., same place.

Claim.—The comb for worsted machinery, consisting of the grooved bed plate A, the plain pins b b, constructed as described, having hooks on their lower ends, and the covering-plate B, all substantially as and for the purposes herein set forth.

113,826. — Self-Releasing Clutch for Water-Wheels.—George W. Wesley, Meadville, Pa.

Claim.—A water-wheel held to its shaft by means of a clutch, one part of which clutch is secured to the hub of the wheel and the other part is secured to the shaft, the teeth or projections of one part of said clutch being made to spring and, by their yielding, release the clutch and cause the wheel to slide upon its shaft in the direction of the length of said shaft whenever the presence of any unyielding obstruction shall jar or suddenly arrest the wheel.

113,827.—Case for Ribbons, Laces, &c.—Samuel Whitaker, Macon, assignor to himself and Aaron Ruth, Decatur, Ill.

Claim.—1. The shaft D, crank K, spool E, flanges F F, washer I, spiral spring G, cap H, nut M, and ratchet-wheel and pawl N, arranged and operating substantially as described, and for the purpose herein set forth.

2. The spool E, point e, opening O, point o', feeder L, and points l l l, substantially as and for the purposes described.

3. The rods P R, measuring-tape Q, and spring tape-measure S, when arranged and used for the purpose hereinbefore set forth.

113,828.—Time-Indicator for Offices.—Edwin A. Wood, Utica, N. Y.

Claim.—Forming a raised sleeve around the center hole of the dial, on which one of the hands is secured and revolves, the other being attached to a spindle running through the center hole.

113,829.—Automatic Relief-Valve.—Albert F. Allen, Providence, R. I.

Claim.—1. The combination of a hydraulic lever and a relief-valve, when the two are so connected and arranged that a current of water flowing under pressure, by acting upon the lever, will hold the relief-valve to its seat, substantially as described.

2. The combination of the relief-valve and signal-bell, the two being so connected and arranged that the opening or closing of the valve will cause the bell to sound, as and for the purposes specified.

3. The combination of the hydraulic lever G and signal-bell, substantially as described, the two being so connected and arranged that the bell will be sounded by the vibration of the lever when moved by the force of a current of water, as and for the purposes specified.

4. In combination with the auxiliary chamber of an automatic relief-valve, the valve B^2, set between it and the suction-chamber of the pump for the purpose of preventing the induction of air by the way of the relief-valve while the pump is being charged, substantially as described.

113,830.—Portable Roller for Moving Heavy Bodies.—John R. Anderson, New York, N. Y.

Claim.—The combination of the bed-piece A, roller B, and adjustable chocks C C, substantially as and for the purpose herein described.

113,831.—Machine for Balling Oakum.—Samuel George Archibald, Edinburgh, North Britain.

Claim.—1. The balling apparatus, consisting of the sliding carriage, the two revolving shafts, the two fluted rollers, and the loose spindle, combined and operating together substantially as set forth.

2. A machine for twisting and balling oakum, consisting of the funnel or the twisting-rollers or aprons, the drawing-rollers, and the balling apparatus, combined and operating together substantially as set forth.

113,832. — Apparatus and Process for Treating Coffee. — John Ashcroft, Brooklyn, N. Y., assignor to Sarah Jane Ashcroft, same place.

Claim.—1. The process of sweating, coloring, and maturing the raw coffee-berry in the manner substantially as herein shown and described.

2. The perforated sweating-boxes D, substantially as herein shown and described.

3. In combination with said boxes, the apparatus A, with its doors, lids, and steam and water-pipes, arranged and operating in the manner substantially as shown and described.

113,833. — Lamp-Burner.—Lewis J. Atwood, Waterbury, Conn., assignor to The Plume & Atwood Manufacturing Company, same place.

Claim.—1. The screw r upon the inside of the cone i, in combination with the wheels i, chimney-holder k, wick-tube e, and base n, substantially as set forth, whereby the wick-raising wheels are operated by the turning of the chimney-holder, as specified.

2. The two screws a b, made with or permanently connected to the burner, as and for the purposes set forth.

3. The wick-raising wheels i, screw r, and wick-tube e, arranged in relation to the central air-tube f and lateral inlet g, as set forth, for moving the flat wick in the Argand wick-tube, as specified.

113,834.—Clasp-Fastener for Bags, &c.—Alfred Holme Balch and Wolfred David Emelius Nelson, Montreal, Canada.

Claim.—The combination of the semicircular parts a and b, hinge c, projections d and e, catches f and g, and points or spikes k, all constructed and operating substantially in the manner and for the purpose herein shown and described.

113,835. — Tongue-and-Groove Joint.—Richard Barton, New York, N. Y.

Claim.—The tongue-and-groove joint for joining

flooring, wainscoting, &c., consisting of the inclined or hook-tongue D formed on one edge of the board, and the corresponding groove C formed in the edge of the adjoining board, substantially as shown and described.

113,836. — HOISTING-MACHINE. — James Bates, Baltimore, Md.

Claim.—1. The combination and arrangement of the serpentine grooved pulley J^1, the rope or chain J, and the balancing-weight J^2, for the purpose of traversing the platform by turning the pulley, and without winding the rope on a drum or cylinder.

2. An elevator or hoisting-machine, constructed, arranged, and operating in all its parts, substantially as herein set forth.

113,837. — HAY-ELEVATOR.—Thomas Vandolah Bayly, Jones' Station, Ind.

Claim.—1. The arrangement of the pulleys *a*, *b*, *d*, *e*, *f*, *h*, *k*, and *p*, hoisting-rope *m*, backing-rope *n*, and fork I, all substantially as and for the purposes herein set forth.

2. The door D, facing E, loop G, and bar H, all substantially as and for the purposes herein set forth.

113,838.—WOODEN PAVEMENT.—George A. Beidler, Philadelphia, Pa.

Claim.—A series of round blocks, provided with shoulders or offsets and tenons, and supported by planks, scantlings, or other pieces of lumber, the whole being arranged substantially as herein set forth.

113,839.—ROTARY ENGINE.—Henry Leonard Bennison, Greenwich, England.

Claim.—The H-shaped cam *e*, internal cylinder *i*, cam *p*, and pistons *q q*, combined and operating substantially as herein shown and described.

113,840.—GRAIN-DRIER.—William Blakey, Brooklyn, N. Y.

Claim.—The combination of the central range of vertical heating-pipes E, the perforated or slotted diaphragms B with inclined or inverted V-shaped ridges D, and the branch-pipe X, all arranged to operate in connection with a tube or casing, A, in the manner substantially as and for the purposes herein specified.

113,841.—FRICTION-CLUTCH FOR BELT-PULLEYS.—James H. Blessing, Albany, N. Y., assignor to himself and Townsend & Jackson, same place.

Claim.—The elastic abutments O O, in combination with toggle-levers and expansible frictional pads G, substantially as described.

113,842. — COOKING-STOVE. — Mary Ann Boughton, Bridgeport, Conn.

Claim.—The arrangement of the hinged shelf E in the rear of the stove, as and for the purpose specified.

113,843.—LOW-WATER INDICATOR. — William A. Bradford, Cincinnati, Ohio.

Claim.—1. In combination with the expansion-tube A, multiplying-lever G, rod F, and valve E, the adjustable thimble M for connecting the valve-stem and rod F, substantially as and for the purpose set forth.

2. An expansion-tube for a low-water indicator, centrally divided by diaphragm P, as and for the purpose described.

3. The curved elastic self-sustaining diaphragm P, substantially as described.

4. In the described combination with the apparatus embodied in the first clause of claims the whistle-testing lever N, connected and operating substantially as and for the purpose described.

113,844. — APPARATUS FOR MAKING EXTRACTS FROM VEGETABLE AND ANIMAL SUBSTANCES. — Louis Brauer, Philadelphia, Pa.

Claim.—1. The combination and arrangement of a boiler and an extractor so as to operate substantially as herein set forth.

2. The vessel A, in combination with the removable vessel B, as and for the purposes set forth.

113,845.—BROOM.—Thomas E. C. Brinly, Louisville, Ky., assignor to Tyler, Brown & Co.

Claim.—The combination of the screw-threaded handle A, the cross-head B, and the metallic socket C, all constructed and arranged substantially as and for the purpose set forth.

113,846.—COOKING-STOVE. — Dominicus Brix, Geneseo, Ill.

Claim.—1. The feeder A, provided with the grate D, and suspended in its casing in such a manner as to leave an air-space, *c*, and operating with reference to the damper *d* in the manner substantially as set forth.

2. The feeder A, constructed as set forth, in connection with the throat *a*, fire-chamber M, and plate *d*, in the manner substantially as described.

3. The flue-space F, arranged around the cover, provided with partitions *x x*, dampers K K, and communicating with the fire-chamber M at the top of the stove and the pipe O at the bottom, as herein shown and described.

4. The stove-pipe O, provided with the draught-wheel H and sliding damper, substantially in the manner and for the purpose set forth.

5. The elbow attached to the pipe O, and provided with the partition *i*, draught-wheel I, and door I', operating together in the manner and for the purpose set forth.

6. The combination, in a stove-pipe, of a damper-register and a ventilating fan-wheel, substantially as and for the purpose described.

113,847, antedated April 8, 1871. — MACHINE FOR MAKING BRICKS AND TILES.—Isaac C. Bryant, Washington, D. C.

Claim.—1. The combination and arrangement of the double-flanged screw P, single-flanged screw M on the same shaft, oblique cutters I I, and feed-rollers D D, all constructed and operating as herein described, and for the purposes set forth.

2. The combination of the case K, removable cylinder W, screw P, mold R, and core Q, all constructed and arranged as shown and described.

3. The combination of the mouth-piece Y with the double dovetailed plate Z^1 and Z^2 and molds Z^3, constructed and arranged substantially as shown and described.

4. The combination of the knife *a* and frame *b* with the crank *d*, wheel *g*, and pulley *f*, when arranged and operated as herein shown and described, for the purpose set forth.

5. The combination of the cylinder W, provided with the bayonet-lock X, with the removable screw P, when arranged and operating as herein shown and for the purpose specified.

113,848.—HAY-TEDDER.—Hiram M. Burdick, Ilion, N. Y.

Claim.—1. The gearing device for operating the rocking fork-rods, consisting of an internal gear-rim, E, eccentrically arranged to the reel-shaft to revolve upon pinions P P', and provided with arms G and H, in combination with cranks K upon the rocking fork-rods R', substantially as described.

2. The adjustable standard C, with brace D having slot S, in combination with the gearing and rocking fork-rods, so as to dump the forks at any required distance from the ground, substantially as described.

3. The sectional shell or sleeve *b c c*, connected by spiral coils *c'*, in combination with the fork-rod

F, one or more of the sections being arranged to rock upon the rod, substantially as described.

4. The rocking sections *c*, having forks M attached through eyes *c'*, in combination with a stationary section *b*, spiral springs *c'*, and the tedder-rod F, substantially as described.

113,849.—HAY-TEDDER. — Hiram M. Burdick, Ilion, N. Y.

Claim.—1. The devices for operating the forks of a hay-tedder, consisting of the internal gear-rim D, having arm E and cam-rod F sliding in oscillating blocks G, the gear-rim being eccentrically arranged and operated by means of arm C and pinions *b c c'* upon a driving-shaft B, substantially as described.

2. The devices for producing the sweeping and dragging motions of the forks of a hay-tedder, consisting of the double levers L M with a flexible joint, *d*, in combination with arm E, rod F, and block G, substantially as described.

3. The combination and arrangement of shaft B, arms C, pinions *b c c'*, gear-rim D with arm E and rod F, block G upon rod R, and double levers L M with flexible joint *d*, substantially as described.

4. The adjustable rod R, supported by adjustable standards H H, in combination with cam-rod F and oscillating block G for adjusting the position and motion of the kickers, substantially as described.

113,850.—MACHINERY FOR DRILLING ROCKS. Charles Burleigh, Fitchburg, Mass., assignor to "The Burleigh Rock-Drill Company," same place.

Claim.—The pawl with its ratchet, or their equivalents, applied to the rock-drilling machine in the manner described, when the said pawl or equivalent device is automatically operated to regulate the feed, as set forth.

113,851.—CARRIAGE-WHEEL. — Garrett G. W. Burnham, Baltimore county, Md., assignor to himself and James N. Burnham.

Claim.—1. A wheel in which the fellies may be drawn together by means of a right-and-left-hand screw, for the purpose of setting, removing, or easing an uncut tire, substantially as set forth.

2. The stiffening-plate G, for holding the ends of the felly, and thus stiffening the joint, substantially in the manner set forth.

113,852.—CURTAIN-FIXTURE. — William Campbell, New York, N. Y.

Claim.—The spring coil H, connected to the rod *d*, and span upon the same in opposite directions, as described, in combination with the case A and cord-spool E, arranged and operating together as set forth.

113,853.—WATER-WHEEL AND CHUTE.—Elisha P. H. Capron, Hudson, N. Y.

Claim.—1. The buckets of a turbine-wheel, made separate and movable, when the said wheel is moved without a hub, so as to be readily put in position or removed as may be desired, substantially as and for the purposes set forth.

2. The adjustable strips or bars D D, in combination with the main portion of the gate and throat, as shown and described, and for the purposes set forth.

3. The movable cap C, in combination with the gate E and throat B, substantially as shown and described, and for the purposes set forth.

4. The flanges K, in combination with a turbine-wheel made without a hub, and the buckets J, substantially as herein shown and described, and for the purposes set forth.

113,854. — HOOP-SKIRT. — Albert Carter, New York, N. Y., assignor to Charles C. Carpenter, same place.

Claim.—In a hoop-skirt consisting of an upper and a lower nest of hoops, united by vertical tapes, the braces E F, when constructed of pliable material, and arranged between each section of space between the vertical tapes, substantially as and for the purpose described.

113,855.—CURCULIO-CATCHER.—Frank J. Claxton and Charles D. Stevens, St. Louis, Mo.

Claim.—1. The curculio catcher herein described, constructed with two wings, consisting of the bars E F, bows H I, arms J K, and sheet L, and hinged to the beams A B so as to adapt said wings to be turned up into vertical position for transportation, or lowered into horizontal position for use, all substantially as specified.

2. The ram P *p* R R' S *s s'* T *t t'* U V, substantially as described.

113,856.—THIMBLE-SKEIN AND BOXING.—Moris Collins, Decatur, Ill.

Claim.—1. The brass bearings *f f*, provided with lugs *k k*, and placed in the mold, and the box cast around the same, substantially as herein set forth.

2. The combination of the skein A, as described, with raised bearings *a a*, recesses *b b*, box or boxes B with recess *d* between them, flange *c*, and oil-chambers *h h*, all substantially as set forth.

113,857. — SECTIONAL STEAM-BOILER. — William H. Cornell, Easton, Pa.

Claim.—A sectional steam-boiler, consisting of tubes A connected at one end to independent inclined boxes B, and at the opposite end to independent boxes B', inclined in a direction contrary to that of the said boxes B.

113,858.—SPOOL-EXHIBITER.—John D. Cutter, Brooklyn, N. Y.

Claim.—A spool-exhibiter, consisting of a number of rods or spindles, D D, suspended in two or more rows or series from a disk, plate, or board, and arranged in length and position substantially as herein described, whereby the lower spools on the inner row or rows of rods or spindles are displayed below those on the outer row or rows.

113,859.—PREPARING FLOUR FOR USE IN CONFECTIONERY, &c.—William G. Dean, Brooklyn, N. Y.

Claim.—The process herein specified of coloring flour.

113,860. — LUBRICATOR FOR JOURNALS.—Patrick S. Devlan, Jersey City, N. J.

Claim.—The transverse openings *a* through the body of the bearing, and the connected holes *b*, in combination with the absorbent strips B, which touch the journal and lubricate it at points *x x'*, and plugs D, arranged and operating in relation to the journal C and oil-reservoir substantially as described.

113,861.—CORPSE-PRESERVER.—Henry M. Diggins, Cincinnati, Ohio.

Claim.—1. The arrangement of wooden sheathing F, outer wooden shell G provided with plug H, the ice-receptacle C, and non-conducting chamber O, all arranged as and for the purpose set forth.

2. The arrangement of the apertures D, ice-receptacle C, and receptacle *g* in outer shell G, said receptacle provided with caps H, as and for the purpose described.

113,862. — DISH-RACK.—William H. Duffett, Rochester, N. Y.

Claim.—The dish-rack A A, having the slatted faces *a a'* arranged in a series of graduated shelves, with the bottoms *b b* open, and having the pendent trough or receptacle D, the whole as herein described.

113,863.—MACHINE FOR PIERCING LEATHER.—Asa Eggleston, Fall River, Mass.

Claim.—In a machine for piercing leather the catches F and T, wheels R and L, spring *m*, gauge W, and clamp P, all arranged as described, for the purpose set forth.

113,864. — CONSTRUCTION OF THERMO-ELECTRIC PAIRS.—Moses G. Farmer, Salem, Mass.

Claim.—1. A thermo-electric pair with the two elements lying side by side, but joined together across the end of one of them, substantially as described.

2. Projections upon one of the bars to aid in joining the two bars, substantially as described.

113,865.—SAW-MILL.—William M. Ferry, Grand Haven, Mich.

Claim.—1. The divided ring F, constructed substantially as described and shown, when used as a detent.

2. The combination of the divided ring F and the wheel D, both constructed substantially as described and shown, when employed as a friction-detent.

3. The means employed for securing a friction-detent, consisting of the ring F, the wheel D, and the eccentric G, substantially as described and shown.

4. The arrangement of the eccentric G, the ring F, and wheel D, substantially as described, for the purpose set forth.

5. The divided ring H, constructed substantially as described and shown, for the purpose of communicating motion by friction.

6. The combination of the divided ring H and the wheel D, both constructed substantially as described and shown, for the purpose of rotating said wheel by friction.

7. The means employed for producing friction between the divided ring H and the inner periphery of the wheel D, and for rotating said wheel, consisting of the cam I provided with the lug *l*, all constructed and arranged substantially as described and shown.

8. The combination of the ring H with its devices for rotating the wheel D, and the ring F with its devices for preventing the rotation of said wheel, substantially as described and shown.

9. The means employed for making the rotation of the dial E automatic, consisting of the cam-lever J, provided with the handle *m''* having a friction-roller, *m'''*, the cam I, and the ring H, in connection with a suitable tripping device, all substantially as described.

10. The means employed for making the rotation of the dial E at will, consisting of the hand lever P, the cam-lever J, the cam I, and the ring H, all constructed and arranged substantially as described and shown.

11. The means employed for rotating the dial E and the dial-plate K simultaneously, consisting of the hand-lever P, the cam-lever J, the cam I, and the divided ring H, all constructed and arranged substantially as described and shown.

12. The combination of the dial-plate K provided with the stud *n*, and the divided ring H, each constructed and arranged substantially as described and shown.

13. The combination of the stop L and the cam-lever J, each constructed and arranged substantially as described and shown, for the purpose of preventing backward rotation of the dial-plate K.

14. The combination of the spring stop N and the dial-plate K, each constructed substantially as described and shown, for the purpose of arresting the rotation of the dial and dial-plate at any desired point.

15. The means employed for compensating for various thicknesses of saws, consisting of the set-screws *p'* in connection with the gauge-bar *b*, and *s* in connection with the guide O, constructed, arranged, and operating substantially as described and shown.

16. The means employed for correcting the gauge to meet the varying thicknesses of saws, and the wear of shaft-pinions and racks, consisting of the gauge-plate M, in connection with the gauge-bar *b*, constructed, arranged, and operated substantially as described and shown.

17. The arrangement of the dial E in relation to the pinions of the shaft A in such a manner that the dial shall at all times display the unsawn thickness of the log upon the carriage, substantially as described and explained.

113,866.—SAW-MILL.—William M. Ferry, Grand Haven, Mich.

Claim.—1. The chain D, provided with the driving-links *f*, constructed and arranged substantially as described and shown.

2. In connection with a chain, D, the sprocket-wheel C, provided with lugs *b c*, and constructed substantially as described and shown.

3. In combination with the endless chain D, the sprocket-wheel C, the supporting-wheel E, and the plate G, constructed and arranged substantially as described and shown.

4. The springs *p'' r''*, in connection with saw-mill dogs M and N, substantially as described and shown.

5. The dog-bar L, provided with projections *a*, operating by its own weight in the groove *c* upon the standard H, and carrying the spring dog M, the several parts being constructed and arranged substantially as described and shown.

6. The combination of the lock-bar K and tumbler *l*, the trucks J and the bed A, all constructed and arranged substantially as described and shown for the purpose of withdrawing the standard.

7. The lock-bar K and tumbler *l*, constructed and arranged substantially as described and shown, in combination with the chain D, for the purposes set forth.

8. The combination of the sprocket-wheel C, the supporting-wheel E, the endless chain D, and the driving-shaft B, so that the standard shall be operated while said shaft rotates continually in one direction.

9. The standard H provided with the dog-bar L, the plates I, and the lock-bar K, and the tumbler *l*, all constructed substantially as described and shown.

10. The combination of the standard H with its connected mechanism, with the bed A and its connected mechanism, all constructed and arranged substantially as described and shown.

113,867. — BEARING-STEP AND VERTICAL SHAFT. — Francis A. Gardner, Danbury, Conn.

Claim.—1. The manner of application of spherical rollers between bearing surfaces, which are disposed relatively in the manner described, so that each of said rollers can revolve upon its natural axis inclined to the prime axis, as described, to form an anti-friction bearing for mechanisms having revolution in horizontal planes.

2. The step B, constructed with an annular flange, *b*, in combination with the revolving part A constructed with a conical face, and the rollers C revolving upon an axis inclined to the prime axis, the whole to operate substantially as set forth.

113,868. — DEVICE FOR ADJUSTING MIRRORS.—Oliver L. Gardner and William Gardner, Glen Gardner, N. J.

Claim.—The combination of the frame A', base B, oscillating support C, sliding bar D, and screw E, for supporting and operating mirrors from their base, it being effected by means substantially such as are herein shown and described.

113,869.—LIGHTNING-ROD.—Albert A. Gaylord, East Cleveland, Ohio.

Claim.—Tubular lightning-rods, the sections thereof connected by means of a lap or scarf-joint secured by a dowel, D, and pin or pins *c*, substantially in the manner as and for the purpose set forth.

113,870.—BEE-HIVE.—Daniel Gebhart, Salimonia, assignor to himself and Peter Weimer, Saratoga, Ind.

Claim.—The unequally-divided honey-board H, grooved around its edges, and provided with pins *c c*, said board being placed between the comb-frames G G so as to leave an open space between it and the sides of the hive A A, substantially as and for the purpose set forth.

113,871.—SLIDE FOR DRAWERS.—James S. Gibbons, Philadelphia, Pa.

Claim.—The combination and arrangement of the metallic slides C and C', constructed substantially as described, with the pieces A and B, substantially in the manner and for the purpose above set forth.

113,872. — FENCE-POST.—Andrew J. Gill, Denver, Colorado Territory.

Claim.—1. The improved iron post herein described, formed of piping, and provided with a fixed cap, C, and a solid point, B, as and for the purposes specified.

2. The holding-stud E, arranged to hold the wire, and provided with the cap or hood *b* to protect the points of contact therewith, as described.

3. In combination with a drive-post, A, and loosely connected thereto, the bladed flange lateral support D, substantially as described.

113,873.—TENON-MACHINE.—William Gilmore, Hudson, N. J., assignor to himself and Henry M. Rogers, same place.

Claim.—1. The combination and arrangement of the pawl and pawl-arm J, ratchet-wheel K, pinion L, rack M, regulating-hook Z, and wiper P, for the purpose hereinbefore described.

2. The arrangement of the carriage B, drop E, and gauge D, as and for the purpose hereinbefore described.

113,874.—CARPET-FASTENER.—Antoine Givaudan, Washington, D. C.

Claim.—The carpet-fastener herein described, consisting of the hook provided with prongs, arranged triangularly as specified, of the one part, and the staple of the other part, said parts being applied to the carpet and floor respectively as shown and set forth.

113,875.—WATER-CLOSET VALVE.—William Gordon, Philadelphia, Pa., assignor to himself and Andrew McCambridge, same place.

Claim.—1. The central opening *g* of the stem *f*, in combination with the spring F and valve B, substantially as and for the purpose set forth.

2. The combination and arrangement of the passage *k* with the central opening *g* and water-chamber *h*, as and for the purpose described.

3. The combination of the adjustable valve-screw H with the crown plate E, arranged and operating in relation to the passage *k* and vacuum-chamber *i*, substantially as and for the purpose set forth.

113,876. — LAMP-BURNER. — William H. Gray, St. Louis, Mo.

Claim.—In combination with the wick-tube A, which is extended below the cap A' to reach to near the bottom of the lamp-bowl, the dome C, when constructed with an elongated neck, C', to form an air-passage around and to the top of the wick-tube, substantially as set forth.

113,877.—BURGLAR-PROOF SAFE.—Edward K. Hall, Louisville, Ky.

Claim.—1. A safe, vault, or cell composed of a series of plates, united at their edges by means of mortises, tenons, and keys, substantially as herein described.

2. The plates *e* and *f*, provided with flanges *e* along their front edge, and with mortises or tenons along their remaining edges, for use in the construction of safes, vaults, or cells, substantially as herein set forth.

113,878. — RAILWAY-CAR TRUCK.—Francis S. Harrington, Boston, Mass.

Claim.—1. The transverse frames B B, constructed as shown, and secured to the side frame A, the whole being arranged as and for the purpose set forth.

2. The bent bars A^1, secured to the transverse frames B and side frames A, as and for the purpose set forth.

3. The longitudinal supporting-bar L', hung to the transverse frames B by the clevises N' and springs Q'', as and for the purpose set forth.

4. The spring-beam L, in combination with the longitudinal supporting-beam L', constructed and arranged substantially as and for the purpose set forth.

113,879. — SPRING-ROLLER SHADE.—Stewart Hartshorn, New York, N. Y.

Claim.—The combination with the spring roller and with weight provided in or attached to the suspended portion of the shade, of a friction-wheel, brake, ratchet-wheel, and pawls, arranged and operating substantially as herein described for the purpose set forth.

113,880. — CIGAR-MACHINE. — Issachar A. Heald, Lowell, Mass.

Claim.—1. The rolls *a*, of a conical or taper form, arranged with their larger ends at the center, whereby the rolls and the cigar have those portions of their surfaces which come in contact moving at a uniform velocity, thus preventing the slipping of any portion of either upon the other, substantially as described.

2. The shell or frame D, having the rolls *a* mounted therein, in combination with the driving-shaft *c* and pinions *b*, arranged to operate substantially as described.

3. The conical rolls *a*, provided with the series of holes or cavities in their ends, in combination with the rolls *a* having corresponding teeth formed on their ends, whereby the rolls *a* are driven by a positive motion and the joint between said rolls is kept closed, so as to prevent the tobacco from being caught therein, substantially as described.

4. The combination of the rolls *a* for forming and holding the cigar, with the shears N arranged as described, for cutting off the ends of the cigar, as set forth.

5. The conical bearing or joint formed on the outside of one or both blades, in combination with the adjustable clasp *w*, or its equivalent, for tightening up the blades, as described.

6. The shears N, having their handles or levers slotted and arranged as described, in combination with the rod *r* and the treadle-rod Y, or its equivalent, for operating the same, substantially as herein described.

7. The former or socket *h*, with the point or projecting pin at its center for forming and perforating the end of the cigar, as set forth.

8. The rocking frame E, pivoted as described, and having the former shaft *g* and the vertical arm *l* attached thereto, with the cross-head or spring *n*, in combination with the swinging frame or shell D, arranged to operate as set forth, for automatically operating the former or pointer at suitable intervals.

9. The shell D, carrying the upper rolls *a* hung in the swinging arms *u*, journaled on the eccentric wrists *p*, whereby the shell with its rolls may be adjusted for different sizes of cigars, as set forth.

10. The rolls *a*, having the groove *a'* formed therein, with their projecting ends *m*, substantially as and for the purposes described.

11. The heads C, provided with the radial slots,

in combination with the adjustable shells or frames D for adjusting the rolls, as set forth.

12. The heads C, provided with the curved slot and adjustable wrist-pins p, whereby the machine may be changed to open at front or rear, as set forth.

13. The arm or lever P, provided with the curved slot O, in combination with the swinging frame or shell D to permit the arm to be changed to either side at will.

14. The clamp or frame O, provided with the yielding pins i, constructed and arranged to operate substantially as described.

113,881.—ARCHED STRUCTURE.—Constantine Henderson, London, England, assignor to Edwin R. Hall, Philadelphia, Pa.

Claim.—The within-described structure, consisting of blocks or plates B, and a flat vertical web or tension-bar, D, connecting said blocks, as specified.

113,882.—METAL-CLAD SHINGLE.—Thomas N. Hickcox, Brooklyn, N. Y.

Claim.—A shingle composed of straw or other board, or thin wood, clad with sheet metal in the manner described, as a new article of manufacture.

113,883.—EXCAVATOR.—Marcus M. Hodgman, Weymouth, Mass.

Claim.—1. The shovel D hung, as above described, to stock C, in combination with the guide-arms e having stop-lugs e', holes f, adjustable gauge-pin f' and guide-staples e'', constructed to operate in the manner shown and described.

2. The slide-bolt h, lever h', and plate g, in combination with the hinged arm j having catch j' and stop-plate j'', in the manner and for the purpose described.

3. The truck, composed of wheels S, axle S', lever T, plate t, and hook t', in combination with the mast A having staple u, in the manner and for the purpose described.

113,884. — CARRIAGE-COUPLING. — Jacob Hollinger, Millersburg, Ohio.

Claim.—The pedestal E with the rib e and plate F, in combination with the plate B having a hole, D, with elongated sides, arranged in relation to each other, the axle-tree, and bolster, substantially as and for the purpose set forth.

113,885. — MACHINE FOR REDUCING OR POINTING WIRE.—Albert G. Hotchkiss, Wolcottville, Conn.

Claim.—The combination, with the dies C C', of the rotating and longitudinally-moving shaft E, clutch p p c, engaging and disengaging gear I J e N, and spring S, the whole arranged and operating substantially as and for the purpose herein set forth.

113,886. — BROILER.—William Thompson Howard, Baltimore, Md.

Claim.—In a steak-broiler, the broad knife-edged bars g g, inclined as specified, and arranged with relation to the parallel grooved bars d d as herein shown and described, whereby the heat and flame are allowed free access to the entire surface of the meat, while the juices thereof are conducted into the annular trough a, as set forth.

113,887.—HAND SEED-SOWER. — Thomas Howell, Morgantown, W. Va.

Claim.—1. The box A, constructed with partitions B B, wooden bottom C, with openings a a, as described, combined with the slide D, having holes b d, and pins f, all substantially as and for the purposes set forth.

2. The combination of the box A, bottom C, slide D, rod E with notches e e, and pins f f, the lever G, and dog H, all substantially as and for the purposes herein set forth.

113,888.—WATER-WHEEL.—Chancy F. H. Huff, New York, N. Y.

Claim.—1. The buckets or floats B B, when the same consist of a warped surface, a a', and a vertical head, B', terminating in a curved flange-lip, b', and are so arranged in relation to the rim and base-plate of the wheel A as to receive and discharge the water, substantially as described.

2. The wheel A, when the same is constructed as stated and is secured in an independent tub C, substantially as described.

113,889.—PEANUT-HULLER.—Josee Johnson, New York, N. Y.

Claim.—The combination of the rotary and stationary disks B and E, each provided with pins n, and the latter with corrugated hub g, with the hopper A, constructed and operating substantially as described and for the purposes described.

113,890.—APPARATUS FOR CLEANING COFFEE, &c. — Josee Johnson, New York, N. Y.

Claim.—1. The combination of the vessels or sieves A and B, when used with water, substantially in the manner and for the purposes set forth.

2. The within-described process for cleaning coffee by the use of the apparatus above claimed, and in the manner herein described.

113,891.—PIPE FOR WATER, GAS, &c.—Algernon K. Johnston, Brooklyn, N. Y.

Claim.—A pipe of paper, cloth, or other textile fabric treated with paraffine, substantially as and for the purposes set forth.

113,892.—BEE-HIVE.—Campbell Jones and Albert Jones, Santa Anna, Ill.

Claim.—1. A bee-hive having its body provided at its upper end with the two shoulders f and g, the former for receiving and holding in place the honey-boxes, and the latter the comb-frames, as herein described.

2. The detachable piece f provided with the tubes H, with the raised lightning-board d, arranged in relation thereto, substantially as described.

113,893.—DINNER-PAIL.—Humphrys Joyce and Anthony Ernest, Troy, N. Y.

Claim.—1. The device D or its equivalent, when formed and constructed substantially in the manner and for the purpose as described and set forth.

2. The combination of the kettle A, tray G, cover H, chamber I, trays L and N, and cup T, when constructed and arranged in the manner and for the purpose substantially as described and set forth.

113,894.—STEAM-BATH.—Charles Kaestner, Chicago, Ill.

Claim.—1. The means employed for generating steam, consisting of the box K, the tank L, and the block N, substantially as and for the purpose set forth.

2. The block N, provided with the inclined communicating grooves n and n', in combination with apparatus for furnishing a supply of water, substantially as and for the purpose specified.

113,895.—DOUBLE-TREE.—David W. Kauffman, Sterling, Ill.

Claim.—1. The compound whiffletree herein described, consisting of the front whiffletree A having trace-fasteners at its extremities, the rear whiffletree C having trace-fasteners at its extremities which pass through holes or mortises in the whiffletree A, and the connecting-iron e, all constructed and arranged as and for the purposes set forth.

2. The short rear whiffletree C having the rods b and b', substantially as shown, and for the purpose set forth.

113,896.—WAGON-AXLE.—August Kessberger, Springfield, Ill.

Claim.—1. The axle, composed of the pipe A, the hollow arms B, the wooden plugs or fillings C, and the bolts D and E, substantially as and for the purpose specified.

2. The combination of a wrought-iron pipe-axle with molten-iron skeins or axle-arms, substantially as and for the purpose shown and described.

3. In combination with a wagon-axle, the truss-rod D', constructed and arranged substantially as and for the purpose shown.

4. The socket-clip G provided with the opening g, the block H, and the bolts h, when constructed as shown, and combined with the axle in the manner and for the purpose set forth.

5. The axle-arm B, constructed as described, and combined with an axle, substantially as and for the purpose specified.

6. The axle A, the arms B, the wooden plugs or fillings C, the bolts D and E, the truss-rod D', and the post or support F, all constructed and combined substantially as and for the purpose shown and described.

113,897.—STEAM-PUMP.—Lucius J. Knowles, Worcester, Mass.

Claim.—1. The combination, with the induction-valves G G' and their seats, of the eduction-valves E E' and their seats, openings S, and inside removable plates O, when said parts are constructed and arranged in relation to each other, substantially as shown and described.

2. The combination, with the valve-stems, of the removable pivot-bars N and holding screws or bolts M, substantially as and for the purpose set forth.

113,898.—MACHINE FOR MOLDING CHAIR-BACKS. — John Lemman, Cincinnati, Ohio.

Claim.—The combination of the stationary guiding-finger G, cutter-spindle C D E revolving in stationary bearings, and the swiveling and sliding arm K k carrying the "form" and "work," substantially as and for the purpose set forth.

113,899.—HORSE HAY-RAKE.—William H. Locke, Canton, Pa.

Claim.—1. The triangular lever G pivoted to the handle E, and having a slot in one arm for connecting with the standards for the shafts, and a hook, a, in another arm to lock on the pins i in the rake-head, substantially as herein set forth.

2. The combination of the shafts A A, rake D, handles E E, and levers G G, all constructed and arranged to operate substantially as and for the purposes herein set forth.

113,900. — COTTON AND HAY-PRESS.—Charles K. Marshall, New Orleans, La.

Claim.—1. The sectional or halved nut E E, yoke F, springs F' F', and cam-lever G, combined and arranged to operate substantially as described.

2. The combination of the screw C and follower-head D with the nut E E, springs F F, and cam or eccentric lever G, substantially as described.

3. The screw C, having a cone-shaped head, c, tongs C', and the cord N', when the latter is so connected with a pulley as to furnish a detachable elevating mechanism for the screw and platen, substantially as described.

4. The arrangement of the pulleys K L, provided with pins k k, on the axle H', the pulley M', endless belt N, cord N', the tongs C', and screw C, when the whole are combined and arranged substantially as described.

5. The tramping-platen, consisting of the screw C and follower-head D, when the latter is provided with rollers d d, substantially as described.

113,901, antedated April 10, 1871.—COTTON-PRESS AND TRAMPER.—Charles K. Marshall, New Orleans, La.

Claim.—1. In the press herein described, the combination of the halved or sectional nut E E with the screw-shaft H, shafts F F, coupling-bars F' F', chocks E' E'? and platform D', all constructed and arranged substantially as shown and described.

2. The screw-shaft H, with or without the varying pitch, and operated by the nut E E, constructed as described, in combination with the follower-head H' of a cotton-press, when constructed and arranged substantially as shown, for the purposes set forth.

3. The arrangement of the pulleys L' L' L', cords or chains, screw-shaft H, sectional nut E E, and follower H', when constructed and operated as herein shown and described, for the purpose set forth.

4. In the cotton-press herein described, the doors B' B', constructed with rabbets b b', and provided with interlocking bars C C', arranged substantially as shown, and for the purpose set forth.

5. The combination of the upper cup a, provided with friction-rollers u' u', with lower cup a' provided with springs u u, when constructed and arranged as shown, for the purpose specified.

113,902.—BUCKLE.—John H. Martin, Columbus, Ohio.

Claim.—1. The buckle-frame K, with the inclined side bars A A arranged opposite free spaces which are between the edges of the plate K and the side loops D D, substantially as described.

2. The ears or guides B' B', cast directly on the edges of the tongue-plate B in the manner described and shown.

3. The skeleton-like trace-buckle herein described, as a new article of manufacture, such buckle being of cast metal and having an end and side loops, D D D, cross-bar C, side bars A A, and a sliding tongue-plate, B F, with gears or guides B' B', all as herein set forth.

113,903.—HEMMING AND TUCKING ATTACHMENT FOR SEWING-MACHINES.—William Nelson Martin, Boston, Mass.

Claim.—1. The graduated curved spring slide B, adjustable and held in position by means of the headed pins a a working in the slot b, in combination with the gauge-plate A, when constructed and operated substantially as and for the purpose set forth.

2. The combination, with the gauge-plate A, of the curved and slotted spring plate D E F and the graduated hemmer-plate with its fingers e e, when all are constructed as described, and adjustable on the plate A, as and for the purpose set forth.

3. The hem or tuck-holder D with its arm d', curved spring E, and slotted plate F, in combination with the plate A and the slotted slide C with the curved hook d, constructed, arranged, and operating substantially as and for the purpose described.

4. The curved hook d, for holding and guiding a tuck, when formed on the end of the graduated plate C, in combination with the plate A and graduated spring slide B when they are constructed and arranged substantially as and for the purpose set forth.

5. The hemmer-slide or plate C, when constructed with the flexible fingers at one end as described, and with the tuck-holder and guide d at the opposite end, substantially as and for the purpose set forth.

113,904. — SHADE-CORD RETAINER.—William McConnell, Philadelphia, Pa.

Claim.—The combination of the pin B, its collar c, and handle C having inclined edges d d, with the slotted plate A.

113,905.—COMBINING CARBONACEOUS MATTERS FOR THE MANUFACTURE OF GAS.—George McKenzie, Glasgow, Scotland.

Claim.—The method herein described of compounding bituminous coal and tar, to be used in the manufacture of illuminating-gas, by finely pulverising all the coal and incorporating the tar with the pulverized coal by grinding the two together, substantially as specified.

113,906.—REVOLVING GAS-BURNER.—Frederick McLewee, New York, N. Y.

Claim.—1. The use of a fan-wheel or propeller attached to the revolving tube of a revolving gas-burner, as and for the purposes described.

2. Arranging the flat-light burners B B one above another, as and for the purpose described.

113,907.—SCROLL-SAW.—Louis Miller, Baltimore, Md.

Claim.—In combination, the strap D, secured to the reciprocating end of the pitman H, to operate as set forth and described.

113,908.—FIRE-GRATE.—George R. Moore, Philadelphia, Pa.

Claim.—1. The upper and lower series of grate-bars working in combination, as *b* and *c*, substantially as and for the purpose herein set forth.

2. The little bars *c*, substantially as and for the purpose herein set forth.

113,909.—REVERSIBLE KNOB-LATCH.—Wallace T. Munger, New Britain, Conn., assignor to P. & F. Corbin, same place.

Claim.—The reversible latch with the shank *f* passing between the stops *t* and carrying the swivel-head *g*, in combination with the arm *e* and projection *n* on the plate *m*, the parts being constructed and arranged substantially as specified.

113,910.—DOOR-LOCK.—Wallace T. Munger, New Britain, Conn., assignor to P. & F. Corbin, same place.

Claim.—The tumblers *k* having two or more notches in their segmental ends, in combination with the bolt *c*, stud 12, bolt-projector *d*, and revolving guard *i*, the parts being constructed, arranged, and operating in substantially the manner set forth.

113,911.—APPARATUS FOR VAPOR-BATH.—George F. Munro, Sr., Albany, Mo.

Claim.—1. The house or casing A, supplied with the door B having the wedge-shaped block *c'*, the aperture or opening C *c*, collar-pieces E E, aperture E', slide F', cap F *f*, and opening with slide K, as and for the purpose described.

2. In combination with the above devices of claim, the sheet-metal board J, stand or support I I', and vessels G and H, all constructed and arranged substantially as and for the purpose set forth.

113,912.—TYPE-SETTING AND DISTRIBUTING MACHINE.—Frank M. Neff and John E. Scruggs, Monroe, Iowa.

Claim.—1. The letter-box B, provided with slides E E' and spring-keys C C', substantially as and for the purposes herein set forth.

2. The combination of the spring-key C, post D, with plate *b* and endless belt G, substantially as and for the purposes herein set forth.

3. The arrangement of the spring-bar K, arm L, and lever J, operating in combination with the endless belt G and projection *t* of the box H, substantially as and for the purposes herein set forth.

4. The combination of the spring-key C' with hook A, spring-bar P, lever R, and spring *k*, constructed and arranged to operate substantially as and for the purposes herein set forth.

5. The ratchet-slide N, hook O, and levers *ff* operated by means of the spring-bar K' and arm L', in combination with the endless belt G, substantially as and for the purposes herein set forth.

113,913, antedated April 8, 1871.—SHEAVE OR PULLEY-BLOCK.—Henry Nick, Paris, France.

Claim.—1. A sheave, consisting of a wooden disk, *a*, having a false nave or tube, *c*, in its center, with a removable cushion or bearing, *d*, therein, also having its groove protected by a metal lining and its sides with metal shields, substantially as herein described.

2. A wooden sheave having its groove lined with sheet metal, substantially as herein described, and for the purpose set forth.

3. In combination with a wooden sheave the convex metallic shields *f*, arranged substantially as herein described, and for the purpose set forth.

4. In combination with a wooden sheave, the removable cushion or bearing *d*, when constructed and arranged substantially as and for the purpose set forth.

5. The combination of the false nave *c* and removable cushion *d*, when constructed and arranged substantially as and for the purpose set forth.

113,914.—MACHINE FOR DRESSING MILLSTONES.—John Norman, Glasgow, Scotland, assignor to William H. Howland.

Claim.—1. The construction of a machine, substantially in the manner described, for dressing millstones, so that the part A^1 or its equivalent, to which is attached the track or way B or B' traversed by the cutting apparatus, shall always remain at a uniform height from that part or face of the machine which rests upon the stone.

2. The combination of the flange A^1 or its equivalent, upon which is mounted the way or track traversed by the cutting apparatus with the base A, substantially in the manner described, so that said flange A^1 shall maintain a fixed horizontal relation to said base, substantially as set forth.

3. In a machine for dressing millstones, the combination of the standard N, sector-plate *n*, and tubular arm N^2.

4. In a machine for dressing millstones, the standard N, provided with suitable supports for the shifting lever L and pulleys Q Q.

5. The combination of standard N, shaft n^2, hub P, arm P', pulleys Q Q, lever O, and poise *o*.

6. The combination of standard N, slotted sector-plate *n* n^1, arm N^2, shaft n^2, hub P, arm P', collar n^3, pulleys Q Q, lever O, and poise *o*.

7. In a machine for dressing millstones, the combination of standard N, lever F, shaft *i*, arm L', and link *l'*.

8. The construction of the sleeve D whereby it is made adjustable, substantially as set forth.

113,915.—BRACE FOR CARRIAGE-SPRINGS.—Daniel W. Norris, Paxton, assignor to Michael Neill, Chatsworth, Ill.

Claim.—1. The combination of the brace-rods E E' with the sliding racks I J and the pinion K, substantially as and for the purpose specified.

2. The combination of the brace-rods E E', sliding racks I J having lugs *i i*, and pinion K, with a supporting-plate, G, having a flange, *m*, substantially as and for the purposes herein set forth.

3. The plate G having two parallel guide-grooves on its upper surface, a slot, *e e'*, cut through the metal along each groove, and a flange, *m*, on the under side midway between and parallel with said slots, substantially as and for the purposes described.

4. The combination of the plate G having the grooves *g g*, flange *m*, and slots *e e'* enlarged at one end, as described, with the racks I J, each having a lug, *i*, which projects through the slot and is provided with a square shoulder, *s*, that bears on the opposite side of the plate G, along the edge of the slot, substantially as and for the purposes herein set forth.

5. The slotted reach-braces D D', when articulated with the brace-rods E E', substantially as described, and for the purpose specified.

6. The combination of two brace-bars with a connecting device attached to the under side of the carriage-body, so constructed and operating that, as the brace-bars work back and forth their upper extremities are caused to move in straight parallel lines, substantially as described, and for the purpose specified.

113,916.—GATE FOR DRAW-BRIDGES.—Ferdinand Pairan, Dayton, Ohio, assignor to himself and Henry Myer, same place.

Claim.—1. The combination of the gate C, revolving in a vertical plane, and draw-bridge A, substantially as set forth.

2. The combination of the revolving gate C hung upon a horizontal shaft, D, gear-wheel D^1, and toothed rack D^3 of the draw-bridge A, substantially as set forth.

3. In combination with the elements enumerated in the preceding claim, the rail D^3, slide-bar E', and spring pawl E, arranged to operate substantially as set forth.

4. In combination with the gate C the protecting cover F, substantially as set forth.

5. The combination of the cover F, slide-bar F^1, and revolving cam F^2, arranged to operate substantially as set forth.

113,917.—MACHINE FOR DRESSING WORSTED CORD.—Isaac E. Palmer, Hackensack, N. J.

Claim.—The combination, in a machine for dressing worsted and other like cord, of guide-pulleys and emery or other hard roughened wheels, arranged to rotate or travel in common with the cord as the latter, directed by the pulleys, passes in contiguous lines or rows around the wheels, substantially as specified.

113,918.—PRODUCT FROM MADDER.—Alfred Paraf, New York, N. Y., assignor to Edward Sabino Renwick, trustee, same place.

Claim.—The new article of manufacture denominated oil-izarine, and hereinbefore described.

113,919.—COMPOSITION OF MADDER FOR PRINTING CLOTHS, &c.—Alfred Paraf, New York, N. Y., assignor to Edward Sabino Renwick, trustee, same place.

Claim.—The new article of manufacture denominated rubidide, and hereinbefore described.

113,920.—WASH-BOILER.—Henry W. Pell, Rome, N. Y.

Claim.—1. The inner boiler B C E, perforated throughout, and surrounded by a circulating space, G, the same being composed of sides B, suspended in the body A of the boiler proper, a removable bottom, C, supported by the sides, and a lid, E, attached to the main lid D and removable therewith, constructed and arranged substantially as described, for the purposes set forth.

2. In combination with the compound lid D E the hooded steam-vents *w v*, as and for the purpose specified.

113,921.—EARTH-MATTRESS.—Theodore William Phinney, Newport, R. I.

Claim.—The earth-mattress or bed-protector, made substantially in manner and of materials and for the purpose as hereinbefore described.

113,922.—FORGING-MACHINE.—James Pipes, Ripley, W. Va.

Claim.—1. The combination of the hammer and its sliding shaft F with the spring F', the lever V, and catch-plate W, substantially as described, for the purpose specified.

2. In combination with the treadle X and shaft C, the single hammer-shaft G, coiled spring B', and the catch-lever C', substantially as described, for the purpose specified.

3. In a forging-machine having two or more hammers that strike alternately upon the same point, the arrangement of the hammer-shafts and their operating devices, substantially as described, whereby one shaft may be thrown out of gear to suspend the operation of one hammer, for the purpose specified.

113,923.—FOUNTAIN-BRUSH.—Zephire Poitras, Chicago, Ill., assignor to C. H. Merrill, F. G. Tanner, and A. W. Merrill, same place.

Claim.—A fountain-brush, consisting of the chamber F, hair packing E, head B, pipe K, stop-cock H, handle L, and packing *b*, constructed and arranged to operate with a hose, J, as set forth.

113,924.—SLEIGH-RUNNER ATTACHMENT TO WHEEL VEHICLES.—Zimri I. Pratt, Chicago, Ill.

Claim.—In combination with wheel A, the plates C C', bolts *d e f*, and runner B when said runner is concaved to receive the periphery of the wheel, as described, in connection with the bolts *d* and *e* when arranged within the plates and in contact with the inner surface of the follies and outer side of the spokes, whereby the wheel is prevented from turning, substantially as described.

113,925.—BEDSTEAD-FASTENING.—Rezin M. Price, Leesville, Ohio.

Claim.—The hook C of the bedstead-fastening herein described, when constructed with the shouldered projecting part C^1 *c* and shank C^2 C^3 *c'*, in combination with the recessed side rail and the covering-plate E, substantially as set forth.

113,926.—SAWING-MACHINE.—Paul Pryibil, New York, N. Y.

Claim.—1. In a band sawing-machine, the combination of a table moving on horizontal guide-ways with two drums, E E', carrying the saw, the bearings of one of which is made movable upon the fixed segment H, the table and one drum being connected by suitable means, as herein shown and described.

2. The lever J, connecting by a link, h, with the pillow-block G of the drum E', and by a rod, *i*, with the table B, in combination with a hand-screw, C, acting on the table B, substantially in the manner herein set forth.

113,927.—MACHINE FOR CUTTING CLOTH, &c.—William Raeuchle, Philadelphia, Pa., assignor to himself, George Rex, and Abraham R. Bockius.

Claim.—A machine for cutting cloth and similar material, having the rotary cutter E and the feeding-wheel F constructed and arranged substantially as described, whereby the cutter is caused to revolve at a greater velocity than the cloth is fed along, thus imparting to it a draw-cut, as set forth.

113,928.—BEE-HIVE.—Dwight Ripley Read, Lawrence, Kansas.

Claim.—A bee-hive constructed substantially as described—that is to say, the box A, having cover H I, the clamps K K', base N with partition O, spaces R P, and door S, comb-frames B with screws M M', division-board E, frame G, and honey-boxes C, all arranged relatively one to the other, as and for the purpose set forth.

113,929.—WOOD PAVEMENT.—Philip H. Reinhard and Ernest F. M. Fachtz, Washington, D. C.

Claim.—A pavement composed of pentagonal blocks arranged in relation to each other substan

tially as and for the purpose described and represented.

113,930.—SASH-HOLDER.—George W. Reisinger, Harrisburg, Pa.

Claim.—The combination of the block A with its slotted plate B, and the block C with its plate D, all constructed as described, and arranged on a window-sash, substantially as and for the purposes herein set forth.

113,931.—CAR-DOOR.—John H. Robertson, New York, N. Y.

Claim.—1. The steel bars or plates introduced into the elongated bearings for the roller journals, substantially as and for the purposes set forth.

2. The case made of two parts, screwed together and grasping the bottom of the door to protect the same, and containing the elongated bearings for the rollers, as set forth.

113,932.—CAR-COUPLING.—W. Bolton Rogerson and Harvey Beyea, Paterson, N. J.

Claim.—The round-faced draw-blocks A A, formed with the vertical slot and the chamber *a*, as described, arranged, and operating in connection with the double-headed draw-bolt B, rotating socket D, lever G, spring *e*, arm *g*, and push-bar E with its stop *i*, the whole constructed as herein shown and set forth.

113,933.—WELDING-POWDER FOR IRON, &c. — Gervas Eby Rose, Philadelphia, Pa.

Claim.—The use of bisulphate of soda, with or without charcoal, as a welding-powder or flux.

113,934.—HORSE HOE AND CULTIVATOR.—Guilford D. Rowell, Menomonee Falls, Wis.

Claim.—A horse hoe and cultivator, arranged as follows: horse hoe M with wings N N, hoe-beam C, cultivator teeth K, plow-share L in rear of frame A, serrated nuts O on the tooth-stocks, and joints D in rear of share L, and frame A, substantially as described.

113,935. — SHOEMAKER'S JACK. — August Rust, Egg Harbor City, N. J.

Claim.—1. A shoemaker's jack, in which the last-holder is constructed with a surrounding pocket, J, to receive and hold the leg of a boot, and the stand or frame A A', with a hinged seat, H, and tool-boxes B B, all arranged as described.

2. The support D for the last-holder, locked in position when adjusted by means of the recess *e* in the frame, and the pivoted arm G, as described.

113,936.—CORN-PLANTER.—William J. Sager, Milesburg, Pa.

Claim.—1. The hollow cylinder dropper G, provided with springs *a*, nipples *b*, and rollers or slides *d*, substantially as and for the purposes herein set forth.

2. In combination with shovels J and springs O, the lever I and chains *c c* with rack K and pin *f*, substantially as and for the purposes herein set forth.

3. The movable shaft F with the hollow cylinder droppers G G and cog-wheels E' and P, operated by means of the lever M, substantially as and for the purposes herein set forth.

113,937.—PERCUSSION-MATCH. — William Servant, Providence, R. I., assignor to himself and Josiah A. Whitman, same place.

Claim.—1. My improved percussion-match or pocket-lamp, produced by the combination of the match-wick *e*, the spring-actuated percussion-rod *f*, and the hollow-headed tube A *i* with each other and with the respective compartments within the pocket-casing *a b*, substantially as and for the purpose herein set forth.

2. The sharpened actuating end of the percussion-rod *f*, as an improvement upon a blunt-headed percussion-rod or hammer, for the purpose herein set forth.

113,938.—MEDICAL COMPOUND OR BITTERS. William T. Sherwood, Ripon, Wis.

Claim.—The manufacture or preparation of a compound which I denominate "tonic elixir bitters or elixir gentian compound," of the ingredients in the proportion and for the purpose specified.

113,939.—BELT-SHIFTER.—William H. H. Sisum, Newark, N. J.

Claim.—The bar B, endwise mounted, so as to be moved at will, with its longitudinal and oblique slots *b b' b²* arranged to operate on the two belt-shifting levers C D, through the medium of the pins *c d*, or their equivalents, as and for the purposes herein specified.

113,940.—REVERBERATING REED-CELL FOR ORGANS OR MELODEONS. — Charles W. Small, Worcester, Mass.

Claim.—1. The reed-cell A in a reed-board for organs or melodeons, having its roof arched above its mouth or entrance.

2. The reed-cell A' in a reed-board for organs or melodeons, having its sides concave, substantially as and for the purpose set forth.

3. In combination with a reed-cell either arched or its sides concave, the inclined passages C C, arranged as and for the purpose set forth.

113,941. — HAT-VENTILATOR.—Alden Solmans, New York, N. Y.

Claim.—The arrangement of the elastic wire gauze A with sweat B in either end of a hat, C, in the manner substantially as herein shown and described, for the purpose of producing a self-conforming hat-ventilator, as set forth.

113,942.—GAS-CONDENSER.—Ira N. Stanley, Brooklyn, N. Y.

Claim.—1. The flat tubes D grouped in sections, submerged in water within independent upright casings with the partitions B and C, and suitable nozzles, water-supplying means, and draining means, arranged relatively to each other, substantially as and for the purposes herein specified.

2. The arrangement of tubes D and diaphragm B C, or their equivalents, in the top and bottom of the vessel, so as to pass the gas four or more times through one cylinder, substantially as herein set forth.

113,943. — SAWING-MACHINE. — William Steschult, Glandorf, Ohio.

Claim.—The combination of the bed-beam A with guide *d*, slotted bar E with spring *b*, pendulum G with handles H H', arm I, foot-board J, and lever K, and the bar D, and slotted arm C, all arranged substantially as shown and described, and for the purposes herein set forth.

113,944. — SEAMING-MACHINE.—Orson W. Stow, Plantsville, Conn.

Claim.—1. The combination of the roller D' shaft E, knee-lever G, shaft *c*, standard B', bed A, standard B, and disk C, substantially as and for the purpose described.

2. The combination of the rollers D D', shaft E, lever G, frame H, inclined planes or projections *e e'*, standard B', and bed A, all combined and operating together, substantially as and for the purpose described.

3. The combination of the rollers D D', shaft E, lever G, frame H, inclined projections *e e'*, standard B', bed A, standard B, and disk C, substantially as and for the purpose set forth.

113,945. — HAME FOR HARNESS.—James Thornton and Emmit G. Latta, Wellsville, N. Y., assignors to James Thornton and James Macken, same place.

Claim.—In combination with a hame, A, having a series of holes in its outer edge, a draft-hook, *c*, formed with a threaded shank, and with the flanged plate *d f*, a plate, *g*, provided with a projection, *i*, and a nut, *h*, all constructed and operating substantially as herein described.

113,946.—SEAL FOR HYDRAULIC MAINS OF GAS-WORKS. — Samuel Trumbore, Easton, Pa.

Claim.—1. The valve F, constructed substantially as described, and arranged within the dip-pipe B and hydraulic main of gas apparatus in respect to the tar-level in the said main, substantially as specified.

2. The tube D, surrounding the valve-rod, *b*, extended to a point below the tar-level in the hydraulic main, for the purpose specified.

113,947.—PRINTERS' INK.—Marshall Turly, Council Bluffs, Iowa.

Claim.—1. The above-described process of preparing printers' ink, consisting of the heating and mixing of resin and lamp-black or soot, substantially as herein set forth.

2. As a new article of manufacture, printers' ink formed of resin and soot or lamp-black, in the manner herein set forth.

3. As a new article of manufacture, printers' ink composed of resin, soot, or lamp-black, and alkali, as herein set forth.

4. As a new article of manufacture, printers' ink composed of resin, soot, or lamp-black, and acid, as herein set forth.

113,948.—WASHING-MACHINE.—Foster Utley, Chapel Hill, N. C.

Claim.—In combination with a tub, A, the cross-bar B, screw D, rubber G, and handle or lever H, all constructed and arranged substantially as and for the purposes herein set forth.

113,949. — LAUNDRY-STOVE. — John Van, Cincinnati, Ohio.

Claim.—1. The inclined pipe F, when combined with the drying-chamber, heater M, furnace C, and elevated air-inlet U, to take air and vapor from near the floor of the drying-chamber and discharge it into the furnace, all substantially as explained.

2. The tube or tubes P P', which conduct air from the bottom of the drying-chamber into the lowest tube of the heater, as set forth.

3. In combination with the tubes P P' and stove or furnace C, the heater M, constructed with a zig-zag range of air-heating pipes, N, as and for the purpose specified.

113,950.—ROAD-SCRAPER.—Harvey B. Van Voorhis, Pittsburg, Pa.

Claim.—1. The combination of the center beam A, side beams B B, and cross-bars C C with their scrapers D D, said beam and cross-bars being pivoted together, substantially as and for the purposes herein set forth.

2. The combination of the scraper-frame A B C, cords or chains *a a*, and rod E, all substantially as and for the purposes herein set forth.

113,951.—PROPELLING CANAL-BOATS.—William W. Virdin, Baltimore, Md.

Claim.—1. The boat A, provided with the upward and inward-curving ends B and C, substantially as and for the purpose specified.

2. A boat, A, provided at or within each end with a suitable inclosed groove, D, constructed on a vertical plane, for the reception and passage of a propelling-chain, which works longitudinally around said boat, substantially as and for the purpose shown.

3. The boat A, provided with the upward and inward-curving ends B and C, the longitudinal groove D, and the recesses F, substantially as and for the purpose set forth.

4. In combination with the chain E, provided with the friction rollers *e'*, the ledges *d* secured to and projecting horizontally inward from the sides of the groove D, substantially as and for the purpose shown and described.

5. In combination with an endless chain, E, working within a suitable longitudinal groove constructed within the bottom and ends of a boat, and upon or over a suitable way suspended above the boat, the paddles or buckets E', pivoted at their vertical centers, and weighted upon their lower edges, so as to cause them to maintain at all times a vertical position, substantially as and for the purpose specified.

6. The braces or supports K, constructed as described, and combined with the rails I, in the manner and for the purpose substantially as shown.

113,952. — COOKING-RANGE. — George W. Walker, Boston, Mass.

Claim.—1. The relative arrangement of the fire-pot *b*, one or more ovens, *c* and *d*, and one or more hot-air chambers or flues, *l*, the fire-pot, the oven or ovens, and the air chamber or chambers being all in the same plane or under the same boiler-plate, and the hot-air chamber (or each hot-air chamber) being between the fire-pot and the adjacent oven, both having an inlet at its bottom and an outlet at its rear end, substantially as shown and described.

2. The fire-pot *b*, ovens *c d*, and hot-air chambers or spaces arranged in a semi-cylindrical body, the fire-pot at the front, the ovens extending radially into the body, and the hot-air chambers or spaces surrounding the fire-pot and ovens, substantially as shown and described.

3. In combination with the fire-pot, ovens, and hot-air spaces, relatively arranged as described, the smoke-flues arranged with relation thereto, substantially as shown and described.

4. In combination with the fire-pot, smoke-flues, ovens, and hot-air chambers or passages, arranged as shown and described, the sub-chamber or hot-air space *k* beneath or in the bottom of the range, substantially as shown and described.

5. In combination with the fire-pot, ovens, hot-air spaces, and smoke-flues, the surmounting hot-air chest or box *s*, at the rear of the range, and covering the rear part of the boiler-plate.

6. In combination with the hot-air spaces between the ovens, the central dividing-partition, *m*, substantially as shown and described.

113,953.—TURN-TABLE.—George Walters, Phœnixville, Pa., assignor to Phœnix Iron Company, same place.

Claim.—1. A turn-table consisting of a circular girder, connected substantially in the manner described to a disk or plate, K, which admits of being adjusted vertically independently of the pivot on which the turn-table revolves.

2. The combination of a circular girder, A, the stays H H and annular plate G, stays H' H' and diagonal tension-rods M M, and adjustable disk or plate K.

3. The combination of the plate or disk K, pivot-head I, and adjusting-bolts *m m*.

4. The transverse girder N N, made in two parts, each having its outer end secured to the circular girder A, and its inner end suspended from the adjustable plate or disk K.

113,954.—BARREL-FILLER.—Lewis H. Watson, Pittsburg, Pa.

Claim.—1. In apparatus for filling barrels, the slot P' in the tubes G and P, made to form a communication with the interior of the barrel and the air without for the escape of the air from the barrel, and also to admit the free play of the outside tripping-lever N, as described.

2. A turning handle, L', having a tripping-arm,

s, in combination with a cranked spindle, L, the tripping-lever N, and float O, as described.

3. The turning handle L′ and its arm *s*, in combination with the spring Y, its regulating-screw *a*, and the tripping-lever N, as described.

4. In a barrel-filling apparatus, in which its cut-off valve S is operated by a turning handle, L, having both a crank, R, and handle L′ tripped by the action of a float, the said handle L′ made to have a movement independent of its spindle L and in advance of the action of the valve S, to allow the turning handle and tripping-lever to be tripped without regard to the pressure upon or friction of the turning spindle L, as and for the purpose described.

5. The combination of the arm *s* of a turning handle L′ and the notched tripping-lever N with the shaft L, crank R, rod R′, and valve S, as described.

6. The combination of the turning handle L′, spring Y, regulating-screw *a*, tripping-lever N, float O, spring valve S, crank R, crank-rod R′, spindle L, tube G with its air-communicating slot I″, and the flint-tube P, the several parts being constructed, arranged, and operating as described.

113,955.—STEAM-GENERATOR.—Elijah Weston, Buffalo, N. Y.

Claim.—1. The tubes *f f*, leading directly across the bridge from the furnace A into the smoke-consuming chamber B, substantially as described and for the purpose set forth.

2. The V-shaped pendent water-space D, in combination with the smoke-combustion chamber B, furnace A, and bridge G, provided with the tubes *f f*, substantially as set forth.

113,956.—STEAM-ENGINE VALVE.—Seth H. Whitmore, Decatur, Ill.

Claim.—The above-described oscillating valve, with the exhaust-passage 4 and rock-shaft 3, in combination with the ports of the steam-chest and cylinder, all constructed and arranged substantially as described.

113,957.—NECK-TIE.—Joseph R. Wilber and Otis W. Peirce, Providence, R. I.

Claim.—1. The loop, substantially as described, and for the purpose set forth.

2. The combination of the springs, hook, and pins, substantially as described, and for the purpose set forth.

3. The combination of said springs, hook, and loop, substantially as and for the purpose as hereinbefore set forth.

113,958.—FIRE-ESCAPE LADDER.—Tobias Witmer, Buffalo, N. Y.

Claim.—1. The frame H when pivoted to the same axis with the ladders, and having operating cords or chains *m n* in front and rear, in connection with the detachable truck E and ladders D or casing C, substantially as and for the purpose described.

2. The combination with the ladders D or casing C of the rack C′ and pinion B, applied and operating as and for the purpose set forth.

3. The ratchet or ratchets *y y′*, pawls *s s*, and props P, as arranged with the ladders, substantially as and for the purpose described.

113,959.—MACHINE FOR TURNING CRANK-PINS.—Milton G. Wood, Boston, Mass.

Claim.—The combination of loose handle *q*, belt *p*, either straight or crossed, belt-wheel *o*, frame A, and feed-screw *n*, operating substantially as described.

113,960.—PLOW.—Charles A. Beard and Ezra E. Evans, Zanesville, Ohio.

Claim.—A plow, consisting of the beam A, arms C C and E E, braces *e e e e*, and mold-boards B, D, and F, all constructed and arranged substantially as and for the purpose set forth.

REISSUES.

4,342.—COMBINED VAPOR-BURNER AND LAMP-POST.—Benjamin D. Evans, Columbus, Ohio, assignor to John W. Baker.—Patent No. 90,830, dated June 1, 1869.

Claim.—1. The combination of the reservoir A and the tubular lamp-post C with each other and with the generator E, substantially as and for the purpose herein set forth.

2. The combination of the vapor-pipe R and the perforated tubular lamp-post C with each other, and with the generator E and the burner K M, substantially as and for the purpose herein set forth.

3. The orifices H H′ in the sides of the tubular lamp-post C to supply the chamber within the same a sufficient quantity of air for cooling and vapor-mingling purposes, substantially as herein set forth.

4. The combination of the inner cap K and the outer cap M of the compound burner with each other and with the flame-spreader G, substantially as and for the purpose herein set forth.

5. The arrangement of the reservoir A, the supply-pipe D, the stop-cock 4, the generator E, the interior tube R, the burner K M G, and the perforated tubular lamp-post B C, substantially as and for the purpose herein set forth.

4,343.—CLOTHES-WRINGING HOOK.—James H. Pratt, Lynn, Mass., assignor to himself and Benjamin F. Larrabee, same place.—Patent No. 112,074, dated February 21, 1871.

Claim.—A wringer-hook, composed of a hook proper and a clamping device, substantially as described, for securing it to the side of the tub.

4,344.—HOSE-COUPLING.—James C. Cooke, Bridgeport, Conn., assignor to Albert F. Allen, Providence, R. I.—Patent No. 22,166, dated November 30, 1858.

Claim.—1. The male and female locking devices *a a* and *c c*, attached alternately to the connecting-faces of a hose-coupling, as and for the purposes specified.

2. The corresponding annular projection and recess *m* and *n*, arranged with relation to each other on the holding-band and neck of a hose-coupling, as and for the purposes specified.

4,345.—Division A.—FEED-WATER PIPE.—John Doyle, Baltimore, Md., assignor to himself and Anthony Reybold, Delaware City, Del.—Patent No. 110,753, dated January 3, 1871.

Claim.—A feed-water pipe within a steam-boiler with graduated perforations to equalize the distribution of the feed-water in the boiler, substantially as and for the purpose described.

4,346.—Division B.—FEED-WATER PIPE.—John Doyle, Baltimore, Md., assignor to himself and Anthony Reybold, Delaware City, Del.—Patent No. 110,753, dated January 3, 1871.

Claim.—A puppet-valve or series of puppet-valves within a steam-boiler, on a pipe discharging water thereinto, substantially as and for the purpose hereinbefore described.

4,347.—MOLD.—William Hainsworth, Allegheny City, assignor of one-half interest to Sears M. Loveridge, Pittsburg, Pa.—Patent No. 109,894, dated December 6, 1870.

Claim.—1. Pulverized coke treated with sour beer or fire-clay water or other similar fluid as a material for molds or cores for casting metals, as specified.

2. Molds or cores made of pulverized coke mixed up with a suitable fluid possessing adhesive properties, substantially as specified.

4,348.—SUSPENDER.—James B. Sharp, New York, and William Seymour, administrator of Robert M. Seymour, deceased, Sing Sing, N. Y.—Patent No. 59,465, dated November 6, 1866.

Claim.—1. The improved suspenders, having their straps rigidly secured by metallic fastenings, substantially as described.

2. Suspenders having their ends covered with metallic bindings, substantially as set forth.

DESIGNS.

4,810.—COOKING-STOVE.—John Abendroth, New York, N. Y.

Claim.—The design for a cooking-stove, as shown.

4,811.—CLAW-BAR.—David Christie, Chillicothe, Ohio.

Claim.—The design for a claw-bar, as shown.

4,812.—BOTTLE-STAND.—George Gill, Taunton, Mass., assignor to Reed & Barton, same place.

Claim.—1. The design for external form of the vase, as represented.

2. The design, as shown, of the vase A and the handle B.

4,813.—TEA-POT.—George Gill, Taunton, Mass., assignor to Reed & Barton, same place.

Claim.—The design for the vase or body, that of the cover, that of the spout or nose, and that of the handle, all being essentially as shown in the drawing.

4,814.—MATCH-SAFE.—George R. Hubbard, New York, N. Y., assignor to Bradley & Hubbard, West Meriden, Conn.

Claim.—The design for match-safe as herein described, and illustrated by the accompanying drawing.

4,815.—COOKING-STOVE.—Jacob Louis Kuechler, Reading, Pa., assignor to Orr, Painter & Co., same place.

Claim.—The design for cook-stoves, as shown and described.

4,816.—STOVE.—John H. Keyser, New York, N. Y.

Claim.—The design for the front of a stove, as represented.

4,817.—OVEN.—John H. Keyser, New York, N. Y.

Claim.—The design herein represented for the front of an oven.

4,818.—PARLOR-STOVE.—John Martino and John Currie, Philadelphia, assignors to Orr, Painter & Co., Reading, Pa.

Claim.—The design for parlor-stove, as shown and described.

4,819.—PLATE OF A COOKING-STOVE.—Charles Noble, Philadelphia, Pa., assignor to Charles Noble & Co., same place.

Claim.—1. The design for the side plate A and door B, substantially as shown and described.

2. The design for the front plate D with its doors, substantially as shown and described.

3. The design for the foot, fig. 3, substantially as illustrated and described.

4,820.—TYPE.—William H. Page, Norwich, Conn., assignor to William H. Page & Co., same place.

Claim.—The design for letters, as shown.

4,821.—STOVE.—La Forist Rollins, Bangor, Me.

Claim.—The design for a stove, as herein described and shown.

4,822.—DRAWER-PULL.—Elbridge J. Steele, New Britain, assignor to Turner, Seymour & Judds, Wolcottville, Conn.

Claim.—1. The design of the shape and configuration of the drawer-pull, substantially as shown.

2. The design of the ornaments *f f* and panels in the exterior curved surface of the drawer-pull, as shown.

4,823.—COOKING-STOVE.—Jacob Steffe, Philadelphia, assignor to Orr, Painter & Co., Reading, Pa.

Claim.—The design for cook-stove, as shown and described.

4,824.—SHOW-CASE.—Jacob D. Vredenburgh, Chicago, Ill.

Claim.—The design for a hexagonal or six-sided prismatical show-case, as shown.

4,825.—COOKING-STOVE.—George Wellhouse, Akron, Ohio.

Claim.—The design for a cook-stove, substantially as described and represented in and by the accompanying photographic illustration.

4,826.—STOCKING FABRIC.—Thomas Dolan, Philadelphia, Pa.

Claim.—1. The design for the stripe A, as described and illustrated.

2. The design for the entire stocking fabric, substantially as described and illustrated in and by the accompanying drawing.

4,827.—STOCKING FABRIC.—Thomas Dolan, Philadelphia, Pa.

Claim.—The design for a stocking fabric, as described and illustrated in and by the accompanying drawings.

4,828.—TALMA OR CLOAK GARMENT.—Eberhard Flues, Fort Washington, (Whitemarsh Post Office,) Pa.

Claim.—The design for a talma or cloak garment substantially as described, and as shown in the accompanying drawing.

4,829.—LAMP-BURNER.—Hiram W. Hayden, Waterbury, Conn., assignor to Holmes, Booth & Haydens, same place.

Claim.—The design of the ornamental shape and configuration of the air-distributer *a*, bead *b*, and chimney-holder *c*, as set forth and shown.

4,830.—LAMP-BURNER.—Hiram W. Hayden, Waterbury, Conn., assignor to Holmes, Booth & Haydens, same place.

Claim.—The design of the shape and configuration of the parts of the lamp-burner combined together as represented.

4,831.—SPOON OR FORK-HANDLE.—Edward C. Moore, Yonkers, N. Y., assignor to Tiffany & Co., New York city.

Claim.—The design for handles of spoons and

forks, substantially as described and illustrated by the accompanying drawing.

4,832.—PATTERN FOR CUTTING DRESS-WAISTS.—Elizabeth P. Smith, Chicago, Ill., assignor to herself and Norman H. Sherburne, same place.

Claim.—1. The design or pattern-scale for forming both the front and back of dress-waists, arranged upon one and the same plate, substantially as described and illustrated by the accompanying drawing.

2. The design of the curved rule, employed in connection with said pattern, for laying out the separate parts of the waist, substantially as described and shown in the accompanying drawing.

4,833.—PUBLIC URINAL AND WATER-CLOSET.—Fredrick J. Smith, Chicago, Ill.

Claim.—The design for a public urinal and water-closet, substantially as shown.

4,834.—STEAM-ENGINE.—Peter L. Weimer, Lebanon, Pa.

Claim.—The design of a steam-engine, as shown.

4,835.—RANGE.—Charles J. Wood, Baltimore, Md.

Claim.—The design and ornamentation of the several constituent portions of a range front, as described and shown by the accompanying photographs.

TRADE-MARKS.

222.—CASSIMERES.—Callaghan & Brother, Philadelphia, Pa.

223.—MEDICINE.—Hostetter & Smith, Pittsburg, Pa.

224.—PAINT.—The Averill Chemical Paint Company, New York, N. Y., and Cleveland, Ohio.

225.—COTTON GOODS.—The Harris Manufacturing Company, Coventry, R. I.

226.—WHISKY.—Vidvard & Sheehan, Utica, N. Y.

EXTENSIONS.

SIDNEY S. HOGLE, of Beren, Ohio.—Letters Patent No. 16,866, dated March 17, 1857; reissue No. 804, dated Aug. 30, 1859.

"Improvement in Harrows."

Claim.—Causing the points of the teeth of a rotating harrow to descend deeper into the ground on one side of their axes of rotation than they do upon the opposite of the same, for the purpose of enabling the dragging force which may be exerted upon said harrow to impart a positive rotary motion thereto, without the aid of gearing-wheels.

WILLIAM D. SLOAN, of New York, N. Y.—Letters Patent No. 16,936, dated March 31, 1857.

"Improved Automatic Lathe for Turning Irregular Forms."

Claim.—The series of rotating and shifting mandrels, for rotating the blocks to be turned and shifting them from one operation to another, substantially as described, in combination with the series of traversing cutters guided by patterns or molds to determine the form to be produced, substantially as described, whereby a series of blocks is simultaneously subjected to the series of operations, and each in succession subjected to all the operations, as set forth.

Also, the mode of operation, substantially as described, of the cutter, (termed the finishing-cutter,) which said mode of operation consists in rolling the cutting-edge along the surface of the block that is being turned, as described, by reason of which a small portion only of the cutting-edge is cutting at any one time, and immediately relieved and followed by another portion of the said cutting-edge, as set forth.

Also, the sliding segment-ring with its slots, substantially as described, in combination with the cutters and their appendages, substantially as described, for carrying the rangling cutters nearer to the axes of the blocks at each successive cutting action, as set forth.

WILLIAM H. HOUSTON, of Peabody Mass.—Letters Patent No. 16,947, dated March 31, 1857.

"Machine for Composing and Distributing Type."

Claim.—1. The within-described machine for composing types, operating in the manner substantially as set forth.

2. The method herein described of selecting the types from the cases by means of the springs s or their equivalents, operating in connection with the keys o, in the manner substantially as herein set forth.

3. The method of transferring the types to the stick by means of the plungers B and T, or their substantial equivalents, as set forth.

4. Raising the rule Y and throwing forward the line of type upon the galley by the means herein described, or by any means substantially the equivalent thereof.

5. The method of feeding forward the types in the cases by means of the slipping bands *f*, rods *j*, and cylinder K, or their equivalents, operating in the manner substantially as herein set forth.

6. The wheel F^2, with its ratchet-wheel M^2, and the connections N^2 O^2 d^2, or their equivalents, whereby this wheel is caused to give motion to the shaft C whenever any one of the keys is depressed, as set forth.

7. The within-described method of connecting the crank u with the pitman W by means of the springs *f* operating as set forth.

8. The distributing machine, constructed, arranged, and operating in the manner substantially as herein described, by means of which a column of type when placed in the machine is distributed automatically in the manner set forth.

9. The method herein described of forwarding the types to the trial case by means of the vibrating case t^3, operating in the manner substantially as set forth.

[Extended by an Act approved March 3, 1871, entitled "An act to amend an act for the relief of JEARUM ATKINS," approved July 15, 1870.]

JEARUM ATKINS, of Mokena, Ill.—Letters Patent, No. 9,479, dated Dec. 21, 1852.

"Improvement in Rakes to Grain-Harvesters."

Claim.—The exclusive use of the herein-described combination of the crane-post *c'*, rock-shaft A', and crank F', to operate the jointed arm c' ℓ and hands D' E', which collect the grain in gavels and deposit it in rear of the harvester, in the manner specified, as the machine moves forward; when applied to machines for harvesting any grain which requires to be collected and deposited, the combination being connected by gearing with the driving-wheel of the harvester, and operating through mechanical devices, substantially as described, as an automaton, to perform the above-specified operation.

HENRY R. REMSEN, of Albany, N. Y.—Letters Patent No. 17,012, dated April 7, 1857.

"Improved Mill for Cleaning Castings."

Claim.—The use, in a horizontal revolving mill for cleaning castings or hollow ware, of open work, lattice, or grated partitions parallel to or in a line with the axis, for the purpose of such compartments as I have described, substantially as above set forth.

ISSUE OF APRIL 25.

PATENTS.

113,961.—CHIMNEY-COWL.—Warren N. Abbott, New York, N. Y., assignor to himself and Isaac H. Wood.

Claim.—1. The inverted hollow cone B, in combination with the tubes C and D, cover E, and cylinder A, all being constructed and arranged substantially as herein shown and described, and for the purposes set forth.

2. The pipe p and ledges *l* and *l'*, in combination with the cone B, tubes C and D, and cylinder A, as herein shown and described, and for the purposes set forth.

113,962.—WAXED-THREAD SEWING-MACHINE.—Hosea P. Aldrich, Boston, Mass.

Claim.—1. The combination of an air-heating and forcing apparatus with a wax-thread sewing-machine, substantially as and for the purpose set forth.

2. The mechanism above described for operating the thread-guide, the same consisting of rocker-arm N, the pitman N', the arm O, shaft P', arm Q, and cam *d e*, the whole being arranged and actuated by the driving-shaft, as set forth.

3. The link e, formed and applied to the shaft P' to adjust the reciprocating movement of the thread-guide.

4. The mechanism, as described, for giving to the awl its horizontal movements, the same consisting of the slider e and its block W, arm n, sleeve m, the compound levers or arms k and h, formed and connected as specified, pitman Z, arm Y, cam-wheel X, and stud *g*, the whole being arranged and actuated by the driving-shaft, substantially as set forth.

5. In an organized sewing-machine, the combination of the mechanism above described for producing the vertical reciprocation of the awl with that for effecting the horizontal movements thereof, as and for the purpose set forth.

113,963.—BREECH-LOADING CANNON.—Hiram J. Allen, Arkadelphia, Ark.

Claim.—The grooved breech-block E and pivoted barrel A, combined as described with the lever F and frame C, as and for the purpose set forth.

113,964.—MACHINE FOR MAKING SKEWERS.—Chauncey Andrews, Paterson, N. J.

Claim.—1. The combination of the block A, standard G, pivoted weighted knife H, and adjustable gauge I with each other, substantially as herein shown and described, and for the purpose set forth.

2. The wheel E and adjustable knives F, constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

113,965.—KNITTING-MACHINE.—John M. Arnour, Syracuse, N. Y.

Claim.—1. The combination of the needle n and stitch-hooks A A, constructed and arranged in relation to each other, and operating together, substantially as herein described, so that they perform by their own motions the entire work of knitting without auxiliary or intermediate devices, as herein specified.

2. The reversible needle n, in combination with two rows or sets of stitch-hooks, A A', when arranged and operating as described, so as to knit either plain circular work or ribbed work, or work changeable from plain to rib work, and vice versa, substantially as herein specified.

3. The combination of the stitch-hooks A A' and carrier-plate b, so arranged together that the stitches are held open laterally by the said hooks and plate, and also afford space between them to allow the needle to enter the stitches thereof, substantially as and for the purpose herein specified.

4. The drum c and the cams and reversing mechanism thereon, for imparting the movements to the stitch-hook carrier, and for reversing the needle, substantially as herein described.

113,966.—DUMB-BELL.—Ellis Ballou, Zanesville, Ohio.

Claim.—The dumb-bell A, made hollow and with a handle, B, extending across its cavity, substantially as herein shown and described, and for the purpose set forth.

113,967.—REVOLVING-CHAIR.—Franklin Barber, Detroit, Mich.

Claim.—In a rocking chair, the combination of the spider A, boxes B, spring C, fulcrum A, and set-screw m, all constructed, arranged, and operating substantially as described and shown.

113,968.—APPARATUS FOR CARBURETING AIR.—Charles C. Beers, Boston, Mass.

Claim.—1. The hollow evaporators F when made triangular in cross-section, and provided at their ends with flanges, and combined with fibrous material wound around the evaporators between the flanges, the form of the evaporators admitting of the inclined faces of one projecting over the inclined faces of the adjacent ones, when arranged in a horizontal series, in which the alternate evaporators are inverted.

2. The combination of the evaporators arranged in horizontal series with the perforated partitions H, in the manner described.

113,969.—STOVE-DRUM.—Goderich Crouter Benton, Port Huron, Mich.

Claim.—The perforations K in the pipe F, the section of pipe L, and the damper M, in combination with the drum, composed of an outer shell, A, and inner shell B, and air-pipe E, and pipes H I, when each part is constructed and arranged to operate substantially as and for the purposes set forth.

113,970.—WATCHMAN'S TIME-CHECKING CLOCK.—Ira G. Blake, Worcester, Mass.

Claim.—The combination of the ring-plate, having a spring stem, with the front D and marking-hand B, as and for the purposes set forth.

113,971.—CULINARY VESSEL.—William H. Bloom, Tiffin, Ohio.

Claim.—The beveled stiffening-ring C applied to a culinary vessel, substantially as described.

113,972.—FLOUR-BOLT AND REEL.—John R. Bradfield, Ada, Mich.

Claim.—1. A bolting-reel divided into longitudinal compartments, in each of which is placed a frame covered with a bolting fabric or screening material, substantially as and for the purpose set forth.

2. The construction and arrangement of the perforated head D, slides E, flange F, and the partitions C in a bolting-reel provided with separate and independent bolts, substantially as described, for the purpose specified.

113,973.—MATERIAL FOR FILTERING.—Leopold Brandeis, Brooklyn, N. Y.

Claim.—The production of a catalytic filtering medium by carbonizing sponge either by direct heat or by immersion in hot metal or other suitable material.

113,974.—TRUNK-FASTENER.—Damon W. Brockway, Dover, assignor to himself and Jonathan F. Parkhurst, Bangor, Me.

Claim.—The within-described trunk-fastening, hinged at *e*, attached as set forth to the lid of the trunk, and secured, when the trunk is shut, by the staple *f* and strap *g* to the trunk-body, as specified.

113,975.—ELEVATOR HAY-FORK.—John T. H. Brown, Greenup, Ill., assignor to himself and J. P. Ewart.

Claim.—The pivoted tines T T T, stock V, and lock-plate W, combined, as described, with the elevator-rope, for the purpose specified.

113,976. — ELECTRIC-TELEGRAPH SOUNDER, RELAY, &c.—Hugh Swinton Legaré Bryan, Cedar Rapids, Iowa.

Claim.—1. The armature of sounders, relays, or registers, arranged upon a stem or rod or other support, having a rectilinear movement between adjustable sounding-points, one at each end, the said rod or stem being suspended by vibrating arms, springs, or in any suitable way to have such movement, all substantially as specified.

2. The arrangement of the magnets, armature, and its support, and the sounding-points, in an open case, substantially as specified.

113,977.—MACHINE FOR MANUFACTURING PICKS AND SIMILAR TOOLS.—Augustus Buerkle, Pittsburg, Pa.

Claim.—1. The arrangement of the punch *d*, stripper *h*, jaws *g g*, and right-and-left-hand adjusting-screw *g'*, substantially as described.

2. The adjustable gauge *f*, in combination with the ram *d'* and mandrel *m*, substantially as set forth.

3. The dies *e e'*, cam-faced in the direction of their motion, and convex-faced in the direction of the axial line of the rolls, such convexity being uniform from the middle of each die to its outer edge, substantially as set forth.

4. The dies *e e' e''*, of the form and arrangement substantially as described.

113,978.—APPARATUS FOR VAPORIZING VOLATILE HYDROCARBONS. — John Butler, New York, N. Y.

Claim.—1. Vaporizing volatile hydrocarbons in a coil of pipe, substantially as herein shown and described, and for the purpose set forth.

2. The combination of a siphon B, and cold-water or condensing-vessel C with the inlet-pipe conducting the hydrocarbon to the vaporizer, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the inlet-pipe A, siphon B, cold-water or condensing-vessel C, hot-water or vaporizing-vessel D, coil E, and stop-cocks G with each other, substantially as herein shown and described, and for the purposes set forth.

113,979.—BABY-TENDER. — Alexander H. Carson, Newport, R. I., and Andrew Brown, Troy, N. Y.

Claim.—An improved baby-tender, consisting of the cloth seat K, open dress J, cords or chains I, large ring or hoop A, cords or chains B, swiveled plate C, adjustable chain D, hook E, coiled spring G, and hook H, whether the cylindrical case F be used or not, said parts being constructed and arranged in connection with each other, substantially as herein shown and described, and for the purpose set forth.

113,980.—LOCOMOTIVE SMOKE-STACK.—Edwin A. Castellaw, Savannah, Ga.

Claim.—A locomotive smoke-stack provided with air-channels *b b c* around the rear half of its crown, and with apertures in the crown-flange *a* to constitute a guard of ascending air for the purpose of keeping the smoke forward, substantially as herein shown and described.

113,981.—BOAT-DETACHING APPARATUS.—David Lopez Cohen, Pensacola, Fla.

Claim.—1. The combination of the rod *g*, tooth A, a catch, *i*, and a suitable locking-lever, *k*, substantially as herein shown and described, for the purpose specified.

2. The combination of the rod *n*, lever *k*, guides *t m*, and catch *i*, as set forth.

113,982.—LAMP-SHADE.—Michael H. Collins, Chelsea, Mass.

Claim.—1. A shade for a lamp or Argand burner as made in two frusto-conical or pyramidal portions, B C, formed, constructed, and combined together in manner as set forth.

2. In a metallic shade composed of a frusto-conical or pyramidal body and a frusto-conical or pyramidal elastic spring portion B, so united as to form the frustum of a cone, making the said circumscribing elastic spring portion of a single piece of metal, or of a series of pieces so united as to form a continuous whole, as shown and described.

113,983.—APPARATUS FOR REEFING SAILS.—Alonzo G. Crossman, Huntington, N. Y., assignor to Franklin M. Crossman, same place.

Claim.—1. The combination, with a sail of a vessel, of the rope *b* attached to the sail, and the halyard B, substantially as described.

2. The arrangement upon a sail of the reefing-rope *b* in a curved line, the center of which is further from the boom or yard than its extremities.

3. The combination of the reefing-rope *b* with the sail of a vessel, substantially as hereinbefore described.

113,984.—CENTER-BOARD FOR VESSELS.—Alonzo G. Crossman, Huntington, N. Y., assignor to Franklin G. Crossman, same place.

Claim.—1. The combination of the center-board D, the standard C or its equivalent, and the pintles *b* and *c* and *d* and *e* connected together, substantially as hereinbefore set forth.

2. The combination of the part D, the part E, the standard C or its equivalent, and the pintles *b*, *c*, *d*, and *e* connected together, substantially as hereinbefore set forth.

3. The combination of the standard C or its equivalent, the parts D and E of the center-board, and the pintles *b* and *c*, substantially as hereinbefore set forth.

113,985.—DUST-PAN.—Francis L. Daniels and John Russell, Boston, Mass.

Claim.—1. The combination of the pan D and trough B, hinged together as described, and the tube G, arranged between the contiguous or adjoining walls of said pan and trough, substantially as and for the purpose set forth.

2. The backwardly-inclined wall E of the pan, hinged to the dust-trough, substantially in the manner described, so that its upper edge shall project over into the trough or in rear of the front wall of the same, for the purposes set forth.

113,986.—FLASK FOR CASTING PIPE.—John Demarest, Mott Haven, N. Y., assignor to himself and Jordan L. Mott, same place.

Claim.—The combination, with the flask and the core-bar, of the screw-supporting projections A C and the temper-screws E F, arranged for springing the core downward along the middle, substantially as specified.

113,987.—WASHING-MACHINE.—John Hilger Doll, Etna, Ill.

Claim.—1. The combination of the rubbing-board B, levers C, rubber-blocks D, rods E, and hand-nuts G with each other and with the tub A and slotted standards F, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the washing-rollers H, three, more or less, cross-bars I, slotted bars J, cross-bars K, adjustable pivoting-rod L, and clamping nuts M N with each other and with the rubbing-board B, levers C, rubber-blocks D, adjusting-rod E, nuts G, standards F, and tub A, substantially as herein shown and described, and for the purpose set forth.

113,988.—WATCHMAN'S TIME-DETECTER.—James Dunning, Bangor, Me.

Claim.—The combination and arrangement of the within-described dial with the marker, operating as set forth, the slides *c d*, through which said marker passes, and the hand-lever A, by which it is adjustable to the required day of the week, all combined and operating substantially as set forth and described.

113,989.—CONDENSING STEAM-ENGINE.—Thomas Edwards, Ladywood, Birmingham, England.

Claim.—The general arrangement of the apparatus, substantially as described.

113,990.—HARVESTER.—John H. Elward, Polo, Ill.

Claim.—1. The suspended binder's platform I, in combination with the transverse overhanging bars G G, connected with the main frame in such manner as to permit their being readily folded thereon, substantially as and for the purpose set forth.

2. The movable binder's seat J, provided with the fork *J'* and stirrup *j'*, in combination with the binder's stand or platform, as described.

3. The axle E, adapted to slide on pins *e'*, in combination with the curved flanges or segments *e*, whereby the machine is thrown into and out of gear without the aid of backing-ratchets or clutches, as described.

113,991.—PAPER-FILE.—George W. Emerson, Chicago, Ill., assignor to John R. Barrett, same place.

Claim.—One or more spring supports F K, slightly rounded, as described, attached to a paper-clip, and arranged to hold the binders J in position to pierce paper, as herein described and shown.

113,992.—SAW.—James E. Emerson, Trenton, N. J.

Claim.—1. The clamp or holder C, having neck *c'* and pivot-piece *c*, in the manner and for the purpose described.

2. The clamp or holder C, as above claimed, and wedge *b'*, in combination with tooth B, when the tooth, clamp, and wedge are constructed and arranged to clamp and hold the said tooth B in contact with the saw-plate A', in the manner described.

113,993.—SAW FOR SAWING STONE.—James E. Emerson, Trenton, N. J.

Claim.—1. The reversible and adjustable cutter B, constructed in the manner and used in a circular-saw plate for sawing stone, as herein above described.

2. The reversible and adjustable cutter B', having serrated edge *a'*, when used in a circular-saw plate for sawing stone, as herein above described and shown.

3. The interchangeable and adjustable jaws or holders B'' B'', constructed in the manner and for the purpose herein described.

4. The clamp or throat-piece C, constructed as described, and wedge D, in combination with the cutters B B' and saw-plate A, in the manner herein described.

5. The combination of the adjustable interchangeable diamond-holders B'' B'' with the clamp-piece C, wedge D, and saw-plate A, as herein above described.

6. A circular-saw for sawing stone, having the removable and adjustable cutters B or B' with chisel edges, and made to be reversible and interchangeable with each other, and arranged in the manner as seen in fig. 4.

7. A circular-saw, A, for sawing stone, having the adjustable jaws or holders B'' B'' with diamond or other mineral points *b* for cutters, when constructed and arranged as described and seen in fig. 3.

8. A circular-saw, A, for sawing stone, having the removable, reversible, and adjustable cutters B or B', alternated with the adjustable jaws or holders B'' B'' having diamond or other mineral points *b*, when arranged with relation to each other in the manner described and seen in fig. 2.

113,994.—MELODEON.—Peter Engers, Jefferson Furnace, Pa.

Claim.—1. The bars or valves C C, arranged as shown and described, whereby they may be operated in connection with a key-board, as set forth.

2. The bars or valves C C, pendants D D, plates E, slides *a*, pins *b* and *c*, and keys B, as herein shown and described, to operate as set forth.

113,995.—MEDICAL COMPOUND FOR TREATING RHEUMATISM, &c.—William H. Farrar, Richmond, Va.

Claim.—The above medical compound, substantially as described.

113,996.—BATTERY-GUN.—William Fields, Wilmington, Del.

Claim.—1. The hinged armor D in combination with the springs T, substantially as shown and described.

2. In combination with the breech-piece L, the two eccentrics I J and lever K, when arranged to operate as described.

3. The feeding device, consisting of the grooved plate P, plungers R, and plate or piston S, when combined as set forth.

4. The barrels E, head-piece F, screw G, hinged spring armor-plates D, breech-piece L, eccentrics I J, lever K, and hammer N, when all are combined to form a field-battery gun, substantially as shown and described.

113,997.—PREPARING AND MASHING GRAIN. Charles H. Frings, Centreton, Mo., assignor to himself and Charles Braches, same place.

Claim.—1. The combined application of hydrate of soda or hydrate of potash and muriatic acid to grain, as specified.

2. The herein-described process of separating proteine from grain before mashing, and returning it to the after saccharization mash for the purpose specified.

3. The process herein described of preparing and mashing grain, substantially as specified.

113,998.—HINGE FOR GATE.—George Garrett, Elkhart, Ill.

Claim.—The sections B and B' of the moving portions of a gate-hinge, arranged as described, and connected together around the gate-post by bolts D D, substantially as and for the purpose specified.

113,999.—APPARATUS FOR STAMPING WEARING APPAREL, &c. — Charles Gernert, Philadelphia, Pa.

Claim.—An ironing apparatus for ornamentally

stamping wearing apparel, consisting of the frame or bed-plate A, the revolving disk B, the lock-key C, the adjustable standard E, the flanges F F, the roller G, the guide-frame H, and the handle I, surmounted by the crutch-like shoulder-piece L, or their equivalents, designed, arranged, constructed, and operating in the manner and for the purposes substantially as described.

114,000.—BUGGY.—James R. Gilman, South Bend, Ind., assignor to Studebaker Brothers' Manufacturing Company, same place.

Claim.—1. The combination of the main seat A with the supporting ways *b b* by means of the chairs *c c*, which are of such a shape that they prevent the spreading of the sides of the buggy-body, while they enable said seat to be adjusted to any desired position, substantially as herein set forth.

2. The combination of the cam-shaft *e* and the angular griping-levers *d d* with each other and with the buggy-seat A, and the supporting ledges *a a*, substantially as and for the purpose herein set forth.

3. The combination of the front seat B and its supporting legs *h h* with each other and with the angular levers *k k*, the springs *m m*, and the sliding bars *n n*, in such a manner as to enable the said seat to be shifted to the respective positions herein represented and described.

4. The within-described combination and arrangement of parts by which the main seat A and the forward seat B can be arranged and secured in the respective positions represented by fig. 2 of the drawing.

5. The within-described combination and arrangement of parts by which the main seat A and the forward seat B can be arranged and secured in the positions represented by fig. 3 of the drawing.

6. The within-described combination and arrangement of parts by which the main seat A and the forward seat B can be arranged and secured in the respective positions represented by fig. 4 of the drawing.

114,001. — BURGLAR-ALARM AND HOTEL-ROOM INDICATOR. — Louis C. Goeson, Trenton, N. J., assignor to himself and John O. Raum, same place.

Claim.—The catch-levers B B, of any required number, operated by means of the wires or cords A A, the drop-slides G G bearing figures or letters moving within the case H, and furnished with a flange, F, which is held by the notch E of the lever B, and arranged to operate substantially as and for the purposes herein set forth.

114,002. — ATTACHMENT OF REVOLVING MOLD-BOARDS TO PLOWS.—Joseph S. Godfrey, Rochester, assignor to himself and Sears M. Loveridge, Pittsburg, Pa.

Claim.—1. A circular rotating scraper, combined with a revolving mold-board, substantially as described.

2. A bent spindle, capable of both lateral and rotary adjustment, as a carrier for a revolving mold-board, and in combination therewith, substantially as described.

3. The saddle-piece *g*, in combination with the slotted post *d'* and fastening-eye *e*, as a means of adjusting vertically the spindle *a* and mold-board *m*, substantially as described.

114,003.—CUTTING APPARATUS FOR HARVESTERS.—Phineas Gregg, Brownsville, Mich.

Claim.—The combination of the wheels D and E, carrying the chain F, with the blocks B and B', screws C, and nuts *a*, when the several parts are constructed, arranged, and operated as described and shown, for the purposes set forth.

114,004. — IMPLEMENT FOR SLITTING AND JOINING RAGS FOR CARPETS. — Marion Green, Coldwater, Mich.

Claim.—The hand-instrument for slitting and looping carpet-rags, consisting of the handle A, knife B, and hook C, constructed substantially as described.

114,005.—ZINC FOR GALVANIC BATTERIES.—Edward A. Hill, Chicago, Ill.

Claim.—As an article of manufacture, the battery-zinc of the form described and shown, substantially as specified.

114,006.—GALVANIC BATTERY.—Edward A. Hill, Chicago, Ill.

Claim.—1. The combination of the annular zinc plate B with the metallic hanger C, provided with the hook *c* and set-screw *e* for securing the wire thereto, substantially as specified and shown.

2. The combination of the magazine E and the copper plate or disk D, when the said disk lies horizontally and flat upon the bottom of the battery-cup and the said magazine rests thereon, substantially as and for the purpose specified.

114,007.—HOTEL-ANNUNCIATOR AND FIRE-ALARM.—Edward A. Hill, Chicago, Ill.

Claim.—1. The combination of the pivoted armatures O and tilting blinds or curtains R, when constructed and operating in an annunciator, substantially as and for the purposes specified.

2. The combination of the magnet A and shunt with the special magnets B' C', when so constructed and arranged that the electric current passes alternately through the magnet and shunt automatically, for the purpose of strengthening the currents to the magnets B' C' when the magnet A is shunted.

3. The permanent magnet K', in combination with the shunt circuit and the alarm-bell, when constructed and operating substantially as and for the purposes specified.

4. The combination of the permanent magnet K', the vibrating arms L', E', and A', when constructed and arranged substantially as described, for the purposes of opening and closing the circuit of the shunt.

5. The dial S, provided with transparent figures, in combination with the shifting blind, as and for the purpose described.

6. The combination of an electro-magnetic annunciator and fire-alarm, when said fire-alarm is so constructed and arranged that the action of the heat closes the same circuit by the annunciator, substantially as specified.

114,008.—COMBINED TATTING-SHUTTLE AND CROCHET-NEEDLE.—Constantine Hingher, New Brunswick, N. J.

Claim.—A compound tatting-shuttle and crocheting-needle, the former having a square-socketed bobbin, *c*, and the latter having a square shank, *c*, to fit therein and rotate the said bobbin, as described.

114,009.—HINGE FOR TABLE-LEAVES, &c.—Phillip Hires, Columbus, Ky.

Claim.—1. A hinge for table-leaves provided with a flanged recess and sliding leaf, substantially as and for the purpose specified.

2. In combination with the elements of the above claim, the spring E, arranged to be compressed in the line of motion of the sliding leaf, as shown and described.

114,010.—VARIABLE CUT-OFF FOR ENGINES FOR WATER-WORKS. — Birdsill Holly, Lockport, N. Y.

Claim.—1. The means, substantially as described, for operating the cut-offs of engines by the varying pressure of water in the mains.

2. The lever c^2, when worked by a cylinder, P which communicates with a water-pipe or main in the manner and for the purpose described.

114,011.—BRICK-MACHINE.—David James Hunter, Somerville, Mass.

Claim.—1. The molds, formed as described, the peculiar-shaped cam L, the horizontal plunger, and the vertical gates, when all the said parts are constructed, combined, and arranged together in manner as shown and described.

2. The double-faced cam-table M, formed as described, in combination with the vertical gates and their stems, provided with two sets of guide-rollers, *r r'*, as set forth, the whole being arranged and operating together in manner as shown and described.

3. The arrangement and combination of the peculiar-shaped cam L, the horizontal plunger, the cam-table M, and the vertical gates, substantially as shown and described.

4. The combination and arrangement of the molds, the peculiar-shaped cam L, the horizontal plunger, the cam-table M, and the vertical gates, substantially as shown and described.

5. A steam-induction pipe, in combination with each mold, when so arranged as to introduce a jet of steam directly into the latter after each retraction of its plunger, as and for the purpose set forth.

6. The hereinbefore-described machine for molding and pressing bricks, the same consisting of the hopper A, its orifices *d d'*, and shaft G armed with knives, and segmental wing *c*, molds I I' provided with a horizontal plunger and vertical gates or covers *h h'*, the said gates being operated by a cam-table, M, and the plunger by a cam, L, the whole being arranged within a suitable frame and operating together as set forth.

114,012.—COFFEE-POT.—Peter H. Inman and Charles B. Withington, Janesville, Wis.

Claim.—The combination, with the vessel A and the percolator B, of the cup D, or a diaphragm, valve F, and tube G, all arranged for operation substantially as specified.

114,013.—DRUM FOR HEATING AND VENTILATING. — Royal Jennings, Shelbyville, Ind.

Claim.—An improved heating and ventilating apparatus, formed by the combination of the drum C, plates or partitions E, interior chambers F, smoke-pipe D, hot-air pipe G, suspended drum H, egress pipe or pipes I, and cold-air pipe J K with each other and with a stove and chimney, substantially as herein shown and described, and for the purpose set forth.

114,014.—PENDULUM-LEVEL AND CLINOMETER.—William Johnson, Edisto Island, S. C.

Claim.—An improved altometer, consisting of two crossed bars, A, a pendulum-pointer, I K, and the arc-plate E, combined with the semi-circular plate F having the diameter *a b* and the semi-circumference M correspondingly graduated, the said parts being constructed and relatively arranged and adjusted as and for the purpose described.

114,015.—CAR-COUPLING.—John W. Jones of Philip De Cateaby, Hereford, Md.

Claim.—The combination of the spring-engaging shoulders *b*, on coupling-bar C, with the coupling-pin B, or an equivalent coupling-shoulder or draw-head A, substantially as described.

114,016. — CHURN-DASHER. — William F. Jones, Easton, Kan.

Claim.—An improved churn-dasher, consisting of the shaft D, transverse pin E, stationary outer wings F, and inner movable wings G, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

114,017.—PAINT.—William N. Jordan, Cambridge, assignor to Charles D. Weld, Boston, Mass.

Claim.—The preparation of paint by the use of rubber solution, as described, compounded with japan, coach-varnish, and dry paint, substantially as described.

114,018.—COOKING-STOVE.—John H. Keyser, New York, N. Y.

Claim.—1. The body of the stove, composed of the sections A *b b* G and frames D, constructed, combined, and secured together substantially as described.

2. The fireless oven C, mounted upon but not secured permanently to the body of the stove beneath, and constructed with an opening through its top covered by means of a frame, J, bridge *k*, and pot-hole covers *j j*, substantially as described.

3. The construction of the removable single wall fireless oven C with an opening through its bottom, an opening through its top, and an opening through its side, in combination with a stove constructed substantially as described.

114,019. — MACHINE FOR MAKING STRAP-HINGES.—William J. Lewis, Pittsburg, Pa.

Claim.—1. The combination of rotating spindle *h*, mandrel *a*, stem and block *a'* and *a''*, the anvil *m*, and mechanism for reciprocating said stem, substantially as and for the purposes set forth.

2. The devices of the previous claim, in combination with a stripper, *s*, substantially as described.

3. In combination with the devices set forth in first clause of claim, the shears *s s'*, substantially as and for the purposes set forth.

4. The segmental wheel *n*, slotted, as at *n'*, so as to be capable of a variable length of stroke, in combination with the spindle *h*, arranged substantially as described, for causing the latter to revolve alternately in opposite directions.

114,020.—PRINTING-PRESS.—John Cameron MacDonald, Weddon, and Joseph Calverly, Camberwell, England.

Claim.—1. The expansible mandrel, constructed as set forth of two longitudinal wedge-formed sections, each carrying a journal to support the mandrel.

2. The combination of the longitudinal wedge-formed sections of the mandrel, the wedges working in recesses therein, and the forcing-screws passing through the journals of the mandrel, all these parts being constructed to operate in combination, substantially as hereinbefore set forth.

3. The combination of the mandrel and its supports for the paper-roll, the printing-cylinder, the dampening-rolls, and the water-trough for supplying water for dampening, substantially as before set forth, so that the paper is dampened by the application of water between the paper-roll and the printing-cylinder.

4. The combination of the ink-fount, the series of metal ink-feeding rolls, the gearing which causes these rollers to revolve positively, the endwise-moving metal ink-distributing rollers, the composition inking-rollers, and the type-cylinder, all constructed and operating as set forth.

5. The combination of the gear-wheels revolving in a fixed position, the endwise-moving ink-distributing rollers and their shifting-gear, all these parts being constructed to operate in combination, as set forth.

6. The combination of the two type-cylinders for printing both sides of the sheet of paper, the two impression-cylinders for presenting the opposite sides of the paper in succession to the type-cylinders, and the metal roller for removing the "set-off" received upon the second impression-cylinder from the side of the paper first printed, these members being constructed to operate in combination, as set forth.

7. The combination of the delivering apparatus for the sheets and the table which receives the printed sheets with a hydraulic ram to vary the elevation of the table, these parts being constructed to operate in combination, substantially as hereinbefore set forth.

114,021.—Discharge-Spout for Thrashing, Hulling, and Separating-Machine.—Martin H. Mansfield, Ashland, Ohio.

Claim.—1. The fan J, constructed substantially as described, in combination with the discharge-spout of a separating-machine, and arranged to operate the discharge-spout of a separating-machine, substantially as and for the purpose described.

2. A discharge-spout constructed with a blast-fan and laterally-vibrating screen, substantially as described.

3. The combination and arrangement of the laterally-movable screen S with the discharge-spout F, substantially as described.

4. The combination of the secondary laterally-movable spout G and the primary spout F, arranged to operate substantially as described.

114,022.—Paddle-Wheel.—Ebenezer Mathers, Harrisville, W. Va.

Claim.—1. The rings A, made in sections and fitted together for adjustment, as shown and described, for the purpose of increasing or diminishing the diameter of the circle described within them.

2. The buckets, arranged as specified, for adjustment toward or from the center of the wheel.

114,023.—Grain-Separator.—Joseph Miller, Detroit, Mich.

Claim.—The construction and arrangement of the frame A, hoppers C, blast-tube B, tapers *a b*, valves *c c'*, hoppers D E F and D', E', and F', and the wings *d d'*, as and for the purpose set forth.

114,024.—Furnace for Steam-Boilers.—Thomas F. Morrison, Bryan, Ohio, assignor to Morrison & Fay, same place.

Claim.—1. The pipes C, E, and F, provided with caps G, when constructed and arranged for the purposes described, in combination with any suitable fan or blower, as set forth.

2. In combination with said pipes C, E, and F, provided with caps G, the steam-pipe D, for the purposes set forth.

3. In combination with pipes C, E, and F, provided with caps G, the grate-bars H, when arranged as described.

114,025.—Method of Making Carriage-Steps.—Francis B. Morse, Plantsville, Conn., assignor to H. D. Smith & Co., same place.

Claim.—The herein-described process for forming carriage-step pads C with their shank D from one and the same piece of metal.

114,026.—Die for Forming Felly-Plates.—Francis B. Morse, Plantsville, Conn., assignor to H. D. Smith & Co., same place.

Claim.—The dies A C, constructed as herein described, for forging felly-plates.

114,027. — Adjustable Spirit-Level.—Joab Morse and Franklin B. Abel, Philadelphia, Pa.

Claim.—1. The combination, with the bottle-box and adjusting-screw, of a plate or shield which operates to hold the said screw in position, as described.

2. The combination, with the bottle-box and adjusting-screw, of a plate or shield which operates to hold the said screw in position, and is provided with an aperture through which the said screw may be turned.

3. The combination of the plate F, wheel E, spindle D, and bubble-glass B, operating as shown and described.

114,028. — King-Bolt for Railway-Car Truck.—Samuel W. Murray and Benjamin P. Lamason, Milton, Pa.

Claim.—The saddle D, forming a truss-bridge for the braces D, and having a central opening *i* for the passage of the king-bolt, and constructed with a stirrup, K, for the latter to rest upon, substantially as shown and described, and for the purpose set forth.

114,029.—Wire Fence.—Zebedee Nicholson, Haddonfield, N. J.

Claim.—1. The arrangement of the wires A and B, substantially as and for the purposes shown and described.

2. In combination with the wires A B, arranged as shown, the stiffener D, substantially as and for the purposes shown and described.

114,030. — Washing-Machine.—James M. Noble, Delhi, Iowa.

Claim.—The cylindrical rocking suds-box B, provided with the perforated false bottom D, and with the hopper C having the inwardly-projecting sides *c*, as specified.

114,031. — Paper-Feeding Machine.—Oliver Norelius, Minneapolis, Minn.

Claim.—1. The combination of the carriers C with the yielding inclines G, constructed and operating substantially as described, and for the purpose set forth.

2. The combination of the carriers C, clamps J, gauges H M, and rest-bar I, all arranged and operating substantially as described, for the purpose specified.

3. The combination of the sliding clamps J, slides K, catches *g*, and springs *h* for clamping and moving the sheet to the gauge M, substantially as described.

114,032. — Newspaper-Addressing Machine.—Patrick O'Connor, Youngstown, Ohio.

Claim.—The belt A, constructed of stencil-plates, which are locked together in the particular manner shown and described.

114,033.—Gang-Plow.—Joseph Oler, Eagle Point, Ill.

Claim.—1. In combination with the laterally-adjustable plow-beams, the laterally-adjustable colters, substantially as set forth.

2. The combination of the platform C, the movable tongue E, the double or reversible ratchet-standard F^2, sector-lever F^1, and the tongue-loops *F F*, substantially as set forth.

3. The combination, in a gang-plow, of yoke N, colter-block m^1, forked standard *m*, and colter M.

114,034.—Scaffolding.—James D. Pettit, Rochester, Ind.

Claim.—The slotted legs B E G, movable in the slots D D, and the slotted sliding pieces which form top A, combined as described with adjustable braces C for the purpose of adjusting the height by a greater or lesser obliquity of the legs, and the length by drawing out the top-pieces.

114,035. — Hot-Air Furnace.—John L. Pfau, Jr., Quincy, Ill.

Claim.—1. The radiator G, when provided with the diaphragm J having an opening in the upper part thereof, closed by a valve, K, in connection with a stove or furnace, as and for the purpose set forth.

2. The air-duct *d*, ring *c*, and inclined perforated hollow back L, arranged and operating substantially as described, for the purpose specified.

3. The construction and arrangement of the ash-pit A, fire-pot C, front E, combustion-chamber D, cap D^1, exit-pipe H, duct *d*, hollow ring *c*, and back L, with or without the radiator G, substantially as and for the purposes herein shown and set forth.

114,036.—Curtain-Fixture.—Phineas W. Phillips, Salem, Mass., assignor to James F. Almy, same place.

Claim.—A spring shade-roller having an automatic clutch, arranged and operating in the manner and for the purpose substantially as set forth and shown.

114,037. — Shutter-Fastener.—John D. Phyfe and John D. Perrine, New York, N. Y.

Claim.— As an article of manufacture, the shutter-fastener composed of the longitudinal sectional parts, one carrying the face-plate, as shown, and the two secured by a screw-nut, the two hooks having projections working in recesses in the sides of the sectional case, and hence not requiring rivets, all as and for the purpose set forth.

114,038.—Wood Pavement.—Albert Potts, Philadelphia, Pa.

Claim.—A wooden pavement composed of cylindrical upright blocks of horizontal stripe, the blocks being forked to straddle the stripe, as set forth.

114,039.—Truss-Bridge.—T. Willis Pratt, Boston, Mass.

Claim.—1. The peculiar method herein shown of connecting the strut and tension-braces C D with the upper and lower "chords" A B in the construction of triangular truss-bridges, substantially in the manner and for the purpose described.

2. The combination of the plates E G, formed as described and shown, strut and tension-braces C D, and "chords" A B, the whole constructed and operating as and for the purpose set forth.

114,040. — Cultivator. — Isaac N. Pyle, Pleasant Mills, Ind.

Claim.—The bracket K, having the form and applied to the beams A, as shown, and the fender J and spring L arranged therewith as specified, whereby the shank of said fender has a double bearing and a vertical play in the bracket, for the purpose set forth.

114,041. — Potato-Digger.—Squire Ransom, Kingsville, Ohio.

Claim.—The revolving prongs G, gearing D E connected with the frame, in combination with the adjustable pole H, stay I, catch J, and lever O, substantially as and for the purpose set forth.

114,042. — Apparatus for Making Sulphuric Acid. — St. Julien Ravenel, Charleston, S. C.

Claim.—The apparatus for making sulphuric acid, constructed and operating substantially as herein described and represented.

114,043.—Saw-Mill.—John Richards, Philadelphia, Pa.

Claim.—1. The cylindrical flanged sleeve *m*, in combination with the frame *a* and lower wheel *c* of a band-sawing machine, arranged substantially as hereinbefore specified.

2. The pendulous pivoted piece S, in combination with the adjusting-screw *o* and the upper wheel of a band-sawing machine, when arranged and operating as herein described.

3. The stud *i*, provided with a groove upon its under side for the reception of a fibrous material, and oil-hole *k*, the whole being constructed as herein shown and described.

114,044, antedated April 12, 1871.—Plow Mold-Board.—Loman P. Rider, Pittsburg, Pa., assignor to himself and James Marshall, same place.

Claim.—The mold-board, constructed with the grade of the board in a true inclined plane extending from the point to the extreme end of the wing, and with the greatest height of said plane equal to the width of the plow, as and for the purpose described.

114,045.—Fire-Place.—Patrick M. Roche, Cleveland, Ohio.

Claim.—An arch, A, and a back, B, having openings C E E provided with doors D F F, constructed and operating substantially as described, for the purpose specified.

114,046.—Heating-Stove.—Peter Rohdin and Charles Ostergren, Chicago, Ill.

Claim.—The cylindrical fire-box A, contracted at its upper end and provided with the openings E F, when arranged eccentrically within the drum D open at both ends, substantially as and for the purposes set forth.

114,047.—Seed-Planter.—Charles R. Sargent, Newburyport, Mass.

Claim.—The seed-planter hereinbefore described, the same consisting of the pioneer or auxiliary furrow-opener C, the main furrow-opener B, the seed-wheel K, the frame or conduit A, the hopper L, the adjustable coverers O O, and the pressing-roller G, all constructed, combined, and arranged substantially in manner, and provided with wheels so as to operate, as and for the purpose set forth.

114,048. — Machine for Oiling Wool, &c. — Charles G. Sargent, Westford, Mass.

Claim.—1. The vibrating oil-supplying bucket I, constructed as described, and operating in a machine for oiling wool and other fibrous materials, substantially as and for the purpose herein specified.

2. The adjustable blade R applied to the vibratory bucket I for graduating the amount of oil taken up by the bucket, substantially as herein set forth.

3. The combination of the vibratory bucket I and revolving brush J, when constructed, arranged, and operating together, substantially in the manner and for the purpose herein specified.

4. The combination of the vibratory bucket I with its adjustable blade R, the revolving brush J, and reservoir E, operating together in the manner and for the purpose herein set forth.

114,049. — Water-Elevator.—Parker W. Sawyer, Gray, Me.

Claim.—The combination of the carriage *d*, having single wheels *e*, pulleys *l*, hook-lever *r*, rod *u*, pivoted piece *v*, tackle-block *t*, and line *h*, with the catch *s*, track *c*, pulley *j*, and wheel *k*, and receptacle *q p*, as herein set forth.

114,050. — Churn. — Henri Schultdrees, Brookville, Ind.

Claim.—1. The combination, with the slotted and grooved end pieces of the case and the beater-shaft, of the slides F and H, substantially as specified.

2. The combination, with the slides H and finger-pieces I thereon, of the catch-levers P and pins Q, substantially as specified.

3. The arrangement of the vertically-adjustable beater-shaft D, pinion Z, driving-wheel Z^1, and extension Z^2 of the beater-shaft, all substantially as specified.

4. The end pieces of the cover, having the mortises X arranged for receiving the ends of the slides F when raised, all substantially as specified.

114,051. — Die for Forging Carriage-Clips. — Moses Seward, New Haven, Conn.

Claim.—The dies constructed as herein described for forging carriage-clips.

114,052, antedated April 22, 1871.—Method of Reducing Pressure in Steam-Boilers. — George Sewell, Brooklyn, N. Y.

Claim.—The method of reducing pressure in a

steam-boiler, consisting of the introduction of cold water into the steam-space, substantially as set forth.

114,053.—CARPET-STRETCHER.—Edward P. Shaffer, Rochester, N. Y.

Claim.—1. The rocking tenter-head a, in combination with the link d and hand-lever B, operating substantially as described.

2. In combination with a rocking tenter-head a, a device or devices for retaining the teeth of the former in an inclined position during the first part of the stroke of the tenter, for the purposes set forth.

114,054. — WAGON-BRAKE. — Richard C. Shockley, Fayette, Wis.

Claim.—The brake-beam D, staples E, rods G G, link c, and double-tree F, combined and arranged with the bounds, reach, and rear wheels of a vehicle to operate as herein shown and described.

114,055. — HEATING-STOVE. — Absalom S. Shonts, Quincy, Ill.

Claim.—1. The diaphragm J, sliding damper-case L, damper L', and rod *f*, arranged and operating substantially as and for the purpose set forth.

2. The construction and arrangement of the ash-pit A, fire-pot B, magazine C, rim-plate G, plate I, diaphragm J, damper-case L, damper L', rod *f*, back-flue-chamber *b'*, double base E, flues *d d' e e'*, and smoke-pipe H, substantially as described, for the purpose specified.

114,056. — COTTON-PRESS.—Franklin Simmons, New Orleans, La.

Claim.—1. In the cotton-press herein described the bevel-wheel *t*, nut *t'*, ratchet *y*, when cast in one piece and combined with the screw *m* and pawl *u*, all being constructed and arranged to operate as shown, for the purpose set forth.

2. The arrangement in the press herein described of the frame A, screw *m*, bevel-wheel *t*, pinion *w*, nut *t'*, ratchet *y*, pawl *u*, collar *s*, platform *c*, and the rollers *d*, when all are constructed and operated substantially as shown and specified.

114,057.—WIRE FENCE.—Arnold C. Sisson, Factoryville, Pa.

Claim.—The arrangement of the perforated iron post A, wires B, top rail F, and socket D with the angular iron brace C attached at its upper end *c*, its lower end entering the socket D and serving as a wedge to secure the post, and its angle forming a bearing or support, substantially as set forth.

114,058. — CARRIAGE-WHEEL. — James Y. Sitton, Due West, S. C.

Claim.—The metal socketed ring D, having the flanges E applied to the spoke, felly, and tire, substantially as specified.

114,059.—FALLER FOR SPINNING-MULES.—Joseph Smith, Preston, England, assignor to Thomas Rawsthorne, same place.

Claim.—The under faller or sickle, provided with two or more wires or other surfaces, arranged as herein described.

114,060. — PASSENGER-REGISTER. — Moritz Springwotet, Louisville, Ky.

Claim.—1. The movable notched plate G, combined, as described, with the pins *j j* on the face of the pinions to lock the treadle, as set forth.

2. The lever I, combined, as described, with the locking and lock-recording mechanisms for their simultaneous operation, as set forth.

114,061.—FURNITURE-CASTER. — Augustus G. Stevens, Manchester, N. H.

Claim.—The hook K and the incline and stop forming a bayonet-fastening for the hook when said incline and stop are below the socket-flange or collar F and upon the exterior of the tubular shank, substantially as specified.

114,062.—ANIMAL-TRAP. — John N. Stow and Robert Loop, Camden, Ohio.

Claim.—1. The notched rod H, latch I, spring J, pedal K, rock-shaft L, wire *a*, arm *b*, and bell-crank *c*, in connection with the sliding chamber G, as and for the purpose set forth.

2. In combination with the above-named parts the box A divided by the partition B, the trap-gate C, the standard D, scale-beam E, and wire F, when arranged and operating in the manner and for the purpose set forth.

114,063. — APPARATUS FOR COOLING AND MIXING SOAP.—James D. Sturges, Chicago, Ill.

Claim.—1. The apparatus for cooling, conveying, and mixing soap, consisting of a screw or spirally-flanged shaft inclosed in a hollow-tube, into which the soap may be poured hot, and from which it escapes, being forced out by the screw, as specified and shown.

2. The combination of the tube B, discharge D, and spirally-flanged shaft E F, for the purposes and substantially as described and shown.

114,064.—DRAWING-FRAME.—Gustavus E. Taft, Northbridge, Mass., assignor to "Whitin Machine Works," same place.

Claim.—The mechanism herein described, consisting of the combination of the heart A and rod B, the slotted part F, the adjustable pin G, the cross-bar H pivoted in the center, the arms J and K, the rods L and M, the adjustable sliver-guides N and O, substantially as described.

114,065.—COMBINED HAY-RAKE AND TEDDER.—Frederick A. Thayer, Sheldonville, Mass.

Claim.—1. The hinged frame D, vertically adjustable between the wheels E E, in combination with the hinged apron *d'*, as and for the purpose described.

2. The endless rake F G H, the pivoted swinging frame X, the hinged frame D, and the pivoted apron *d'*, all combined, as described, in a hay-rake and tedder.

3. The arms N and traveling rake-teeth F G combined with the revolving rake-teeth P, when all are arranged to operate in different vertical planes, as described.

4. The curved arms N to receive the hay, the revolving rake P to remove it, the receptacle T to contain it, and the rotary clearer U to throw it off in sections of a windrow, all combined to operate as described.

114,066.—SEED-PLANTER.—Charles J. Turner and Marcellous L. Wilkinson, Olean, N. Y.

Claim.—1. The clutch mechanism as arranged for operating the dropping-cylinder E, the lever *d*, and incline *h*, in combination with the movable barrow-handles I I, by which the clutch is thrown and held out of gear, substantially as shown and described.

2. The movable handles I I as connected together, with their supports K K, as arranged, when combined with a hand-barrow seed-planter, for operating in the manner substantially as and for the purposes herein set forth.

114,067.—SHOE.—Charles E. Tyler, Georgetown, Mass.

Claim.—1. The improved brogan or heavy high-quartered shoe, having its "upper" formed of a single piece of leather, shaped and connected in manner as described, the said upper having the front or toe portion thereof crimped in order to give the desired curve or contour, as set forth.

2. An upper formed of a single piece of heavy leather, suitable for the manufacture of the class of coarse high-quartered shoes known as brogans or plow-shoes, when the front or toe portion of said upper is crimped, as and for the purpose specified.

114,068. — MACHINE FOR PUNCHING AND STAMPING METAL. — Isaac Van Hagen, Chicago, Ill.

Claim.—1. The blank-holder J, made self-adjusting and self-yielding by journals hung in boxes L, which are slotted at *n n* to have a longitudinal movement, as and for the purpose set forth.

2. The blank-holder J, constructed as described, and combined with levers C or their equivalents, placed above the level of bed of press, substantially as and for the purpose set forth.

3. The combination of the blank-holder J with levers C provided with slotted boxes L, with punch N, cam T, rods Q, springs *f*, and yoke R, substantially as described and shown.

114,069. — RECOLORING FABRICS. — John Murray Wallace, New York N. Y., assignor to Bernhard Weber, same place.

Claim.—A process of recoloring faded fabrics by applying thereto an alcoholic aniline coloring solution, and infixing the same by the mordant immediately thereafter, while the fabric is still damp and on the frame, for the purpose of preventing injury to the fabric and the substance covered, by the subsequent use of vats or steam.

114,070. — GRATER. — Henry Clay White, Philadelphia, Pa., assignor to George Booth & Co., same place.

Claim.—The grater herein described, composed of side pieces A A', with longitudinal grooves *a a*, cross-pieces B and C, and grater-plate D, the whole arranged and combined substantially as set forth.

114,071.—FRICTION-BAND AND STOP FOR SEWING-MACHINES.—Francis E. Whiteside, Oxford, Pa.

Claim.—1. An elastic friction-band, G, combined with the periphery of the upper or lower band-wheel or pulley of a sewing-machine, and with the cord or band passing over said wheel, substantially in the manner and for the purpose herein set forth.

2. The forked look-bar K, provided with one or more clamping-screws, *t t*, to embrace and lock the pulley operating the sewing mechanism of a sewing-machine, and combined with said pulley and with the table or bed-plate of the machine, substantially in the manner and for the purpose herein set forth.

114,072.—RUNNING-GEAR FOR CARRIAGES.—Eli Wigle, Bay City, Mich.

Claim.—1. The combination of the separate axle-arms A provided with collars *a* and *b*, the boxes B and C, and the hub K provided with sand-guards E, all constructed and arranged substantially as and for the purpose specified.

2. The combination of the separate axle-arms A, the boxes B and C, and the transverse bar G, all constructed and arranged substantially as described and shown, for the purpose set forth.

114,073. — STAVE-EQUALIZER. — Hiram S. Wiley, Madison, Ind.

Claim.—In combination with the within-described self-feeding and equalising device and gauge B, the inclined ways *g g* for clearing the staves from the feed-belts, when arranged substantially as shown, and for the purposes set forth.

114,074.—SPINNING-MACHINE.—Samuel M. Williams and Henry M. Williams, Coldwater, Mich.

Claim.—1. The spindles O provided with disks or flanges T, the peripheries of which are provided with hooks or projections *l*, in combination with the fliers or guides U, when constructed, arranged, and operating substantially as and for the purpose set forth.

2. The combination of the spindles O provided with the disks T and fliers U, constructed and arranged as described, with the feed-rollers X X', the shafts N N' K K', the pulleys M L, the belt *e*, and the tubes V, all constructed, arranged, and operated substantially as described and shown, for the purposes set forth.

114,075.—FIRE-PLACE.—Jonathan E. Wood, Webster, Ohio.

Claim.—The clay tiles A B B C, when made in the form and fitted together as represented, forming a fire-place having an inclined top and back and straight sides, as and for the purpose herein described.

114,076. — CORN-HARVESTER. — Alvin N. Woodard, Fentonville, Mich.

Claim.—The combination and arrangement of the V-shaped knives L, rods J, connecting-rods K, shafts G, cranked wheels I, brackets F, pinions H, and spur-wheels C, substantially as and for the purpose set forth.

114,077. — DIVIDING-WHEEL OF WEFT-THREAD KNITTING-MACHINES.—Horace Woodman, Saco, Me.

Claim.—The dividing-wheel of a weft-thread knitting-machine, having the teeth made adjustable to vary the order of their action on the needles, substantially as specified.

114,078.—VALVE AND STEAM-CHEST FOR ENGINES. — Peter N. Woods, Fairfield, Iowa.

Claim.—The aligned conical valves A C, combined, as described, with the four-ported steam-chests B D, when all are constructed and arranged to operate in the manner described.

114,079.—GAIN-CUTTER.—E. H. Woodsum, Harrison, Me., assignor to himself and F. H. Whitman, same place.

Claim.—Combination of cutter-heads, adjustable knives, and platform, substantially as herein set forth, to prepare Woodsum's improved railroad sleeper, and for similar uses.

114,080.—GAVEL-FORK. — Baxter Wright and William C. Park, Cardiff, N. Y.

Claim.—In connection with the double-headed fork A B *b* and handle F, the socket C, with ears *d d* and jaws *e e*, as and for the purpose described.

114,081. — BREECH-LOADING FIRE-ARM.—Frederick J. Abbey and James H. Foster, Chicago, Ill.

Claim.—1. The bolts C C moving laterally to and from and within a lateral perforation or opening *e* of the projection J, substantially as and for the purpose described.

2. The projection J of the barrel with its lateral perforation *e*, in combination with bolts C C, substantially as and for the purpose described.

3. The slide D provided with V-shaped slot for operating the levers B B, substantially as and for the purpose described.

4. In combination, the bolts C C, levers B B, slide D, and lever E, the whole arranged and operating substantially as and for the purpose described.

114,082.—SUPPORT FOR CAMERA-BOXES.—Orin Ackerman, Carthage, N. Y.

Claim.—In combination with the plate E, the legs G, cross-bar *n*, socket *o*, bar *q*, and set-screw *p*, as explained.

114,083. — VACUUM-ENGINE. — Henry W. Adams, Philadelphia, Pa.

Claim.—Utilizing and transmitting motive pow-

or by causing jets of fluid or liquid under pressure to create, in the manner described, a partial vacuum on one side of a piston, or its equivalent, while the opposite side is exposed to the pressure of atmospheric air.

114,084.—PASSENGER-RECORDER.—George H. Aldrich, New York, N. Y.

Claim.—1. The independent alternately-acting spring steps, in combination with a feed-motion carrying a recording-fillet and the independent recording-punches, substantially as herein described.

2. In combination with the above, the reciprocating locking-lever, or its equivalent, arranged so as to lock and securely hold in a fixed position either one of the independent steps by the action of the other step.

114,085.—PLANE-IRON.—Ira Almy and Sereno A. Drake, Covert, N. Y.

Claim.—The herein-described plane-iron, consisting of the cap A and the reversible bit B, substantially as shown and described.

114,086.—PAINT-BRUSH.—John Ames, Jr., Lansingburg, N. Y., assignor to John Ames, same place.

Claim.—The combination of an interior brush, D E F, with the exterior or main brush A B C, substantially as herein shown and described, and for the purpose set forth.

114,087. — PAPER-FEEDING MACHINE.—Ezra R. Andrews, Robert B. Randall, and William H. Clague, Rochester, N. Y.

Claim—1. In combination with the needle-supporting bars *m n*, the elevating cam *p*, arranged to be automatically operated at each end of the movement of the feeder, for the purposes set forth.

2. In combination with the reciprocating feeder A provided with lifting-cam *p*, the fixed spiral incline K, arranged to operate substantially as set forth.

3. In combination with the reciprocating feeder A provided with a lifting-cam, *p*, the tripping-lever *r* arranged to be operated substantially as set forth.

4. The automatic switches *u*, in combination with the reciprocating feeder A, whereby the latter is allowed to drop upon the "bank" with sufficient force to operate the tripping-lever *r*, substantially as set forth.

114,088. — POTATO-DIGGER.—Sherman E. Anthony, Stillwater, N. Y.

Claim.—1. The combination of the tined disk *t u*, shaft A, journal-bearings *i k*, bevel-pinion *n*, bevel-gear E, axle B, and frame A *f*, when all said parts are arranged as shown and described.

2. The disk *t*, provided with the teeth *u*, and combined with the shaft A and frame F in the manner described, and for the purpose of enabling the shaft A to be set at an angle with the side pieces of the frame.

114,089.—COOPER'S CROZE.—Joseph F. Applegate and Caspar Feiock, New Albany, Ind.

Claim.—1. The head-block B, with cross-bar C, in combination with screw D, wooden block *d*, and bit E, all constructed and arranged substantially as and for the purposes herein set forth.

2. The combination of the head-block B with cross-bar C, screw D, wooden block *d*, bit E, raising-block *b*, and plate A, all constructed and arranged substantially as and for the purposes herein set forth.

114,090.—FLUX FOR REFINING IRON AND STEEL.—Edward T. Atwood, Minerva, Ohio.

Claim.—A compound flux for refining iron and steel, consisting of silver ore, borax, and manganese mixed together and treated in the manner herein set forth, for the purpose specified.

114,091. — GLOVE.—Ezra Wilmoth Avery and Adaline Augusta Avery, Plymouth, N. H., assignors to A. W. Avery & Co., same place.

Claim.—1. A glove or a mitten having its thumb portion and palm portion formed in one piece with the body, and shaped, folded, and joined, and arranged, and combined, all essentially as described and represented.

2. A glove as composed of the parts made as shown in figs. 5, 6, 9, and 10, folded, and arranged, and joined, thereby having the thumb in one piece with the body, or that portion thereof from which it may be immediately projected.

114,092. — APPARATUS FOR ELEVATING WATER. — Jared A. Ayres, Hartford, Conn.

Claim.—1. The automatic valve or cock C, constructed so that in one position it opens communication between the compressed air and one of the chambers B B′, and allows the air in the other chamber to escape through one of the holes *i i′*, and in the other position of the cock the operation is reversed, substantially as described.

2. The devices *j k* and *m n* for operating the valve C at the end of any number of strokes desired, substantially as described.

3. The chambers B B′ connected with the automatic valve C, substantially as described.

114,093. — WASHING-MACHINE.—Junius S. Bulsly, North Bend, Ky.

Claim.—The combination of the tub *a*, partition *a*, furnace *b*, false bottom *c*, rollers *d*, and reciprocating frame *f*, arranged as specified.

114,094.—HARVESTER-RAKE.—John Barnes, Rockford, Ill.

Claim.—1. The combination of an intermittently-rotating rising-and-falling rake descending into the cut grain lying upon the platform, with intermittently-moving gearing to rotate, raise, and lower the rake at proper intervals, these members being constructed and operating substantially as hereinbefore set forth.

2. The combination of an intermittently-rotating rising-and-falling rake, descending into the cut grain lying upon the platform, intermittently-rotating reel-arms revolving synchronously with the rake, but with varying speed relatively thereto, and connecting gearing to produce these movements, these members being constructed and operating substantially as hereinbefore set forth.

3. The combination of two independent series of intermittently-rotating rising-and-falling reel-arms with an intermittently-revolving rising-and-falling rake, revolving uniformly with one set of reel-arms, but with a varying speed relatively to the other; all these members being constructed and operating substantially as hereinbefore set forth.

4. The combination of a stationary bent rake-post, two gear-rings revolving around said post, but at variable speeds relatively to each other, and each carrying independent reel-arms and links connecting the reel-arms with the bent arm of the rake-post; all these members being constructed and operating substantially as hereinbefore set forth.

5. The combination of the driving-pinion G, the toothed wheels *i i′*, the gear-rings D D′, their studs *h h′*, the rake and its segment-gear on one gear-ring, and the collar and its segment-gear on the other; all these parts being constructed and co-operating as hereinbefore set forth.

6. The combination with the rake-arm of the beater-arm F⁴, pivoted tangentially to the lower ring on an arm overhanging the upper ring, as and for the purpose described.

7. The combination of the beater-arm F⁴ pivoted on the outer edge of the upper ring, with the arm *l* pivoted to the lower ring nearer the center, as and for the purpose set forth.

114,095.—KILN.—Arthur Batchelar, Brockham, Great Britain.

Claim.—The arrangement and combination, in a series of kilns, of the heat-flues E, J, and K with the main flues D, connecting-chambers F, and the dampers G, H, K′, and M, substantially in the manner and for the purposes hereinbefore set forth and described.

114,096.—ADJUSTABLE BEVEL.—Elbert A. Bell, Meriden, Conn.

Claim.—The method herein described of holding the adjustable blade of a bevel at the required angle, consisting of the cam-rod C, in combination with the washer or binder F, operating upon the blade in the manner and for the purpose substantially as herein specified.

114,097.—GRAIN-SEPARATOR.—Daniel Best, Yuba, Cal.

Claim.—1. The grain-separator herein described, consisting principally of the hoppers C and E, elevators D and T, curved screens G and G′, screen H, fans V, spouts R and S, and the riddles I, all constructed and arranged to operate substantially as and for the purpose set forth.

2. The combination and arrangement of the double set of curved screens G and G′, fans V V, and the riddles I, all constructed as described, and operating substantially as and for the purpose specified.

114,098. — POLISHING-MACHINE. — Samuel Bevan, Philadelphia, Pa., assignor to "Henry Disston & Son," same place.

Claim.—The combination, with the revolving polishing-wheel C, of a yielding roller, R, arranged below the wheel at one side of a vertical line drawn through the axis of the latter, so as to form the fulcrum of a board carrying the plate to be polished, as set forth.

114,099, antedated April 13, 1871.—TICKET-CASE FOR RAILROAD STATIONS.—John F. Birchard, Milwaukee, Wis.

Claim.—A coupon-ticket case perpendicular in form, with shelves E E wide at the top and narrow at the bottom, arranged substantially as described.

114,100.—WAGON-BRAKE.—Simeon R. Bolton, Prescott, assignor to himself, Hannibal Felt, of said Prescott, and Pascal P. Child, St. Louis, Mo.

Claim.—1. The combination of the brake-bar N, link or links O, and rest-block P, substantially as and for the purposes set forth.

2. The combination and arrangement of the shoe Q, connecting-links R R′, and bar N, constructed and adapted to operate as herein specified.

3. The lever I, in combination with the plurality of perforations A A in the tongue, and with the connecting-plate J provided with a plurality of perforations, *j j*, substantially as and for the purposes set forth.

114,101.—GATE.—Robert T. Bowne, Fallston, Md.

Claim.—1. In connection with the gate B the movable disk E, bearing the lower pintle *d*, arranged in combination with pulleys G on the end of crank-rods H, and tense cords or wires J, to move through more than one quarter revolution to carry the pintle past the center F, substantially as and for the purpose set forth.

2. In combination with an automatic gate the cams K, substantially as and for the purpose set forth.

3. In combination with an automatic gate the fixed fulcrums L, as and for the purpose set forth.

114,102.—VENTILATOR FOR RAILROAD CARS AND DWELLINGS. — John Bradley, New York, N. Y., assignor to himself and Frank I. Kimball, Ramsey's, N. J.

Claim.—1. The adjustable inner sash C, provided with the duplicate pair of jointed folding arms *d d*, in combination with the sash B, arranged and operating as and for the purposes set forth.

2. In combination with the adjustable inner sash C, provided with the pairs of jointed arms *d d*, the projecting way or track *f f*, substantially as set forth.

3. In combination with the adjustable inner sash C, the hood or guard H when applied to railway cars or steam-boats, substantially as set forth.

4. In combination with the hood H, the flange or gutter *g*, for use on railway cars and vessels, substantially as set forth.

114,103.—BUCKWHEAT-REFINER. — Daniel D. Brewster, West Laurens, N. Y.

Claim.—1. The construction and arrangement, as heretofore described, of the sieve B′, chutes G¹ G, in combination with the fan-box H, fan H¹, screens I I′, and plates C C′, as and for the purpose set forth.

2. The combined arrangement of the shafts F F¹, plates C C′, sieve B′, bevel-gearing F¹ F² H² H³, fan H¹, chutes G G¹, rollers *g¹ f²*, belt *g*, and screens I I′, as and for the purpose specified.

114,104.—LIME-OVEN.—August Califf, Danville, Ill.

Claim.—In the lime-kiln herein described, the combination of the outer wall D, the fire-brick wall A, the backing *c*, of common brick, and the sand-layer E, all arranged in the manner and for the purpose specified.

114,105.—PRINTING-PRESS.—Andrew Campbell, Brooklyn, N. Y.

Claim.—The means herein described, or their equivalent, for automatically applying pressure to the sheet upon the feed-board to hold the same during the interval of time between the lifting of the sheet-guides or the withdrawal of the register-points and the taking hold of the gripers, so as to insure its proper delivery to the latter, substantially as hereinbefore set forth.

114,106.—PRINTING-PRESS.—Andrew Campbell, Brooklyn, N. Y.

Claim.—The arrangement of a rock-shaft and weighted arm or arms above the plane of the feed-table in connection with means for automatically operating the same, substantially as and for the purpose hereinbefore set forth.

114,107.—BURGLAR-PROOF SAFE.—John W. Campbell, Sr., New York, N. Y.

Claim.—1. In combination with a safe, a lock-frame, A, having an open lower end, and which communicates with the interior of the safe by suitable passages formed in the door, substantially as and for the purpose set forth.

2. In combination with a safe, a lock-frame, A, having an open lower end communicating by suitable passages with the interior of the safe and a pan, B, containing water, substantially as and for the purpose set forth.

114,108.—KEY-TAG. — Charles L. Carter, Washington, D. C.

Claim.—A key-tag, constructed of two or more annular or serrated pieces, *a b*, arranged at an angle toward each other, substantially as and for the purpose herein described.

114,109.—APPARATUS FOR THE MANUFACTURE OF BESSEMER STEEL.—Henry Chisholm, Cleveland, Ohio.

Claim.—Forming or making the joint or joints of steel and other like articles of graphite and fire-

clay or ganister, either together or combined with other material or materials.

114,110.—Pen-and-Pencil Case.—James M. Clark, Jersey City, N. J.

Claim.—The pen-case tubes r and s, united at e at one end, and the tube r, closed by the plate x, at the other end, in combination with the ever-pointed pencil-case b and head d, when the latter is provided with the pin 2 in the slot of the tube r, as and for the purposes set forth.

114,111.—Mechanical Movement.—John Corley, near Coalfield, Kan.

Claim.—1. The method of multiplying motion or speed in a machine or machinery by means of sets of links, connected and operating together substantially as described.

2. The device herein described for multiplying motion or speed, consisting of the links a b, bearing A, and wrist g, with the bearing B, wrist c, links d e, and stop, substantially as set forth.

3. The mechanical movement herein described, having the three joints of the links arranged in a line and so operating that when one set of links has come to this line in its movements the central joint of the opposite set, when more than one is used, will be at its furthest point from said line, as set forth.

114,112.—Bed-Spring.—Delos V. Crandall, Chicago, Ill.

Claim.—Coiled bed-springs, secured to slats or rails by means of the metal plate B and one or more screws or rivets, substantially as described, for the purpose specified.

114,113.—Lamp-Chimney.—Thomas A. Davies, New York, N. Y.

Claim.—As a new and improved article of manufacture the lamp-chimney or locomotive headlights, herein described, provided on one side with colored bands, as and for the purpose specified.

114,114.—Silk and Thread-Measuring Apparatus.—Lucius Dimock, Leeds, Mass.

Claim.—The arrangement of the friction driving-wheel B, the friction-pulley C adjustable in relation to said wheel, the spool-spindles e and f, the measuring-wheel G, and registering-disks or wheels H and I, together with their pointer or pointers, and mechanism by which motion is communicated from the measuring-wheel, all as shown and described.

114,115.—Forge-Bonnet.—Walter Dunkerly, Woonsocket, R. I.

Claim.—1. The bonnet C, constructed substantially as described.

2. Jointly, the bonnet C and base rim A, hinged together, substantially as specified.

114,116.—Double-Tree.—Milton Durnell and Wesley Milner, Leesburg, Ohio.

Claim.—The slotted elliptic spring d and metal plate g, in combination with spiral spring e, draft-hook b, and double-tree A, all arranged as described, for the purpose set forth.

114,117.—Spark-Arrester.—William W. Elliott, Elliott's Mills, Miss.

Claim.—The improved spark-arrester, consisting of the hinged box A and apertured flange h, arranged with the tube f, flues c c, and smoke-stack e, as herein shown and described, to operate as set forth.

114,118.—Weather-Strip.—Lucius H. Ellsworth, William E. Wilcox, and Samuel Seabury, Peoria, Ill.

Claim.—The combination and arrangement of elbow D, links d d d d, rod A provided with head k, strip C provided with rubber l, spiral spring f, plate e, and recess i made in the rabbet of jamb but not extending out to the edge thereof, substantially in the manner and for the purpose as herein shown and set forth.

114,119.—Pocket Fire-Escape.—George A. England, Ripon, Wis.

Claim.—The friction-bar B, having a rope passing through it in the manner shown, in combination with a strap or equivalent device attached at the center, as set forth.

114,120.—Broom-Head.—Charles Fiscus, Washington, D. C.

Claim.—The combination of the metal broom-head A with the nails D and broom-straw B, when constructed and arranged as shown and described, for the purpose set forth.

114,121.—Heel-Die.—Benjamin F. Fisk and Mark B. Stone, Haverhill, Mass.

Claim.—1. The heel-cutting punch or die, having its opposite sides connected by a cross-bolt, s, substantially as and for the purpose described.

2. The heel-cutting punch or die, formed of the curved cutter-plate b and the straight cutter-plate f_2, made separate and connected by the pressure of the curved plate upon the edges of the straight plate and suitable pins, substantially as described.

3. In combination with the curved cutter b, the adjustable breast-cutter f, substantially as shown and described.

4. In combination with the punch or die, the lifter and gauge-plate p and the lever m for operating the plate, substantially as described.

5. In combination with the swiveling gauge-plate p, the adjusting-screws q for adjustably regulating the normal position of the plate, substantially as described.

6. The combination of the cross-bolt s and the center-bolt i for fastening the sides of the punch together and the punch to the plate, substantially as shown and described.

114,122.—Axle-Box Cover.—Walter H. Fitz Gerald, Brooklyn, N. Y., assignor to himself and Isaiah A. Huson, Jersey City, N. J.

Claim.—1. The removable cover C, secured on one side by one or more studs T, and on the other by the spring-latch or bolt E engaging beneath the lug b, and formed with a laterally-projecting head, for the purpose of retracting it, all substantially as herein described.

2. The latch or bolt E, constructed with an inclined or wedge-shaped holding surface, and drawn into lock by a spring or springs, substantially as described.

3. In combination with an axle-box cover and its securing devices, constructed substantially as above specified, the casket B, constructed with bolt lugs b^2 b and slotted tapering lugs b b^1, and adapted, as specified, to enable the application of my improved cover to an axle-box of common form.

114,123.—Switch for Changing Gauge of Cars.—Thomas Fogg, St. Mary's, Canada.

Claim.—The combination of the broad and narrow-gauge rails B and C with the adjustable switch-rail D, for permitting the transfer of cars from narrow to broad gauge, and *vice versa*, as specified.

114,124.—Car-Coupling.—Edwin L. Foreman, Rantoul, Ill.

Claim.—1. The hammer-strap C hinged on the upper side of the draw-head, substantially as and for the purposes herein set forth.

2. In combination with the hammer-strap C, the adjustable-bar a and pin b, substantially as and for the purposes herein set forth.

114,125.—Steam-Engine.—David R. Fraser, Chicago, Ill., assignor to himself and P. W. Gates, same place.

Claim.—1. The piston-rod C, extended through both ends of the cylinder B and supported by means of rolling surfaces, in combination with adjusting-screws o o, substantially as described.

2. The cross-head D, supported, together with the end of the piston-rod C, upon a track, s, by means of a wheel, E, and adjustable bearing blocks p p, substantially as described.

3. The arrangement and combination of the front and rear rollers E and E, piston-rod C extended through the cylinder B, cross-head D, and ways W W and s, whereby the piston-rod is supported at both ends upon friction-rollers which are below and directly in line with it, substantially as and for the purpose set forth.

114,126.—Washing-Machine.—Henry A. Gaston, San Francisco, Cal.

Claim.—The box A, buckets B C E R, so placed as to leave intervals between their extremities and the ends of the box, and the stripe l m n K, the latter being located so as to overlap the joint of the cover D, when all these parts are constructed and arranged to operate as described.

114,127.—Cotton and Corn-Stalk Chopper.—James H. Gatling, Murfreesborough, N. C.

Claim.—1. The combination, with the adjustable chopping-cylinders K, of the shaft H, adjustable gauge N, and weight-rail T, substantially as and for the purposes shown and described.

2. The adjustable chopping-cylinders herein described, consisting of the wooden cylinders K, longitudinal radial-knives L, provided with the offsets e and the tires Z, substantially as specified.

114,128.—Connection of Booms to Masts.—Alpheus Gill, Holmes' Hole, Mass.

Claim.—1. The combination of the grooved saddle-band and the jaw-piece, as specified.

2. The combination of the grooved saddle-band a, the jaw-piece b, and the sections d, as described.

114,129.—Self-Oiling Pulley.—James Goodrich and Henry J. Colburn, Fitchburg, Mass.

Claim.—1. The combination of a pulley having an oil-cavity, b, in its interior, with a tubular bush, C, fitting the interior of the pulley so as to close the oil-cavity therein, provided with radial holes i, stopped with wooden plugs or equivalent porous material, for transmitting oil from the oil-cavity to the shaft, substantially as herein specified.

2. The construction of oil-transmitting bush C with its raised and tapering or slightly conical annular projections g g to fit corresponding apertures in the hub of the pulley, substantially as and for the purpose herein specified.

114,130.—Printing-Press.—John Gough, London, England.

Claim.—The heater-box h, inking-table j, and plate k provided with the pins l, in combination with the spring claw m, carrier n, lugs p p', and rollers q q', arranged to operate in connection with driving mechanism, substantially as set forth.

114,131.—Horse-Collar.—William H. Gray, New York, N. Y.

Claim.—The trace-stay D, constructed with a loop, through which the trace may slide freely, in connection with the ring or hook on the end of said trace, for operation, as herein described.

114,132.—Feed-Water Heater.—Charles S. S. Griffing, Salem, Ohio, assignor to himself and Thomas Sharp, same place.

Claim.—1. The plates B B, with the winding water-channels, when such channels have a descending grade from the point at which the water falls upon them to the point at which it leaves them, substantially as and for the purpose set forth.

2. The plates B B, constructed with winding water-channels, which have a descending grade as described, when low transverse dams are formed in such channels, substantially as and for the purpose set forth.

3. The arrangement of the cap or cover A^3 with reference to the cylinder A, it being such that a narrow space is formed for the escape of the steam from the body of the heater to the chamber which conducts it to the exhaust-pipe, substantially as and for the purpose set forth.

4. The combination of the set-screw H, spider G, and disks B, substantially as and for the purpose specified.

114,133.—Fertilizing Compound.—William Barkerville Hamilton, New Orleans, La., assignor to the New Orleans Sanitary and Fertilizing Company.

Claim.—A fertilizing compound composed of the ingredients stated.

114,134.—Veneer-Cutting Machine.—Thomas Harvey, Rochester, N. Y.

Claim.—In a horizontal machine for cutting splints or boards from a log, the open box B, with tongues b b running inside of the ways a a, the fixed bed E, with the knife F, attached by a tongue, f, and having the extended beveled throat e, and the adjustable bed D, the whole combined, arranged, and operating substantially as and for the purpose specified.

114,135, antedated April 18, 1871.—Wheel-Skate.—George W. Hawk, Chicago, Ill.

Claim.—1. The combination and arrangement of the foot-stand C, straps or clasps M L, main support B, vibrating pivoted support S, wheels No N, having suitable tires or bands, also suitable bearings o o o o, joint and pivot-bolt G, friction-lever e, and its spring d, operating substantially as and for the purposes herein shown and specified.

2. The metallic strip E, suitable strap H, knob R, brake-levers F F, heel-support D, and fulcrums i i, cord or chain I, loop or clasp h, pulleys f f, operating substantially as and for the purposes herein described and set forth.

3. The combination of the foot-stand C, stationary support B as arranged for the front wheel No, pivoted vibrating support S as arranged for the rear wheel N, double-acting spring a, and lug b, for the purposes herein shown and specified.

4. The joint and bolt G arranged between the front wheel No and the rear wheel N.

114,136.—Torsion-Spring for Railway Cars.—Benjamin Hershey, Erie, Pa., assignor to himself, E. Geer, Richard Dudley, and R. F. Gaggin, same place.

Claim.—1. The plates A and A^1, having torsional spring rods arranged thereon in such relative position that their lateral arms b b shall operate in connection with each other, substantially as described.

2. The torsion-springs B B, when arranged in sets parallel to each other, and extending the whole length of the bolster-plate, the lateral arms of each set meeting or being in contact, substantially as described.

3. The plates A and A^1, torsional spring rods B B, plate D^1, and flanged recessed bearing-plate D, when the same are combined and arranged so as to operate substantially as described.

114,137.—Drier.—Charles H. Hersey, Boston, Mass., assignor to "Hawes & Hersey," same place.

Claim.—1. A rotary drier-drum, open at its opposite ends and having located centrally within it a steam-heated cylinder for heating the currents

of air passing through the drum and the material falling upon the heater.

2. The rotary drum *a* and heater-cylinder *f*, connected together and held in relative position by the spokes *k*, substantially as shown and described.

3. The adjustable spokes *k*, in combination with the rotary drum and heater-cylinder.

4. The variously-inclined buckets *a*, in combination with the rotary drum and cylinder.

5. The pipe for freeing the heater-cylinder from the water of condensation, substantially as shown and described.

6. The rings *o* and flanges *p*, in combination with the heater-cylinder, and for raising the balls and letting them drop, substantially as described.

114,138. — TELEGRAPH-POLE.—Ira Hersey, New York, N. Y.

Claim.—1. A telegraph-pole having its sections insulated, substantially in the manner and for the purpose herein set forth.

2. The cross-bar, insulated, upon a telegraph-pole, substantially as herein described.

114,139. — MACHINE FOR THE MANUFACTURE OF ROOFING.—Dwight Hitchcock and Willis Gibbs, Syracuse, New York, assignors to Oliver T. Burt, same place.

Claim.—1. The hand-carriage G, made with flat strengthening-pieces *g g* of metal, arranged vertically, as shown, to prevent springing, and projecting below the carriage to act as guide-ribs, and projecting above to act as guards and knives, if desired, in connection with the table B A, pressure-roller D, and hopper E, as and for the purpose described.

2. In connection with the table B, roller D, and hopper E, the carriage G, made with a detachable bottom or tray, F, as and for the purpose herein described.

3. The hopper E, constructed with a shelf, *h*, at its discharge, for heating purposes, in connection with a suitable carriage and table for running off the asphaltic compound and pressing it into sheets, substantially as described.

4. The hopper E, with adjustable flooding-guards *m m* and valve-lever I, with friction-stop *i*, in connection with the machine A B D G, as and for the purpose specified.

114,140.—MANUFACTURE OF LAMP-SHADES. John H. Hobbs, Charles W. Brockomier, and William Leighton, Jr., Wheeling, W. Va.

Claim.—The manufacture of ornamental shades or globes for lamps or other lights by pressing the above-described material in molds while it is in a semi-fluid condition, the molds being so constructed as to give to the shades irregular thicknesses, substantially as and for the purpose set forth.

114,141. — STEAM-TRAP. — James Wilson Hodges, Baltimore, Md.

Claim.—1. The combination and arrangement of the guide D, float *d*, main-pipe or trap A A′ B′, duct C, and apertures *a a*^{1}, substantially as and for the purpose specified.

2. The combination and arrangement of the rod or valve E *e*, main-pipe or trap A A′ B′, duct C, and apertures *a a*^{1}, substantially as and for the purposes set forth.

114,142. — COMBINED HEATER AND CONDENSER.—Birdsill Holly, Lockport, N. Y.

Claim.—The combination of the chests S and G, their valves A and F, and steam-pipe *a*, substantially as and for the purpose described.

114,143. — SELF-HEATING POCKET-FLASK. Seymour Hughes, Hudson, N. Y.

Claim.—The portable flask, provided with the concealed lamp C and heating-tube B, substantially as herein shown and described.

114,144. — ATTACHMENT TO GAS-SERVICE PIPE FOR AUTOMATICALLY CUTTING OFF THE GAS IN CASE OF FIRE.—William Humphreys, Waterford, N. Y.

Claim.—1. A valve held separated from its seat by cement or other suitable substance, which remains solid at ordinary temperature, but which will melt when heated above that, thereby releasing the valve and allowing it to fall down to its seat and shut off the supply of gas, substantially as and for the purposes herein set forth.

2. A space within the fitting filled with some substance which, when melted, will release the valve or ball and flow around it in the valve-seat, thus hermetically sealing the valve, substantially as set forth.

114,145.—SHOE-SOLE.—John Morrison Hunter, New York, N. Y.

Claim.—1. The peculiarly-cut shank A B, having slits or scores extending inward from the edge, and terminating with a cross-slit or widening, as shown.

2. The thickened lines A′, produced by soldering or otherwise firmly attaching strips of additional material, extending along the shank, as and for the purposes specified.

3. The spring or springs D and guides G, arranged relatively to each other and to the shank, as specified.

4. The cross-spring F, arranged in front of the shank and serving therewith, as specified.

5. The sockets E in the front of the heel-shell, receiving and holding the spring or springs D, and serving in combination therewith, as represented.

6. The heel-block K, with holes *a* filled with hair or analogous soft material, as specified.

7. The freely-revolving metallic ring M, made conical upon its inner surface, and with the offset shown on the upper face matching to the plate N^1, as shown, and mounted in a heel and adapted to serve therewith, as and for the purposes specified.

8. The exterior ring N^1 of the main bearing portion of the heel, arranged to serve, as represented, within the revolving ring M, to prevent the spreading of the inner materials against the same, as specified.

9. The points *a*, cut from the metal A within the line of the edge, and serving relatively to the metal A and to the welt H, as specified.

10. The covering-layers I J, or either of them, as a flexible and strengthened metallic shank, as specified.

11. The combination of the metal shank, made strong and elastic, as shown, with a heel-body of wood or analogous material, carrying a heel-disk, M N, or equivalent facing, as herein specified.

114,146.—STEAM-GENERATOR.—William H. Ivens, Trenton, N. J.

Claim.—1. The combination of the outer tube J secured at its upper end in the lower flue-sheet P, and the inner tube H secured in the upper flue-sheet D, and united at their lower ends, forming a water-leg, substantially as described, with an intermediate feeder, *d*, so that the caloric surrounding the outer tube J and passing through the inner one H will cause an ascending current near each fire surface and a descending one through said feeder, essentially as specified.

2. The dividing-collar *c*, arranged to extend upward into the feeder-space *d* to divide the descending current, substantially as shown and described.

3. The arrangement of the conical steam-drum K, enlarging toward its upper part within the flue-chamber B, substantially as and for the purpose set forth.

4. The combination of the double polygonal divisions, figs. 4 and 6, with the annular water-legs, substantially as shown and described, for the purpose set forth.

5. The annular feed-cylinders, provided with spiral wings *f*, or continuous spiral ribs *g h* on their respective external and internal surfaces, whereby the upward currents are caused to rotate within the water-legs around their axes, as and for the purpose specified.

114,147.—CARRIAGE-AXLE. — Eldridge W. Ives, Hamden, Conn.

Claim.—1. The strip of hard rolled brass B, or other suitable hard metal, inserted longitudinally into the under side of the axle A so as to prevent the wearing and heating of the axle, substantially as described.

2. The strip of hard rolled brass B, or other suitable hard metal, wider at its inner than its outer end, and inserted in a groove on the under side of the axle, substantially as shown and described.

114,148.—CARRIAGE-AXLE BOX.—Eldridge W. Ives, Hamden, Conn.

Claim.—1. The carriage axle-box A, formed of hard rolled sheet metal, substantially as shown and described.

2. As a new article of manufacture, an axle-box constructed of hard rolled sheet-brass, or other suitable material, substantially as specified.

114,149. — VEHICLE. — Robert Jack, Des Moines, Iowa.

Claim.—The socket-jointed king-bolt *a*, the adjustable segmental slotted circle *d d* with its bent arm *f f*, the short stay-reach *g g*, the hinged and jointed braces *h h*, all made, combined, and operated with the gearing and body or box of a buggy or carriage, in the manner described, and for the purpose specified.

114,150.—HORSE HAY-RAKE.—Oliver Smith Jarvis, Xenia, Ill.

Claim.—The hay-rake herein described, provided with rollers D, shields E, sectional rake-heads A, hinge *a*, rod *b*′, and braces F F, all substantially as and for the purpose specified.

114,151.—PUDDLING AND OTHER FURNACES. John Allcock Jones, Richard Howson, and John Gjers, Middlesborough-on-Tees, England, assignors to Theodore Fox, Jeremiah Head, and Charles M. Newcomen, same place.

Claim.—The combination, with a puddling-furnace, of appliances substantially as described, whereby air and steam may be combined, the mixture heated, without decomposing either gas, by the waste heat of the furnace, and then introduced into the furnace to support combustion, as set forth.

114,152.—CUPBOARD-LATCH. — Albert D. Judd, New Haven, Conn.

Claim.—The arrangement of the latch C within the case B, constructed so as to form the spring chamber F, and provided with the flat-guide E extending through the opening *a* in the case, and so as to retain the spring in the chamber, substantially as herein described.

114,153. — MILKING-STOOL. — Judson N. Knapp, Syracuse, N. Y.

Claim.—1. The pail-rest C, when formed of a single piece of wire bent into the form shown, with the central leg *c*, and having its ends loosely inserted in sockets in the front legs so as to swing freely, as and for the purpose set forth, and as shown.

2. The spring arms B B, detachable legs *a a a*, and swinging rest C *c*, in connection with the seat A, all constructed as described, and for the purpose set forth.

114,154.—WATER-WHEEL.—John L. Kurtz, York, Pa.

Claim.—The combination of the casing A, head B, conductors C C, platform D, plate E, wheel G H, and spindle I, all constructed and arranged substantially as herein set forth.

114,155. — SHUTTLE FOR LOOMS. — Julius Kuttner, New York, N. Y.

Claim.—1. The arms *a* and retriever *c*, in combination with the friction-spring *l*, spindle *f*, and bobbin or spool *d*, substantially as and for the purposes specified.

2. A friction mechanism applied to the spindle of the bobbin or spool of a shuttle, in combination with a spring intervening between the spindle and the bobbin or spool, and mechanism, substantially as set forth, for relieving the spindle of friction during the passage of the shuttle beneath the upper shed of warp-threads, substantially as set forth.

114,156. — APPARATUS FOR EXHAUSTING GAS, &c. — Robert Laidlaw and John Thomson, Glasgow, Great Britain.

Claim.—The exhausting of gas and pumping or forcing of fluids by means of two parallel bosses, having radial blades and concavities, revolving and gearing together in a casing, as shown in the drawing, and with their shafts connected and made to work together by two pairs of spur-wheels inclosed in casings and placed inside of the bearings supporting the shafts, all substantially as hereinbefore set forth.
